## PCAPWARE /GlobalConf

This table contains pcapware global configuration information.

### XML structure

```
<PCAPWARE>
  <GlobalConf>
    <MaxBytes></MaxBytes>
    <MaxPktsPerFile></MaxPktsPerFile>
    <Storage>
      <Type></Type>
      <LocalSpaceLimit></LocalSpaceLimit>
      <Path></Path>
      <Username></Username>
      <Password></Password>
      <PassType></PassType>
    </Storage>
  </GlobalConf>
</PCAPWARE>
```

### Table description

Item	Description
Feature name	PCAPWARE
Table name	GlobalConf
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxBytes	Maximum number of bytes per packet.	N/A	Unsigned integer. Value range: 512 to 4096. Default: 512.	N/A
MaxPktsPerFile	Maximum number of packets per file.	N/A	Unsigned integer. Value range: 100 to 1000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Default: 100.	
Storage	Storage information of the .cap file.	Data structure	Members include: <ul style="list-style-type: none"> <li>Type.</li> <li>Path.</li> <li>User.</li> <li>Password.</li> <li>LocalPacketLimit.</li> </ul>	N/A
Type	Storage type of the .cap file.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Local(Default).</li> <li>2—Remote.</li> </ul>	N/A
LocalSpaceLimit	Maximum space available for local packets, in KB.	N/A	Unsigned integer. Value range: 1024 to 10240. Default: 4096.	This column is empty if storage type is remote.
Path	Storage path of the .cap file.	N/A	String. Length: 1 to 253 characters.	This column is empty if storage type is local.
Username	Authentication username.	N/A	String. Length: 1 to 255 characters.	This column is empty if no authentication is required.
Password	Authentication password.	N/A	String. Length: 1 to 373 characters.	This column is empty if no authentication is required.
PassType	The type of authentication password.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Simple.</li> <li>2—Cipher.</li> </ul>

Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxBytes	Maximum number of bytes per packet.	N/A	Unsigned integer. Value range: 512 to 4096.	N/A
MaxPktsPerFile	Maximum number of packets per file.	N/A	Unsigned integer. Value range: 100 to 1000.	N/A
Storage	Storage information of the .cap file.	Data structure	Members include: <ul style="list-style-type: none"><li>Type.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>Path.</li> <li>User.</li> <li>Password.</li> <li>LocalPacketLimit.</li> </ul>	
Type	Storage type of the .cap file.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Local.</li> <li>2—Remote.</li> </ul>	N/A
LocalSpaceLimit	Maximum space available for local packets, in KB.	N/A	Unsigned integer. Value range: 1024 to 10240.	This column is empty if storage type is remote.
Path	Storage path of the .cap file.	N/A	String. Length: 1 to 253 characters.	This column is empty if storage type is local.
Username	Authentication username.	N/A	String. Length: 1 to 255 characters.	This column is empty if no authentication is required.
Password	Authentication password.	N/A	String. Length: 1 to 373 characters.	This column is empty if no authentication is required.
PassType	The type of authentication password.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Simple.</li> <li>2—Cipher.</li> </ul>	

## PCAPWARE/UploadFiles

This table contains information about uploaded .cap files.

### XML structure

```

<PCAPWARE>
  <UploadFiles>
    <UploadFile>
      <Sequence></Sequence>
      <UploadState></UploadState>
      <FileName></FileName>
    </UploadFile>
  </UploadFiles>
</PCAPWARE>

```

### Table description

Item	Description
Feature name	PCAPWARE
Table name	UploadFiles
Table type	Multi-instance table
Row name	UploadFile

Restrictions	None
--------------	------

## Columns

Column name	Column description	Column type	Data type and restrictions
Sequence	Sequence number of the .cap file.	Index	Unsigned integer.
UploadState	Whether the .cap file has been saved successfully.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Succeeded.</li> <li>2—Failed.</li> </ul>
FileName	Name of the .cap file.	N/A	String. Length: 1 to 253 characters.

## PCAPWARE/LocalFiles

This table contains information about local .cap files.

## XML structure

```

<PCAPWARE>
  <LocalFiles>
    <LocalFile>
      <FileName></FileName>
      <FileSize></FileSize>
    </LocalFile>
  </LocalFiles>
</PCAPWARE>

```

## Table description

Item	Description
Feature name	PCAPWARE
Table name	LocalFiles
Table type	Multi-instance table
Row name	LocalFile
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
FileName	Name of the .cap	Index	String.

Column name	Column description	Column type	Data type and restrictions
	file.		Length: 1 to 253 characters.
FileSize	Size of the .cap file, in bytes.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .

## PCAPWARE/CaptureState

This table contains packet capture status information.

### XML structure

```
<PCAPWARE>
  <CaptureState>
    <State></State>
    <StateDetail></StateDetail>
  </CaptureState>
</PCAPWARE>
```

### Table description

Item	Description
Feature name	PCAPWARE
Table name	CaptureState
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
State	Packet capture status.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Started.</li> <li><b>false</b>—Stopped.</li> </ul>
StateDetail	Detailed packet capture status.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Stopped.</li> <li><b>1</b>—Started.</li> <li><b>2</b>—Saving captured packets.</li> </ul>

## PCAPWARE/CaptureProgress

This table contains information about the packet capture progress.

## XML structure

```
<PCAPWARE>
  <CaptureProgress>
    <Percent></Percent>
  </CaptureProgress>
</PCAPWARE>
```

## Table description

Item	Description
Feature name	PCAPWARE
Table name	CaptureProgress
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Percent	Percent of captured packets that have been saved.	N/A	Unsigned integer.

## PCAPWARE/StartCapture

Message	Explanation
Failed to start packet capture. Reason: Packet capture is not supported on a shared interface. 不支持共享口，开启报文捕获失败。	A user tried to start packet capture on a shared interface. Packet capture is not supported on a shared interface. 尝试在共享口进行报文捕获导致报文捕获失败，目前报文捕获不支持共享口抓包。
Saving captured packets to file... Please wait for a while or stop the ongoing packet capture process by force. 正在读取缓存报文，如果想继续操作请执行强制停止。	The system was writing the captured packets in memory to a file. You can wait for a while or stop the ongoing packet capture process by force to start packet capture again immediately. 缓存中还有报文没有读出，如果想继续操作请执行强制停止报文捕获。
Failed to start packet capture. Reason: Not enough memory. 内存达到一级告警门限，开启报文捕获失败。	Not enough memory. Please release enough memory space. 内存达到一级告警门限，请预留足够的内存。
Failed to start packet capture. Reason: The specified file server is unreachable. 外部存储服务器不可达，开启报文捕获失败。	The specified file server is unreachable. Verify that the file server IP address is correctly configured on the device and the file server is reachable. 外部存储服务器不可达，请检查外部服务器地址配置是否正确，路由是否可达。
A two-way packet capture process is already started. To start another packet capture process, stop the existing process first. 报文捕获已经开始，若要重新开始抓包，请先停止当前报文捕获。	A two-way packet capture process is already started. To start another packet capture process, stop the existing process first. 报文捕获已经开始，又尝试开始捕获报文，如果想重新开始抓包，请先停止当前报文捕获。

## PCAPWARE/StopCapture

Message	Explanation
Packet capture already stopped. 报文捕获已经停止。	The capture is already stopped. 报文捕获已经停止，又尝试停止报文捕获。
Saving captured packets to file... Please wait for a while or stop the ongoing packet capture process by force. 正在读取缓存报文，如果想继续操作请执行强制停止。	The system was writing the captured packets in memory to a file. You can wait for a while or stop the ongoing packet capture process by force. 缓存中还有报文没有读出，如果想继续操作请执行强制停止报文捕获。

## PCAPWARE/GlobalConf

Message	Explanation
A two-way packet capture process is already started. To change relevant settings, stop the	It is not permit to change relevant settings when a two-way packet capture process is already started. To change relevant settings,

**process first.**

报文捕获已经开始，若要修改相关配置，请先停止当前报文捕获。

**stop the process first.**

报文捕获开始时不允许修改配置，若要修改相关配置，请先停止当前报文捕获。

## PEX/PEXPorts

Message	Explanation
Operation failed. The PEX port ID is out of range. 操作失败。PEX端口编号超出取值范围。	The PEX port ID is out of range. 指定的 PEX 端口编号超出取值范围。
The PEX port doesn't exist. 该PEX端口不存在。	The PEX port does not configuration. 指定的PEX端口还没有配置。
Operation failed. The number of PEX port's associated physical interfaces reached the upper limit. PEX端口的成员接口个数已达到最大值。	The number of PEX port's associated physical interfaces reached the upper limit. PEX端口的成员接口个数已经达到上限。
The virtual chassis ID or virtual slot number is already used. 该虚拟框号/虚拟槽位号已经被使用。	The virtual chassis ID or virtual slot number is already used. 指定的虚拟框号/虚拟槽位号已经被使用。
Interface <i>Ten-Gigabitethernet1/0/7</i> has been bound to another PEX port. 接口 <i>Ten-Gigabitethernet1/0/7</i> 已与另一PEX端口绑定。	The interface has been bound to another PEX port. 指定的接口已经与另外的PEX绑定。
The type of interface <i>Ten-Gigabitethernet1/0/7</i> is not supported. 不支持接口 <i>Ten-Gigabitethernet1/0/7</i> 的接口类型。	The interface type is not supported to bind to PEX port. 不支持指定的接口所属的接口类型绑定到PEX端口。
Interface <i>Ten-Gigabitethernet1/0/7</i> is already used exclusively by another feature and can't be bound to a PEX port. 接口 <i>Ten-Gigabitethernet1/0/7</i> 已被其他特性独占，不能配置为PEX端口的成员接口。	The interface is already used exclusively by another feature and can't be bound to a PEX port. 指定的接口已经被其它特性占用，不能配置为PEX端口的成员。
Configuration synchronization timed out. 同步配置超时。	Configuration synchronization timed out. 同步配置超时。
Configuration synchronization failed. 同步配置失败。	Configuration synchronization failed. 同步配置失败。
Interface <i>Ten-Gigabitethernet1/0/7</i> has been bound to the PEX port. 接口 <i>Ten-Gigabitethernet1/0/7</i> 已经与该PEX端口绑定。	The interface has been bound to the PEX port. 指定的接口已经绑定到指定的PEX端口。
Interface <i>Ten-Gigabitethernet1/0/7</i> switching failed. 接口 <i>Ten-Gigabitethernet1/0/7</i> 转换失败。	The interface binding to PEX port is failed. 指定的端口绑定到PEX端口失败。
Can't perform the operation when the PEX is loading. PEX加载时不能执行该操作。	Can't perform the operation when the PEX is loading. PEX加载时不能执行该操作。
The PEX port ID is already used in another MDC. PEX端口编号已经在其他MDC中使用。	The PEX port ID is already used in another MDC. 指定的PEX端口号已经在别的MDC内使用。

Physical interface <i>Ten-GigabitEthernet100/0/7</i> on PEXs can't be bound to a PEX port. PE板上的物理接口 <i>Ten-GigabitEthernet100/0/7</i> 不能绑定到PEX端口。	The physical interface on PEXs can't be bound to a PEX port. PE板上的物理口不能绑定到PEX端口
The virtual chassis ID or virtual slot number is not in range. 虚拟框号/虚拟槽位号超出了范围。	The virtual chassis ID or virtual slot number is not in range. 虚拟框号/虚拟槽位号超出了范围。
Interface <i>Ten-GigabitEthernet1/0/7</i> doesn't exist. 该接口不存在。	The interface does not exist. 指定的接口不存在。

# PFC

## PFC/GlobalCfg

This table contains the global PFC configuration.

### XML structure

```
<PFC>
  <GlobalCfg>
    <State></State>
  </GlobalCfg>
</PFC>
```

### Table description

Item	Description
Feature name	PFC
Table name	GlobalCfg
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
State	Global PFC state.	N/A	Enumeration: <ul style="list-style-type: none"><li>enable.</li><li>disable.</li></ul>	N/A

## PFC/DeadLockIntervals

This table contains the detection interval information of the specified CoS.

### XML structure

```
<PFC>
  <DeadLockIntervals>
    <DeadLockInterval>
      <Chassis></Chassis>
      <Slot></Slot>
    </DeadLockInterval>
  </DeadLockIntervals>
</PFC>
```

```

    <CPUID></CPUID>
    <Cos></Cos>
    <Interval></Interval>
  </DeadLockInterval>
</DeadLockIntervals>
</PFC>

```

## Table description

Item	Description
Feature name	PFC
Table name	DeadLockIntervals
Table type	Multi-instance table
Row name	DeadLockInterval
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the entity resides.	Index	Unsigned integer. Value range: 0 to 65535.	The value is 65535 when the current devie's type is centralized.
Slot	Slot ID of the device node.	Index	Unsigned integer. Value range: 0 to 65535.	The value is 65535 when the current devie's type is centralized.
CPUID	CPU ID.	Index	Unsigned integer. Value range: 0 to 65535.	The value is 65535 when the current devie's type is centralized.
Cos	Class of service	Index	Unsigned integer. Value range: 0 to 7.	N/A
Interval	Detection interval configuration	N/A	Unsigned integer. Value range: 1 to 15	N/A

## PFC/DeadLockPrecisions

This table contains the timer precision configuration.

## XML structure

```

<PFC>
  <DeadLockPrecisions>
    <DeadLockPrecision>

```

```

    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
    <Precision></Precision>
  </DeadLockPrecision>
</DeadLockPrecisions>
</PFC>

```

## Table description

Item	Description
Feature name	PFC
Table name	DeadLockPrecisions
Table type	Multi-instance table
Row name	DeadLockPrecision
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the entity resides.	Index	Unsigned integer. Value range: 0 to 65535.	The value is 65535 when the current devie's type is centralized.
Slot	Slot ID of the device node.	Index	Unsigned integer. Value range: 0 to 65535.	The value is 65535 when the current devie's type is centralized.
CPUID	CPU ID.	Index	Unsigned integer. Value range: 0 to 65535.	The value is 65535 when the current devie's type is centralized.
Precision	Timer precision configuration	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—High.</li> <li>2—Normal</li> <li>3—Low</li> </ul>	N/A

## PFC/PortDeadLocks

This table contains setting deadlock enable and recover-mode manual.

## XML structure

```

<PFC>
  <PortDeadLocks>
    <PortDeadLock>

```

```

    <IfIndex></IfIndex>
    <State></State>
    <RecoverMode></RecoverMode>

## PIM/Instances

This table contains IPv4 PIM instance information.

### XML structure

```
<PIM>
  <Ipv4Instances>
    <Instance>
      <VRF></VRF>
      <RegWholeChks></RegWholeChks>
      <SsmPolicy></SsmPolicy>
    </Instance>
  </Ipv4Instances>
</PIM>
```

### Table description

Item	Description
Feature name	PIM
Table name	Ipv4Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	This table supports only default VRF.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN name.	Index	String. Length: 0 to 31 characters.	Empty string indicates default VRF.
RegWholeChks	Checksum calculating rule for PIM register messages.	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Calculates the checksum based on an entire register message.</li><li><b>false</b>—Calculates the checksum based on the header of a register message (default).</li></ul>	N/A
SsmPolicy	ACL number.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 2000 to 2999.	

## PIM/Interfaces

This table contains IPv4 PIM interface information.

## XML structure

```

<PIM>
  <Ipv4Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Mode></Mode>
    </Interface>
  </Ipv4Interfaces>
</PIM>

```

## Table description

Item	Description
Feature name	PIM
Table name	Ipv4Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Mode	PIM Mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—PIM-SM.</li> <li>2—PIM-DM.</li> </ul>	N/A

</PIM>
```

## Table description

Item	Description
Feature name	PIM
Table name	Ipv4Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	This table supports only default VRF.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN name.	Index	String. Length: 0 to 31 characters.	Empty string indicates default VRF.
RegWholeChks	Checksum calculating rule for PIM register message.	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Calculates the checksum based on an entire register message.</li><li><b>false</b>—Calculates the checksum based on the header of a register message (default).</li></ul>	N/A
SsmPolicy	ACL number.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A

# PIM/Interfaces

This table contains IPv4 PIM interface information.

## XML structure

```
<PIM>
  <Ipv4Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Mode></Mode>
    </Interface>
  </Ipv4Interfaces>
</PIM>
```

## Table description

Item	Description
Feature name	PIM
Table name	Ipv4Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 3 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Mode	PIM Mode.	N/A	Enumeration: <ul style="list-style-type: none"><li>1—PIM-SM.</li><li>2—PIM-DM.</li></ul>	N/A

# PIM/Ipv4Nbrs

This table contains IPv4 PIM neighbor information.

## XML structure

```
<PIM>
```

```

<Ipv4Nbrs>
  <Nbr>
    <IfIndex></IfIndex>
    <NbrAddr></NbrAddr>
    <Uptime></Uptime>
    <Expires></Expires>
  </Nbr>
</Ipv4Nbrs>
</PIM>

```

## Table description

Item	Description
Feature name	PIM
Table name	Ipv4Nbrs
Table type	Multi-instance table
Row name	Nbr
Restrictions	This table supports only Layer 3 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
NbrAddr	IPv4 address.	Index	String, dotted decimal notation.	Example: 1.1.1.1.
Uptime	Length of time the PIM neighbor has been up.	N/A	Unsigned integer (in seconds).	N/A
Expires	Time remaining of the PIM neighbor lifetime.	N/A	Unsigned integer (in seconds).	The value of 0xFFFFFFFF means that the PIM neighbor is always up and reachable.

## PIM/Instances

Message	Explanation
PIM is not configured. PIM尚未配置。	During executing set operation, PIM is not configured. 对该表进行配置时，PIM 还未配置。
PIM is not ready. PIM尚未就绪。	During executing set operation, PIM is not complete startup. 对该表进行配置时，PIM还未完全启动。
PIM is not enabled. PIM协议尚未开启。	During executing set operation, resource is not enough, that result in failing to create PIM view. 对该表进行配置时，资源不足，导致创建PIM视图失败。

## PIM/Interfaces

Message	Explanation
PIM is not configured. PIM尚未配置。	During executing set operation, PIM is not configured. 对该表进行配置时，PIM 还未配置。
PIM is not ready. PIM尚未就绪。	During executing set operation, PIM is not complete startup. 对该表进行配置时，PIM还未完全启动。
PIM-DM and PIM-SM can't coexist in the same VRF. 同一VRF内不能同时配置PIM-SM和PIM-DM。	During executing replace or merge operation for mode of this interface, PIM_SM or PIM_DM mode is already configured. Before setting new mode, deleting or removing previous mode is required. 通过replace或者merge操作更改接口下mode时，接口下已经配置了PIM-SM或者PIM-DM。更改时需要先去使能之前的mode，再配置新的mode。
PIM is not enabled on this interface. 接口上的PIM协议尚未开启。	Resource is not enough, that result in failing to enable PIM on this interface. 资源不足，导致接口上使能PIM协议失败。

## PIM/Ipv4Nbrs

Message	Explanation
PIM is not configured. PIM尚未配置。	During executing set operation, PIM is not configured. 对该表进行配置时，PIM 还未配置。
PIM is not ready. PIM尚未就绪。	During executing set operation, PIM is not complete startup. 对该表进行配置时，PIM还未完全启动。

    </Export>
  </ExportPublicKeys>
</PKEY>
```

### Table description

Item	Description
Feature name	PKEY
Table name	ExportPublicKeys
Table type	Multi-instance table
Row name	Export
Restrictions	None.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AlgID	Identity of algorithm	Index	Unsigned integer. Value range: 1 to 2 <sup>32</sup> -1.	See table PKEYCapabilities for supported algorithms.
KeyName	Name of local asymmetric key	Index	String. Length: 0 to 64 characters. Case insensitive.	A key name with 0 characters belongs to a default key.
FormatID	Identity of SSH format	N/A	Unsigned integer. Value range: 1 to 2 <sup>32</sup> -1.	See table SSHFormats for supported algorithm.

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	User path of the file ,which the public key will be exported to.	N/A	String. Length: 1 to 128 characters. Case insensitive.	The path can't be the followed value: <ul style="list-style-type: none"> <li>• "hostkey"</li> <li>• "serverkey"</li> <li>• "dsaakey"</li> <li>• "ecdsaakey"</li> <li>• path which only contain "."."</li> <li>• path which first character is '/'</li> <li>• path which contains "/" or "../"</li> </ul>
ReplaceFile	If replace existed file	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul> Default value is false	N/A

## PKEY/ImportPeerKeys

This table is used to import peer public key pairs.

### XML structure

```

<PKEY>
  <ImportPeerKeys>
    <Import>
      <PeerKeyName></PeerKeyName>
      <FileName></FileName>
      <ReplaceKey></ReplaceKey>
    </Import>
  </ImportPeerKeys>
</PKEY>

```

### Table description

Item	Description
Feature name	PKEY
Table name	ImportPeerKeys
Table type	Multi-instance table
Row name	Import
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerKeyName	Name of peer public key	Index	String. Length: 1 to 31 characters. Case sensitive	N/A
FileName	Path of peer key file	N/A	String. Length: 1 to 128 characters. Case insensitive.	The path can't be the followed value: <ul style="list-style-type: none"> <li>• "hostkey"</li> <li>• "serverkey"</li> <li>• "dsakey"</li> <li>• "ecdsaakey"</li> <li>• path which only contain ".", "\"</li> <li>• path which first character is '/'</li> <li>• path which contains "/" or "../"</li> </ul>
ReplaceKey	If replace existed peer key	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul> Default value is false	N/A

## PKEY/CreateLocalKeys

This table is used to create local asymmetric key pairs.

## XML structure

```

<PKEY>
  <CreateLocalKeys>
    <Create>
      <AlgID></AlgID>
      <KeyName></KeyName>
      <Length></Length>
      <ReplaceKey></ReplaceKey>
    </Create>
  </CreateLocalKeys>
</PKEY>

```

## Table description

Item	Description
Feature name	PKEY
Table name	CreateLocalKeys
Table type	Multi-instance table

Item	Description
Row name	Create
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AlgID	Identity of algorithm	Index	Unsigned integer. Value range: 1 to 2 <sup>32</sup> -1.	See table PKEYCapabilities for supported algorithms.
KeyName	Name of local asymmetric key	Index	String. Length: 0 to 64 characters. Case insensitive.	A key name with 0 characters belongs to a default key.
Length	Length of public key	N/A	Unsigned integer.	See table PKEYCapabilities for supported length.
ReplaceKey	If replace existed local asymmetric key	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul> Default value is false.	N/A

## PKEY/DestroyLocalKeys

This table is used to destroy local asymmetric key pairs.

## XML structure

```

<PKEY>
  <DestroyLocalKeys>
    <Destroy>
      <AlgID></AlgID>
      <KeyName></KeyName>
    </Destroy>
  </DestroyLocalKeys>
</PKEY>

```

## Table description

Item	Description
Feature name	PKEY
Table name	DestroyLocalKeys
Table type	Multi-instance table

Item	Description
Row name	Destroy
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AlgID	Identity of algorithm	Index	Unsigned integer. Value range: 1 to $2^{32}-1$ .	See table PKEYCapabilities for supported algorithms.
KeyName	Name of local asymmetric key	Index	String. Length: 0 to 64 characters. Case insensitive.	A key name with 0 characters belongs to a default key.

# PKEY

## PKEY/LocalKeys

This table is used to get local public keys.

### XML structure

```
<PKEY>
  <LocalKeys>
    <Key>
      <AlgID></AlgID>
      <KeyName></KeyName>
      <Length></Length>
      <CreatedTime></CreatedTime>
      <Value></Value>
    </Key>
  </LocalKeys>
</PKEY>
```

### Table description

Item	Description
Feature name	PKEY
Table name	LocalKeys
Table type	Multi-instance table
Row name	Key
Restrictions	None.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AlgID	Identity of algorithm	Index	Unsigned integer. Value range: 1 to 2 <sup>32</sup> -1.	See table PKEYCapabilities for supported algorithm.
KeyName	Name of local asymmetric key	Index	String. Length: 1 to 64 characters. Case insensitive	N/A
Length	Length of local asymmetric key	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CreatedTime	When is the key created	N/A	DateTime. Format:HH:MM:SS YYYY/MM/DDT	N/A
Value	The value of public key	N/A	PKCS#1 formatted hex string.	N/A

## PKEY/DefaultLocalKeys

This table is used to get default local public keys.

### XML structure

```

<PKEY>
  <DefaultLocalKeys>
    <Key>
      <AlgID></AlgID>
      <Usage></Usage>
      <Length></Length>
      <CreatedTime></CreatedTime>
      <Value></Value>
    </Key>
  </DefaultLocalKeys>
</PKEY>

```

### Table description

Item	Description
Feature name	PKEY
Table name	DefaultLocalKeys
Table type	Multi-instance table
Row name	Key
Restrictions	None.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AlgID	Identity of algorithm	Index	Unsigned integer. Value range: 1 to 2 <sup>32</sup> -1.	See table PKEYCapabilities for supported algorithm.
Usage	Key Usage	Index	Enumeration:	ServerKey is only

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>1—HostKey.</li> <li>2—ServerKey</li> </ul>	meaningful for RSA, while HostKey is meaningful for all supported algorithms.
Length	Length of local asymmetric key	N/A	Unsigned integer.	N/A
CreatedTime	When is the key created	N/A	DateTime. Format:HH:MM:SS YYYY/MM/DDT	N/A
Value	The value of key	N/A	PKCS#1 formatted hex string.	N/A

## PKEY/PeerKeys

This table is used to get peer public keys.

### XML structure

```

<PKEY>
  <PeerKeys>
    <Key>
      <PeerKeyName></PeerKeyName>
      <AlgID></AlgID>
      <Length></Length>
      <Value></Value>
    </Key>
  </PeerKeys>
</PKEY>

```

### Table description

Item	Description
Feature name	PKEY
Table name	PeerKeys
Table type	Multi-instance table
Row name	Key
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerKeyName	Name of peer public key	Index	String. Length: 1 to 31 characters. Case sensitive	N/A
AlgID	Identity of algorithm	N/A	Unsigned integer. Value range: 1 to 2 <sup>32</sup> -1.	See table PKEYCapabilities for supported algorithm.
Length	Length of asymmetric key	N/A	Unsigned integer.	N/A
Value	The value of key	N/A	PKCS#1 formatted hex string.	N/A

## PKEY/GetSSHPublicKeys

This table is used to export local public key to SSH formatted data.

## XML structure

```
<PKEY>
  <GetSSHPublicKeys>
    <Key>
      <AlgID></AlgID>
      <KeyName></KeyName>
      <FormatID></FormatID>
      <Value></Value>
    </Key>
  </GetSSHPublicKeys>
</PKEY>
```

## Table description

Item	Description
Feature name	PKEY
Table name	GetSSHPublicKeys
Table type	Multi -instance table
Row name	Key
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AlgID	Identity of algorithm	Index	Unsigned integer. Value range: 1 to 2 <sup>32</sup> -1.	See table PKEYCapabilities for supported algorithm.
KeyName	Name of local asymmetric key	Index	String. Length: 0 to 64 characters. Case insensitive.	A key name with 0 characters belongs to a default key.
FormatID	Identity of SSH format	Index	Unsigned integer. Value range: 1 to 2 <sup>32</sup> -1.	See table SSHFormats for supported algorithm.
Value	Information of SSH format key	N/A	String. Length: 1 to 2048 characters.	N/A

## PKEY/SSHFormats

This table described supported SSH format

## XML structure

```
<PKEY>
  <SSHFormats>
    <SSHFormat>
      <FormatID></FormatID>
      <FormatName></FormatName>
    </SSHFormat>
  </SSHFormats>
</PKEY>
```

## Table description

Item	Description
Feature name	PKEY
Table name	SSHFormats
Table type	Multi -instance table
Row name	SSHFormat
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FormatID	Identity of SSH format	Index	Unsigned integer.	N/A
FormatName	Name of supported SSH format	N/A	String. Length: 1 to 255 characters Case insensitive	N/A

## PKEY/PKEYCapabilities

This table contains supported PKEY algorithm information

### XML structure

```
<PKEY>
  <PKEYCapabilities>
    <PKEYCapability>
      <AlgID></AlgID>
      <AlgName></AlgName>
      <MinLength></MinLength>
      <MaxLength></MaxLength>
      <DefaultLength></DefaultLength>
      <ExportFormatIDList>
        <IDItem></IDItem>
      </ExportFormatIDList>
    </PKEYCapability>
  </PKEYCapabilities>
</PKEY>
```

### Table description

Item	Description
Feature name	PKEY
Table name	PKEYCapabilities
Table type	Multi-instance table
Row name	PKEYCapability
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AlgID	Identity of algorithm	Index	Unsigned integer. Value range: 1 to $2^{32}-1$ .	N/A
AlgName	Name of algorithm	N/A	String. Length: 1 to 255 characters. Case insensitive.	The name of supported algorithm
MinLength	Minimal length of supported algorithm	N/A	Unsigned integer.	N/A
MaxLength	Maximal length of supported algorithm	N/A	Unsigned integer.	N/A
DefaultLength	Default length of supported algorithm	N/A	Unsigned integer.	N/A
ExportFormatList	Supported export SSH format list	Data structure	Members include: <ul style="list-style-type: none"> <li>IDItem.</li> </ul>	N/A
IDItem	Identity of SSH format	N/A	Unsigned integer. Value range: 1 to $2^{32}-1$	Contains up to 3 IDItem in ExportFormatList .

# PKI

# PKI/ImportCertificates

This table is used to import the certificate to device.

## XML structure

```
<PKI>
  <ImportCertificates>
    <Import>
      <Domain></Domain>
      <CertificateType></CertificateType>
      <FilePath></FilePath>
      <Password></Password>
      <NewPubKeyName></NewPubKeyName>
    </Import>
  </ImportCertificates>
</PKI>
```

## Table description

Item	Description
Feature name	PKI
Table name	ImportCertificates
Table type	Multi-instance table
Row name	Import
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include: ~, ", ' , \ ,   , . , * , < , > , / .
CertificateType	The type of certificate	Index	Enumeration: <ul style="list-style-type: none"> <li>1—CA</li> <li>2—Local.</li> </ul>	N/A
FilePath	The path of certificate file to be imported	N/A	String	The file must be existed in the device
Password	Password used to	N/A	String	<b>Case sensitive.</b> <b>The password is</b>

Column name	Column description	Column type	Data type and restrictions	Remarks
	decrypt the certificate, which can be PKCS#12 or PEM formatted.			<b>necessary as follow:</b> <ul style="list-style-type: none"> <li>The file format is PKCS#12 and the certificate type is local</li> <li>The file format is PEM, and there is local certificate and private key in the file</li> </ul>
NewPubKey Name	The name of new public key.	N/A	String. Length: 1 to 64 characters.	<ul style="list-style-type: none"> <li>Case insensitive.</li> <li>Only contain letters, number and "-".</li> <li>If the name is empty and there is no key name in the domain, it will use the domain name as the key name.</li> </ul>

## PKI/ExportCACertificates

This table is used to export the CA certificate.

### XML structure

```

<PKI>
  <ExportCACertificates>
    <Export>
      <Domain></Domain>
      <FileFormat></FileFormat>
      <IsWithCertsChain></IsWithCertsChain>
      <FilePath></FilePath>
      <ReplaceFile></ReplaceFile>
    </Export>
  </ExportCACertificates>
</PKI>

```

### Table description

Item	Description
Feature name	PKI

Table name	ExportCACertificates
Table type	Multi-instance table
Row name	Export
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include: ~, *, \,  , ., " , ' , < , > , , , / , .
FileFormat	The file format	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—DER</li> <li>2—PEM</li> </ul>	N/A
IsWithCertsChain	If exported certificate contains CA certificate chain	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Yes.</li> <li>false—No.</li> </ul> Default value is false	N/A
FilePath	The path of the file will export certificate to	N/A	String	The path must be existed in the device
ReplaceFile	If replace when the file is existed.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Yes.</li> <li>false—No.</li> </ul> Default value is false	N/A

## PKI/ExportLocalCertificates

This table is used to export the local certificate.

## XML structure

```

<PKI>
  <ExportLocalCertificates>
    <Export>
      <Domain></Domain>
      <FileFormat></FileFormat>
      <IsWithCertsChain></IsWithCertsChain>

## Table description

Item	Description
Feature name	PKI
Table name	Domains
Table type	Multi-instance table
Row name	Domain
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include: " ~ , * " \ ,   ; . " < " > _ : " / " .
CALidentifier	CA identifier name.	N/A	String. Length: 1 to 63 characters. Case sensitive.	N/A
Entity	Reference a PKI entity for the PKI domain	N/A	String. Case insensitive. Length: 1 to 31 characters.	N/A
CertRequest From	The type of certificate request reception authority.	N/A	Enumeration: 1—CA. 2—RA.	N/A
CertRequest URL	The URL of the certificate request reception authority (CA or RA)	Data structure	Members include: URL VRF	N/A
URL	The value of	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	URL		Length: 1 to 511 characters. Case sensitive.	
VRF	The vpn instance which the address is belongs to.	N/A	String: Length:1 to 31 characters Case sensitive.	It's a public network when VRF is not specified.
CertRequest Mode	The certificate request mode.	Data structure	Members include: Mode PWDType Password	N/A
Mode	The mode of certificate request	N/A	Enumeration: 1—Auto. 2—Manual. Default value is 2.	N/A
PWDType	The password type of certificate revocation.	N/A	Enumeration: 1—simple. 2—cipher.	The column can be valid only when Mode is Auto
Password	The password value of certificate revocation.	N/A	String. Length: 1 to 73 characters. Case sensitive.	The column can be valid only when Mode is Auto. Type simple string length is 1 to 31. Type cipher string length is 1 to 73.
RootCertFingerprint	The fingerprint for verifying the validity of the CA root certificate.	Data structure	Members include: Type Value	N/A
Type	The fingerprint type.	N/A	Enumeration: 1—MD5. 2—SHA1.	N/A
Value	The fingerprint value.	N/A	String: Length:32 or 40 hex characters Case sensitive.	Type MD5 is 32 hex string length. Type SHA1 is 40 hex string length.
LDAPServer	An LDAP server for a PKI domain	Data structure	Members include: Host PortNumber VRF	N/A
Host	The hostname of the LDAP server	N/A	String: Length:1 to 255 characters Case sensitive.	The string can be IPv4 address, IPv6 address, or domain name.
PortNumber	The port number of the LDAP server	N/A	Unsigned integer: Value range:1 to 65535 Default value is 389.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	The vpn instance which the address is belongs to.	N/A	String: Length:1 to 31 characters Case sensitive.	It's a public network when VRF is not specified.
CRLURL	the URL of the CRL repository.	Data structure	Members include: URL VRF	N/A
URL	The value of URL	N/A	String. Length: 1 to 511 characters. Case sensitive.	The URL format is ldap://server_location or http://server_location, Server_location can be an IP address or a domain name.
VRF	The vpn instance which the address is belongs to.	N/A	String: Length:1 to 31 characters Case sensitive.	It's a public network when VRF is not specified.
CRLCheck	If check whether the certificate has been revoked by CRL	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable.</li> </ul> Default value is false.	N/A
Usage	Certificate usage for requesting certificate	Data structure	Members include: <ul style="list-style-type: none"> <li>IKE</li> <li>SSLServer</li> <li>SSLClient.</li> </ul>	Can include one or more certificate usage at the same time.
IKE	Use certificate as the IKE	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable.</li> </ul>	N/A
SSLServer	Use certificate as the SSL server certificates	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable.</li> </ul>	N/A
SSLClient	Use certificate as the SSL client certificates	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable.</li> </ul>	N/A
CertRequest Poll	The polling interval and the maximum number of attempts to query certificate request status.	Data structure	Members include: Count Interval	N/A
Count	The value of the maximum number	N/A	Unsigned integer: Value range:1 to 100 Default value is 50.	N/A
Interval	The value of the polling	N/A	Unsigned integer:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	interval		Value range:5 to 168, in minutes Default value is 20.	
SourceIP	The source IP address for PKI protocol packets.	Data structure	Members include: AddressType Address IfIndex	N/A
AddressType	The type of IP Address	N/A	Enumeration: 1—IPv4 2—IPv6	AddressType, Address must be configured together. Can not be configured together with IfIndex.
Address	The value of IP Address	N/A	IPv4 or IPv6	N/A
IfIndex	The index of interface	N/A	Unsigned integer.	Can not be configured together with AddressType and Address. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
pkcs7EncryType	Encryption algorithm for the PKI domain	N/A	Unsigned integer.	See the PKICapabilities table in Comware V7 PKI NETCONF XML API Data Reference for supported encryption algorithms.

## PKI/DomainPubkeys

This table is used to reference the asymmetric keys for PKI domain.

### XML structure

```

<PKI>
  <DomainPubkeys>
    <Pubkey>
      <Domain></Domain>
      <Type></Type>
      <Purpose></Purpose>
      <Name></Name>
      <Length></Length>
    </Pubkey>
  
```

```
</DomainPubkeys>
</PKI>
```

## Table description

Item	Description
Feature name	PKI
Table name	DomainPubkeys
Table type	Multi-instance table
Row name	Pubkey
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include: ~, *, \,  , ", ., <, >, ' , /, .
Type	Type of algorithm	Index	Enumeration: <ul style="list-style-type: none"> <li>1—RSA.</li> <li>2—DSA.</li> <li>3—ECDSA.</li> <li>4—SM2</li> </ul>	See the PKI/AuthorityAlgs table in Comware V7 PKI NETCONF XML API Data Reference for supported algorithms.
Purpose	Key purpose	Index	Enumeration: <ul style="list-style-type: none"> <li>1—General</li> <li>2—Signature</li> <li>3—Encryption</li> </ul>	ECDSA key and DSA key can be used for signature purpose, while RSA key can be used for all purpose.
Name	Key name	N/A	String. Length: 1 to 64 characters Case insensitive.	Only contain letters, number and "-".
Length	Length of public key	N/A	Unsigned integer.	See table PKI/AuthorityAlgs for supported length.

## PKI/Entities

This table is used to configure the PKI entities.

## XML structure

```
<PKI>
  <Entities>
```

```

<Entity>
  <EntityName></EntityName>
  <CommonName></CommonName>
  <Country></Country>
  <State></State>
  <Locality></Locality>
  <Organization></Organization>
  <OrganizationUnit></OrganizationUnit>
  <FQDN></FQDN>
  <IP>
    <Ipv4Address></Ipv4Address>
    <IfIndex></IfIndex>
  </IP>
</Entity>
</Entities>
</PKI>

```

## Table description

Item	Description
Feature name	PKI
Table name	Entities
Table type	Multi-instance table
Row name	Entity
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EntityName	PKI entity name	Index	String. Length: 1 to 31 characters. Case insensitive.	N/A
CommonName	The common name	N/A	Text. Length: 1 to 63 characters. Case sensitive.	Comma can not be contained.
Country	The country code	N/A	Text. Length: 2 to 2 characters.	Country code is described in ISO 3166-1
State	The state name	N/A	Text. Length: 1 to 63 characters. Case sensitive.	Comma can not be contained.
Locality	The locality name	N/A	Text. Length: 1 to 63 characters. Case sensitive.	Comma can not be contained.

Column name	Column description	Column type	Data type and restrictions	Remarks
Organization	The organization name	N/A	Text. Length: 1 to 63 characters. Case sensitive.	Comma can not be contained.
OrganizationUnit	The unit name	N/A	Text. Length: 1 to 63 characters. Case sensitive.	Comma can not be contained.
FQDN	The FQDN name	N/A	String. Length: 1 to 255 characters Case sensitive.	N/A
IP	The IP address	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv4Address.</li> <li>IfIndex..</li> </ul>	Either Ipv4Address or IfIndex can be specified.
Ipv4Address	Ipv4 address	N/A	Ipv4Address	N/A
IfIndex	The index of interface	N/A	Unsigned integer.	Get the primary Ipv4 address of the interface.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

## PKI/CertAccessPolicies

This table is used to configure the certificate access control policies.

### XML structure

```

<PKI>
  <CertAccessPolicies>
    <Policy>
      <Name></Name>
    </Policy>
  </CertAccessPolicies>
</PKI>

```

### Table description

Item	Description
Feature name	PKI
Table name	CertAccessPolicies

Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	The name of certificate access control policy	Index	String. Length: 1 to 31 characters. Case insensitive.	N/A

## PKI/CertAccessRules

This table is used to configure the rules of the certificate access control policy.

## XML structure

```

<PKI>
  <CertAccessRules>
    <Rule>
      <Policy></Policy>
      <RuleID></RuleID>
      <Action></Action>
      <AttributeGroup></AttributeGroup>
    </Rule>
  </CertAccessRules>
</PKI>

```

## Table description

Item	Description
Feature name	PKI
Table name	CertAccessRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Policy	The name of certificate access control policy	Index	String. Length: 1 to 31 characters. Case insensitive.	N/A
RuleID	Index of the rule in the access control policy.	Index	Unsigned integer. Value range:1 to 16	The smaller the RuleID is, the higher the priority is.
Action	How to operate the certificate that match the rule	N/A	Enumeration: <ul style="list-style-type: none"><li>• 1—Permit</li><li>• 2—Deny</li></ul>	N/A
AttributeGroup	The name of certificate attribute group	N/A	String. Length: 1 to 31 characters. Case insensitive.	N/A

## PKI/CertAttributeGroups

This table is used to configure the certificate attribute groups.

## XML structure

```
<PKI>
  <CertAttributeGroups>
    <Group>
      <Name></Name>
    </Group>
  </CertAttributeGroups>
</PKI>
```

## Table description

Item	Description
Feature name	PKI
Table name	CertAttributeGroups
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	The name of certificate attribute group	Index	String. Length: 1 to 31 characters. Case insensitive.	N/A

## PKI/CertAttributes

This table is used to configure the attributes of the certificate attribute groups.

## XML structure

```
<PKI>
  <CertAttributes>
    <Attribute>
      <Group></Group>
      <AttributeID></AttributeID>
      <Object></Object>
      <Item></Item>
      <Operator></Operator>
      <Value></Value>
    </Attribute>
  </CertAttributes>
</PKI>
```

## Table description

Item	Description
Feature name	PKI
Table name	CertAttributes
Table type	Multi-instance table
Row name	Attribute
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Group	The name of certificate attribute group	Index	String. Length: 1 to 31 characters. Case insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AttributeID	Index of the attribute in the certificate attribute group	Index	Unsigned integer. Value range:1 to 16	The smaller the AttributeID is, the higher the priority is.
Object	The object which to be matched	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—alt-subject-name</li> <li>2—issuer-name</li> <li>3—subject-name</li> </ul>	N/A
Item	The item in the object	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—DN</li> <li>2—FQDN</li> <li>3—IpAddress</li> </ul>	It's can be each value when the object is subject-name or issuer-name, but only can be FQDN or IpAddress when the object is alt-subject-name.
Operator	How to operate the item	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—contain</li> <li>2—equal</li> <li>3—not contain</li> <li>4—not equal</li> </ul>	N/A
Value	The value that be used to match with item.	N/A	String. Length: 1 to 255 characters. Case insensitive.	N/A

## PKI/StoragePath

This table is used to configure the PKI storage path.

### XML structure

```

<PKI>
  <StoragePath>
    <StorageCertPath></StorageCertPath>
    <StorageCRLPath></StorageCRLPath>
  </StoragePath>
</PKI>

```

### Table description

Item	Description
Feature name	PKI
Table name	StoragePath
Table type	Single-instance table

Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StorageCert Path	The PKI certificate storage path	N/A	String. Case sensitive.	The path can't begin with "/" or "../"
StorageCRL Path	The PKI CRL storage path	N/A	String. Case sensitive.	The path can't begin with "/" or "../"

## Table description

Item	Description
Feature name	PKI
Table name	Domains
Table type	Multi-instance table
Row name	Domain
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include: ~, *, ", \,  , ., <, >, ;, /, .
CAIdentifier	CA identifier name.	N/A	String. Length: 1 to 63 characters. Case sensitive.	N/A
Entity	Reference a PKI entity for the PKI domain	N/A	String. Length: 1 to 31 characters. Case insensitive.	N/A
CertRequest From	The type of certificate request reception authority.	N/A	Enumeration: 1—CA. 2—RA.	N/A
CertRequest URL	The URL of the certificate request reception authority (CA or RA)	Data structure	Members include: URL VRF	N/A
URL	The value of URL	N/A	String. Length: 1 to 511 characters. Case sensitive.	N/A
VRF	The vpn	N/A	String:	It's a public network

Column name	Column description	Column type	Data type and restrictions	Remarks
	instance which the address is belongs to.		Length:1 to 31 characters Case sensitive.	when VRF is not specified.
CertRequest Mode	The certificate request mode.	Data structure	Members include: Mode	N/A
Mode	The type of Mode	N/A	Enumeration: 1—Auto. 2—Manual. Default value is 2.	N/A
RootCertFingerprint	The fingerprint for verifying the validity of the CA root certificate.	Data structure	Members include: Type Value	N/A
Type	The fingerprint type.	N/A	Enumeration: 1—MD5. 2—SHA1.	N/A
Value	The fingerprint value.	N/A	String: Length:32 or 40 hex characters Case sensitive.	Type MD5 is 32 hex string length. Type SHA1 is 40 hex string length.
LDAPServer	An LDAP server for a PKI domain	Data structure	Members include: Host PortNumber VRF	N/A
Host	The hostname of the LDAP server	N/A	String: Length:1 to 255 characters Case sensitive.	The string can be IPv4 address, IPv6 address, or domain name.
PortNumber	The port number of the LDAP server	N/A	Unsigned integer: Value range:1 to 65535 Default value is 389.	N/A
VRF	The vpn instance which the address is belongs to.	N/A	String: Length:1 to 31 characters Case sensitive.	It's a public network when VRF is not specified.
CRLURL	The URL of the CRL repository.	Data structure	Members include: URL VRF	N/A
URL	The value of URL	N/A	String. Length: 1 to 511 characters. Case sensitive.	The URL format is ldap://server_location or http://server_location, Server_location can be an IP address or a domain name.
VRF	The vpn instance which	N/A	String:	It's a public network when VRF is not

Column name	Column description	Column type	Data type and restrictions	Remarks
	the address is belongs to.		Length:1 to 31 characters Case sensitive.	specified.
CRLCheck	If check whether the certificate has been revoked by CRL	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable.</li> </ul> Default value is false.	N/A
Usage	Certificate usage for requesting certificate	Data structure	Members include: <ul style="list-style-type: none"> <li>IKE</li> <li>SSLServer</li> <li>SSLClient.</li> </ul>	Can include one or more certificate usage at the same time.
IKE	Use certificate as the IKE	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable.</li> </ul>	N/A
SSLServer	Use certificate as the SSL server certificates	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable.</li> </ul>	N/A
SSLClient	Use certificate as the SSL client certificates	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable.</li> </ul>	N/A
CertRequest Poll	The polling interval and the maximum number of attempts to query certificate request status.	Data structure	Members include: Count Interval	N/A
Count	The value of the maximum number	N/A	Unsigned integer: Value range:1 to 100 Default value is 50.	N/A
Interval	The value of the polling interval	N/A	Unsigned integer: Value range:5 to 168, in minutes Default value is 20.	N/A
SourceIP	The source IP address for PKI protocol packets.	Data structure	Members include: AddressType Address IfIndex	N/A
AddressType	The type of IP Address	N/A	Enumeration: 1—IPv4 2—IPv6	N/A
Address	The value of IP Address	N/A	IPv4 or IPv6	N/A
IfIndex	The index of interface	N/A	Unsigned integer.	Get the primary IP address of the interface.

Column name	Column description	Column type	Data type and restrictions	Remarks
				Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
pkcs7Encry Type	Encryption algorithm for the PKI domain	N/A	Unsigned integer.	See table PKICapabilities for supported encryption algorithms.

## PKI/DomainPubkeys

This table is used to get the asymmetric keys of PKI domain.

### XML structure

```

<PKI>
  <DomainPubkeys>
    <Pubkey>
      <Domain></Domain>
      <Type></Type>
      <Purpose></Purpose>
      <Name></Name>
      <Length></Length>
    </Pubkey>
  </DomainPubkeys>
</PKI>

```

### Table description

Item	Description
Feature name	PKI
Table name	DomainPubkeys
Table type	Multi-instance table
Row name	Pubkey
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include: ~ " ' * " '   , . : ; " < " > " "" "" "" "" "" / "
Type	Type of algorithm	Index	Enumeration: <ul style="list-style-type: none"> <li>1—RSA.</li> <li>2—DSA.</li> <li>3—ECDSA.</li> <li>4—SM2.</li> </ul>	See table PKI/AuthorityAlgs for supported encryption algorithim.
Purpose	Key purpose	Index	Enumeration: <ul style="list-style-type: none"> <li>1—General</li> <li>2—Signature</li> <li>3—Encryption</li> </ul>	ECDSA key and DSA key can be used for signature purpose, while RSA key can be used for all purpose.
Name	Key name	N/A	String. Length: 1 to 64 characters Case insensitive.	Only contain letters, number and "-".
Length	Length of public key	N/A	Unsigned integer.	See table PKI/AuthorityAlgs for supported length.

# PKI/Entities

This table is used to get the PKI entities.

## XML structure

```
<PKI>
  <Entities>
    <Entity>
      <EntityName></EntityName>
      <CommonName></CommonName>

Table name	CertAccessPolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	The name of certificate access control policy	Index	String. Length: 1 to 31 characters. Case insensitive.	N/A

## PKI/CertAccessRules

This table is used to get the rules of the certificate access control policy.

## XML structure

```
<PKI>
  <CertAccessRules>
    <Rule>
      <Policy></Policy>
      <RuleID></RuleID>
      <Action></Action>
      <AttributeGroup></AttributeGroup>
    </Rule>
  </CertAccessRules>
</PKI>
```

## Table description

Item	Description
Feature name	PKI
Table name	CertAccessRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Policy	The name of certificate access control policy	Index	String. Length: 1 to 31 characters. Case insensitive.	N/A
RuleID	Index of the rule in the access control policy.	Index	Unsigned integer. Value range:1 to 16	The smaller the RuleID is, the higher the priority is.
Action	How to operate the certificate that match the rule	N/A	Enumeration: <ul style="list-style-type: none"><li>1—Permit</li><li>2—Deny</li></ul>	N/A
AttributeGroup	The name of certificate attribute group	N/A	String. Length: 1 to 31 characters. Case insensitive.	N/A

## PKI/CertAttributeGroups

This table is used to get the certificate attribute groups.

## XML structure

```
<PKI>
  <CertAttributeGroups>
    <Group>
      <Name></Name>
    </Group>
  </CertAttributeGroups>
</PKI>
```

## Table description

Item	Description
Feature name	PKI
Table name	CertAttributeGroups
Table type	Multi-instance table
Row name	Group
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	The name of certificate attribute group	Index	String. Length: 1 to 31 characters. Case insensitive.	N/A

## PKI/CertAttributes

This table is used to get the attributes of the certificate attribute groups.

## XML structure

```
<PKI>
  <CertAttributes>
    <Attribute>
      <Group></Group>
      <AttributeID></AttributeID>
      <Object></Object>
      <Item></Item>
      <Operator></Operator>
      <Value></Value>
    </Attribute>
  </CertAttributes>
```

</PKI>

## Table description

Item	Description
Feature name	PKI
Table name	CertAttributes
Table type	Multi-instance table
Row name	Attribute
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Group	The name of certificate attribute group	Index	String. Length: 1 to 31 characters. Case insensitive.	N/A
AttributeID	Index of the attribute in the certificate attribute group	Index	Unsigned integer. Value range:1 to 16	The smaller the AttributeID is, the higher the priority is.
Object	The object which to be matched	N/A	Enumeration: <ul style="list-style-type: none"><li>• 1—alt-subject-name</li><li>• 2—issuer-name</li><li>• 3—subject-name</li></ul>	N/A
Item	The item in the object	N/A	Enumeration: <ul style="list-style-type: none"><li>• 1—DN</li><li>• 2—FQDN</li><li>• 3—IpAddress</li></ul>	It's can be each value when the object is subject-name or issuer-name, but only can be FQDN o IpAddress when the object is alt-subject-name.
Operator	How to operate the item	N/A	Enumeration: <ul style="list-style-type: none"><li>• 1—contain</li><li>• 2—equal</li><li>• 3—not contain</li><li>• 4—not equal</li></ul>	N/A
Value	The value that be used to match with item.	N/A	String. Length: 1 to 255 characters. Case insensitive.	N/A

# PKI/StoragePath

This table is used to get the PKI storage path.

## XML structure

```
<PKI>
  <StoragePath>
    <StorageCertPath></StorageCertPath>
    <StorageCRLPath></StorageCRLPath>
  </StoragePath>
</PKI>
```

## Table description

Item	Description
Feature name	PKI
Table name	StoragePath
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StorageCert Path	The PKI certificate storage path	N/A	String. Case sensitive.	The path can't begin with "/" or "../"
StorageCRL Path	The PKI CRL storage path	N/A	String. Case sensitive.	The path can't begin with "/" or "../"

# PKI/DomainCACerts

This table is used to get the CA certificates of the PKI domain

## XML structure

```
<PKI>
  <DomainCACerts>
    <Cert>
      <Domain></Domain>
      <SerialNumber></SerialNumber>
      <Issuer></Issuer>
    </Cert>
  </DomainCACerts>
</PKI>
```

```

    <Subject></Subject>
    <Validity>
      <NotBefore></NotBefore>
      <NotAfter></NotAfter>
    </Validity>
    <IsLowestCA></IsLowestCA>
    <DetailInfoText></DetailInfoText>
  </Cert>
</DomainCACerts>
</PKI>

```

## Table description

Item	Description
Feature name	PKI
Table name	DomainCACerts
Table type	Multi-instance table
Row name	Cert
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include: "~", "*", "\",  , ", ., <, >, ' , /, .
SerialNumber	The serial number of the certificate	Index	String.	N/A
Issuer	The issuer name	N/A	String	N/A
Subject	The Subject name	N/A	String	N/A
Validity	The validity date of the certificate	Data structure	Members include: <ul style="list-style-type: none"> <li>NotBefore.</li> <li>NotAfter.</li> </ul>	N/A
NotBefore	The begin time of the validity	N/A	DateTime	N/A
NotAfter	The end time of the validity	N/A	DateTime	N/A
IsLowestCA	If the CA certificate is the lowest in the PKI domain	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—The CA certificate is lowest.</li> <li><b>false</b>—The CA certificate isn't lowest.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DetailInfoText	The text of the ca certificate or the certificate chain.	N/A	String	N/A

## PKI/DomainLocalCerts

This table is used to get the local certificates of the PKI domain

### XML structure

```

<PKI>
  <DomainLocalCerts>
    <Cert>
      <Domain></Domain>
      <KeyUsage></KeyUsage>
      <SerialNumber></SerialNumber>
      <Issuer></Issuer>
      <Subject></Subject>
      <Validity>
        <NotBefore></NotBefore>
        <NotAfter></NotAfter>
      </Validity>
      <DetailInfoText></DetailInfoText>
    </Cert>
  </DomainLocalCerts>
</PKI>

```

### Table description

Item	Description
Feature name	PKI
Table name	DomainLocalCerts
Table type	Multi-instance table
Row name	Cert
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI	Index	String.	Can't

Column name	Column description	Column type	Data type and restrictions	Remarks
	domain name		Length: 1 to 31 characters. Case insensitive.	include: ~ ! " \$ % & ' ( ) * + , - . : ; / .
KeyUsage	The key usage of the certificate	Index	Enumeration: <ul style="list-style-type: none"> <li>1—General.</li> <li>2—Signature.</li> <li>3—Encryption.</li> </ul>	There is only one special usage certificate in one domain, and general usage certificate can't appear with signature/encryption certificate at the same time.
SerialNumber	The serial number of the certificate	N/A	String.	N/A
Issuer	The issuer name	N/A	String	N/A
Subject	The Subject name	N/A	String	N/A
Validity	The validity date of the certificate	Data structure	Members include: <ul style="list-style-type: none"> <li>NotBefore.</li> <li>NotAfter.</li> </ul>	N/A
NotBefore	The begin time of the validity	N/A	DateTime	N/A
NotAfter	The end time of the validity	N/A	DateTime	N/A
DetailInfoText	The text of the local certificate or the certificate chain	N/A	String	N/A

## PKI/CertificateRequests

This table is used to get the certificate requests for the domain

### XML structure

```

<PKI>
  <CertificateRequests>
    <Request>
      <Domain></Domain>
      <Password></Password>
      <Value></Value>
    </Request>
  </CertificateRequests>
</PKI>

```

## Table description

Item	Description
Feature name	PKI
Table name	CertificateRequests
Table type	Multi-instance table
Row name	Request
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include:"~""`""'"\""; "" "" "" "" <""> "" "" "" "" - _ . , ; / "
Password	The challenge word which is needed when revoke the certificate	N/A	String. Length: 1 to 31 characters. Case sensitive.	N/A
Value	The certificate request value	N/A	String	N/A

# PKI/ImportCertStatus

This table is used to get the status when import certificate to a domain

## XML structure

```
<PKI>
  <ImportCertStatus>
    <Status>
      <Domain></Domain>
      <CertificateType></CertificateType>
      <FilePath></FilePath>
      <Password></Password>
      <NewPubKeyName></NewPubKeyName>
      <IsNewPubKeyExist></IsNewPubKeyExist>
      <IsPubKeyConfiged></IsPubKeyConfiged>
      <IsCorrectFormat></IsCorrectFormat>
      <IsNoCA></IsNoCA>
      <IsKeyPairExist></IsKeyPairExist>
      <IsKeyPairMatched></IsKeyPairMatched>
      <CertFingerprint></CertFingerprint>
```

```
<DomainFingerprint></DomainFingerprint>
<IsFingerprintMatched></IsFingerprintMatched>
<NeedReplaceCACert></NeedReplaceCACert>
<NeedReplaceLocalCert></NeedReplaceLocalCert>
<NeedReplaceKeyPair></NeedReplaceKeyPair>
<CertVerifyErrStr></CertVerifyErrStr>
</Status>
</ImportCertStatus>
</PKI>
```

## Table description

Item	Description
Feature name	PKI
Table name	ImportCertStatus
Table type	Multi-instance table
Row name	Status
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include: <code>" ~ " &amp;#x201C; \   , . ; * _ &lt; &gt; ~ /</code> .
CertificateType	The type of certificate	Index	Enumeration: • 1—CA • 2—Local.	N/A
FilePath	The path of the file contain certificate	Index	String	The file must be existed in the device
Password	Password which will be used to encrypt the file when the certificate contains private key.	N/A	String <b>Case sensitive.</b>	<b>The password is required as follow:</b> • The file format is <b>PKCS#12</b> and the certificate type is local • The file format is <b>PEM</b> , and there is local certificate and private key in the file
NewPubKey	The name of new public	N/A	String.	Only contain letters, number and “-”.

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	key.		Length: 1 to 64 characters. Case insensitive.	If the name is empty and there is no key name in the domain, it will use the domain name as the key name.
IsNewPubKeyExist	If the new public key is existed	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes.</li> <li><b>false</b>—No.</li> </ul>	N/A
IsPubKeyConfigured	If there is public key configure in the domain	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes.</li> <li><b>false</b>—No.</li> </ul>	N/A
IsCorrectFormat	If the file format is correct	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes.</li> <li><b>false</b>—No.</li> </ul>	Error information
IsNoCA	If there is no any CA certificate when import	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes.</li> <li><b>false</b>—No.</li> </ul>	Error information
IsKeyPairExists	If the key pair is existed	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes.</li> <li><b>false</b>—No.</li> </ul>	If there isn't key pair in both file and device, the value is false, otherwise it is true Error information
IsKeyPairMatched	If the key pair is matched with the certificate	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes.</li> <li><b>false</b>—No.</li> </ul>	Error information
CertFingerprint	The fingerprint of the root certificate	N/A	String. Length: 1 to 127 characters.	The column is appended only when there is new root certificate be imported to device Confirm information
DomainFingerprint	The fingerprint configured in the PKI domain	N/A	String. Length: 1 to 127 characters.	The column is appended only when the PKI domain configured the root fingerprint
IsFingerprintMatched	If the root fingerprint is matched	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes.</li> <li><b>false</b>—No.</li> </ul>	Error information
NeedReplaceCACert	If the ca certificate need to be replaced	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes.</li> <li><b>false</b>—No.</li> </ul>	Confirm information
NeedReplaceLocalCert	If the local certificate need to be replaced	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes.</li> <li><b>false</b>—No.</li> </ul>	Confirm information

Column name	Column description	Column type	Data type and restrictions	Remarks
NeedReplaceKeyPair	If the key pair need to be replaced	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes.</li> <li><b>false</b>—No.</li> </ul>	Confirm information
CertVerifyErrStr	The result of the validate when import	N/A	String. Length: 1 to 255 characters.	The column is appended only when it is failed to verify the certificate

## PKI/AuthorityAlgs

This table is used to get the authority algorithm

### XML structure

```

<PKI>
  <AuthorityAlgs>
    <Alg>
      <AlgID></AlgID>
      <AlgName></AlgName>
      <MinLength></MinLength>
      <MaxLength></MaxLength>
      <DefaultLength></DefaultLength>
    </Alg>
  </AuthorityAlgs>
</PKI>

```

### Table description

Item	Description
Feature name	PKI
Table name	AuthorityAlgs
Table type	Multi-instance table
Row name	Alg
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AlgID	Identity of algorithm	Index	Unsigned integer. Value range: 1 to 2 <sup>32</sup> -1.	

Column name	Column description	Column type	Data type and restrictions	Remarks
AlgName	Name of algorithm	N/A	String. Length: 1 to 255 characters Case insensitive.	The name of supported algorithm
MinLength	Minimal length of supported algorithm	N/A	Unsigned integer.	N/A
MaxLength	Maximal length of supported algorithm	N/A	Unsigned integer.	N/A
DefaultLength	Default length of supported algorithm	N/A	Unsigned integer.	N/A

## PKI/PKICapabilities

This table is used to get the PKI capabilities

### XML structure

```

<PKI>
  <PKICapabilities>
    <PKICapability>
      <EncAlgID></EncAlgID>
      <Name></Name>
    </PKICapability>
  </PKICapabilities>
</PKI>

```

### Table description

Item	Description
Feature name	PKI
Table name	PKICapabilities
Table type	Multi-instance table
Row name	PKICapability
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EncAlgID	Identity of encryption algorithm	Index	Unsigned integer. Value range: 1 to 2 <sup>32</sup> -1.	N/A
Name	Name of encryption algorithm	N/A	String. Length: 1 to 255 characters. Case insensitive.	The name of supported encryption algorithm

## PKI/CertRequestStatus

This table is used to get the certificate request status.

## XML structure

```
<PKI>
  <CertRequestStatus>
    <Status>
      <Domain></Domain>
      <KeyUsage></KeyUsage>
      <PollingInterval></PollingInterval>
      <LastPollingTime></LastPollingTime>
      <RemainPollingCount></RemainPollingCount>
    </Status>
  </CertRequestStatus>
</PKI>
```

## Table description

Item	Description
Feature name	PKI
Table name	CertRequestStatus
Table type	Multi-instance table
Row name	Status
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	PKI domain	Index	String.	Can't

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include:" " * " \ "   " , . : ; < " > " " / .
SerialNumber	The serial number of the certificate	Index	String.	N/A
Issuer	The issuer name	N/A	String	N/A
Subject	The Subject name	N/A	String	N/A
Validity	The validity date of the certificate	Data structure	Members include: • NotBefore. • NotAfter.	N/A
NotBefore	The begin time of the validity	N/A	DateTime	N/A
NotAfter	The end time of the validity	N/A	DateTime	N/A
DetailInfoText	The text of the peer certificate .	N/A	String	N/A

# PKI/DomainsCRL

This table is used to get the CRL saved at the local for a PKI domain.

## XML structure

```
<PKI>
  <DomainsCRL>
    <DomainCRL>
      <Domain></Domain>
      <Issuer></Issuer>
      <LastUpdate></LastUpdate>
      <NextUpdate></NextUpdate>
    </DomainCRL>
  </DomainsCRL>
</PKI>
```

## Table description

Item	Description
Feature name	PKI
Table name	DomainsCRL
Table type	Multi-instance table
Row name	DomainCRL
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The PKI domain name	Index	String. Length: 1 to 31 characters. Case insensitive.	Can't include: ~ " " &#x201c; " "   " " " " " " < " " > " " " " " " " " " " " " " " " "
Issuer	The issuer name	N/A	String	N/A
LastUpdate	The last update time.	N/A	DateTime	N/A
NextUpdate	The next update time.	N/A	DateTime	N/A

# PKI/PKIValidateResults

This table is used to get the validity of certificates.

## XML structure

```
<PKI>
  <PKIValidateResults>
    <Result>
      <Domain></Domain>
      <CertType></CertType>
      <SerialNum></SerialNum>
      <Issuer></Issuer>
      <Subject></Subject>
      <ErrCode></ErrCode>
      <ErrDescription></ErrDescription>
    </Result>
  </PKIValidateResults>
</PKI>

## PoE/PSEUpdate

This table contains PoE Update action information.

### XML structure

```
<PoE>
  <PSEUpdate>
    <PSE>
      <PSEID></PSEID>
      <FileName></FileName>
      <Mode></Mode>
    </PSE>
  </PSEUpdate>
</PoE>
```

### Table description

Item	Description
Feature name	PoE
Table name	PSEUpdate
Table type	Multi-instance table
Row name	PSE
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PSEID	Index of the PSE	Index	Unsigned integer.	N/A
FileName	The used file name.	N/A	String. Length: 1 to 255characters.	N/A
Mode	Updating mode.	<b>N/A</b>	<b>Enumeration:</b> <ul style="list-style-type: none"><li><b>0 – full.</b></li><li><b>1 – refresh.</b></li></ul>	N/A

## PoE/PSEs

This table contains PSE information.

## XML structure

```
<PoE>
  <PSEs>
    <PSE>
      <PSEID></PSEID>
      <PeakPower></PeakPower>
      <AveragePower></AveragePower>
    </PSE>
  </PSEs>
</PoE>
```

## Table description

Item	Description
Feature name	PoE
Table name	PSEs
Table type	Multi-instance table
Row name	PSE
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PSEID	Index of the PSE	Index	Unsigned integer.	N/A
PeakPower	The peak power (W)	N/A	Unsigned integer.	Only support 0 to clear the statistic information.
AveragePower	The average power (W)	N/A	Unsigned integer.	Only support 0 to clear the statistic information.

## PoE/Ports

This table contains PoE port information.

## XML structure

```
<PoE>
  <Ports>
    <Port>
      <PSEID></PSEID>
      <IfIndex></IfIndex>
      <PeakPower></PeakPower>
```

```

    <AveragePower></AveragePower>
  </Port>
</Ports>
</PoE>

```

## Table description

Item	Description
Feature name	PoE
Table name	Ports
Table type	Multi -instance table
Row name	Port
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PSEID	Index of the PSE which the port belongs to	Index	Unsigned integer.	N/A
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see <i>Ifmgr NETCONF XML API Configuration Reference</i> .
PeakPower	The peak power (mW)	N/A	Unsigned integer.	Only support 0 to clear the statistic information.
AveragePower	The average power (mW)	N/A	Unsigned integer.	Only support 0 to clear the statistic information.

# PoE

## PoE/PriorityPolicy

This table contains PoE global priority policy information.

### XML structure

```
<PoE>
  <PriorityPolicy>
    <PSEPolicyMode></PSEPolicyMode>
    <PDPolicyMode></PDPolicyMode>
  </PriorityPolicy>
</PoE>
```

### Table description

Item	Description
Feature name	PoE
Table name	PriorityPolicy
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PSEPolicyMode	Mode of PSE power policy.	N/A	Enumeration. <ul style="list-style-type: none"><li>1 – <b>disabled (default).</b></li><li>2 – <b>priority.</b></li></ul>	<p>The PSE policy only applies to the situation that when a new board (PSE) is inserted, and the power is overload.</p> <p>A value of priority(2) means that the power will stop supplying to the low priority PSE. A value of disabled(1) means that the power will stop supplying to the new inserted PSE.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
PDPolicyMode	Mode of PD power policy	N/A	Enumeration. <ul style="list-style-type: none"> <li>1 – disabled (default).</li> <li>2 – priority.</li> </ul>	The PD policy only applies to the situation that when a new PD is inserted, and the power of PSE is overload. A value of priority(2) means that the power will stop supplying to the low priority port PD. A value of disabled(1) means that the slot stop supplying to the new inserted PD.

## PoE/Powers

This table contains PoE Power information.

## XML structure

```

<PoE>
  <Powers>
    <Power>
      <PowerIndex></PowerIndex>
      <PowerLimit></PowerLimit>
    </Power>
  </Powers>
</PoE>

```

## Table description

Item	Description
Feature name	PoE
Table name	Powers
Table type	Multi-instance table
Row name	Power
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PowerIndex	Index of the Power supply	Index	Unsigned integer.	N/A
PowerLimit	The max power limit (mW)	N/A	Unsigned integer.	N/A

## PoE/PSEs

This table contains PSE information.

## XML structure

```
<PoE>
  <PSEs>
    <PSE>
      <PSEID></PSEID>
      <PowerLimit></PowerLimit>
      <UsageThreshold></UsageThreshold>
      <Priority></Priority>
      <Legacy></Legacy>
    </PSE>
  </PSEs>
</PoE>
```

## Table description

Item	Description
Feature name	PoE
Table name	PSEs
Table type	Multi-instance table
Row name	PSE
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PSEID	Index of the PSE	Index	Unsigned integer.	N/A
PowerLimit	The max power (mW)	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
UsageThresh old	The usage threshold (%)	N/A	Unsigned integer. Value range: 1 to 99.	N/A
Priority	The power priority	N/A	Enumeration. <ul style="list-style-type: none"> <li>• <b>1 – critical.</b></li> <li>• <b>2 – high.</b></li> <li>• <b>3 – low (default).</b></li> </ul>	N/A
Legacy	The legacy mode status(for nonstandard PD detection)	N/A	Enumeration. <ul style="list-style-type: none"> <li>• <b>0 – enabled.</b></li> <li>• <b>1 – disabled (default).</b></li> </ul>	N/A

## PoE/Ports

This table contains PoE Port information.

## XML structure

```

<PoE>
  <Ports>
    <Port>
      <PSEID></PSEID>
      <IfIndex></IfIndex>

---------------------------------------	----

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PSEID	Index of the PSE which the port belongs to	Index	Unsigned integer.	N/A
IfIndex	Interface index Index of the PSE	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see <i>Ifmgr NETCONF XML API Configuration Reference</i> .
AdminEnable	The admin enable status of an interface which can provide PSE functions	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
Pairs	The power pairs in use.	N/A	Enumeration. <ul style="list-style-type: none"> <li><b>1 – signal.</b></li> <li><b>2 – spare.</b></li> </ul>	signal means that the signal pairs only are in use.  spare means that the spare pairs only are in use.
Priority	The power priority of the specified interface	N/A	Enumeration. <ul style="list-style-type: none"> <li><b>1 – critical.</b></li> <li><b>2 – high.</b></li> <li><b>3 – low (default).</b></li> </ul>	N/A
PDDescription	The description for the Pd that is connected to the port.	N/A	String. Length: 1 to 80 characters.	N/A
FaultDescription	The fault category	N/A	String. Length: 1 to 255 characters.	N/A
PowerLimit	The max power (mW)	N/A	Unsigned integer.	N/A
ProfileIndex	The profile index applied to the Poe port	N/A	Unsigned integer.	N/A

## PoE/Profiles

This table contains PoE profile information.

## XML structure

```
<PoE>
  <Profiles>
    <Profile>
      <ProfileIndex></ProfileIndex>
      <ProfileName></ProfileName>
      <PowerMode></PowerMode>
      <PowerLimit></PowerLimit>
      <Priority></Priority>
      <Pairs></Pairs>
    </Profile>
  </Profiles>
</PoE>
```

## Table description

Item	Description
Feature name	PoE
Table name	Profiles
Table type	Multi-instance table
Row name	Profile

# PoE

## PoE/Capabilities

This table contains PoE global capability information.

### XML structure

```
<PoE>
  <Capabilities>
    <SupportPoE></SupportPoE>
    <PSEPolicy></PSEPolicy>
    <PDPolicy></PDPolicy>
    <PowerManage></PowerManage>
    <MaxPower></MaxPower>
    <PSEUpdate></PSEUpdate>
    <PowerMode></PowerMode>
    <PSEMaxPower></PSEMaxPower>
  </Capabilities>
</PoE>
```

### Table description

Item	Description
Feature name	PoE
Table name	Capabilities
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SupportPoE	Whether Support PoE feature	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b></li><li><b>false</b></li></ul>	N/A
PSEPolicy	Whether the system supports PSE power policy configuration	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b></li><li><b>false</b></li></ul>	N/A
PDPolicy	Whether the system supports	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b></li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	PD power policy configuration		<ul style="list-style-type: none"> <li><b>false</b></li> </ul>	
PowerManage	Whether the system supports PoE power management	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
MaxPower	Whether the system supports PoE power MaxPower configuration	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
PSEUpdate	Whether the system supports PSE firmware updating	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
PowerMode	Whether the system supports PoE port power mode configuration	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
PSEMaxPower	Whether the system supports PSE max power configuration	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A

## PoE/PriorityPolicy

This table contains PoE global priority policy information.

## XML structure

```

<PoE>
  <PriorityPolicy>
    <PSEPolicyMode></PSEPolicyMode>
    <PDPolicyMode></PDPolicyMode>
  </PriorityPolicy>
</PoE>

```

## Table description

Item	Description
Feature name	PoE
Table name	PriorityPolicy
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PSEPolicyMode	Mode of PSE power policy.	N/A	Enumeration. <ul style="list-style-type: none"> <li>1 – disabled.</li> <li>2 – priority.</li> </ul>	The PSE policy only applies to the situation that when a new board (PSE) is inserted, and the power is overload.  A value of priority(2) means that the power will stop supplying to the low priority PSE. A value of disabled(1) means that the power will stop supplying to the new inserted PSE.
PDPolicyMode	Mode of PD power policy	N/A	Enumeration. <ul style="list-style-type: none"> <li>1 – disabled.</li> <li>2 – priority.</li> </ul>	The PD policy only applies to the situation that when a new PD is inserted, and the power of PSE is overload.  A value of priority(2) means that the power will stop supplying to the low priority port PD. A value of disabled(1) means that the slot stop supplying to the new inserted PD.

## PoE/Powers

## Table description

Item	Description
Feature name	PoE
Table name	Ports
Table type	Multi-instance table
Row name	Port
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PSEID	Index of the PSE which the port belongs to	Index	Unsigned integer.	N/A
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see <i>Ifmgr NETCONF XML API Configuration Reference</i> .
AdminEnable	The admin enable status of an interface which can provide PSE functions	N/A	Enumeration. <ul style="list-style-type: none"> <li>1 – <b>true</b>.</li> <li>2 – <b>false</b>.</li> </ul>	N/A
PairsControllability	The capability of controlling the power pairs	N/A	Enumeration. <ul style="list-style-type: none"> <li>1 – <b>true</b>.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	functionality to switch pins for sourcing power		<ul style="list-style-type: none"> <li>2 – <b>false</b>.</li> </ul>	
Pairs	The power pairs in use.	N/A	Enumeration. <ul style="list-style-type: none"> <li>1 – <b>signal</b>.</li> <li>2 – <b>spare</b>.</li> </ul>	signal means that the signal pairs only are in use.  spare means that the spare pairs only are in use.
DetectionStatus	The operational status of the port PD detection	N/A	Enumeration. <ul style="list-style-type: none"> <li>1 – <b>disabled</b>.</li> <li>2 – <b>searching</b>.</li> <li>3 – <b>deliveringPower</b>.</li> <li>4 – <b>fault</b>.</li> <li>5 – <b>test</b>.</li> <li>6 – <b>otherFault</b>.</li> <li>7 – <b>pdDisconnected</b>.</li> </ul>	disabled indicates that the PSE State diagram is in the state DISABLED.  deliveringPower indicates that the PSE State diagram is in the state POWER_ON for a duration greater than the limit max (see IEEE Std 802.3af Table 33-5 tlim).  fault indicates that the PSE State diagram is in the state TEST_ERROR.  test indicates that the PSE State diagram is in the state TEST_MODE.  otherFault indicates that the PSE State diagram is in the state IDLE due to the variable error_conditions.  searching indicates the PSE State diagram is in a state other than those listed above.  pdDisconnected indicates that the PSE State diagram is in the state DISCONNECTED.
Priority	The power priority	N/A	Enumeration. <ul style="list-style-type: none"> <li>1 – <b>critical</b>.</li> <li>2 – <b>high</b>.</li> <li>3 – <b>low</b>.</li> </ul>	N/A
MPSAbsentCounter	The counter for interface state diagram transitions directly from the state POWER_ON to the state	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	IDLE			
PDDescription	The description for the Pd that is connected to the port.	N/A	String. Length: 1 to 80 characters.	N/A
PowerClassifications	The Classification of the PD connected to the PoE interface	N/A	Enumeration. <ul style="list-style-type: none"> <li>1 – class0.</li> <li>2 – class1.</li> <li>3 – class2.</li> <li>4 – class3.</li> <li>5 – class4.</li> </ul>	N/A
InvalidSignatureCounter	This counter is incremented when the PSE state diagram enters the state SIGNATURE_INVALID	N/A	Unsigned integer.	N/A
PowerDeniedCounter	This counter is incremented when the PSE state diagram enters the state POWER_DENIED	N/A	Unsigned integer.	N/A
OverLoadCounter	This counter is incremented when the PSE state diagram enters the state ERROR_DELAY_OVER	N/A	Unsigned integer.	N/A
ShortCounter	This counter is incremented when the PSE state diagram enters the state ERROR_DELAY_SHORT	N/A	Unsigned integer.	N/A
FaultDescription	The fault category	N/A	String. Length: 1 to 255 characters.	N/A
PeakPower	The peak power (mW)	N/A	Unsigned integer.	N/A
AveragePower	The average power (mW)	N/A	Unsigned integer.	N/A
CurrentPower	The current power (mW)	N/A	Unsigned integer.	N/A
PowerLimit	The max power (mW)	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PowerModeDefault	The default mode of PoE port power mode	N/A	Enumeration. <ul style="list-style-type: none"> <li>1 – signal.</li> <li>2 – spare.</li> </ul>	N/A
ProfileIndex	The profile index applied to the PoE port	N/A	Unsigned integer.	N/A

## PoE/Profiles

This table contains PoE profile information.

# PoE event stream

PoE stream description.

## PSEPower event

This event is used to report PSE usage power over threshold usage. Only supported on the default MDC.

## XML structure for event subscription

```
<PSEPowerEvent>
  <PSEPower>
    <PSEID></PSEID>
  </PSEPower>
</PSEPowerEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>PoE</stream>
    <filter type="subtree">
      <PSEPowerEvent xmlns="http://www.h3c.com/netconf/event:1.0/PoE:1.0">
        <PSEPower>
          <PSEID>1</PSEID>
        </PSEPower>
      </PSEPowerEvent>
    </filter>
  </create-subscription>
</rpc>
```

### Table description

Item	Description
Event stream name	PoE
Event name	PSEPowerEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/PoE:1.0
Support for extended query	No

### Columns

Column name	Column description	Data type and restrictions
PSEID	Index of the PSE which the port belongs to	Unsigned integer.

# XML structure for event report

```
<PSEPowerEvent>
  <PSEPower>
    <PSEID></PSEID>
    <Chassis></Chassis>
    <Slot></Slot>
    <SubSlot></SubSlot>
    <Event></Event>
    <CurrentPower></CurrentPower>
  </PSEPower>
</PSEPowerEvent>
```

## Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <PSEPowerEvent xmlns="http://www.h3c.com/netconf/event:1.0/PoE:1.0">
    <PSEPower>
      <PSEID>1</PSEID>
      <Chassis>1</Chassis>
      <Slot>1</Slot>
      <SubSlot>65535</SubSlot>
      <Event>2</Event>
      <CurrentPower>3000</CurrentPower>
    </PSEPower>
  </PSEPowerEvent>
</notification>
```

## Columns

Column name	Column description	Data type and restrictions	Remarks
PSEID	Index of the PSE which the port belongs to	Unsigned integer.	
Chassis	ID of the member where the power supply resides	Unsigned integer. Value range: 0 to 65535.	If there is no chassis number, return 65535.
Slot	The number of slot where the power supply resides	Unsigned integer. Value range: 0 to 65535.	If there is no slot number, return 65535.
SubSlot	The number of Subslot where the PSE resides	Unsigned integer. Value range: 1 to 65535.	If there is no subslot number, return 65535.
Event	Indicate what happens on PSE port.	Enumeration: <ul style="list-style-type: none"><li>1 - Power consumption exceed threshold</li><li>2 - Power consumption recede below threshold</li></ul>	
CurrentPower	The current power (mW)	Unsigned integer.	

# PoEPort event

This event is used to report PSE port detection status change.

## XML structure for event subscription

```
<PoEPortEvent>
  <PoEPort>
    <PSEID></PSEID>
    <InterfaceName></InterfaceName>
  </PoEPort>
</PoEPortEvent>
```

### Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>PoE</stream>
    <filter type="subtree">
      <PoEPortEvent xmlns="http://www.h3c.com/netconf/event:1.0/PoE:1.0">
        <PoEPort>
          <PSEID>1</PSEID>
          <InterfaceName>GigabitEthernet1/0/1</InterfaceName>
        </PoEPort>
      </PoEPortEvent>
    </filter>
  </create-subscription>
</rpc>
```

### Table description

Item	Description
Event stream name	PoE
Event name	PoEPortEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/PoE:1.0
Support for extended query	No

### Columns

Column name	Column description	Data type and restrictions	Support for extended queries
PSEID	Index of the PSE which the port belongs to	Unsigned integer.	No
Interface Name	Interface name	String. Length: 2 to 47 characters. Example:	No

Column name	Column description	Data type and restrictions	Support for extended queries
		GigabitEthernet2/0/2

## Columns

Column name	Column description	Data type and restrictions	Remarks
PSEID	Index of the PSE which the port belongs to	Unsigned integer.	
Interface Name	Interface name	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	
Event	Event Type	Enumeration: <ul style="list-style-type: none"> <li>1 - Power On</li> <li>2 - Power Off</li> </ul>	
Status	Indicate what happens on PSE port.	Enumeration: <ul style="list-style-type: none"> <li>1 - Power Disabled</li> <li>2 - Power Searching</li> <li>3 - Power Delivering</li> <li>4 - Power fault</li> <li>5 - Test</li> <li>6 - Other Fault</li> </ul>	

Column name	Column description	Data type and restrictions	Remarks
		<ul style="list-style-type: none"> <li>7 - PD disconnected</li> </ul>

# PortSecurity

## PortSecurity/Common

This table contains information about port security global parameters.

### XML structure

```
<PortSecurity>
  <Common>
    <Enable></Enable>
    <MACMove></MACMove>
    <AuthorStrict></AuthorStrict>
    <SecMACAgingInterval></SecMACAgingInterval>
    <IntrusionShutdownInterval></IntrusionShutdownInterval>
  </Common>
</PortSecurity>
```

### Table description

Item	Description
Feature name	PortSecurity
Table name	Common
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions
Enable	Whether port security is enabled	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled.</li><li><b>false</b>—Disabled (default).</li></ul>
MACMove	Whether to allow 802.1X or MAC authenticated users to move between ports on a device	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Yes.</li><li><b>false</b>—No (default).</li></ul>
AuthorStrict	Whether to log off 802.1X or MAC authenticated users that have failed authorization	N/A	<ul style="list-style-type: none"><li><b>Boolean:</b></li><li><b>true</b>—Logs off the users.</li><li><b>false</b>—Keeps the users online (default).</li></ul>
SecMACAgingInterval	Value for the secure MAC	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
	address aging timer		Value range: 0 to 129600 minutes. Default: 0 minutes.
IntrusionShutdownInterval	Value for intrusion protection's port shutdown timer	N/A	Unsigned integer Value range: 20 to 300 seconds. Default: 20 seconds.

## PortSecurity/OUIList

This table contains an OUI list for port security's OUI authentication.

### XML structure

```
<PortSecurity>
  <OUIList>
    <OUIMAC>
      <Index></Index>
      <Address></Address>
    </OUIMAC>
  </OUIList>
</PortSecurity>
```

### Table description

Item	Description
Feature name	PortSecurity
Table name	OUIList
Table type	Multi-instance table
Row name	OUIMAC
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	OUI index	Index	Unsigned integer. Value range: 1 to 16.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Address	An OUI string of a 48-bit MAC address	N/A	MAC address in the HH-HH-HH-HH-HH-HH format.	The system uses only the 24 high-order bits as the OUI value. The system does not limit the number of OUIs in the list.

## PortSecurity/Interfaces

This table contains port security configuration on an interface.

### XML structure

```

<PortSecurity>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <AuthenMode></AuthenMode>
      <AuthorIgnore></AuthorIgnore>
      <ProtectionMode></ProtectionMode>
      <SecMACAgeMode></SecMACAgeMode>
      <SecMACSticky></SecMACSticky>
      <SecMACMaxCnt></SecMACMaxCnt>
      <FreeVlanList></FreeVlanList>
      <NTKMode></NTKMode>      <SecMACDynamic></SecMACDynamic>
    </Interface>
  </Interfaces>
</PortSecurity>

```

### Table description

Item	Description
Feature name	PortSecurity
Table name	Interfaces
Table type	Multi-instance table
Row name	interface
Restrictions	None
Support for row creation and deletion	No

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface names. For more information, see the XSD document of your product. For information about IfIndex, see “Appendix” in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
AuthenMode	Authentication mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—noRestrictions (default).</li> <li>• <b>2</b>—autoLearn.</li> <li>• <b>3</b>—macAddressWithRadius.</li> <li>• <b>4</b>—macAddressElseUserLoginSecure.</li> <li>• <b>5</b>—macAddressElseUserLoginSecureExt.</li> <li>• <b>6</b>—secure.</li> <li>• <b>7</b>—userLogin.</li> <li>• <b>8</b>—userLoginSecure.</li> <li>• <b>9</b>—userLoginSecureExt.</li> <li>• <b>10</b>—macAddressOrUserLoginSecure.</li> <li>• <b>11</b>—macAddressOrUserLoginSecureExt.</li> <li>• <b>12</b>—userLoginWithOUI.</li> </ul>	N/A
AuthorIgnore	Whether to ignore authorization information from the server for users logging on from the interface	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Yes.</li> <li>• <b>false</b>—No (default).</li> </ul>	N/A
ProtectionMode	Protection action when an intrusion is detected	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—Does not perform intrusion protection (default).</li> <li>• <b>2</b>—Adds the source MAC address of the illegal packet to the blocked MAC address list.</li> <li>• <b>3</b>—Shuts down the port that receives illegal packets permanently.</li> <li>• <b>4</b>—Shuts down the port that receives illegal packets for some time.</li> </ul>	N/A
SecMACAge	Secure MAC	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Mode	aging mode		<ul style="list-style-type: none"> <li>• <b>0</b>—Time aging (default).</li> <li>• <b>1</b>—Inactivity aging.</li> </ul>	
SecMACSticky	Whether to save secure MAC addresses on the interface to the startup configuration file	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Yes (default).</li> <li>• <b>false</b>—No.</li> </ul>	This column does not take effect.
SecMACMaxCnt	Maximum number of secure MAC addresses on the interface	N/A	Unsigned integer. Value range: 1 to 2147483647. Default: Not configured.	N/A
NTKMode	Need to Know mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—NTK is disabled (default).</li> <li>• <b>2</b>—Allows only unicast packets and broadcasts with authenticated destination MAC addresses.</li> <li>• <b>3</b>—Allows unicast packets, multicasts, and broadcasts with authenticated destination MAC addresses.</li> <li>• <b>4</b>—Allows only unicast packets with authenticated destination MAC addresses.</li> </ul>	N/A
FreeVlanList	Authentication free VLAN list	N/A	Number string. The string is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	This column supports incremental editing. You can set the flag like "<FreeVlanList base:incremental='true'>". If the value is true, the VLAN list will be incrementally added or removed. If the value is false or no flag is set, the free VLANs issued on the current operation are all the effective free VLANs.
SecMACDynamic	Whether to enable the dynamic secure MAC feature	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Yes.</li> <li>• <b>false</b>—No (default).</li> </ul>	N/A

## PortSecurity/InterfaceSecMAC

This table contains port security's secure MAC addresses on interfaces.

## XML structure

```
<PortSecurity>
  <InterfaceSecMAC>
    <SecureMAC>
      <IfIndex></IfIndex>
      <VLANID></VLANID>
      <MAC></MAC>
      <Sticky></Sticky>
    </SecureMAC>
  </InterfaceSecMAC>
</PortSecurity>
```

## Table description

Item	Description

</Portal>
```

### Table description

Item	Description
Table description	Portal Server information table
Table type	Multi-instance table
Feature name	Portal
Table name	PortalServers
Row name	PortalServer
Restrictions	No
Support for row creation and deletion	Yes

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Portal server name	Index	String, case-sensitive. Length: 1 to 32 characters.	N/A
IPAddressInfo	Portal server address	Data structure	Members include: IPAddress VRF Key	The IPAddress must be set for this column.
IPAddress	IP address of the portal server	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	N/A
VRF	VRF instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	If the portal server is on the public network, the length of characters is 0.
Key	Shared secret	N/A	String, case-sensitive. Length: 1 to 64 characters.	The key is used for communication between the portal server and the device. It supports only plaintext.
Port	Port number	N/A	Non-negative integer. Value range: 1 to 65534.	The default is 50100.
Detect	Portal server detection	Data structure	Members include: TimeOut Action	When you set the structure, the Action must be set. The timeout is 60 by default if not set.
TimeOut	Detection timeout	N/A	Non-negative integer. Value range: 10 to 3600 seconds.	The default is 60.
Action	Action to be performed when the detection times out.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—log</li> <li>2—trap</li> <li>3—Both</li> </ul>	N/A
UserSyncTime	User synchronization time	N/A	Non-negative integer. Value range: 60 to 18000 seconds.	The default is 1200.

## Table information

Item	Description
Table description	Portal FreeRule information table
Table type	Multi-instance table
Feature name	Portal
Table name	FreeRules
Row name	FreeRule
Restrictions	Not support modify
Support for row creation and deletion	Yes

## Columns

Column name	Description	Column type	Data type restrictions and	Remarks
RuleID	Portal-free rule number	Index	Non-negative integer.	N/A

IsAllotID	Whether ID is allocated automatically		Boolean: <ul style="list-style-type: none"> <li>true—Yes</li> <li>false—No</li> </ul>	N/A
Description	Description for the portal free rule		String, <ul style="list-style-type: none"> <li>Length: 1 to 255 characters.</li> </ul> Members include: <ul style="list-style-type: none"> <li>SrcIPAddr</li> <li>SrcIPAddrLen</li> <li>SrcProtocolType</li> <li>SrcPortStart</li> <li>SrcPortEnd</li> <li>DstIPAddr</li> <li>DstIPAddrLen</li> <li>DstProtocolType</li> <li>DstPortStart</li> <li>DstPortEnd</li> </ul>	N/A
Layer3	N/A	Data structure		N/A
SrcIPAddr	Source IP address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 address example: 1.0.0.1 IPv6 address example: 2001:12::1:2
SrcIPAddrLen	Subnet mask length of the source IP address	N/A	Non-negative integer. Value range: 0 to 128.	When the SrcIPAddr is the IPv4 address type, the value range is 0 to 32. When the SrcIPAddr is the IPv6 address type, the value range is 0 to 128.
SrcProtocolType	Source protocol type	N/A	Enumeration: <ul style="list-style-type: none"> <li>6—TCP</li> <li>17—UDP</li> </ul>	When SrcProtocolType is configured, SrcPortStart and SrcPortEnd must be configured and use the same protocol type. Currently, only one port is supported, so SrcPortStart and SrcPortEnd must be the same.
SrcPortStart	Start port number for the source protocol	N/A	Non-negative integer. Value range: 0 to 65535.	N/A
SrcPortEnd	End port number for the source protocol	N/A	Non-negative integer. Value range: 0 to 65535.	N/A
DstIPAddr	Destination IP address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal	IPv4 address example: 1.0.0.1 IPv6 address

			string, colon-separated.	example: 2001:12::1:2
DstIPAddrLen	Subnet mask length of the destination IP address	N/A	Non-negative integer. Value range: 0 to 128.	When DstIPAddr is IPv4 address type, the value range is 0 to 32. When DstPAddr is IPv6 address type, the value range is 0 to 128.
DstProtocolType	Destination protocol type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 6—TCP</li> <li>• 17—UDP</li> </ul>	When DstProtocolType is configured, DstPortStart and DstPortEnd must be configured and use the same protocol type. Currently, only one port is supported, so DstPortStart and DstPortEnd must be the same.
DstPortStart	Start port number for the destination protocol	N/A	Non-negative integer. Value range: 0 to 65535.	N/A
DstPortEnd	End port number for the destination protocol	N/A	Non-negative integer. Value range: 0 to 65535.	N/A
Layer2	N/A	Data structure	Members include: <ul style="list-style-type: none"> <li>• SrcIfIndex</li> <li>• SrcVlan</li> <li>• SrcMacAddr</li> </ul>	N/A
SrcIfIndex	Source interface index	N/A	Source interface index.	N/A
SrcVlan	Source VLAN	N/A	Non-negative integer. Value range: 1 to 4094.	N/A
SrcMacAddr	Source MAC address	N/A	MAC address in the HH-HH-HH-HH-HH-HH format.	Example: 00-0c-af-e3-5d-c0.
ObjGroupName	Source object group		String, Length: 1 to 31 characters.	N/A
HostName	Host name	N/A	String. Length: 1 to 253 characters.	Case-insensitive and can contains letters, digits, hyphens(-), dots (.), underscores (_), and wildcard(*). It must not be "ip" or "ipv6" or "i" or "ipv".

Row name	IPv4Interface
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column name	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	index	Non-negative integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
Method	IPv4 portal authentication method	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Direct</li> <li>1—Layer3</li> <li>2—Redhcp</li> </ul>	N/A
WebServer	N/A	Data structure	Members include: <ul style="list-style-type: none"> <li>WebServerName</li> <li>EscapeEnable</li> </ul>	Both members must be included at the same time.
WebServerName	Name of the IPv4 portal Web server	N/A	String, case-sensitive. Length: 1 to 32 characters.	N/A
EscapeEnable	Whether the fail-permit feature is enabled for the IPv4 portal Web server	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Yes</li> <li>false—No</li> </ul>	N/A
Domain	IPv4 authentication domain	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
MaxUser	Maximum number of IPv4 users	N/A	Non-negative integer. Value range: 1 to 4294967295.	N/A

BasIP	BAS-IP attribute specified for IPv4 user authentication	N/A	IPv4: String, dotted decimal notation.	N/A
EscapeSvrName	Name of the IPv4 portal server with the fail-permit feature enabled	N/A	String, case-sensitive. Length: 1 to 32 characters.	N/A
PreAuthPoolName	Name of the IPv4 preauthentication user pool	N/A	String, case-insensitive. Length: 1 to 63 characters. Members include:	N/A
UserDetect	N/A	Data structure	<ul style="list-style-type: none"> <li>• UserDetectType</li> <li>• UserDetectIdleTime</li> <li>• UserDetectInterval</li> <li>• UserDetectRetry</li> </ul> Enumeration:	UserDetectType must be set, and other columns use default settings if not set.
UserDetectType	IPv4 user detection type	N/A	<ul style="list-style-type: none"> <li>• 0—ARP</li> <li>• 2—ICMP</li> </ul>	N/A
UserDetectIdleTime	IPv4 user detection idle time	N/A	Non-negative integer. Value range: 60 to 3600 seconds.	The default is 180 seconds.
UserDetectInterval	IPv4 user detection interval	N/A	Non-negative integer. Value range: 1 to 1200 seconds.	The default is 3 seconds.
UserDetectRetry	Number of IPv4 user detection attempts	N/A	Non-negative integer. Value range: 1 to 10.	The default is 3.
ExtendAuthDomain	IPv4 extended authentication domain	N/A	String. Length: 1 to 255 characters.	N/A
TempPass	TempPass feature that temporarily permits Internet access	Data structure	Members include: <ul style="list-style-type: none"> <li>• TempPassEnable</li> <li>• TempPassPeriod</li> </ul> Enumeration:	TempPassEnable must be included, and TempPassPeriod uses the default if not set.
TempPassEnable	TempPass status	N/A	<ul style="list-style-type: none"> <li>• 0—Disabled</li> <li>• 1—Enabled</li> </ul>	N/A
TempPassPeriod	Time interval during which Internet access is permitted	N/A	Unsigned integer. Value range: 10 to 180 seconds. Default: 30 seconds.	N/A
MacSvrName	IPv4 MacTrigger server name		String, case-sensitive. Length: 1 to 32 characters.	N/A
PreAuthPolicy	IPv4 Pre-Auth policy name	N/A	String, case-sensitive. Length: 1 to 255 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Protocol type	Index	Enumeration: <ul style="list-style-type: none"> <li>0—HTTP.</li> <li>1—HTTPS.</li> </ul>	This column configures the protocol type for the local Web server.

ssid	SSID name	Index	String, case-sensitive. Length: 1 to 32 characters.	This column assigns a specific SSID to the designated page file.
DeviceType	Device type	Index	String, case-sensitive. Length: 1 to 127 characters.	This column assigns a specific device type to the designated page file.
LogonPageFile	Authentication page file.	N/A	String, including letters, numbers, and underscores (_). Length: 1 to 91 characters.	N/A

## Portal/ExtendAuthServers

This table contains information about portal extended authentication servers.

### XML structure

```

<Portal>
  <ExtendAuthServers>
    <ExtendAuthServer>
      <Type></Type>
      <AuthUrl></AuthUrl>
      <AppId></AppId>
      <AppKey></AppKey>
      <RedirectUrl></RedirectUrl>
      <MailProtocol></MailProtocol>
      <MailDomain>
        <MailDomainName></MailDomainName>
      </MailDomain>
    </ExtendAuthServer>
  </ExtendAuthServers>
</Portal>

```

### Table description

Item	Description
Feature name	Portal
Table name	ExtendAuthServers
Table type	Multi-instance table
Row name	ExtendAuthServer
Restrictions	None
Support for row creation and deletion	Yes

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Extended authentication service type	Index	Enumeration: <ul style="list-style-type: none"> <li>0—QQ.</li> <li>1—Mail.</li> </ul>	N/A
AuthUrl	Authentication URL	N/A	String. Length: 1 to 256 characters. Default: https://graph.qq.com (when the Type field is specified as 0).	This column takes effect only when the Type field is specified as 0.
AppId	App ID which supports for extended authentication	N/A	String. Length: 1 to 32 characters.	This column takes effect only when the Type field is specified as 0. The default value is the App ID of the Lvzhou application in the QQ open platform.
AppKey	The key of App ID	N/A	String. Length: 1 to 64 characters.	This column takes effect only when the Type field is specified as 0, and can only be used as plain text input and cannot return to users. The default value is the App key of the Lvzhou application in the QQ open platform.
RedirectUrl	Authentication redirect URL	N/A	String. Length: 1 to 256 characters.	This column takes effect only when the Type field is specified as 0. The default value is the callback address of the Lvzhou application in the QQ open platform.
MailProtocol	Mail authentication protocol type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—POP3.</li> <li>2—IMAP.</li> <li>3—POP3 and IMAP.</li> </ul>	This column takes effect only when the Type field is specified as 1.
MailDomain	Mail domain	Data structure	Members include: <ul style="list-style-type: none"> <li>MailDomainName</li> </ul>	This column takes effect only when the Type field is specified as 1. MailDomainName must be set. You can specify 1 to 16

MailDomainName	Mail domain name	N/A	String. Length: 1 to 255 characters	domain names. The value of the column must be the Email domain format. For example: @qq.com.

## Portal/MacServer

This table contains information about portal mac trigger servers.

### XML structure

```
<Portal>
  <MacTriggerServers>
    <MacTriggerServer>
      <Name></Name>
      <IPAddressInfo>
        <IPAddress></IPAddress>
        <VRF></VRF>
        <Key></Key>
      </IPAddressInfo>
      <Threshold></Threshold>
      <NasType></NasType>
      <MacSvrPort></MacSvrPort>
      <Detect>
        <MacSvrRetries></MacSvrRetries>
        <MacSvrRetryInterval></MacSvrRetryInterval>
      </Detect>
      <MacServerType></MacServerType>
      <Version></Version>
      <MacSvrAuthTimeOut></MacSvrAuthTimeOut>
      <AgingTime></AgingTime>
      <LocalBindingEnable></LocalBindingEnable>
      <LocalBindingAgingTime></LocalBindingAgingTime>
      <CloudBindingEnable></CloudBindingEnable>
    </MacTriggerServer>
  </MacTriggerServers>
</portal>
```

### Table description

Item	Description
Feature name	Portal

Table name	MacTriggerServers
Table type	Multi-instance table
Row name	MacTriggerServer
Restrictions	None

## Columns

Column name	Description	Column type	Data type and restrictions	Remarks
Name	Portal mac-trigger server name	Index	String, case-sensitive. Length: 1 to 32 characters.	N/A
IPAddressInfo	Portal mac-trigger server address	Data structure	Members include: IPAddress VRF	N/A
IPAddress	IP address of the portal mac-trigger server	N/A	IPv4: String, dotted decimal notation.	N/A
VRF	VRF instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	If the portal mac-trigger server is on the public network, the length of characters is 0.
Key	Shared secret	N/A	String, case-sensitive. Length: 1 to 64 characters.	The key is used for communication between the portal mac-trigger server and the device. It supports only plaintext.
Threshold	the threshold for MAC-triggered authentication	N/A	Unsigned integer. Value range: 0 to 10240000	The default free-traffic threshold is 0 bytes.
NasType	NAS-Port-Type value	N/A	Unsigned integer. Value range: 1 to 255	The default NAS-Port-Type value carried in RADIUS requests is 0.
MacSvrPort	UDP port number	N/A	Unsigned integer. Value range: 1 to 65534	The default MAC binding server listens for MAC binding query packets on UDP port 50100.
Detect	Portal Mac-trigger server detection	Data structure	Members include: <ul style="list-style-type: none"> <li>Retry</li> <li>Interval</li> </ul>	N/A
MacSvrRetries	Maximum number of portal	N/A	Unsigned integer. Value range: 1~10	The default maximum number

	Mac-trigger server detection attempts			of query attempts is 3.
MacSvrRetryInterval	Detection interval	N/A	Unsigned integer. Value range:1~60	The default maximum number of query interval is 1 second.
MacServerType	a MAC binding server type	N/A	Boolean: <ul style="list-style-type: none"> <li>0.imc</li> <li>1.cmcc</li> </ul>	The default type of a MAC binding server is IMC.
Version	Version number	N/A	Unsigned integer. Value range:1~3	The default version of the portal protocol is 1.
MacSvrAuthTimeOut	Set the timeout time the device waits for portal authentication to complete	N/A	Unsigned integer. Value range:1~15	The default portal authentication timeout time is 3 minutes.
AgingTime	Set the aging time for MAC-trigger entries	N/A	Unsigned integer. Value range:60~7200	The default aging time for MAC-trigger entries is 300 seconds.
LocalBindingEnable	enable portal MAC-Trigger local-binding	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Yes</li> <li>false—No</li> </ul>	N/A
LocalBindingAgingTime	the aging time for MAC-trigger local-binding entry	N/A	Unsigned integer. Value range:1~2160	N/A
CloudBindingEnable	Enable portal MAC-Trigger cloud binding	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Yes</li> <li>false—No</li> </ul>	N/A

## Portal/ForbiddenRule

This table contains information about portal-forbidden rules.

### XML structure

        <DstPortEnd></DstPortEnd>
        <DstHostName></DstHostName>
        <SrcSsidName></SrcSsidName>
    </ForbiddenRule>
</ForbiddenRules>
</Portal>

```

## Table description

Item	Description
Feature name	Portal
Table name	ForbiddenRules
Table type	Multi-instance table
Row name	ForbiddenRule
Restrictions	Not support modify
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Portal-forbidden rule number	Index	Non-negative integer.	N/A
IsAllotID	Whether the rule number is allocated automatically	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Yes</li> <li>false—No</li> </ul>	N/A
SrcIPAddr	Source IP address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 address example: 1.0.0.1 IPv6 address example: 2001:12::1:2
SrcIPAddrLen	Subnet mask length of the source IP address	N/A	Non-negative integer. Value range: <ul style="list-style-type: none"> <li>0 to 32 for a source IPv4 address.</li> <li>0 to 128 for a source IPv6 address.</li> </ul>	N/A
SrcProtocolType	Source protocol type	N/A	Enumeration: <ul style="list-style-type: none"> <li>6—TCP.</li> <li>17—UDP.</li> </ul>	When SrcProtocolType is configured, SrcPortStart and SrcPortEnd must be configured and use the same protocol type.
SrcPortStart	Start port number for the	N/A	Non-negative integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	source protocol		Value range: 0 to 65535.	
SrcPortEnd	End port number for the source protocol	N/A	Non-negative integer. Value range: 0 to 65535.	N/A
DstIPAddr	Destination IP address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 address example: 1.0.0.1 IPv6 address example: 2001:12::1:2
DstIPAddrLen	Subnet mask length of the destination IP address	N/A	Non-negative integer. Value range: <ul style="list-style-type: none"> <li>0 to 32 for a destination IPv4 address.</li> <li>0 to 128 for a destination IPv6 address.</li> </ul>	N/A
DstProtocolType	Destination protocol type	N/A	Enumeration: <ul style="list-style-type: none"> <li>6—TCP.</li> <li>17—UDP.</li> </ul>	When DstProtocolType is configured, DstPortStart and DstPortEnd must be configured and use the same protocol type.
DstPortStart	Start port number for the destination protocol	N/A	Non-negative integer. Value range: 0 to 65535.	N/A
DstPortEnd	End port number for the destination protocol	N/A	Non-negative integer. Value range: 0 to 65535.	N/A
DstHostName	Destination hostname	N/A	String. Length: 1 to 253 characters.	Case-insensitive and can contains letters, digits, hyphens(-), dots (.), underscores (_), and wildcard(*). It must not be "ip" or "ipv6" or "i" or "ipv".
SrcSsidName	Source SSID name	N/A	String. Length: 1 to 32 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable the portal proxy feature	N/A		N/A
SourceIP	Source IP address	N/A	IPv4: String, dotted decimal notation.	This column specifies the source address for the packets actively sent to the server. The IP address of the output interface is used if not specified.
PortalServerPort	Destination port	N/A	Non-negative integer. Value range: 1 to 65535.	This column specifies the destination port on the device. The default port is 2000.
MacTriggerServerIP	IP address of the MAC binding server	N/A	IPv4: String, dotted decimal notation.	By default, the device does not specify the IP address and port number of the MAC binding server.
MacTriggerServerPort	Port number of the MAC binding server	N/A	Non-negative integer. Value range: 1 to 65535.	The default port number is 50100.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	IfIndex.	Index	Non-negative integer.	N/A
IPAddress	IP address of the user.	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	N/A
UserName	User name.	N/A	String. Length: 1 to 253 characters.	N/A
MacAddress	MAC address of the user.	N/A	MAC address in the HH-HH-HH-HH-HH-HH format.	N/A
VLAN	VLAN where the user resides.	N/A	Value range: 1 to 4049.	N/A
VRF	MPLS L3VPN where the users resides.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
ServerName	Name of the portal server.	N/A	String, case-sensitive. Length: 1 to 32 characters.	N/A
LoginTime	Time when the user logged in	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
OnlineDuration	User online duration.	N/A	Non-negative integer. The unit is second.	N/A
FlowStats	Flow statistics for the user.	Data structure	Members include: <ul style="list-style-type: none"> <li>SendPktNum</li> <li>SendByteNum</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>RecvPktNum</li> <li>RecvByteNum</li> </ul>	
SendPktNum	Number of packets sent by the user.	N/A	Value range: 0 to $2^{64}-1$ .	N/A
SendByteNum	Number of bytes sent by the user.	N/A	Value range: 0 to $2^{64}-1$ .	N/A
RecvPktNum	Number of packets received by the user.	N/A	Value range: 0 to $2^{64}-1$ .	N/A
RecvByteNum	Number of bytes received by the user.	N/A	Value range: 0 to $2^{64}-1$ .	N/A
ObjectGroup	Users belong to the group of object.	N/A	String. Length: 1 to 31 characters.	N/A
InboundFlowRate	Inbound Real time rate.	N/A	Value range: 0 to $2^{64}-1$ .	bytes per second
OutboundFlowRate	Outbound Real time rate.	N/A	Value range: 0 to $2^{64}-1$ .	bytes per second
AccessSwitch	Whether the user can access the network.	N/A	Boolean: <ul style="list-style-type: none"> <li>false—OFF</li> <li>true—ON</li> </ul>	N/A

</ExtendAuthServers>
</Portal>

```

## Table description

Item	Description
Feature name	Portal
Table name	ExtendAuthServers
Table type	Multi-instance table
Row name	ExtendAuthServer
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Extended authentication service type	Index	Enumeration: <ul style="list-style-type: none"> <li>0—QQ.</li> <li>1—Mail.</li> </ul>	N/A
AuthUrl	Authentication URL	N/A	String. Length: 1 to 256 characters. Default: https://graph.qq.com (when the Type field is specified as 0).	N/A.
AppId	App ID which supports for extended authentication	N/A	String. Length: 1 to 32 characters.	The default value is the App ID of the Lvzhou application in the QQ open platform.
AppKey	The key of App ID	N/A	String. Length: 1 to 64 characters.	App key needs to be kept confidential and not returned to users.
RedirectUrl	Authentication redirect URL	N/A	String. Length: 1 to 256 characters.	The default value is the callback address of the Lvzhou application in the QQ open platform.
MailProtocol	Mail authentication	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—POP3.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	protocol type		<ul style="list-style-type: none"> <li>2—IMAP.</li> <li>3—POP3 and IMAP.</li> </ul>	
MailDomain	Maildomain	Data structure	<b>Members include:</b> <ul style="list-style-type: none"> <li><b>MailDomainName</b></li> </ul>	This column takes effect only when the type field is specified as 1. MailDomainName must be set. You can specify 1 to 16 domain names.
MailDomainName	Mail domain name	N/A	String. Length: 1 to 255 characters.	The value of the column must be the Email domain format. For example: @qq.com

## Portal/HistoryOnlineUserNums

This table contains the statistics on the number of historical online users.

### XML structure

```

<Portal>
  <HistoryOnlineUserNums>
    <HistoryOnlineUserNum>
      <Interval></Interval>
      <TimeStamp></TimeStamp>
      <Num></Num>

</MacTriggerServer>
</MacTriggerServers>
</portal>

```

## Table description

Item	Description
Feature name	Portal
Table name	MacTriggerServers
Table type	Multi-instance table
Row name	MacTriggerServer
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Portal mac-trigger server name	Index	String, case-sensitive. Length: 1 to 32 characters.	N/A
IPAddressInfo	Portal mac-trigger server address	Data structure	Members include: IPAddress VRF	N/A
IPAddress	IP address of the portal mac-trigger server	N/A	IPv4: String, dotted decimal notation.	N/A
VRF	VRF instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	If the portal mac-trigger server is on the public network, the length of characters is 0.

Column name	Column description	Column type	Data type and restrictions	Remarks
Key	Shared secret	N/A	String, case-sensitive. Length: 1 to 64 characters.	The key is used for communication between the portal mac-trigger server and the device. It supports only plaintext.
Threshold	the threshold for MAC-triggered authentication	N/A	Unsigned integer. Value range: 0 to 10240000	The default free-traffic threshold is 0 bytes.
NasType	NAS-Port-Type value	N/A	Unsigned integer. Value range: 1 to 255	The default NAS-Port-Type value carried in RADIUS requests is 0.
MacSvrPort	UDP port number	N/A	Unsigned integer. Value range: 1 to 65534	The default MAC binding server listens for MAC binding query packets on UDP port 50100.
Detect	Portal Mac-trigger server detection	Data structure	Members include: • Retry Interval	N/A
MacSvrRetries	Maximum number of portal Mac-trigger server detection attempts	N/A	Unsigned integer. Value range: 1~10	The default maximum number of query attempts is 3.
MacSvrRetryInterval	Detection interval	N/A	Unsigned integer. Value range:1~60	The default maximum number of query interval is 1 second.
MacServerType	a MAC binding server type	N/A	Boolean: • 0.imc 1.cmcc	The default type of a MAC binding server is IMC.
Version	Version number	N/A	Unsigned integer. Value range:1~3	The default version of the portal protocol is 1.
MacSvrAuthTimeout	Set the timeout time the device waits for portal authentication to complete	N/A	Unsigned integer. Value range:1~15	The default portal authentication timeout time is 3 minutes.
AgingTime	Set the aging time for MAC-trigger entries	N/A	Unsigned integer. Value range:60~7200	The default aging time for MAC-trigger entries is 300 seconds.
LocalBindingEnable	enable portal MAC-Trigger local-binding	N/A	Boolean: • true—Yes false—No	N/A
LocalBindingAgingTime	the aging time for MAC-trigger local-binding	N/A	Unsigned integer. Value range:1~2160	N/A

Column name	Column description entry	Column type	Data type and restrictions	Remarks
CloudBindingEnable	Enable portal MAC-Trigger cloud binding	N/A	Boolean: • true—Yes false—No	N/A

## Portal/ForbiddenRule

This table contains information about portal-forbidden rules.

### XML structure

```

<Portal>
  <ForbiddenRules>
    <ForbiddenRule>
      <RuleID></RuleID>
      <IsAllotID></IsAllotID>
      <SrcIPAddr></SrcIPAddr>
      <SrcIPAddrLen></SrcIPAddrLen>
      <SrcProtocolType></SrcProtocolType>
      <SrcPortStart></SrcPortStart>
      <SrcPortEnd></SrcPortEnd>
      <DstIPAddr></DstIPAddr>
      <DstIPAddrLen></DstIPAddrLen>
      <DstProtocolType></DstProtocolType>
      <DstPortStart></DstPortStart>
      <DstPortEnd></DstPortEnd>
      <DstHostName></DstHostName>
      <SrcSsidName></SrcSsidName>
    </ForbiddenRule>
  </ForbiddenRules>
</Portal>

```

### Table description

Item	Description
Feature name	Portal
Table name	ForbiddenRules
Table type	Multi-instance table
Row name	ForbiddenRule
Restrictions	Not support modify

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Portal-forbidden rule number	Index	Non-negative integer.	N/A
IsAllotID	Whether the rule number is allocated automatically	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes</li> <li><b>false</b>—No</li> </ul>	N/A
SrcIPAddr	Source IP address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	N/A
SrcIPAddrLen	Subnet mask length of the source IP address	N/A	Non-negative integer. Value range: 0 to 128.	N/A
SrcProtocolType	Source protocol type	N/A	Enumeration: <ul style="list-style-type: none"> <li>6—TCP.</li> <li>17—UDP.</li> </ul>	N/A
SrcPortStart	Start port number for the source protocol	N/A	Non-negative integer. Value range: 0 to 65535.	N/A
SrcPortEnd	End port number for the source protocol	N/A	Non-negative integer Value range:0 to 65535.	N/A
DstIPAddr	Destination IP address	N/A	IPv4:String,dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	N/A
DstIPAddrLen	Subnet mask of the destination IP address	N/A	Non-negative integer. Value range: 0 to 128.	N/A
DstProtocolType	Destination protocol type	N/A	Enumeration: <ul style="list-style-type: none"> <li>6—TCP.</li> <li>17—UDP.</li> </ul>	N/A
DstPortStart	Start port number for the destination protocol	N/A	Non-negative integer. Value range: 0 to 65535.	N/A
DstPortEnd	End port number for the destination protocol	N/A	Non-negative integer. Value range: 0 to 65535,	N/A
DstHostName	Destination hostname	N/A	String. Length: 1 to 253 characters.	N/A
SrcSsidName	Source SSID name	N/A	String. Length: 1 to 32 characters	N/A

## Portal/PortalServers

Message	Explanation
Portal detection configuration is not complete. 探测功能配置不完整。	Portal detection configuration is not complete. 探测功能配置不完整。
Another portal authentication server is using the IP address. 指定Portal认证服务器的IP地址冲突。	Another portal authentication server is using the IP address. 指定的ip已经被其他Portal认证服务器使用。
IP address configuration is not complete. IP地址配置不完整。	IP address configuration is not complete. 配置vpn和key之前首先要配置ip。
Invalid shared key. 无效的共享密钥。	Invalid shared key. 用户发来的明文密码要加密,加密失败。
Another portal authentication server is using the IP address. 指定Portal认证服务器的IP地址冲突。	Another portal authentication server is using the IP address. 指定的ip已经被其他Portal认证服务器使用。
Invalid IP address. 无效IP地址值。	Invalid IP address. 无效IP地址值。
Failed to configure the trap action because this action is not supported. 不支持向网管服务器发送Trap信息。	Failed to configure the trap action because this action is not supported. 不支持向网管服务器发送Trap信息。

## Portal/FreeRule

Message	Explanation
A portal-free rule with the same filtering criteria already exists. 已经存在相同内容的免认证规则。	A portal-free rule with the same filtering criteria already exists. 配置的portal free rule和已配置free rule参数一样,提示已经存在。
The portal free-rule already exists. 这条免认证规则已经存在。	The portal free-rule already exists. 配置的portal free rule id已经存在。
The source port number and destination port number must belong to the same transport layer protocol. 源和目的端口号所属的传输层协议类型必须保持一致。	The source port number and destination port number must belong to the same transport layer protocol. 配置的free-rule源和目的端口号类型不同。
The source IP address and destination IP address of a portal-free rule must be the same IP version. 免认证规则的源IP地址和目的IP地址的版本必须保持一致。	The source IP address and destination IP address of a portal-free rule must be the same IP version. 免认证规则的源IP地址和目的IP地址的版本必须保持一致。
A portal-free rule can't contain both Layer 3 and	A portal-free rule can't contain both Layer 3 and Layer 2

Layer 2 parameters. 在同一个免认证规则中不可以同时配置有关二层和三层的参数。	parameters. 在同一个免认证规则中不可以同时配置有关二层和三层的相关参数。
The portal-free rule can't be empty. 配置的免认证规则内容不能为空。	The portal-free rule can't be empty. 配置的免认证规则内容不能为空。
Invalid MAC address. 无效的MAC地址。	Invalid MAC address. 无效的MAC地址。
Invalid IP address. 无效IP地址值。	Invalid IP address. 无效IP地址值。

## Portal/IPv4Interfaces

Message	Explanation
Invalid BAS-IP. 无效的BAS-IP。	Invalid BAS-IP. 无效的BAS-IP。
Failed to change method of the interface, because it is enabled with portal. 无法改变接口的认证方式，因为该接口已经使能了Portal认证。	Failed to change method of the interface, because it is enabled with portal. 无法改变接口的认证方式，因为该接口已经使能了Portal认证。
Portal detection configuration is not complete. 探测功能配置不完整。	Portal detection configuration is not complete. 探测功能配置不完整。
Portal Web server configuration is not complete. Web服务配置不完整。	Portal Web server configuration is not complete. WebServerName和EscapeEnable需要都配置，不能配置其中一个

## Portal/IPv6Interfaces

Message	Explanation
Invalid BAS-IPv6. 无效的BAS-IPv6。	Invalid BAS-IPv6. 无效的BAS-IPv6。
Failed to change method of the interface, because it is enabled with portal. 无法改变接口的认证方式，因为该接口已经使能了Portal认证。	Failed to change method of the interface, because it is enabled with portal. 无法改变接口的认证方式，因为该接口已经使能了Portal认证。
Portal detection configuration is not complete. 探测功能配置不完整。	Portal detection configuration is not complete. 探测功能配置不完整。
Portal Web server configuration is not complete. Web服务配置不完整。	Portal Web server configuration is not complete. WebServerName和EscapeEnable需要都配置，不能配置其中一个

# Portal/WebServers

Message	Explanation
The portal Web server doesn't exist. 该Portal Web服务器不存在。	The portal Web server doesn't exist. 该Portal Web服务器不存在。
The URL parameter of this type already exists. 该类型的URL参数配置已存在。	The URL parameter of this type already exists. 该类型的URL参数配置已存在。

# Portal/LocalWebServers

Message	Explanation
Please specify an SSL server policy. 请引用SSL服务器端策略名。	Please specify an SSL server policy. 请引用SSL服务器端策略名。
HTTPS has been configured for the local portal Web server and the SSL server policy name can't be modified. 本地Portal Web服务器的HTTPS已经存在，SSL服务器端策略名不能被修改。	HTTPS has been configured for the local portal Web server and the SSL server policy name can't be modified. 本地Portal Web服务器的HTTPS已经存在，SSL服务器端策略名不能被修改。
The specified port is being used by another service. Please specify another port. 配置的本地Portal Web服务器的TCP端口号已经被占用。	The specified port is being used by another service. Please specify another port. 配置的本地Portal Web服务器的TCP端口号已经被占用。
The local-portal Web server doesn't exist. 配置的本地Portal Web服务器不存在。	The local-portal Web server doesn't exist. 配置的本地Portal Web服务器不存在。
Failed to configure the local portal Web server because of port conflict. Please specify another port. 配置的端口号冲突，请指定其它TCP端口号。	Failed to configure the local portal Web server because of port conflict. Please specify another port. 配置的端口号冲突，请指定其它TCP端口号。
Failed to configure HTTPS for the local portal Web server because of SSL server policy isn't exist. Please check SSL server policy. 指定的SSL服务策略不存在，请检查SSL配置。	Failed to configure HTTPS for the local portal Web server because of SSL server policy isn't exist. Please check SSL server policy. 指定的SSL服务策略不存在，请检查SSL配置。
Portal detection configuration is not complete. 探测功能配置不完整。	Portal detection configuration is not complete. 探测功能配置不完整。
Failed to configure the trap action because this action is not supported. 不支持向网管服务器发送Trap信息。	Failed to configure the trap action because this action is not supported. 不支持向网管服务器发送Trap信息。

# Portal/IPv4ServiceTemplates

Message	Explanation
Portal detection configuration is not complete. 探测功能配置不完整。	Portal detection configuration is not complete. 探测功能配置不完整。

Portal Web server configuration is not complete. Web服务配置不完整。	Portal Web server configuration is not complete. WebServerName和EscapeEnable需要都配置，不能配置其中一个
The service-template doesn't exist. 配置的服务模版不存在。	The service-template doesn't exist. 配置的服务模版不存在。

## Portal/IPv6ServiceTemplates

Message	Explanation
Portal detection configuration is not complete. 探测功能配置不完整。	Portal detection configuration is not complete. 探测功能配置不完整。
Portal Web server configuration is not complete. Web服务配置不完整。	Portal Web server configuration is not complete. WebServerName和EscapeEnable需要都配置，不能配置其中一个
The service-template doesn't exist. 配置的服务模版不存在。	The service-template doesn't exist. 配置的服务模版不存在。

## Portal/SelfDefDevTypePage

Message	Explanation
Please specify a custom authentication page file. 请指定自定义认证页面文件。	Please specify a custom authentication page file. 请指定自定义认证页面文件。

## PortalProxy/ProxyEnable

This table contains global enabling portal proxy function.

### XML structure

```
<PortalProxy>
  <ProxyEnable>
    <Enable></Enable>
  </ProxyEnable>
</PortalProxy>
```

### Table description

Item	Description
Feature name	PortalProxy
Table name	ProxyEnable
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether the portal proxy feature is enabled	N/A	Boolean: <ul style="list-style-type: none"><li>true.</li><li>false.</li></ul>	Default value: false.

## PortalProxy/ProxyPort

This table contains port for receiving portal packet.

### XML structure

```
<PortalProxy>
  <ProxyPort>
    <Port></Port>
  </ProxyPort>
</PortalProxy>
```

```

    </ProxyPort>
  </PortalProxy>

```

## Table description

Item	Description
Feature name	PortalProxy
Table name	ProxyPort
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Port	Port for receiving portal packet	N/A	Non-negative integer. Value range: 1 to 65535.	Example: 2000.

## PortalProxy/AddrEntries

This table contains ipv4 address about portal proxy bas.and user-ip range.

## XML structure

```

<PortalProxy>
  <AddrEntries>
    <AddrEntry>
      <AddrGrpName></AddrGrpName>
      <BasIP></BasIP>
      <UserAddrRang>
        <Addr></Addr>
        <MaskLen></MaskLen>
      </UserAddrRang>
    </AddrEntry>
  </AddrEntries>
</PortalProxy>

```

## Table description

Item	Description
Feature name	PortalProxy
Table name	AddrEntries
Table type	Multi-instance table
Row name	AddrEntry
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddrGrpName	Group of a user address range	Index	String,case-sensitive. Length: 1 to 63 characters.	N/A
BasIP	IP of portal bas	N/A	IPv4: String,dotted decimal notation.	N/A
UserAddrRange	User IP address range group	Data structure	Members include: <ul style="list-style-type: none"><li>Addr.</li><li>MaskLen.</li></ul>	This column can appear at most 8 times in this row.
Addr	IP address range	N/A	IPv4: String,dotted decimal notation.	N/A
MaskLen	Mask length	N/A	Value: 1 to 32.	Example: 16.

# PPP

## PPP/PPPAuth/Table

This table contains the information about using **ppp authentication-mode** to configure PPP authentication.

### XML structure

```
<PPP>
  <PPPAuth>
    <AuthMode>
      <IfIndex></IfIndex>
      <Mode></Mode>
      <Callin></Callin>
      <Domain></Domain>
      <DefaultDomain></DefaultDomain>
    </AuthMode>
  </PPPAuth>
</PPP>
```

### Table description

Item	Description
Feature name	PPP
Table name	PPPAuth
Table type	Multi-instance table
Row name	AuthMode
	This table supports interface types: virtual-template interface virtual-ppp interface/subinterface analogmodem interface
Restrictions	isdn bri interface cpos interface async interface aux interface serial interface
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Mode	Authentication mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—pap.</li> <li>• <b>2</b>—chap.</li> <li>• <b>4</b>—ms-chap.</li> <li>• <b>8</b>—ms-chap-v2.</li> </ul>	PPP authentication includes the following categories: PAP and CHAP and ms-chap and ms-chap-v2. You can configure multiple authentication modes. For example the Mode is 10 when Authentication mode types are chap and ms-chap-v2
Callin	Authenticates the call-in users only.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	Authenticates the call-in users only. This keyword can be configured when the local end acts as the receiving end of DDR calls.
Domain	ISP domain name.	N/A	String,case-insensitive. Length: 1 to 255 characters.	Specifies the ISP domain name for authentication.
DefaultDomain	ISP default domain name.	N/A	String,case-insensitive. Length: 1 to 255 characters.	N/A

## PPP/PPPUserPap/Table

This table contains the information about PPP Pap.

## XML structure

```

<PPP>
  <PPPUserPap>
    <UserPap>
      <IfIndex></IfIndex>
      <UserName></UserName>
      <PassWord></PassWord>
    </UserPap>
  
```

```

    </PPUserPap>
  </PPP>

```

## Table description

Item	Description
Feature name	PPP
Table name	PPUserPap
Table type	Multi-instance table
Row name	UserPap
Restrictions	<p>This table supports interface types:</p> <ul style="list-style-type: none"> <li>virtual-template interface</li> <li>virtual-ppp interface/subinterface</li> <li>analogmodem interface</li> <li>isdn bri interface</li> <li>pos interface</li> <li>async interface</li> <li>aux interface</li> <li>serial interface</li> </ul>
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
UserName	Username of Pap mode	N/A	String. case-sensitive. Length: 1 to 80 characters.	N/A
PassWord	Password of Pap mode	N/A	String. case-sensitive. Length: 1 to 255 characters.	N/A

## PPP/PPPDNS/Table

This table contains the information of PPP DNS server IP addresses.

## XML structure

```
<PPP>
  <PPPDNS>
    <IpcpDNS>
      <IfIndex></IfIndex>
      <PriAddr></PriAddr>
      <SecAddr></SecAddr>
    </IpcpDNS>
  </PPPDNS>
</PPP>
```

## Table description

Item	Description
Feature name	PPP
Table name	PPPDNS
Table type	Multi-instance table
Row name	IpcpDNS
Restrictions	This table supports interface types: virtual-template interface virtual-ppp interface/subinterface analogmodem interface isdn bri interface cpos interface async interface aux interface serial interface
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
PriAddr	Specifies a primary DNS server IP address.	N/A	String, dotted decimal notation.	N/A
SecAddr	Specifies a secondary DNS server IP address.	N/A	String, dotted decimal notation.	N/A

## PPP/PPPOuserChap/Table

This table contains the information about using PPP authentication-mode chap to configure PPP authentication.

### XML structure

```

<PPP>
  <PPPOuserChap>
    <UserChap>
      <IfIndex></IfIndex>
      <UserName></UserName>
      <PassWord></PassWord>
    </UserChap>
  </PPPOuserChap>
</PPP>

```

### Table description

Item	Description
Feature name	PPP
Table name	PPPOuserChap
Table type	Multi-instance table
Row name	UserChap
Restrictions	<p>This table supports interface types:</p> <ul style="list-style-type: none"> <li>virtual-template interface</li> <li>virtual-ppp interface/subinterface</li> <li>analogmodem interface</li> <li>isdn bri interface</li> <li>pos interface</li> <li>async interface</li> <li>aux interface</li> <li>serial interface</li> </ul>
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
UserName	Username of chap mode	N/A	String. case-sensitive. Length: 1 to 80 characters.	N/A
PassWord	Password of chap mode	N/A	String. case-sensitive. Length: 1 to 255 characters.	N/A

## PPP/PPPIpPool/Table

This table contains ip pool of PPP configuration information.

## XML structure

```
<PPP>
  <PPPIpPool>
    <IpPool>
      <GroupName></GroupName>
      <PoolName></PoolName>
      <StartIPAddr></StartIPAddr>
      <EndIPAddr></EndIPAddr>
    </IpPool>
  </PPPIpPool>
</PPP>
```

## Table description

Item	Description
Feature name	PPP
Table name	PPPIpPool
Table type	Multi-instance table
Row name	IpPool
Restrictions	None

Support for row creation and deletion	Yes
---------------------------------------	-----

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	PPP ip pool group name	Index	String, case sensitive. Length: 1 to 31 characters.	Group name must be "default" when you set the default group.
PoolName	PPP ip pool name	Index	String, case sensitive. Length: 1 to 31 characters.	N/A
StartIPAddr	Start IP address of IP address range in a PPP address pool for dynamic allocation	Index	String, dotted decimal notation.	N/A
EndIPAddr	End IP address of IP address range in a PPP address pool for dynamic allocation	Index	String, dotted decimal notation.	It is equal with the StartIPAddr when it is empty. EndIPAddr must be no less than the StartIPAddr.

## PPP/PPPRmtAddr/Table

This table contains PPP remote address configuration information.

## XML structure

```
<PPP>
  <PPPRmtAddr>
    <RmtAddr>
      <IfIndex></IfIndex>
      <IPAddress></IPAddress>
      <PoolName></PoolName>
    </RmtAddr>
  </PPPRmtAddr>
</PPP>
```

## Table description

Item	Description
Feature name	PPP
Table name	PPPRmtAddr
Table type	Multi-instance table

Row name	RmtAddr
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
IPaddress	Start IP address of IP address range in a PPP address pool for dynamic allocation	N/A	String, dotted decimal notation.	N/A
PoolName	PPP ip pool name	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A

## PPP/PPPDNSAccept/Table

This table contains PPP ipcp dns admit-any configuration information.

## XML structure

```

<PPP>
  <PPPDNSAccept>
    <DNSAdmitAny>
      <IfIndex></IfIndex>
      <AdmitAny></AdmitAny>
    </DNSAdmitAny>
  </PPPDNSAccept>
</PPP>

```

## Table description

Item	Description
Feature name	PPP

Table name	PPPDNSAccept
Table type	Multi-instance table
Row name	DNSAdmitAny
Restrictions	<p>This table supports interface types:</p> <p>virtual-template interface</p> <p>virtual-ppp interface/subinterface</p> <p>analogmodem interface</p> <p>isdn bri interface</p> <p>cpos interface</p> <p>async interface</p> <p>aux interface</p> <p>serial interface</p>
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
AdmitAny	Configure an interface to accept the DNS server IP address assigned by the peer.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	You can config an interface to accept the DNS server IP address assigned by the peer, through which domain names can be resolved for the device.

## PPP/PPPDNSRequest/Table

This table contains PPP ipcp dns admit-any configuration information.

## XML structure

```

<PPP>
  <PPPDNSRequest>
    <DNSRequest>
      <IfIndex></IfIndex>
    
```

```

    <Request></Request>
  </DNSRequest>
</PPPDNSRequest>
</PPP>

```

# PPP

## PPP/PPPAuth/Table

This table contains the information about using ppp authentication-mode to configure PPP authentication.

### XML structure

```
<PPP>
  <PPPAuth>
    <AuthMode>
      <IfIndex></IfIndex>
      <Mode></Mode>
      <Callin></Callin>
      <Domain></Domain>
      <DefaultDomain></DefaultDomain>
    </AuthMode>
  </PPPAuth>
</PPP>
```

### Table description

Item	Description
Feature name	PPP
Table name	PPPAuth
Table type	Multi-instance table
Row name	AuthMode
Restrictions	This table supports interface types: virtual-template interface virtual-ppp interface/subinterface analogmodem interface isdn bri interface cpos interface async interface aux interface serial interface

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Mode	Authentication mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—pap.</li> <li>2—chap.</li> <li>4—ms-chap.</li> <li>8—ms-chap-v2.</li> </ul>	N/A
Callin	Authenticates the call-in users only.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
Domain	ISP domain name.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
DefaultDomain	ISP default domain name.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A

## PPP/PPPPUserPap/Table

This table contains the information about PPP Pap.

## XML structure

```

<PPP>
  <PPPPUserPap>
    <UserPap>
      <IfIndex></IfIndex>
      <UserName></UserName>
      <PassWord></PassWord>
    </UserPap>
  </PPPPUserPap>
</PPP>

```

## Table description

Item	Description
Feature name	PPP
Table name	PPPUserPap
Table type	Multi-instance table
Row name	UserPap
Restrictions	This table supports interface types: virtual-template interface virtual-ppp interface/subinterface analogmodem interface isdn bri interface pos interface async interface aux interface serial interface

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
UserName	Username of Pap mode	N/A	String. case-sensitive. Length: 1 to 80 characters.	N/A
PassWord	Password of Pap mode	N/A	String. case-sensitive. Length: 1 to 255 characters.	N/A

## PPP/PPPDNS/Table

This table contains the information of PPP DNS server IP addresses.

## XML structure

```
<PPP>
  <PPPDNS>
```

```

<IpcpDNS>
  <IfIndex></IfIndex>
  <PriAddr></PriAddr>
  <SecAddr></SecAddr>
</IpcpDNS>
</PPPDNS>
</PPP>

```

## Table description

Item	Description
Feature name	PPP
Table name	PPPDNS
Table type	Multi-instance table
Row name	IpcpDNS
Restrictions	<p>This table supports interface types:</p> <ul style="list-style-type: none"> <li>virtual-template interface</li> <li>virtual-ppp interface/subinterface</li> <li>analogmodem interface</li> <li>isdn bri interface</li> <li>cpos interface</li> <li>async interface</li> <li>aux interface</li> <li>serial interface</li> </ul>

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
PriAddr	Specifies a primary DNS server IP address.	N/A	String, dotted decimal notation.	N/A
SecAddr	Specifies a secondary DNS server IP address.	N/A	String, dotted decimal notation.	N/A

# PPP/PPPUserChap/Table

This table contains the information about using PPP authentication-mode Chap to configure PPP authentication.

## XML structure

```
<PPP>
  <PPPUserChap>
    <UserChap>
      <IfIndex></IfIndex>
      <UserName></UserName>
      <PassWord></PassWord>
    </UserChap>
  </PPPUserChap>
</PPP>
```

## Table description

Item	Description
Feature name	PPP
Table name	PPPUserChap
Table type	Multi-instance table
Row name	UserChap
	This table supports interface types:
	virtual-template interface
	virtual-ppp interface/subinterface
	analogmodem interface
Restrictions	isdn bri interface
	pos interface
	async interface
	aux interface
	serial interface

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
UserName	Username of chap mode	N/A	String. case-sensitive. Length: 1 to 80 characters.	N/A
PassWord	Password of chap mode	N/A	String. case-sensitive. Length: 1 to 255 characters.	N/A

## PPP/PPPOEUserNumInfo/Table

This table contains the number of PPPoE user information.

### XML structure

```

<PPP>
  <PPPOEUserNumInfo>
    <Num></Num>
  </PPPOEUserNumInfo>
</PPP>

```

### Table description

Item	Description
Feature name	PPP
Table name	PPPOEUserNumInfo
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Num	PPPoE user number.	N/A	Unsigned integer.	N/A

## PPP/PPPOEUserInfo/Table

This table contains PPPoE user information.

## XML structure

```
<PPP>
  <PPPOEUserInfo>
    <PPPOEUser>
      <IfIndex></IfIndex>
      <UserName></UserName>
      <MacAddr></MacAddr>
      <IpAddr></IpAddr>
      <ObjectGroup></ObjectGroup>
    </PPPOEUser>
  </PPPOEUserInfo>
</PPP>
```

## Table description

Item	Description
Feature name	PPP
Table name	PPPOEUserInfo
Table type	Multi-instance table
Row name	PPPOEUser
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Unsigned integer. Value range: 0 to $2^{64} - 1$ . Unsigned integer. Value range: 0 to $2^{64} - 1$ . This don't support name index.
UserName	User name.	N/A	String. Length: 1 to 80 characters.	N/A
MacAddr	MAC address .	N/A	String, dotted decimal notation.	N/A
IpAddr	Ip address.	N/A	String, dotted decimal notation.	N/A
ObjectGroup	Group name	N/A	String. Length: 1 to 31 characters.	N/A

## PPP/PPPUUserInfo/Table

This table contains PPP user information.

## XML structure

```

<PPP>
  <PPPUUserInfo>
    <PPPUser>
      <PPPIndex></PPPIndex>
      <UserType></UserType>
      <State></State>

<IPv6FlowStat></IPv6FlowStat>
<AccessInterface></AccessInterface>
<BasInterface></BasInterface>
<CfgInterface></CfgInterface>
</PPPUser>
</PPPUserInfo>
</PPP>

```

## Table description

Item	Description
Feature name	PPP
Table name	PPPUserInfo
Table type	Multi-instance table
Row name	PPPUser
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PPPIIndex	PPP index.	Index	Unsigned integer.	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
UserType	User Type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—LAC.</li> <li>2—LNS.</li> <li>3—PPPOA.</li> <li>4—PPPOE</li> <li>5—PPPPHY</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
State	PPP Phase	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—PHASE_DEAD.</li> <li>1—PHASE_ESTABLISH</li> <li>2—PHASE_AUTHENTICATE</li> <li>3—PHASE_DDRAUTH</li> <li>4—PHASE_MULTILINK</li> <li>5—PHASE_NETWORK</li> <li>6—PHASE_TERMINATE</li> </ul>	N/A
UserName	User name.	N/A	String. Length: 1 to 80 characters.	N/A
MacAddr	MAC address .	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
IpAddr	Ip address.	N/A	String, dotted decimal notation.	N/A
IPv6Addr	IPv6 address	N/A	Hexadecimal string, colon-separated.	N/A
AuthenDomain	Domain name for authentication	N/A	String. Length: 1 to 255 characters.	N/A
AuthorDomain	Domain name for authorization	N/A	String. Length: 1 to 255 characters.	N/A
VPNInstanceName	Authorized VPN instance name	N/A	Length: 1 to 31 characters.	N/A
UserID	User ID assigned to an user in online state	N/A	Unsigned integer	N/A
ServiceVLAN	Service provider VLAN	N/A	Unsigned short.	N/A
CustomerVLAN	Customer VLAN	N/A	Unsigned short.	N/A
IPv4Pool	PPP IPCP address pool name	N/A	String. Length: 1 to 31 characters.	N/A
IPv6Pool	PPP IPV6 address pool name	N/A	String, Length: 1 to 63 characters.	N/A
IPv6NDPool	PPP IPV6 ND prefix address pool name	N/A	String, Length: 1 to 63 characters.	N/A
VxLANID	VXLAN ID	N/A	Unsigned integer.	N/A
LoginTime	User login time	N/A	DateTime.	Example: YYYY-MM-DDT hh:mm:ss

Column name	Column description	Column type	Data type and restrictions	Remarks
OnlineTime	User online time	N/A	DateTime.	Example: hh:mm:ss
RemainTime	Session duration from AAA	N/A	Unsigned integer.	Unit: seconds
UserProfile	Authorized User profile name from AAA	N/A	String. Length: 1 to 31 characters.	N/A
GroupUserProfile	Authorized Group user profile name from AAA	N/A	String. Length: 1 to 31 characters.	N/A
InboundCAR	Authorized inbound average rate value	N/A	Unsigned integer.	Unit: kbps
OutboundCAR	Authorized outbound average rate value	N/A	Unsigned integer.	Unit: kbps
InboundPIR	Authorized inbound peak rate value	N/A	Unsigned integer.	Unit: kbps
OutboundPIR	Authorized outbound peak rate value	N/A	Unsigned integer.	Unit: kbps
IPv4FlowStat	IPv4 flow statistics	N/A	String. Length: 1 to 80 characters.	Include uplink packets/bytes and downlink packets/bytes
IPv6FlowStat	IPv6flow statistics	N/A	String. Length: 1 to 80 characters.	Include uplink packets/bytes and downlink packets/bytes
AccessInterface	Access interface	N/A	Unsigned integer	N/A
BasInterface	Bas interface	N/A	Unsigned integer	N/A
CfgInterface	Configuration interface	N/A	Unsigned integer	N/A

## PPP/PPPIpPool/Table

This table contains ip pool of PPP configuration information.

## XML structure

```
<PPP>
  <PPPIpPool>
```

```

<IpPool>
  <GroupName></GroupName>
  <PoolName></PoolName>
  <StartIPAddr></StartIPAddr>
  <EndIPAddr></EndIPAddr>
</IpPool>
</PPPIpPool>
</PPP>

```

## Table description

Item	Description
Feature name	PPP
Table name	PPPIpPool
Table type	Multi-instance table
Row name	IpPool
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	PPP ip pool group name	Index	String, case sensitive. Length: 1 to 31 characters.	Group name must be "default" when you set the default group.
PoolName	PPP ip pool name	Index	String, case sensitive. Length: 1 to 31 characters.	N/A
StartIPAddr	Start IP address of IP address range in a PPP address pool for dynamic allocation	Index	String, dotted decimal notation.	N/A
EndIPAddr	End IP address of IP address range in a PPP address pool for dynamic allocation	Index	String, dotted decimal notation.	It is equal with the StartIPAddr when it is empty. EndIPAddr must be no less than the StartIPAddr.

## PPP/PPPRmtAddr/Table

This table contains PPP remote address configuration information.

## XML structure

```
<PPP>
  <PPPRmtAddr>
    <RmtAddr>
      <IfIndex></IfIndex>
      <IPAddress></IPAddress>
      <PoolName></PoolName>
    </RmtAddr>
  </PPPRmtAddr>
</PPP>
```

## Table description

Item	Description
Feature name	PPP
Table name	PPPRmtAddr
Table type	Multi-instance table
Row name	RmtAddr
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
IPAddress	Start IP address of IP address range in a PPP address pool for dynamic allocation	N/A	String, dotted decimal notation.	N/A
PoolName	PPP ip pool name	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

## PPP/PPPDNSAccept/Table

This table contains PPP ipcp dns admit-any configuration information.

### XML structure

```

<PPP>
  <PPPDNSAccept>
    <DNSAdmitAny>
      <IfIndex></IfIndex>
      <AdmitAny></AdmitAny>
    </DNSAdmitAny>
  </PPPDNSAccept>
</PPP>

```

### Table description

Item	Description
Feature name	PPP
Table name	PPPDNSAccept
Table type	Multi-instance table
Row name	DNSAdmitAny
Restrictions	This table supports interface types: virtual-template interface virtual-ppp interface/subinterface analogmodem interface isdn bri interface cpos interface async interface aux interface serial interface

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
AdmitAny	Configure an interface to accept the DNS server IP address assigned by the peer.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true.</b></li><li>• <b>false.</b></li></ul>	You can config an interface to accept the DNS server IP address assigned by the peer, through which domain names can be resolved for the device.

## PPP/PPPDNSRequest/Table

This table contains PPP ipcp dns admit-any configuration information.

## XML structure

```
<PPP>
  <PPPDNSRequest>
    <DNSRequest>
      <IfIndex></IfIndex>
      <Request></Request>
    </DNSRequest>
  </PPPDNSRequest>
</PPP>
```

## Table description

Item	Description
Feature name	PPP
Table name	PPPDNSRequest
Table type	Multi-instance table
Row name	DNSRequest
Restrictions	This table supports interface types: virtual-template interface

virtual-ppp interface/subinterface
analogmodem interface
isdn bri interface
cpos interface
async interface
aux interface
serial interface

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
lflIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about lflIndex, see "Appendix" in lflmgr NETCONF XML API Configuration Reference.
Request	Configure an interface to actively request the DNS server IP address its peer.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	If a device is connected to a provider's access server through a PPP link, you can use this command. Then, the device can obtain the specified DNS server IP address from the access server during IPCP negotiation.

## PPP/HistoryUserInfo/Table

This table contains PPP history user information.

## XML structure

```

<PPP>
  <HistoryUserInfo>
    <HistoryUser>
      <Interval></Interval>
      <Index></Index>
      <TimeStamp></TimeStamp>
      <Num></Num>
    </HistoryUser>
  </HistoryUserInfo>

```

</PPP>

## Table description

Item	Description
Feature name	PPP
Table name	HistoryUserInfo
Table type	Multi-instance table
Row name	HistoryUser
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Interval	The time interval of getting user information	Index	Enumeration: <ul style="list-style-type: none"><li>• 0—hour.</li><li>• 1—day.</li></ul>	When Interval = 0, obtain ppp user information at a time every ten minutes. When Interval = 1, obtain ppp user information at a time every one hour.
Index	The serial number of information	Index	Unsigned integer. Value range: 1 to 60.	The smaller the Index, obtained information from the closer now.
TimeStamp	The time when getting information	N/A	Date time	N/A
Num	PPP user total	N/A	Unsigned integer.	N/A

# Comware 7 PPP NETCONF XML API Error Message Reference

## PPP/PPPAuthMode

Message	Explanation
Configuration items don't meet the requirements. 不符合配置要求。	The <Mode> column has been set and the < Callin > column has been set to true, but the < Domain > column and the < DefaultDomain > don't been set. <Mode>列存在设置, <Callin>设为真, 但<Domain>和<DefaultDomain>行没有设置。
In aux interface, async-mode protocol should be issued first. 在AUX口, async-mode protocol命令应该先下发。	Async-mode protocol should be issued first. Async-mode protocol命令应该先下发
Domain cannot be set as "default". Domain列不能被设置为"default"。	Avoid to conflict with command. 防止与命令行冲突。

## PPP/PPPUserPap

Message	Explanation
In aux interface, async-mode protocol should be issued first. 在AUX口, async-mode protocol命令应该先下发。	Async-mode protocol should be issued first. Async-mode protocol命令应该先下发

## PPP/PPPDNS

Message	Explanation
Invalid start IPv4 address. 非法的IPv4开始地址。	The <PriAddr> column should be a valid IP address. <PriAddr>列必须是合法的IP地址。
Invalid end IPv4 address. 非法的IPv4结束地址。	The <SecAddr> column should be a valid IP address. <SecAddr>列必须是合法的IP地址。
Configuration items don't meet the requirements. 不符合配置要求。	The <PriAddr> column doesn't been set, but the <SecAddr> column has bee set. <PriAddr>列没有进行配置, 但<SecAddr>列存在配置
In aux interface, async-mode protocol should be issued first. 在AUX口, async-mode protocol命令应该先下发。	Async-mode protocol should be issued first. Async-mode protocol命令应该先下发

## PPP/PPPUUserChap

Message	Explanation
In aux interface, async-mode protocol should be issued first. 在AUX口，async-mode protocol命令应该先下发。	Async-mode protocol should be issued first. Async-mode protocol命令应该先下发

## PPP/PPPipPool

Message	Explanation
Invalid start IPv4 address. 非法的IPv4开始地址。	The <StartIPAddr> column should be a valid IP address. <StartIPAddr>列必须是合法的IP地址。
Invalid end IPv4 address. 非法的IPv4结束地址。	The <EndIPAddr> column should be a valid IP address. <EndIPAddr>列必须是合法的IP地址。
Total IP address number in this range exceeds 65535. 该IP范围内IP地址个数已达上限。	Total IP address number in this range exceeds 65535. 该IP范围内IP地址个数已达上限。
Total IP address number in this pool exceeds 65535. 该IP地址池内IP地址个数已达上限。	Total IP address number in this pool exceeds 65535. 该IP地址池内IP地址个数已达上限。
This pool is not allowed, because the pool is already in another group. 该IP地址池已存在其他组内	This pool is not allowed, because the pool is already in another group. 该IP地址池已存在其他组内
The IP address range overlaps with existing IP address ranges in other group. 该IP地址范围与其他组内的IP地址范围相互覆盖。	The IP address range overlaps with existing IP address ranges in other group. 该IP地址范围与其他组内的IP地址范围相互覆盖。
The start IP address should be less than or equal to the end IP address. 开始IP地址必须小于等于结束IP地址。	The start IP address should be less than or equal to the end IP address. 开始IP地址必须小于等于结束IP地址。
Operation failed, The pool is being used. 操作失败，地址池正在使用。	Operation failed, The pool is being used. 操作失败，地址池正在使用。

## PPP/PPPRmtAddr

Message	Explanation
Invalid IPv4 address. 非法的IPv4地址。	The <PAddress> column should be a valid IP address. <IPAddress>列必须是合法的IP地址。
Configuration items don't meet the requirements. 不符合配置要求。	The <PAddress> column and <PoolName > column can't be set at the same time. <PAddress> 和<PoolName >不能同时配置。

## PPP/PPPDNSAccept

Message	Explanation
In aux interface,async-mode protocol should be issued first.	Async-mode protocol should be issued first.
在AUX口， async-mode protocol命令应该先下发。	Async-mode protocol命令应该先下发

## PPP/PPPDNSRequest

Message	Explanation
In aux interface,async-mode protocol should be issued first.	Async-mode protocol should be issued first.
在AUX口， async-mode protocol命令应该先下发。	Async-mode protocol命令应该先下发

### Table description

Item	Description
Feature name	PPPOEC
Table name	PppoecClient
Table type	Multi-instance table
Row name	Client
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 GigabitEthernet interface/subinterface Layer 3 Ten-GigabitEthernet interface/subinterface Layer 3 Forty-GigEthernet interface/subinterface Layer 3 Hundred-GigEthernet interface/subinterface Layer 3 Virtual-Ethernet interface/subinterface Layer 3 WLAN-Ethernet interface/subinterface Layer 3 Twenty-GigEthernet interface/subinterface Layer 3 Smartrate-Ethernet interface/subinterface Layer 3 EFM interface/subinterface Layer 3 Eth-channel interface/subinterface VLAN interface
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
BundleNum	PPPOE client bundle number	Index	Unsigned integer. Value range: MinBundleNum to MaxBundleNum.	The value of MinBundleNum and MaxBundleNum depend on the device model.
Hostuniq	Whether is Host-Uniq is enable or not.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>(default)</li> <li>• <b>false</b>.</li> </ul>	N/A

## PPPOES/PppoesBind/Table

This table contains the information about using **pppoe-server bind** to enable the PPPoE server on an interface and bind the interface to a VT interface.

### XML structure

```
<PPPOES>
  <PppoesBind>
    <BindVT>
      <IfIndex></IfIndex>
      <VTNum></VTNum>
    </BindVT>
  </PppoesBind>
</PPPOES>
```

### Table description

Item	Description
Feature name	PPPOES
Table name	PppoesBind
Table type	Multi-instance table
Row name	BindVT
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 GigabitEthernet interface/subinterface Layer 3 Ten-GigabitEthernet interface/subinterface Layer 3 Forty-GigEthernet interface/subinterface Layer 3 Hundred-GigEthernet interface/subinterface Layer 3 Virtual-Ethernet interface/subinterface Layer 3 VE L3VPN interface/subinterface Layer 3 Smartrate-Ethernet interface/subinterface Layer 3 EFM interface/subinterface Layer 3 reth interface/subinterface VLAN interface
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
VTNum	VT number.	N/A	Unsigned integer.	The value of VTNum depends on the device model.

## PPPOES/PppoesIfLimit/Table

This table contains PPPOE server sessions limit on interface configuration information.

## XML structure

```
<PPPOES>
  <PppoesIfLimit>
    <IfLimit>
      <IfIndex></IfIndex>
      <LimitIf></LimitIf>
      <LimitClnMac></LimitClnMac>
    </IfLimit>

# Comware 7 PPPOES NETCONF XML API Error Message Reference

## PPPOES/PppoesIfLimit

Message	Explanation
Config interface session limit failed. 配置接口上所能创建PPPoE会话的最大数目失败。	For some reasons like invalid parameter, Config interface session limit failed. 因为参数不在合法范围内等原因，配置接口下最大PPPoE会话限制失败。
Config session limit per client MAC failed. 配置接口上每个用户所能创建PPPoE会话的最大数目失败。	For some reasons like invalid parameter, Config session limit per client MAC failed. 因为参数不在合法范围内等原因，配置每个MAC地址对应的最大PPPoE会话数失败。

## PPPOES/PppoesBind

Message	Explanation
Another virtual template is bound with the interface. To bind a new one, remove the existing binding first. 该接口已绑定其他VT口。如果想绑定新的VT口，先删除已经绑定的VT口。	The interface can bind one virtual template. To bind a new one, remove the existing binding first. 接口下只能绑定一个VT口，绑定新VT需要先删除旧的。
The operation is not supported on this interface. 接口上不支持该操作。	The operation is not supported on this interface. 接口上不支持该操作。
Failed to config PPPoE server. 配置失败。	Failed to config PPPoE server. 配置失败。
Operation failed. You can execute this command only after all users on the interface go offline. 操作失败。在此接口所有用户下线后你才能执行这条命令。	You can execute this command only after all users on the interface go offline. 有用户在线不能去捆绑VT口。
Failed to Craete Bas-interface. 创建Bas接口失败。	Failed to Craete Bas-interface. 创建Bas接口失败。
The specified virtual-template interface doesn't exist. 指定的VT口不存在。	You can execute this command only after the specified virtual-template interface exist. VT口存在才能做PPPOES捆绑。
The VTNum cannot be bigger than the supported max VTNum. 下发的VTNum不能大于设备支持的最大VTNum。	The VTNum is out of range. 配置的VTNum超出范围。

# PPPOES/PppoesAccessDelay

Message	Explanation
The configuration doesn't meet the requirements. 当前配置不符合配置要求。	The configuration parameter is incomplete. 配置参数不全。

IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Priority	Port default priority.	N/A	Unsigned integer. Value range: 0 to 7.	When this priority is supported, the default value is 0.
Dscp	DSCP.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
Dot1p	Dot1p.	N/A	Unsigned integer. Value range: 0 to 7.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Exp	MPLS EXP.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
DropPriority	Drop priority.	N/A	Unsigned integer. Value range: 0 to 2.	When this priority is supported, the default value is 0.
LocalPrecedence	Local precedence.	N/A	Unsigned integer. Value range: 0 to 7.	When this priority is supported, the default value is 2.

## PRIMAP/PortTrustMode

This table contains information about port priority trust mode.

### XML structure

```

<PRIMAP>
  <PortTrustMode>
    <Port>
      <IfIndex></IfIndex>
      <TrustMode></TrustMode>
      <Override></Override>
    </Port>
  </PortTrustMode>
</PRIMAP>

```

### Table description

Item	Description
Feature name	PRIMAP
Table name	PortTrustMode
Table type	Multi-instance table
Row name	Port
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of

Column name	Column description	Column type	Data type and restrictions	Remarks
				your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
TrustMode	Port priority trust mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Untrust.</li> <li>2—Dot1p.</li> <li>3—DSCP.</li> <li>4—EXP.</li> <li>5—IP precedence.</li> <li>6—Dot11e.</li> <li>7—Auto.</li> </ul>	Required. The default priority trust mode on an interface varies by device.
Override	Whether overwrite the original priority carried in the packet	N/A	Boolean: <ul style="list-style-type: none"> <li><b>false</b>—Do not overwrite the priority (default).</li> <li><b>true</b>—Overwrite the priority.</li> </ul>	Required. Both TrustMode and Override are specified, or both are not specified. If there is no TrustMode specified, the default value of Override is false.

## PRIMAP/GlobalTrustMode

This table contains information about global priority trust mode.  
Vxlan mode is supported only.

### XML structure

```
<PRIMAP>
  <GlobalTrustMode>
    <TunnelDscp></TunnelDscp>
  </GlobalTrustMode>
</PRIMAP>
```

### Table description

Item	Description
Feature name	PRIMAP
Table name	GlobalTrustMode
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelDscp	Global priority trust mode specifies the priority mapping for tunnel packets.	N/A	Boolean: <ul style="list-style-type: none"><li><b>false</b>—Trust the inner DSCP value in tunnel packets (default).</li><li><b>true</b>—Trust the DSCP value in tunnel encapsulation.</li></ul>	Vxlan mode is supported only

# PRIMAP

## PRIMAP/MapTables

This table contains information about priority mapping tables.

### XML structure

```
<PRIMAP>
  <MapTables>
    <MapTable>
      <Source></Source>
      <Target></Target>
      <Color></Color>
      <Direction></Direction>
      <Import></Import>
      <Export></Export>
    </MapTable>
  </MapTables>
</PRIMAP>
```

### Table description

Item	Description
Feature name	PRIMAP
Table name	MapTables
Table type	Multi-instance table
Row name	MapTable
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Source	The source type of priority.	Index	Enumeration: <ul style="list-style-type: none"><li>• 1—dot11e</li><li>• 2—dot1p</li><li>• 3—dscp</li><li>• 4—exp</li><li>• 5—IP precedence</li><li>• 6—Local precedence</li><li>• 7—User priority</li></ul>	N/A
Target	The target type of priority.	Index	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>1—dot11e</li> <li>2—dot1p</li> <li>3—Drop priority</li> <li>4—dscp</li> <li>5—exp</li> <li>6—Forwarding-class priority</li> <li>7—Local precedence</li> <li>8—RPR priority</li> <li>9—User priority</li> </ul>	
Color	The color of priority mapping table.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Uncolored.</li> <li>1—Green.</li> <li>2—Yellow.</li> <li>3—Red.</li> </ul>	N/A
Direction	The direction of priority mapping table.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Inbound.</li> <li>1—Outbound.</li> <li>2—Both.</li> </ul>	N/A
Import	Input value of priority mapping table.	Index	Unsigned integer. Value range: 0 to 63.	Different priority has different range of export value. dot1p: 0 to 7 dscp: 0 to 63 lp: 0 to 7 exp: 0 to 7 IP Precedence: 0 to 7 up: 0 to 7 dot11e: 0 to 7
Export	Output value of priority mapping table.	N/A	Unsigned integer. Value range: 0 to 63.	Different priority has different range of export value. dot1p: 0 to 7 dscp: 0 to 63 lp: 0 to 7 exp: 0 to 7 up: 0 to 7 dot11e: 0 to 7 fc: 0 to 7 rpr: 0 to 2 drop priority: 0 to 2

## PRIMAP/PortPriority

This table contains information about port priority.

# XML structure

```
<PRIMAP>
  <PortPriority>
    <Port>
      <IfIndex></IfIndex>
      <Priority></Priority>
      <Dscp></Dscp>
      <Dot1p></Dot1p>
      <Exp></Exp>
      <DropPriority></DropPriority>
      <LocalPrecedence></LocalPrecedence>
    </Port>
  </PortPriority>
</PRIMAP>
```

## Table description

Item	Description
Feature name	PRIMAP
Table name	PortPriority
Table type	Multi-instance table
Row name	Port
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Priority	Port default priority.	N/A	Unsigned integer. Value range: 0 to 7.	When this priority is supported, the default value is 0.
Dscp	DSCP.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
Dot1p	Dot1p.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
Exp	MPLS EXP.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 0 to 7.	
DropPriority	Drop priority.	N/A	Unsigned integer. Value range: 0 to 2.	When this priority is supported, the default value is 0.
LocalPrecedence	Local precedence.	N/A	Unsigned integer. Value range: 0 to 7.	When this priority is supported, the default value is 2.

## PRIMAP/PortTrustMode

This table contains information about port priority trust mode.

### XML structure

```

<PRIMAP>
  <PortTrustMode>
    <Port>
      <IfIndex></IfIndex>
      <TrustMode></TrustMode>
      <Override></Override>
    </Port>
  </PortTrustMode>
</PRIMAP>

```

### Table description

Item	Description
Feature name	PRIMAP
Table name	PortTrustMode
Table type	Multi-instance table
Row name	Port
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr

Column name	Column description	Column type	Data type and restrictions	Remarks
				NETCONF XML API Configuration Reference.
TrustMode	Port priority trust mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Untrust.</li> <li>2—Dot1p.</li> <li>3—DSCP.</li> <li>4—EXP.</li> <li>5—IP precedence.</li> <li>6—Dot11e.</li> <li>7—Auto.</li> </ul>	The default priority trust mode on an interface varies by device.
Override	Whether overwrite the original priority carried in the packet	N/A	Boolean: <ul style="list-style-type: none"> <li><b>false</b>—Do not overwrite the priority.</li> <li><b>true</b>—Overwrite the priority.</li> </ul>	N/A

## PRIMAP/GlobalTrustMode

This table contains information about global priority trust mode.

Vxlan mode is supported only.

## XML structure

```

<PRIMAP>
  <GlobalTrustMode>
    <TunnelDscp></TunnelDscp>
  </GlobalTrustMode>
</PRIMAP>

```

## Table description

Item	Description
Feature name	PRIMAP
Table name	GlobalTrustMode
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelDscp	Global priority trust mode	N/A	Boolean:	Vxlan mode is supported

Column name	Column description	Column type	Data type and restrictions	Remarks
	specifies the priority mapping for tunnel packets.		<ul style="list-style-type: none"> <li><b>false</b>—Trust the inner DSCP value in tunnel packets.</li> <li><b>true</b>—Trust the DSCP value in tunnel encapsulation.</li> </ul>	only

## PRIMAP/MapTablesCapability

This table contains information about priority mapping table capabilities.

### XML structure

```
<PRIMAP>
  <MapTablesCapability>
    <Capability>
      <MapTable></MapTable>
      <MaxExportValue></MaxExportValue>
    </Capability>
  </MapTablesCapability>
</PRIMAP>
```

### Table description

Item	Description
Feature name	PRIMAP
Table name	MapTablesCapability
Table type	Multi-instance table
Row name	Capability
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MapTable	Made up of "map from" priority type and "map to" priority type.	Index	String: <ul style="list-style-type: none"> <li>dot1p-lp</li> <li>dot1p-dp</li> <li>exp-lp</li> <li>dscp-lp</li> <li>exp-dp</li> <li>dscp-dp</li> <li>dscp-dot1p</li> </ul>	Different products support different map tables.

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>• dot1p-dscp</li> <li>• dscp-dscp</li> <li>• dscp-exp</li> <li>• exp-dscp</li> <li>• exp-dot1p</li> <li>• exp-exp</li> <li>• lp-dot1p</li> <li>• dot1p-rpr</li> <li>• dscp-rpr</li> <li>• exp-rpr</li> <li>• ippre-rpr</li> <li>• up-dot1p</li> <li>• up-dscp</li> <li>• up-exp</li> <li>• up-dp</li> <li>• up-lp</li> <li>• up-rpr</li> <li>• up-fc</li> <li>• lp-dscp</li> <li>• dot11e-lp</li> <li>• lp-dot11e</li> <li>• lp-lp</li> <li>• dot1p-exp</li> <li>• lp-exp</li> <li>• lp-dp</li> <li>• up-up</li> <li>• dot1p-dot1p</li> </ul>	
MaxExportValue	The max export value of the map table.	N/A	Unsigned integer.	N/A

## PRIMAP/PortTrustCapability

This table contains information about port priority trust mode capabilities.

### XML structure

```

<PRIMAP>
  <PortTrustCapability>
    <Capability>
      <IfIndex></IfIndex>
      <TrustMode></TrustMode>
      <DefaultMode></DefaultMode>
    </Capability>
  </PortTrustCapability>
</PRIMAP>

```

## Table description

Item	Description
Feature name	PRIMAP
Table name	PortTrustCapability
Table type	Multi-instance table
Row name	Capability
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
TrustMode	Port priority trust mode	N/A	Each bit represents a mode as follows: <ul style="list-style-type: none"><li>• 1—Untrust.</li><li>• 2—Dot1p.</li><li>• 4—DSCP.</li><li>• 8—EXP.</li><li>• 16—IP precedence.</li><li>• 32—Dot11e.</li><li>• 64—Auto.</li></ul>	N/A
DefaultMode	Default port priority trust mode	N/A	Enumeration: <ul style="list-style-type: none"><li>• 1—Untrust.</li><li>• 2—Dot1p.</li><li>• 3—DSCP.</li><li>• 4—EXP.</li><li>• 5—IP precedence.</li><li>• 6—Dot11e.</li><li>• 7—Auto.</li></ul>	N/A

## PRIMAP/FlexMapTables

This table contains information about flexible priority mapping tables.

</PTP>
```

### Table description

Item	Description
Feature name	PTP
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table contains only global PTP information.

### Columns

Column name	Column description	Column type	Data type and restrictions
Profile	PTP profile	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Invalid.</li><li>• <b>1</b>—IEEE 1588 version 2.</li><li>• <b>2</b>—IEEE 802.1AS.</li><li>• <b>3</b>—ITU-T G.8275.1.</li></ul>

## PTP/Clock

This table contains PTP clock information.

### XML structure

```
<PTP>
  <Clock>
    <ClockId></ClockId>
    <ClockType></ClockType>
    <ReceiveIfIndex></ReceiveIfIndex>
    <StepsRemoved></StepsRemoved>
```

```

    <TimeLockStatus></TimeLockStatus>
  </Clock>
</PTP>

```

## Table description

Item	Description
Feature name	PTP
Table name	Clock
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClockId	Clock ID	N/A	Octet string. Length: 18.	It's a hexadecimal string. Example: 18C2DF-FFFE-EA0100.
ClockType	Clock type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Invalid.</li> <li>1—Local.</li> <li>2—Tod0.</li> <li>3—Tod1.</li> </ul>	N/A
ReceiveIfIndex	Index of the receiving interface	N/A	Unsigned integer. Length: 32 bits.	N/A
StepsRemoved	Hops from the GM to the device	N/A	Unsigned integer. Value range: 0 to 255, 65535.	The value 65535 is invalid. If the device is a TC node or is in Force state, this column takes this value.
TimeLockStatus	Whether the device is in locked state	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A

## PTP/Interfaces

This table contains PTP interface information.

## XML structure

# Radius

## Radius/Trap

SNMP notification information table of RADIUS.

### XML structure

```
<Radius>
  <Trap>
    <AuthErrThreshold></AuthErrThreshold>
    <Switchs>
      <AuthServerDown></AuthServerDown>
      <AuthServerUp></AuthServerUp>
      <AcctServerDown></AcctServerDown>
      <AcctServerUp></AcctServerUp>
      <AuthErrReachThreshold></AuthErrReachThreshold>
    </Switchs>
  </Trap>
</Radius>
```

### Table description

Item	Description
Feature name	Radius
Table name	Trap
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AuthErrThreshhold	The threshold for authentication failure notification	N/A	Unsigned integer. Value range: 1 to 100.	Default threshold: 30. An authentication failure notification will be sent if the number of authentication failures compared to the total number of authentication attempts exceeds the specified threshold.

Column name	Column description	Column type	Data type and restrictions	Remarks
				This column is not supported to configure at present.
Switchs	Whether to enable each type of notification	Data structure	Members include: <ul style="list-style-type: none"> <li>AuthServerDown.</li> <li>AuthServerUp.</li> <li>AcctServerDown.</li> <li>AcctServerUp.</li> <li>AuthErrReachThreshold.</li> </ul>	N/A
AuthServerDown	Whether to send a notification after a RADIUS authentication server is down	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	Default: false.
AuthServerUp	Whether to send a notification after a RADIUS authentication server is up	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	Default: false.
AcctServerDown	Whether to send a notification after a RADIUS accounting server is down	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	Default: false.
AcctServerUp	Whether to send a notification after a RADIUS accounting server is up	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	Default: false.
AuthErrReachThreshold	Whether to send a notification when the number of authentication failures compared to the total number of authentication attempts exceeds the specified threshold	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	Default: false.

## Radius/Dscp

The DSCP priority of RADIUS packets.

## XML structure

```
<Radius>
  <Dscp>
    <Ipv4></Ipv4>
```

```

        <Ipv6></Ipv6>
    </Dscp>
</Radius>

```

## Table description

Item	Description
Feature name	Radius
Table name	Dscp
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4	DSCP priority of IPv4 RADIUS packets	N/A	Unsigned integer. Value range: 0 to 63.	Default: 0.
Ipv6	DSCP priority of IPv6 RADIUS packets	N/A	Unsigned integer. Value range: 0 to 63.	Default: 0.

## Radius/Client/GlobalNasIps

RADIUS global NAS IP information table.

## XML structure

```

<Radius>
  <Client>
    <GlobalNasIps>
      <GlobalNasIp>
        <VRF></VRF>
        <IpType></IpType>
        <IpAddress></IpAddress>
      </GlobalNasIp>
    </GlobalNasIps>
  </Client>
</Radius>

```

## Table description

Item	Description
Feature name	Radius
Table name	GlobalNasIps
Table type	Multi-instance table
Row name	GlobalNasIp
Restrictions	A maximum of 16 global NAS IP addresses are supported.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
IpType	Type of the source IP address for outgoing RADIUS packets	Index	Enumeration: <ul style="list-style-type: none"><li>• 0—IPv4.</li><li>• 1—IPv6.</li></ul>	N/A
IpAddress	Source IP address for outgoing RADIUS packets	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	If the IpType value is 0, this column represents an IPv4 address. For example, 1.0.0.1. If the IpType value is 1, this column represents an IPv6 address. For example, 2001:12::1:2.

## Radius/Client/GlobalNasIpIf

This table contains the global source interface of outgoing RADIUS packets.

## XML structure

```
<Radius>
  <Client>
    <GlobalNasIpIf>
      <IfIndex></IfIndex>
    </GlobalNasIpIf>
  </Client>
</Radius>
```

## Table description

Item	Description
Feature name	Radius
Table name	GlobalNasIpIpf
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Index of the interface that provides the source IP address of outgoing RADIUS packets	N/A	Unsigned integer.

## Radius/Client/ServerTestProfiles

The test profile table for RADIUS server status detection.

## XML structure

```
<Radius>
  <Client>
    <ServerTestProfiles>
      <ServerTestProfile>
        <ProfileName></ProfileName>
        <UserName></UserName>
        <Interval></Interval>
      </ServerTestProfile>
    </ServerTestProfiles>
  </Client>
</Radius>
```

## Table description

Item	Description
Feature name	Radius
Table name	ServerTestProfiles
Table type	Multi-instance table
Row name	ServerTestProfile
Restrictions	None

Item	Description
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Name of the RADIUS test profile	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
UserName	User name for the RADIUS test profile	N/A	String, case-sensitive. Length: 1 to 253 characters.	This column is required.
Interval	Period for sending test packets	N/A	Unsigned integer. Value range: 1 to 3600, in minutes.	Default: 60 minutes.

## Radius/Client/Schemes

RADIUS scheme table.

## XML structure

```

<Radius>
  <Client>
    <Schemes>
      <Scheme>
        <SchemeName></SchemeName>
        <TimeUnitage></TimeUnitage>

        <ClassType></ClassType>
        <AcctOnEnable></AcctOnEnable>
        <AcctOnSendInterval></AcctOnSendInterval>
        <AcctOnSendTimes></AcctOnSendTimes>
        <ChangePassword></ChangePassword>
      </Scheme>
    </Schemes>
  </Client>
</Radius>

```

```

        <StopAcctPktSendForce></StopAcctPktSendForce>
    </Scheme>
</Schemes>
</Client>
</Radius>

```

## Table description

Item	Description
Feature name	Radius
Table name	Schemes
Table type	Multi-instance table
Row name	Scheme
Restrictions	The device supports a maximum of 16 RADIUS schemes.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeName	RADIUS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
TimeUnitage	Measurement unit of the interval for sending realtime accounting packets	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Minute.</li> <li>1—Second.</li> </ul>	Default: 0.
RealAcctInterval	Realtime accounting interval	N/A	Unsigned integer. Value range: 0 to 71582.	<p>Default: 12 minutes.</p> <p>Zero indicates that the device does not send realtime accounting packets to the RADIUS accounting server.</p> <p>The unit of the realtime accounting interval is set through the TimeUnitage column. If the TimeUnitage column is not set, the unit is minute.</p> <p>The device converts the interval value to a value in seconds even if the configured measurement unit is minute.</p> <p>After the realtime accounting interval is set, only deleting the</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
				TimeUnitage column does not affect the interval.
TimeOut	RADIUS server response timeout period	N/A	Unsigned integer. Value range: 1 to 10, in seconds.	Default: 3 seconds.
QuietTime	Quiet timer for the servers specified in the RADIUS scheme	N/A	Unsigned integer. Value range: 1 to 255, in minutes.	Default: 5 minutes.
PktRetryTimes	Max number of attempts to send a RADIUS packet to a single RADIUS server	N/A	Unsigned integer. Value range: 1 to 20.	Default: 3.
RealAcctRetryTimes	Max number of realtime accounting attempts	N/A	Unsigned integer. Value range: 1 to 255.	Default: 5.
UserNameFormat	Format of user names to be sent to RADIUS servers	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—keep-original.</li> <li>1—with-domain.</li> <li>2—without-domain.</li> </ul>	Default: 1.
BytesUnit	Data flow measurement unit for traffic statistics	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—byte.</li> <li>1—kilo-byte.</li> <li>2—mega-byte.</li> <li>3—giga-byte.</li> </ul>	Default: 0.
PacketsUnit	Packet measurement unit for traffic statistics	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—one-packet.</li> <li>1—kilo-packet.</li> <li>2—mega-packet.</li> <li>3—giga-packet.</li> </ul>	Default: 0.
NasIpv4Address	Source IPv4 address for outgoing RADIUS packets	N/A	String in dotted decimal notation.	For example, 10.1.1.1.
NasIpv6Address	Source IPv6 address for outgoing RADIUS packets	N/A	Hexadecimal string, colon-separated.	For example, 2001:12::22:33.
AuthenKey	Authentication shared key	N/A	In non-FIPS mode, a plaintext shared key is a string of 1 to 64 characters.  In FIPS mode, a plaintext shared key is a string of 15 to 64 characters that must contain digits, uppercase letters, lowercase letters, and	The shared key is in plain text.

Column name	Column description	Column type	Data type and restrictions	Remarks
			special characters.	
AcctKey	Accounting shared key	N/A	In non-FIPS mode, a plaintext shared key is a string of 1 to 64 characters.  In FIPS mode, a plaintext shared key is a string of 15 to 64 characters that must contain digits, uppercase letters, lowercase letters, and special characters.	The shared key is in plain text.
VRF	VPN instance name for the RADIUS scheme	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
ClassType	Whether to interpret the RADIUS class attribute (attribute 25) as CAR parameters	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Standard.</li> <li>1—CAR.</li> </ul>	Default: 0.
AcctOnEnable	Whether to enable the accounting-on feature	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	Default: false.
AcctOnSendInterval	Interval for retransmitting an accounting-on packet	N/A	Unsigned integer. Value range: 1 to 15, in seconds.	Default: 3 seconds. Only when the AcctOnEnable column is true, this column is effective.
AcctOnSendTimes	Max number of accounting-on packet transmission attempts	N/A	Unsigned integer. Value range: 1 to 255.	Default: 50. Only when the AcctOnEnable column is true, this column is effective.
ChangePassword	Whether to enable the online password change feature	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	Default: 0.
StopAcctPktSendForce	Whether to send stop-accounting packets when users for which no start-accounting packets are sent go offline	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	Default: false.

## Table description

Item	Description
Feature name	Radius
Table name	DaeClients
Table type	Multi-instance table
Row name	DaeClient
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
IpType	Type of the DAE client IP address	Index	Enumeration: <ul style="list-style-type: none"><li>• 0—IPv4.</li><li>• 1—IPv6.</li></ul>	N/A
IpAddress	IP address of the DAE client	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	If the IpType value is 0, this column represents the IPv4 address of the client. For example, 1.0.0.1. If the IpType value is 1, this column represents the IPv6 address of the client. For example, 2001:12::1:2.
Key	Shared key of RADIUS DAE packets	N/A	In non-FIPS mode, a plaintext shared key is a string of 1 to 64 characters. In FIPS mode, a plaintext shared key is a string of 15 to 64 characters that must contain digits, uppercase letters, lowercase letters, and special characters.	The shared key is in plain text.

# Radius

## Radius/Trap

SNMP notification information table of RADIUS.

### XML structure

```
<Radius>
  <Trap>
    <AuthErrThreshold></AuthErrThreshold>
    <Switchs>
      <AuthServerDown></AuthServerDown>
      <AuthServerUp></AuthServerUp>
      <AcctServerDown></AcctServerDown>
      <AcctServerUp></AcctServerUp>
      <AuthErrReachThreshold></AuthErrReachThreshold>
    </Switchs>
  </Trap>
</Radius>
```

### Table description

Item	Description
Feature name	Radius
Table name	Trap
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AuthErrThresh hold	The threshold for authentication failure notification	N/A	Unsigned integer. Value range: 1 to 100.	Default: 30. An authentication failure notification will be sent if the number of authentication failures compared to the total number of authentication attempts exceeds the specified threshold. This column is not supported to configure

Column name	Column description	Column type	Data type and restrictions	Remarks
				at present.
Switchs	Whether to enable each type of notification	Data structure	Members include: <ul style="list-style-type: none"> <li>AuthServerDown.</li> <li>AuthServerUp.</li> <li>AcctServerDown.</li> <li>AcctServerUp.</li> <li>AuthErrReachThreshold.</li> </ul>	N/A
AuthServerDown	Whether to send a notification after a RADIUS authentication server is down	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	Default: false.
AuthServerUp	Whether to send a notification after a RADIUS authentication server is up	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	Default: false.
AcctServerDown	Whether to send a notification after a RADIUS accounting server is down	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	Default: false.
AcctServerUp	Whether to send a notification after a RADIUS accounting server is up	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	Default: false.
AuthErrReachThreshold	Whether to send a notification when the number of authentication failures compared to the total number of authentication attempts exceeds the specified threshold	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	Default: false.

## Radius/Dscp

The DSCP priority of RADIUS packets.

### XML structure

```

<Radius>
  <Dscp>
    <Ipv4></Ipv4>
    <Ipv6></Ipv6>
  </Dscp>

```

</Radius>

## Table description

Item	Description
Feature name	Radius
Table name	Dscp
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4	DSCP priority of IPv4 RADIUS packets	N/A	Unsigned integer. Value range: 0 to 63.	Default: 0.
Ipv6	DSCP priority of IPv6 RADIUS packets	N/A	Unsigned integer. Value range: 0 to 63.	Default: 0.

## Radius/Client/GlobalNasIps

RADIUS global NAS IP information table.

## XML structure

```
<Radius>
  <Client>
    <GlobalNasIps>
      <GlobalNasIp>
        <VRF></VRF>
        <IpType></IpType>
        <IpAddress></IpAddress>
      </GlobalNasIp>
    </GlobalNasIps>
  </Client>
</Radius>
```

## Table description

Item	Description
Feature name	Radius
Table name	GlobalNasIps

Item	Description
Table type	Multi-instance table
Row name	GlobalNasIp
Restrictions	A maximum of 16 global NAS IP addresses are supported.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
IpType	Type of the source IP address for outgoing RADIUS packets	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> </ul>	N/A
IpAddress	Source IP address for outgoing RADIUS packets	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	If the IpType value is 0, this column represents an IPv4 address. For example, 1.0.0.1. If the IpType value is 1, this column represents an IPv6 address. For example, 2001:12::1:2.

## Radius/Client/GlobalNasIpIf

This table contains the global source interface of outgoing RADIUS packets.

## XML structure

```

<Radius>
  <Client>
    <GlobalNasIpIf>
      <IfIndex></IfIndex>
    </GlobalNasIpIf>
  </Client>
</Radius>

```

## Table description

Item	Description
Feature name	Radius
Table name	GlobalNasIpIf
Table type	Single-instance table

Item	Description
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
lflIndex	Index of the interface that provides the source IP address of outgoing RADIUS packets	N/A	Unsigned integer.

# Radius/Client/ServerTestProfiles

The test profile table for RADIUS server status detection.

## XML structure

```

<Radius>
  <Client>
    <ServerTestProfiles>
      <ServerTestProfile>
        <ProfileName></ProfileName>
        <UserName></UserName>
        <Interval></Interval>
      </ServerTestProfile>
    </ServerTestProfiles>
  </Client>
</Radius>

```

## Table description

Item	Description
Feature name	Radius
Table name	ServerTestProfiles
Table type	Multi-instance table
Row name	ServerTestProfile
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Name of the RADIUS test	Index	String, case-sensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	profile		Length: 1 to 31 characters.	
UserName	User name for the RADIUS test profile	N/A	String, case-sensitive. Length: 1 to 253 characters.	This column is required.
Interval	Period for sending test packets	N/A	Unsigned integer. Value range: 1 to 3600, in minutes.	Default: 60 minutes.

## Radius/Client/Schemes

RADIUS scheme table.

### XML structure

```

<Radius>
  <Client>
    <Schemes>
      <Scheme>
        <SchemeName></SchemeName>
        <RealAcctInterval></RealAcctInterval>
        <Timeout></Timeout>
        <QuietTime></QuietTime>
        <PktRetryTimes></PktRetryTimes>
        <RealAcctRetryTimes></RealAcctRetryTimes>
        <UserNameFormat></UserNameFormat>
        <BytesUnit></BytesUnit>
        <PacketsUnit></PacketsUnit>
        <NasIpv4Address></NasIpv4Address>
        <NasIpv6Address></NasIpv6Address>
        <VRF></VRF>
        <ClassType></ClassType>
        <AcctOnEnable></AcctOnEnable>
        <AcctOnSendInterval></AcctOnSendInterval>
        <AcctOnSendTimes></AcctOnSendTimes>
        <ChangePassword></ChangePassword>
        <StopAcctPktSendForce></StopAcctPktSendForce>
      </Scheme>
    </Schemes>
  </Client>
</Radius>

```

## Table description

Item	Description
Feature name	Radius
Table name	Schemes
Table type	Multi-instance table
Row name	Scheme
Restrictions	A maximum of 16 RADIUS schemes are supported.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeName	RADIUS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
RealAcctInterval	Realtime accounting interval	N/A	Unsigned integer. Value range: 0 to 71582, in seconds.	The device converts the interval value to a value in seconds even if the configured measurement unit is minute.  Zero indicates that the device doesn't send realtime accounting packets to the RADIUS accounting server.
TimeOut	RADIUS server response timeout period	N/A	Unsigned integer. Value range: 1 to 10, in seconds.	Default: 3 seconds.
QuietTime	Quiet timer for the servers specified in the RADIUS scheme	N/A	Unsigned integer. Value range: 1 to 255, in minutes.	Default: 5 minutes.
PktRetryTimes	Max number of attempts to send a RADIUS packet to a single RADIUS server	N/A	Unsigned integer. Value range: 1 to 20.	Default: 3.
RealAcctRetryTimes	Max number of realtime accounting attempts	N/A	Unsigned integer. Value range: 1 to 255.	Default: 5.
UserNameFormat	Format of user names to be sent to RADIUS servers	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—keep-original.</li> <li>1—with-domain.</li> <li>2—without-domain.</li> </ul>	Default: 1.
BytesUnit	Data flow measurement unit for traffic	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—byte.</li> </ul>	Default: 0.

Column name	Column description	Column type	Data type and restrictions	Remarks
	statistics		<ul style="list-style-type: none"> <li>1—kilo-byte.</li> <li>2—mega-byte.</li> <li>3—giga-byte.</li> </ul>	
PacketsUnit	Packet measurement unit for traffic statistics	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—one-packet.</li> <li>1—kilo-packet.</li> <li>2—mega-packet.</li> <li>3—giga-packet.</li> </ul>	Default: 0.
NasIpv4Address	Source IPv4 address for outgoing RADIUS packets	N/A	String in dotted decimal notation.	For example, 10.1.1.1.
NasIpv6Address	Source IPv6 address for outgoing RADIUS packets	N/A	Hexadecimal string, colon-separated.	For example, 2001:12::22:33.
VRF	VPN instance name for the RADIUS scheme	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
ClassType	Whether to interpret the RADIUS class attribute (attribute 25) as CAR parameters	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Standard.</li> <li>1—CAR.</li> </ul>	Default: 0.
AcctOnEnable	Whether to enable the accounting-on feature	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	Default: false.
AcctOnSendInterval	Time interval for retransmitting an accounting-on packet	N/A	Unsigned integer. Value range: 1 to 15, in seconds.	Default: 3 seconds. This column is effective only when the AcctOnEnable value is true.
AcctOnSendTimes	Max number of attempts for transmitting an accounting-on packet	N/A	Unsigned integer. Value range: 1 to 255.	Default: 50. This column is effective only when the AcctOnEnable value is true.
ChangePassword	Enabling status of the online password change feature	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disabled.</li> <li>1—Enabled.</li> </ul>	N/A
StopAcctPktSendForce	Whether to send stop-accounting packets when users for which no start-accounting packets are sent go offline	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	Default: false.

# Radius/Client/AuthServers

RADIUS authentication server table.

## XML structure

```
<Radius>
  <Client>
    <AuthServers>
      <AuthServer>
        <SchemeName></SchemeName>
        <Priority></Priority>
        <VRF></VRF>
        <IpType></IpType>
        <Host></Host>
        <Port></Port>
        <SvrTestProfileName></SvrTestProfileName>
        <State></State>
      </AuthServer>
    </AuthServers>
  </Client>
</Radius>
```

## Table description

Item	Description
Feature name	Radius
Table name	AuthServers
Table type	Multi-instance table
Row name	AuthServer
Restrictions	You can specify one primary authentication server and a maximum of 16 secondary servers in one RADIUS scheme. To change the primary server, you must remove the old primary server first, and then specify a new primary server.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeName	RADIUS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Priority	Priority	Index	Enumeration: <ul style="list-style-type: none"><li>0—Primary authentication server.</li><li>1—Secondary</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			authentication server.	
VRF	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
IpType	Type of the RADIUS authentication server address	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> <li>2—FQDN.</li> </ul>	The value 2 for IpType is not supported currently. The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Host	RADIUS authentication server	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. FQDN: String of 1 to 255 characters.	If the IpType value is 0, this column represents the IPv4 address of the server. If the IpType value is 1, this column represents the IPv6 address of the server. The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Port	UDP port number of the RADIUS authentication server	Index	Unsigned integer. Value range: 1 to 65535.	Default: 1812.
SvrTestProfileName	Name of the test profile	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
State	Status of the RADIUS authentication server	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Active.</li> <li>1—Blocked.</li> </ul>	N/A

Request	Number of RADIUS Access-Request packets sent to this server	N/A	Unsigned integer.	Only valid Access-Request packets are counted.  This column does not include

Column name	Column description	Column type	Data type and restrictions	Remarks
				retransmissions.
ReTrans	Number of times that RADIUS Access-Request packets were retransmitted	N/A	Unsigned integer.	N/A
Accept	Number of RADIUS Access-Accept packets (valid or invalid) received from this server	N/A	Unsigned integer.	N/A
Reject	Number of RADIUS Access-Reject packets (valid or invalid) received from this server	N/A	Unsigned integer.	N/A
Challenge	Number of RADIUS Access-Challenge packets (valid or invalid) received from this server	N/A	Unsigned integer.	N/A
Malformed	Number of malformed RADIUS authentication responses received from this server	N/A	Unsigned integer.	The BadAuthenticator and UnknownType statistics are not included. Malformed packets include packets with an invalid length.
BadAuthenticator	Number of RADIUS authentication responses received from this server	N/A	Unsigned integer.	The packets contain invalid authenticators or Signature attributes.
PendingRequest	Number of RADIUS Access-Request packets waiting for responses	N/A	Unsigned integer.	This variable is incremented when an Access-Request is sent. This variable is decremented because of the receipt of an Access-Accept, Access-Reject, or Access-Challenge, or because of a request timeout or retransmission.
TimeOut	Number of authentication timeouts to this server	N/A	Unsigned integer.	After a timeout, the client may retransmit the authentication request to the same server, send a new

Column name	Column description	Column type	Data type and restrictions	Remarks
				request to another server, or give up.
UnKnownType	Number of unknown-type RADIUS packets that were received from this server on the authentication port	N/A	Unsigned integer.	N/A
Dropped	Number of RADIUS packets that were received from this server on the authentication port and dropped for some other reason	N/A	Unsigned integer.	N/A
LastRoundTripTime	Time interval (in hundredths of a second) between the most recent authentication response and request exchanged with the RADIUS authentication server	N/A	Unsigned integer.	N/A

## Table description

Item	Description
Feature name	Radius
Table name	AcctServers
Table type	Multi-instance table
Row name	AcctServer
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
IpType	Type of the RADIUS accounting server	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> <li>2—FQDN.</li> </ul>	The value 2 for IpType is not supported currently.  The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Host	RADIUS accounting server	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. FQDN: String of 1 to 255 characters.	If the IpType value is 0, this column represents the IPv4 address of the server.  If the IpType value is 1, this column represents the IPv6 address of the server.

Column name	Column description	Column type	Data type and restrictions	Remarks
				The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Port	UDP port number of the RADIUS accounting server	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Request	Number of RADIUS Accounting-Request packets sent to this server	N/A	Unsigned integer.	Only valid Accounting-Request packets are counted. This column does not include retransmissions.
ReTrans	Number of times that RADIUS Accounting-Request packets were retransmitted	N/A	Unsigned integer.	Retransmissions include the retries in which the Identifier and Acct-Delay have been updated, as well as the retries in which the Identifier and Acct-Delay have not been updated.
Response	Number of RADIUS packets received on the accounting port from this server	N/A	Unsigned integer.	N/A
Malformed	Number of malformed RADIUS Accounting-Response packets received from this server	N/A	Unsigned integer.	The BadAuthenticator and UnknownType statistics are not included. Malformed packets include packets with an invalid length.
BadAuthenticator	Number of RADIUS Accounting-Response packets received from this server	N/A	Unsigned integer.	The packets contain invalid authenticators.
PendingRequest	Number of RADIUS Accounting-Request packets waiting for responses	N/A	Unsigned integer.	This variable is incremented when an Accounting-Request is sent. This variable is decremented because of the receipt of an Accounting-Response or a request timeout or retransmission.

Column name	Column description	Column type	Data type and restrictions	Remarks
TimeOut	Number of accounting timeouts to this server	N/A	Unsigned integer.	After a timeout, the client may retransmit the accounting request to the same server, send a new request to another server, or give up.
UnKnownType	Number of unknown-type RADIUS packets that were received from this server on the accounting port	N/A	Unsigned integer.	N/A
Dropped	Number of RADIUS packets that were received from this server on the accounting port and dropped for some other reason	N/A	Unsigned integer.	N/A
LastRoundTripTime	Time interval between the most recent Accounting-Response and the Accounting-Request exchanged with the RADIUS accounting server	N/A	Unsigned integer.	N/A
AcctStartRequest	Number of start accounting requests sent to this server	N/A	Unsigned integer.	N/A
AcctStartResponse	Number of start accounting responses received from this server	N/A	Unsigned integer.	N/A
AcctUpdateRequest	Number of realtime accounting requests sent to this server	N/A	Unsigned integer.	N/A
AcctUpdateResponse	Number of realtime accounting responses received from this server	N/A	Unsigned integer.	N/A
AcctStopRequest	Number of stop accounting requests sent to	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	this server			
AcctStopResponse	Number of stop accounting responses received from this server	N/A	Unsigned integer.	N/A

## Radius/Statistic/SessCtrl

The statistics table of the session-control feature.

### XML structure

```

<Radius>
  <Statistic>
    <SessCtrl>
      <Request></Request>
      <Response></Response>
      <Dropped></Dropped>
      <CheckFail></CheckFail>
      <Terminate></Terminate>
      <SetPolicy></SetPolicy>
      <ReTrans></ReTrans>
      <UnKnownType></UnKnownType>
      <Malformed></Malformed>
    </SessCtrl>
  </Statistic>
</Radius>

```

### Table description

Item	Description
Feature name	Radius
Table name	SessCtrl
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Request	Number of received	N/A	Unsigned integer.	Only valid session-control request

Column name	Column description	Column type	Data type and restrictions	Remarks
	session-control request packets			packets are counted. This column does not include retransmissions.
Response	Number of sent session-control response packets	N/A	Unsigned integer.	N/A
Dropped	Number of discarded session-control request packets	N/A	Unsigned integer.	This column includes statistics for session-control request packets that were discarded for reasons other than CheckFail, UnknownType, and Malformed.
CheckFail	Number of check-failed session-control request packets	N/A	Unsigned integer.	Check-failed packets refer to packets that contain invalid authenticators.
Terminate	Number of user-offline session-control request packets	N/A	Unsigned integer.	N/A
SetPolicy	Number of session-control request packets for modifying user permissions	N/A	Unsigned integer.	N/A
ReTrans	Number of times that session-control request packets were retransmitted	N/A	Unsigned integer.	N/A
UnKnownType	Number of unknown-type session-control request packets	N/A	Unsigned integer.	N/A
Malformed	Number of malformed session-control request packets	N/A	Unsigned integer.	Malformed packets refer to packets with an invalid length and packets received from clients not associated with the session-control server.

## Radius/Statistic/Dae

The statistics table of the DAE server feature.

## XML structure

```
<Radius>
  <Statistic>
    <Dae>
      <Request></Request>
      <ReTrans></ReTrans>
      <Response></Response>
      <Dropped></Dropped>
      <CheckFail></CheckFail>
      <Disconnect></Disconnect>
      <Coa></Coa>
      <UnknownType></UnknownType>
      <Malformed></Malformed>
    </Dae>
  </Statistic>
</Radius>
```

## Table description

Item	Description
Feature name	Radius
Table name	Dae
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Request	Number of received DAE request packets	N/A	Unsigned integer.	Only valid DAE request packets are counted. This column does not include retransmissions.
ReTrans	Number of times that DAE request packets were retransmitted	N/A	Unsigned integer.	N/A
Response	Number of DAE response packets sent to the DAE clients	N/A	Unsigned integer.	N/A
Dropped	Number of discarded DAE request packets	N/A	Unsigned integer.	This column includes statistics for DAE request packets that were discarded for

Column name	Column description	Column type	Data type and restrictions	Remarks
				reasons other than CheckFail, UnknownType, and Malformed
CheckFail	Number of check-failed DAE request packets	N/A	Unsigned integer.	Check-failed packets refer to packets that contain invalid authenticators.
UnknownType	Number of unknown DAE request packets	N/A	Unsigned integer.	N/A
Disconnect	Number of user-offline DAE request packets	N/A	Unsigned integer.	N/A
Coa	Number of DAE request packets for modifying user permissions	N/A	Unsigned integer.	N/A
Malformed	Number of malformed DAE request packets	N/A	Unsigned integer.	Malformed packets refer to packets with an invalid length and packets received from clients not associated with the DAE server.

## Radius/PasswordLimit

Requirements to meet when you configure passwords for the RADIUS module.

### XML structure

```

<Radius>
  <PasswordLimit>
    <MinLen></MinLen>
    <MaxLen></MaxLen>
    <MinTypeNum></MinTypeNum>
  </PasswordLimit>
</Radius>

```

### Table description

Item	Description
Feature name	Radius
Table name	PasswordLimit
Table type	Single-instance table
Row name	None
Restrictions	<ul style="list-style-type: none"> <li>The configuration takes effect on the following</li> </ul>

Item	Description
	<p>items:</p> <ul style="list-style-type: none"> <li>Radius/Client/Schemes table:  &lt;AuthenKey&gt;&lt;/AuthenKey&gt;  &lt;AcctKey&gt;&lt;/AcctKey&gt;</li> <li>Radius/Client/AuthServers table:  &lt;Key&gt;&lt;/Key&gt;</li> <li>Radius/Client/AcctServers table:  &lt;Key&gt;&lt;/Key&gt;</li> <li>Radius/Server/SessCtrlClients table:  &lt;Key&gt;&lt;/Key&gt;</li> <li>Radius/Server/DaeClients table:  &lt;Key&gt;&lt;/Key&gt;</li> <li>Radius/Proxy/DaeProxyClients table:  &lt;Key&gt;&lt;/Key&gt;</li> </ul> <ul style="list-style-type: none"> <li>Data restrictions acquired in FIPS mode are different from the data restrictions acquired in non-FIPS mode.</li> </ul>

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MinLen	Minimum password length	N/A	Unsigned integer.	N/A
MaxLen	Maximum password length	N/A	Unsigned integer.	N/A
MinTypeNum	Minimum number of character types that the password must contain	N/A	Unsigned integer.	Character types include digit, uppercase letter, lowercase letter, and special character. For example, if the value is set to 3, the password string must include three or more character types.

  </Rules>
</RBAC>

```

## Table description

Item	Description
Feature name	RBAC
Table name	Rules
Table type	Multi-instance table
Row name	Rule
Restrictions	When the EntityType value is <b>feature</b> , the Entity value

	must be selected from the RBAC/Features table, and the RoleName value must be selected from the RBAC/Roles table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.	N/A
RuleIndex	Index of the rule	Index	Unsigned integer. Value range: 1 to 256.	The bigger the index, the higher the priority. RBAC rules are matched in descending order of priority.
Action	Action	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—permit.</li> <li>1—deny.</li> </ul>	N/A
ReadOperation	Whether it is a read operation	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Perform a read operation on the entity.
WriteOperation	Whether it is a write operation	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Perform a write operation on the entity.
ExecOperation	Whether it is an execute operation	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Perform an execute operation on the entity.
EntityType	Type of the entity	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Command.</li> <li>1—Feature.</li> <li>2—Feature group.</li> <li>3—Web menu.</li> <li>4—XML element.</li> <li>5—SNMP OID.</li> </ul>	The system ignores values of the ReadOperation, WriteOperation, and ExecOperation columns of entities of <b>command</b> type.
Entity	Entity	N/A	Command: String. Length: 1 to 128 characters. Feature: String. Length: 1 to 15 characters. Feature group: String. Length: 1 to 31 characters. Web menu: String.	For information about different types of entities, see the RBAC configuration in the user manual.

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 255 characters. XML element: String. Length: 1 to 255 characters. SNMP OID: String. Length: 1 to 255 characters.	

## RBAC/Policies/InterfacePolicies

RBAC interface policy table.

### XML structure

```

<RBAC>
  <Policies>
    <InterfacePolicies>
      <Policy>
        <RoleName></RoleName>
        <InterfaceListPermitted></InterfaceListPermitted>
      </Policy>
    </InterfacePolicies>
  </Policies>
</RBAC>

```

### Table description

Item	Description
Feature name	RBAC
Table name	InterfacePolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	Select the value of RoleName from the RBAC/Roles table. Before configuring the table, first set the value of PermitAllInterface to false in the RBAC/Roles table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.	N/A
InterfaceListPermitted	A list of permitted interfaces specified by full names	N/A	String. Length: 0 to 32767 characters.	To specify an interface range, make sure the interfaces are located on the same chassis, slot, or subslot. Specify the interface range with the last portion of the interface number. For example, set the list the following: GigabitEthernet0/0/1, GigabitEthernet0/0/10 to GigabitEthernet0/0/20, GigabitEthernet0/0/25

## RBAC/Policies/VLANPolicies

RBAC VLAN policy table.

## XML structure

```
<RBAC>
  <Policies>
    <VLANPolicies>
      <Policy>
        <RoleName></RoleName>
        <VLANListPermitted></VLANListPermitted>
      </Policy>
    </VLANPolicies>
  </Policies>
</RBAC>
```

## Table description

Item	Description
Feature name	RBAC
Table name	VLANPolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	Select the value of RoleName from the RBAC/Roles table. Before configuring the table, first set the value of PermitAllVLAN to false in the RBAC/Roles table.

Support for row creation and deletion	Yes
---------------------------------------	-----

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.	N/A
VLANListPermitted	A list of permitted VLANs	N/A	String. Length: 0 to 32767 characters.	The string can contain only numbers, minus signs, and commas, and cannot end with a comma or minus sign. The string does not support blank characters. For example, 1,2,3,5-8,10-20.

## RBAC/Policies/VRF Policies

RBAC VRF policy table.

## XML structure

```
<RBAC>
  <Policies>
    <VRFPolicies>
      <Policy>
        <RoleName></RoleName>
        <VRFPermitted></VRFPermitted>
      </Policy>
    </VRFPolicies>
  </Policies>
</RBAC>
```

## Table description

Item	Description
Feature name	RBAC
Table name	VRFPolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	Select the value of RoleName from the RBAC/Roles table. Before configuring the table, first set the value of PermitAllVRF to false in the RBAC/Roles table.

Support for row creation and deletion	Yes
---------------------------------------	-----

## Columns

Column name	Column description	Column type	Data type and restrictions
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.
VRFPermitted	Name of the permitted VRF instance	Index	String. Length: 1 to 31 characters.

## RBAC/Policies/SecZonePolicies

RBAC security zone policy table.

## XML structure

```

<RBAC>
  <Policies>
    <SecZonePolicies>
      <Policy>
        <RoleName></RoleName>
        <SecZonePermitted></SecZonePermitted>
      </Policy>
    </SecZonePolicies>
  </Policies>
</RBAC>

```

## Table description

Item	Description
Feature name	RBAC
Table name	SecZonePolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	Select the value of RoleName from the RBAC/Roles table. Before configuring the table, first set the value of PermitAllSecZone to false in the RBAC/Roles table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.
SecZonePermitted	Name of the permitted security zone	Index	String. Length: 1 to 13 characters.

## RBAC/FeatureGroups

RBAC feature group table.

## XML structure

```
<RBAC>
  <FeatureGroups>
    <FeatureGroup>
      <Name></Name>
    </FeatureGroup>
  </FeatureGroups>
</RBAC>
```

## Table description

Item	Description
Feature name	RBAC
Table name	FeatureGroups
Table type	Multi-instance table
Row name	FeatureGroup
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the feature group	Index	String. Length: 1 to 31 characters.	The predefined feature groups named <b>L2</b> and <b>L3</b> cannot be modified.

# RBAC/FeaturesInGroup

RBAC Feature In Group table.

## XML structure

```
<RBAC>
  <FeaturesInGroup>
    <Feature>
      <GroupName></GroupName>
      <FeatureName></FeatureName>
    </Feature>
  </FeaturesInGroup>
</RBAC>
```

## Table description

Item	Description
Feature name	RBAC
Table name	FeaturesInGroup
Table type	Multi-instance table
Row name	Feature
Restrictions	The value of FeatureName must be selected from the RBAC/Features table. The value of GroupName must be selected from the RBAC/FeatureGroups table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Name of the group	Index	String. Length: 1 to 31 characters.
FeatureName	Name of the feature	Index	String. Length: 1 to 15 characters.

# RBAC

## RBAC/Roles

RBAC role table.

## XML structure

```
<RBAC>
  <Roles>
    <Role>
      <RoleName></RoleName>
      <Description></Description>
      <PermitAllInterface></PermitAllInterface>
      <PermitAllVLAN></PermitAllVLAN>
      <PermitAllVRF></PermitAllVRF>
      <PermitAllSecZone></PermitAllSecZone>
      <IsPreDefined></IsPreDefined>
      <CanAddRules></CanAddRules>
    </Role>
  </Roles>
</RBAC>
```

## Table description

Item	Description
Feature name	RBAC
Table name	Roles
Table type	Multi-instance table
Row name	Role
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.	N/A
Description	Description of the role	N/A	String. Length: 1 to 128 characters.	Predefined roles have default descriptions, which are different. User-defined roles do not have default descriptions.

Column name	Column description	Column type	Data type and restrictions	Remarks
PermitAllInterface	Whether to allow access to all interfaces	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	The default value is true.
PermitAllVLAN	Whether to allow access to all VLANs	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	The default value is true.
PermitAllVRF	Whether to allow access to all VRFs	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	The default value is true.
PermitAllSecZone	Whether to allow access to all security zones	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	The default value is true.
IsPreDefined	Whether it is a predefined role	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Predefined roles include network-admin, network-operator, and level-0 to level-15 users.
CanAddRules	Whether to allow users to add rules	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	All user-defined roles, and part of the predefined roles allow users to add rules.

## RBAC/Rules

RBAC rule table.

## XML structure

```

<RBAC>
  <Rules>
    <Rule>
      <RoleName></RoleName>
      <RuleIndex></RuleIndex>
      <IsPreDefined></IsPreDefined>
      <Action></Action>
      <ReadOperation></ReadOperation>
      <WriteOperation></WriteOperation>
      <ExecOperation></ExecOperation>
      <EntityType></EntityType>
      <Entity></Entity>
    </Rule>
  </Rules>
</RBAC>

```

## Table description

Item	Description
Feature name	RBAC
Table name	Rules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.	N/A
RuleIndex	Index of the rule	Index	Unsigned integer. Value range: 1 to 256.	The bigger the index, the higher the priority. RBAC rules are matched in descending order of priority.
IsPreDefined	Whether it is a predefined rule	Index	Boolean: true false	Predefine rules can not be modified.
Action	Action	N/A	Enumeration: • <b>0</b> —permit. • <b>1</b> —deny.	N/A
ReadOperation	Whether it is a read operation	N/A	Boolean: • true • false	Perform a read operation on the entity.
WriteOperation	Whether it is a write operation	N/A	Boolean: • true • false	Perform a write operation on the entity.
ExecOperation	Whether it is an execute operation	N/A	Boolean: • true • false	Perform an execute operation on the entity.
EntityType	Type of the entity	N/A	Enumeration: • <b>0</b> —Command. • <b>1</b> —Feature. • <b>2</b> —Feature group. • <b>3</b> —Web menu. • <b>4</b> —XML element. • <b>5</b> —SNMP OID.	The system ignores values of the ReadOperation, WriteOperation, and ExecOperation columns of entities of <b>command</b> type.
Entity	Entity	N/A	Command: String. Length: 1 to 128 characters.	For information about different types of entities, see the RBAC configuration in the user

Column name	Column description	Column type	Data type and restrictions	Remarks
			Feature: String. Length: 1 to 15 characters. Feature group: String. Length: 1 to 31 characters. Web menu: String. Length: 1 to 255 characters. XML element: String. Length: 1 to 255 characters. SNMP OID: String. Length: 1 to 255 characters.	manual.

## RBAC/Policies/InterfacePolicies

RBAC interface policy table.

### XML structure

```

<RBAC>
  <Policies>
    <InterfacePolicies>
      <Policy>
        <RoleName></RoleName>
        <InterfaceListPermitted></InterfaceListPermitted>
      </Policy>
    </InterfacePolicies>
  </Policies>
</RBAC>

```

### Table description

Item	Description
Feature name	RBAC
Table name	InterfacePolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.	N/A
InterfaceListPermitted	A list of permitted interfaces specified by full names	N/A	String. Length: 0 to 32767 characters.	To specify an interface range, make sure the interfaces are located on the same chassis, slot, or subslot. Specify the interface range with the last portion of the interface number. For example, set the list the following: GigabitEthernet0/0/1, GigabitEthernet0/0/10 to GigabitEthernet0/0/20, GigabitEthernet0/0/25

## RBAC/Policies/VLANPolicies

RBAC VLAN policy table.

## XML structure

```
<RBAC>
  <Policies>
    <VLANPolicies>
      <Policy>
        <RoleName></RoleName>
        <VLANListPermitted></VLANListPermitted>
      </Policy>
    </VLANPolicies>
  </Policies>
</RBAC>
```

## Table description

Item	Description
Feature name	RBAC
Table name	VLANPolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.	N/A
VLANListPermitted	A list of permitted VLANs	N/A	String. Length: 0 to 32767 characters.	The string can contain only numbers, minus signs, and commas, and cannot end with a comma or minus sign. The string does not support blank characters. For example, 1,2,3,5-8,10-20.

## RBAC/Policies/VRF Policies

RBAC VRF policy table.

## XML structure

```
<RBAC>
  <Policies>
    <VRFPolicies>
      <Policy>
        <RoleName></RoleName>
        <VRFPermitted></VRFPermitted>
      </Policy>
    </VRFPolicies>
  </Policies>
</RBAC>
```

## Table description

Item	Description
Feature name	RBAC
Table name	VRFPolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.
VRFPermitted	Name of the permitted VRF instance	Index	String. Length: 1 to 31 characters.

## RBAC/Policies/SecZonePolicies

RBAC security zone policy table.

## XML structure

```
<RBAC>
  <Policies>
    <SecZonePolicies>
      <Policy>
        <RoleName></RoleName>
        <SecZonePermitted></SecZonePermitted>
      </Policy>
    </SecZonePolicies>
  </Policies>
</RBAC>
```

## Table description

Item	Description
Feature name	RBAC
Table name	SecZonePolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
RoleName	Name of the role	Index	String. Length: 1 to 63 characters.
SecZonePermitted	Name of the permitted	Index	String.

Column name	Column description	Column type	Data type and restrictions
	security zone		Length: 1 to 31 characters.

## RBAC/Features

RBAC feature table.

### XML structure

```

<RBAC>
  <Features>
    <Feature>
      <Name></Name>
      <Description></Description>
    </Feature>
  </Features>
</RBAC>

```

### Table description

Item	Description
Feature name	RBAC
Table name	Features
Table type	Multi-instance table
Row name	Feature
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the feature group	Index	String. Length: 1 to 31 characters.	The predefined feature groups named L2 and L3 cannot be modified.

## RBAC/FeatureGroups

RBAC feature group table.

### XML structure

```

<RBAC>
  <FeatureGroups>

```

```

    <FeatureGroup>
      <Name></Name>

# RDDC

## RDDC/RedundancySwitchoverRequest

This table is used to switch over the redundancy group manually.

### XML structure

```
<RDDC>
  <RedundancySwitchoverRequest>
    <SwitchoverRequest>
      <GroupName></GroupName>
    </SwitchoverRequest>
  </RedundancySwitchoverRequest>
</RDDC>
```

### Table description

Item	Description
Feature name	RDDC
Table name	RedundancySwitchoverRequest
Table type	Multi-instance table
Row name	SwitchoverRequest
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.

## RDDC/RedundancySwitchoverReset

This table is used to trigger preemption in redundancy group manually.

### XML structure

```
<RDDC>
  <RedundancySwitchoverReset>
    <SwitchoverReset>
      <GroupName></GroupName>
    </SwitchoverReset>
  </RedundancySwitchoverReset>
</RDDC>
```

```

    </SwitchoverReset>
  </RedundancySwitchoverReset>
</RDDC>

```

## Table description

Item	Description
Feature name	RDDC
Table name	RedundancySwitchoverReset
Table type	Multi-instance table
Row name	SwitchoverReset
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.

## RDDC/RedundancyGroupClear

This table is used to clear redundancy group node or redundancy group itself.

## XML structure

```

<RDDC>
  <RedundancyGroupClear>
    <RedundancyClear>
      <GroupName></GroupName>
      <NodeID></NodeID>
    </RedundancyClear>

# RDDC

## RDDC/RedundancyInterfaceMember

This table contains member interface information in redundancy interface.

### XML structure

```
<RDDC>
  <RedundancyInterfaceMember>
    <MemberInterface>
      <IfIndex></IfIndex>
      <MemberIfIndex></MemberIfIndex>
      <Priority></Priority>
    </MemberInterface>
  </RedundancyInterfaceMember>
</RDDC>
```

### Table description

Item	Description
Feature name	RDDC
Table name	RedundancyInterfaceMember
Table type	Multi-instance table
Row name	MemberInterface
Restrictions	This table supports member interface types: Layer 3 Ethernet interface Layer 3 aggregate interface
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only redundancy interfaces are supported.
MemberIfIndex	Member interface index.	Index	Unsigned integer.	N/A
Priority	Priority of the member interface	N/A	Unsigned integer. Value range: 1 to 255.	Required. The higher the value, the greater the priority.

# RDDC/RedundancyGroup

This table contains redundancy group information.

## XML structure

```
<RDDC>
  <RedundancyGroup>
    <Group>
      <GroupName></GroupName>
      <PreemptDelay></PreemptDelay>
      <HoldDownInterval></HoldDownInterval>
    </Group>
  </RedundancyGroup>
</RDDC>
```

## Table description

Item	Description
Feature name	RDDC
Table name	RedundancyGroup
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.	N/A
PreemptDelay	Preempt delay time of redundancy group node	N/A	Unsigned integer. Value range: 0 to 12 minutes. Default: 1 minute.	0 means no switchover.
HoldDownInterval	Hold-down time	N/A	Unsigned integer. Value range: 0 to 1800 seconds. Default: 1 second	0 means not to hold down in switchover.

# RDDC/RedundancyGroupMember

This table contains redundancy interface information in redundancy group.

## XML structure

```
<RDDC>
  <RedundancyGroupMember>
    <MemberInterface>
      <GroupName></GroupName>
      <IfIndex></IfIndex>
    </MemberInterface>
  </RedundancyGroupMember>
</RDDC>
```

## Table description

Item	Description
Feature name	RDDC
Table name	RedundancyGroupMember
Table type	Multi-instance table
Row name	MemberInterface
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.	N/A
IfIndex	Interface index.	Index	Unsigned integer.	Only redundancy interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.

# RDDC/RedundancyFailoverGroup

This table contains failover group information in redundancy group.

## XML structure

```
<RDDC>
  <RedundancyFailoverGroup>
    <FailoverGroup>
      <GroupName></GroupName>
      <FailoverGroupName></FailoverGroupName>
    </FailoverGroup>
  </RedundancyFailoverGroup>
</RDDC>
```

## Table description

Item	Description
Feature name	RDDC
Table name	RedundancyFailoverGroup
Table type	Multi-instance table
Row name	FailoverGroup
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.	N/A
FailoverGroupUpName	Failover group name	Index	String, case-sensitive. Length: 1 to 63 characters.	N/A

# RDDC/RedundancyGroupNode

This table contains redundancy group node information in redundancy group.

## XML structure

```
<RDDC>
  <RedundancyGroupNode>
    <Node>
      <GroupName></GroupName>
```

```

    <NodeID></NodeID>
    <Priority></Priority>
    <BindChassis></BindChassis>
  </Node>
</RedundancyGroupNode>
</RDDC>

```

## Table description

Item	Description
Feature name	RDDC
Table name	RedundancyGroupNode
Table type	Multi-instance table
Row name	Node
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.	N/A
NodeID	Redundancy group node ID	Index	Unsigned integer. Value range: 1 to 2.	N/A
Priority	Priority of this redundancy group node	N/A	Unsigned integer. Value range: 1 to 255. Default: 1.	The higher the value, the greater the priority.
BindChassis	The bound chassis ID	N/A	Unsigned integer.	N/A

## RDDC/RedundancyGroupTrack

This table contains track information of redundancy group node.

## XML structure

```

<RDDC>
  <RedundancyGroupTrack>
    <Track>
      <GroupName></GroupName>
      <NodeID></NodeID>
      <TrackID></TrackID>
      <ReducePriority></ReducePriority>
    </Track>
  </RedundancyGroupTrack>
</RDDC>

```

```

        <IfIndex></IfIndex>
    </Track>
</RedundancyGroupTrack>
</RDDC>

```

## Table description

Item	Description
Feature name	RDDC
Table name	RedundancyGroupTrack
Table type	Multi-instance table
Row name	Track
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.	N/A
NodeID	Redundancy group node ID	Index	Unsigned integer. Value range: 1to 2.	N/A
TrackID	The track ID	Index	Unsigned integer. Value range: 1to 1024.	N/A
ReducePriority	Reduce priority of redundancy group node	N/A	Unsigned integer. Value range: 1to 255. Default: 255.	N/A
IfIndex	Track interface index.	N/A	Unsigned integer.	N/A

## RDDC/RedundancyGroupNodeMember

This table contains member interface information in redundancy group node.

## XML structure

```

<RDDC>
  <RedundancyGroupNodeMember>
    <MemberInterface>
      <GroupName></GroupName>
      <NodeID></NodeID>
      <IfIndex></IfIndex>
    </MemberInterface>
  </RedundancyGroupNodeMember>
</RDDC>

```

```

    </RedundancyGroupNodeMember>
  </RDDC>

```

## Table description

Item	Description
Feature name	RDDC
Table name	RedundancyGroupNodeMember
Table type	Multi-instance table
Row name	MemberInterface
Restrictions	Bind redundancy group node with chassis first. This table supports member interface types: Layer 2 Ethernet interface Layer 3 Ethernet interface
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.	N/A
NodeID	Redundancy group node ID	Index	Unsigned integer. Value range: 1 to 2.	N/A
IfIndex	Interface index.	Index	Unsigned integer.	The interface must belong to the chassis bound with the redundancy group node. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.

# RDDC

## RDDC/RedundancyInterfaceMember

This table contains member interface information in redundancy interface.

### XML structure

```
<RDDC>
  <RedundancyInterfaceMember>
    <MemberInterface>
      <IfIndex></IfIndex>
      <MemberIfIndex></MemberIfIndex>
      <Priority></Priority>
      <ActiveStatus></ActiveStatus>
      <HoldStatus></HoldStatus>
    </MemberInterface>
  </RedundancyInterfaceMember>
</RDDC>
```

### Table description

Item	Description
Feature name	RDDC
Table name	RedundancyInterfaceMember
Table type	Multi-instance table
Row name	MemberInterface
Restrictions	This table supports member interface types: Layer 3 Ethernet interface Layer 3 aggregate interface

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only redundancy interfaces are supported.
MemberIfIndex	Member interface index.	Index	Unsigned integer.	N/A
Priority	Priority of the member interface	N/A	Unsigned integer. Value range: 1 to 255.	The higher the value, the greater the priority.

Column name	Column description	Column type	Data type and restrictions	Remarks
ActiveStatus	Active status of member interface	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Inactive.</li> <li>1—Active.</li> </ul>	N/A
HoldStatus	Hold status of member interface	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Absent.</li> <li>1—Normal.</li> </ul>	N/A

## RDDC/RedundancyGroup

This table contains redundancy group information.

### XML structure

```

<RDDC>
  <RedundancyGroup>
    <Group>
      <GroupName></GroupName>
      <PreemptDelay></PreemptDelay>
      <HoldDownInterval></HoldDownInterval>
      <HoldDownTimeRemained></HoldDownTimeRemained>
      <PreemptDelayRemained></PreemptDelayRemained>
      <SwitchoverRequest></SwitchoverRequest>
    </Group>
  </RedundancyGroup>
</RDDC>

```

### Table description

Item	Description
Feature name	RDDC
Table name	RedundancyGroup
Table type	Multi-instance table
Row name	Group
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PreemptDelay	Preempt delay time of redundancy group node	N/A	Unsigned integer. Value range: 0 to 12 minutes.	0 means no switchover.
HoldDownInterval	Hold-down time	N/A	Unsigned integer. Value range: 0 to 1800 seconds.	0 means not to hold down in switchover.
HoldDownTimeRemained	Remained hold-down time when a switchover occurred or a failover recovery.	N/A	Unsigned integer. Value range: 0 to 1800 seconds.	N/A
PreemptDelayRemained	Preempt delay time remained when a failover recovery.	N/A	Unsigned integer. Value range: 0 to 12 minutes.	N/A
SwitchoverRequest	Whether request a switchover to the low-priority node or not.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false(default)</b></li> </ul>	N/A

## RDDC/RedundancyGroupMember

This table contains redundancy interface information in redundancy group.

### XML structure

```

<RDDC>
  <RedundancyGroupMember>
    <MemberInterface>
      <GroupName></GroupName>
      <IfIndex></IfIndex>
    </MemberInterface>
  </RedundancyGroupMember>
</RDDC>

```

### Table description

Item	Description
Feature name	RDDC
Table name	RedundancyGroupMember
Table type	Multi-instance table
Row name	MemberInterface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.	<b>N/A</b>
IfIndex	Interface index.	Index	Unsigned integer.	Only redundancy interfaces are supported.

## RDDC/RedundancyFailoverGroup

This table contains failover group information in redundancy group.

## XML structure

```
<RDDC>
  <RedundancyFailoverGroup>
    <FailoverGroup>
      <GroupName></GroupName>
      <FailoverGroupName></FailoverGroupName>
    </FailoverGroup>
  </RedundancyFailoverGroup>
</RDDC>
```

## Table description

Item	Description
Feature name	RDDC
Table name	RedundancyFailoverGroup
Table type	Multi-instance table
Row name	FailoverGroup
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.	N/A
FailoverGroupUpName	Failover group name	Index	String, case-sensitive. Length: 1 to 63 characters.	N/A

# RDDC/RedundancyGroupNode

This table contains the information of redundancy group node.

## XML structure

```
<RDDC>
  <RedundancyGroupNode>
    <Node>
      <GroupName></GroupName>
      <NodeID></NodeID>
      <Priority></Priority>
      <BindChassis></BindChassis>
      <TrackWeight></TrackWeight>
      <Status></Status>
    </Node>
  </RedundancyGroupNode>
</RDDC>
```

## Table description

Item	Description
Feature name	RDDC
Table name	RedundancyGroupNode
Table type	Multi-instance table
Row name	Node
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.	N/A
NodeID	Redundancy group node ID	Index	Unsigned integer. Value range: 1 to 2.	N/A
Priority	Priority of this redundancy group node	N/A	Unsigned integer. Value range: 1 to 255.	The higher the value, the greater the priority.
BindChassis	The bound chassis ID	N/A	Unsigned integer.	N/A
TrackWeight	The current weight of this redundancy group node.	N/A	Integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	The current status of this redundancy group node.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Secondary.</li> <li>2—Primary.</li> </ul>	N/A

## RDDC/RedundancyGroupTrack

This table contains track information of redundancy group node.

### XML structure

```

<RDDC>
  <RedundancyGroupTrack>
    <Track>
      <GroupName></GroupName>
      <NodeID></NodeID>
      <TrackID></TrackID>
      <ReducePriority></ReducePriority>
      <Status></Status>
      <IfIndex></IfIndex>
      <FailInterface></FailInterface>
      <HoldStatus></HoldStatus>
    </Track>
  </RedundancyGroupTrack>
</RDDC>

```

### Table description

Item	Description
Feature name	RDDC
Table name	RedundancyGroupTrack
Table type	Multi-instance table
Row name	Track
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Redundancy group name	Index	String, case-sensitive. Length: 1 to 15 characters.
NodeID	Redundancy group node ID	Index	Unsigned integer. Value range: 1 to 2.

Column name	Column description	Column type	Data type and restrictions
TrackID	The track ID	Index	Unsigned integer. Value range: 1 to 1024.
ReducePriority	Reduce priority of redundancy group node	N/A	Unsigned integer. Value range: 1 to 255.
Status	Track Status	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Positive.</li> <li>2—Negative.</li> </ul>
IfIndex	Track interface index.	N/A	Unsigned integer.
FailInterface	Whether the trace interface is fault.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>
HoldStatus	The trace interface status.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Absend.</li> <li>1—Normal.</li> </ul>

## RDDC/RedundancyGroupNodeMember

This table contains member interface information in redundancy group node.

### XML structure

```

<RDDC>
  <RedundancyGroupNodeMember>
    <MemberInterface>
      <GroupName></GroupName>
      <NodeID></NodeID>
      <IfIndex></IfIndex>
      <RedundancyDown></RedundancyDown>
    </MemberInterface>

## WLANClient/ RfpingInformation

This table contains station 13n information.

### XML structure

```
<WLANClient>
  <RfpingInformation>
    <RfpingTest>
      <MacAddress></MacAddress>
      <ErrCode></ErrCode>
      <StaMode></StaMode>
      <Rfping>
        <McsIdx></McsIdx>
        <Nss></Nss>
        <VhtMcsIdx></VhtMcsIdx>
        <TxRate></TxTate>
        <TxPktCnt></TxPktCnt>
        <RxPktCnt></RxPktCnt>
        <Rssi></Rssi>
        <RetryPktCnt></RetryPktCnt>
        <Rtt></Rtt>
      </Rfping>
    </RfpingTest>
  </RfpingInformation>
</WLANClient>
```

### Table description

Item	Description
Feature name	WLANClient
Table name	RfpingInformation
Table type	Multi-instance table
Row name	RfpingTest
Group name	Rfping
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	MAC Address of station	index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
ErrCode	Rfping Result code	column	unsigned int 0 indicates success 1 indicates STA is offline 2 indicates RF ping conflict 3 indicates STA is sleeping 4 indicates Rf ping fail	Flag of the rfping result.
StaMode	Wireless mode	column	unsigned int . 1: 802.11b 2: 802.11a 4: 802.11g 16: 802.11gn 32: 802.11an 64: 802.11ac	N/A
McsIdx	Index of 11n-MCS	column	unsigned int, range: 0-255	This field is available when the station is in 802.11n mode. This field belong to group of Rfping.
Nss	Index of 11ac-NSS	column	unsigned int, range: 0-255	This field is available when the station is in 802.11ac mode. This field belong to group of Rfping.
VhtMcsIdx	Index of 11ac-VHT-MCS	column	unsigned int, range: 0-255	This field is available when the station is in 802.11ac mode. This field belong to group of Rfping.
TxRate	Transmit rate	column	unsigned int, range: 0-65535. Unit: 100Kbps.	This field belong to group of Rfping.
TxPktCnt	Transmit package count	column	unsigned int, 5 is expected.	This field belong to group of Rfping.
RxPktCnt	Received packet count	column	unsigned int, range: 0-5.	This field belong to group of Rfping.
Rssi	Received signal strength indication	column	unsigned int	This field belong to group of Rfping.
RetryPktCnt	Retried packet count	column	unsigned int, range: 0-15	This field belong to group of Rfping.

Rtt	Round trip time	column	unsigned int. Unit: ms.	This field belong to group of Rfping.

# RIP

## RIP/Instances

This table contains RIP instances information.

### XML structure

```
<RIP>
  <Instances>
    <Instance>
      <Name></Name>
      <VRF></VRF>
    </Instance>
  </Instances>
</RIP>
```

### Table description

Item	Description
Feature name	RIP
Table name	Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	Only unsigned integer ranging from 1 to 65535 is supported now.
VRF	Vrf name.	N/A	String. Length: 1 to 31 characters.	After an instance is created, its VRF cannot be modified.

## RIP/Networks

This table contains RIP network lists information.

## XML structure

```
<RIP>
  <Networks>
    <Network>
      <Name></Name>
      <NetworkAddr></NetworkAddr>
      <WildcardMask></WildcardMask>
    </Network>
  </Networks>
</RIP>
```

## Table description

Item	Description
Feature name	RIP
Table name	Networks
Table type	Multi-instance table
Row name	Network
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an Instance first before you merge or create networks for it.  Only unsigned integer ranging from 1 to 65535 is supported now.
NetworkAddr	Network address.	Index	String, dotted decimal notation.	N/A
WildcardMask	Wildcard mask.	N/A	String, dotted decimal notation.	N/A

## RIP/Redistributes

This table contains RIP redistribute lists information.

## XML structure

```
<RIP>
  <Redistributes>
    <Redist>
      <Name></Name>
      <Protocol></Protocol>
      <RedistName></RedistName>
    </Redist>
  </Redistributes>
</RIP>
```

## Table description

Item	Description
Feature name	RIP
Table name	Redistributes
Table type	Multi-instance table
Row name	Redist
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance first before you merge or create redistribute lists for it.  Only unsigned integer ranging from 1 to 65535 is supported now.
Protocol	Redistribute protocol.	Index	Enumeration: <ul style="list-style-type: none"><li>• 1—Direct</li><li>• 2—Static</li><li>• 3—RIP</li><li>• 4—OSPF</li><li>• 5—ISIS</li><li>• 6—BGP</li></ul>	N/A
RedistName	Redistribute instance name.	Index	String. Length: 1 to 31 characters.	It must be empty when the <b>Protocol</b> column is Direct, Static or BGP.

# RIP/Interfaces

This table contains RIP Interfaces information.

## XML structure

```
<RIP>
  <Interfaces>
    <If>
      <IfIndex></IfIndex>
      <Version></Version>
      <IfEnable>
        <Name></Name>

        <AuthType></AuthType>
        <PasswordType></PasswordType>
        <Password></Password>
        <KeyId></KeyId>
      </Authentication>
    </If>
  </Interfaces>
</RIP>
```

## Table description

Item	Description
Feature name	RIP
Table name	Interfaces
Table type	Multi-instance table
Row name	If
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant

Column name	Column description	Column type	Data type and restrictions	Remarks
				information, see the XSD document of your product. For information about IfIndex, see IfMgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Version	Interface version.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—RIPV1</li> <li>2—RIPV2</li> <li>3—RIPV2 Broadcast</li> </ul>	N/A
IfEnable	Interface enable messages.	N/A	Members include: <ul style="list-style-type: none"> <li>Name.</li> <li>ExcludedSubIp.</li> </ul>	N/A
Name	Instance name.	N/A	String. Length: 1 to 31 characters.	Only unsigned integer ranging from 1 to 65535 is supported now.
ExcludedSubIp	Whether to exclude secondary IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Exclude secondary IP addresses.</li> <li><b>false</b>—<b>Does not</b> exclude secondary IP addresses(default).</li> </ul>	N/A
Input	Whether to receive RIP packets.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Receive RIP packets (default).</li> <li>false—Does not receive RIP packets.</li> </ul>	N/A
Output	Whether to send RIP packets.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Send RIP packets (default).</li> <li>false—Does not send RIP packets.</li> </ul>	N/A
Authentication	Authentication messages.	N/A	Members include: <ul style="list-style-type: none"> <li>AuthType.</li> <li>PasswordType.</li> <li>Password.</li> <li>KeyId.</li> </ul>	The members of AuthType, PasswordType and Password must be specified. If <b>AuthType</b> column is Md5Rfc2082, KeyId must be specified.
AuthType	Authentication type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Simple.</li> <li>2—Md5Rfc2082.</li> <li>3—Md5Rfc2453.</li> </ul>	N/A
PasswordType	Password type.	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>1—Ciphertext.</li> <li>2—Plaintext.</li> </ul>	
Password	Password.	N/A	String. Length: <ul style="list-style-type: none"> <li><b>1 to 16 characters for plain password.</b></li> <li><b>33 to 53 characters for cipher password.</b></li> </ul>	N/A
KeyId	Key ID.	N/A	Unsigned integer. Value range: 1 to 255.	This column is available when the <b>AuthType</b> column is Md5Rfc2082. It must be empty when the <b>AuthType</b> column is Simple or Md5Rfc2453.

# RMON

## RMON/EtherStats

This table contains ethernet statistics information.

### XML structure

```
<RMON>
  <EtherStats>
    <Statistic>
      <Index></Index>
      <DataSource></DataSource>
      <Owner></Owner>
      <TemporaryStatus></TemporaryStatus>
    </Statistic>
  </EtherStats>
</RMON>
```

### Table description

Item	Description
Feature name	RMON
Table name	EtherStats
Table type	Multi-instance table
Row name	Statistic
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxEtherStats in the data namespace.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
DataSource	The particular ethernet interface to be sampled.	N/A	String, dotted decimal notation.	Only the instance of the ifIndex can be configured, which defined in RFC2836.
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TemporaryStatus	The status of this entry.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A

## RMON/EtherHistoryControls

This table contains ethernet history controls information.

### XML structure

```

<RMON>
  <EtherHistoryControls>
    <Control>
      <Index></Index>
      <DataSource></DataSource>
      <BucketsRequested></BucketsRequested>
      <Interval></Interval>
      <Owner></Owner>
      <TemporaryStatus></TemporaryStatus>
    </Control>
  </EtherHistoryControls>
</RMON>

```

### Table description

Item	Description
Feature name	RMON
Table name	EtherHistoryControls
Table type	Multi-instance table
Row name	Control
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxHistoryControls in the data namespace.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DataSource	The source of the data for which historical data was sampled.	N/A	String, dotted decimal notation.	Only the instance of the ifIndex can be configured, which defined in RFC2836.
BucketsRequested	The requested number of records to be saved for each interface.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 50.	The max number depends on RMON/Capabilities/MaxEtherHistorySamples in the data namespace.
Interval	The sample interval. Unit: second.	N/A	Unsigned integer. Value range: 5 to 3600. Default: 1800.	N/A
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A
TemporaryStatus	The status of this entry.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A

## RMON/Alarms

This table contains alarms information.

### XML structure

```

<RMON>
  <Alarms>
    <Alarm>
      <Index></Index>
      <Interval></Interval>
      <Variable></Variable>
      <SampleType></SampleType>
      <StartupAlarm></StartupAlarm>
      <RisingThreshold></RisingThreshold>
      <FallingThreshold></FallingThreshold>
      <RisingEventIndex></RisingEventIndex>
      <FallingEventIndex></FallingEventIndex>
      <Owner></Owner>
      <TemporaryStatus></TemporaryStatus>
    </Alarm>
  </Alarms>
</RMON>

```

## Table description

Item	Description
Feature name	RMON
Table name	Alarms
Table type	Multi-instance table
Row name	Alarm
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxAlarms in the data namespace.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Interval	The interval over which the data is sampled and compared with the rising and falling thresholds. Unit: second.	N/A	Unsigned integer. Value range: 5 to 65535.	N/A
Variable	The object identifier of the particular variable to be sampled.	N/A	String, dotted decimal notation.	Only variables that resolve to an ASN.1 primitive type of INTEGER (INTEGER, Integer32, Counter32, Counter64, Gauge, or TimeTicks) may be sampled.
SampleType	The method of sampling the selected variable and calculating the value to be compared against the thresholds.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—AbsoluteValue.</li> <li>2—DeltaValue.</li> </ul>	For AbsoluteValue, the value of the selected variable will be compared directly with the thresholds at the end of the sampling interval.  For DeltaValue, the value of the selected variable at the last sample will be subtracted from the current value, and the difference compared with the thresholds.

Column name	Column description	Column type	Data type and restrictions	Remarks
StartupAlarm	The alarm that may be sent when this entry is first set to valid.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—RisingAlarm.</li> <li>• 2—FallingAlarm.</li> <li>• 3—RisingOrFallingAlarm.</li> </ul>	<p>If the first sample after this entry becomes valid is greater than or equal to the RisingThreshold and StartupAlarm is equal to RisingAlarm or RisingOrFallingAlarm, then a single rising alarm will be generated.</p> <p>If the first sample after this entry becomes valid is less than or equal to the FallingThreshold and StartupAlarm is equal to FallingAlarm or RisingOrFallingAlarm, then a single falling alarm will be generated.</p>
RisingThreshold	A threshold for the sampled statistic.	N/A	Signed integer.	<p>When the current sampled value is greater than or equal to this threshold, and the value at the last sampling interval was less than this threshold, a single event will be generated.</p> <p>A single event will also be generated if the first sample after this entry becomes valid is greater than or equal to this threshold and the associated StartupAlarm is equal to RisingAlarm or RisingOrFallingAlarm.</p> <p>After a rising event is generated, another such event will not be generated until the sampled value falls below this threshold and reaches the FallingThreshold.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
FallingThreshold	A threshold for the sampled statistic.	N/A	Signed integer.	<p>When the current sampled value is less than or equal to this threshold, and the value at the last sampling interval was greater than this threshold, a single event will be generated.</p> <p>A single event will also be generated if the first sample after this entry becomes valid is less than or equal to this threshold and the associated StartupAlarm is equal to FallingAlarm or RisingOrFallingAlarm.</p> <p>After a falling event is generated, another such event will not be generated until the sampled value rises above this threshold and reaches the RisingThreshold.</p>
RisingEventIndex	The index in RMON/Events that is used when a rising threshold is crossed.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
FallingEventIndex	The index in RMON/Events that is used when a falling threshold is crossed.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A
TemporaryStatus	The status of this entry.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A

## RMON/Events

This table contains events information.

## XML structure

<RMON>

```

<Events>
  <Event>
    <Index></Index>
    <Description></Description>
    <Type></Type>
    <Community></Community>
    <Owner></Owner>
    <TemporaryStatus></TemporaryStatus>
  </Event>
</Events>
</RMON>

```

## Table description

Item	Description
Feature name	RMON
Table name	Events
Table type	Multi-instance table
Row name	Event
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxEvents in the data namespace.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Description	A comment describing this event entry.	N/A	String. Length: 1 to 127 characters.	N/A
Type	The type of notification that the probe will make about this event.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—None.</li> <li>2—Log.</li> <li>3—SnmpTrap.</li> <li>4—LogAndTrap.</li> </ul>	N/A
Community	If an SNMP trap is to be sent, it will be sent to the SNMP community specified by this octet string.	N/A	String. Length: 1 to 127 characters.	N/A
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TemporaryStatus	The status of this entry.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A

## RMON/UsrHistoryControls

This table contains user history controls information.

### XML structure

```

<RMON>
  <UsrHistoryControls>
    <Control>
      <Index></Index>
      <MaxObjects></MaxObjects>
      <Objects>
        <Variable></Variable>
        <SampleType></SampleType>
      </Objects>
      <BucketsRequested></BucketsRequested>
      <Interval></Interval>
      <Owner></Owner>
      <TemporaryStatus></TemporaryStatus>
    </Control>
  </UsrHistoryControls>
</RMON>

```

### Table description

Item	Description
Feature name	RMON
Table name	UsrHistoryControls
Table type	Multi-instance table
Row name	Control
Restrictions	The max number of entries depends on RMON/Capabilities/MaxUsrHistoryControls in the data namespace.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
MaxObjects	The number of objects to be sampled.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 1.	The max number depends on RMON/Capabilities/MaxUserHistoryObjects in the data namespace.
Objects	The objects to be sampled.	N/A	Members include: <ul style="list-style-type: none"> <li>Variable</li> <li>SampleType</li> </ul>	Multi-instance. Maximum occurrence is MaxObjects.
Variable	The object identifier of the particular variable to be sampled.	N/A	String, dotted decimal notation.	Only variables that resolve to an ASN.1 primitive type of Integer32 (Integer32, Counter, Gauge, or TimeTicks) may be sampled.
SampleType	The method of sampling the selected variables.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—AbsoluteValue.</li> <li>2—DeltaValue.</li> </ul>	For AbsoluteValue, the value of the selected variable will be copied directly into the history bucket.  For DeltaValue, the value of the selected variable at the last sample will be subtracted from the current value, and the difference will be stored in the history bucket.
BucketsRequested	The requested number of records to be saved.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 50.	N/A
Interval	The sample interval. Unit: second.	N/A	Unsigned integer. Value range: 1 to $2^{31} - 1$ . Default: 1800.	N/A
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A
TemporaryStatus	The status of this entry.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A

## RMON/ExtAlarms

This table contains extended alarms information.

## XML structure

```
<RMON>
  <ExtAlarms>
    <Alarm>
      <Index></Index>
      <Interval></Interval>
      <Variable></Variable>
      <Description></Description>
      <SampleType></SampleType>
      <StartupAlarm></StartupAlarm>
      <RisingThreshold></RisingThreshold>
      <FallingThreshold></FallingThreshold>
      <RisingEvtIndex></RisingEvtIndex>
      <FallingEvtIndex></FallingEvtIndex>
      <StatCycle></StatCycle>
      <StatType></StatType>
      <Owner></Owner>
      <TemporaryStatus></TemporaryStatus>
    </Alarm>
  </ExtAlarms>
</RMON>
```

## Table description

Item	Description
Feature name	RMON
Table name	ExtAlarms
Table type	Multi-instance table
Row name	Alarm
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxExtAlarms in the data namespace.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Interval	The interval over which the data is sampled and compared with the rising and falling thresholds. Unit: second.	N/A	Unsigned integer. Value range: 10 to 65535. Default: 1800.	N/A
Variable	The object identifier of the particular variable to be sampled.	N/A	String, dotted decimal notation. Length: 1 to 255 characters.	Only variables that resolve to an ASN.1 primitive type of INTEGER (INTEGER, Integer32, Unsigned32, Counter32, Counter64, Gauge, or TimeTicks) may be sampled.
Description	A comment describing this alarm entry.	N/A	String. Length: 1 to 127 characters.	N/A
SampleType	The method of sampling the selected variable and calculating the value to be compared against the thresholds.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—AbsoluteValue.</li> <li>2—DeltaValue.</li> </ul>	For AbsoluteValue, the value of the selected variable will be compared directly with the thresholds at the end of the sampling interval.  For DeltaValue, the value of the selected variable at the last sample will be subtracted from the current value, and the difference compared with the thresholds.
StartupAlarm	The alarm that may be sent when this entry is first set to valid.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—RisingAlarm.</li> <li>2—FallingAlarm.</li> <li>3—RisingOrFallingAlarm.</li> </ul>	If the first sample after this entry becomes valid is greater than or equal to the RisingThreshold and StartupAlarm is equal to RisingAlarm or RisingOrFallingAlarm, then a single rising alarm will be generated.  If the first sample after this entry becomes valid is less than or equal to the FallingThreshold and StartupAlarm is equal to FallingAlarm or RisingOrFallingAlarm, then a single falling alarm will be generated.

Column name	Column description	Column type	Data type and restrictions	Remarks
RisingThreshold	A rising threshold for the sampled statistic.	N/A	Signed integer. Default: 1.	<p>When the current sampled value is greater than or equal to this threshold, and the value at the last sampling interval was less than this threshold, a single event will be generated.</p> <p>A single event will also be generated if the first sample after this entry becomes valid is greater than or equal to this threshold and the associated StartupAlarm is equal to RisingAlarm or RisingOrFallingAlarm.</p> <p>After a rising event is generated, another such event will not be generated until the sampled value falls below this threshold and reaches the FallingThreshold.</p>
FallingThreshold	A falling threshold for the sampled statistic.	N/A	Signed integer. Default: 0.	<p>When the current sampled value is less than or equal to this threshold, and the value at the last sampling interval was greater than this threshold, a single event will be generated.</p> <p>A single event will also be generated if the first sample after this entry becomes valid is less than or equal to this threshold and the associated StartupAlarm is equal to FallingAlarm or RisingOrFallingAlarm.</p> <p>After a falling event is generated, another such event will not be generated until the sampled value rises above this threshold and reaches the RisingThreshold.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
RisingEvtIndex	The index in RMON/Events that is used when a rising threshold is crossed.	N/A	Unsigned integer. Value range: 0 to 65535. Default: 0.	If there is no corresponding entry in RMON/Events, then no association exists.  In particular, if this value is zero, no associated event will be generated, as zero is not a valid index of RMON/Events.
FallingEvtIndex	The index in RMON/Events that is used when a falling threshold is crossed.	N/A	Unsigned integer. Value range: 0 to 65535. Default: 0.	If there is no corresponding entry in RMON/Events, then no association exists.  In particular, if this value is zero, no associated event will be generated, as zero is not a valid index of RMON/Events.
StatType	Type of statistic period.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Forever.</li> <li>2—Cycle.</li> </ul> Default: 1.	N/A
StatCycle	The lifetime starts when an alarm entry is set in valid state. Unit: second.	N/A	Unsigned integer. Value range: 0 to 4294967. Default: 0.	It must be zero when StatType is 1-Forever. Otherwise it must be greater than the value of Interval.
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A
TemporaryStatus	The status of this entry.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A

# RMON

## RMON/Capabilities

This table contains capabilities information.

### XML structure

```
<RMON>
  <Capabilities>
    <MaxEtherStats></MaxEtherStats>
    <MaxHistoryControls></MaxHistoryControls>
    <MaxEtherHistorySamples></MaxEtherHistorySamples>
    <MaxAlarms></MaxAlarms>
    <MaxEvents></MaxEvents>
    <MaxLogs></MaxLogs>
    <MaxUsrHistoryControls></MaxUsrHistoryControls>
    <MaxUsrHistoryObjects></MaxUsrHistoryObjects>
    <MaxUsrHistorySamples></MaxUsrHistorySamples>
    <MaxExtAlarms></MaxExtAlarms>
  </Capabilities>
</RMON>
```

### Table description

Item	Description
Feature name	RMON
Table name	Capabilities
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
MaxEtherStats	Max number of entry in EtherStats	N/A	Unsigned integer. Value range: 1 to 65535.
MaxHistoryControls	Max number of entry in EtherHistoryControls	N/A	Unsigned integer. Value range: 1 to 65535.
MaxEtherHistorySamples	Max number of entry in EtherHistorySamples	N/A	Unsigned integer. Value range: 1 to 65535.

Column name	Column description	Column type	Data type and restrictions
MaxAlarms	Max number of entry in Alarms	N/A	Unsigned integer. Value range: 1 to 65535.
MaxEvents	Max number of entry in Events	N/A	Unsigned integer. Value range: 1 to 65535.
MaxLogs	Max number of entry in Logs	N/A	Unsigned integer. Value range: 1 to 65535.
MaxUsrHistoryControls	Max number of entry in UsrHistoryControls	N/A	Unsigned integer. Value range: 1 to 65535.
MaxUsrHistoryObjects	Max number of Objects group in UsrHistoryControls and UsrHistorySamples	N/A	Unsigned integer. Value range: 1 to 65535.
MaxUsrHistorySamples	Max number of entry in UsrHistorySamples	N/A	Unsigned integer. Value range: 1 to 65535.
MaxExtAlarms	Max number of entry in ExtAlarms	N/A	Unsigned integer. Value range: 1 to 65535.

## Table description

Item	Description
Feature name	RMON
Table name	EtherStats
Table type	Multi-instance table
Row name	Statistic
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxEtherStats.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
DataSource	The particular ethernet interface to be sampled.	N/A	String, dotted decimal notation.	Only the instance of the ifIndex can be configured, which defined in RFC2836.
DropEvents	The total number of events in which packets were dropped by the probe due to lack of resources.	N/A	Unsigned integer.	N/A
Octets	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets).	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Pkts	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.	N/A	Unsigned integer.	N/A
BroadcastPkts	The total number of good packets received that were directed to the broadcast address.	N/A	Unsigned integer.	N/A
MulticastPkts	The total number of good packets received that were directed to a multicast address.	N/A	Unsigned integer.	N/A
CRCAAlignErrors	The total number of packets received that had a length (excluding framing bits, but including FCS octets) between 64 and 1518 octets, inclusive, but had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).	N/A	Unsigned integer.	N/A
UndersizePkts	The total number of packets received that were less than 64 octets long (excluding framing bits, but including FCS octets) and were otherwise well formed.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
OversizePkts	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.	N/A	Unsigned integer.	N/A
Fragments	The total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).	N/A	Unsigned integer.	N/A
Jabbers	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).	N/A	Unsigned integer.	N/A
Collisions	The best estimate of the total number of collisions on this ethernet segment.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Pkts64Octets	The total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets).	N/A	Unsigned integer.	N/A
Pkts65to127Octets	The total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).	N/A	Unsigned integer.	N/A
Pkts128to255Octets	The total number of packets (including bad packets) received that were between 128 and 255 octets in length inclusive (excluding framing bits but including FCS octets).	N/A	Unsigned integer.	N/A
Pkts256to511Octets	The total number of packets (including bad packets) received that were between 256 and 511 octets in length inclusive (excluding framing bits but including FCS octets).	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Pkts512to1023Octets	The total number of packets (including bad packets) received that were between 512 and 1023 octets in length inclusive (excluding framing bits but including FCS octets).	N/A	Unsigned integer.	N/A
Pkts1024to1518Octets	The total number of packets (including bad packets) received that were between 1024 and 1518 octets in length inclusive (excluding framing bits but including FCS octets).	N/A	Unsigned integer.	N/A
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A
TemporaryStatus	The status of this entry.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A

## RMON/EtherHistoryControls

This table contains ethernet history controls information.

### XML structure

```

<RMON>
  <EtherHistoryControls>
    <Control>
      <Index></Index>
      <DataSource></DataSource>
      <BucketsRequested></BucketsRequested>
      <Interval></Interval>
      <Owner></Owner>
      <TemporaryStatus></TemporaryStatus>
    </Control>
  </EtherHistoryControls>
</RMON>

```

## Table description

Item	Description
Feature name	RMON
Table name	EtherHistoryControls
Table type	Multi-instance table
Row name	Control
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxHistoryControls.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
DataSource	The source of the data for which historical data was sampled.	N/A	String, dotted decimal notation.	Only the instance of the ifIndex can be configured, which defined in RFC2836.
BucketsRequested	The requested number of records to be saved in RMON/EtherHistorySamples for each interface.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 50.	The max number depends on RMON/Capabilities/MaxEtherHistorySamples.
Interval	The sample interval. Unit: second.	N/A	Unsigned integer. Value range: 5 to 3600. Default: 1800.	N/A
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A
TemporaryStatus	The status of this entry.	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b></li><li><b>false</b></li></ul>	N/A

## RMON/EtherHistorySamples

This table contains ethernet historical samples information.

## XML structure

```
<RMON>

</RMON>

```

## Table description

Item	Description
Feature name	RMON
Table name	EtherHistorySamples
Table type	Multi-instance table
Row name	Sample
Restrictions	The max number of entrys depends on both RMON/Capabilities/MaxHistoryControls and RMON/Capabilities/MaxEtherHistorySamples.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ControlIndex	The controls index.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
SampleIndex	The samples index.	Index	Unsigned integer. Value range: 1 to $2^{31} - 1$ .	This index starts at 1 and increases by one as each new sample is taken.
IntervalStart	Time at the start of the interval over which this sample was measured. Unit: second.	N/A	Unsigned integer.	It represents the times elapsed after the device started up.

Column name	Column description	Column type	Data type and restrictions	Remarks
DropEvents	The total number of events in which packets were dropped by the probe due to lack of resources during this sampling interval.	N/A	Unsigned integer.	N/A
Octets	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets) during this sampling interval.	N/A	Unsigned integer.	N/A
Pkts	The total number of packets (including bad packets) received during this sampling interval.	N/A	Unsigned integer.	N/A
BroadcastPkts	The total number of good packets received during this sampling interval that were directed to the broadcast address.	N/A	Unsigned integer.	N/A
MulticastPkts	The total number of good packets received during this sampling interval that were directed to a multicast address.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CRCAAlignErrors	The number of packets received during this sampling interval that had a length (excluding framing bits but including FCS octets) between 64 and 1518 octets, inclusive, but had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).	N/A	Unsigned integer.	N/A
UndersizePkts	The number of packets received during this sampling interval that were less than 64 octets long (excluding framing bits, but including FCS octets) and were otherwise well formed.	N/A	Unsigned integer.	N/A
OversizePkts	The number of packets received during this sampling interval that were longer than 1518 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Fragments	The total number of packets received during this sampling interval that were less than 64 octets in length (excluding framing bits but including FCS octets) had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).	N/A	Unsigned integer.	N/A
Jabbers	The number of packets received during this sampling interval that were longer than 1518 octets (excluding framing bits but including FCS octets), and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).	N/A	Unsigned integer.	N/A
Collisions	The best estimate of the total number of collisions on this ethernet segment during this sampling interval.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Utilization	The best estimate of the mean physical layer network utilization on this interface during this sampling interval. Unit: percent.	N/A	Unsigned integer. Value range: 0 to 100.	N/A

## RMON/Alarms

This table contains alarms information.

### XML structure

```

<RMON>
  <Alarms>
    <Alarm>
      <Index></Index>
      <Interval></Interval>
      <Variable></Variable>
      <SampleType></SampleType>
      <Value></Value>
      <StartupAlarm></StartupAlarm>
      <RisingThreshold></RisingThreshold>
      <FallingThreshold></FallingThreshold>
      <RisingEventIndex></RisingEventIndex>
      <FallingEventIndex></FallingEventIndex>
      <Owner></Owner>
      <TemporaryStatus></TemporaryStatus>
    </Alarm>
  </Alarms>
</RMON>

```

### Table description

Item	Description
Feature name	RMON
Table name	Alarms
Table type	Multi-instance table
Row name	Alarm
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxAlarms.

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Interval	The interval over which the data is sampled and compared with the rising and falling thresholds. Unit: second.	N/A	Unsigned integer. Value range: 5 to 65535.	N/A
Variable	The object identifier of the particular variable to be sampled.	N/A	String, dotted decimal notation.	Only variables that resolve to an ASN.1 primitive type of INTEGER (INTEGER, Integer32, Counter32, Counter64, Gauge, or TimeTicks) may be sampled.
SampleType	The method of sampling the selected variable and calculating the value to be compared against the thresholds.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—AbsoluteValue.</li> <li>2—DeltaValue.</li> </ul>	For AbsoluteValue, the value of the selected variable will be compared directly with the thresholds at the end of the sampling interval.  For DeltaValue, the value of the selected variable at the last sample will be subtracted from the current value, and the difference compared with the thresholds.
Value	The value of the statistic during the last sampling period.	N/A	Signed integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
StartupAlarm	The alarm that may be sent when this entry is first set to valid.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>1—RisingAlarm.</li> <li>2—FallingAlarm.</li> <li>3—RisingOrFallingAlarm.</li> </ul>	<p>If the first sample after this entry becomes valid is greater than or equal to the RisingThreshold and StartupAlarm is equal to RisingAlarm or RisingOrFallingAlarm, then a single rising alarm will be generated.</p> <p>If the first sample after this entry becomes valid is less than or equal to the FallingThreshold and StartupAlarm is equal to FallingAlarm or RisingOrFallingAlarm, then a single falling alarm will be generated.</p>
RisingThreshold	A threshold for the sampled statistic.	N/A	Signed integer.	<p>When the current sampled value is greater than or equal to this threshold, and the value at the last sampling interval was less than this threshold, a single event will be generated.</p> <p>A single event will also be generated if the first sample after this entry becomes valid is greater than or equal to this threshold and the associated StartupAlarm is equal to RisingAlarm or RisingOrFallingAlarm.</p> <p>After a rising event is generated, another such event will not be generated until the sampled value falls below this threshold and reaches the FallingThreshold.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
FallingThreshold	A threshold for the sampled statistic.	N/A	Signed integer.	<p>When the current sampled value is less than or equal to this threshold, and the value at the last sampling interval was greater than this threshold, a single event will be generated.</p> <p>A single event will also be generated if the first sample after this entry becomes valid is less than or equal to this threshold and the associated StartupAlarm is equal to FallingAlarm or RisingOrFallingAlarm.</p> <p>After a falling event is generated, another such event will not be generated until the sampled value rises above this threshold and reaches the RisingThreshold.</p>
RisingEventIndex	The index in RMON/Events that is used when a rising threshold is crossed.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
FallingEventIndex	The index in RMON/Events that is used when a falling threshold is crossed.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A
TemporaryStatus	The status of this entry.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A

## RMON/Events

This table contains events information.

## XML structure

<RMON>

```

<Events>
  <Event>
    <Index></Index>
    <Description></Description>
    <Type></Type>
    <Community></Community>
    <LastTimeSent></LastTimeSent>
    <Owner></Owner>
    <TemporaryStatus></TemporaryStatus>
  </Event>
</Events>
</RMON>

```

## Table description

Item	Description
Feature name	RMON
Table name	Events
Table type	Multi-instance table
Row name	Event
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxEvents.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Description	A comment describing this event entry.	N/A	String. Length: 1 to 127 characters.	N/A
Type	The type of notification that the probe will make about this event.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—None.</li> <li>2—Log.</li> <li>3—SnmpTrap.</li> <li>4—LogAndTrap.</li> </ul>	N/A
Community	If an SNMP trap is to be sent, it will be sent to the SNMP community specified by this octet string.	N/A	String. Length: 1 to 127 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LastTimeSent	Time at the time this event entry last generated an event. Unit: second	N/A	Unsigned integer.	It represents the times elapsed after the device started up.
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A
TemporaryStatus	The status of this entry.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A

## RMON/Logs

This table contains logs information.

### XML structure

```

<RMON>
  <Logs>
    <Log>
      <EventIndex></EventIndex>
      <LogIndex></LogIndex>
      <Time></Time>
      <Description></Description>
    </Log>
  </Logs>
</RMON>

```

### Table description

Item	Description
Feature name	RMON
Table name	Logs
Table type	Multi-instance table
Row name	Log
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxLogs.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EventIndex	The event index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
LogIndex	The log index	Index	Unsigned integer. Value range: 1 to $2^{31} - 1$ .	N/A
Time	Time when this log entry was created.	N/A	Unsigned integer.	It represents the times elapsed after the device started up.
Description	An implementation dependent description of the event that activated this log entry.	N/A	String. Length: 1 to 255 characters.	N/A

## RMON/UsrHistoryControls

This table contains user history controls information.

### XML structure

```
<RMON>
  <UsrHistoryControls>
    <Control>
      <Index></Index>

      <Objects>
        <Variable></Variable>
        <SampleType></SampleType>
      </Objects>
      <BucketsRequested></BucketsRequested>
      <Interval></Interval>
      <Owner></Owner>
      <TemporaryStatus></TemporaryStatus>
    </Control>
  </UsrHistoryControls>
</RMON>
```

### Table description

Item	Description
Feature name	RMON

Table name	UsrHistoryControls
Table type	Multi-instance table
Row name	Control
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxUsrHistoryControls.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
MaxObjects	The number of objects to be sampled.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 50.	The max number depends on RMON/Capabilities/MaxUsrHistoryObjects.
Objects	The objects to be sampled.	N/A	Members include: <ul style="list-style-type: none"> <li>Variable</li> <li>SampleType</li> </ul>	Multi-instance. Maximum occurrence is MaxObjects.
Variable	The object identifier of the particular variable to be sampled.	N/A	String, dotted decimal notation.	Only variables that resolve to an ASN.1 primitive type of Integer32 (Integer32, Counter, Gauge, or TimeTicks) may be sampled.
SampleType	The method of sampling the selected variables.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—AbsoluteValue.</li> <li>2—DeltaValue.</li> <li>Default: DeltaValue</li> </ul>	For AbsoluteValue, the value of the selected variable will be copied directly into the history bucket. For DeltaValue, the value of the selected variable at the last sample will be subtracted from the current value, and the difference will be stored in the history bucket.
BucketsRequested	The requested number of records to be saved in RMON/UsrHistorySamples.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 50.	N/A
Interval	The sample interval. Unit: second.	N/A	Unsigned integer. Value range: 1 to $2^{31} - 1$ . Default: 1800.	N/A
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TemporaryStatus	The status of this entry.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A

## RMON/UsrHistorySamples

This table contains user history samples information.

### Table description

Item	Description
Feature name	RMON
Table name	UsrHistorySamples
Table type	Multi-instance table
Row name	Sample
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxUsrHistoryControls, RMON/Capabilities/MaxUsrHistoryObjects and RMON/Capabilities/MaxUsrHistorySamples.

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ControlIndex	The controls index.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
SampleIndex	The samples index.	Index	Unsigned integer. Value range: 1 to 2147483647.	This index starts at 1 and increases by one as each new sample is taken.
IntervalStart	Time at the start of the interval over which this sample was measured.	N/A	Unsigned integer.	It represents the times elapsed after the device started up.
IntervalEnd	Time at the end of the interval over which this sample was measured.	N/A	Unsigned integer.	It represents the times elapsed after the device started up.
Objects	The objects which was sampled.	N/A	Members include: <ul style="list-style-type: none"> <li>Variable</li> <li>SampleType</li> <li>Value</li> <li>ValStatus</li> </ul>	Multi-instance. Maximum occurrence is RMON/UsrHistoryControls/Control/MaxObjects.
Variable	The object identifier of the particular variable to be sampled.	N/A	String, dotted decimal notation.	N/A
SampleType	The method of sampling the selected variables.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—AbsoluteValue.</li> <li>2—DeltaValue.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AbsValue	The absolute value (i.e., unsigned value) of the user-specified statistic during the last sampling period.	N/A	Unsigned integer.	<p>The value during the current sampling period is not made available until the period is completed.</p> <p>To obtain the true value for this sampling interval, the associated instance of ValStatus must be checked, and AbsValue adjusted as necessary.</p> <p>If the MIB instance could not be accessed during the sampling interval, then this object will have a value of zero, and the associated instance of ValStatus will be set to NotAvailable.</p> <p>The access control check prescribed in the definition of RMON/UsrHistoryControls/Control/Objects/Variable SHOULD be checked for each sampling interval.</p> <p>If this check determines that access should not be allowed, then this object will have a value of zero, and the associated instance of ValStatus will be set to NotAvailable.</p>
ValStatus	Validity and sign of the data.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>1—NotAvailable.</li> <li>2—Positive.</li> <li>3—Negative.</li> </ul>	<p>If the MIB instance could not be accessed during the sampling interval, then NotAvailable will be returned.</p> <p>If the sample is valid and the actual value of the sample is greater than or equal to zero, then Positive is returned.</p> <p>If the sample is valid and the actual value of the sample is less than zero, Negative will be returned. The associated instance of AbsValue should be multiplied by -1 to obtain the true sample value.</p>

# RMON/ExtAlarms

This table contains extended alarms information.

## XML structure

      <SampleType></SampleType>
      <Value></Value>
      <StartupAlarm></StartupAlarm>
      <RisingThreshold></RisingThreshold>
      <FallingThreshold></FallingThreshold>
      <RisingEvtIndex></RisingEvtIndex>
      <FallingEvtIndex></FallingEvtIndex>
      <StatCycle></StatCycle>
      <StatType></StatType>
      <Owner></Owner>
      <TemporaryStatus></TemporaryStatus>
    </Alarm>
  </ExtAlarms>
</RMON>
```

## Table description

Item	Description
Feature name	RMON
Table name	ExtAlarms
Table type	Multi-instance table
Row name	Alarm
Restrictions	The max number of entrys depends on RMON/Capabilities/MaxExtAlarms.

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Entry index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Interval	The interval over which the data is sampled and compared with the rising and falling thresholds. Unit: second.	N/A	Unsigned integer. Value range: 10 to 65535. Default: 1800.	N/A
Variable	The object identifier of the particular variable to be sampled.	N/A	String, dotted decimal notation. Length: 1 to 255 characters.	Only variables that resolve to an ASN.1 primitive type of INTEGER (INTEGER, Integer32, Unsigned32, Counter32, Counter64, Gauge, or TimeTicks) may be sampled.
Description	A comment describing this alarm entry.	N/A	String. Length: 1 to 127 characters.	N/A
SampleType	The method of sampling the selected variable and calculating the value to be compared against the thresholds.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—AbsoluteValue.</li> <li>2—DeltaValue.</li> </ul>	For AbsoluteValue, the value of the selected variable will be compared directly with the thresholds at the end of the sampling interval.  For DeltaValue, the value of the selected variable at the last sample will be subtracted from the current value, and the difference compared with the thresholds.
Value	The value of the statistic during the last sampling period.	N/A	Signed integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
StartupAlarm	The alarm that may be sent when this entry is first set to valid.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—RisingAlarm.</li> <li>2—FallingAlarm.</li> <li>3—RisingOrFallingAlarm.</li> </ul>	<p>If the first sample after this entry becomes valid is greater than or equal to the RisingThreshold and StartupAlarm is equal to RisingAlarm or RisingOrFallingAlarm, then a single rising alarm will be generated.</p> <p>If the first sample after this entry becomes valid is less than or equal to the FallingThreshold and StartupAlarm is equal to FallingAlarm or RisingOrFallingAlarm, then a single falling alarm will be generated.</p>
RisingThreshold	A rising threshold for the sampled statistic.	N/A	Signed integer. Default: 1.	<p>When the current sampled value is greater than or equal to this threshold, and the value at the last sampling interval was less than this threshold, a single event will be generated.</p> <p>A single event will also be generated if the first sample after this entry becomes valid is greater than or equal to this threshold and the associated StartupAlarm is equal to RisingAlarm or RisingOrFallingAlarm.</p> <p>After a rising event is generated, another such event will not be generated until the sampled value falls below this threshold and reaches the FallingThreshold.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
FallingThreshold	A falling threshold for the sampled statistic.	N/A	Signed integer. Default: 0.	<p>When the current sampled value is less than or equal to this threshold, and the value at the last sampling interval was greater than this threshold, a single event will be generated.</p> <p>A single event will also be generated if the first sample after this entry becomes valid is less than or equal to this threshold and the associated StartupAlarm is equal to FallingAlarm or RisingOrFallingAlarm.</p> <p>After a falling event is generated, another such event will not be generated until the sampled value rises above this threshold and reaches the RisingThreshold.</p>
RisingEvtIndex	The index in RMON/Events that is used when a rising threshold is crossed.	N/A	Unsigned integer. Value range: 0 to 65535. Default: 0.	<p>If there is no corresponding entry in RMON/Events, then no association exists.</p> <p>In particular, if this value is zero, no associated event will be generated, as zero is not a valid index of RMON/Events.</p>
FallingEvtIndex	The index in RMON/Events that is used when a falling threshold is crossed.	N/A	Unsigned integer. Value range: 0 to 65535. Default: 0.	<p>If there is no corresponding entry in RMON/Events, then no association exists.</p> <p>In particular, if this value is zero, no associated event will be generated, as zero is not a valid index of RMON/Events.</p>
StatType	Type of statistic period.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Forever.</li> <li>2—Cycle.</li> </ul> Default: 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
StatCycle	The lifetime starts when an alarm entry is set in valid state. Unit: second.	N/A	Unsigned integer. Value range: 0 to 4294967. Default: 0.	It must be zero when StatType is 1-Forever. Otherwise it must be greater than the value of Interval.
Owner	The entity that configured this entry.	N/A	String. Length: 1 to 127 characters.	N/A
TemporaryStatus	The status of this entry.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A

# RMON

## RMON/EtherStats

Message	Explanation
When you modify a column,make sure the value of column TemporaryStatus is true. 修改列的值，行状态必须是临时态。	Merge, delete or replace operation failed. 修改列的值，行状态必须是临时态。
When you create a new row,make sure the value of column TemporaryStatus is false. 创建新行，行状态必须是非临时态。	Create operation failed. 创建新行，行状态必须是非临时态。
Please enter a value for the DataSource column to create a new Ethernet statistics entry. 创建新的以太网统计表项，请指定DataSource列的值。	During executing create or replace operation, 'DataSource' must be specified. 采样以太网接口地址，必须指定。

## RMON/EtherHistoryControls

Message	Explanation
The DataSource column can't be removed. DataSource列不能删除。	The DataSource column can't be removed. 采样以太网接口地址列不能删除。
Please enter a value for the DataSource column to create a new Ethernet history control entry. 创建新的以太网历史控制表项，请指定DataSource列的值。	During executing create or replace operation, 'DataSource' must be specified. 采样以太网接口地址，必须指定。
An entry with the same datasource and interval already exists. 同数据源相同采样间隔的表项已经存在。	No need to create a new table. 同数据源相同采样间隔的表项已经存在。
An entry with the same datasource already exists. 同数据源的表项已经存在。	No need to create a new table. 同数据源相同采样间隔的表项已经存在。

## RMON/Alarms

Message	Explanation
When you modify a column,make sure the value of column TemporaryStatus is true. 修改列的值，行状态必须是临时态。	Merge, delete or replace operation failed. 修改列的值，行状态必须是临时态。
When you create a new row,make sure the value of column TemporaryStatus is false. 创建新行，行状态必须是非临时态。	Create operation failed. 创建新行，行状态必须是非临时态。
The Variable column can't be removed.	'Variable' shows the object identifier of the particular variable to be sampled, and it can't be removed.

Variable列不能删除。	采样对象标识符不能被删除。
Please enter a value for the Variable column to create a new alarm. 创建新的告警，请指定Variable列的值。	'Variable' shows the object identifier of the particular variable to be sampled, and it must be specified. 创建新的告警，请指定采样对象标识符。

## RMON/UsrHistoryControls

Message	Explanation
When you modify a column,make sure the value of column TemporaryStatus is true. 修改列的值，行状态必须是临时态。	Merge, delete or replace operation failed. 修改列的值，行状态必须是临时态。
When you create a new row,make sure the value of column TemporaryStatus is false. 创建新行，行状态必须是非临时态。	Create operation failed. 创建新行，行状态必须是非临时态。
Operation failed.The number of objects exceed the value of column Maxobjects. Objects的个数超出Maxobjects的值。	Create new object failed. Objects的个数超出本地可维护最大值，创建失败。

## RMON/ExtAlarms

Message	Explanation
When you modify a column,make sure the value of column TemporaryStatus is true. 修改列的值，行状态必须是临时态。	Merge, delete or replace operation failed. 修改列的值，行状态必须是临时态。
When you create a new row,make sure the value of column TemporaryStatus is false. 创建新行，行状态必须是非临时态。	Create operation failed. 创建新行，行状态必须是非临时态。
Please enter a value for the Variable column to create a new extalarm. 创建新的扩展告警，请指定Variable列的值。	Please specify a dotted decimal notation string. 创建新的扩展告警，请指定采样对象标识符。
Please enter a value for the Description column to create a new extalarm. 创建新的扩展告警，请指定Description列的值。	The 'Description' is a comment describing the alarm entry. 创建新的扩展告警，请指定告警描述。
The Variable column can't be removed. Variable列不能删除。	'Variable' shows the object identifier of the particular variable to be sampled, and it can't be removed. 采样对象标识符不能被删除。
The Description column can't be removed. Description列不能删除。	The 'Description' can't be removed. 告警描述不能删除。

## Table description

Item	Description
Feature name	Route
Table name	Ipv4Routes
Table type	Multi-instance table
Row name	RouteEntry
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	Destination VRF.	index	String, case-sensitive. Length: 0 to 31 characters.	Null denotes public network.
Topology	Destination topology.	index	String, case-sensitive. Length: 0 to 31 characters.	Null denotes default topology.
Ipv4	Destination IPv4 prefix.	Data structure	Members include: <ul style="list-style-type: none"><li>Ipv4Address.</li><li>Ipv4PrefixLength.</li></ul>	The two members must both be specified. Support filter, for more information, see Table 1
Ipv4Address	Destination IPv4 address.	index	String, dotted decimal notation.	Example: 1.1.1.1.
Ipv4PrefixLength	Length of the destination IPv4 address prefix.	index	Unsigned integer. Value range: 0 to 32.	N/A
NextHop	NextHop IPv4 address.	index	String, dotted decimal notation.	Example: 1.1.1.1. 0.0.0.0 is an invalid value.
IfIndex	Interface index.	index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
AllVRF	All VRF routing tables.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Disable.</li><li>1—Enable.</li></ul>	Get all routes from private network while index "VRF" is Null and "AllVRF" is Enable.
Protocol	Routing protocol.	Data	Members include:	N/A

Column name	Column description	Column type structure	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>ProtocolID.</li> <li>SubProtocolID.</li> </ul>	
ProtocolID	Routing protocol ID.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—DIRECT.</li> <li>2—STATIC.</li> <li>3—RIP.</li> <li>4—OSPF.</li> <li>5—IS-IS.</li> <li>6—BGP.</li> <li>7—LISP.</li> <li>8—EIGRP.</li> <li>9—OpenR.</li> </ul>	N/A
SubProtocolID	Routing sub-protocol ID.	N/A	Unsigned integer.	N/A
ProcessID	Process ID.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Age	Route alive time.	N/A	Unsigned integer. Unit is second.	N/A
Preference	Route preference.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
Metric	Route metric.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
Tag	Route tag.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
Neighbor	Neighbor.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
ASNummer	Autonomy system.	Data structure	Members include: <ul style="list-style-type: none"> <li>OriginAS.</li> <li>LastAS.</li> </ul>	N/A
OriginAS	Original AS.	N/A	Unsigned integer.	N/A
LastAS	Last AS.	N/A	Unsigned integer.	N/A
BackupPathAttribute	Backup path attribute.	Data structure	Members include: <ul style="list-style-type: none"> <li>BackupIfIndex.</li> <li>BackupNextHop.</li> </ul>	N/A
BackupIfIndex	Backup interface index.	N/A	<ul style="list-style-type: none"> <li>Unsigned integer.</li> </ul>	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
BackupNexthop	Backup nexthop IPv4 address.	N/A	<ul style="list-style-type: none"> <li>String, dotted decimal notation.</li> </ul>	Example: 1.1.1.1. 0.0.0.0 is an invalid value.

**Table 1 Route filter Type**

Filter	Description	Example
Ip-address	Use ip-address to get matched route entries. Vrf keyword is not specified in the public network.	<pre>&lt;RouteEntry base:filter="IP 1.1.1.1"&gt; &lt;RouteEntry base:filter="vrf vpn1 IP 1.1.1.1"&gt;</pre>
Ip-address longer	Use ip-address to get the route entry with the longest mask. Vrf keyword is not specified in the public network.	<pre>&lt;RouteEntry base:filter="IP 1.1.1.1 longer"&gt; &lt;RouteEntry base:filter="vrf vpn1 IP 1.1.1.1 longer"&gt;</pre>
Ip-address MaskLen	Use ip-address MaskLen to get matched route entries. Vrf keyword is not specified in the public network.	<pre>&lt;RouteEntry base:filter="IP 1.1.1.0 MaskLen 24"&gt; &lt;RouteEntry base:filter="vrf vpn1 IP 1.1.1.0 MaskLen 24"&gt;</pre>
Ip-address MaskLen Longer	Use ip-address MaskLen to get the route entry with the longest mask. Vrf keyword is not specified in the public network.	<pre>&lt;RouteEntry base:filter="IP 1.1.1.0 MaskLen 24 longer"&gt; &lt;RouteEntry base:filter="vrf vpn1 IP 1.1.1.0 MaskLen 24 longer"&gt;</pre>
Ip-address 1 to Ip-address 2	Use ip-address1 to ip-address2 to get information about routes to a range of destination. Vrf keyword is not specified in the public network.	<pre>&lt;RouteEntry base:filter="IP 1.1.1.0 to 10.1.1.1"&gt; &lt;RouteEntry base:filter="vrf vpn1 IP 1.1.1.0 to 10.1.1.1"&gt;</pre>
Prefix-List	Use prefix-list to get Routes permitted by an IP prefix list. Vrf keyword is not specified in the public network.	<pre>&lt;RouteEntry base:filter="Prefix-List aaa"&gt; &lt;RouteEntry base:filter="vrf vpn1 Prefix-List aaa"&gt;</pre>
ACL	Use acl to get routes permitted by a basic ACL. Vrf keyword is not	<pre>&lt;RouteEntry base:filter="ACL 2000"&gt; &lt;RouteEntry base:filter="vrf vpn1 ACL 2000"&gt;</pre>

Filter	Description	Example
	specified in the public network.	

# Route/Ipv6Routes

## Table description

Item	Description
Feature name	Route
Table name	Ipv6Routes
Table type	Multi-instance table
Row name	RouteEntry
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	Destination VRF.	index	String, case-sensitive. Length: 0 to 31 characters.	Null denotes public network.
Topology	Destination topology.	index	String, case-sensitive. Length: 0 to 31 characters.	Null denotes default topology.
Ipv6Prefix	Destination IPv6 prefix.	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv6Address.</li> <li>Ipv6PrefixLength.</li> </ul>	The two members must both be specified. Support filter, for more information, see Table 2
Ipv6Address	Destination IPv6 address.	index	Hexadecimal string, colon-separated.	Example: 1:2::1.
Ipv6PrefixLength	Length of the destination IPv6 address prefix.	index	Unsigned integer. Value range: 0 to 128.	N/A
Nexthop	Nexthop IPv6 address.	index	Hexadecimal string, colon-separated.	Example: 1:2::1. 0::0 is an invalid value.
IfIndex	Interface index.	index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
AllVRF	All VRF routing tables.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	Get all routes from private network while index "VRF" is Null and "AllVRF" is Enable.
Protocol	Routing protocol.	Data	Members include:	N/A

Column name	Column description	Column type structure	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>ProtocolID.</li> <li>SubProtocolID.</li> </ul>	
ProtocolID	Routing protocol ID.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—DIRECT.</li> <li>2—STATIC.</li> <li>3—RIPng.</li> <li>4—OSPFv3.</li> <li>5—IS-ISv6.</li> <li>6—BGP4+.</li> <li>9—OpenR.</li> </ul>	N/A
SubProtocolID	Routing sub-protocol ID.	N/A	Unsigned integer.	N/A
ProcessID	Process ID.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Age	Route alive time.	N/A	Unsigned integer. Unit is second.	N/A
Preference	Route preference.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
Metric	Route metric.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
Tag	Route tag.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
Neighbor	Neighbor.	N/A	Hexadecimal string, colon-separated.	Example: 1:2::1.
ASNummer	Autonomy system.	Data structure	Members include: <ul style="list-style-type: none"> <li>OriginAS.</li> <li>LastAS.</li> </ul>	N/A
OriginAS	Original AS.	N/A	Unsigned integer.	N/A
LastAS	Last AS.	N/A	Unsigned integer.	N/A
BackupPathAttribute	Backup path attribute.	Data structure	Members include: <ul style="list-style-type: none"> <li>BackupIfIndex.</li> <li>BackupNextHop.</li> </ul>	N/A
BackupIfIndex	Backup interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
BackupNextHop	Backup nextHop IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:2::1. 0::0 is an invalid

Column name	Column description	Column type	Data type and restrictions	Remarks
				value.

**Table 2 Route filter Type**

Filter	Description	Example
Ipv6-address	Use ipv6-address to get matched route entries.	<RouteEntry base:filter="IPv6 1::1"> <RouteEntry base:filter="vrf vpn2 IPv6 1::1">
Ipv6-address longer	Use ipv6-address to get the route entry with the longest prefix.	<RouteEntry base:filter="IPv6 1::1 longer"> <RouteEntry base:filter="vrf vpn2 IPv6 1::1 longer">
Ipv6-address PrefixLen	Use ipv6-address PrefixLen to get matched route entries.	<RouteEntry base:filter="IPv6 1:: PrefixLen 64"> <RouteEntry base:filter="vrf vpn2 IPv6 1:: PrefixLen 64">
Ipv6-address PrefixLen Longer	Use ipv6-address PrefixLen to get the route entry with the longest prefix.	<RouteEntry base:filter="IPv6 1:: PrefixLen 64 longer"> <RouteEntry base:filter="vrf vpn2 IPv6 1:: PrefixLen 64 longer">
Ipv6-address 1 to Ipv6-address 2	Use ipv6-address1 to ipv6-address2 to get information about routes to a range of destination.	<RouteEntry base:filter="IPv6 1::1 to 10::1"> <RouteEntry base:filter="vrf vpn2 IPv6 1::1 to 10::1">
Prefix-List	Use prefix-list to get routes permitted by an IPv6 prefix list.	<RouteEntry base:filter="Prefix-List aaa"> <RouteEntry base:filter="vrf vpn2 Prefix-List aaa">
ACL	Use acl to get routes permitted by an IPv6 basic ACL.	<RouteEntry base:filter="ACL 2000"> <RouteEntry base:filter="vrf vpn2 ACL 2000">

## Route/Ipv4RouteStatistics

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Node.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Mode	Operation type of Route Policy.		Enumeration: <ul style="list-style-type: none"> <li>0—permit.</li> <li>1—deny.</li> </ul>	To perform create or replace operation, Mode can't be empty. To perform Merge operation to create a row, Mode can't be empty. Delete or remove operation is not supported.
Description	Description of route policy.		String, case-sensitive. Length: 1 to 80 characters.	N/A
Match	If match condition.	Data structure	Members include: <ul style="list-style-type: none"> <li>IPv4AddressPrefixList.</li> <li>IPv6AddressPrefixList.</li> <li></li> <li>ExtcommunityList</li> <li>Tag</li> <li>Interface</li> <li>L3vni</li> <li>RouteType</li> <li>TagList</li> <li>RdList</li> <li>Cost</li> <li>IPv4AddressAcl</li> <li>IPv4NextHopAcl</li> <li>IPv4NextHopPrefixList</li> <li>IPv4RouteSourceAcl</li> <li>IPv4RouteSourcePrefixList</li> <li>IPv6AddressAcl</li> <li>IPv6NextHopAcl</li> <li>IPv6NextHopPrefixList</li> <li>IPv6RouteSourceAcl</li> <li>IPv6RouteSourcePrefixList</li> <li>LocalPreference</li> <li>MacList</li> <li>MplsLabel</li> <li>Rpki</li> </ul>	N/A
IPv4AddressPrefixList	Match IPv4 address using prefix list.		String, case-sensitive. Length: 1 to 63 characters.	N/A
IPv6AddressPrefixList	Match IPv6 address using prefix list.		String, case-sensitive. Length: 1 to 63 characters.	N/A
Extcommunit	Match BGP routes whose		Unsigned integer.	Repeat supported for

Column name	Column description	Column type	Data type and restrictions	Remarks
CommunityList	extended community attribute matches a specified extended community list		Value range: 1 to 65535.	32 times.
Tag	Match IGP routes with specified tag		Unsigned integer. Value range: 0 to 4294967295	N/A
Interface	Match routes with specified Interface.		Interface name: String, interface type and interface number. Interface index: Unsigned integer. Length: 32 bits.	Support interface name or interface index. Repeat supported for 16 times.
L3vni	Match the L3 VXLAN ID of BGP routes.		Unsigned integer. Value range: 0 to 16777215	N/A
RouteType	Match route type.		Enumeration: <ul style="list-style-type: none"> <li>1—internal.</li> <li>2—external-type1or2.</li> <li>3—external-type1.</li> <li>4—external-type2.</li> <li>5—nssa-external-type1or2.</li> <li>6—nssa-external-type1.</li> <li>7—nssa-external-type2.</li> <li>8—is-is-level-1.</li> <li>9—is-is-level-2.</li> <li>10—bgp-evpn-mac-ip.</li> <li>11—bgp-evpn-imet.</li> <li>12—bgp-evpn-ip-prefix.</li> <li>13—eigrp-internal.</li> <li>14—eigrp-external.</li> </ul>	Repeat supported for 14 times. One route type cannot be configured twice in one command.
TagList	Match IGP routes with the specified tag list.		Unsigned integer. Value range: 1 to 65535.	N/A
RdList	Match VPN routes with the specified RD list.		Unsigned integer. Value range: 1 to 65535.	N/A
Cost	Match routes with the specified cost.		Unsigned integer. Value range: 0 to 4294967295.	
IPv4AddressAcl	Match the destination address of IPv4 routes using an		Unsigned integer. Value range: 2000 to 3999.	

Column name	Column description	Column type	Data type and restrictions	Remarks
	ACL.			
IPv4NextHopAcl	Match the next hop of IPv4 routes using an ACL.		Unsigned integer. Value range: 2000 to 2999.	
IPv4NextHopPrefixList	Match the next hop of IPv4 routes using a prefix list.		String, case-sensitive. Length: 1 to 63 characters.	
IPv4RouteSourceAcl	Match the source address of IPv4 routes using an ACL.		Unsigned integer. Value range: 2000 to 2999.	
IPv4RouteSourcePrefixList	Match the source address of IPv4 routes using an IP prefix list.		String, case-sensitive. Length: 1 to 63 characters.	
IPv6AddressAcl	Match the destination address of IPv6 routes using an ACL.		Unsigned integer. Value range: 2000 to 3999.	
IPv6NextHopAcl	Match the next hop of IPv6 routes using an ACL.		Unsigned integer. Value range: 2000 to 2999.	
IPv6NextHopPrefixList	Match the next hop of IPv6 routes using an IPv6 prefix list.		String, case-sensitive. Length: 1 to 63 characters.	
IPv6RouteSourceAcl	Match the source address of IPv6 routes using an ACL.		Unsigned integer. Value range: 2000 to 2999.	
IPv6RouteSourcePrefixList	Match the source address of IPv6 routes using an IPv6 prefix list.		String, case-sensitive. Length: 1 to 63 characters.	
LocalPreference	Match BGP routes that have the specified local preference.		Unsigned integer. Value range: 0 to 4294967295.	
MacList	Match MAC addresses that are contained in EVI IS-IS packets.		String, case-sensitive. Length: 1 to 63 characters.	
MplsLabel	Match routes with the specified MPLS labels.		Enumeration: <ul style="list-style-type: none"> <li>0—Not configured.</li> <li>1—Configured.</li> </ul>	
Rpki	Match routes with the specified		Enumeration: <ul style="list-style-type: none"> <li>0—invalid</li> </ul>	

Column name	Column description	Column type	Data type and restrictions	Remarks
	RPKI validation state.		<ul style="list-style-type: none"> <li>1—not-found</li> <li>2—valid</li> </ul>	
MatchCommunityList	If match communitylist condition.	Data structure	Members include: <ul style="list-style-type: none"> <li>List.</li> <li>WholeMatch</li> </ul>	Repeat supported for 32 times.
List	Match BGP routes whose community attribute matches a specified community list.		Basic community list number: Unsigned integer. Value range:1 to 99. Advanced community list number: Unsigned integer. Value range:100 to 199. Community list name: String, case-sensitive. Length: 1 to 63 characters.	List name cannot be all made up of numbers.
WholeMatch	Match all communities exactly.		Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	Not supported when specifying an advanced community list number.
MatchVlan	Match routes that contain the specified VLANs.	Data structure	Members include: <ul style="list-style-type: none"> <li>VlanId</li> <li>VlanIdRangStart</li> <li>VlanIdRangeEnd.</li> </ul>	A maximum of 16 VLAN ID items can be specified.
VlanId	Specify a VLAN ID.		Unsigned integer. Value range: 1 to 4094.	N/A
VlanIdRangeStart	Specify the start VLAN ID of a VLAN ID range.		Unsigned integer. Value range: 1 to 4094.	You must set both VlanIdRangeStart and VlanIdRangeEnd, or set neither of them.
VlanIdRangeEnd	Specify the end VLAN ID of a VLAN ID range.		Unsigned integer. Value range: 1 to 4094.	You must set both of VlanIdRangeStart and VlanIdRangeEnd, or set neither of them.
Apply	Apply action.	Data structure	Members include: <ul style="list-style-type: none"> <li>ExtCommunityRtValue.</li> <li>ExtCommunityRtType.</li> <li>VpnPeerId</li> <li>CostValue.</li> <li>CostMode.</li> <li>LocalPreference.</li> <li>L3vni.</li> <li>ASPath.</li> <li>ASPathType.</li> <li>CommunityNumber.</li> <li>CommunityAttr.</li> <li>CommunityType.</li> <li>Exp.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>CommListDelete.</li> <li>CostType.</li> <li>IPv6NextHop.</li> <li>ISIS.</li> <li>MplsLabel.</li> <li>Preference.</li> <li>PreferredValue.</li> <li>PrefixPriority.</li> <li>Tag.</li> </ul>	
ExtCommunityRtValue	The value of Ext Community Route Target (RT).		String. Length: 3 to 21 characters. <ul style="list-style-type: none"> <li>The format is IP&lt;X.X.X.X&gt;:NN&lt;0-65535&gt; or AS&lt;0-65535&gt;:NN&lt;0-4294967295&gt; or AS&lt;65536-4294967295&gt;:NN&lt;0-65535&gt;.</li> </ul>	Example: 101:3 or 192.168.122.15:1 or 70000:3. Repeat supported for Get and Get-Bulk action.
ExtCommunityRtType	The Ext Community RT additive type.		Enumeration: <ul style="list-style-type: none"> <li>1—Additive.</li> <li>2—Replace.</li> </ul>	N/A
VpnPeerId	Set vpn-peer-id		Unsigned integer. Value range: 1 to 134217727	N/A
CostValue	Route cost value		Unsigned integer. Value range: 0 to 4294967295	N/A
CostMode	Route cost change mode.		Enumeration: <ul style="list-style-type: none"> <li>0—Update.</li> <li>1—Increase.</li> <li>2—Decrease.</li> </ul>	N/A
LocalPreference	BGP route local preference		Unsigned integer. Value range: 0 to 4294967295	N/A
L3vni	Specify an L3 VXLAN ID for BGP routes.		Unsigned integer. Value range: 0 to 16777215	N/A
ASPath	AS_PATH attribute value.		Unsigned integer. Value range: 1 to 4294967295	Repeat supported for 32 times.
ASPathType	AS_PATH attribute additive type.		Enumeration: <ul style="list-style-type: none"> <li>1—Additive.</li> <li>2—Replace.</li> </ul>	N/A
CommunityNumber	Community number.		Unsigned integer. Value range: 1 to 4294967295.	Example: 10 or 1:65535 Repeat supported for 32 times along with

Column name	Column description	Column type	Data type and restrictions	Remarks
			String. Length: 3 to 11 characters. Format: AA<0-65535>:NN<0-65535>.	CommunityAttr.
CommunityAttr	Community attribute.		Enumeration: <ul style="list-style-type: none"> <li>1—Internet.</li> <li>2—No-advertise.</li> <li>3—no-export.</li> <li>4—no-export-subconfed.</li> </ul>	Repeat supported for 32 times along with CommunityNumber.
CommunityType	Community additive type.		Enumeration: <ul style="list-style-type: none"> <li>0—Replace.</li> <li>1—Additive.</li> <li>2—None.</li> </ul>	N/A
Exp	Specify an MPLS EXP value		Unsigned integer. Value range: 0 to 7	N/A
CommListDelete	Delete the COMMUNITY attributes from BGP routes.		Basic community list number: Unsigned integer. Value range:1 to 99. Advanced community list number: Unsigned integer. Value range:100 to 199. Community list name: String, case-sensitive. Length: 1 to 63 characters.	N/A
CostType	Specify a cost type.		Enumeration: <ul style="list-style-type: none"> <li>1—external.</li> <li>2—internal.</li> <li>3—type-1</li> <li>4—type-2</li> </ul>	N/A
IPv6NextHop	Specify a next hop for IPv6 routes.		Hexadecimal string, colon-separated.	N/A
ISIS	Specify an IS-IS level.		Enumeration: <ul style="list-style-type: none"> <li>1—level-1.</li> <li>2—level-1-2.</li> <li>3—level-2.</li> </ul>	N/A
MplsLabel	Specify whether to configure an MPLS label or not.		Enumeration: <ul style="list-style-type: none"> <li>0—Not configured.</li> <li>1—Configured.</li> </ul>	N/A
Preference	Specify a preference for a routing protocol.		Unsigned integer. Value range: 1 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PreferredValue	Specify a preferred value for BGP routes.		Unsigned integer. Value range: 0 to 65535.	N/A
PrefixPriority	Specify a prefix priority.		Enumeration: <ul style="list-style-type: none"> <li>1—critical.</li> <li>2—high.</li> <li>3—medium.</li> </ul>	N/A
Tag	Specify a tag for IGP routes.		Unsigned integer. Value range: 0 to 4294967295.	N/A
ApplyIpv4NextHop	Specify next hop.	Data structure	Members include: <ul style="list-style-type: none"> <li>NextHopAddr.</li> <li>Public.</li> <li>VrfName.</li> </ul>	N/A
NextHopAddr	Specify next hop address, x.x.x.x Ip-address.		IPv4: String, dotted decimal notation.	N/A
Public	Public network.		Enumeration: <ul style="list-style-type: none"> <li>0—Not configured.</li> <li>1—Configured.</li> </ul>	N/A
VrfName	VPN instance name.		String. Length: 0 to 31 characters.	An empty string indicates the public network.
ApplyFastReroute	Set a backup link for IPv4 fast reroute.	Data structure	Members include: <ul style="list-style-type: none"> <li>InterfaceName.</li> <li>IpAddress.</li> </ul>	N/A
InterfaceName	Specify a backup output interface by its Name.		String. Length: 0 to 47 characters.	Example: <ul style="list-style-type: none"> <li>NULL0.</li> </ul> M-GigabitEthernet0/0/0
IpAddress	Specify a backup next hop.		IPv4: String, dotted decimal notation.	N/A
ApplyIPv6FastReroute	Set a backup link for IPv6 fast reroute.	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv6InterfaceName.</li> <li>Ipv6Address.</li> </ul>	N/A
Ipv6InterfaceName	Specify a backup output interface by its Name.		String. Length: 0 to 47 characters.	Example: <ul style="list-style-type: none"> <li>NULL0.</li> </ul> M-GigabitEthernet0/0/0
Ipv6Address	Specify a backup next hop.		Hexadecimal string, colon-separated.	N/A
ApplyOrigin	Set the ORIGIN attribute for BGP routes.	Data structure	Members include: <ul style="list-style-type: none"> <li>Origin</li> <li>OriginAsNum</li> </ul>	N/A
Origin	Specify an ORIGIN		Enumeration: <ul style="list-style-type: none"> <li>1—egp.</li> </ul>	N/A

Column name	Column description attribute.	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>2—igp.</li> <li>3—incomplete.</li> </ul>	
OriginAsNum	Specify the AS number for EGP routes.		Unsigned integer. Value range: 1 to 4294967295.	The AsNumber can be set only when the Origin is set to egp.
ApplyIpPrecedence	Set an IP precedence.	Data structure	Members include: <ul style="list-style-type: none"> <li>IpPrecValue</li> <li>IpPrecClear</li> </ul>	N/A
IpPrecValue	Specify an IP precedence.		Unsigned integer. Value range: 0 to 7.	You cannot set IpPrecValue and IpPrecClear at the same time.
IpPrecClear	Clear the IP precedence of matching routes.		Enumeration: <ul style="list-style-type: none"> <li>0—Not configured.</li> <li>1—Configured..</li> </ul>	You cannot set IpPrecValue and IpPrecClear at the same time.
ApplyQoSLocId	Set a local QoS ID.	Data structure	Members include: <ul style="list-style-type: none"> <li>QoSLocIdValue</li> <li>QoSLocIdClear</li> </ul>	N/A
QoSLocIdValue	Specify a local QoS ID.		Unsigned integer. Value range: 1 to 4095.	You can not set QoSLocIdValue and QoSLocIdClear at the same time.
QoSLocIdClear	Clear the local QoS ID of matching routes.		Enumeration: <ul style="list-style-type: none"> <li>0—Not configured.</li> <li>1—Configured..</li> </ul>	You cannot set QoSLocIdValue and QoSLocIdClear at the same time.
ApplyTraffIndex	Set a traffic index.	Data structure	Members include: <ul style="list-style-type: none"> <li>TraffIndexValue</li> <li>TraffIndexClear</li> </ul>	N/A
TraffIndexValue	Specify a traffic index.		Unsigned integer. Value range: 1 to 64.	You cannot set TraffIndexValue and TraffIndexClear at the same time.
TraffIndexClear	Clear the traffic index of BGP routes.		Enumeration: <ul style="list-style-type: none"> <li>0—Not configured.</li> <li>1—Configured..</li> </ul>	You cannot set TraffIndexValue and TraffIndexClear at the same time.
Continue	Set the next node to be matched.		Unsigned integer. Value range: 0 to 65535.	N/A

## RoutePolicy/ExtcommunityList

This table contains route policy extcommunity list information.

## XML structure

```
<RoutePolicy>
  <ExtcommunityList>
    <List>
      <ListNum></ListNum>
      <Index></Index>
      <Mode></Mode>
      <Rt></Rt>
      <SoO></SoO>
    </List>
  </ExtcommunityList>
</RoutePolicy>
```

## Table description

Item	Description
Feature name	RoutePolicy
Table name	ExtcommunityList
Table type	Multi-instance table
Row name	List
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ListNum	ListNum	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Index	Node	Index	Unsigned integer. Value range: 1 to 4294967295	N/A
Mode	Operation type of extcommunity list.		Enumeration: <ul style="list-style-type: none"><li>0—permit.</li><li>1—deny.</li></ul>	N/A
Rt	Route-target		String. Length: 3 to 21 characters. Format: IP<X.X.X.X>:NN<0-65535> or AS<0-65535>:NN<0-4294967295> or AS<65536-4294967295>:NN<0-65535>.	Example: 101:3 or 192.168.122.15:1 or 70000:3.  Repeat supported for 32 times along with SoO configuration.

Column name	Column description	Column type	Data type and restrictions	Remarks
SoO	Site-of-Origin		String. Length: 3 to 21 characters. Format: IP<X.X.X.X>:NN<0-65535> or AS<0-65535>:NN<0-4294967 295> or AS<65536-4294967295>:NN< 0-65535>.	Example: 101:3 or 192.168.122.15:1 or 70000:3.  Repeat supported for 32 times along with Rt configuration.

## RoutePolicy/CommunityList

This table contains route policy community list information.

### XML structure

```

<RoutePolicy>
  <CommunityList>
    <List>
      <ListName></ListName>
      <Level></Level>
      <Index></Index>

# RoutePolicy

## RoutePolicy/IPv4Prefix

This table contains route policy IPv4 prefix information.

### XML structure

```
<RoutePolicy>
  <IPv4PrefixList>
    <PrefixList>
      <PrefixListName></PrefixListName>
      <Index></Index>
      <Mode></Mode>
      <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <MinPrefixLength></MinPrefixLength>
      <MaxPrefixLength></MaxPrefixLength>
    </PrefixList>
  </IPv4PrefixList>
</RoutePolicy>
```

### Table description

Item	Description
Feature name	RoutePolicy
Table name	IPv4PrefixList
Table type	Multi-instance table
Row name	PrefixList
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PrefixListName	Name of prefix list.	Index	String, case-sensitive. Length: 1 to 63 characters.	N/A
Index	Node.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Mode	Operation type of prefix list.		Enumeration: <ul style="list-style-type: none"><li>0—permit.</li><li>1—deny.</li></ul>	N/A
Ipv4Address	IPv4 address.		IPv4: String, dotted decimal	IPv4 example: 1.1.1.1

Column name	Column description	Column type	Data type and restrictions	Remarks
			notation.	
Ipv4PrefixLength	Mask length of IP address.		Unsigned integer. Value range: 0 to 32.	N/A
MinPrefixLength	Greater than or equal to this value.	N/A	Unsigned integer. • Value range: 0 to 32.	Ipv4PrefixLength ≤ MinPrefixLength ≤ MaxPrefixLength.
MaxPrefixLength	Less than or equal to this value.	N/A	Unsigned integer. • Value range: 0 to 32.	Ipv4PrefixLength ≤ MinPrefixLength ≤ MaxPrefixLength.

## RoutePolicy/IPv6PrefixList

This table contains route policy IPv6 prefix information.

### XML structure

```

<RoutePolicy>
  <IPv6PrefixList>
    <PrefixList>
      <PrefixListName></PrefixListName>
      <Index></Index>
      <Mode></Mode>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <MinPrefixLength></MinPrefixLength>
      <MaxPrefixLength></MaxPrefixLength>
    </PrefixList>
  </IPv6PrefixList>
</RoutePolicy>

```

### Table description

Item	Description
Feature name	RoutePolicy
Table name	IPv6PrefixList
Table type	Multi-instance table
Row name	PrefixList
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PrefixListName	Name of prefix list.	Index	String, case-sensitive. Length: 1 to 63 characters.	N/A
Index	Node.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Mode	Operation type of prefix list.		Enumeration: <ul style="list-style-type: none"> <li>0—permit.</li> <li>1—deny.</li> </ul>	N/A
Ipv6Address	IPv6 address.		IPv6: String, hexadecimal notation.	IPv6 example: 1:1::1:1
Ipv6PrefixLength	Prefix length of IP address.		Unsigned integer. Value range: 0 to 128.	N/A
MinPrefixLength	Greater than or equal to this value.	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>Value range: 0 to 128</li> </ul>	Ipv6PrefixLength ≤ MinPrefixLength ≤ MaxPrefixLength.
MaxPrefixLength	Less than or equal to this value.	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>Value range: 0 to 128.</li> </ul>	Ipv6PrefixLength ≤ MinPrefixLength ≤ MaxPrefixLength.

## RoutePolicy/Policy

This table contains route policy information.

## XML structure

```

## Table description

Item	Description
Feature name	RoutePolicy
Table name	Policy
Table type	Multi-instance table
Row name	Entry
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of route policy.	Index	String, case-sensitive. Length: 1 to 63 characters.	N/A
Index	Node.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Mode	Operation type of Route Policy.		Enumeration: <ul style="list-style-type: none"> <li>0—permit.</li> <li>1—deny.</li> </ul>	N/A
Description	Description of route policy.		String, case-sensitive. Length: 1 to 80 characters.	N/A
Match	If match condition.	Data structure	Members include: <ul style="list-style-type: none"> <li>IPv4AddressPrefixList.</li> <li>IPv6AddressPrefixList</li> <li>ExtcommunityList</li> <li>Tag</li> <li>Interface</li> <li>L3vni</li> <li>RouteType</li> <li>TagList</li> <li>RdList</li> <li>Cost</li> <li>IPv4AddressAcl</li> <li>IPv4NextHopAcl</li> <li>IPv4NextHopPrefixList</li> <li>IPv4RouteSourceAcl</li> <li>IPv4RouteSourcePrefixList</li> <li>IPv6AddressAcl</li> <li>IPv6NextHopAcl</li> <li>IPv6NextHopPrefixList</li> <li>IPv6RouteSourceAcl</li> <li>IPv6RouteSourcePrefixList</li> <li>LocalPreference</li> <li>MacList</li> <li>MplsLabel</li> <li>Rpki</li> </ul>	N/A
IPv4AddressPrefixList	Match IPv4 address using prefix list.		String, case-sensitive. Length: 1 to 63 characters.	N/A
IPv6AddressPrefixList	Match IPv6 address using prefix list.		String, case-sensitive. Length: 1 to 63 characters.	N/A
ExtcommunityList	Match BGP routes whose extended community		Unsigned integer. Value range: 1 to 65535.	Repeat supported for 32 times.

Column name	Column description	Column type	Data type and restrictions	Remarks
	attribute matches a specified extended community list			
Tag	Match IGP routes with specified tag		Unsigned integer. Value range: 0 to 4294967295	N/A
Interface	Match routes with specified Interface.		Interface name: String, interface type and interface number. Interface index: Unsigned integer. Length: 32 bits.	Support interface name or interface index. Repeat supported for 16 times.
L3vni	Match the L3 VXLAN ID of BGP routes.		Unsigned integer. Value range: 0 to 16777215	N/A
RouteType	Match route type.		Enumeration: <ul style="list-style-type: none"> <li>1—internal.</li> <li>2—external-type1or2.</li> <li>3—external-type1.</li> <li>4—external-type2.</li> <li>5—nssa-external-type1or2.</li> <li>6—nssa-external- type1.</li> <li>7—nssa-external- type2.</li> <li>8—is-is-level-1.</li> <li>9—is-is-level-2.</li> <li>10—bgp-evpn-mac-ip.</li> <li>11—bgp-evpn-imet.</li> <li>12—bgp-evpn-ip-prefix.</li> <li>13—eigrp-internal.</li> <li>14—eigrp-external.</li> </ul>	Repeat supported for 14 times. One route type cannot be configured twice in one command.
TagList	Match IGP routes with the specified tag list.		Unsigned integer. Value range: 1 to 65535.	N/A
RdList	Match VPN routes with the specified RD list.		Unsigned integer. Value range: 1 to 65535.	N/A
Cost	Match routes with the specified cost.		Unsigned integer. Value range: 0 to 4294967295.	N/A
IPv4Address Acl	Match the desination address of IPv4 routes using an ACL.		Unsigned integer. Value range: 2000 to 3999.	N/A
IPv4NextHop	Match the next		Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Acl	hop of IPv4 routes using an ACL.		Value range: 2000 to 2999.	
IPv4NextHopPrefixList	Match the next hop of IPv4 routes using a prefix list.		String, case-sensitive. Length: 1 to 63 characters.	N/A
IPv4RouteSourceAcl	Match the source address of IPv4 routes using an ACL.		Unsigned integer. Value range: 2000 to 2999.	N/A
IPv4RouteSourcePrefixList	Match the source address of IPv4 routes using an IP prefix list.		String, case-sensitive. Length: 1 to 63 characters.	N/A
IPv6AddressAcl	Match the destination address of IPv6 routes using an ACL.		Unsigned integer. Value range: 2000 to 3999.	N/A
IPv6NextHopAcl	Match the next hop of IPv6 routes using an ACL.		Unsigned integer. Value range: 2000 to 2999.	N/A
IPv6NextHopPrefixList	Match the next hop of IPv6 routes using an IPv6 prefix list.		String, case-sensitive. Length: 1 to 63 characters.	N/A
IPv6RouteSourceAcl	Match the source address of IPv6 routes using an ACL.		Unsigned integer. Value range: 2000 to 2999.	N/A
IPv6RouteSourcePrefixList	Match the source address of IPv6 routes using an IPv6 prefix list.		String, case-sensitive. Length: 1 to 63 characters.	N/A
LocalPreference	Match BGP routes that have the specified local preference.		Unsigned integer. Value range: 0 to 4294967295.	N/A
MacList	Match MAC addresses that are contained in EVI IS-IS packets.		String, case-sensitive. Length: 1 to 63 characters.	N/A
MplsLabel	Match routes with the specified MPLS labels.		Enumeration: <ul style="list-style-type: none"> <li>0—Not configured.</li> <li>1—Configured.</li> </ul>	N/A
Rpki	Match routes with the specified RPKI validation state.		Enumeration: <ul style="list-style-type: none"> <li>0—invalid</li> <li>1—not-found</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>2—valid</li> </ul>	
MatchCommunityList	If match communitylist condition.	Data structure	Members include: <ul style="list-style-type: none"> <li>List.</li> <li>WholeMatch</li> </ul>	Repeat supported for 32 times.
List	Match BGP routes whose community attribute matches a specified community list.		Basic community list number: Unsigned integer. Value range:1 to 99. Advanced community list number: Unsigned integer. Value range:100 to 199. Community list name: String, case-sensitive. Length: 1 to 63 characters.	List name cannot be all made up of numbers.
WholeMatch	Match all communities exactly.		Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	Not supported when specifying an advanced community list number.
MatchVlan	Match routes that contain the specified VLANs.	Data structure	Members include: <ul style="list-style-type: none"> <li>VlanId</li> <li>VlanIdRangeStart</li> <li>VlanIdRangeEnd.</li> </ul>	A maximum of 16 VLAN ID items can be specified.
VlanId	Specify a VLAN ID.		Unsigned integer. Value range: 1 to 4094.	N/A
VlanIdRangeStart	Specify the start VLAN ID of a VLAN ID range.		Unsigned integer. Value range: 1 to 4094.	You must set both VlanIdRangeStart and VlanIdRangeEnd, or set neither of them.
VlanIdRangeEnd	Specify the end VLAN ID of a VLAN ID range.		Unsigned integer. Value range: 1 to 4094.	You must set both of VlanIdRangeStart and VlanIdRangeEnd, or set neither of them.
Apply	Apply action.	Data structure	Members include: <ul style="list-style-type: none"> <li>ExtCommunityRtValue.</li> <li>ExtCommunityRtType.</li> <li>VpnPeerId</li> <li>CostValue.</li> <li>CostMode.</li> <li>LocalPreference.</li> <li>L3vni.</li> <li>ASPath.</li> <li>ASPathType.</li> <li>CommunityNumber.</li> <li>CommunityAttr.</li> <li>CommunityType.</li> <li>Exp.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>CommListDelete.</li> <li>CostType.</li> <li>IPv6NextHop.</li> <li>ISIS.</li> <li>MplsLabel.</li> <li>Preference.</li> <li>PreferredValue.</li> <li>PrefixPriority.</li> <li>Tag.</li> </ul>	
ExtCommunityRtValue	The value of Ext Community Route Target (RT).		String. Length: 3 to 21 characters. <ul style="list-style-type: none"> <li>The format is IP&lt;X.X.X.X&gt;:NN&lt;0-65535&gt; or AS&lt;0-65535&gt;:NN&lt;0-4294967295&gt; or AS&lt;65536-4294967295&gt;:NN&lt;0-65535&gt;.</li> </ul>	Example: 101:3 or 192.168.122.15:1 or 70000:3. Repeat supported for Get and Get-Bulk action.
ExtCommunityRtType	The Ext Community RT additive type.		Enumeration: <ul style="list-style-type: none"> <li>1—Additive.</li> <li>2—Replace.</li> </ul>	N/A
VpnPeerId	Set vpn-peer-id		Unsigned integer. Value range: 1 to 134217727	N/A
CostValue	Route cost value.		Unsigned integer. Value range: 0 to 4294967295	N/A
CostMode	Route cost change mode.		Enumeration: <ul style="list-style-type: none"> <li>0—Update.</li> <li>1—Increase.</li> <li>2—Decrease.</li> </ul>	N/A
LocalPreference	BGP route local preference.		Unsigned integer. Value range: 0 to 4294967295	N/A
L3vni	Specify an L3 VXLAN ID for BGP routes.		Unsigned integer. Value range: 0 to 16777215	N/A
ASPath	AS_PATH attribute value.		Unsigned integer. Value range: 1 to 4294967295	Repeat supported for 32 times.
ASPathType	AS_PATH attribute additive type.		Enumeration: <ul style="list-style-type: none"> <li>1—Additive.</li> <li>2—Replace.</li> </ul>	N/A
CommunityNumber	Community number.		Unsigned integer. Value range:	Example: 10 or 1:65535 Repeat supported for

Column name	Column description	Column type	Data type and restrictions	Remarks
			1 to 4294967295. String. Length: 3 to 11 characters. Format: AA<0-65535>:NN<0-65535>.	32 times along with CommunityAttr.
CommunityAttr	Community attribute.		Enumeration: <ul style="list-style-type: none"> <li>1—Internet.</li> <li>2—No-advertise.</li> <li>3—no-export.</li> <li>4—no-export-subconfed.</li> </ul>	Repeat supported for 32 times along with CommunityNumber.
CommunityType	Community additive type.		Enumeration: <ul style="list-style-type: none"> <li>0—Replace.</li> <li>1—Additive.</li> <li>2—None.</li> </ul>	N/A
Exp	Specify an MPLS EXP value		Unsigned integer. Value range: 0 to 7	N/A
CommListDelete	Delete the COMMUNITY attributes from BGP routes.		Basic community list number: Unsigned integer. Value range:1 to 99. Advanced community list number: Unsigned integer. Value range:100 to 199. Community list name: String, case-sensitive. Length: 1 to 63 characters.	N/A
CostType	Specify a cost type.		Enumeration: <ul style="list-style-type: none"> <li>1—external.</li> <li>2—internal.</li> <li>3—type-1</li> <li>4—type-2</li> </ul>	N/A
IPv6NextHop	Specify a next hop for IPv6 routes.		Hexadecimal string, colon-separated.	N/A
ISIS	Specify an IS-IS level.		Enumeration: <ul style="list-style-type: none"> <li>1—level-1.</li> <li>2—level-1-2.</li> <li>3—level-2.</li> </ul>	N/A
MplsLabel	Specify whether to configure an MPLS label or not.		Enumeration: <ul style="list-style-type: none"> <li>0—Not configured.</li> <li>1—Configured.</li> </ul>	N/A
Preference	Specify a preference		Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	for a routing protocol.		Value range: 1 to 255.	
PreferredValue	Specify a preferred value for BGP routes.		Unsigned integer. Value range: 0 to 65535.	N/A
PrefixPriority	Specify a prefix priority.		Enumeration: <ul style="list-style-type: none"> <li>1—critical.</li> <li>2—high.</li> <li>3—medium.</li> </ul>	N/A
Tag	Specify a tag for IGP routes.		Unsigned integer. Value range: 0 to 4294967295.	N/A
ApplyIpv4NextHop	Specify next hop.	Data structure	Members include: <ul style="list-style-type: none"> <li>NextHopAddr.</li> <li>Public.</li> <li>VrfName.</li> </ul>	N/A
NextHopAddr	Specify next hop address, x.x.x.x Ip-address.		IPv4: String, dotted decimal notation.	N/A
Public	Public network.		Enumeration: <ul style="list-style-type: none"> <li>0—Not configured.</li> <li>1—Configured.</li> </ul>	N/A
VrfName	VPN instance name.		String. Length: 0 to 31 characters.	An empty string indicates the public network.
ApplyFastReroute	Set a backup link for IPv4 fast reroute.	Data structure	Members include: <ul style="list-style-type: none"> <li>InterfaceName.</li> <li>IpAddress..</li> </ul>	N/A
InterfaceName	Specify a backup output interface by itsname.		String. Length: 0 to 47 characters.	Example: <ul style="list-style-type: none"> <li>NULL0.</li> <li>M-GigabitEthernet0/0/0</li> </ul>
IpAddress	Specify a backup next hop.		IPv4: String, dotted decimal notation.	N/A
ApplyIPv6FastReroute	Set a backup link for IPv6 fast reroute.	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv6InterfaceName.</li> <li>Ipv6Address.</li> </ul>	N/A
Ipv6InterfaceName	Specify a backup output interface by itsname.		String. Length: 0 to 47 characters.	Example: <ul style="list-style-type: none"> <li>NULL0.</li> <li>M-GigabitEthernet0/0/0</li> </ul>
Ipv6Address	Specify a backup next hop.		Hexadecimal string, colon-separated.	N/A
ApplyOrigin	Set the ORIGIN attribute for BGP	Data structure	Members include: <ul style="list-style-type: none"> <li>Origin</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	routes.		<ul style="list-style-type: none"> <li>OriginAsNum</li> </ul>	
Origin	Specify an ORIGIN attribute.		Enumeration: <ul style="list-style-type: none"> <li>1—egp.</li> <li>2—igp.</li> <li>3—incomplete.</li> </ul>	N/A
OriginAsNum	Specify the AS number for EGP routes.		Unsigned integer. Value range: 1 to 4294967295.	The AsNumber can be set only when Origin is set to egp.
ApplyIpPrecedence	Set an IP precedence.	Data structure	Members include: <ul style="list-style-type: none"> <li>IpPrecValue</li> <li>IpPrecClear</li> </ul>	N/A
IpPrecValue	Specify an IP precedence.		Unsigned integer. Value range: 0 to 7.	You cannot set IpPrecValue and IpPrecClear at the same time.
IpPrecClear	Clear the IP precedence off matching routes.		Enumeration: <ul style="list-style-type: none"> <li>0—Not configured.</li> <li>1—Configured..</li> </ul>	You cannot set IpPrecValue and IpPrecClear at the same time.
ApplyQosLocId	Set a local QoS ID.	Data structure	Members include: <ul style="list-style-type: none"> <li>QosLocIdValue</li> <li>QosLocIdClear</li> </ul>	N/A
QosLocIdValue	Specify a local QoS ID.		Unsigned integer. Value range: 1 to 4095.	You cannot set QosLocIdValue and QosLocIdClear at the same time.
QosLocIdClear	Clear the local QoS ID of matching routes.		Enumeration: <ul style="list-style-type: none"> <li>0—Not configured.</li> <li>1—Configured..</li> </ul>	You cannot set QosLocIdValue and QosLocIdClear at the same time.
ApplyTraffIndex	Set a traffic index.	Data structure	Members include: <ul style="list-style-type: none"> <li>TraffIndexValue</li> <li>TraffIndexClear</li> </ul>	N/A
TraffIndexValue	Specify a traffic index.		Unsigned integer. Value range: 1 to 64.	You cannot set TraffIndexValue and TraffIndexClear at the same time.
TraffIndexClear	Clear the traffic index of BGP routes.		Enumeration: <ul style="list-style-type: none"> <li>0—Not configured.</li> <li>1—Configured.</li> </ul>	You cannot set TraffIndexValue and TraffIndexClear at the same time.
Continue	Set the next node to be matched.		Unsigned integer. Value range: 0 to 65535.	N/A

# RoutePolicy/ExtcommunityList

This table contains route policy extcommunity list information.

ListNum	List number	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Index	Node	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
Mode	Operation type of RD list		Enumeration: <ul style="list-style-type: none"> <li>0—permit.</li> <li>1—deny.</li> </ul>	N/A
RdValue	Rd value		String. Length: 3 to 21 characters.  Format: IP<X.X.X.X>:NN<0-65535> or IP<X.X.X.X>:*  or AS<0-65535>:NN<0-4294967295> or AS<0-65535>:* or AS<65536-4294967295>:NN<0-65535> or AS<65536-4294967295>:*	Repeat supported for 10 times.

# RoutePolicy/MacList

This table contains route policy MAC list information.

## XML structure

```
<RoutePolicy>
  <MacList>
    <List>
      <MaclistName></MaclistName>
      <Index></Index>
      <Mode></Mode>
      <MacAddress></MacAddress>
      <MaskLength></MaskLength>
    </List>
  </MacList>
</RoutePolicy>
```

## Table description

Item	Description
Feature name	RoutePolicy
Table name	MacList
Table type	Multi-instance table
Row name	List
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaclistName	Name of the MAC list.	Index	String. Length: 1 to 63 characters.	N/A
Index	MAC list item index	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Mode	Operation type of MAC list.		Enumeration: <ul style="list-style-type: none"><li>0—permit.</li><li>1—deny.</li></ul>	N/A
MacAddress	MAC address		Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
MaskLength	Mask length		Unsigned integer. Value range: 0 to 48.	N/A

# RoutePolicy

## RoutePolicy/IPv4Prefix

Message	Explanation
Invalid MinPrefixLength value. Note: Prefix length <= MinPrefixLength <= MaxPrefixLength. 最小前缀长度的值非法 注意：前缀长度<= 最小前缀长度<= 最大前缀长度。	Invalid configuration, please modify configuration under the guidance.
Invalid MaxPrefixLength value. Note: Prefix length <= MinPrefixLength <= MaxPrefixLength. 最大前缀长度的值非法 注意：前缀长度<= 最小前缀长度<= 最大前缀长度。	Invalid configuration, please modify configuration under the guidance.
Invalid combination of mask length, MaxPrefixLength value and MinPrefixLength value. Note: Prefix length <= MinPrefixLength <= MaxPrefixLength. 前缀长度、最小前缀长度和最大前缀长度之间的大小关系非法 注意：前缀长度<= 最小前缀长度<= 最大前缀长度。	Invalid configuration, please modify configuration under the guidance.
Invalid MaxPrefixLength value or MinPrefixLength value. Note: Prefix length <= MinPrefixLength <= MaxPrefixLength. 最小前缀长度或最大前缀长度之间的值非法 注意：前缀长度<= 最小前缀长度<= 最大前缀长度。	Invalid configuration, please modify configuration under the guidance.

## RoutePolicy/Policy

Message	Explanation
ExtCommunityRtValue and ExtCommunityRtType must be configured together. 扩展团体属性值和类型必须同时配置。	Invalid configuration, please modify configuration under the guidance.
Invalid or unusable interfaces. 无效的或不可下刷的接口索引。	Invalid configuration, please modify configuration under the guidance.
Configuration number has exceeded the limit. 配置数目超限。	Invalid configuration, please modify configuration under the guidance.
Existed configuration. 已有相同配置，此配置不能下刷。	Same configuration has existed when creating a new configuration.
Vpnpeer is not customized on this device. 设备没有定制vpnpeer特性。	Configuration is not supported.

Same value of List is not supported in current repeat-group. 当前可重复组中不支持配置相同的团体属性。	Invalid configuration, please modify configuration under the guidance.
The CostValue and CostMode column must be configured at the same time. 必须同时配置路由开销值和模式。	Invalid configuration, please modify configuration under the guidance.
The ASPath and ASPathType column must be configured together. AS路径访问列表和类型必须同时配置。	Invalid configuration, please modify configuration under the guidance.

## RoutePolicy/ExtcommunityList

Message	Explanation
Existed configuration. 已有相同配置，此配置不能下刷。	Same configuration has existed when creating a new configuration.

## RoutePolicy/CommunityList

Message	Explanation
Configuration number has exceeded the limit. 配置数目超限。	Invalid configuration, please modify configuration under the guidance.
Existed configuration. 已有相同配置，此配置不能下刷。	Same configuration has existed when creating a new configuration.
Configuration is not supported in current community-list level. 当前团体属性列表级别下不支持此配置。	Invalid configuration, check community-list level.
Invalid index of community-list. 团体属性列表索引列配置错误。	Invalid configuration, please modify configuration under the guidance.
Wrong format in current operation mode. 带非索引列删除时，必须同时下刷匹配模式及对应配置。	Invalid configuration, please modify configuration under the guidance.

## RoutePolicy/TagList

Message	Explanation
Existed configuration. 已有相同配置，此配置不能下刷。	Same configuration has existed when creating a new configuration.

## RoutePolicy/RdList

Message	Explanation
Existed configuration. 已有相同配置，此配置不能下刷。	Same configuration has existed when creating a new configuration.

## RoutePolicy/MacList

Message	Explanation
Operation failed. The configuration already exists. 已有相同配置，此配置不能下刷。	Operation failed. The configuration already exists.

# RRM

## RRM/ChlProntoAll

This table contains the operation to make all the radios trigger channel change at next calibration cycle.

### XML structure

```
<RRM>
  <ChlProntoAll>
    <Pronto></Pronto>
  </ChlProntoAll>
</RRM>
```

### Table description

Item	Description
Feature name	RRM
Table name	ChlProntoAll
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Pronto	Trigger change channel at next calibration cycle	N/A	This column must be empty.	Required.

## RRM/PwrProntoAll

This table contains the operation to make all the radios trigger power change at next calibration cycle.

### XML structure

```
<RRM>
  <PwrProntoAll>
    <Pronto></Pronto>
  </PwrProntoAll>
```

</RRM>

## Table description

Item	Description
Feature name	RRM
Table name	PwrProntoAll
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Pronto	Trigger power change at next calibration cycle	N/A	This column must be empty.	Required.

## RRM/ApChlPronto

This table contains radio channel adjustment information.

## XML structure

```
<RRM>
  <ChlPronto>
    <Radio>
      <ApName></ApName>
      <RadioID></RadioID>
      <Pronto></Pronto>
    </Radio>
  </ChlPronto>
</RRM>
```

## Table description

Item	Description
Feature name	RRM
Table name	ChlPronto
Table type	Multi-instance table
Row name	Radio

Item	Description
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String: case-insensitive. Length: 1 to 64 characters.	N/A
RadioID	Radio ID	Index	Unsigned integer. Value range: 1 to 4.	N/A
Pronto	Channel adjustment triggering	N/A	This column must be empty.	Required.

## RRM/ApGroupChlPronto

This table contains AP group channel adjustment information.

## XML structure

```

<RRM>
  <ApGroupChlPronto>
    <Radio>
      <ApGroupName></ApGroupName>
      <ApModel></ApModel>
      <RadioID></RadioID>
      <Pronto></Pronto>
    </Radio>
  </ApGroupChlPronto>
</RRM>

```

## Table description

Item	Description
Feature name	RRM
Table name	ApGroupChlPronto
Table type	Multi-instance table
Row name	Radio
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApGroupName	AP group name	Index	String: case-insensitive. Length: 1 to 31 characters.	N/A
ApModel	AP model name	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
RadioID	Radio ID	Index	Unsigned integer. Value range: 1 to 4.	N/A
Pronto	Channel adjustment triggering	N/A	This column must be empty.	Required.

## RRM/ApBaselineSave

This table contains radio baseline saving information.

## XML structure

```
<RRM>
  <BaselineSave>
    <BaselineName></BaselineName>
    <ApName></ApName>
    <RadioID></RadioID>
    <Save></Save>
  </BaselineSave>
</RRM>
```

## Table description

Item	Description
Feature name	RRM
Table name	BaselineSave
Table type	Multi-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BaselineName	Baseline name	Index	String: case-insensitive. Length: 1 to 32 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String: case-insensitive. Length: 1 to 64 characters.	N/A
RadioID	Radio ID	Index	Unsigned integer. Value range: 1 to 4.	N/A
Save	Save baseline	N/A	This column must be empty.	Required.

## RRM/APGroupBaselineSave

This table contains AP group baseline saving information.

### XML structure

```

<RRM>
  <ApGroupBaselineSave>
    <BaselineName></BaselineName>
    <ApGroupName></ApGroupName>
    <ApModel></ApModel>
    <RadioID></RadioID>
    <Save></Save>
  </ApGroupBaselineSave>
</RRM>

```

### Table description

Item	Description
Feature name	RRM
Table name	ApGroupBaselineSave
Table type	Multi-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BaselineName	Baseline name	Index	String: case-insensitive. Length: 1 to 32 characters.	N/A
ApGroupName	AP group name	Index	String: case-insensitive. Length: 1 to 31 characters.	N/A
ApModel	AP model name	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RadiolD	Radio ID	Index	Unsigned integer. Value range: 1 to 4.	N/A
Save	Save baseline	N/A	This column must be empty.	Required.

## RRM/GlobalBaselineSave

This table contains global baseline saving information.

### XML structure

```

<RRM>
  <GlobalBaselineSave>
    <BaselineName></BaselineName>
    <Save></Save>
  </GlobalBaselineSave>
</RRM>

```

### Table description

Item	Description
Feature name	RRM
Table name	GlobalBaselineSave
Table type	Multi-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BaselineName	Baseline name	Index	String: case-insensitive. Length: 1 to 32 characters.	N/A
Save	Save baseline	N/A	This column must be empty.	Required.

## RRM/BaselineRemove

This table contains baseline deleting information.

## XML structure

```
<RRM>
  <BaselineRemove>
    <BaselineName></BaselineName>
    <Remove></Remove>
  </BaselineRemove>
</RRM>
```

## Table description

Item	Description
Feature name	RRM
Table name	BaselineRemove
Table type	Multi-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BaselineName	Baseline name	Index	String: case-insensitive. Length: 1 to 32 characters.	N/A
Remove	Remove baseline	N/A	This column must be empty.	Required.

## RRM/BaselineApply

This table contains baseline application information.

## XML structure

```
<RRM>
  <BaselineApply>
    <BaselineName></BaselineName>
    <Apply></Apply>
  </BaselineApply>
</RRM>
```

## Table description

Item	Description
Feature name	RRM
Table name	BaselineApply
Table type	Multi-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BaselineName	Baseline name	Index	String: case-insensitive. Length: 1 to 32 characters.	N/A
Apply	Apply baseline	N/A	This column must be empty.	Required.

# RRM

## RRM/ClbInterval

This table contains channel calibration interval information.

### XML structure

```
<RRM>
  <ClbInterval>
    <Interval></Interval>
  </ClbInterval>
</RRM>
```

### Table description

Item	Description
Feature name	RRM
Table name	ClbInterval
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
Interval	Channel calibration interval in minutes	N/A	Unsigned integer. Value range: 3 to 1440. Default: 8.

## RRM/PwrClbInterval

This table contains power calibration interval information.

### XML structure

```
<RRM>
```

```

    <PwrClbInterval>
      <Interval></Interval>
    </PwrClbInterval>
  </RRM>

```

## Table description

Item	Description
Feature name	RRM
Table name	PwrClbInterval
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Interval	Power calibration interval in minutes	N/A	Unsigned integer. Value range: 3 to 180. Default: 8.

## RRM/ApPowerCfg

This table contains the operation to set Ap radio's adjacency factor and the least transmit power and the threshold of calibrating power and a switch to enable radio calibrate power automatically.

## XML structure

```

<RRM>
  <PowerCfg>
    <Radio>
      <ApName></ApName>
      <RadioID></RadioID>
      <AdjacencyFactor></AdjacencyFactor>
      <PwrMin></PwrMin>
      <PwrThreshold></PwrThreshold>
      <PwrClbMode></PwrClbMode>
    </Radio>
  </PowerCfg>
</RRM>

```

## Table description

Item	Description
Feature name	RRM
Table name	PowerCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String: case-insensitive Length: 1 to 64 characters	N/A
RadioID	Radio Id	Index	Unsigned integer. Value range: 1 to 4.	N/A
AdjacencyFactor	The adjacency factor of radio	N/A	Unsigned integer. Value range: 1 to 16.	Optional
PwrMin	The least transmit power of radio	N/A	Unsigned integer. Value range: 1 to 20.	Optional
PwrThreshold	The threshold of calibrating radio's power	N/A	Unsigned integer. Value range: 50 to 90.	Optional
PwrClbMode	Enable/Disable auto power selection of radio	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Disable auto power selection.</li><li>• <b>1</b>—Enable auto power selection.</li></ul>	Optional

## RRM/ApGroupPowerCfg

This table contains the operation to set ApGroup radios' adjacency factor and the least transmit power and the threshold of calibrating power and a switch to enable radio calibrate power automatically.

## XML structure

```
<RRM>
  <ApGroupPowerCfg>
    <Radio>
      <ApGroupName></ApGroupName>
      <ApModel></ApModel>
```

```

    <RadioID></RadioID>
    <AdjacencyFactor></AdjacencyFactor>
    <PwrMin></PwrMin>
    <PwrThreshold></PwrThreshold>
    <PwrClbMode></PwrClbMode>
  </Radio>
</ApGroupPowerCfg>
</RRM>

```

## Table description

Item	Description
Feature name	RRM
Table name	ApGroupPowerCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApGroupName	AP Group name	Index	String: case-insensitive Length: 1 to 31 characters	N/A
ApModel	AP Model name	Index	String: case-insensitive Length: 1 to 63 characters	N/A
RadioID	Radio Id	Index	Unsigned integer. Value range: 1 to 4.	N/A
AdjacencyFactor	The adjacency factor of radio	N/A	Unsigned integer. Value range: 1 to 16. Default value: 3.	Optional
PwrMin	The least transmit power of radio	N/A	Unsigned integer. Value range: 1 to 20. Default value: 1.	Optional
PwrThreshold	The threshold of calibrating radio's power	N/A	Unsigned integer. Value range: 50 to 90. Default value: 65.	Optional
PwrClbMode	Enable/Disable auto power selection of radio	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable auto power selection(default).</li> <li>1—Enable auto power selection.</li> </ul>	Optional

# RRM/ApChannelCfg

This table contains information about CRC-error threshold and Interference threshold to determine one radio's current channel is good or bad, and tolerance level that determines if the radio switch current channel, and a switch to enable one radio calibrate channel automatically.

## XML structure

```
<RRM>
  <ChannelCfg>
    <Radio>
      <ApName></ApName>
      <RadioID></RadioID>
      <CrcErrThreshold></CrcErrThreshold>
      <InterferenceThreshold></InterferenceThreshold>
      <ToleranceLevel></ToleranceLevel>
      <ChlClbMode></ChlClbMode>
    </Radio>
  </ChannelCfg>
</RRM>
```

## Table description

Item	Description
Feature name	RRM
Table name	ChannelCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String: case-insensitive Length: 1 to 64 characters	N/A
RadioID	Radio Id	Index	Unsigned integer. Value range: 1 to 4.	N/A
CrcErrThreshoId	The CRC-error threshold of radio	N/A	Unsigned integer. Value range: 10 to 100.	Optional
InterferenceThreshold	The Interference threshold of radio	N/A	Unsigned integer. Value range: 10 to 100.	Optional

Column name	Column description	Column type	Data type and restrictions	Remarks
ToleranceLevel	The tolerance level of radio to determine if the radio switch current channel	N/A	Unsigned integer. Value range: 15 to 45.	Optional
ChlClbMode	Enable/Disable auto channel selection of radio	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Disable auto channel selection.</li> <li>• <b>1</b>—Enable auto channel selection.</li> </ul>	Optional

## RRM/ApGroupChannelCfg

This table contains information about CRC-error threshold and Interference threshold to determine one ApGroup radios' current channel is good or bad, and tolerance level that determines if the radio switch current channel, and a switch to enable one radio calibrate channel automatically.

### XML structure

```

<RRM>
  <ApGroupChannelCfg>

Mode	Enable/Disable WSA collaboration of radio	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Disable WSA collaboration (default).</li><li>• <b>1</b>—Enable WSA collaboration.</li></ul>	Optional

## RRM/ClbGroupCfg

This table contains calibration group

## XML structure

```
<RRM>
  <ClbGroupCfg>
    <ClbGroup>
      <ClbGroupId></ClbGroupId>
      <ClbGroupDescription></ClbGroupDescription>
      <ChlHolddownTime></ChlHolddownTime>
      <PwrHolddownTime></PwrHolddownTime>
      <LocationName></LocationName>
    </ClbGroup>
  </ClbGroupCfg>
</RRM>
```

## Table description

Item	Description
Feature name	RRM
Table name	ClbGroupCfg
Table type	Multi-instance table
Row name	ClbGroup
Restrictions	Not support creation/merge/deletion/remove

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClbGroupId	Calibration group id	Index	Unsigned integer.	N/A
ClbGroupDescription	Calibration group description	N/A	String: case-insensitive Length: 1 to 64 characters	N/A
ChlHolddownTime	Channel holddown time	N/A	Unsigned integer. Value range: 10 to 1440. Default value: 720.	N/A
PwrHolddownTime	Power holddown time	N/A	Unsigned integer. Value range: 10 to 1440. Default value: 60	N/A
LocationName	Location name	N/A	String: case-insensitive Length: 1 to 31 characters	N/A

## RRM/ClbGroupMemberCfg

This table contains calibration group member

## XML structure

```
<RRM>
  <ClbGroupMemberCfg>
    <ClbGroupMember>
      <ApName></ApName>
      <RadioID></RadioID>
      <ClbGroupId></ClbGroupId>
    </ClbGroupMember>
  </ClbGroupMemberCfg>
</RRM>
```

## Table description

Item	Description
Feature name	RRM
Table name	ClbGroupMemberCfg
Table type	Multi-instance table
Row name	ClbGroupMember
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	Ap name	Index	String, lowercase. Length: 1 to 64 characters.	N/A
Radioid	Radioid	Index	Unsigned short. Value range: 1 to 4.	N/A
ClbGroupId	Calibration group id	N/A	Unsigned integer.	N/A

## RRM/ClbGroupCreate

This table contains the operation to create a calibration group.

## XML structure

```
<RRM>
  <ClbGroupCreate>
    <ClbGroupId></ClbGroupId>
  </ClbGroupCreate>
</RRM>
```

## Table description

Item	Description
Feature name	RRM
Table name	ClbGroupCreate
Table type	Single-instance table
Row name	None

Restrictions	None
Support for row creation and deletion	Just support for creation

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClbGroupId	Calibration group id	N/A	Unsigned integer. Value range: 1 to 128	NA

## RRM/ClbGroupDelete

This table contains the operation to delete a calibration group.

## XML structure

```

<RRM>
  <ClbGroupDelete>
    <ClbGroup>
      <ClbGroupIdIndex></ClbGroupIdIndex>
      <ClbGroupIdColumn></ClbGroupIdColumn>
    </ClbGroup>
  </ClbGroupDelete>
</RRM>

```

## Table description

Item	Description
Feature name	RRM
Table name	ClbGroupDelete
Table type	Multi-instance table
Row name	ClbGroup
Restrictions	Just support for deletion/removing

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClbGroupIdIndex	Calibration group id	Index	Unsigned integer.	N/A
ClbGroupId	Calibration	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
dColumn	group id		Value range: 1 to 128	

## RRM/ClbGroupMerge

This table contains the operation to merge a calibration group.

### XML structure

```

<RRM>
  <ClbGroupMerge>
    <ClbGroup>
      <ClbGroupId></ClbGroupId>
      <ClbGroupDescription></ClbGroupDescription>
      <ChlHolddownTime></ChlHolddownTime>
      <PwrHolddownTime></PwrHolddownTime>
      <LocationName></LocationName>
    </ClbGroup>
  </ClbGroupMerge>
</RRM>

```

### Table description

Item	Description
Feature name	RRM
Table name	ClbGroupMerge
Table type	Multi-instance table
Row name	ClbGroup
Restrictions	Just support for merging

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClbGroupId	Calibration group id	Index	Unsigned integer.	N/A
ClbGroupDescription	Calibration group description	N/A	String: case-insensitive Length: 1 to 64 characters	N/A
ChlHolddownTime	Channel holddown time	N/A	Unsigned integer. Value range: 10 to 1440. Default value: 720.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PwrHolddownTime	Power holddown time	N/A	Unsigned integer. Value range: 10 to 1440. Default value: 60	N/A
LocationName	Location name	N/A	String: case-insensitive Length: 1 to 31 characters	N/A

## RRM/ApPwrClbModeCfg

This table contains radio power calibration mode information.

### XML structure

```

<RRM>
  <PwrClbModeCfg>
    <Radio>
      <ApName></ApName>
      <RadioID></RadioID>
      <ClbMode></ClbMode>

# RRM

## RRM/ClbInterval

This table contains channel calibration interval information.

### XML structure

```
<RRM>
  <ClbInterval>
    <Interval></Interval>
  </ClbInterval>
</RRM>
```

### Table description

Item	Description
Feature name	RRM
Table name	ClbInterval
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
Interval	Channel calibration interval in minutes	N/A	Unsigned integer. Value range: 3 to 1440. Default: 8.

## RRM/PwrClbInterval

This table contains power calibration interval information.

### XML structure

```
<RRM>
  <PwrClbInterval>
    <Interval></Interval>
  </PwrClbInterval>
</RRM>
```

```

    </PwrClbInterval>
</RRM>

```

## Table description

Item	Description
Feature name	RRM
Table name	PwrClbInterval
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Interval	Power calibration interval in minutes	N/A	Unsigned integer. Value range: 3 to 180. Default: 8.

## RRM/ApPowerCfg

This table contains information about adjacency factor and the least transmit power and threshold of calibrating power and a switch to enable radio calibrate power automatically.

## XML structure

```

<RRM>
  <PowerCfg>
    <Radio>
      <ApName></ApName>
      <RadioID></RadioID>
      <AdjacencyFactor></AdjacencyFactor>
      <PwrMin></PwrMin>
      <PwrThreshold></PwrThreshold>
      <PwrClbMode></PwrClbMode>
    </Radio>
  </PowerCfg>
</RRM>

```

## Table description

Item	Description
Feature name	RRM
Table name	PowerCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	Name of specify ap	Index	String: case-insensitive Length: 1 to 64 characters	N/A
RadioID	Radio Id	Index	Unsigned integer. Value range: 1 to 4.	N/A
Adjacency Factor	The adjacency factor of radio	N/A	Unsigned integer. Value range: 1 to 16.	N/A
PwrMin	The least transmit power of radio	N/A	Unsigned integer. Value range: 1 to 20.	N/A
PwrThresh old	The threshold of calibrating radio's power	N/A	Unsigned integer. Value range: 50 to 90.	N/A
PwrClbMode	Enable/Disable auto power selection of radio	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Disable auto power selection.</li><li>• <b>1</b>—Enable auto power selection.</li></ul>	N/A

## RRM/ApGroupPowerCfg

This table contains the operation to set ApGroup radio's adjacency factor and the least transmit power and the threshold of calibrating power and a switch to enable radio calibrate power automatically.

## XML structure

```
<RRM>
  <ApGroupPowerCfg>
    <Radio>
      <ApGroupName></ApGroupName>
      <ApModel></ApModel>
```

```

    <RadioID></RadioID>
    <AdjacencyFactor></AdjacencyFactor>
    <PwrMin></PwrMin>
    <PwrThreshold></PwrThreshold>
    <PwrClbMode></PwrClbMode>
  </Radio>
</ApGroupPowerCfg>
</RRM>

```

## Table description

Item	Description
Feature name	RRM
Table name	ApGroupPowerCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApGroupName	AP Group name	Index	String: case-insensitive Length: 1 to 31 characters	N/A
APModel	AP Model name	Index	String: case-insensitive Length: 1 to 63 characters	N/A
RadioID	Radio Id	Index	Unsigned integer. Value range: 1 to 4.	N/A
AdjacencyFactor	The adjacency factor of radio	N/A	Unsigned integer. Value range: 1 to 16 Default value: 3.	Optional
PwrMin	The least transmit power of radio	N/A	Unsigned integer. Value range: 1 to 20 Default value: 1.	Optional
PwrThreshold	The threshold of calibrating radio's power	N/A	Unsigned integer. Value range: 50 to 90 Default value: 65.	Optional
PwrClbMode	Enable/Disable auto power selection of radio	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable auto power selection(default).</li> <li>1—Enable auto power selection.</li> </ul>	Optional

# RRM/ApChannelCfg

This table contains information about CRC-error threshold and Interference threshold to determine one radio's current channel is good or bad, and tolerance level that determines if the radio switch current channel, and a switch to enable one radio calibrate channel automatically.

## XML structure

```
<RRM>
  <ChannelCfg>
    <Radio>
      <ApName></ApName>
      <RadioID></RadioID>
      <CrcErrThreshold></CrcErrThreshold>
      <InterferenceThreshold></InterferenceThreshold>
      <ToleranceLevel></ToleranceLevel>
      <ChlClbMode></ChlClbMode>
    </Radio>
  </ChannelCfg>
</RRM>
```

## Table description

Item	Description
Feature name	RRM
Table name	ChannelCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	Name of specify ap	Index	String: case-insensitive Length: 1 to 64 characters	N/A
RadioID	Radio Id	Index	Unsigned integer. Value range: 1 to 4.	N/A
CrcErrThreshold	The CRC-error threshold of radio	N/A	Unsigned integer. Value range: 10 to 100.	N/A
InterferenceThreshold	The Interference threshold of	N/A	Unsigned integer. Value range: 10 to 100.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	radio			
ToleranceLevel	The tolerance level of radio to determine if the radio switch current channel	N/A	Unsigned integer. Value range: 15 to 45.	N/A
ChlClbMode	Enable/Disable auto channel selection of radio	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Disable auto channel selection.</li> <li>• <b>1</b>—Enable auto channel selection.</li> </ul>	N/A

## RRM/ApGroupChannelCfg

This table contains information about CRC-error threshold and Interference threshold to determine one APGroup radio's current channel is good or bad, and tolerance level that determines if the radio switch current channel, and a switch to enable one radio calibrate channel automatically.

## XML structure

```

<RRM>
  <ApGroupChannelCfg>
    <Radio>
      <ApGroupName></ApGroupName>
      <ApModel></ApModel>
      <RadioID></RadioID>
      <CrcErrThreshold></CrcErrThreshold>
      <InterferenceThreshold></InterferenceThreshold>
      <ToleranceLevel></ToleranceLevel>
      <ChlClbMode></ChlClbMode>
    </Radio>
  </ApGroupChannelCfg>
</RRM>

```

## Table description

Item	Description
Feature name	RRM
Table name	ApGroupChannelCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApGroupName	AP Group name	Index	String: case-insensitive Length: 1 to 31 characters	N/A
APModel	AP Model name	Index	String: case-insensitive Length: 1 to 63 characters	N/A
RadioID	Radio Id	Index	Unsigned integer. Value range: 1 to 4.	N/A
CrcErrThreshold	The CRC-error threshold of radio	N/A	Unsigned integer. Value range: 10 to 100 Default value: 20.	Optional
InterferenceThreshold	The Interference threshold of radio	N/A	Unsigned integer. Value range: 10 to 100 Default value: 50.	Optional
ToleranceLevel	The tolerance level of radio to determine if the radio switch current channel	N/A	Unsigned integer. Value range: 15 to 45 Default value: 20.	Optional
ChlClbMode	Enable/Disable auto channel selection of radio	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable auto channel selection(default).</li> <li>1—Enable auto channel selection.</li> </ul>	Optional

## RRM/ApWsaCfg

This table contains the operation to set a switch to enable radio responds to the event reported by WLAN Spectrum Analysis.

## XML structure

```

<RRM>
  <ApWsaCfg>
    <Radio>
      <ApName></ApName>
      <RadioID></RadioID>
      <Mode></Mode>
    </Radio>
  </ApWsaCfg>
</RRM>

```

## Table description

Item	Description
Feature name	RRM
Table name	ApWsaCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String: case-insensitive Length: 1 to 64 characters	N/A
RadioID	Radio Id	Index	Unsigned integer. Value range: 1 to 4.	N/A
Mode	Enable/Disable WSA collaboration of radio	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Disable WSA collaboration .</li><li>• <b>1</b>—Enable WSA collaboration.</li></ul>	Optional

## RRM/ApGroupWsaCfg

This table contains information about a switch to enable one ApGroup radio collaborates with WSA automatically.

## XML structure

```
<RRM>
  <ApGroupWsaCfg>
    <Radio>
      <ApGroupName></ApGroupName>
      <ApModel></ApModel>
      <RadioID></RadioID>
      <Mode></Mode>
    </Radio>
  </ApGroupWsaCfg>
</RRM>
```

## Table description

    <ChlNumBef></ChlNumBef>
    <ChlNumAft></ChlNumAft>
    <PwrLvlBef></PwrLvlBef>
    <PwrLvlAft></PwrLvlAft>
    <RetryBef></RetryBef>
    <RetryAft></RetryAft>
  </RadioCount>
</History>
</RRM>

```

## Table description

Item	Description
Feature name	RRM
Table name	History
Table type	Muti-instance table
Row name	RadioCount
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String: case-insensitive Length: 1 to 64 characters	N/A
RadiolD	Radio Id	Index	Unsigned integer. Value range: 1 to 4.	N/A
HistoryCnt	The Nth history information	Index	Unsigned integer. Value range: 1 to 3.	N/A
BasicBSSID	Field of Radio Information	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
ChangeTime	Date and time when change occurs.	N/A	String	Example: 2014-05-07T09:35:07.
ReasonBitMap	Field of History Information	N/A	Unsigned integer. Rewrite the unsigned integer to binary number. The Reason can be	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<p>judged by whether the bits of this binary number is 1.</p> <p>the last bit is RadioDown;</p> <p>the second last bit is Interference;</p> <p>the third last bit is Noise;</p> <p>the forth last bit is PachetDisCard;</p> <p>the fifth last bit is Retransmission;</p> <p>the sixth last bit is Radar;</p> <p>the seventh last bit is Other;</p> <p>the Reason can be the combination of 2 or more reasons.</p>	
UtilBef	Utilization before calibration	N/A	<p>Unsigned integer.</p> <p>Value range: 0 to 100.</p> <p>Unit: %.</p>	N/A
UtilAft	Utilization after calibration	N/A	<p>Unsigned integer.</p> <p>Value range: 0 to 100.</p> <p>Unit: %.</p>	N/A
LoadBef	Load before calibration	N/A	<p>Unsigned integer.</p> <p>Value range: 0 to 100.</p> <p>Unit: %.</p>	N/A
LoadAft	Load after calibration	N/A	<p>Unsigned integer.</p> <p>Value range: 0 to 100.</p> <p>Unit: %.</p>	N/A
TotalIntrfBef	Total Interference before calibration	N/A	<p>Unsigned integer.</p> <p>Value range: 0 to 100.</p> <p>Unit: %.</p>	N/A
TotalIntrfAft	Total Interference after calibration	N/A	<p>Unsigned integer.</p> <p>Value range: 0 to 100.</p> <p>Unit: %.</p>	N/A
PacketErrBef	Packet error rate before calibration	N/A	<p>Unsigned integer.</p> <p>Value range: 0 to 100.</p> <p>Unit: %.</p>	N/A
PacketErrAft	Packet error rate after calibration	N/A	<p>Unsigned integer.</p> <p>Value range: 0 to 100.</p> <p>Unit: %.</p>	N/A
ChlNumBef	Channel number before calibration	N/A	<p>Unsigned integer.</p>	N/A
ChlNumAft	Channel number after	N/A	<p>Unsigned integer.</p>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	calibration			
PwrLvlBef	Power level before calibration	N/A	Unsigned integer.	N/A
PwrLvlAft	Power level after calibration	N/A	Unsigned integer.	N/A
RetryBef	Retransmission rate before calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
RetryAft	Retransmission rate after calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A

## RRM/ClbGroupCfg

This table contains calibration group

### XML structure

```

## Table description

Item	Description
Feature name	RRM
Table name	ConfigureSpec
Table type	Multi-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Interval_Min	Smallest channel calibration interval	N/A	Unsigned integer. Value is 3.
Interval_Max	Largest channel calibration interval	N/A	Unsigned integer. Value is 1440.
Interval_Def	Default channel calibration interval	N/A	Unsigned integer. Value is 8.
PwrClbInterval_Min	Smallest power calibration interval	N/A	Unsigned integer. Value is 3.
PwrClbInterval_Max	Largest power calibration interval	N/A	Unsigned integer. Value is 180.

Column name	Column description	Column type	Data type and restrictions
PwrClblInterval_Def	Default power calibration interval	N/A	Unsigned integer. Value is 8.
AdjacencyFactor_Min	The minimum adjacency factor of radio	N/A	Unsigned integer. Value is 1
AdjacencyFactor_Max	The maximum adjacency factor of radio	N/A	Unsigned integer. Value is 16
AdjacencyFactor_Def	The default adjacency factor of radio	N/A	Unsigned integer. Value is 3
PwrMin_Min	The minimum least transmit power of radio	N/A	Unsigned integer. Value is 1
PwrMin_Max	The maximum least transmit power of radio	N/A	Unsigned integer. Value is 20
PwrMin_Def	The default least transmit power of radio	N/A	Unsigned integer. Value is 1
PwrThreshold_Min	The minimum threshold of calibrating radio's power	N/A	Unsigned integer. Value is 50
PwrThreshold_Max	The maximum threshold of calibrating radio's power	N/A	Unsigned integer. Value is 90
PwrThreshold_Def	The default threshold of calibrating radio's power	N/A	Unsigned integer. Value is 65
CrcErrThreshold_Min	The minimum CRC-error threshold of radio	N/A	Unsigned integer. Value is 10
CrcErrThreshold_Max	The maximum CRC-error threshold of radio	N/A	Unsigned integer. Value is 100
CrcErrThreshold_Def	The default CRC-error threshold of radio	N/A	Unsigned integer. Value is 20
InterferenceThreshold_Min	The minimum Interference threshold	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
	of radio		Value is 10
InterferenceThreshold_Max	The maximum Interference threshold of radio	N/A	Unsigned integer. Value is 100
InterferenceThreshold_Def	The default Interference threshold of radio	N/A	Unsigned integer. Value is 50
ToleranceLevel_Min	The minimum tolerance level of radio to determine if the radio switch current channel	N/A	Unsigned integer. Value is 15
ToleranceLevel_Max	The maximum tolerance level of radio to determine if the radio switch current channel	N/A	Unsigned integer. Value is 45
ToleranceLevel_Def	The default tolerance level of radio to determine if the radio switch current channel	N/A	Unsigned integer. Value is 20
ClbGroupDescription_MinLen	Minimum length of calibration group description	N/A	Unsigned integer. Value is 1
ClbGroupDescription_MaxLen	Maximum length of calibration group description	N/A	Unsigned integer. Value is 64
ChlHolddownTime_Min	The minimum channel holddown time	N/A	Unsigned integer. Value is 10
ChlHolddownTime_Max	The maximum channel holddown time	N/A	Unsigned integer. Value is 1440
ChlHolddownTime_Def	The default channel holddown time	N/A	Unsigned integer. Value is 720
PwrHolddownTime_Min	The minimum power holddown time	N/A	Unsigned integer. Value is 10
PwrHolddownTime_Max	The maximum power holddown time	N/A	Unsigned integer. Value is 1440
PwrHolddownTime	The default power	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
e_Def	holddown time		Value is 60
ClbGroupId_Min	The minimum Calibration group id	N/A	Unsigned integer. Value is 1
ClbGroupId_Max	The maximum Calibration group id	N/A	Unsigned integer. Value is 128
Coverage_AdjacencyFactor	The default adjacency factor of power coverage calibration mode	N/A	Unsigned integer. Value is 6
Coverage_PwrThreshold	The default power threshold of power coverage calibration mode	N/A	Unsigned integer. Value is 65
Coverage_PwrMin	The default minimum least transmit power of power coverage calibration mode	N/A	Unsigned integer. Value is 1
Density_AdjacencyFactor	The default adjacency factor of power density calibration mode	N/A	Unsigned integer. Value is 1
Density_PwrThreshold	The default power threshold of power density calibration mode	N/A	Unsigned integer. Value is 80
Density_PwrMin	The default minimum least transmit power of power density calibration mode	N/A	Unsigned integer. Value is 1

## RRM/ClbGroupCreate

This table contains the operation to create a calibration group.

### XML structure

```

<RRM>
  <ClbGroupCreate>
    <ClbGroupId></ClbGroupId>
  </ClbGroupCreate>
</RRM>

```

## Table description

Item	Description
Feature name	RRM
Table name	ClbGroupCreate
Table type	Single-instance table
Row name	None
Restrictions	Just support for creation

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClbGroupId	Calibration group id	N/A	Unsigned integer. Value range: 1 to 128.	N/A

## RRM/ClbGroupDelete

This table contains the operation to delete a calibration group.

## XML structure

```
<RRM>
  <ClbGroupDelete>
    <ClbGroup>
      <ClbGroupIdIndex></ClbGroupIdIndex>
      <ClbGroupIdColumn></ClbGroupIdColumn>
    </ClbGroup>
  </ClbGroupDelete>
</RRM>
```

## Table description

Item	Description
Feature name	RRM
Table name	ClbGroupDelete
Table type	Multi-instance table
Row name	ClbGroup
Restrictions	Just support for deletion/removing

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClbGroupIdIndex	Calibration group id	Index	Unsigned integer.	N/A
ClbGroupIdColumn	Calibration group id	N/A	Unsigned integer. Value range: 1 to 128	N/A

## RRM/ClbGroupMerge

This table contains the operation to merge a calibration group.

## XML structure

```
<RRM>
  <ClbGroupMerge>
    <ClbGroup>
      <ClbGroupId></ClbGroupId>
      <ClbGroupDescription></ClbGroupDescription>
      <ChlHolddownTime></ChlHolddownTime>
      <PwrHolddownTime></PwrHolddownTime>
      <LocationName></LocationName>
    </ClbGroup>
  </ClbGroupMerge>
</RRM>
```

## Table description

Item	Description
Feature name	RRM
Table name	ClbGroupMerge
Table type	Multi-instance table
Row name	ClbGroup
Restrictions	Just support for merging

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClbGroupId	Calibration group id	Index	Unsigned integer.	N/A
ClbGroupDescription	Calibration group description	N/A	String: case-insensitive Length: 1 to 64 characters	N/A
ChlHolddownTime	Channel holddown time	N/A	Unsigned integer. Value range: 10 to 1440 Default value: 720.	N/A
PwrHolddownTime	Power holddown time	N/A	Unsigned integer. Value range: 10 to 1440 Default value: 60	N/A
LocationName	Location name	N/A	String: case-insensitive Length: 1 to 31 characters	N/A

## RRM/ApPwrClbModeCfg

This table contains radio power calibration mode information.

## XML structure

```
<RRM>
  <PwrClbModeCfg>
    <Radio>
      <ApName></ApName>
      <RadioID></RadioID>
      <ClbMode></ClbMode>
    </Radio>
  </PwrClbModeCfg>
</RRM>
```

## Table description

Item	Description
Feature name	RRM
Table name	PwrClbModeCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String: case-insensitive. Length: 1 to 64 characters.	N/A
RadioID	Radio ID	Index	Unsigned integer. Value range: 1 to 4.	N/A
ClbMode	Calibration mode	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Custom calibration mode.</li><li>• <b>1</b>—Coverage calibration mode.</li><li>• <b>2</b>—Density calibration mode.</li></ul>	Optional

## RRM/ApGroupPwrClbModeCfg

This table contains AP group power calibration mode information.

## XML structure

```
<RRM>
  <ApGroupPwrClbModeCfg>
    <Radio>
      <ApGroupName></ApGroupName>
      <ApModel></ApModel>

      <BaselineType></BaselineType>
      <BaselineRange></BaselineRange>
    </Radio>
  </BaselineInfoHead>
</RRM>
```

## Table description

Item	Description
Feature name	RRM
Table name	BaselineInfoHead
Table type	Muti-instance table
Row name	Radio
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BaselineName	Baseline name	Index	String: case-insensitive. Length: 1 to 32 characters.	Uppercase characters will be converted to lowercase forms automatically.
Count	Radio quantity	N/A	Unsigned integer.	N/A
Description	Baseline description	N/A	String. Length: 1 to 63 characters.	N/A
CreateTime	Creation time	N/A	String. Length: 1 to 19 characters.	N/A
BaselineType	Baseline type	N/A	String. Length: 1 to 9 characters.	N/A
BaselineRange	Baseline range	N/A	String. Length: 1 to 9 characters.	N/A

## RRM/BaselineInfoBody

This table contains baseline information.

## XML structure

```
<RRM>
  <BaselineInfoBody>
    <Radio>
      <BaselineName></BaselineName>
      <ApName></ApName>
      <RadioID></RadioID>
      <RadioType></RadioType>
      <PrimaryChannel></PrimaryChannel>
      <Power></Power>
      <BandWidth></BandWidth>
      <RegionCode></RegionCode>
    </Radio>
  </BaselineInfoBody>
</RRM>
```

## Table description

Item	Description
Feature name	RRM
Table name	BaselineInfoBody

Table type	Multi-instance table
Row name	Radio
Restrictions	You can only get the table information in bulk, and the first index 'BaselineName' can't be empty.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BaselineName	Baseline name	Index	String: case-insensitive. Length: 1 to 32 characters.	Uppercase characters will be converted to lowercase forms automatically.
ApName	AP name	Index	String: case-insensitive. Length: 1 to 64 characters.	N/A
RadioID	Radio ID	Index	Unsigned integer. Value range: 1 to 4.	N/A
RadioType	Radio type	N/A	Unsigned integer.	N/A
PrimaryChannel	Current working channel	N/A	Unsigned short.	N/A
Power	Current power	N/A	Unsigned short.	N/A
BandWidth	Current band width	N/A	Unsigned char.	N/A
RegionCode	Region code	N/A	Unsigned integer.	N/A

## RRM/BaselineApplyResult

This table contains baseline application result information.

## XML structure

```

ClbGroupId	Calibration group index	N/A	Unsigned integer.	N/A
WsaFlag	WSA collaboration of radio	N/A	Unsigned integer.	N/A
TimeRangeName	Time range name	N/A	String: case-sensitive.	N/A
ScanMode	Channel scanning status	N/A	Unsigned integer.	N/A
ServiceType	Radio service type	N/A	Unsigned integer.	N/A
IsChlPronto	Channel pronto calibration flag	N/A	Boolean: true—Support. false—Not support.	N/A
IsPwrPronto	Power pronto calibration flag	N/A	Boolean: true—Support. false—Not support.	N/A
IsRdScan	Whether a radio is set to scan	N/A	Boolean: true—Support. false—Not support.	N/A

## RRM/EnvQuality

This table contains information about environmental quality scores.

### XML structure

```

<RRM>
  <EnvQuality>
    <EnvQualityScore>
      <RadioType></RadioType>
      <Score></Score>
    </EnvQualityScore>
  </EnvQuality>
</RRM>

```

```

    </EnvQuality>
</RRM>

```

## Table description

Item	Description
Feature name	RRM
Table name	EnvQuality
Table type	Muti-instance table
Row name	EnvQualityScore
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RadioType	Radio type	Index	Enumeration: <ul style="list-style-type: none"> <li>1 —Radio type is 2.4G.</li> <li>2 — Radio type is 5G.</li> </ul>	N/A
Score	Environmental quality score	N/A	Unsigned integer.	N/A

## RRM/RadioDetail

This table contains details about bad environmental quality radio.

## XML structure

```

<RRM>
  <RadioDetail>
    <Radio>
      <RadioType></RadioType>
      <ApName></ApName>
      <RadioID></RadioID>
      <Reason></Reason>
    </Radio>
  </RadioDetail>
</RRM>

```

## Table description

Item	Description
Feature name	RRM
Table name	RadioDetail
Table type	Muti-instance table
Row name	Radio
Restrictions	You can only get the table information in bulk, and the first index can't be empty.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RadioType	Radio type	Index	Enumeration: <ul style="list-style-type: none"><li>1—Radio type is 2.4G.</li><li>2— Radio type is 5G.</li></ul>	N/A
ApName	AP name	Index	String: case-insensitive Length: 1 to 64 characters	N/A
RadioID	Radio ID	Index	Unsigned integer. Value range: 1 to 4.	N/A
Reason	Detail about environmental quality	N/A	Unsigned integer.	N/A

## RRM/LastHistoryRecord

This table contains the fields that carry the most recent history record information.

## XML structure

```
<RRM>
  <LastHistoryRecord>
    <RadioCount>
      <ApName></ApName>
      <RadioID></RadioID>
      <BasicBSSID></BasicBSSID>
      <ChangeTime></ChangeTime>
      <ReasonBitMap></ReasonBitMap>
      <UtilBef></UtilBef>
      <UtilAft></UtilAft>
      <LoadBef></LoadBef>
      <LoadBef></LoadBef>
```

```

    <TotalIntrfBef></TotalIntrfBef>
    <TotalIntrfAft></TotalIntrfAft>
    <PacketErrBef></PacketErrBef>
    <PacketErrAft></PacketErrAft>
    <ChlNumBef></ChlNumBef>
    <ChlNumAft></ChlNumAft>
    <PwrLvlBef></PwrLvlBef>
    <PwrLvlAft></PwrLvlAft>
    <RetryBef></RetryBef>
    <RetryAft></RetryAft>
  </RadioCount>
</LastHistoryRecord>
</RRM>

```

## Table description

Item	Description
Feature name	RRM
Table name	LastHistoryRecord
Table type	Muti-instance table
Row name	RadioCount
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String: case-insensitive Length: 1 to 64 characters	N/A
RadiolD	Radio ID	Index	Unsigned integer. Value range: 1 to 4.	N/A
BasicBSSID	Basic SSID	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
ChangeTime	Date and time when change occurs	N/A	String	Example: 2014-05-07T09:35:07.
ReasonBitMap	Field of history information	N/A	Unsigned integer. Each bit in the string represents a reason. The changes were caused by reasons which bits are set to 1. Meaning of each bit: The last bit represents RadioDown; The second last bit represents Interference;	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			The third last bit represents Noise; The forth last bit represents PacketDisCard; The fifth last bit represents Retransmission; The sixth last bit represents Radar; The seventh last bit represents Other;	
UtilBef	Utilization before calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
UtilAft	Utilization after calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
LoadBef	Load before calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
LoadAft	Load after calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
TotalIntrfBef	Total interference before calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
TotalIntrfAft	Total interference after calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
PacketErrBef	Packet error rate before calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
PacketErrAft	Packet error rate after calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
ChlNumBef	Channel number before calibration	N/A	Unsigned integer.	N/A
ChlNumAft	Channel number after calibration	N/A	Unsigned integer.	N/A
PwrLvlBef	Power level before calibration	N/A	Unsigned integer.	N/A
PwrLvlAft	Power level	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	after calibration			
RetryBef	Retransmission rate before calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
RetryAft	Retransmission rate after calibration	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A

## RRM/HierarchyClbMode

This table contains hierarchy calibration mode information.

### XML structure

```
<RRM>
  <HierarchyClbMode>
    <Mode></Mode>
  </HierarchyClbMode>
</RRM>
```

### Table description

Item	Description
Feature name	RRM
Table name	HierarchyClbMode
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Mode	Hierarchy-calibration mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Local.</li> <li>1—Central.</li> </ul>	N/A

# RRM/ApChlClbSntCfg

This table contains channel calibration sensitivity configuration information for radios of an AP.

## XML structure

```
<RRM>
  <ChlClbSntCfg>
    <Radio>
      <ApName></ApName>
      <RadioID></RadioID>
      <ChlClbSnt></ChlClbSnt>
    </Radio>
  </ChlClbSntCfg>
</RRM>
```

## Table description

Item	Description
Feature name	RRM
Table name	ChlClbSntCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String: case-insensitive Length: 1 to 64 characters	N/A
RadioID	Radio ID	Index	Unsigned integer. Value range: 1 to 4.	N/A
ChlClbSnt	Channel calibration sensitivity mode	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Custom.</li><li>• <b>1</b>—Low.</li><li>• <b>2</b>—Medium.</li><li>• <b>3</b>—High.</li></ul>	N/A

# RRM/ApGroupChlClbSntCfg

This table contains channel calibration sensitivity configuration information for radios of APs in an AP group.

## XML structure

```
<RRM>
  <ApGroupChlClbSntCfg>
    <Radio>
      <ApGroupName></ApGroupName>
      <ApModel></ApModel>
      <RadioID></RadioID>
      <ChlClbSnt></ChlClbSnt>
    </Radio>
  </ApGroupChlClbSntCfg>
</RRM>
```

## Table description

Item	Description
Feature name	RRM
Table name	ApGroupChlClbSntCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApGroupName	AP group name	Index	String: case-insensitive. Length: 1 to 31 characters.	N/A
ApModel	AP model name	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
RadioID	Radio ID	Index	Unsigned integer. Value range: 1 to 4.	N/A
ChlClbSnt	Channel calibration sensitivity mode	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Custom.</li><li>• <b>1</b>—Low.</li><li>• <b>2</b>—Medium.</li><li>• <b>3</b>—High.</li></ul>	N/A

# RRM/ApRadioSelectionCfg

This table contains adjacency-factor radio-selection mode configuration information for radios of an AP.

## XML structure

```
<RRM>
  <RadioSelectionCfg>
    <Radio>
      <ApName></ApName>
      <RadioID></RadioID>
      <RadioSelection></RadioSelection>
    </Radio>
  </RadioSelectionCfg>
</RRM>
```

## Table description

## SAMPLER/Sampler

This table contains Sampler information.

### XML structure

```
<SAMPLER>
  <Sampler>
    <SamplerEntry>
      <SamplerName></SamplerName>
      <Mode></Mode>
      <PacketInterval></PacketInterval>
    </SamplerEntry>
  </Sampler>
</SAMPLER>
```

### Table description

Item	Description
Feature name	SAMPLER
Table name	Sampler
Table type	Multi-instance table
Row name	SamplerEntry
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SamplerName	Sampler Name	Index	String, case sensitive. Length: 1 to 31 characters.	N/A
Mode	Sampler Mode	N/A	Enumeration: 1—fixed 2—random	N/A
PacketInterval	PacketInterval Rate	N/A	Unsigned integer. Value range: 1 to PacketIntervalMaxNum	The value of PacketIntervalMaxNum depends on the device model.

# SAMPLER/SamplerSpecification

This table contains Sampler specification information.

## XML structure

```
<SAMPLER>
  <SamplerSpecification>
    <SupportFixedMode></SupportFixedMode>
    <SupportRandomMode></SupportRandomMode>
    <MaxPacketInterval></MaxPacketInterval>
    <MaxSamplerProfileNumber></MaxSamplerProfileNumber>
  </SamplerSpecification>
</SAMPLER>
```

## Table description

Item	Description
Feature name	SAMPLER
Table name	SamplerSpecification
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SupportFixedMode	Whether the fixed mode is supported.	N/A	Boolean: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>	N/A
SupportRandomMode	Whether the random mode is supported.	N/A	Boolean: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>	N/A
MaxPacketInterval	Maximum sampling rate.	N/A	Unsigned integer.	The value of MaxPacketInterval varies by device model.
MaxSamplerProfileNumber	Maximum number of samplers supported.	N/A	Unsigned integer.	N/A

# SecurityPolicies

## SecurityPolicies/ClearRuleStatistic

This table contains the operation information for a security policy rule.

### XML structure

```
<SecurityPolicies>
  <ClearRuleStatistic>
    <Rule>
      <RuleID></RuleID>
      <ClearType></ClearType>
      <Clear></Clear>
    </Rule>
  </ClearRuleStatistic>
</SecurityPolicies>
```

### Table description

Item	Description
Feature name	SecurityPolicies
Table name	ClearRuleStatistic
Table type	Multi-instance table
Row name	Rule
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Rule ID.	Index	Unassigned integer. Value range: 0 to 65534.	N/A
ClearType	Type of statistics to be cleared.	N/A	Enumeration: <ul style="list-style-type: none"><li>1—IPv4 statistics.</li><li>2—IPv6 statistics.</li></ul>	N/A
Clear	Clears security policy rule statistics.	N/A	This column must be empty.	Required.

# SecurityPolicies/CommitCfgChange

This table contains the commit operation for configuration changes.

## XML structure

```
<SecurityPolicies>
  <CommitCfgChange>
    <Commit></Commit>
  </CommitCfgChange>
</SecurityPolicies>
```

## Table description

Item	Description
Feature name	SecurityPolicies
Table name	CommitCfgChange
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Commit	Commits configuration changes.	N/A	This column must be empty.	Required.

# SecurityPolicies/MoveIPv4Rule

This table contains information about moving an IPv4 security policy rule within an IPv4 security policy.

## XML structure

```
<SecurityPolicies>
  <MoveIPv4Rule>
    <Rule>
      <ID></ID>
      <MoveType></MoveType>
      <DestID></DestID>
    </Rule>
  </MoveIPv4Rule>
</SecurityPolicies>
```

## Table description

Item	Description
Feature name	SecurityPolicies
Table name	MoveIPv4Rule
Table type	Multi-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID.	Index	Unassigned integer. Value range: 0 to 65534.	N/A
MoveType	Type of rule to be moved.	Index	Enumeration: <ul style="list-style-type: none"><li>• 1—Head.</li><li>• 2—Before.</li><li>• 3—After.</li><li>• 4—Tail.</li></ul>	N/A
DestID	Destination rule ID.	N/A	Unassigned integer. Value range: 0 to 65534.	N/A

## SecurityPolicies/MoveIPv6Rule

This table contains information about moving an IPv6 security policy rule within an IPv6 security policy.

## XML structure

```
<SecurityPolicies>
  <MoveIPv6Rule>
    <Rule>
      <ID></ID>
      <MoveType></MoveType>
      <DestID></DestID>
    </Rule>
  </MoveIPv6Rule>
</SecurityPolicies>
```

## Table description

Item	Description
Feature name	SecurityPolicies
Table name	MoveIPv6Rule
Table type	Multi-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID.	Index	Unassigned integer. Value range: 0 to 65534.	N/A
MoveType	Type of rule to be moved.	Index	Enumeration: <ul style="list-style-type: none"><li>• 1—Head.</li><li>• 2—Before.</li><li>• 3—After.</li><li>• 4—Tail.</li></ul>	N/A
DestID	Destination rule ID.	N/A	Unassigned integer. Value range: 0 to 65534.	N/A

## SecurityPolicies/RedundancyRulesCheck

This table contains information about checking redundant security policy rules.

## XML structure

```
<SecurityPolicies>  
  <RedundancyRulesCheck>  
    <Action></Action>  
  </RedundancyRulesCheck>  
</SecurityPolicies>
```

## Table description

Item	Description
Feature name	SecurityPolicies
Table name	RedundancyRulesCheck
Table type	Single-instance table

Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Action of checking redundant rules.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Start.</li> <li>2—Stop.</li> </ul>	N/A

## SecurityPolicies/SingleOptimized

This table contains the optimization operation for single risky security policy rule.

## XML structure

```

<SecurityPolicies>
  <SingleOptimized>
    <PolicyType></PolicyType>
    <RuleID></RuleID>
    <RuleName></RuleName>
    <Profile></Profile>
    <ParentID></ParentID>
    <ParentName></ParentName>
    <IsAppTicked></IsAppTicked>
  </SingleOptimized>
</SecurityPolicies>

```

## Table description

Item	Description
Feature name	SecurityPolicies
Table name	SingleOptimized
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyType	Rule type.	Index	Enumeration: <ul style="list-style-type: none"><li>1—IPv4.</li><li>2—IPv6.</li></ul>	Required.
RuleID	Rule ID.	Index	Unassigned integer. Value range: 0 to 65534.	Required.
RuleName	Rule name.	N/A	String, case-insensitive. Length: 1 to 127 characters.	Required.
Profile	Profile name.	N/A	String. Length: 1 to 63 characters.	Required.
ParentID	Parent rule ID.	N/A	Unassigned integer. Value range: 0 to 65534.	Required.
ParentName	Parent rule name.	N/A	String, case-insensitive. Length: 1 to 127 characters.	Required.
IsAppTicked	Whether the application being ticked.	N/A	Boolean: <ul style="list-style-type: none"><li>true—Enable.</li><li>false—Disable.</li></ul>	Required.

## SecurityPolicies/BatchOptimized

This table contains the optimization operation for some risky security policy rules.

### XML structure

```
<SecurityPolicies>
  <BatchOptimized>
    <OptimizeType></OptimizeType>
    <Commit></Commit>
  </BatchOptimized>
</SecurityPolicies>
```

### Table description

Item	Description
Feature name	SecurityPolicies
Table name	BatchOptimized
Table type	Single-instance table
Row name	N/A

Restrictions	None
--------------	------

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
OptimizeType	The time range of optimization.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Today.</li> <li>1—Last Three Days.</li> <li>2—Last Week.</li> <li>3—Last Month.</li> </ul>	Required
Commit	Commit batch optimization operation.	N/A	This column must be empty.	Required.

## SecurityPolicies/MoveIPv4RuleGroup

This table contains information about moving a rule group within an IPv4 security policy.

## XML structure

```

<SecurityPolicies>
  <MoveIPv4RuleGroup>
    <RuleGroup>
      <RuleGroupName></RuleGroupName>
      <Direction></Direction>
      <DestinationType></DestinationType>
      <DestinationName></DestinationName>
    </RuleGroup>
  </MoveIPv4RuleGroup>
</SecurityPolicies>

```

## Table description

Item	Description
Feature name	SecurityPolicies
Table name	MoveIPv4RuleGroup
Table type	Multi-instance table
Row name	RuleGroup
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleGroupName	Rule group name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Direction	Moving direction	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Before.</li> <li>2—After.</li> </ul>	N/A
DestinationType	Type of destination	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Rule group.</li> <li>2—Rule.</li> </ul>	N/A
DestinationName	Target rule group name or rule name	Index	String, case-insensitive. Length: 1 to 127 characters.	N/A

## SecurityPolicies/MoveIPv6RuleGroup

This table contains information about moving a rule group within an IPv6 security policy.

## XML structure

```

<SecurityPolicies>
  <MoveIPv6RuleGroup>
    <RuleGroup>
      <RuleGroupName></RuleGroupName>
      <Direction></Direction>
      <DestinationType></DestinationType>
      <DestinationName></DestinationName>
    </RuleGroup>
  </MoveIPv6RuleGroup>
</SecurityPolicies>

```

## Table description

Item	Description
Feature name	SecurityPolicies
Table name	MoveIPv6RuleGroup
Table type	Multi-instance table
Row name	RuleGroup
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleGroupName	Rule group name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Direction	Moving direction	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Before.</li> <li>2—After.</li> </ul>	N/A
DestinationType	Type of destination	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Rule group.</li> <li>2—Rule.</li> </ul>	N/A
DestinationName	Target rule group name or rule name	Index	String, case-insensitive. Length: 1 to 127 characters.	N/A

## SecurityPolicies/RenameIPv4RuleGrp

This table contains information about renaming a rule group within an IPv4 security policy.

## XML structure

```

<SecurityPolicies>
  <RenameIPv4RuleGrp>
    <RuleGroup>
      <RuleGroupName></RuleGroupName>
      <NewRuleGroupName></NewRuleGroupName>
    </RuleGroup>
  </RenameIPv4RuleGrp>
</SecurityPolicies>

```

## Table description

Item	Description
Feature name	SecurityPolicies
Table name	RenameIPv4RuleGrp
Table type	Multi-instance table
Row name	RuleGroup
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleGroupName	Rule group name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
NewRuleGroupName	New rule group name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

## SecurityPolicies/RenameIPv6RuleGrp

This table contains information about renaming a rule group within an IPv6 security policy.

## XML structure

```
<SecurityPolicies>
  <RenameIPv6RuleGrp>
    <RuleGroup>
      <RuleGroupName></RuleGroupName>
      <NewRuleGroupName></NewRuleGroupName>
    </RuleGroup>
  </RenameIPv6RuleGrp>
</SecurityPolicies>
```

## Table description

Item	Description
Feature name	SecurityPolicies
Table name	RenameIPv6RuleGrp
Table type	Multi-instance table
Row name	RuleGroup
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleGroupName	Rule group name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

NewRuleGroup Name	New rule group name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
-------------------	---------------------	-------	--	-----

## SecurityPolicies/ExportSecurityPolicies

This table contains information about exporting security policy rules.

### XML structure

```

<SecurityPolicies>
  <ExportSecurityPolicies>
    <FileName></FileName>
    <SecZone></SecZone>
    <AddrOMS></AddrOMS>
    <SrvOMS></SrvOMS>
    <App></App>
    <TimeRange></TimeRange>
    <VRF></VRF>
    <Profile></Profile>
    <Policy></Policy>
    <User></User>
    <Mac></Mac>
  </ExportSecurityPolicies>
</SecurityPolicies>

```

### Table description

Item	Description
Feature name	SecurityPolicies
Table name	ExportSecurityPolicies
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the export file	N/A	String: Length: 1 to 255 characters.	N/A
SecZone	Whether the configuration of security zones	N/A	Boolean: • true	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	needs to be exported		<ul style="list-style-type: none"> <li>false</li> </ul>	
AddrOMS	Whether the configuration of address object groups needs to be exported	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
SrvOMS	Whether the configuration of service object groups needs to be exported	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
App	Whether the configuration of applications and application groups needs to be exported	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
TimeRange	Whether the configuration of time ranges needs to be exported	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
VRF	Whether the configuration of VRT need be export or not	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
Profile	Whether the configuration of VPN instances needs to be exported	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
Policy	Whether the configuration of profiles needs to be exported	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
User	Whether the configuration of security policies needs to be exported	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
Mac	Whether the configuration of users and user groups needs to be exported	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A

## SecurityPolicies/ImportSecurityPolicies

This table contains information about importing security policy rules.

## XML structure

```
<SecurityPolicies>
  <ImportSecurityPolicies>
    <FileName></FileName>
  </ImportSecurityPolicies>
</SecurityPolicies>
```

## Table description

Item	Description

# SecurityPolicies

## SecurityPolicies/IPv4Rules

This table contains IPv4 rule information.

### XML structure

```
<SecurityPolicies>
  <IPv4Rules>
    <Rule>
      <ID></ID>
      <RuleName></RuleName>
      <Action></Action>
      <VRF></VRF>
      <TimeRange></TimeRange>
      <Enable></Enable>
      <Log></Log>
      <Counting></Counting>
      <Comment></Comment>
      <Profile></Profile>
      <SessAgingTimeSw></SessAgingTimeSw>
      <SessAgingTime></SessAgingTime>
      <SessPersistAgingTimeSw></SessPersistAgingTimeSw>
      <SessPersistAgingTime></SessPersistAgingTime>
    <RuleGroupName></RuleGroupName>    </Rule>
  </IPv4Rules>
</SecurityPolicies>
```

### Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4Rules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID.	Index	Unassigned integer. Value range: 0 to 65535.	If you set this column to 65535, the device automatically assigns the rule an ID.
RuleName	Rule name.	N/A	String, case-insensitive. Length: 1 to 127 characters.	The value cannot be the word default.
Action	Action for the rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Deny.</li> <li>2—Permit.</li> </ul>	Required when you create a rule or modify a rule through the <b>replace</b> operation.
VRF	VRF name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	Optional.
TimeRange	Name of the time range.	N/A	String, case-insensitive. Length: 1 to 32 characters. The string must start with an English letter.	It cannot be the word <b>all</b> .
Enable	Whether to enable the rule.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable (default).</li> <li>false—Disable.</li> </ul>	Optional.
Log	Whether to enable logging.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable (default).</li> </ul>	Optional.
Counting	Whether to enable counting.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable (default).</li> </ul>	Optional.
Comment	Description.	N/A	String. Length: 1 to 127 characters.	Optional.
Profile	Profile name	N/A	String. Length: 1 to 63 characters.	Optional
SessAgingTimeSw	Whether to enable the session aging timer.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable (default).</li> </ul>	Optional.
SessAgingTime	Session aging time period.	N/A	Unsigned integer. Value range: 0 to 2000000 seconds.	Optional.
SessPersistAgingTimeSw	Whether to enable the persistent session aging timer.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable (default).</li> </ul>	Optional.
SessPersistAgingTime	Persistent session aging time	N/A	Unsigned integer. Value range: 0 to 24000 hours.	Optional.

	period.		0 indicates that the timer never ages out.	
RuleGroupName	Rule group name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Optional.

## SecurityPolicies/IPv6Rules

This table contains IPv6 rule information.

### XML structure

```

<SecurityPolicies>
  <IPv6Rules>
    <Rule>
      <ID></ID>
      <RuleName></RuleName>
      <Action></Action>
      <VRF></VRF>
      <TimeRange></TimeRange>
      <Enable></Enable>

### Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6Rules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID.	Rule ID	Index	Unassigned integer. Value range: 0 to 65535.	If you set this column to 65535, the device automatically assigns the rule an ID.
RuleName.	Rule name	N/A	String, case-insensitive. Length: 1 to 127 characters.	The value cannot be the word <b>default</b> .
Action.	Action for the rule	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Deny.</li> <li>2—Permit.</li> </ul>	Required when you create a rule or modify a rule through the <b>replace</b> operation.
VRF.	VRF name	N/A	String, case-sensitive. Length: 1 to 31 characters.	Optional.
TimeRange.	Name of the time range	N/A	String, case-insensitive. Length: 1 to 32 characters. The string must start with an English letter.	It cannot be the word <b>all</b> .
Enable.	Whether to enable the rule	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable (default).</li> <li>false—Disable.</li> </ul>	Optional.
Log.	Whether to enable logging	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable (default).</li> </ul>	Optional.
Counting.	Whether to enable counting	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable (default).</li> </ul>	Optional.
Comment.	Description	N/A	String. Length: 1 to 127 characters.	Optional.
Profile	Profile name	N/A	String. Length: 1 to 63 characters.	Optional
SessAgingTimeSw.	Whether to enable the session aging timer	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable (default).</li> </ul>	Optional.
SessAgingTime.	Session aging time period	N/A	Unsigned integer. Value range: 0 to 2000000 seconds.	Optional.
SessPersistAgingTimeSw.	Whether to enable the persistent session aging timer.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable (default).</li> </ul>	Optional.
SessPersistAgingTime.	Persistent session aging time period.	N/A	Unsigned integer. Value range: 0 to 24000	Optional.

			hours. 0 indicates that the timer never ages out.	
RuleGroupName	Rule group name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Optional

## SecurityPolicies/IPv4SrcSecZone

This table contains source security zone information for an existing IPv4 security policy rule.

### XML structure

```
<SecurityPolicies>
  <IPv4SrcSecZone>
    <SrcSecZone>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </SrcSecZone>
  </IPv4SrcSecZone>
</SecurityPolicies>
```

### Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4SrcSecZone
Table type	Multi-instance table
Row name	SrcSecZone
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 65534.	N/A
SeqNum	Sequence	Index	Unassigned integer.	This column is insignificant.

	number		Value range: 1 to 16.	Ignore the value in this column.
IsIncrement	Whether to increment the data	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Yes.</li> <li>false—No (default).</li> </ul>	N/A
NameList	Name of the source security zone list	Data structure	Members include: <ul style="list-style-type: none"> <li>NameItem</li> </ul>	N/A
NameItem	Name of the source security zone	N/A	String, case-insensitive. Length: 1 to 31 characters.	A source security zone list can contain a maximum of 16 source security zones.

## SecurityPolicies/IPv6SrcSecZone

This table contains source security zone information for an existing IPv6 security policy rule.

### XML structure

```

<SecurityPolicies>
  <IPv6SrcSecZone>
    <SrcSecZone>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </SrcSecZone>
  </IPv6SrcSecZone>
</SecurityPolicies>

```

### Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6SrcSecZone

SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 1024.	This column is insignificant. Ignore the value in this column.
IsIncrement	Whether to increment the data	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Yes.</li> <li>false—No (default).</li> </ul>	N/A
NameList	Name of the user list	Data structure	Members include: <ul style="list-style-type: none"> <li>NameItem</li> </ul>	N/A
NameItem	Name of user	N/A	String, case-sensitive. User name length: 1 to 55 characters. Domain name length: 1 to 255 characters.	Form: user-name, user-name@domain-name. The user name cannot be <b>a</b> , <b>al</b> , or <b>all</b> , and it cannot contain any of the following characters: \   / : * ? < > @. The domain name cannot contain any of the following characters: \   / : * ? < > @.

				For versions B64D025 and B64D026, the domain name cannot be <b>d</b> , <b>de</b> , <b>def</b> , <b>defa</b> , <b>defau</b> , <b>default</b> , <b>default</b> , <b>i</b> , <b>if</b> , <b>if-</b> , <b>if-u</b> , <b>if-un</b> , <b>if-unk</b> , <b>if-unkn</b> , <b>if-unkno</b> , <b>if-unknow</b> , or <b>if-unknown</b> .
--	--	--	--	--

## SecurityPolicies/IPv6User

This table contains user information for an existing IPv6 security policy rule.

### XML structure

```
<SecurityPolicies>
  <IPv6User>
    <User>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </User>
  </IPv6User>
</SecurityPolicies>
```

### Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6User
Table type	Multi-instance table
Row name	User
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 65534.	N/A
SeqNum	Sequence	Index	Unassigned integer.	This column is insignificant.

	number		Value range: 1 to 1024.	Ignore the value in this column.
IsIncrement	Whether to increment the data	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Yes.</li> <li>false—No (default).</li> </ul>	N/A
NameList	Name of the user list	Data structure	Members include: <ul style="list-style-type: none"> <li>NameItem</li> </ul>	N/A
NameItem	Name of the user	N/A	String, case-sensitive. User name length: 1 to 55 characters. Domain name length: 1 to 255 characters.	Form: user-name, user-name@domain-name. The user name cannot be <b>a</b> , <b>al</b> , or <b>all</b> , and it cannot contain any of the following characters: \   / : * ? < > @. The domain name cannot contain any of the following characters: \   / : * ? < > @. For versions B64D025 and B64D026, the domain name cannot be <b>d</b> , <b>de</b> , <b>def</b> , <b>defa</b> , <b>defau</b> , <b>defaul</b> , <b>default</b> , <b>i</b> , <b>if</b> , <b>if-</b> , <b>if-u</b> , <b>if-un</b> , <b>if-unkn</b> , <b>if-unkn</b> , <b>if-unkn</b> , <b>if-unkn</b> , <b>if-unkn</b> , or <b>if-unknown</b> .

## SecurityPolicies/IPv4UserGrp

This table contains user group information for an existing IPv4 security policy rule.

### XML structure

```

<SecurityPolicies>
  <IPv4UserGrp>
    <UserGrp>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </UserGrp>
  </IPv4UserGrp>
</SecurityPolicies>

```

### Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4UserGrp

Table type	Multi-instance table
Row name	UserGrp
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 65534.	N/A
SeqNum	Sequence number	Index	Unassigned integer. Value range: 1 to 1024.	This column is insignificant. Ignore the value in this column.
IsIncrement	Whether to increment the data	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Yes.</li> <li>false—No (default).</li> </ul>	N/A
NameList	Name of the user group list	Data structure	Members include: <ul style="list-style-type: none"> <li>NameItem</li> </ul>	N/A
NameItem	Name of the user group	N/A	String, case-insensitive. Group name length: 1 to 32 characters. Domain name length: 1 to 255 characters.	Form: user-group-name, user-group-name@domain-name.  The domain name cannot contain any of the following characters: \   / : * ? < > @. For versions B64D025 and B64D026, the domain name cannot be <b>d</b> , <b>de</b> , <b>def</b> , <b>defa</b> , <b>defau</b> , <b>default</b> , <b>i</b> , <b>if</b> , <b>if-</b> , <b>if-u</b> , <b>if-un</b> , <b>if-unk</b> , <b>if-unkn</b> , <b>if-unkno</b> , <b>if-unknow</b> , or <b>if-unknown</b> .  If you want to contain a backslash (\) or an at sign (@) in the user group name, you must enter the escape character (\) before the backslash (\) or at sign (@).

## SecurityPolicies/IPv6UserGrp

This table contains user group information for an existing IPv6 security policy rule.

## XML structure

```
<SecurityPolicies>
  <IPv6UserGrp>
    <UserGrp>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </UserGrp>
  </IPv6UserGrp>
</SecurityPolicies>
```

## Table description

Item	Description

## SecurityPolicies/Accelerate

This table contains rule matching acceleration information for security policies.

### XML structure

```

<SecurityPolicies>
  <Accelerate>
    <Enable></Enable>
  </Accelerate>
</SecurityPolicies>

```

### Table description

Item	Description
Feature name	SecurityPolicies
Table name	Accelerate
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether to enable rule matching acceleration for the	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable (default).</li> <li>false—Disable.</li> </ul>	Optional.

	security policy.			
--	------------------	--	--	--

## SecurityPolicies/RulesCounting

This table contains rules counting information for security policies.

### XML structure

```
<SecurityPolicies>
  <RulesCounting>
    <Enable></Enable>
  </RulesCounting>
</SecurityPolicies>
```

### Table description

Item	Description
Feature name	SecurityPolicies
Table name	RulesCounting
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether to enable rule counting for the security policy.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable (default).</li> </ul>	Optional.

## SecurityPolicies/IPv4RuleGroup

This table contains information about an IPv4 security policy rule group.

### XML structure

```
<SecurityPolicies>
  <IPv4RuleGroup>
    <RuleGroup>
      <RuleGroupName></RuleGroupName>
    </RuleGroup>
  </IPv4RuleGroup>
</SecurityPolicies>
```

```

<Description></Description>
<FromRuleName></FromRuleName>
<ToRuleName></ToRuleName><Enable></Enable>
<IncludeMember></IncludeMember>
</RuleGroup>
</IPv4RuleGroup>
</SecurityPolicies>

```

## Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4RuleGroup
Table type	Multi-instance table
Row name	RuleGroup
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleGroupName	Rule group name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description.	Description	N/A	String. Length: 1 to 127 characters.	Optional.
FromRuleName	The begin rule name	N/A	String, case-insensitive. Length: 1 to 127 characters.	Optional.
ToRuleName	The end rule name	N/A	String, case-insensitive. Length: 1 to 127 characters.	Optional.
IncludeMember	Delete all the rules under the rule group.	N/A	This column is used when a rule group is deleted. If this column is specified, the rules under the rule group will also be deleted.	Optional.
Enable	Enable the rule group.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	Optional.

## SecurityPolicies/IPv6RuleGroup

This table contains information about an IPv6 security policy rule group.

## XML structure

```
<SecurityPolicies>

    </Rule>
  </IPv4Rules>
</SecurityPolicies>
```

### Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4Rules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID.	Index	Unassigned integer. Value range: 0 to 65534.
RuleName	Rule name.	N/A	String, case-insensitive. Length: 1 to 127 characters.
Action	Action for the rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Deny.</li> <li>2—Permit.</li> </ul>
VRF	VRF name.	N/A	String, case-sensitive. Length: 1 to 31 characters.
TimeRange	Name of the time range.	N/A	String, case-insensitive. Length: 1 to 32 characters. The string must start with an English letter.
TimeRangeState	Status of the time range.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Effective.</li> <li>false—Not effective.</li> </ul>
Enable	Whether to enable the rule.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>
Log	Whether to enable logging.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>
Counting	Whether to enable counting.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>
Comment	Description.	N/A	String. Length: 1 to 127 characters.
Count	Count of matches.	N/A	Unassigned integer. Value range: 0 to $2^{64}-1$ .
Byte	Bytes of packets	N/A	N/A
Profile	Profile name	N/A	String. Length: 1 to 63 characters.
SessAgingTimeSw	Whether to enable the session aging timer.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>
SessAgingTime	Session aging time period.	N/A	Unsigned integer. Value range: 0 to 2000000 seconds.
SessPersistAgingTimeSw	Whether to enable the persistent session aging timer.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>

SessPersistAgingTime	Persistent session aging time period.	N/A	Unsigned integer. Value range: 0 to 24000 hours. 0 indicates that the timer never ages out.
RuleGroupName	Rule group name	N/A	String, case-insensitive. Length: 1 to 63 characters.

DestZoneItem	Name of the destination zone	N/A	String, case-insensitive. Length: 1 to 31 characters.
SrcAddrList	Name of the source address list.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcAddrItem</li> </ul>
SrcAddrItem	Name of the source address	N/A	String, case-insensitive. Length: 1 to 31 characters.
DestAddrList	Name of the destination address list.	Data structure	Members include: <ul style="list-style-type: none"> <li>DestAddrItem</li> </ul>
DestAddrItem	Name of the destination address	N/A	String, case-insensitive. Length: 1 to 31 characters.
SrcMacAddrList	Name of the source IPv4 MAC address list	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcMacAddrItem</li> </ul>
SrcMacAddrItem	Name of the source MAC address	N/A	String, case-insensitive. Length: 1 to 31 characters.
ServGrpList	Name of the service group list.	Data structure	Members include: <ul style="list-style-type: none"> <li>ServGrpItem</li> </ul>
ServGrpItem	Name of the service group	N/A	String, case-insensitive. Length: 1 to 31 characters.
AppList	Name of the application list	Data structure	Members include: <ul style="list-style-type: none"> <li>AppItem</li> </ul>
AppItem	Name of the application	N/A	String, case-insensitive. Length: 1 to 63 characters.
AppGrpList	Name of the application group list	Data structure	Members include: <ul style="list-style-type: none"> <li>AppGrpItem</li> </ul>
AppGrpItem	Name of the application group	N/A	String, case-insensitive. Length: 1 to 63 characters.
UserList	Name of the user list	Data structure	Members include: <ul style="list-style-type: none"> <li>UserItem</li> </ul>
UserItem	Name of the user	N/A	String, case-insensitive. Form: user-name, user-name@domain-name. User name length: 1 to 55 characters. Domain name length: 1 to 255 characters.
UserGrpList	Name of the user group list	Data structure	Members include: <ul style="list-style-type: none"> <li>UserGrpItem</li> </ul>

UserGrpItem	Name of the user group	N/A	String, case-insensitive. Form: user-group-name, user-group-name@domain-name. Group name length: 1 to 32 characters. Domain name length: 1 to 255 characters. If you want to contain a backslash (\) or an at sign (@) in the user group name, you must enter the escape character (\) before the backslash (\) or at sign (@).
TimeRange	Name of the time range.	N/A	String. Length: 1 to 32 characters.
VRF	VRF name.	N/A	String. Length: 1 to 31 characters.
Profile	Profile name	N/A	String. Length: 1 to 63 characters.
Enable	Whether the rule is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>
Log	Whether logging is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>
Counting	Whether counting is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>
Count	Count of matches.	N/A	Unassigned integer. Value range: 0 to $2^{64}-1$ .
Byte	Bytes of packets	N/A	N/A
SessAgingTimeSw	Whether the session aging timer is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>
SessAgingTime	Session aging time period.	N/A	Unsigned integer. Value range: 0 to 2000000 seconds.
SessPersistAgingTimeSw	Whether the persistent session aging timer is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>
SessPersistAgingTime	Persistent session aging time period.	N/A	Unsigned integer. Value range: 0 to 24000 hours. 0 indicates that the timer never ages out.
AllRulesCount	The number of all security policy rules	N/A	N/A
Comment	Description.	N/A	String. Length: 1 to 127 characters.
RuleGroupName	Rule group name	N/A	String, case-insensitive.

e			Length: 1 to 63 characters.
Valid	Whether the rule is valid.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true—Valid.</li> <li>• false—Invalid</li> </ul>

## Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 65534.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Name of the service object group list	Data structure	Members include: <ul style="list-style-type: none"><li>• NameItem</li></ul>

NameItem	Name of the service object group	N/A	String, case-insensitive. Length: 1 to 31 characters.
----------	----------------------------------	-----	--

## SecurityPolicies/IPv6ServGrp

This table contains service object group information for an existing IPv6 security policy rule.

### XML structure

```

<SecurityPolicies>
  <IPv6ServGrp>
    <ServGrp>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </ServGrp>
  </IPv6ServGrp>
</SecurityPolicies>

```

### Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6ServGrp
Table type	Multi-instance table
Row name	ServGrp
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 65534.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.

NameList	Name of the service object group list	Data structure	Members include: <ul style="list-style-type: none"> <li>Nameltem</li> </ul>
Nameltem	Name of the service object group	N/A	String, case-insensitive. Length: 1 to 31 characters.

## SecurityPolicies/IPv4App

This table contains application information for an existing IPv4 security policy rule.

### XML structure

```

<SecurityPolicies>
  <IPv4App>
    <App>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </App>
  </IPv4App>
</SecurityPolicies>

```

### Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv4App
Table type	Multi-instance table
Row name	App
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 65534.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.

IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Name of the application list	Data structure	Members include: <ul style="list-style-type: none"> <li>NameItem</li> </ul>
NameItem	Name of the application	N/A	String, case-insensitive. Length: 1 to 63 characters.

## SecurityPolicies/IPv6App

This table contains application information for an existing IPv6 security policy rule.

### XML structure

```

<SecurityPolicies>
  <IPv6App>
    <App>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </App>
  </IPv6App>
</SecurityPolicies>

```

### Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6App
Table type	Multi-instance table
Row name	App
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 65534.

SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Name of the application list	Data structure	Members include: <ul style="list-style-type: none"> <li>• NameItem</li> </ul>
NameItem	Name of the application	N/A	String, case-insensitive. Length: 1 to 63 characters.

## SecurityPolicies/IPv4AppGrp

This table contains application group information for an existing IPv4 security policy rule.

### XML structure

```

<SecurityPolicies>
  <IPv4AppGrp>
    <AppGrp>
      <ID></ID>
      <SeqNum></SeqNum>
      <IsIncrement></IsIncrement>

</IPv6UserGrp>
</SecurityPolicies>

```

## Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6UserGrp
Table type	Multi-instance table
Row name	UserGrp
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 65534.
SeqNum	Sequence Number	Index	Unassigned integer. Value range: 1 to 1024.
IsIncrement	Whether to increment the data	N/A	This column is insignificant. Ignore the value in this column.
NameList	Name of the user group list	Data structure	Members include: <ul style="list-style-type: none"> <li>NameItem</li> </ul>
NameItem	Name of the user group	N/A	String, case-insensitive. Form: user-group-name, user-group-name@domain-name. Group name length: 1 to 32 characters. Domain name length: 1 to 255 characters. If you want to contain a backslash (\) or an at sign (@) in the user group name, you must enter the escape character (\) before the backslash (\) or at sign (@).

# SecurityPolicies/AllocRuleID

This table contains an available rule ID.

## XML structure

```
<SecurityPolicies>
  <AllocRuleID>
    <Rule>
      <Type></Type>
      <ID></ID>
    </Rule>
  </AllocRuleID>
</SecurityPolicies>
```

## Table description

Item	Description
Feature name	SecurityPolicies
Table name	AllocRuleID
Table type	Single-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Type	Rule Type	Index	Enumeration: <ul style="list-style-type: none"><li>1—IPv4.</li><li>2—IPv6.</li></ul>
ID	Rule ID.	N/A	Unassigned integer. Value range: 0 to 65534.

# SecurityPolicies/Accelerate

This table contains security policy rule matching acceleration information for security policies.

## XML structure

```
<SecurityPolicies>
  <Accelerate>
    <Enable></Enable>
```

```

    </Accelerate>
  </SecurityPolicies>

```

## Table description

Item	Description
Feature name	SecurityPolicies
Table name	Accelerate
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Enable	Whether to enable rule matching acceleration for the security policy.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>

# SecurityPolicies/GetAccelerateCommitStatus

This table contains acceleration commit status information for the security policy.

## XML structure

```

<SecurityPolicies>
  <GetAccelerateCommitStatus>
    <Status></Status>
  </GetAccelerateCommitStatus>
</SecurityPolicies>

```

## Table description

Item	Description
Feature name	SecurityPolicies
Table name	Accelerate
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Whether to enable rule acceleration for the security policy.	N/A	Boolean: <ul style="list-style-type: none"><li>true—Enable.</li><li>false—Disable.</li></ul>	Optional.

## SecurityPolicies/BaseProtocols

This table contains base protocol informations for the existing applications and application-groups within a security policy rule.

## XML structure

```
<SecurityPolicies>
  <BaseProtocols>
    <Protocol>
      <Type></Type>
      <ID></ID>
      <ProtoNum></ProtoNum>
      <AppNum></AppNum>
      <ProtocolItem></ProtocolItem>
      <NameList>
        <AppItem></AppItem>
      </NameList>
    </Protocol>
  </BaseProtocols>
</SecurityPolicies>
```

## Table description

Item	Description
Feature name	SecurityPolicies
Table name	BaseProtocols
Table type	Multi-instance table
Row name	Protocol
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Type	Rule Type	Index	Enumeration: <ul style="list-style-type: none"><li>1—IPv4.</li><li>2—IPv6.</li></ul>
ID	Rule ID.	Index	Unassigned integer. Value range: 0 to 65534.
ProtoNum	Protocol Number	Index	Unassigned integer. Value range: 1 to 1024.
AppNum	Application Number	Index	Unassigned integer. Value range: 1 to 1024.
ProtocolItem	Name of the protocol	N/A	String, case-insensitive. Length: 1 to 63 characters.
NameList	Name of the application list	Data structure	Members include: <ul style="list-style-type: none"><li>ApplItem</li></ul>
ApplItem	Name of the application	N/A	String, case-insensitive. Length: 1 to 63 characters.

## SecurityPolicies/RedundancyCheckStatus

This table contains status information for checking the redundant security policy rules.

### XML structure

```
<SecurityPolicies>
  <RedundancyCheckStatus>
    <Status></Status>
    <Proportion></Proportion>
  </RedundancyCheckStatus>
</SecurityPolicies>
```

### Table description

Item	Description
Feature name	SecurityPolicies
Table name	RedundancyCheckStatus
Table type	Single-instance table
Row name	Status

Restrictions	None
--------------	------

## Columns

Column name	Column description	Column type	Data type and restrictions
Status	The status for checking redundancy security policy rules	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—init.</li> <li>1—finished.</li> <li>2—checking.</li> </ul>
Proportion	Percentage of progress	N/A	Unassigned integer. Value range: 0 to 100.

## SecurityPolicies/ContainRedundancyRules

This table shows security policy rules that have redundant rules.

## XML structure

## Table description

Item	Description
Feature name	SecurityPolicies
Table name	ConfirmedRedundancyRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions
Type	Rule type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4.</li> <li>2—IPv6.</li> </ul>
RuleID	Rule ID	Index	Unassigned integer. Value range: 0 to 65534.
RuleName	Rule name	N/A	String, case-insensitive. Length: 1 to 127 characters.
ContainRedundancyRuleID	ID of the rule that contains this redundant rule	N/A	Unassigned integer. Value range: 0 to 65534.
Action.	Action for the rule	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Deny.</li> <li>2—Permit.</li> </ul>
SrcZoneList	Name of the source zone list	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcZoneItem.</li> <li>SrcZoneStatus.</li> </ul>
SrcZoneItem	Name of the source zone	N/A	String, case-insensitive. Length: 1 to 31 characters.
SrcZoneStatus	Status of the source zone	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Effective.</li> <li>false—Not effective.</li> </ul>
DestZoneList	Name of the destination zone list	Data structure	Members include: <ul style="list-style-type: none"> <li>DestZoneItem.</li> <li>DestZoneStatus.</li> </ul>
DestZoneItem	Name of the destination zone	N/A	String, case-insensitive. Length: 1 to 31 characters.
DestZoneStatus	Status of the destination zone	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Effective.</li> <li>false—Not effective.</li> </ul>
SrcMacAddrList	Name of the source IPv4 MAC address list	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcMacAddrItem.</li> <li>SrcMacAddrStatus.</li> </ul>
SrcMacAddrItem	Name of the source MAC address	N/A	String, case-insensitive. Length: 1 to 31 characters.
SrcMacAddrStatus	Status of the source MAC address	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Effective.</li> <li>false—Not effective.</li> </ul>
SrcAddrList	Name of the source address list	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcAddrItem.</li> <li>SrcAddrStatus.</li> </ul>

SrcAddrItem	Name of the source address	N/A	String, case-insensitive. Length: 1 to 31 characters.
SrcAddrStatus	Status of the source address	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Effective.</li> <li>false—Not effective.</li> </ul>
DestAddrList	Name of the destination address list.	Data structure	Members include: <ul style="list-style-type: none"> <li>DestAddrItem.</li> <li>DestAddrStatus.</li> </ul>
DestAddrItem	Name of the destination address	N/A	String, case-insensitive. Length: 1 to 31 characters.
DestAddrStatus	Status of the destination address	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Effective.</li> <li>false—Not effective.</li> </ul>
ServGrpList	Name of the service group list	Data structure	Members include: <ul style="list-style-type: none"> <li>ServGrpItem.</li> <li>ServGrpStatus.</li> </ul>
ServGrpItem	Name of the service group	N/A	String, case-insensitive. Length: 1 to 31 characters.
ServGrpStatus	Status of the service group	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Effective.</li> <li>false—Not effective.</li> </ul>
AppList	Name of the application list	Data structure	Members include: <ul style="list-style-type: none"> <li>AppItem.</li> <li>AppStatus</li> </ul>
AppItem	Name of the application	N/A	String, case-insensitive. Length: 1 to 63 characters.
AppStatus	Status of the application	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Effective.</li> <li>false—Not effective.</li> </ul>
AppGrpList	Name of the application group list	Data structure	Members include: <ul style="list-style-type: none"> <li>AppGrpItem.</li> <li>AppGrpStatus</li> </ul>
AppGrpItem	Name of the application group	N/A	String, case-insensitive. Length: 1 to 63 characters.
AppGrpStatus	Status of the application group.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Effective.</li> <li>false—Not effective.</li> </ul>
UserList	Name of the user list	Data structure	Members include: <ul style="list-style-type: none"> <li>UserItem.</li> <li>UserStatus</li> </ul>
UserItem	Name of the user	N/A	String, case-insensitive. Form: user-name, user-name@domain-name. User name length: 1 to 55 characters. Domain name length: 1 to 255 characters.

UserStatus	Status of the user.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Effective.</li> <li>false—Not effective.</li> </ul>
UserGrpList	Name of the user group list	Data structure	Members include: <ul style="list-style-type: none"> <li>UserGrpItem.</li> <li>UserGrpStatus</li> </ul>
UserGrpItem	Name of the user group	N/A	String, case-insensitive. Form: user-group-name, user-group-name@domain-name. Group name length: 1 to 32 characters. Domain name length: 1 to 255 characters. If you want to contain a backslash (\) or an at sign (@) in the user group name, you must enter the escape character (\) before the backslash (\) or at sign (@).
UserGrpStatus	Status of the user group.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Effective.</li> <li>false—Not effective.</li> </ul>
TimeRange	Name of the time range.	N/A	String, case-insensitive. Length: 1 to 32 characters. The string must start with an English letter.
VRF	VRF name.	N/A	String, case-insensitive. Length: 1 to 31 characters.
Enable	Whether to enable the rule.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>
Comment	Description.	N/A	String. Length: 1 to 127 characters.
Profile	Profile name	N/A	String. Length: 1 to 63 characters.

## SecurityPolicies/IPv4SrcSecZoneInfo

This table contains source security zone information for an IPv4 security policy rule that is redundant or has a redundant rule.

### XML structure

```

<SecurityPolicies>

Name	Name of the application group	N/A	String, case-insensitive. Length: 1 to 63 characters.

Status	Status of the application group.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Effective.</li> <li>false—Not effective.</li> </ul>
--------	----------------------------------	-----	--

## SecurityPolicies/IPv6AppGrpInfo

This table contains application group information for an IPv6 security policy rule that is redundant or has a redundant rule.

### XML structure

```

<SecurityPolicies>
  <IPv6AppGrpInfo>
    <AppGrpInfo>
      <ID></ID>
      <SeqNum></SeqNum>
      <NameList>
        <Name></Name>
        <Status></Status>
      </NameList>
    </AppGrpInfo>
  </IPv6AppGrpInfo>
</SecurityPolicies>

```

### Table description

Item	Description
Feature name	SecurityPolicies
Table name	IPv6AppGrpInfo
Table type	Multi-instance table
Row name	AppGrpInfo
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 65534.
SeqNum	Sequence number	Index	Unassigned integer. Value range: 0 to 1024.
NameList	Name of the	Data structure	Members include:

	application group list		<ul style="list-style-type: none"> <li>Name</li> <li>Status</li> </ul>
Name	Name of the application group	N/A	String, case-insensitive. Length: 1 to 63 characters.
Status	Status of the application group.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Effective.</li> <li>false—Not effective.</li> </ul>

## SecurityPolicies/IPv4UserInfo

This table contains user information for an IPv4 security policy rule that is redundant or has a redundant rule.

### XML structure

```

<SecurityPolicies>
  <IPv4UserInfo>
    <UserInfo>
      <ID></ID>
      <SeqNum></SeqNum>
      <NameList>
        <Name></Name>
        <Status></Status>
      </NameList>
    </UserInfo>
  </IPv4UserInfo>
</SecurityPolicies>

```

### Table description

Item	Description

</SecurityPolicies>
```

### Table description

Item	Description
Feature name	SecurityPolicies
Table name	RuleFlux
Table type	Multi-instance table
Row name	AppFlux
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
PolicyType	Rule type.	Index	Enumeration:

			<ul style="list-style-type: none"> <li>1—IPv4.</li> <li>2—IPv6.</li> </ul>
RuleID	Rule ID.	Index	Unassigned integer. Value range: 0 to 65534.
QueryType	The time range.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Today.</li> <li>1—Last Three Days.</li> <li>2—Last Week.</li> <li>3—Last Month.</li> </ul>
SeqNum	Sequence number.	Index	Unassigned integer. Value range: 0 to 65535.
AppCount	The count of applications.	N/A	Unassigned integer. Value range: 0 to 65535.
RuleName	Rule name.	N/A	String, case-insensitive. Length: 1 to 127 characters.
ChildRuleID	Child rule ID.	N/A	Unassigned integer. Value range: 0 to 65534.
ChildRuleName	Child rule name.	N/A	String, case-insensitive. Length: 1 to 127 characters.
TotalFlux	Flux of statistics.	N/A	N/A
Profile	Profile name.	N/A	String. Length: 1 to 63 characters.
AppList	Flux statistics of the application list.	Data structure	Members include: <ul style="list-style-type: none"> <li>AppInfo</li> </ul>
AppInfo	Information of the application.	N/A	String, case-insensitive. Length: 1 to 255 characters.

## SecurityPolicies/AppOptimizedStatus

This table contains the progress of batch application optimization.

### XML structure

```

<SecurityPolicies>
  <AppOptimizedStatus>
    <Result></Result>
    <Description></Description>
    <Percent></Percent>
  </AppOptimizedStatus>
</SecurityPolicies>

```

## Table description

Item	Description
Feature name	SecurityPolicies
Table name	AppOptimizedStatus
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Result	Optimization result.	N/A	Boolean: <ul style="list-style-type: none"><li>true—Successful.</li><li>false—Failed.</li></ul>
Description	The case of failure.	N/A	String, case-insensitive. Length: 1 to 127 characters.
Percent	Progress in percentage.	N/A	Unassigned integer. Value range: 0 to 100.

## SecurityPolicies/AppOptimizedAdvice

This table contains the advice of application optimization.

## XML structure

```
<SecurityPolicies>
  <AppOptimizedAdvice>
    <PolicyType></PolicyType>
    <OptimizeType></OptimizeType>

# SecurityPolicies

## SecurityPolicies/IPv4Rules

Message	Explanation
Failed to create the rule because the rule number exceeds the upper limit. 由于已经达到规则数上限，创建规则失败。	During executing create operation, the current number of the rule must under the limit. 当执行create操作时，规则数必须在限制内。
The time range does not exist and the rule will be set to inactive. 由于指定的时间段不存在，该规则不会生效。	During executing create、merge、replace operation, the time range must exist. 当执行create、merge、replace操作时，指定的时间段必须存在。
Failed to create the rule because the ID of the rule to be moved is equal to the target one. 由于指定规则编号和目标规则编号相同，移动规则失败。	During executing create operation, the ID of the rule to be moved can't be equal to the target one. 当执行create操作时，指定规则编号不能和目标规则相同。
Failed to merge the rule because the ID of the rule to be moved is equal to the target one. 由于指定规则编号和目标规则编号相同，移动规则失败。	During executing merge operation, the ID of the rule to be moved can't be equal to the target one. 当执行merge操作时，指定规则编号不能和目标规则相同。
Failed to replace the rule because the ID of the rule to be moved is equal to the target one. 由于指定规则编号和目标规则编号相同，移动规则失败。	During executing replace operation, the ID of the rule to be moved can't be equal to the target one. 当执行replace操作时，指定规则编号不能和目标规则相同。
Failed to move the rule because the specified rule does not exist. 由于指定规则或目标规则不存在，移动规则失败。	During executing create、merge、replace operation, the specified rule must exist. 当执行create、merge、replace操作时，指定规则或目标规则必须存在。
Failed to create the rule because the action of the rule is not specified. 由于未指定规则动作，创建规则失败。	During executing create operation, the action of the rule must be specified. 当执行create操作时，必须指定规则动作。
Failed to merge the rule because the action of the rule is not specified. 由于未指定规则动作，创建规则失败。	During executing merge operation, the action of the rule must be specified. 当执行merge操作时，必须指定规则动作。
The maximum number of rules has been reached. 由于已经达到规则数上限，创建规则失败。	During executing create operation, the current number of the rule must under the maximum. 当执行create操作时，规则数不能达到上限值。
The app group does not exist. 指定的应用组不存在。	During executing create、merge、replace operation, the app group must exist. 当执行create、merge、replace操作时，指定的应用组必须存在。
The application does not exist. 指定的应用不存在。	During executing create、merge、replace operation, the application must exist. 当执行create、merge、replace操作时，指定的应用必须存在。
The app group and the application does not exist, the rule does not match packets. 指定的应用组和应用都不存在，该规则不会匹配报	During executing create、merge、replace operation, the app group and the application must exist.

文。	当执行create、merge、replace操作时，指定的应用或应用组必须存在。
The application does not exist, the rule does not match packets. 指定的应用不存在，该规则不会匹配报文。	During executing create、merge、replace operation, the application must exist. 当执行create、merge、replace操作时，指定的应用必须存在。
The app group does not exist, the rule does not match packets. 指定的应用组不存在，该规则不会匹配报文。	During executing create、merge、replace operation, the app group must exist. 当执行create、merge、replace操作时，指定的应用组必须存在。
The name is already used by another security policy rule. 规则名称已存在。	During executing create、merge、replace operation, the name of the new rule can't be exist. 当执行create、merge、replace操作时，新规则名称必须不存在。
Invalid rule name. 无效的规则名称。	During executing create、merge、replace operation, the name of the new rule must be valid. 当执行create、merge、replace操作时，规则名称必须有效。

## SecurityPolicies/IPv6Rules

Message	Explanation
Failed to create the rule because the rule number exceeds the upper limit. 由于已经达到规则数上限，创建规则失败。	During executing create operation, the current number of the rule must under the limit. 当执行create操作时，规则数必须在限制内。
The time range does not exist and the rule will be set to inactive. 由于指定的时间段不存在，该规则不会生效。	During executing create、merge、replace operation, the time range must exist. 当执行create、merge、replace操作时，指定的时间段必须存在。

Failed to create the rule because the action of the rule is not specified. 由于未指定规则动作，创建规则失败。	During executing create operation, the action of the rule must be specified. 当执行create操作时，必须指定规则动作。
Failed to merge the rule because the action of the rule is not specified.	During executing merge operation, the action of the rule must be specified.

由于未指定规则动作，创建规则失败。	当执行merge操作时，必须指定规则动作。
The maximum number of rules has been reached. 由于已经达到规则数上限，创建规则失败。	During executing create operation, the current number of the rule must under the maximum. 当执行create操作时，规则数不能达到上限值。
The app group does not exist. 指定的应用组不存在。	During executing create、merge、replace operation, the app group must exist. 当执行create、merge、replace操作时，指定的应用组必须存在。
The application does not exist. 指定的应用不存在。	During executing create、merge、replace operation, the application must exist. 当执行create、merge、replace操作时，指定的应用必须存在。
The app group and the application does not exist, the rule does not match packets. 指定的应用组和应用都不存在，该规则不会匹配报文。	During executing create、merge、replace operation, the app group and the application must exist. 当执行create、merge、replace操作时，指定的应用或应用组必须存在。
The application does not exist, the rule does not match packets. 指定的应用不存在，该规则不会匹配报文。	During executing create、merge、replace operation, the application must exist. 当执行create、merge、replace操作时，指定的应用必须存在。
The app group does not exist, the rule does not match packets. 指定的应用组不存在，该规则不会匹配报文。	During executing create、merge、replace operation, the app group must exist. 当执行create、merge、replace操作时，指定的应用组必须存在。
The name is already used by another security policy rule. 规则名称已存在。	During executing create、merge、replace operation, the name of the new rule can't be exist. 当执行create、merge、replace操作时，新规则名称必须不存在。
Invalid rule name. 无效的规则名称。	During executing create、merge、replace operation, the name of the new rule must be valid. 当执行create、merge、replace操作时，规则名称必须有效。

## SecurityPolicies/IPv4SrcSecZone

Message	Explanation
Invalid name. 无效名称。	During executing create、merge、replace operation, the name must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of source seczone already reached. 源安全域个数超过上限。	During executing create、merge、replace operation, the number of source seczone must be under the maximum. 当执行create、merge、replace操作时，源安全域个数必须在限制内。
The source seczone is already existed in the rule. 源安全域已存在。	During executing create、merge、replace operation, the new source zone can't be existed. 当执行create、merge、replace操作时，源安全域不能存在。

## SecurityPolicies/IPv6SrcSecZone

Message	Explanation
Invalid name. 无效名称。	During executing create、merge、replace operation, the name must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of source seczone already reached. 源安全域个数超过上限。	During executing create、merge、replace operation, the number of source seczone must be under the maximum. 当执行create、merge、replace操作时，源安全域个数必须在限制内。
The source seczone is already existed in the rule. 源安全域已存在。	During executing create、merge、replace operation, the new source zone can't be existed. 当执行create、merge、replace操作时，源安全域不能存在。

## SecurityPolicies/IPv4DestSecZone

Message	Explanation
Invalid name. 无效名称。	During executing create、merge、replace operation, the name of must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of destination seczone already reached. 目的安全域个数超过上限。	During executing create、merge、replace operation, the number of destination seczone must be under the maximum. 当执行create、merge、replace操作时，目的安全域个数必须在限制内。
The destination seczone is already existed in the rule. 目的安全域已存在。	During executing create、merge、replace operation, the new destination zone can't be existed. 当执行create、merge、replace操作时，目的安全域不能存在。

## SecurityPolicies/IPv6DestSecZone

Message	Explanation
Invalid name. 无效名称。	During executing create、merge、replace operation, the name must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of destination seczone already reached. 目的安全域个数超过上限。	During executing create、merge、replace operation, the number of destination seczone must be under the maximum. 当执行create、merge、replace操作时，目的安全域个数必须在限制内。
The destination seczone is already existed in the rule. 目的安全域已存在。	During executing create、merge、replace operation, the new destination zone can't be existed. 当执行create、merge、replace操作时，目的安全域不能存在。

## SecurityPolicies/IPv4SrcAddr

Message	Explanation
Illegal source IP address object group type. 指定的源IP地址对象组类型不正确。	During executing create、merge、replace operation, the source IP address object group type must be legal. 当执行create、merge、replace操作时，指定的源IP地址对象组类型必须正确。
Invalid name. 无效名称。	During executing create、merge、replace operation, the name must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of source ip already reached. 源地址个数超过上限。	During executing create、merge、replace operation, the number of source ip address must be under the maximum. 当执行create、merge、replace操作时，源地址个数必须在限制内。

## SecurityPolicies/IPv6SrcAddr

Message	Explanation
Illegal source IP address object group type. 指定的源IP地址对象组类型不正确。	During executing create、merge、replace operation, the source IP address object group type must be legal. 当执行create、merge、replace操作时，指定的源IP地址对象组类型必须正确。
Invalid name. 无效名称。	During executing create、merge、replace operation, the name must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of source ip already reached. 源地址个数超过上限。	During executing create、merge、replace operation, the number of source ip address must be under the maximum. 当执行create、merge、replace操作时，源地址个数必须在限制内。

## SecurityPolicies/IPv4DestAddr

Message	Explanation
Illegal destination IP address object group type. 指定的目的IP地址对象组类型不正确。	During executing create、merge、replace operation, the destination IP address object group type must be legal. 当执行create、merge、replace操作时，指定的目的IP地址对象组类型必须正确。
Invalid name. 无效名称。	During executing create、merge、replace operation, the name must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of destination ip already reached. 目的地址个数超过上限。	During executing create、merge、replace operation, the number of destination ip address must be under the maximum. 当执行create、merge、replace操作时，目的地址个数必须在限制内。

## SecurityPolicies/IPv6DestAddr

Message	Explanation
Illegal destination IP address object group type. 指定的目的IP地址对象组类型不正确。	During executing create、merge、replace operation, the destination IP address object group type must be legal. 当执行create、merge、replace操作时，指定的目的IP地址对象组类型必须正确。
Invalid name. 无效名称。	During executing create、merge、replace operation, the name must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of destination ip already reached. 目的地址个数超过上限。	During executing create、merge、replace operation, the number of destination ip address must be under the maximum. 当执行create、merge、replace操作时，目的地址个数必须在限制内。

## SecurityPolicies/IPv4SrcMacAddr

Message	Explanation
Invalid name. 无效名称。	During executing create、merge、replace operation, the name must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of source MAC already reached. 源MAC地址组个数超过上限。	During executing create、merge、replace operation, the number of source MAC address must be under the maximum. 当执行create、merge、replace操作时，源MAC地址组个数必须在限制内。
Illegal source MAC address object group type. 指定的源MAC地址对象组类型不正确。	During executing create、merge、replace operation, the source MAC address object group type must be legal. 当执行create、merge、replace操作时，指定的源MAC地址对象组类型必须正确。

## SecurityPolicies/IPv4ServGrp

Message	Explanation
Illegal service object group type. 指定的服务对象组类型不正确。	During executing create、merge、replace operation, the service object object group type must be legal. 当执行create、merge、replace操作时，指定的服务对象组类型必须正确。
Invalid name. 无效名称。	During executing create、merge、replace operation, the name must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of service group already reached. 服务组个数超过上限。	During executing create、merge、replace operation, the number of service group must be under the maximum. 当执行create、merge、replace操作时，服务组个数必须在限制内。

# SecurityPolicies/IPv6ServGrp

Message	Explanation
Illegal service object group type. 指定的服务对象组类型不正确。	During executing create、merge、replace operation, the service object object group type must be legal. 当执行create、merge、replace操作时，指定的服务对象组类型必须正确。
Invalid name. 无效名称。	During executing create、merge、replace operation, the name must be valid. 当执行create、merge、replace操作时，名称必须有效。
Maximum number of service group already reached. 服务组个数超过上限。	During executing create、merge、replace operation, the number of service group must be under the maximum. 当执行create、merge、replace操作时，服务组个数必须在限制内。

# SecurityPolicies/IPv4App

Message	Explanation
Can not use 'invalid' or 'other' as app-group or application name. 应用组或应用名称不能为'invalid'或'other'。	During executing create、merge、replace operation, the app-group or application name can't be 'invalid' or 'other'. 当执行create、merge、replace操作时，应用组或应用名称不能为'invalid'或'other'。
Maximum number of service group already reached. 服务组个数超过上限。	During executing create、merge、replace operation, the number of service group must be under the maximum. 当执行create、merge、replace操作时，服务组个数必须在限制内。
Maximum number of application already reached. 应用个数超过上限。	During executing create、merge、replace operation, the number of application must be under the maximum. 当执行create、merge、replace操作时，应用个数必须在限制内。

# SecurityPolicies/IPv6App

Message	Explanation
Can not use 'invalid' or 'other' as app-group or application name. 应用组或应用名称不能为'invalid'或'other'。	During executing create、merge、replace operation, the app-group or application name can't be 'invalid' or 'other'. 当执行create、merge、replace操作时，应用组或应用名称不能为'invalid'或'other'。
Maximum number of service group already reached. 服务组个数超过上限。	During executing create、merge、replace operation, the number of service group must be under the maximum. 当执行create、merge、replace操作时，服务组个数必须在限制内。
Maximum number of application already reached. 应用个数超过上限。	During executing create、merge、replace operation, the number of application must be under the maximum. 当执行create、merge、replace操作时，应用个数必须在限制内。

## SecurityPolicies/IPv4AppGrp

Message	Explanation
Can not use 'invalid' or 'other' as app-group or application name. 应用组或应用名称不能为'invalid'或'other'。	During executing create、merge、replace operation, the app-group or application name can't be 'invalid' or 'other'. 当执行create、merge、replace操作时，应用组或应用名称不能为'invalid'或'other'。
Maximum number of application group already reached. 应用组个数超过上限。	During executing create、merge、replace operation, the number of application group must be under the maximum. 当执行create、merge、replace操作时，应用组个数必须在限制内。

## SecurityPolicies/IPv6AppGrp

Message	Explanation
Can not use 'invalid' or 'other' as app-group or application name. 应用组或应用名称不能为'invalid'或'other'。	During executing create、merge、replace operation, the app-group or application name can't be 'invalid' or 'other'. 当执行create、merge、replace操作时，应用组或应用名称不能为'invalid'或'other'。
Maximum number of application group already reached. 应用组个数超过上限。	During executing create、merge、replace operation, the number of application group must be under the maximum. 当执行create、merge、replace操作时，应用组个数必须在限制内。

## SecurityPolicies/IPv4User

Message	Explanation
Invalid username. 无效的用户名。	During executing create、merge、replace operation, the username must be valid. 当执行create、merge、replace操作时，用户名必须有效。
Maximum number of user already reached. 用户个数超过上限。	During executing create、merge、replace operation, the number of user must be under the maximum. 当执行create、merge、replace操作时，用户个数必须在限制内。

## SecurityPolicies/IPv6User

Message	Explanation
Invalid username. 无效的用户名。	During executing create、merge、replace operation, the username must be valid. 当执行create、merge、replace操作时，用户名必须有效。
Maximum number of user already reached. 用户个数超过上限。	During executing create、merge、replace operation, the number of user must be under the maximum. 当执行create、merge、replace操作时，用户个数必须在限制内。

## SecurityPolicies/IPv4UserGrp

Message	Explanation
Maximum number of user-group already reached. 用户组个数超过上限。	During executing create、merge、replace operation, the number of user-group must be under the maximum. 当执行create、merge、replace操作时，用户组个数必须在限制内。

## SecurityPolicies/IPv6UserGrp

Message	Explanation
Maximum number of user-group already reached. 用户组个数超过上限。	During executing create、merge、replace operation, the number of user-group must be under the maximum. 当执行create、merge、replace操作时，用户组个数必须在限制内。

## SecurityPolicies/AppOptimizedStatus

Message	Explanation
Failed to create the rule because the rule number exceeds the upper limit. 由于已经达到规则数上限，创建规则失败。	The number of rule must be under the maximum when create rules. 当创建规则时，规则个数必须在限制内。
The maximum number of rules has been reached. 由于已经达到规则数上限，创建规则失败。	The number of rule must be under the maximum when create rules. 当创建规则时，规则个数必须在限制内。
Failed to reference the protection action during the auto batch optimization operation. 策略批量调优过程中引用策略防护动作失败。	During the auto batch optimization operation, the protection action must be referenced successfully. 策略批量调优过程中，引用策略防护动作必须成功。
Auto batch optimization failed. 策略批量调优失败。	Auto batch optimization failed. 策略批量调优失败。

## SecurityPolicies/CommitCfgChange

Message	Explanation
The accelerate state of IPv4 or IPv6 is disable. IPv4或者IPv6的加速状态为不加速。	The accelerate state of IPv4 or IPv6 is disable. IPv4或者IPv6的加速状态为不加速。

## SecurityPolicies/MoveIPv4Rule

Message	Explanation
Failed to move the rule because the ID of the rule to be moved is equal to the target one. 由于指定规则和目标规则的编号相同，移动规则失败。	During the operation, the ID of the rule to be moved can't be equal to the target one. 当执行该操作时，指定规则编号不能和目标规则相同。

Failed to move the rule because the specified rule does not exist. 由于指定规则或目标规则不存在，移动规则失败。	During the operation, the specified rule must exist. 当执行该操作时，指定规则或目标规则必须存在。
--	--

## SecurityPolicies/MoveIPv6Rule

Message	Explanation
Failed to move the rule because the ID of the rule to be moved is equal to the target one. 由于指定规则和目标规则的编号相同，移动规则失败。	During the operation, the ID of the rule to be moved can't be equal to the target one. 当执行该操作时，指定规则编号不能和目标规则相同。
Failed to move the rule because the specified rule does not exist. 由于指定规则或目标规则不存在，移动规则失败。	During the operation, the specified rule must exist. 当执行该操作时，指定规则或目标规则必须存在。

## SecurityPolicies/SingleOptimized

Message	Explanation
Failed to create the rule because the rule number exceeds the upper limit. 由于已经达到规则数上限，创建规则失败。	During the operation, the current number of the rule must under the limit. 当执行该操作时，规则数必须在限制内。
The maximum number of rules has been reached. 由于已经达到规则数上限，创建规则失败。	During the operation, the current number of the rule must under the maximum. 当执行该操作时，规则数必须在限制内。
The name is already used by another security policy rule. 规则名称已存在。	During the operation, the name of the new rule can't be exist. 当执行该操作时，新规则名称必须不存在。
The policy has been optimized. 调优失败，此策略规则已调优，请刷新。	During the operation, the policy can't have been optimized already. 当执行该操作时，规则必须还未调优过。

# SecurityZone

## SecurityZone/Zones

This table contains the information about the security zone.

### XML structure

```
<SecurityZone>
  <Zones>
    <Zone>
      <Name></Name>
    </Zone>
  </Zones>
</SecurityZone>
```

### Table description

Item	Description
Feature name	SecurityZone
Table name	Zones
Table type	Multi-instance table
Row name	Zone
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remark
Name	Security zone name	Index	String. Length: 1 to 31 characters.	Case-insensitive and contains no midline( - ).

## SecurityZone/ZonePairs

This table contains the information about the security zone pair.

### XML structure

```
<SecurityZone>
  <ZonePairs>
    <ZonePair>
```

```

        <SrcZone></SrcZone>
        <DestZone></DestZone>
    </ZonePair>
</ZonePairs>
</SecurityZone>

```

## Table description

Item	Description
Feature name	SecurityZone
Table name	ZonePairs
Table type	Multi-instance table
Row name	ZonePair
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remark
SrcZone	Source security zone name	Index	String. Length: 1 to 31 characters.	Case-insensitive and contains no midline( - ).
DestZone	Destination security zone name	Index	String. Length: 1 to 31 characters.	Case-insensitive and contains no midline( - ).

## SecurityZone/Interfaces

The table contains the interface member information of security zone.

## XML structure

```

<SecurityZone>
  <Interfaces>
    <Interface>
      <ZoneName></ZoneName>
      <IfIndex></IfIndex>
      <VlanList></VlanList>
    </Interface>
  </Interfaces>
</SecurityZone>

```

## Table description

Item	Description
Feature name	SecurityZone
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remark
ZoneName	Security zone name	Index	String. Length: 1 to 31 characters.	Case-insensitive and contains no midline( - ).
IfIndex	Interface index	Index	Unsigned integer.	Applicable to only layer 2 and layer 3 interface.
VlanList	The VLANs that the interface belongs	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string must not end with a comma or hyphen, or include any whitespace characters.	N/A

## SecurityZone/VLANs

The table contains the VLAN interface information of the security zone.

## XML structure

```
<SecurityZone>
  <VLANs>
    <VLAN>
      <ZoneName></ZoneName>
      <VlanList></VlanList>
    </VLAN>
  </VLANs>
</SecurityZone>
```

## Table description

Item	Description
Feature name	SecurityZone
Table name	VLANs
Table type	Multi-instance table
Row name	VLAN
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remark
ZoneName	Security zone name	Index	String. Length: 1 to 31 characters.	Case-insensitive and contains no midline( - ).
VlanList	List of VLAN	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string must not end with a comma or hyphen, or include any whitespace characters.	N/A

# SecurityZone/ServicePaths

The table contains the service path member information of security zone.

## XML structure

```
<SecurityZone>
  <ServicePaths>
    <ServicePath>
      <ZoneName></ZoneName>
      <ServicePathID></ServicePathID>
      <Reverse></Reverse>
    </ServicePath>
  </ServicePaths>
</SecurityZone>
```

## Table description

Item	Description
Feature name	SecurityZone
Table name	ServicePaths
Table type	Multi-instance table
Row name	ServicePath
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remark
ZoneName	Security zone name	Index	String. Length: 1 to 31 characters.	Case-insensitive and contains no midline( - ).
ServicePathID	Service path ID	Index	Unsigned integer.	N/A
Reverse	Reverse tag	Index	Boolean: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>	N/A

# SecurityZone/VsipFilterSwitch

This table contains information about filtering traffic based on virtual service IP address.

## XML structure

```
<SecurityZone>
  <VsipFilterSwitch>
    <EnableVsipFilter></EnableVsipFilter>
  </VsipFilterSwitch>
</SecurityZone>
```

## Table description

Item	Description
Feature name	SecurityZone
Table name	VsipFilterSwitch
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
EnableVsipFilter	Whether to enable filtering based on virtual service IP address.	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enable the filtering feature.</li><li><b>false</b>—Disable the filtering feature (default).</li></ul>

# SecurityZone

## SecurityZone/Capabilities

This table contains the capabilities information of the security zone.

### XML structure

```
<SecurityZone>
  <Capabilities>
    <L3Interface></L3Interface>
    <L2Interface></L2Interface>
    <VLAN></VLAN>
    <IP></IP>
    <ServicePath></ServicePath>
  </Capabilities>
</SecurityZone>
```

### Table description

Item	Description
Feature name	SecurityZone
Table name	Capabilities
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remark
L3Interface	Whether layer 3 interface member is supported.	N/A	Boolean: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>	N/A
L2Interface	Whether layer 2 interface member is supported.	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b></li><li><b>false</b></li></ul>	N/A
VLAN	Whether VLAN member is supported.	N/A	Boolean: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remark
IP	Whether IP member is supported.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
ServicePath	Whether service path member is supported.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A

## SecurityZone/Zones

This table contains security zone information.

### XML structure

```

<SecurityZone>
  <Zones>
    <Zone>
      <Name></Name>
      <ID></ID>
    </Zone>
  </Zones>
</SecurityZone>

```

### Table description

Item	Description
Feature name	SecurityZone
Table name	Zones
Table type	Multi-instance table
Row name	Zone
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remark
Name	Security zone name	Index	String. Length: 1 to 31 characters.	Case-insensitive and contains no midline( - ).
ID	Security zone ID	N/A	Unsigned integer. Value range: 0 to 10100	N/A

# SecurityZone/ZonePairs

This table contains security zone pair information.

## XML structure

```
<SecurityZone>
  <ZonePairs>
    <ZonePair>
      <SrcZone></SrcZone>
      <DestZone></DestZone>
    </ZonePair>
  </ZonePairs>
</SecurityZone>
```

## Table description

Item	Description
Feature name	SecurityZone
Table name	ZonePairs
Table type	Multi-instance table
Row name	ZonePair
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remark
SrcZone	Source security zone name	Index	String. Length: 1 to 31 characters.	Case-insensitive and contains no midline( - ).
DestZone	Destination security zone name	Index	String. Length: 1 to 31 characters.	Case-insensitive and contains no midline( - ).

# SecurityZone/Interfaces

The table contains the interface member information of security zone.

## XML structure

```
<SecurityZone>
```

```

<Interfaces>
  <Interface>
    <ZoneName></ZoneName>
    <IfIndex></IfIndex>
    <VlanList></VlanList>
  </Interface>
</Interfaces>
</SecurityZone>

```

## Table description

Item	Description
Feature name	SecurityZone
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remark
ZoneName	Security zone name	Index	String. Length: 1 to 31 characters.	Case-insensitive and contains no midline( - ).
IfIndex	Interface index	Index	Unsigned integer.	Applicable to only layer 2 and layer 3 interface.
VlanList	The VLANs that the interface belongs	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string must not end with a comma or hyphen, or include any whitespace characters.	N/A

# SecurityZone/VLANs

The table contains the VLAN member information of the security zone.

## XML structure

```
<SecurityZone>
  <VLANs>
    <VLAN>
      <ZoneName></ZoneName>
      <VlanList></VlanList>
    </VLAN>
  </VLANs>
</SecurityZone>
```

## Table description

Item	Description
Feature name	SecurityZone
Table name	VLANs
Table type	Multi-instance table
Row name	VLAN
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remark
ZoneName	Security zone name	Index	String. Length: 1 to 31 characters.	Case-insensitive and contains no midline( - ).
VlanList	List of VLANs	Index	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string must not end with a comma or hyphen, or include any whitespace characters.	N/A

# SecurityZone/ServicePaths

The table contains the service path member information of security zone.

## XML structure

```
<SecurityZone>
  <ServicePaths>
    <ServicePath>
      <ZoneName></ZoneName>
      <ServicePathID></ServicePathID>
      <Reverse></Reverse>
    </ServicePath>
  </ServicePaths>
</SecurityZone>
```

## Table description

Item	Description
Feature name	SecurityZone
Table name	ServicePaths
Table type	Multi-instance table
Row name	ServicePath
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remark
ZoneName	Security zone name	Index	String. Length: 1 to 31 characters.	Case-insensitive and contains no midline( - ).
ServicePathID	Service path ID	Index	Unsigned integer.	N/A
Reverse	Reverse tag	Index	Boolean: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>	N/A

# SecurityZone/VsipFilterSwitch

This table contains information about filtering traffic based on virtual service IP address.

## XML structure

```
<SecurityZone>
  <VsipFilterSwitch>
    <EnableVsipFilter></EnableVsipFilter>
  </VsipFilterSwitch>
</SecurityZone>
```

## Table description

Item	Description
Feature name	SecurityZone
Table name	VsipFilterSwitch
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
EnableVsipFilter	Whether filtering based on virtual service IP address is enabled.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Enabled.</li><li>• <b>false</b>—Disabled.</li></ul>

# SRVCHN

## SRVCHN/Paths

This table contains service chain information.

### XML structure

```
<SRVCHN>
  <Paths>
    <Path>
      <PathID></PathID>
      <ACLNumber></ACLNumber>
      <ACLName></ACLName>
      <NextHop></NextHop>
      <PrevHop></PrevHop>
    </Path>
  </Paths>
</SRVCHN>
```

### Table description

Item	Description
Feature name	SRVCHN
Table name	Paths
Table type	Multi-instance table
Row name	Path
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PathID	Path ID of the service chain	Index	Unsigned integer. Value range: 1 to 8388606.	N/A
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999.	Choose the ACLNumber or ACLName column to specify an ACL to match locally generated packets. The two columns

Column name	Column description	Column type	Data type and restrictions	Remarks
				cannot be set together. Support for this column depends on the device model.
ACLName	ACL name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Choose the ACLNumber or ACLName column to specify an ACL to match locally generated packets. The two columns cannot be set together. Support for this column depends on the device model.
NextHop	IP address of the next service node	N/A	String, dotted decimal notation.	Default: 0.0.0.0. Example: 1.1.1.1.
PrevHop	IP address of the previous service node	N/A	String, dotted decimal notation.	Default: 0.0.0.0. Example: 1.1.1.1.

## SRVCHN/IfMatches

This table contains service chain policy information. Support for this table depends on the device model.

## XML structure

```

<SRVCHN>
  <IfMatches>
    <IfMatch>
      <PathID></PathID>
      <IfIndex></IfIndex>
      <ACLNumber></ACLNumber>
      <ACLName></ACLName>
    </IfMatch>
  </IfMatches>
</SRVCHN>

```

## Table description

Item	Description
Feature name	SRVCHN

Table name	IfMatches
Table type	Multi-instance table
Row name	IfMatch
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PathID	Path ID of the service chain	Index	Unsigned integer. Value range: 1 to 8388606.	The specified service chain must exist before you configure this table.
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported.
ACLNumber	ACL number	N/A	Unsigned integer Value range:2000 to 3999	Choose the ACLNumber or ACLName column to specify an ACL to match received IP packets. The two columns cannot be set together.
ACLName	ACL name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Choose the ACLNumber or ACLName column to specify an ACL to match received IP packets. The two columns cannot be set together.

## SRVCHN/Funcs

This table contains service chain service function information.

## XML structure

```

<SRVCHN>
  <Funcs>
    <Func>
      <PathID></PathID>
      <FuncID></FuncID>
      <LBTeamName></LBTeamName>
      <SrvList></SrvList>
    </Func>
  </Funcs>
</SRVCHN>

```

## Table description

Item	Description
Feature name	SRVCHN
Table name	Funcs
Table type	Multi-instance table
Row name	Func
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PathID	Path ID of the service chain	Index	Unsigned integer. Value range: 1 to 8388606.	The specified service chain must exist before you configure this table.
FuncID	Service node ID	Index	Unsigned integer. Value range: 1 to 255.	If the device does not support load sharing teams, the value for this column can only be 1.
LBTeamName	Load sharing team name	N/A	String, case-sensitive. Length: 1 to 63 characters.	Support for this column depends on the device model.
SrvList	List of services	N/A	String, case-insensitive. Length: 1 to 255 characters.	Different service combinations are separated by spaces. The combinations are matched by the configuration order defined in the SrvList column for inter-device packets.  For example: ACG DPI FW IPS IPsec LB NAT.

    </InterfaceStatistic>
  </InterfaceStatistics>
</ConnectionLimit>
</Session>

```

## Table description

Item	Description
Feature name	Session
Table name	InterfaceStatistics
Table type	Multi-instance table
Row name	InterfaceStatistic
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
Clear	Resets counters.	N/A	This column must be empty.	N/A

# Session/ConnectionLimit/ClearAllInterfaceStatistics

Clear all connection limit statistics on an interface.

## XML structure

```
<Session>
  <ConnectionLimit>
    <ClearAllInterfaceStatistics>
      <InterfaceStatistic>
        <IfIndex></IfIndex>
        <Clear></Clear>
      </InterfaceStatistic>
    </ClearAllInterfaceStatistics>
  </ConnectionLimit>
</Session>
```

# Session

## Session/Ipv4Persistent

This table contains IPv4 persistent sessions' information. The table supports only one persistent configuration. As a best practice, use the Ipv4Persistence table for IPv4 persistent configuration.

### XML structure

```
<Session>
  <Ipv4Persistent>
    <ACLNumber></ACLNumber>
    <AgingTime></AgingTime>
  </Ipv4Persistent>
</Session>
```

### Table description

Item	Description
Feature name	Session
Table name	Ipv4Persistent
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ACLNumber	IPv4 ACL number	N/A	Unsigned integer. Value range: 2000 to 3999.	N/A
AgingTime	Aging time for IPv4 persistent sessions (hours).	N/A	Unsigned integer. Value range: 0 to 360. Default: 24.	0 indicates never ageing. This column can only be configured when <i>ACLNumber</i> is also configured.

## Session/Ipv6Persistent

This table contains IPv6 persistent sessions' information. The table supports only one persistent configuration. As a best practice, use the Ipv6Persistence table for IPv6 persistent configuration.

## XML structures

```
<Session>
  <Ipv6Persistent>
    <ACLNumber></ACLNumber>
    <AgingTime></AgingTime>
  </Ipv6Persistent>
</Session>
```

## Table description

Item	Description

## Session/L4StateAgingTime

This table contains the aging time for the sessions in transport layer protocol states.

## XML structure

```

<Session>
  <L4StateAgingTime>
    <AgingTime>
      <StateID></StateID>
      <TimeValue></TimeValue>
    </AgingTime>
  </L4StateAgingTime>
</Session>

```

## Table description

Item	Description
Feature name	Session
Table name	L4StateAgingTime
Table type	Multi-instance table
Row name	AgingTime
Restrictions	None
Support for row creation and deletion	No

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StateID	Transport layer protocol state ID.	Index	Unsigned integer. Value range: 0 to 20. <ul style="list-style-type: none"> <li>• <b>0—SYN-SENT and SYN-RCV (TCP)</b></li> <li>• <b>1—ESTABLISHED (TCP).</b></li> <li>• <b>2—FIN-WAIT (TCP).</b></li> <li>• <b>3—UDP-OPEN.</b></li> <li>• <b>4—UDP-READY.</b></li> <li>• <b>5—ICMP -REQUEST.</b></li> <li>• <b>6—ICMP -REPLY.</b></li> <li>• <b>7—RAWIP-OPEN.</b></li> <li>• <b>8—RAWIP-READY.</b></li> <li>• <b>9—UDPLITE-OPNE.</b></li> <li>• <b>10—UDPLITE-READY.</b></li> <li>• <b>11—DCCP-REQUEST.</b></li> <li>• <b>12—DCCP-EST.</b></li> <li>• <b>13—DCCP-CLOSEREQ.</b></li> <li>• <b>14—SCTP-INIT.</b></li> <li>• <b>15—SCTP-EST.</b></li> <li>• <b>16—SCTP-SHUTDOWN.</b></li> <li>• <b>17—ICMPV6-REQUEST.</b></li> <li>• <b>18—ICMPV6-REPLAY.</b></li> <li>• <b>19—TCP-TIME-WAIT.</b></li> <li>• <b>20—TCP-CLOSE.</b></li> </ul>	The aging time can be configured if is the protocol ID is 0 to 8, 19, or 20. The aging time for other protocols uses the default value.
TimeValue	Aging time (seconds).	N/A	Unsigned integer. Value range: 5 to 100000 seconds. Default aging time for sessions in different protocol states is as follows: <ul style="list-style-type: none"> <li>• <b>0—SYN-SENT or SYN-RCV (TCP) : 30</b></li> <li>• <b>1—ESTABLISHED (TCP) : 3600</b></li> <li>• <b>2—FIN-WAIT (TCP): 30</b></li> <li>• <b>3—UDP -OPEN : 30</b></li> <li>• <b>4—UDP -READY : 60</b></li> <li>• <b>5—ICMP -REQUEST : 60</b></li> <li>• <b>6—ICMP -REPLY : 30</b></li> <li>• <b>7—RAWIP-OPEN : 30</b></li> <li>• <b>8—RAWIP-READY : 60</b></li> <li>• <b>9—UDPLITE-OPNE : 30</b></li> <li>• <b>10—UDPLITE-READY : 60</b></li> <li>• <b>11—DCCP-REQUEST : 30</b></li> <li>• <b>12—DCCP-EST : 3600</b></li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>13—DCCP-CLOSEREQ : 30</li> <li>14—SCTP-INIT : 30</li> <li>15—SCTP-EST : 3600</li> <li>16—SCTP-SHUTDOWN: 30</li> <li>17—ICMPV6-REQUEST :60</li> <li>18—ICMPV6-REPLAY : 30</li> <li>19—TCP-TIME-WAIT :2</li> <li>20—TCP-CLOSE: 2</li> </ul>	

## Session/AppAgingTime

This table contains the aging time for the sessions of application layer protocols.

### XML structure

```

<Session>
  <AppAgingTime>
    <AgingTime>
      <AppID></AppID>
      <TimeValue></TimeValue>
    </AgingTime>
  </AppAgingTime>
</Session>

```

Value range: 0 to 16. <ul style="list-style-type: none"> <li>• 0—DNS.</li> <li>• 1—FTP.</li> <li>• 2—GTP.</li> <li>• 3—H.225.</li> <li>• 4—H.245.</li> <li>• 5—RAS.</li> <li>• 6—RTSP.</li> <li>• 7—SIP.</li> <li>• 8—TFTP.</li> <li>• 9—ILS.</li> <li>• 10—MGCP.</li> <li>• 11—NBT.</li> <li>• 12—PPTP.</li> <li>• 13—RSH.</li> <li>• 14—SCCP.</li> <li>• 15—SQLNET.</li> <li>• 16—XDMCP.</li> </ul>	
TimeValue	Aging time ( seconds).	N/A	Unsigned integer. Value range and default aging time for sessions of application layer protocols are as follows: Value range: <ul style="list-style-type: none"> <li>• 0—DNS: 1 to 100000 seconds.</li> <li>• 1-16—FTP-XDMCP: 5 to 100000 seconds</li> </ul> Default aging time: <ul style="list-style-type: none"> <li>• 0—DNS: 1.</li> <li>• 1—FTP: 3600.</li> <li>• 2—GTP: 60.</li> <li>• 3—H.225: 3600.</li> <li>• 4—H.245: 3600.</li> <li>• 5—RAS: 300.</li> <li>• 6—RTSP: 3600.</li> <li>• 7—SIP: 300.</li> <li>• 8—TFTP: 60.</li> <li>• 9—ILS: 3600.</li> <li>• 10—MGCP: 60.</li> <li>• 11—NBT: 3600.</li> <li>• 12—PPTP: 3600.</li> <li>• 13—RSH: 60.</li> <li>• 14—SCCP: 3600.</li> <li>• 15—SQLNET: 600.</li> <li>• 16—XDMCP: 3600.</li> </ul>	N/A

## Session/ApplicationAgingTime

This table contains the aging time for the sessions of application layer protocols.

## XML structure

```
<Session>
  <ApplicationAgingTime>
    <AgingTime>
      <AppName></AppName>
      <TimeValue></TimeValue>
    </AgingTime>
  </ApplicationAgingTime>
</Session>
```

## Table description

Item	Description
Feature name	Session
Table name	ApplicationAgingTime
Table type	Multi-instance table
Row name	ApplicationAgingTime
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Application layer protocol name.	Index	String, case-insensitive. Length: 1 to 63 characters.	This value can be pre-defined or user-defined application layer protocol name.  Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other".  The application layer protocol name must be standard and can be identified by the equipment.
TimeValue	Aging time ( seconds).	N/A	<ul style="list-style-type: none"><li>• Unsigned integer.</li><li>• Value range and default aging time for sessions of application layer protocols are as follows:</li><li>• Value range:</li><li>• 1 to 100000 seconds.</li><li>• Default aging time of pre-defined applications:</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>• DNS: 1.</li> <li>• FTP: 3600.</li> <li>• GTP-CONTROL:60.</li> <li>• GTP-USER:60.</li> <li>• GPRSDATA:60.</li> <li>• GPRSSIG:60.</li> <li>• H225: 3600.</li> <li>• H245: 3600.</li> <li>• RAS: 300.</li> <li>• RTSP: 3600.</li> <li>• SIP: 300.</li> <li>• TFTP: 60.</li> <li>• ILS: 3600.</li> <li>• MGCP-CALLAGENT:60.</li> <li>• MGCP-GATEWAY:60.</li> <li>• PPTP: 3600.</li> <li>• RSH: 60.</li> <li>• SCCP: 3600.</li> <li>• SQLNET: 600.</li> <li>• XDMCP: 3600.</li> <li>• BOOTPC:120.</li> <li>• BOOTPS:120.</li> <li>• FTPDATA:240.</li> <li>• HTTPS:600.</li> <li>• L2TP:120.</li> <li>• NETBIOS-DGM:3600</li> <li>• NETBIOS-NS:3600</li> <li>• NETBIOS-SSN:3600.</li> <li>• NTP:120.</li> <li>• QQ:120.</li> <li>• RIP:120.</li> <li>• SNMP:120.</li> <li>• SNMPTRAP:120.</li> <li>• STUN:600.</li> <li>• SYSLOG:120.</li> <li>• TACACSDS:120.</li> <li>• WHO:120.</li> <li>• Default aging time of other pre-defined and user-defined applications: 1200s.Default aging time of other pre-defined and user-defined applications: 1200s.</li> </ul>	

## Session/LogThreshold

This table contains threshold for session logging.

## XML structure

```
<Session>
  <LogThreshold>
    <TimeThreshold></TimeThreshold>
    <FlowThreshold>
      <Type></Type>
      <Threshold></Threshold>
    </FlowThreshold>
  </LogThreshold>
</Session>
```

## Table description

Item	Description
Feature name	Session
Table name	LogThreshold
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TimeThreshold	Time-based session logging threshold (minutes).	N/A	Unsigned integer. Value range: 10 to 120.	The value must be integer times of 10.
FlowThreshold	Traffic-based session logging threshold ( minutes).	Data structure.	Members include: <ul style="list-style-type: none"><li>Type.</li><li>Threshold.</li></ul>	
Type	Type of traffic-based session logging.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Packet-based threshold for traffic-based logging.</li><li>1—Byte-based threshold for traffic-based logging.</li></ul>	If you set both the byte-based and packet-based thresholds, the last configuration takes effect.
Threshold	Threshold for traffic-based logging.	N/A	Unsigned integer. Value range: 1 to 100000.	If type is 0, the unit is mega-packets. If type is 1, the unit is mega-bytes.

# Session/Ipv4LogOnInterfaces

This table contains interfaces on which IPv4 session logging is enabled.

## XML structure

```
<Session>
  <Ipv4LogOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <ACLNumber></ACLNumber>
    </Interface>
  </Ipv4LogOnInterfaces>
</Session>
```

## Table description

Item	Description
Feature name	Session
Table name	Ipv4LogOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
Direction	Direction of the interface where session logging is enabled.	Index	Enumeration: <ul style="list-style-type: none"><li>0—Inbound.</li><li>1—Outbound.</li></ul>	N/A
ACLNumber	IPv4 ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999.	If an ACL is specified, this configuration enables session logging for sessions that match the permit statements in the ACL.

Column name	Column description	Column type	Data type and restrictions	Remarks
				<p>If no ACL is specified, this configuration enables session logging for all IPv4 sessions on the interface.</p> <p>This column can be null.</p>

## Session/Ipv6LogOnInterfaces

This table contains interfaces to which IPv6 session logging is enabled.

### XML structure

```

<Session>
  <Ipv6LogOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <ACLNumber></ACLNumber>
    </Interface>
  </Ipv6LogOnInterfaces>
</Session>

```

### Table description

Item	Description
Feature name	Session
Table name	Ipv6LogOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	<p>This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC,</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
				FCB and encrypt interface.
Direction	Direction of the interface where session logging is enabled.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Inbound.</li> <li>1—Outbound.</li> </ul>	N/A
ACLNumber	IPv6 ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999.	If an ACL is specified, this configuration enables session logging for sessions that match the permit statements in the ACL. If no ACL is specified, this configuration enables session logging for all IPv6 sessions on the interface.  This column can be null.

## Session/HotBackup

This table contains session hot backuping configurations.

### XML structure

```

<Session>
  <HotBackup>
    <EnableHotBackup></EnableHotBackup>
  </HotBackup>
</Session>

```

### Table description

Item	Description
Feature name	Session
Table name	HotBackup
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EnableHotBackup	Whether enable hot backup for session tables.	N/A	Boolean: <ul style="list-style-type: none"><li>true</li><li>false (default).</li></ul>	N/A

## Session/ProtocolHotBackup

This table contains protocols which need hot backuping.

## XML structure

```
<Session>
  <ProtocolHotBackup>
    <ProtocolInfo>
      <ProtocolID></ProtocolID>
      <EnableBackup></EnableBackup>
    </ProtocolInfo>
  </ProtocolHotBackup>
</Session>
```

## Table description

Item	Description
Feature name	Session
Table name	ProtocolHotBackup
Table type	Multi-instance table
Row name	ProtocolInfo
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProtocolID	ProtocolID.	Index	Enumeration: <ul style="list-style-type: none"><li>1—DNS.</li><li>2—HTTP.</li></ul>	Default, sessions of these protocols are not synchronized.
EnableBackup	Whether enable protocol backup.	N/A	Boolean: <ul style="list-style-type: none"><li>true—YES</li><li>false—NO(default).</li></ul>	N/A

# Session/TopStatistics/Switch

This table contains session top statistics configuration of switch.

## XML structure

```
<Session>
  <TopStatistics>
    <Switch>
      <Enable></Enable>
    </Switch>
  </TopStatistics>
</Session>
```

## Table description

Item	Description
Feature name	Session
Table name	Switch
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether enable session top statistics	N/A	Boolean: <ul style="list-style-type: none"><li>true—YES</li><li>false—NO(default).</li></ul>	N/A

# Session/TrafficLogFlowBegin

This table contains traffic log flow begin configuration.

## XML structure

```
<Session>
  <TrafficLogFlowBegin>
    <OutputCreateLog></OutputCreateLog>
  </TrafficLogFlowBegin>
```

</Session>

## Table description

Item	Description
Feature name	Session
Table name	TrafficLogFlowBegin
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
OutputCreate Log	Whether enable traffic logging.	N/A	Boolean: <ul style="list-style-type: none"><li>true—YES</li><li>false—NO(default).</li></ul>	N/A

## Session/TrafficLogThreshold

This table contains threshold for traffic log threshold logging.

## XML structure

```
<Session>
  <TrafficLogThreshold>
    <TimeThreshold></TimeThreshold>
    <FlowThreshold>
      <Type></Type>
      <Threshold></Threshold>
    </FlowThreshold>
  </TrafficLogThreshold>
</Session>
```

## Table description

Item	Description
Feature name	Session
Table name	TrafficLogThreshold
Table type	Single-instance table
Row name	None

Restrictions	None
--------------	------

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TimeThreshold	Time-based traffic logging threshold (minutes).	N/A	Unsigned integer. Value range: 10 to 120.	The value must be integer times of 10.
FlowThreshold	Traffic-based traffic logging threshold ( minutes).	Data structure.	Members include: <ul style="list-style-type: none"> <li>Type.</li> <li>Threshold.</li> </ul>	N/A
Type	Type of traffic-based Traffic logging.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Packet-based threshold for traffic-based logging.</li> <li>1—Byte-based threshold for traffic-based logging.</li> </ul>	If you set both the byte-based and packet-based thresholds, the last configuration takes effect.
Threshold	Threshold for traffic-based logging.	N/A	Unsigned integer. Value range: 1 to 1000.	If type is 0, the unit is mega-packets. If type is 1, the unit is mega-bytes.

## Session/Ipv4LogOnInterZones

This table contains session traffic log enable ipv4 configuration.

### XML structure

```

<Session>
  <Ipv4LogOnInterZones>
    <InterZone>
      <SourceZone></SourceZone>
      <DestinationZone></DestinationZone>
      <EnableLog></EnableLog>
      <Mode></Mode>
      <ACLNumber></ACLNumber>

## Session/ConnectionLimit/Ipv6PolicyAppliedGlobally

This table contains IPv6 connection limit policy applied globally.

## XML structure

```
<Session>
  <ConnectionLimit>
    <Ipv6PolicyAppliedGlobally>
      <PolicyNumber></PolicyNumber>
    </Ipv6PolicyAppliedGlobally>
  </ConnectionLimit>
</Session>
```

## Table description

Item	Description
Feature name	Session
Table name	Ipv6PolicyAppliedGlobally
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyNumber	IPv6 connection limit policy number	Index	Unsigned integer. Value range: 1 to 32.	N/A

# Session/ConnectionLimit/Ipv4PolicyOnInterfaces

This table contains interfaces to which IPv4 connection limit policy is applied.

## XML structure

```
<Session>
  <ConnectionLimit>
    <Ipv4PolicyOnInterfaces>
      <Interface>
        <IfIndex></IfIndex>
        <PolicyNumber></PolicyNumber>
      </Interface>
    </Ipv4PolicyOnInterfaces>
  </ConnectionLimit>
</Session>
```

## Table description

Item	Description
Feature name	Session
Table name	Ipv4PolicyOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
PolicyNumber	IPv4 connection limit policy number	N/A	Unsigned integer. Value range: 1 to 32.	N/A

# Session/ConnectionLimit/Ipv6PolicyOnInterfaces

This table contains interfaces to which IPv6 connection limit policy is applied.

## XML structure

```
<Session>
  <ConnectionLimit>
    <Ipv6PolicyOnInterfaces>
      <Interface>
        <IfIndex></IfIndex>
        <PolicyNumber></PolicyNumber>
      </Interface>
    </Ipv6PolicyOnInterfaces>
  </ConnectionLimit>
</Session>
```

## Table description

Item	Description

# Session

## Session/Ipv4Persistent

This table contains IPv4 persistent sessions' information. The table supports only one persistent configuration. As a best practice, use the Ipv4Persistence table for IPv4 persistent configuration.

### XML structure

```
<Session>
  <Ipv4Persistent>
    <ACLNumber></ACLNumber>
    <AgingTime></AgingTime>
  </Ipv4Persistent>
</Session>
```

### Table description

Item	Description
Feature name	Session
Table name	Ipv4Persistent
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ACLNumber	IPv4 ACL number	N/A	Unsigned integer. Value range: 2000 to 3999.	N/A
AgingTime	Aging time for IPv4 persistent sessions (hours).	N/A	Unsigned integer. Value range: 0 to 360. Default: 24.	0 indicates never aging. This column can only be configured when <i>ACLNumber</i> is also configured.

## Session/Ipv6Persistent

This table contains IPv6 persistent sessions' information. The table supports only one persistent configuration. As a best practice, use the Ipv6Persistence table for IPv6 persistent configuration.

## XML structures

```
<Session>
  <Ipv6Persistent>
    <ACLNumber></ACLNumber>
    <AgingTime></AgingTime>
  </Ipv6Persistent>
</Session>
```

## Table description

Item	Description
Feature name	Session
Table name	Ipv6Persistent
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ACLNumber	IPv6 ACL number	N/A	Unsigned integer. Value range: 2000 to 3999.	N/A
AgingTime	Aging time for IPv6 persistent sessions (hours).	N/A	Unsigned integer. Value range: 0 to 360. Default: 24.	0 indicates never aging. This column can only be configured when <i>ACLNumber</i> is also configured.

## Session/Ipv4Persistence

This table contains IPv4 persistent sessions' information.

## XML structure

```
<Session>
  <Ipv4Persistence>
    <Persistence>
      <ACLNumber></ACLNumber>
      <AgingTime></AgingTime>
    </Persistence>
  </Ipv4Persistence>
</Session>
```

</Session>

## Table description

Item	Description
Feature name	Session
Table name	Ipv4Persistence
Table type	Multi-instance table
Row name	Persistence
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ACLNumber	IPv4 ACL number	Index	Unsigned integer. Value range: 2000 to 3999.	N/A
AgingTime	Aging time for IPv4 persistent sessions, in hours	N/A	Unsigned integer. Value range: 0 to 360. Default: 24.	0 indicates never aging. This column can be configured only when <i>ACLNumber</i> is configured.

## Session/Ipv6Persistence

This table contains IPv6 persistent sessions' information.

## XML structures

```
<Session>
  <Ipv6Persistence>
    <Persistence>
      <ACLNumber></ACLNumber>
      <AgingTime></AgingTime>
    </Persistence>
  </Ipv6Persistence>
</Session>
```

## Table description

Item	Description
Feature name	Session
Table name	Ipv6Persistence

Table type	Multi-instance table
Row name	Persistence
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ACLNumber	IPv6 ACL number	Index	Unsigned integer. Value range: 2000 to 3999.	N/A
AgingTime	Aging time for IPv6 persistent sessions, in hours	N/A	Unsigned integer. Value range: 0 to 360. Default: 24.	0 indicates never aging. This column can be configured only when <i>ACLNumber</i> is configured.

## Session/L4StateAgingTime

This table contains the aging time for the sessions in transport layer protocol states.

## XML structure

```

<Session>
  <L4StateAgingTime>
    <AgingTime>
      <StateID></StateID>
      <StateName></StateName>
      <TimeValue></TimeValue>
    </AgingTime>
  </L4StateAgingTime>
</Session>

```

## Table description

Item	Description
Feature name	Session
Table name	L4StateAgingTime
Table type	Multi-instance table
Row name	AgingTime
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StateID	Transport layer protocol state ID.	Index	Unsigned integer. Value range: 0 to 20. <ul style="list-style-type: none"> <li>• <b>0—SYN-SENT and SYN-RCV (TCP)</b></li> <li>• <b>1—ESTABLISHED (TCP).</b></li> <li>• <b>2—FIN-WAIT (TCP).</b></li> <li>• <b>3—UDP-OPEN.</b></li> <li>• <b>4—UDP-READY.</b></li> <li>• <b>5—ICMP -REQUEST.</b></li> <li>• <b>6—ICMP -REPLY.</b></li> <li>• <b>7—RAWIP-OPEN.</b></li> <li>• <b>8—RAWIP-READY.</b></li> <li>• <b>9—UDPLITE-OPNE.</b></li> <li>• <b>10—UDPLITE-READY.</b></li> <li>• <b>11—DCCP-REQUEST.</b></li> <li>• <b>12—DCCP-EST.</b></li> <li>• <b>13—DCCP-CLOSEREQ.</b></li> <li>• <b>14—SCTP-INIT.</b></li> <li>• <b>15—SCTP-EST.</b></li> <li>• <b>16—SCTP-SHUTDOWN.</b></li> <li>• <b>17—ICMPV6-REQUEST.</b></li> <li>• <b>18—ICMPV6-REPLAY.</b></li> <li>• <b>19—TCP-TIME-WAIT.</b></li> <li>• <b>20—TCP-CLOSE.</b></li> </ul>	The aging time can be configured if is the protocol ID is 0 to 8, 19, or 20. The aging time for other protocols uses the default value.
StateName	Transport layer protocol state name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TimeValue	Aging time (seconds).	N/A	Unsigned integer. Value range: 5 to 100000 seconds. Default aging time for sessions in different protocol states is as follows: <ul style="list-style-type: none"> <li>• <b>0—SYN-SENT or SYN-RCV (TCP) : 30</b></li> <li>• <b>1—ESTABLISHED (TCP) : 3600</b></li> <li>• <b>2—FIN-WAIT (TCP): 30</b></li> <li>• <b>3—UDP -OPEN : 30</b></li> <li>• <b>4—UDP -READY : 60</b></li> <li>• <b>5—ICMP -REQUEST : 60</b></li> <li>• <b>6—ICMP -REPLY : 30</b></li> <li>• <b>7—RAWIP-OPEN : 30</b></li> <li>• <b>8—RAWIP-READY : 60</b></li> <li>• <b>9—UDPLITE-OPNE : 30</b></li> <li>• <b>10—UDPLITE-READY : 60</b></li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>• 11—DCCP-REQUEST : 30</li> <li>• 12—DCCP-EST : 3600</li> <li>• 13—DCCP-CLOSEREQ : 30</li> <li>• 14—SCTP-INIT : 30</li> <li>• 15—SCTP-EST : 3600</li> <li>• 16—SCTP-SHUTDOWN: 30</li> <li>• 17—ICMPV6-REQUEST :60</li> <li>• 18—ICMPV6-REPLAY : 30</li> <li>• 19—TCP-TIME-WAIT :2</li> <li>• 20—TCP-CLOSE : 2</li> </ul>	

## Session/AppAgingTime

This table contains the aging time for the sessions of application layer protocols.

### XML structure

```

<Session>
  <AppAgingTime>
    <AgingTime>
      <AppID></AppID>
      <AppName></AppName>
      <TimeValue></TimeValue>
    </AgingTime>
  </AppAgingTime>
</Session>

```

### Table description

Item	Description
Feature name	Session
Table name	AppAgingTime
Table type	Multi-instance table
Row name	AgingTime
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppID	Application layer protocol ID.	Index	Unsigned integer. Value range: 0 to 16. <ul style="list-style-type: none"> <li>• 0—DNS.</li> <li>• 1—FTP.</li> <li>• 2—GTP.</li> <li>• 3—H.225.</li> <li>• 4—H.245.</li> <li>• 5—RAS.</li> <li>• 6—RTSP.</li> <li>• 7—SIP.</li> <li>• 8—TFTP.</li> <li>• 9—ILS.</li> <li>• 10—MGCP.</li> <li>• 11—NBT.</li> <li>• 12—PPTP.</li> <li>• 13—RSH.</li> <li>• 14—SCCP.</li> <li>• 15—SQLNET.</li> <li>• 16—XDMCP.</li> </ul>	N/A
AppName	Application layer protocol name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TimeValue	Aging time (seconds).	N/A	Unsigned integer. Value range and default aging time for sessions of application layer protocols are as follows: Value range: <ul style="list-style-type: none"> <li>• 0—DNS: 1 to 100000 seconds.</li> <li>• 1-16—FTP-XDMCP: 5 to 100000 seconds</li> </ul> Default aging time: <ul style="list-style-type: none"> <li>• 0—DNS: 1.</li> <li>• 1—FTP: 3600.</li> <li>• 2—GTP: 60.</li> <li>• 3—H.225: 3600.</li> <li>• 4—H.245: 3600.</li> <li>• 5—RAS: 300.</li> <li>• 6—RTSP: 3600.</li> <li>• 7—SIP: 300.</li> <li>• 8—TFTP: 60.</li> <li>• 9—ILS: 3600.</li> <li>• 10—MGCP: 60.</li> <li>• 11—NBT: 3600.</li> <li>• 12—PPTP: 3600.</li> <li>• 13—RSH: 60.</li> <li>• 14—SCCP: 3600.</li> </ul>	N/A

## Session/ApplicationAgingTime

This table contains the aging time for the sessions of application layer protocols.

### XML structure

```

<Session>
  <ApplicationAgingTime>
    <AgingTime>
      <AppName></AppName>
      <AppID></AppID>
      <TimeValue></TimeValue>
    </AgingTime>
  </ApplicationAgingTime>
</Session>

```

### Table description

Item	Description
Feature name	Session
Table name	ApplicationAgingTime
Table type	Multi-instance table
Row name	ApplicationAgingTime
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Application layer protocol name.	Index	String, case-insensitive. Length: 1 to 63 characters.	<p>This value can be pre-defined or user-defined application layer protocol name.</p> <p>Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other".</p> <p>The application layer</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
				protocol name must be standard and can be identified by the equipment.
AppID	Application layer protocol ID.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$	N/A
TimeValue	Aging time ( seconds).	N/A	Unsigned integer. Value range and default aging time for sessions of application layer protocols are as follows: Value range: 1 to 100000 seconds. Default aging time of pre-defined applications: <ul style="list-style-type: none"> <li>• DNS: 1.</li> <li>• FTP: 3600.</li> <li>• GTP-CONTROL:60.</li> <li>• GTP-USER:60.</li> <li>• GPRSDATA:60.</li> <li>• GPRSSIG:60.</li> <li>• H225: 3600.</li> <li>• H245: 3600.</li> <li>• RAS: 300.</li> <li>• RTSP: 3600.</li> <li>• SIP: 300.</li> <li>• TFTP: 60.</li> <li>• ILS: 3600.</li> <li>• MGCP-CALLAGENT:60.</li> <li>• MGCP-GATEWAY:60.</li> <li>• PPTP: 3600.</li> <li>• RSH: 60.</li> <li>• SCCP: 3600.</li> <li>• SQLNET: 600.</li> <li>• XDMCP: 3600.</li> <li>• BOOTPC:120.</li> <li>• BOOTPS:120.</li> <li>• FTPDATA:240.</li> <li>• HTTPS:600.</li> <li>• L2TP:120.</li> <li>• NETBIOS-DGM:3600</li> <li>• NETBIOS-NS:3600</li> <li>• NETBIOS-SSN:3600.</li> <li>• NTP:120.</li> <li>• QQ:120.</li> <li>• RIP:120.</li> <li>• SNMP:120.</li> <li>• SNMPTRAP:120.</li> <li>• STUN:600.</li> <li>• SYSLOG:120.</li> <li>• TACACSDS:120.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>WHO:120.</li> </ul> Default aging time of other pre-defined and user-defined applications: 1200s.	

## Session/LogThreshold

This table contains threshold for session logging.

### XML structure

```

<Session>
  <LogThreshold>
    <TimeThreshold></TimeThreshold>
    <FlowThreshold>
      <Type></Type>
      <Threshold></Threshold>
    </FlowThreshold>
  </LogThreshold>
</Session>

```

### Table description

Item	Description
Feature name	Session
Table name	LogThreshold
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TimeThreshold	Time-based session logging threshold (minutes).	N/A	Unsigned integer. Value range: 10 to 120.	The value must be integer times of 10.
FlowThreshold	Traffic-based session logging threshold ( minutes).	Data structure.	Members include: <ul style="list-style-type: none"> <li>Type.</li> <li>Threshold.</li> </ul>	
Type	Type of traffic-based	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Packet-based</li> </ul>	If you set both the byte-based and

Column name	Column description	Column type	Data type and restrictions	Remarks
	session logging.		threshold for traffic-based logging. <ul style="list-style-type: none"> <li>1—Byte-based threshold for traffic-based logging.</li> </ul>	packet-based thresholds, the last configuration takes effect.
Threshold	Threshold for traffic-based logging.	N/A	Unsigned integer. Value range: 1 to 100000.	If type is 0, the unit is mega-packets. If type is 1, the unit is mega-bytes.

## Session/Ipv4LogOnInterfaces

This table contains interfaces on which IPv4 session logging is enabled.

### XML structure

```

<Session>
  <Ipv4LogOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <ACLNumber></ACLNumber>
    </Interface>
  </Ipv4LogOnInterfaces>
</Session>

```

### Table description

Item	Description
Feature name	Session
Table name	Ipv4LogOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt

Column name	Column description	Column type	Data type and restrictions	Remarks
				interface.
Direction	Direction of the interface where session logging is enabled.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Inbound.</li> <li>1—Outbound.</li> </ul>	N/A
ACLNumber	IPv4 ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999.	If an ACL is specified, this configuration enables session logging for sessions that match the permit statements in the ACL. If no ACL is specified, this configuration enables session logging for all IPv4 sessions on the interface.  This column can be null.

## Session/Ipv6LogOnInterfaces

This table contains interfaces to which IPv6 session logging is enabled.

### XML structure

```

<Session>
  <Ipv6LogOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <ACLNumber></ACLNumber>
    </Interface>
  </Ipv6LogOnInterfaces>
</Session>

```

### Table description

Item	Description
Feature name	Session
Table name	Ipv6LogOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
Direction	Direction of the interface where session logging is enabled.	Index	Enumeration: <ul style="list-style-type: none"><li>0—Inbound.</li><li>1—Outbound.</li></ul>	N/A
ACLNumber	IPv6 ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999.	If an ACL is specified, this configuration enables session logging for sessions that match the permit statements in the ACL. If no ACL is specified, this configuration enables session logging for all IPv6 sessions on the interface.  This column can be null.

## Session/HotBackup

This table contains session hot backuping configurations.

### XML structure

```
<Session>
  <HotBackup>
    <EnableHotBackup></EnableHotBackup>
  </HotBackup>
</Session>
```

### Table description

Item	Description
Feature name	Session
Table name	HotBackup
Table type	Single-instance table
Row name	None

Restrictions	None
--------------	------

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EnableHotBackup	Whether enable hot backuping for session tables.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false (default).</li> </ul>	N/A

## Session/ProtocolHotBackup

This table contains protocols which need hot backuping.

## XML structure

```

<Session>
  <ProtocolHotBackup>
    <ProtocolInfo>
      <ProtocolID></ProtocolID>
      <ProtocolName></ProtocolName>
      <EnableBackup></EnableBackup>
    </ProtocolInfo>
  </ProtocolHotBackup>
</Session>

```

## Table description

Item	Description
Feature name	Session
Table name	ProtocolHotBackup
Table type	Multi-instance table
Row name	ProtocolInfo
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProtocolID	ProtocolID.	Index	Enumeration: <ul style="list-style-type: none"><li>1—DNS.</li><li>2—HTTP.</li></ul>	Default, sessions of these protocols are not synchronized.
ProtocolName	Protocol name for which backup is enabled.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
EnableBackup	Whether enable protocol backup.	N/A	Boolean: <ul style="list-style-type: none"><li>true—YES</li><li>false—NO(default).</li></ul>	N/A

## Session/SessionStatistics

This table contains statistics of sessions.

### XML structure

```
<Session>

## Table description

Item	Description
Feature name	Session
Table name	SessionStatistics
Table type	Multi-instance table
Row name	SessionStatistic
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
SourceIpv4	Source IP address of the packet from the initiator to the responder.	N/A	Ipv4 Address.	This column can be used as query condition.
DestinationIpv4	Destination IP address of the packet from the initiator to the responder.	N/A	Ipv4 Address.	This column can be used as query condition.
SourcePort	Source port of the packet from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.
DestinationPort	Destination port of the packet from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.

Protocol	Transport layer protocol name of the packet from the initiator to the responder.	N/A	Enumeration string: <ul style="list-style-type: none"> <li>• dccp</li> <li>• icmp</li> <li>• raw-ip</li> <li>• sctp</li> <li>• tcp</li> <li>• udp</li> <li>• udp-lite</li> </ul>	This column can be used as query condition.
CurSessionCount	Total number of current sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
CurRelationCount	Total number of current relation entries.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
SessionCount	Number of sessions of different protocols.	Data structure.	Members include: <ul style="list-style-type: none"> <li>• TCPCount.</li> <li>• UDPCount.</li> <li>• ICMPCount.</li> <li>• ICMPv6Count.</li> <li>• UDPLiteCount.</li> <li>• SCTPCount.</li> <li>• DCCPCount.</li> <li>• RawIPCount.</li> </ul>	N/A
TCPCount	Number of TCP sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
UDPCount	Number of UDP sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
ICMPCount	Number of ICMP sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
ICMPv6Count	Number of ICMPv6 sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
UDPLiteCount	Number of UDP-Lite sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
SCTPCount	Number of SCTP sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
DCCPCount	Number of DCCP sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
RawIPCount	Number of Raw IP sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
DNSCount	Number of DNS sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
FTPCount	Number of FTP sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
GTPCount	Number of GTP sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
H323Count	Number of H323 sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
HTTPCount	Number of HTTP sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
ILSCount	Number of ILS sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
MGCPCount	Number of MGCP sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
NBTPCount	Number of NBT sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
PPTPCount	Number of PPTP sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
RSHCount	Number of RSH sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
RTSPCount	Number of RTSP sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
SCCPCount	Number of SCCP sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
SIPCount	Number of SIP sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
SMTPCount	Number of SMTP sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
SQLNETCount	Number of SQLNET sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
SSHCount	Number of SSH sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
TELNETCount	Number of TELNET sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
TFTPCount	Number of TFTP sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
XDMCPCount	Number of XDMCP sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
SessionEstablishedRate	Session establishment rate, and rates for establishing sessions of different protocols.	Data structure.	Members include: <ul style="list-style-type: none"> <li>• TCPRate.</li> <li>• UDPRate.</li> <li>• ICMPRate.</li> <li>• ICMPv6Rate.</li> <li>• UDPLiteRate.</li> <li>• SCTPRate.</li> <li>• DCCPRate.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>RawIPRate.</li> </ul>	
TCPRate	Establishment rate of TCP sessions (per second).	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
UDPRate	Establishment rate of UDP sessions (per second).	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
ICMPRate	Establishment rate of ICMP sessions (per second).	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
ICMPv6Rate	Establishment rate of ICMPv6 sessions (per second).	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
UDPLiteRate	Establishment rate of UDP-Lite sessions (per second).	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
SCTPRate	Establishment rate of SCTP sessions (per second).	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
DCCPRate	Establishment rate of DCCP sessions (per second).	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
RawIPRate	Establishment rate of Raw IP sessions (per second).	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
ReceivedPkts Bytes	Number of received packets and packet bytes of different protocols.	Data structure.	Members include: <ul style="list-style-type: none"> <li>TCPBytes.</li> <li>TCPPkts.</li> <li>UDPBytes.</li> <li>UDPPkts.</li> <li>ICMPBytes.</li> <li>ICMPPkts.</li> <li>ICMPv6Bytes.</li> <li>ICMPv6Pkts.</li> <li>UDPLiteBytes.</li> <li>UDPLitePkts.</li> <li>SCTPBytes.</li> <li>SCTPPkts.</li> <li>DCCPBytes.</li> <li>DCCPPkts.</li> <li>RawIPBytes.</li> <li>RawIPPkts.</li> </ul>	N/A
TCPBytes	Number of	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	received TCP packet bytes.		Value range: 0 to $2^{64} - 1$ .	
TCPPkts	Number of received TCP packets.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
UDPBytes	Number of received UDP packet bytes.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
UDPPkts	Number of received UDP packets.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
ICMPBytes	Number of received ICMP packet bytes.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
ICMPPkts	Number of received ICMP packets.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
ICMPv6Bytes	Number of received ICMPv6 packet bytes.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
ICMPv6Pkts	Number of received ICMPv6 packets.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
UDPLiteBytes	Number of received UDP-Lite packet bytes.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
UDPLitePkts	Number of received UDP-Lite packets.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
SCTPBytes	Number of received SCTP packet bytes.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
SCTPPkts	Number of received SCTP packets.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
DCCPBytes	Number of received DCCP packet bytes.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
DCCPPkts	Number of received DCCP packets.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
RawIPBytes	Number of received Raw IP packet bytes.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
RawIPPkts	Number of received Raw IP packets.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A

# Session/TopStatistics/Switch

This table contains session top statistics configuration of switch.

## XML structure

```
<Session>
  <TopStatistics>
    <Switch>
      <Enable></Enable>
    </Switch>
  </TopStatistics>
</Session>
```

## Table description

Item	Description
Feature name	Session
Table name	Switch
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether enable session top statistics	N/A	Boolean: <ul style="list-style-type: none"><li><b>true.</b></li><li><b>false.</b></li></ul>	N/A

# Session/TopStatistics/CountingByAddress

This table contains top statistics for sessions by addresses.

## XML structure

```
<Session>
  <TopStatistics>
    <CountingByAddress>
      <Item>
        <Type></Type>
        <Period></Period>
```

```

    <Sequence></Sequence>
    <Address>
        <IPv4Addr></IPv4Addr>
        <IPv6Addr></IPv6Addr>
    </Address>
    <SumCount></SumCount>
    <EstablishedRate></EstablishedRate>
</Item>
</CountingByAddress>
</TopStatistics>
</Session>

```

## Table description

Item	Description
Feature name	Session
Table name	CountingByAddress
Table type	Multi-instance table
Row name	Item
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Type of top statistics	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Top statistics by source address.</li> <li>1—Top statistics by destination address.</li> </ul>	N/A
Period	Period of history session statistics	Index	Unsigned integer. Value range: 0 to 2. <ul style="list-style-type: none"> <li>0—1 hour.</li> <li>1—1 day.</li> <li>2—30 days.</li> </ul>	N/A
Sequence	Sequence number for top statistics	Index	Unsigned integer. Value range: 1 to 10.	N/A
Address	Source or destination network layer address	Data structure	Members include: <ul style="list-style-type: none"> <li>IPv4Addr.</li> <li>IPv6Addr.</li> </ul>	N/A
IPv4Addr	IPv4 address	N/A	IPv4 address.	Columns IPv4Addr and IPv6Addr are mutually exclusive.

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6Addr	IPv6 address	N/A	IPv6 address.	Columns IPv4Addr and IPv6Addr are mutually exclusive.
SumCount	Total number of sessions established in a period	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
EstablishedRate	Average establishment rate of sessions established between a pair of samples in a period	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A

## Session/TopStatistics/SampleTime

This table contains sample time for the top statistics in a period.

### XML structure

```

<Session>
  <TopStatistics>
    <SampleTime>
      <Item>
        <Type></Type>
        <Period></Period>
        <SampleTime></SampleTime>
      </Item>
    </SampleTime>
  </TopStatistics>
</Session>

```

### Table description

Item	Description
Feature name	Session
Table name	SampleTime
Table type	Multi-instance table
Row name	Item
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Type of top statistics	Index	Enumeration: <ul style="list-style-type: none"><li>0—Top statistics by source address.</li><li>1—Top statistics by destination address.</li></ul>	N/A
Period	Period of history session statistics	Index	Unsigned integer. Value range: 0 to 2. <ul style="list-style-type: none"><li>0—1 hour.</li><li>1—1 day.</li><li>2—30 days.</li></ul>	N/A
SampleTime	Sample time in a period	N/A	String. Length: 1 to 32 characters.	Example: 2000-04-25 21:23:23.

## Session/HistoryStatistics

This table contains session history statistics.

## XML structure

```
<Session>
  <HistoryStatistics>
    <Item>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <Period></Period>
      <Sequence></Sequence>
      <Time></Time>
      <SessionCount></SessionCount>
      <EstablishedRate></EstablishedRate>
    </Item>
  </HistoryStatistics>
</Session>
```

## Table description

Item	Description
Feature name	Session
Table name	HistoryStatistics

Table type	Multi-instance table
Row name	Item
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
Period	Period of history session statistics	Index	Unsigned integer. Value range: 0 to 2. <ul style="list-style-type: none"> <li>0—1 hour.</li> <li>1—1 day.</li> <li>2—30 days.</li> </ul>	N/A
Sequence	Number of history statistics time point	Index	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
Time	Current time	N/A	String. Length: 1 to 32 characters.	N/A
SessionCount	Number of history session count	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$	N/A
Established Rate	Number of history new established rate	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A

## Session/TrafficLogFlowBegin

This table contains traffic log flow begin configuration.

## XML structure

```

<Session>
  <TrafficLogFlowBegin>
    <OutputCreateLog></OutputCreateLog>
  </TrafficLogFlowBegin>
</Session>

```

## Table description

Item	Description
Feature name	Session
Table name	TrafficLogFlowBegin
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
OutputCreate Log	Whether enable traffic logging.	N/A	Boolean: <ul style="list-style-type: none"><li><b>true.</b></li><li><b>false.</b></li></ul>	N/A

## Session/TrafficLogThreshold

This table contains threshold for traffic threshold logging.

## XML structure

```
<Session>
  <TrafficLogThreshold>
    <TimeThreshold></TimeThreshold>
    <FlowThreshold>
      <Type></Type>
      <Threshold></Threshold>
    </FlowThreshold>
  </TrafficLogThreshold>
</Session>
```

## Table description

Item	Description
Feature name	Session
Table name	TrafficLogThreshold
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TimeThreshold	Time-based traffic logging threshold (minutes).	N/A	Unsigned integer. Value range: 10 to 120.	The value must be integer times of 10.
FlowThreshold	Traffic-based traffic logging threshold ( minutes).	Data structure.	Members include: <ul style="list-style-type: none"><li>Type.</li><li>Threshold.</li></ul>	N/A
Type	Type of traffic-based Traffic logging.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Packet-based threshold for traffic-based logging.</li><li>1—Byte-based threshold for traffic-based logging.</li></ul>	If you set both the byte-based and packet-based thresholds, the last configuration takes effect.
Threshold	Threshold for traffic-based logging.	N/A	Unsigned integer. Value range: 1 to 1000.	If type is 0, the unit is mega-packets. If type is 1, the unit is mega-bytes.

## Session/Ipv4LogOnInterZones

This table contains session traffic log enable ipv4 configuration.

### XML structure

```
<Session>
  <Ipv4LogOnInterZones>
    <InterZone>
      <SourceZone></SourceZone>
      <DestinationZone></DestinationZone>
      <EnableLog></EnableLog>
      <Mode></Mode>
      <ACLNumber></ACLNumber>
    </InterZone>
  </Ipv4LogOnInterZones>
</Session>
```

### Table description

Item	Description
Feature name	Session

Table name	Ipv4LogOnInterZones
Table type	Multi-instance table
Row name	InterZone
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SourceZone	Source Zone.	Index	String, case-insensitive. Length: 1 to 31 characters.	Characters ">", ">>" and " " can't be included.
DestinationZone	Destination Zone	Index	String, case-insensitive. Length: 1 to 31 characters.	Characters ">", ">>" and " " can't be included.
EnableLog	Logging enable	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO</li> </ul>	N/A
Mode	Whether by-server	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO</li> </ul>	N/A
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999.	N/A

## Session/Ipv6LogOnInterZones

This table contains session traffic log enable ipv6 configuration.

## XML structure

```

<Session>
  <Ipv6LogOnInterZones>
    <InterZone>
      <SourceZone></SourceZone>
      <DestinationZone></DestinationZone>
      <EnableLog></EnableLog>
      <Mode></Mode>
      <ACLNumber></ACLNumber>
    </InterZone>
  </Ipv6LogOnInterZones>
</Session>

```

## Table description

Item	Description
Feature name	Session
Table name	Ipv4Sessions
Table type	Multi-instance table
Row name	Session
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
Handle	Session Handle	Index	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	This column has no practical sense, it's only the index of the table.
PerChassis	ID of the member where the entity resides	N/A	Unsigned integer. Value range: 0 to 65534.	This column is for several times to get
PerSlot	Slot ID of the entity	N/A	Unsigned integer. Value range: 0 to 65534.	This column is for several times to get
PerCPUID	CPU ID	N/A	Unsigned integer. Value range: 0 to 7.	This column is for several times to get
PerHandle	Handle	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	This column is for several times to get
LocalCreate	Mark of the session that Local board Created	N/A	Unsigned integer. Value range: 0 to 1. <ul style="list-style-type: none"> <li>0—All boards</li> <li>1—Local board</li> </ul>	N/A
SessionMax	The number of one time get	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Type of the module which created the session.	N/A	Unsigned integer. Enumeration: <ul style="list-style-type: none"> <li>0—NAT.</li> <li>1—CONNECTION-LIMIT.</li> <li>2—LB.</li> <li>3—ASPF.</li> <li>4—LOG.</li> <li>5—ALG.</li> <li>6—DS-Lite.</li> <li>7—TCP MSS.</li> <li>8—Application of statistical.</li> <li>9—Inter-zone strategy.</li> <li>10—WAAS.</li> <li>11—TCP serial number to check.</li> <li>12—AFT.</li> <li>13—DIM Engine processing.</li> <li>14—TCP Engine restructuring.</li> <li>15—Traffic log.</li> </ul>	This column can be used as query condition.
SessionFwdType	Session forward type.	N/A	Unsigned integer. Enumeration: <ul style="list-style-type: none"> <li>0—VRF instance name.</li> <li>1—VLAN ID.</li> <li>2—Inline ID.</li> </ul>	This column can be used as query condition.
InitVRF	Session forward value of the initiator.	N/A	String, case-insensitive. Length: 1 to 31 characters.	1 This column can be used as query condition.  2 When SessionFwdType is VLAN ID, the value for InitVRF is VLAN ID. When SessionFwdType is Inline ID, the value for InitVRF is Inline ID. When SessionFwdType is VRF instance name, the value for InitVRF is the VRF instance name.
InitSourceIp	Source IP address of the packet from the initiator to the responder.	N/A	Ipv4 Address.	This column can be used as query condition.
InitSourcePort	Source port of the packet from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.

Column name	Column description	Column type	Data type and restrictions	Remarks
InitDestinationIp	Destination IP address of the packet from the initiator to the responder.	N/A	Ipv4 Address.	This column can be used as query condition.
InitDestinationPort	Destination port of the packet from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.
InitDSLiteTunnelPeer	Address of the DS-Lite tunnel peer of the initiator.  When the session does not belong to any DS-Lite tunnel, this field is NULL.	N/A	String, case-insensitive. Length: 1 to 46 characters.	N/A
InitProtocol	Transport layer protocol name of the packet from the initiator to the responder.	N/A	String, case-insensitive. Length: 1 to 31 characters.	This column can be used as query condition.
ResponseVRF	Session forward value of the responder.	N/A	String, case-insensitive. Length: 1 to 31 characters.	1 This column can be used as query condition.  2 When SessionFwdType is VLAN ID, the value for InitVRF is VLAN ID. When SessionFwdType is Inline ID, the value for InitVRF is Inline ID. When SessionFwdType is VRF instance name, the value for InitVRF is the VRF instance name.
ResponseSourceIp	Source IP address of the packet from the responder to the initiator.	N/A	Ipv4 Address.	This column can be used as query condition.
ResponseSourcePort	Source port of the packet from the responder to the initiator.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.
ResponseDestinationIp	Destination IP address of the packet from the responder to the initiator.	N/A	Ipv4 Address.	This column can be used as query condition.

Column name	Column description	Column type	Data type and restrictions	Remarks
ResponseDestinationPort	Destination port of the packet from the responder to the initiator.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.
ResponseDSLiteTunnelPeer	Address of the DS-Lite tunnel peer of the responder.  When the session does not belong to any DS-Lite tunnel, this field is NULL.	N/A	String, case-insensitive. Length: 1 to 46 characters.	N/A
ResponseProtocol	Transport layer protocol name of the packet from the responder to the initiator.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
Application	Application layer protocol.  The value of OTHER indicates an unknown protocol with a non-well-known port.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column can be used as query condition.
State	Session state(String).	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
StartTime	Session establishment time.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
TTL	Remaining lifetime of the session, in seconds.v	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ seconds.	N/A
RecvInterface	Interface name of the packet receiver.	N/A	String, case-insensitive. Length: 2 to 47 characters.	This column can be used as query condition.
RecvSecurityZone	SecurityZone name of the packet receiver	N/A	String, case-insensitive. Length: 1 to 31 characters.	This column can be used as query condition.
SendInterface	Interface name of the packet sender.	N/A	String, case-insensitive. Length: 2 to 47 characters.	This column can be used as query condition.
SendSecurityZone	SecurityZone name of the packet sender	N/A	String, case-insensitive. Length: 1 to 31 characters.	This column can be used as query condition.

Column name	Column description	Column type	Data type and restrictions	Remarks
InitToResponsePackets	Number of packets from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
InitToResponseBytes	Number of packet bytes from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
ResponseToInitPackets	Number of packets from the responder to the initiator.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
ResponseToInitBytes	Number of packet bytes from the responder to the initiator.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
InitEnProtocol	Transport layer protocol id of the packet from the initiator to the responder.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—TCP.</li> <li>• 1—UDP.</li> <li>• 2—ICMP.</li> <li>• 3—ICMPv6.</li> <li>• 4—UDP-Lite.</li> <li>• 5—SCTP.</li> <li>• 6—DCCP.</li> <li>• 7—RAWIP.</li> <li>• 8—ALL.</li> </ul>	This column can be used as query condition.
StopTime	Remaining time of stopping a specified session's flow	N/A	Unsigned integer.	N/A
Backupflag	Session state's mask: owner, director, etc	N/A	Unsigned Char. 0x40—OWNER 0x80—DIRECTOR	N/A
InitRuleName	The name of rule of which is matched by zone checking	N/A	String, case-insensitive. Length: 1 to 127 characters.	This column can be used as query condition.

Column name	Column description	Column type	Data type and restrictions	Remarks
EnState	Session state(Enumeration).	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—TCP_SYN_SENT.</li> <li>• 1—TCP_SYN_RECV.</li> <li>• 2—TCP_ESTABLISHED.</li> <li>• 3—TCP_FIN_WAIT.</li> <li>• 4—TCP_CLOSE_WAIT.</li> <li>• 5—TCP_LAST_ACK.</li> <li>• 6—TCP_TIME_WAIT.</li> <li>• 7—TCP_CLOSE.</li> <li>• 8—TCP_SYN_SENT2.</li> <li>• 9—DCCP_REQUEST.</li> <li>• 10—DCCP_RESPOND.</li> <li>• 11—DCCP_PARTOPEN.</li> <li>• 12—DCCP_OPEN.</li> <li>• 13—DCCP_CLOSEREQ.</li> <li>• 14—DCCP_CLOSING.</li> <li>• 15—DCCP_TIMEWAIT.</li> <li>• 16—ICMP_REQUEST.</li> <li>• 17—ICMP_REPLY.</li> <li>• 20—RAWIP_OPEN.</li> <li>• 21—RAWIP_READY.</li> <li>• 22—SCTP_CLOSED.</li> <li>• 23—SCTP_COOKIE_WAIT.</li> <li>• 24—SCTP_COOKIE_ECHOED.</li> <li>• 25—SCTP_ESTABLISHED.</li> <li>• 26—SCTP_SHUTDOWN_SENT.</li> <li>• 27—SCTP_SHUTDOWN_RECV.</li> <li>• 28—SCTP_SHUTDOWN_ACK_SENT.</li> <li>• 29—UDP_OPEN.</li> <li>• 30—UDP_READY.</li> <li>• 31—UDPLITE_OPEN.</li> <li>• 32—UDPLITE_READY.</li> </ul>	This column can be used as query condition.
TimeRangeStart	Start time of the time range.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	This column can be used as query condition.
TimeRangeEnd	End time of the time range.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	This column can be used as query condition.
SessionDir	Direction of the session.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—Initiator.</li> <li>• 1—Responder.</li> <li>• 2—Both.</li> </ul>	This column can be used as query condition.

Column name	Column description	Column type	Data type and restrictions	Remarks
PageNum	Page number.	N/A	Unsigned integer. Value range: 1 to $2^{32} - 1$ .	This column can be used as query condition.
PageCnt	Number of sessions per page.	N/A	Unsigned integer. Value range: 1 to $2^{32} - 1$ .	This column can be used as query condition.
TotalCnt	Total number of sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A

## Session/Ipv6Sessions

This table is used to display the ipv6 session details.

## Table description

Item	Description
Feature name	Session
Table name	Ipv6Sessions
Table type	Multi-instance table
Row name	Session
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Handle	Handle.	Index	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	This column has no practical sense, it's only the index of the table.
PerChasis	ID of the member where the entity resides	N/A	Unsigned integer. Value range: 0 to 65534.	This column is for several times to get
PerSlot	Slot ID of the entity	N/A	Unsigned integer. Value range: 0 to 65534	This column is for several times to get
PerCPUID	CPU ID	N/A	Unsigned integer. Value range: 0 to 7	This column is for several times to get
PerHandle	Handle	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$	This column is for several times to get
LocalCreate	Mark of the session that Local board Created	N/A	Unsigned integer. Value range: 0 to 1. <ul style="list-style-type: none"> <li>0—All boards</li> <li>1—Local board</li> </ul>	N/A
SessionMax	The number of one time get	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
Type	Type of the module which created the session.	N/A	Unsigned integer. Enumeration: <ul style="list-style-type: none"> <li>0—NAT.</li> <li>1—CONNECTION-LIMIT</li> <li>2—LB.</li> <li>3—ASPF.</li> <li>4—LOG.</li> <li>5—ALG</li> <li>6—DS-Lite</li> <li>7—TCP MSS</li> <li>8—Application of statistical</li> <li>9—Inter-zone strategy</li> <li>10—WAAS</li> <li>11—TCP serial number to check</li> <li>12—AFT</li> <li>13—DIM Engine processing</li> <li>14—TCP Engine restructuring</li> <li>15—Traffic log</li> </ul>	This column can be used as query condition.
SessionFwdType	Session forward type.	N/A	Unsigned integer. Enumeration: <ul style="list-style-type: none"> <li>0—VRF instance name.</li> <li>1—VLAN ID.</li> <li>2—Inline ID.</li> </ul>	This column can be used as query condition.

Column name	Column description	Column type	Data type and restrictions	Remarks
InitVRF	Session forward value of the initiator.	N/A	String, case-sensitive. Length: 1 to 31 characters.	1 This column can be used as query condition.  2 When SessionFwdType is VLAN ID, the value for InitVRF is VLAN ID; SessionFwdType is Inline ID, the value for InitVRF is Inline ID, SessionFwdType is VRF instance name, the value for InitVRF is VRF instance name.
InitSourceIp	Source IP address of the packet from the initiator to the responder.	N/A	Ipv6 Address.	This column can be used as query condition.
InitSourcePort	Source port of the packet from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.
InitDestinationIp	Destination IP address of the packet from the initiator to the responder.	N/A	Ipv6 Address.	This column can be used as query condition.
InitDestinationPort	Destination port of the packet from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.
InitProtocol	Transport layer protocol name of the packet from the initiator to the responder.	N/A	String, case-insensitive. Length: 1 to 31 characters.	This column can be used as query condition.
ResponseVRF	Session forward value of the responder.	N/A	String, case-sensitive. Length: 1 to 31 characters.	1 This column can be used as query condition.  2 When SessionFwdType is VLAN ID, the value for InitVRF is VLAN ID; SessionFwdType is Inline ID, the value for InitVRF is Inline ID, SessionFwdType is VRF instance name, the value for InitVRF is VRF instance name.

Column name	Column description	Column type	Data type and restrictions	Remarks
ResponseSourceIp	Source IP address of the packet from the responder to the initiator.	N/A	Ipv6 Address.	This column can be used as query condition.
ResponseSourcePort	Source port of the packet from the responder to the initiator.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.
ResponseDestinationIp	Destination IP address of the packet from the responder to the initiator.	N/A	Ipv6 Address.	This column can be used as query condition.
ResponseDestinationPort	Destination port of the packet from the responder to the initiator.	N/A	Unsigned integer. Value range: 0 to 65535.	This column can be used as query condition.
ResponseProtocol	Transport layer protocol name of the packet from the responder to the initiator.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
Application	Application layer protocol. The value of OTHER indicates an unknown protocol with a non-well-known port.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column can be used as query condition.
State	Session state(String).	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
StartTime	Session establishment time.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
TTL	Remaining lifetime of the session, in seconds.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ seconds.	N/A
RecvInterface	Interface name of the packet receiver.	N/A	String, case-insensitive. Length: 2 to 47 characters.	This column can be used as query condition.
RecvSecurityZone	SecurityZone name of the packet receiver	N/A	String, case-insensitive. Length: 1 to 31 characters.	This column can be used as query condition.
SendInterface	Interface name of the packet sender.	N/A	String, case-insensitive. Length: 2 to 47 characters.	This column can be used as query condition.

Column name	Column description	Column type	Data type and restrictions	Remarks
SendSecurityZone	SecurityZone name of the packet sender	N/A	String, case-insensitive. Length: 1 to 31 characters	This column can be used as query condition.
InitToResponsePackets	Number of packets from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
InitToResponseBytes	Number of packet bytes from the initiator to the responder.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
ResponseToInitPackets	Number of packets from the responder to the initiator.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
ResponseToInitBytes	Number of packet bytes from the responder to the initiator.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
InitEnProtocol	Transport layer protocol id of the packet from the initiator to the responder.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—TCP.</li> <li>• 1—UDP.</li> <li>• 2—ICMP.</li> <li>• 3—ICMPv6.</li> <li>• 4—UDP-Lite.</li> <li>• 5—SCTP.</li> <li>• 6—DCCP.</li> <li>• 7—RAWIP.</li> <li>• 8—ALL.</li> </ul>	This column can be used as query condition.
StopTime	Remaining time of stopping a specified session's flow	N/A	Unsigned integer..	N/A
Backupflag	Session state's mask: owner, director, etc	N/A	Unsigned Char. <ul style="list-style-type: none"> <li>• 0x40—OWNER</li> <li>• 0x80—DIRECTOR</li> </ul>	N/A
InitRuleName	The name of rule of which is matched by zone checking	N/A	String, case-insensitive. Length: 1 to 127 characters.	This column can be used as query condition.

Column name	Column description	Column type	Data type and restrictions	Remarks
EnState	Session state(Enumeration).	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—TCP_SYN_SENT.</li> <li>• 1—TCP_SYN_RECV.</li> <li>• 2—TCP_ESTABLISHED.</li> <li>• 3—TCP_FIN_WAIT.</li> <li>• 4—TCP_CLOSE_WAIT.</li> <li>• 5—TCP_LAST_ACK.</li> <li>• 6—TCP_TIME_WAIT.</li> <li>• 7—TCP_CLOSE.</li> <li>• 8—TCP_SYN_SENT2.</li> <li>• 9—DCCP_REQUEST.</li> <li>• 10—DCCP_RESPOND.</li> <li>• 11—DCCP_PARTOPEN.</li> <li>• 12—DCCP_OPEN.</li> <li>• 13—DCCP_CLOSEREQ.</li> <li>• 14—DCCP_CLOSING.</li> <li>• 15—DCCP_TIMEWAIT.</li> <li>• 18—ICMPV6_REQUEST.</li> <li>• 19—ICMPV6_REPLY.</li> <li>• 20—RAWIP_OPEN.</li> <li>• 21—RAWIP_READY.</li> <li>• 22—SCTP_CLOSED.</li> <li>• 23—SCTP_COOKIE_WAIT.</li> <li>• 24—SCTP_COOKIE_ECHOED.</li> <li>• 25—SCTP_ESTABLISHED.</li> <li>• 26—SCTP_SHUTDOWN_SENT.</li> <li>• 27—SCTP_SHUTDOWN_RECV.</li> <li>• 28—SCTP_SHUTDOWN_ACK_SENT.</li> <li>• 29—UDP_OPEN.</li> <li>• 30—UDP_READY.</li> <li>• 31—UDPLITE_OPEN.</li> <li>• 32—UDPLITE_READY.</li> </ul>	This column can be used as query condition.
TimeRangeStart	Start time of the time range.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	This column can be used as query condition.
TimeRangeEnd	End time of the time range.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	This column can be used as query condition.
SessionDir	Direction of the session.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—Initiator.</li> <li>• 1—Responder.</li> <li>• 2—Both.</li> </ul>	This column can be used as query condition.

Column name	Column description	Column type	Data type and restrictions	Remarks
PageNum	Page number.	N/A	Unsigned integer. Value range: 1 to $2^{32} - 1$ .	This column can be used as query condition.
PageCnt	Number of sessions per page.	N/A	Unsigned integer. Value range: 1 to $2^{32} - 1$ .	This column can be used as query condition.
TotalCnt	Total number of sessions.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A

## Session/ConnectionLimit/Ipv4Policies

This table contains IPv4 connection limit policy configurations..

## Table description

Item	Description
Feature name	Session
Table name	Ipv4LimitRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyNumber	IPv4 connection limit policy number	Index	Unsigned integer. Value range: 1 to 32.	N/A
RuleNumber	IPv4 connection limit rule ID.	Index	Unsigned integer. Value range: 1 to 256.	N/A
ACLNumber	IPv4 ACL number	N/A	Unsigned integer. Value range: 2000 to 3999.	Either <i>ACLNumber</i> or <i>ACLName</i> is required, and you cannot configure both.
ACLName	IPv4 ACL name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Either <i>ACLNumber</i> or <i>ACLName</i> is required, and you cannot configure both.
HighThreshold	Upper connection limit	N/A	Unsigned integer. Value range: 1 to 4294967294.	When user connections in a range or of a type exceed the upper connection limit, new connections cannot be created.  This column is affirmatively chosen item.
LowThreshold	Lower connection limit	N/A	Unsigned integer. Value range: 1 to 4294967294.	The lower connection limit cannot be greater than the upper connection limit. New connections cannot be created until the connection number goes below the lower connection limit.  This column is affirmatively chosen item.
ClmRate	Maximum number of connections per second	N/A	Unsigned integer. Value range: 5 to 10000000.	When the number of connections per second greater than maximum number of connections per second, new connections cannot be created.  This column is affirmatively chosen item.
LimitType	Connection limit type	Data structure.	Members include: <ul style="list-style-type: none"> <li>PerSource.</li> <li>PerDestination.</li> <li>PerService.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PerSource	Limits connections by source IP address.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default).</li> </ul>	N/A
PerDestination	Limits connections by destination IP address.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default).</li> </ul>	N/A
PerService	Limits connections by service port.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default).</li> </ul>	N/A
Description	IPv4 connection limit rule description.	N/A	String, case-insensitive. Length: 1 to 127 characters.	N/A
PermitNew	Permit new connection establishment after user connections exceed the upper limit.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES.</li> <li>false—NO.</li> </ul>	N/A

## Session/ConnectionLimit/Ipv6LimitRules

This table contains IPv6 connection limit rule configurations.

## Session/ConnectionLimit/Ipv4LimitRules

Message	Explanation
ACL name must start with an English letter, and it can't be the word 'all'. ACL名称不能为'all',且必须以字母开头。	ACL ipv4 name must start with an English letter, and it can't be the word 'all'(not case sensitive). ACL ipv4名称不能为'all'(不区分大小写),且必须以英文字母开头。
A number or a name is required for the ACL. ACL编号和ACL名称必须且只能配置其中一个。	<ol style="list-style-type: none"><li>1. A number or a name is required for the ACL. ACL 编号和 ACL 名称有且只能有一个。</li><li>2. Operation Replace not allowed to replace from ACL number to ACL name or from ACL name to ACL number. Replace 操作不能从 ACL 编号替换到 ACL 名称,也不能从 ACL 名称切换到 ACL 编号。</li></ol>
The low and high thresholds are required. 触发阈值和恢复阈值都必须配置。	HighThreshold and LowThreshold are required and not equal to zero. 触发阈值和恢复阈值都必须配置且不能配为 0。
Low threshold can't be greater than high threshold. 触发阈值不能小于恢复阈值。	Low threshold can't be greater than high threshold. 触发阈值不能小于恢复阈值。
Another connection limit rule is using the ACL. 此ACL已经被其它规则引用。	An ACL rule can only be applied by one connection limit rule. 一个ACL只允许被一个连接数限制规则所引用。

## Session/ConnectionLimit/Ipv6LimitRules

Message	Explanation
ACL name must start with an English letter, and it can't be the word 'all'. ACL名称不能为'all',且必须以字母开头。	ACL ipv6 name must start with an English letter, and it can't be the word 'all'(not case sensitive). ACL ipv6名称不能为'all'(不区分大小写),且必须以英文字母开头。
A number or a name is required for the ACL. ACL编号和ACL名称必须且只能配置其中一个。	<ol style="list-style-type: none"><li>1. A number or a name is required for the ACL. ACL 编号和 ACL 名称有且只能有一个。</li><li>2. Operation Replace not allowed to replace from ACL number to ACL name or from ACL name to ACL number. Replace 操作不能从 ACL 编号替换到 ACL 名称,也不能从 ACL 名称切换到 ACL 编号。</li></ol>
The low and high thresholds are required. 触发阈值和恢复阈值都必须配置。	HighThreshold and LowThreshold are required and not equal to zero. 触发阈值和恢复阈值都必须配置且不能配为 0。
Low threshold can't be greater than high threshold. 触发阈值不能小于恢复阈值。	Low threshold can't be greater than high threshold. 触发阈值不能小于恢复阈值。
Another connection limit rule is using the ACL. 此ACL已经被其它规则引用。	An ACL rule can only be applied by one connection limit rule. 一个ACL只允许被一个连接数限制规则所引用。

## Session/TopStatistics/Switch

Message	Explanation
The operation is not supported on this the device. 该设备不支持此操作。	Session top statistics not be supported by this device. 该设备不支持头部会话统计功能。
The stop process is running. Please try it later. 关闭操作尚未执行完毕，请稍后重试。	Operation undo enable is processing. Undo 操作正在处理中。

## Session/Ipv4LogOnInterZones

Message	Explanation
The specified source security zone doesn't exist. 指定的源安全域并不存在。	The security zone must exist before being configured as source zone. 指定的源安全域必须已经存在。
The specified destination security zone doesn't exist. 指定的目的安全域并不存在。	The security zone must exist before being configured as destination zone. 指定的目的安全域必须已经存在。
This device doesn't support session traffic log enable { ipv4   ipv6 }. 当前设备不支持更改会话日志流开关。	This device doesn't support session traffic log. 当前设备不支持会话日志流功能。

## Session/Ipv6LogOnInterZones

Message	Explanation
The specified source security zone doesn't exist. 指定的源安全域并不存在。	The security zone must exist before being configured as source zone. 指定的源安全域必须已经存在。
The specified destination security zone doesn't exist. 指定的目的安全域并不存在。	The security zone must exist before being configured as destination zone. 指定的目的安全域必须已经存在。
This device doesn't support session traffic log enable { ipv4   ipv6 }. 当前设备不支持更改会话日志流开关。	This device doesn't support session traffic log. 当前设备不支持会话日志流功能。

## Session/TrafficLogFlowBegin

Message	Explanation
This device doesn't support session traffic log flow-begin. 当前设备不支持输出会话新建日志。	This device doesn't support session traffic log flow-begin. 当前设备不支持输出会话新建日志。

## Session/TrafficLogThreshold

Message	Explanation
This device doesn't support session traffic log threshold. 当前设备不支持更改会话日志输出阈值。	This device doesn't support modify session traffic log threshold. 当前设备不支持更改会话日志输出阈值。

## Session/HotBackup

Message	Explanation
This device doesn't support hotbackup function. 当前设备不支持热备功能。	Some devices dose not support backup session or eim entries. 有一部分设备不支持会话和Eim表项备份功能。

## Session/ProtocolHotBackup

Message	Explanation
This device doesn't support hotbackup function. 当前设备不支持热备功能。	Some devices dose not support backup session or eim entries (for dns and http). 有一部分设备不支持会话和Eim表项备份功能（对于dns和http协议的表项）。

# SFLOW

## SFLOW/sFlowCollector

This table contains SFLOW collector configuration information.

### XML structure

```
<SFLOW>
  <sFlowCollector>
    <Collector>
      <CollectorID></CollectorID>
      <VRF></VRF>
      <IpAddress></IpAddress>
      <Port></Port>
      <MaxDatagramSize></MaxDatagramSize>
      <Timeout></Timeout>
      <Description></Description>
    </Collector>
  </sFlowCollector>
</SFLOW>
```

### Table description

Item	Description
Feature name	SFLOW
Table name	sFlowCollector
Table type	Multi-instance table
Row name	Collector
Restrictions	None
Support for row creation and deletion	Yes

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CollectorID	Collector-id	Index	Unsigned integer. Value range: 1 to MaxCollectorID.	The value of MaxCollectorID depends on the device model.
VRF	VRF instance name	N/A	String, case sensitive. Length: 1 to 31 characters.	If the SFLOW host is on the public network, the length of characters is 0.
IpAddress	The IPv4address or IPv6address of sFlow Collector	N/A	String, dotted decimal notation or Hexadecimal string, colon-separated.	For the create and replace operations, IpAddress must be configured. For the merge operation, IpAddress must be configured only when the instance is not exist. For the delete and remove operations, IpAddress cannot be configured.
Port	UDP port of sFlow Collector	N/A	Unsigned integer. Value range: 1 to 65535. Default: 6343.	N/A
MaxDatagramSize	The max size of sFlow datagram	N/A	Unsigned integer. Value range: 200 to 3000. Default: 1400.	N/A
Timeout	The agetime of sFlow Collector	N/A	Unsigned integer. Value range: 0 to 2147483647. Default: 0.	0 means the instance is static.

Column name	Column description	Column type	Data type and restrictions	Remarks
Description	Description of sFlow Collector	N/A	String, case insensitive. Length: 1 to 127 characters.	For the create and replace operations, Description must be configured. For the merge operation, Description must be configured only when the instance is not exist.

## SFLOW/sFlowFlowSampler

This table contains SFLOW sampler configuration information.

### XML structure

```

<SFLOW>
  <sFlowFlowSampler>
    <FlowSampler>
      <IfIndex></IfIndex>
      <CollectorID></CollectorID>
      <PacketSamplingRate></PacketSamplingRate>
      <SamplingMode></SamplingMode>
      <MaxHeaderSize></MaxHeaderSize>
    </FlowSampler>
  </sFlowFlowSampler>
</SFLOW>

```

### Table description

Item	Description
Feature name	SFLOW
Table name	sFlowFlowSampler
Table type	Multi-instance table
Row name	FlowSampler
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	<p>Layer 2 Ethernet interface</p> <p>Layer 3 Ethernet interface</p> <p>Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.</p>
CollectorID	Collector-id	N/A	<p>Unsigned integer.</p> <p>Value range: 1 to MaxCollectorID.</p>	The value of MaxCollectorID depends on the device model.
PacketSamplingRate	sflow sampling-rate	N/A	<p>Unsigned integer.</p> <p>Value range: MinSamplerRate to MaxSamplerRate.</p>	Values of MinSamplerRate and MaxSamplerRate depend on the device model.
SamplingMode	SamplingMode of SFLOW	N/A	<p>Unsigned integer.</p> <ul style="list-style-type: none"> <li>1—random .</li> <li>2—determine</li> </ul>	The default value of SamplingMode depends on the device model.
MaxHeaderSize	Maximum number of bytes that can be copied	N/A	<p>Unsigned integer.</p> <p>Value range: 18 to 512.</p> <p>Default: 128</p>	N/A

## SFLOW/sFlowCounterSampler

This table contains SFLOW counter sampler configuration information.

## XML structure

```
<SFLOW>
  <sFlowCounterSampler>
    <CounterSampler>
      <IfIndex></IfIndex>
      <CollectorID></CollectorID>
      <Interval></Interval>
    </CounterSampler>
  </sFlowCounterSampler>
</SFLOW>
```

## Table description

Item	Description
Feature name	SFLOW
Table name	sFlowCounterSampler
Table type	Multi-instance table
Row name	CounterSampler
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Layer 2 Ethernet interface. Layer 3 Ethernet interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
CollectorID	Collector-id	N/A	Unsigned integer. Value range: 1 to MaxCollectorID.	The value of MaxCollectorID depends on the device model.
Interval	The interval of counter sampling	N/A	Unsigned integer. Value range: 2 to 86400.	Counter sampling is disabled as default.

## SFLOW/sFlowConfig

This table contains SFLOW config configuration information.

## XML structure

```

<SFLOW>
  <sFlowConfig>
    <AgentIpAddress></AgentIpAddress>
    <SourceIpv4Address></SourceIpv4Address>
    <SourceIpv6Address></SourceIpv6Address>
  </sFlowConfig>
</SFLOW>

```

## Table description

Item	Description
Feature name	SFLOW
Table name	sFlowAgent
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
AgentIpAddress	The IPv4address or IPv6address of sFlow agent	N/A	String, dotted decimal notation or Hexadecimal string, colon-separated.
SourceIpv4Address	The IPv4address of sFlow source	N/A	String, dotted decimal notation or Hexadecimal string, colon-separated.
SourceIpv6Address	The IPv6address of sFlow source	N/A	String, dotted decimal notation or Hexadecimal string, colon-separated.

## SFLOW/sFlowFlowInstance

This table contains sFlow flow instance configuration information.

## XML structure

```
<SFLOW>
  <sFlowFlowInstance>
    <FlowInstance>
      <IfIndex></IfIndex>
      <Instance></Instance>
    </FlowInstance>
  </sFlowFlowInstance>
</SFLOW>
```

```

    <CollectorID></CollectorID>
    <PacketSamplingRate></PacketSamplingRate>
    <SamplingMode></SamplingMode>
    <MaxHeaderSize></MaxHeaderSize>
  </FlowInstance>
</sFlowFlowInstance>
</SFLOW>

```

## Table description

Item	Description
Feature name	SFLOW
Table name	sFlowFlowInstance
Table type	Multi-instance table

# SFLOW

## SFLOW/sFlowCollector

This table contains SFLOW collector configuration information.

### XML structure

```
<SFLOW>
  <sFlowCollector>
    <Collector>
      <CollectorID></CollectorID>
      <VRF></VRF>
      <IpAddress></IpAddress>
      <Port></Port>
      <MaxDatagramSize></MaxDatagramSize>
      <Timeout></Timeout>
      <AgeTime></AgeTime>
      <Description></Description>
    </Collector>
  </sFlowCollector>
</SFLOW>
```

### Table description

Item	Description
Feature name	SFLOW
Table name	sFlowCollector
Table type	Multi-instance table
Row name	Collector
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CollectorID	Collector-id	Index	Unsigned integer. Value range: 1 to MaxCollectorID.	The value of MaxCollectorID depends on the device model.
VRF	VRF instance name	N/A	String, case sensitive. Length: 1 to 31 characters.	If the SFLOW host is on the public network, the length of characters is 0.
IpAddress	The IPv4address or IPv6address of sFlow Collector	N/A	String, dotted decimal notation or Hexadecimal string, colon-separated.	N/A
Port	UDP port of sFlow Collector	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
MaxDatagramSize	The max size of sFlow datagram	N/A	Unsigned integer. Value range: 200 to 3000.	N/A
Timeout	The age time of sFlow Collector	N/A	Unsigned integer. Value range: 0 to 2147483647.	0 means the instance is static.
AgeTime	The remaining aging time of sFlow Collector	N/A	Unsigned integer. Value range: 0 to 2147483647.	N/A
Description	Description of sFlow Collector	N/A	String, case insensitive. Length: 1 to 127 characters.	N/A

## SFLOW/sFlowFlowSampler

This table contains SFLOW sampler configuration information.

## XML structure

```
<SFLOW>
  <sFlowFlowSampler>
```

```

<FlowSampler>
  <IfIndex></IfIndex>
  <CollectorID></CollectorID>
  <PacketSamplingRate></PacketSamplingRate>
  <SamplingMode></SamplingMode>
  <MaxHeaderSize></MaxHeaderSize>
  <Status></Status>
</FlowSampler>
</sFlowFlowSampler>
</SFLOW>

```

## Table description

Item	Description
Feature name	SFLOW
Table name	sFlowFlowSampler
Table type	Multi-instance table
Row name	FlowSampler
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Layer 2 Ethernet interface Layer 3 Ethernet interface
CollectorID	Collector-id	N/A	Unsigned integer. Value range: 1 to MaxCollectorID.	The value of MaxCollectorID depends on the device model.
PacketSamplingRate	sflow sampling-rate	N/A	Unsigned integer. Value range: MinSamplerRate to MaxSamplerRate.	The values of MinSamplerRate and MaxSamplerRate depend on the device model.

Column name	Column description	Column type	Data type and restrictions	Remarks
SamplingMode	SamplingMode of SFLOW	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>1—random .</li> <li>2—determine</li> </ul>	The default value of SamplingMode depends on the device model.
MaxHeaderSize	Maximum number of bytes that can be copied	N/A	Unsigned integer. Value range: 18 to 512. Default: 128	N/A
Status	Status of SFLOW	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>0—Suspended.</li> <li>1—Active</li> </ul>	N/A

## SFLOW/sFlowCounterSampler

This table contains SFLOW counter sampler configuration information.

### XML structure

```

<SFLOW>
  <sFlowCounterSampler>
    <CounterSampler>
      <IfIndex></IfIndex>
      <CollectorID></CollectorID>
      <Interval></Interval>
      <Status></Status>
    </CounterSampler>
  </sFlowCounterSampler>
</SFLOW>

```

### Table description

Item	Description
Feature name	SFLOW
Table name	sFlowCounterSampler
Table type	Multi-instance table
Row name	CounterSampler
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ifindex	Interface index	Index	Unsigned integer.	Layer 2 Ethernet interface. Layer 3 Ethernet interface.
CollectorID	Collector-id	N/A	Unsigned integer. Value range: 1 to MaxCollectorID.	The value of MaxCollectorID depends on the device model.
Interval	The interval of counter sampling	N/A	Unsigned integer. Value range: 2 to 86400.	Counter sampling is disabled as default.
Status	Status of SFLOW	N/A	<b>Unsigned integer.</b> <ul style="list-style-type: none"><li>0—Suspended.</li><li>1—Active</li></ul>	N/A

## SFLOW/sFlowConfig

This table contains SFLOW config configuration information.

## XML structure

```
<SFLOW>
  <sFlowConfig>
    <AgentIpAddress></AgentIpAddress>
    <SourceIpv4Address></SourceIpv4Address>
    <SourceIpv6Address></SourceIpv6Address>
  </sFlowConfig>
</SFLOW>
```

## Table description

Item	Description
Feature name	SFLOW
Table name	sFlowAgent

Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
AgentIpAddress	The IPv4address or IPv6address of sFlow agent	N/A	String, dotted decimal notation or Hexadecimal string, colon-separated.
SourceIpV4Address	The IPv4address of sFlow source	N/A	String, dotted decimal notation or Hexadecimal string, colon-separated.
SourceIpV6Address	The IPv6address of sFlow source	N/A	String, dotted decimal notation or Hexadecimal string, colon-separated.

## SFLOW/sFlowSpecification

This table contains SFLOW specification information.

## XML structure

```

<SFLOW>
  <sFlowSpecification>
    <MaxCollectorID></MaxCollectorID>
    <MinSamplerRate></MinSamplerRate>
    <MaxSamplerRate></MaxSamplerRate>
    <DefaultSamplerMode></DefaultSamplerMode>
  </sFlowSpecification>
</SFLOW>

```

## Table description

Item	Description
Feature name	SFLOW
Table name	sFlowSpecification
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
MaxCollectorID	The maximum of CollectorID.	N/A	Unsigned integer.
MinSamplerRate	The minimum of samplerRate.	N/A	Unsigned integer.
MaxSamplerRate	The maximum of SamplerRate.	N/A	Unsigned integer.
DefaultSamplerMode	The default of SamplerMode	N/A	Unsigned integer.

## SFLOW/sFlowFlowInstance

This table contains sFlow flow instance configuration information.

## XML structure

```
<SFLOW>
  <sFlowFlowInstance>
    <FlowInstance>
      <IfIndex></IfIndex>
      <Instance></Instance>
      <CollectorID></CollectorID>
      <PacketSamplingRate></PacketSamplingRate>
      <SamplingMode></SamplingMode>
      <MaxHeaderSize></MaxHeaderSize>
      <Status></Status>
    </FlowInstance>
  </sFlowFlowInstance>
</SFLOW>
```

## Table description

Item	Description
Feature name	SFLOW
Table name	sFlowFlowInstance
Table type	Multi-instance table
Row name	FlowInstance
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Layer 2 Ethernet interfaces and Layer 3 Ethernet interfaces are supported.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Instance	sFlow instance ID	Index	Unsigned integer. Value range: 1 to 4.	N/A
CollectorID	Collector ID	N/A	Unsigned integer. Value range: 1 to MaxCollectorID.	The value of MaxCollectorID varies by device model.

Column name	Column description	Column type	Data type and restrictions	Remarks
PacketSamplingRate	Flow sampling rate	N/A	Unsigned integer. Value range: MinSamplerRate to MaxSamplerRate.	The values of MinSamplerRate and MaxSamplerRate vary by device model.
SamplingMode	Flow sampling mode	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>1—random.</li> <li>2—determine.</li> </ul>	The default value of SamplingMode varies by device model.
MaxHeaderSize	Maximum number of bytes that can be copied	N/A	Unsigned integer. Value range: 18 to 512. Default: 128	N/A

### Table description

Item	Description
Feature name	SmartMC
Table name	DeviceList
Table type	Multi-instance table
Row name	Device
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Id	Member device ID	Index	Unsigned integer Value range: 0 to 255	

MacAddress	Device MAC	NA	NA	Example: 84d9-3196-75ec
Role	Device role	NA	Enumeration: • 1—manager • 2—member	
Status	Device status	NA	Enumeration: • 1—normal • 2—offline	
HostName	Sysname	NA	String Length: 1 to 64 characters	
Model	Device model	NA	String Length: 1 to 32 characters	
Hop	Hop from member to manager	NA	Unsigned integer Value range: 0 to 255	
IpAddress	IP address of the device	NA	IpAddress IPv4: String, dotted decimal notation.	Example: 192.168.22.188
SerialNumber	Device serial number	NA	String Length: 1 to 64 characters	
SysVersion	System version	NA	String Length: 1 to 32 characters	
IrfCount	IRF member count	NA	Unsigned integer	
IsSnapshot	Save Topology	NA	Boolean: • true • false	

## SmartMC/LinkRelation

This table contains the relation of devices.

### XML structure

```

<SmartMC>
  <LinkRelation>
    <Relation>
      <SrcId></SrcId>
      <IfIndex></IfIndex>
      <SrcMAC></SrcMAC>

# SNMP

## SNMP/System

This table contains SNMP system information.

### XML structure

```
<SNMP>
  <System>
    <AgentStatus></AgentStatus>
    <Version>
      <V1></V1>
      <V2C></V2C>
      <V3></V3>
    </Version>
    <Location></Location>
    <Contact></Contact>  </System>
</SNMP>
```

### Table description

Item	Description
Feature name	SNMP
Table name	System
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AgentStatus	SNMP status	N/A	Enumeration: <ul style="list-style-type: none"><li>enable</li><li>disable</li></ul>	You must separately set AgentStatus to enable or disable SNMP.
V1	SNMP V1 status	N/A	Enumeration: <ul style="list-style-type: none"><li>enable</li><li>disable</li></ul> Default: disable.	N/A
V2C	SNMP V2C status	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
V3	SNMP V3 status	N/A	<ul style="list-style-type: none"> <li>enable</li> <li>disable</li> </ul> Default: disable.	N/A
Location	SNMP physical location information	N/A	Enumeration: <ul style="list-style-type: none"> <li>enable</li> <li>disable</li> </ul> Default: enable.	Using zero-length to restore to default value.
Contact	SNMP contact information	N/A	String. Length: 0 to 255 characters.	Using zero-length to restore to default value.

## SNMP/Agent

This table contains SNMP agent information.

### XML structure

```

<SNMP>
  <Agent>
    <LocalEngineId></LocalEngineId>
    <AgentUdpPort></AgentUdpPort>
    <PacketMaxSize></PacketMaxSize>
    <GetLog></GetLog>
    <SetLog></SetLog>
    <NotificationLog></NotificationLog>
  </Agent>
</SNMP>

```

### Table description

Item	Description
Feature name	SNMP
Table name	Agent
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalEngineId	Local engine ID of agent	N/A	Hex String. Length: 10 to 64 characters.	The number of characters must be even. All-zero and all-F strings are invalid.
AgentUdpPort	UDP port for receiving SNMP packets	N/A	Unsigned integer. Value range: 1 to 65535. Default: 161.	N/A
PacketMaxSize	Maximum size of packets that the agent can receive or send Unit: byte.	N/A	Unsigned integer. Value range: 484 to 17940. Default: 1500.	N/A
GetLog	Logging status of get.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul> Default: false	N/A
SetLog	Logging status of set.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul> Default: false	N/A
NotificationLog	Logging status of notification.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul> Default: false	N/A

## SNMP/Notification

This table contains SNMP notification information.

## XML structure

      <IPv6BasicACL>
        <Number></Number>
      </IPv6BasicACL>
      <IPv6AdvancedACL>
        <Number></Number>
      </IPv6AdvancedACL>
    </Community>
  </Communities>
</SNMP>

```

## Table description

Item	Description
Feature name	SNMP
Table name	Communities
Table type	Multi-instance table
Row name	Community
Restrictions	<p>The max number of tables depends on SNMP/Capabilities/MaxCommunities in data namespace.</p> <p>'Number' and 'Name' are two configuration ways.</p> <p>Only one way can take effect at the same time for both 'IPv4BasicACL', 'IPv4AdvancedACL', 'IPv6BasicACL' and 'IPv6AdvancedACL'.</p>
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Community name	Index	String. Length:1 to 32 characters.	N/A
Type	Community type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0 – read-only (Default)</li> <li>1 – read-write</li> <li>2 – use-RBAC</li> </ul>	<p>If specified '2 - use-RBAC', then a 'Role' must be included together while 'MIBView' is meaningless.</p> <p>For the other enumerations, 'Role' is meaningless, and must not be included.</p>
Role	User role name for the community.	N/A	String. Length:1 to 63 characters.	Applicable only when 'Type' is '2 - use-RBAC'.
MIBView	MIB view name available for the community.	N/A	String. Length:1 to 32 characters. Default: ViewDefault.	N/A
IPv4BasicACL	Specifies an IPv4 basic ACL to filter NMSs.	Data structure	Members include: Number	<p>If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent.</p> <p>If the specified ACL does not have any rules, no NMS in this</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
				community can access the SNMP agent.
Number	Number of IPv6 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv4AdvancedACL	Specifies an IPv4 advanced ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent.  If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.  IPv4BasicACL and IPv4AdvancedACL can't be configured simultaneously
Number	Number of IPv4 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
IPv6BasicACL	Specifies an IPv6 basic ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent.  If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv6 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv6AdvancedACL	Specifies an IPv6 advanced ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent.  If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.  IPv6BasicACL and IPv6AdvancedACL can't be configured simultaneously
Number	Number of IPv6 advanced ACL.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 3000 to 3999.	

## SNMP/Contexts

This table contains SNMP context information.

### XML structure

```
<SNMP>
  <Contexts>
    <Context>
      <Name></Name>
    </Context>
  </Contexts>
</SNMP>
```

### Table description

Item	Description
Feature name	SNMP
Table name	Contexts
Table type	Multi-instance table
Row name	Context
Restrictions	The max number of tables depends on SNMP/Capabilities/MaxContexts in data namespace.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Context name	Index	String. Length:1 to 32 characters.	<p>An NMS and an SNMP agent can communicate with each other if the following conditions exist:</p> <ul style="list-style-type: none"> <li>No SNMP context is configured on the NMS and the SNMP agent.</li> <li>The NMS and the SNMP agent use the same SNMP</li> </ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
context.				

## SNMP/CommunityMappings

This table contains SNMP communities information.

### XML structure

```

<SNMP>
  <CommunityMappings>
    <Mapping>
      <Community></Community>
      <Context></Context>
    </Mapping>
  </CommunityMappings>
</SNMP>

```

### Table description

Item	Description
Feature name	SNMP
Table name	CommunityMappings
Table type	Multi-instance table
Row name	Mapping
Restrictions	The max number of tables depends on SNMP/Capabilities/MaxCommunityMappings in data namespace.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Community	Community name	Index	String. Length: 1 to 32 characters.	An NMS and an SNMP agent communicate with community, this community can map to a context name of processes in system, and then the NMS can communicate with specified process.

Column name	Column description	Column type	Data type and restrictions	Remarks
Context	Context name	N/A	String. Length:1 to 32 characters.	This column must be specified.

## SNMP/MIBViews

This table contains SNMP MIB view information.

### XML structure

```

<SNMP>
  <MIBViews>
    <View>
      <Name></Name>
      <SubTree></SubTree>
      <Type></Type>
      <Mask></Mask>
    </View>
  </MIBViews>
</SNMP>

```

### Table description

Item	Description
Feature name	SNMP
Table name	MIBViews
Table type	Multi-instance table
Row name	View
Restrictions	<p>The system creates the <b>ViewDefault</b> view when the SNMP agent is enabled.</p> <p>In this default MIB view, all MIB objects in the <b>iso</b> subtree but the <b>snmpUsmMIB</b>, <b>snmpVacmMIB</b>, and <b>snmpModules.18</b> subtrees are accessible.</p> <p>The max number of tables depends on SNMP/Capabilities/MaxMIBViews in data namespace, including the 4 default MIB view records.</p> <p>After deleting, the default MIB view records will be restored after</p>

	the system reboots, and the max number of rows can be created do not change.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	View name.	Index	String. Length:1 to 32 characters.	N/A
SubTree	A MIB subtree by its root node's OID or object name.	Index	String or dotted decimal notation string. Length:1 to 255 characters.	Example for OID, 1.3.6.1.2.1.1. Example for object name, iso.  When creating a row with OIDs, the 'SubTree' will be transform to object name automatic if the whole MIB tree in the system contained these OIDs.
Type	Access type to any node in the subtree.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1 – included</li> <li>2 – excluded</li> </ul>	This column must be specified.
Mask	A MIB subtree mask	N/A	Hex String. Length: 1 to 32 characters.  Default: no value is specified.	N/A

## SNMP/Groups

This table contains SNMP group information.

## XML structure

```

<SNMP>
  <Groups>
    <Group>
      <Name></Name>
      <SecurityMode></SecurityMode>
      <SecurityLevel></SecurityLevel>
      <ReadView></ReadView>
      <WriteView></WriteView>
    </Group>
  </Groups>
</SNMP>

```

```

<NotifyView></NotifyView>
<IPv4BasicACL>

</IPv4AdvancedACL>
<IPv6BasicACL>
  <Number></Number>
</IPv6BasicACL>
<IPv6AdvancedACL>
  <Number></Number>
</IPv6AdvancedACL>
</Group>
</Groups>
</SNMP>

```

## Table description

Item	Description
Feature name	SNMP
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	<p>The max number of tables depends on SNMP/Capabilities/MaxGroups in data namespace.</p> <p>'Number' and 'Name' are two configuration ways.</p> <p>Only one way can take effect at the same time for both 'IPv4BasicACL', 'IPv4AdvancedACL', 'IPv6BasicACL' and 'IPv6AdvancedACL'.</p>
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Group name.	Index	String. <ul style="list-style-type: none"> <li>Length:1 to 32 characters.</li> </ul>	N/A
SecurityMode	The security model by this group is provided.	Index	Enumeration: <ul style="list-style-type: none"> <li>1 – v1</li> <li>2 – v2c</li> <li>3 – v3</li> </ul>	N/A
SecurityLevel	Security Level.	Index	Enumeration: <ul style="list-style-type: none"> <li>1 – noAuthNoPriv</li> </ul>	When 'SecurityMode' is '1 – v2' and '2 – v2c', the

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>2 – authNoPriv</li> <li>3 – authPriv</li> </ul>	applicable value is just '1 - noAuthNoPriv'.
ReadView	MIB view for read-only access.	N/A	String. Length:1 to 32 characters. Default: ViewDefault.	N/A
WriteView	MIB view for read and write access.	N/A	String. Length:1 to 32 characters. Default: no value is specified.	If no read and write view is specified, this group cannot set any MIB object.
NotifyView	MIB view for notify access.	N/A	String. Length:1 to 32 characters. Default: no value is specified.	The SNMP agent sends notifications to the NMS in this group only for the MIB objects included in the notify view.  If no notify view is specified, the SNMP agent does not send any notification to the NMS in this group.  If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent.
IPv4BasicACL	Specifies an IPv4 basic ACL to filter NMSs.	Data structure	Members include: Number	If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv4 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv4AdvancedACL	Specifies an IPv4 advanced ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent.  If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.  IPv4BasicACL and IPv4AdvancedACL can't be configured simultaneously.
Number	Number of IPv4 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6BasicACL	Specifies an IPv6 basic ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent.  If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv6 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv6AdvancedACL	Specifies an IPv6 advanced ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent.  If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.  IPv6BasicACL and IPv6AdvancedACL can't be configured simultaneously.
Number	Number of IPv6 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A

## SNMP/Users

This table contains SNMP user information.

### XML structure

```

<SNMP>
  <Users>
    <User>

Name	User name.	Index	String. Length:1 to 32 characters.	N/A
EngineId	SNMP engine ID.	Index	Hex String. Length: 0 or 10 to 64 characters.	<p>There are 2 ways to create a row:</p> <p>The first way is without engine ID for SNMPv3 local user or SNMPv1 and SNMPv2c user .</p> <p>In this way, the 'EngineId'and 'Adress'and 'VRF'must be zero-length.</p> <p>The second way is using the engine ID of remote SNMP manage.</p> <p>In this way, the 'EngineId' must be zero-length, then both the Remote/Address and Remode/VPN in this row must be included.</p> <p>The number of characters must be even.</p> <p>All-zero and all-F strings are invalid.</p>
Address	Address of the remote manage.	index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	<p>Only for remote SNMP manage.</p> <p>IPv4 example: 1.1.1.1 IPv6 example: 1:2:3:4:5:6:7:8</p>
VRF	VRF instance name.	index	String. Length: 0 to 31 characters.	<p>Only for remote SNMP manage</p> <p>VRF'must be zero-length if the remote manage is on the public network.</p>
GroupControl	Group control of this user.	Data structure	Members include: <ul style="list-style-type: none"> <li>Group</li> <li>Role</li> </ul>	'Group' and 'Role' can not be specified together.
Group	Group name.	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Role	User role name.	N/A	Length:1 to 32 characters. String.	Multi-instance.
SecurityParam	Security parameters of this user.	Data structure	Length:1 to 63 characters. Members include: <ul style="list-style-type: none"> <li>• AuthProtocol</li> <li>• AuthKey</li> <li>• PrivProtocol</li> <li>• PrivKey</li> </ul> Default: no value is specified.	Applicable only when 'SecurityMode' is '3 – v3'.  Applicable only when 'SecurityMode' is '3 – v3'.  'PrivProtocol' and 'PrivKey' must be specified with 'AuthProtocol' and 'AuthKey' together.
AuthProtocol	Authentication algorithm.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1 – MD5</li> <li>• 2 – SHA</li> </ul>	N/A
AuthKey	Authentication key.	N/A	String. Length:1 to 64 characters.	Plaintext key string. Must be specified with 'AuthProtocol'.
PrivProtocol	Encryption algorithm privacy.	N/A for	Enumeration: <ul style="list-style-type: none"> <li>• 1 – DES</li> <li>• 2 – AES</li> <li>• 3 – 3DES</li> <li>• 4 – AES192</li> <li>• 5 – AES256</li> </ul>	N/A
PrivKey	Privacy key.	N/A	String. Length:1 to 64 characters.	Plaintext key string. Must be specified with 'PrivProtocol'.
IPv4BasicACL	Specifies an IPv4 basic ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent.  If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv4 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv4AdvancedACL	Specifies an IPv4 advanced ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent.  If the specified ACL

Column name	Column description	Column type	Data type and restrictions	Remarks
				does not have any rules, no NMS in this community can access the SNMP agent.  IPv4BasicACL and IPv4AdvancedACL can't be configured simultaneously.
Number	Number of IPv4 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
IPv6BasicACL	Specifies an IPv6 basic ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent.  If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv6 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv6AdvancedACL	Specifies an IPv6 advanced ACL to filter NMSs.	Data structure	Members include: Number	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent.  If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.  IPv6BasicACL and IPv6AdvancedACL can't be configured simultaneously.
Number	Number of IPv6 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A

## SNMP/RemoteManages

This table contains SNMP remote manage information.

### XML structure

<SNMP>

```

<RemoteManages>
  <Manage>
    <Address></Address>
    <VRF></VRF>
    <EngineId></EngineId>
  </Manage>
</RemoteManages>
</SNMP>

```

## Table description

Item	Description
Feature name	SNMP
Table name	RemoteManages
Table type	Multi-instance table
Row name	Manage
Restrictions	The max number of tables depends on SNMP/Capabilities/MaxRemoteManages in data namespace.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Address	Address of the remote manage.	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1 IPv6 example: 1:2:3:4:5:6:7:8
VRF	VRF instance name.	Index	String. Length: 0 to 31 characters.	If the remote manage is on the public network, the length of characters is 0.
EngineId	SNMP engine ID of the remote manage.	N/A	Hex String. Length: 10 to 64 characters.	The number of characters must be even. All-zero and all-F strings are invalid.

## SNMP/TargetHosts

This table contains SNMP target host information.

## XML structure

```

<SNMP>

```

```

<TargetHosts>
  <UdpHost>
    <TargetType></TargetType>
    <SecurityName></SecurityName>
    <Address></Address>
    <VRF></VRF>
    <SecurityMode></SecurityMode>
    <SecurityLevel></SecurityLevel>
    <Port></Port>
    <AddressType></AddressType>
  </UdpHost>
</TargetHosts>
</SNMP>

```

## Table description

Item	Description
Feature name	SNMP
Table name	TargetHosts
Table type	Multi-instance table
Row name	UdpHost
Restrictions	The max number of tables depends on SNMP/Capabilities/MaxTargetHosts in data namespace.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TargetType	Notifications type.	Index	Enumeration: <ul style="list-style-type: none"> <li>1 – InformRequest</li> <li>2 – Trap</li> </ul>	N/A
SecurityName	Authentication parameter.	Index	String. Length: 1 to 32 characters.	For SNMPv3, 'SecurityName' specifies an username.
Address	Address of the remote manage.	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. HostName: Case-insensitive string, Length: 1 to 253 characters.	IPv4 example: 1.1.1.1 IPv6 example: 1:2:3:4:5:6:7:8 HostName example: www.example.com
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	If the remote manage is on the public network, the length of characters

Column name	Column description	Column type	Data type and restrictions	Remarks
				is 0.
SecurityMode	The Security model to be used when generating SNMP notifications.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1 – v1</li> <li>2 – v2c</li> <li>3 – v3</li> </ul>	If 'TargetType' is '1 – InformRequest', only '2 - v2c' and '3 - v3' are applicable.
SecurityLevel	Security level.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1 – noAuthNoPriv</li> <li>2 – authNoPriv</li> <li>3 – authPriv</li> </ul>	Applicable only when 'SecurityMode' is '3 – v3'.
Port	UDP port for SNMP notifications	N/A	Unsigned integer. Value range: 0 to 65535. Default: 162.	N/A
AddressType	Host name type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1 – IPv4 host name</li> <li>2 – IPv6 host name</li> </ul>	If this column is not included, the Address column is an IPv4 or IPv6 address.

# SNMP

## SNMP/System

This table contains SNMP system information.

### XML structure

```
<SNMP>
  <System>
    <AgentStatus></AgentStatus>
    <Version>
      <V1></V1>
      <V2C></V2C>
      <V3></V3>
    </Version>
    <Location></Location>
    <Contact></Contact>
  </System>
</SNMP>
```

### Table description

Item	Description
Feature name	SNMP
Table name	System
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AgentStatus	SNMP status	N/A	Enumeration: <ul style="list-style-type: none"><li>enable</li><li>disable</li></ul>	N/A
V1	SNMP V1 status	N/A	Enumeration: <ul style="list-style-type: none"><li>enable</li><li>disable</li></ul>	N/A
V2C	SNMP V2C status	N/A	Enumeration: <ul style="list-style-type: none"><li>enable</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
V3	SNMP V3 status	N/A	<ul style="list-style-type: none"> <li>• disable</li> </ul> Enumeration:	N/A
Location	SNMP physical location information	N/A	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul> String. Length:0 to 255 characters.	N/A
Contact	SNMP contact information	N/A	String. Length:0 to 255 characters.	N/A

## SNMP/Agent

This table contains SNMP agent information.

### XML structure

```

<SNMP>
  <Agent>
    <LocalEngineId></LocalEngineId>
    <AgentUdpPort></AgentUdpPort>
    <PacketMaxSize></PacketMaxSize>
    <GetLog></GetLog>
    <SetLog></SetLog>
    <NotificationLog></NotificationLog>
  </Agent>
</SNMP>

```

### Table description

Item	Description
Feature name	SNMP
Table name	Agent
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalEngineId	Local engine ID of agent	N/A	Hex String. Length: 10 to 64 characters.	The number of characters must be even. All-zero and all-F strings are invalid.
AgentUdpPort	UDP port for receiving SNMP packets	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
PacketMaxSize	Maximum size of packets that the agent can receive or send Unit: byte.	N/A	Unsigned integer. Value range: 484 to 17940.	N/A
GetLog	Logging status of get.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
SetLog	Logging status of set.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
NotificationLog	Logging status of notification.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A

## SNMP/Notification

This table contains SNMP notification information.

### XML structure

```

<SNMP>
  <Notification>
    <ColdStart></ColdStart>
    <WarmStart></WarmStart>
    <AuthenticationFailure></AuthenticationFailure>
    <QueueSize></QueueSize>
    <QueueLifeTime></QueueLifeTime>
    <TrapSource></TrapSource>
    <InformSource></InformSource>
    <EnableModules>
      <Module></Module>
    </EnableModules>
    <DisableModules>
      <Module></Module>
    </DisableModules>
  </Notification>
</SNMP>

```

## Table description

Item	Description
Feature name	SNMP
Table name	Notification
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ColdStart	Status of SNMP coldStart notification.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
WarmStart	Status of SNMP warmStart notification.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
AuthenticationFailure	Status of SNMP authenticationFailure notification.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
QueueSize	Notification queue size.	N/A	Unsigned integer. Value range: 1 to 1000.	N/A
QueueLifeTime	Lifetime of notifications in the SNMP notification queue. Unit: second.	N/A	Unsigned integer. Value range: 1 to 2592000.	N/A
TrapSource	An interface name, of which primary IP address as the source IP address for the traps.	N/A	String. Length: 2 to 47 characters.	Only the interface which can be assigned an IP address. (The interface type is layer 3 but not NULL or controller.)  The configuration will fail if the interface has not been created and will take effect only after a valid IP address is assigned to the specified interface.
InformSource	An interface name, of which primary IP address as the source IP address for the informRequests.	N/A	String. Length: 2 to 47 characters.	Only the interface which can be assigned an IP address. (The interface type is layer 3 but not NULL or controller.)

Column name	Column description	Column type	Data type and restrictions	Remarks
				The configuration will fail if the interface has not been created and will take effect only after a valid IP address is assigned to the specified interface.
EnableModules	Modules of notification function status is enable.	N/A	Members include: <ul style="list-style-type: none"> <li>Module</li> </ul>	For a module that has sub-modules, the status is <b>enable</b> if the notification function of one of its sub-modules is enabled.
Module	Module name.	N/A	String. Length: 1 to 127 characters.	N/A
DisableModules	Modules of notification function status is disable.	N/A	Members include: <ul style="list-style-type: none"> <li>Module</li> </ul>	For a module that has sub-modules, the status is <b>disable</b> if the notification function of any of its sub-modules is disabled.
Module	Module name.	N/A	String. Length: 1 to 127 characters.	N/A

## SNMP/Communities

This table contains SNMP community information.

### XML structure

```

<SNMP>
  <Communities>
    <Community>
      <Name></Name>
      <Type></Type>

    </IPv6BasicACL>
    <IPv6AdvancedACL>
        <Number></Number>
    </IPv6AdvancedACL>
    <Context></Context>
</Community>
</Communities>
</SNMP>

```

## Table description

Item	Description
Feature name	SNMP
Table name	Communities
Table type	Multi-instance table
Row name	Community
Restrictions	<p>The max number of tables depends on SNMP/Capabilities/MaxCommunities.</p> <p>'Number' and 'Name' are two configuration ways.</p> <p>Only one way can take effect at the same time for both 'IPv4BasicACL', 'IPv4AdvancedACL', 'IPv6BasicACL' and 'IPv6AdvancedACL'.</p>

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Community name	Index	String. Length:1 to 32 characters.	N/A
Type	Community type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0 – read-only</li> <li>1 – read-write</li> <li>2 – use-RBAC</li> </ul>	<p>If specified '2 - use-RBAC', then a 'Role' must be included together.</p> <p>For the other enumerations, 'Role' is meaningless, and must not be included.</p>
Role	User role name for the community.	N/A	String. Length:1 to 63 characters.	Applicable only when 'Type' is '2 - use-RBAC'.
MIBView	MIB view name available for the community.	N/A	String. Length:1 to 32 characters.	Applicable only when 'Type' is '0 – read-only' or '1 – read-write'.
IPv4BasicACL	Specifies an IPv4	Data	Members include:	If no ACL is specified, or

Column name	Column description	Column type	Data type and restrictions	Remarks
	basic ACL to filter NMSs.	structure	<ul style="list-style-type: none"> <li>Number</li> </ul>	<p>the specified ACL does not exist, all NMSs in this community can access the SNMP agent.</p> <p>If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.</p>
Number	Number of IPv4 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv4AdvancedACL	Specifies an IPv4 advanced ACL to filter NMSs.	Data structure	Members include: Number	<p>If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent.</p> <p>If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.</p>
Number	Number of IPv4 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
IPv6BasicACL	Specifies an IPv6 basic ACL to filter NMSs.	Data structure	Members include: <ul style="list-style-type: none"> <li>Number</li> </ul>	<p>If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent.</p> <p>If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.</p>
Number	Number of IPv6 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv6AdvancedACL	Specifies an IPv6 advanced ACL to filter NMSs.	Data structure	Members include: Number	<p>If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent.</p> <p>If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.</p>
Number	Number of IPv6 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Context	The context mapped to a community.	N/A	String. Length:1 to 32 characters.	If no mapping between an SNMP community and an SNMP context exists, this field is not included.

## SNMP/Contexts

This table contains SNMP context information.

### XML structure

```

<SNMP>
  <Contexts>
    <Context>
      <Name></Name>
    </Context>
  </Contexts>
</SNMP>

```

### Table description

Item	Description
Feature name	SNMP
Table name	Contexts
Table type	Multi-instance table
Row name	Context
Restrictions	The max number of tables depends on SNMP/Capabilities/MaxContexts.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Context name	Index	String. Length: 1 to 32 characters.	<p>An NMS and an SNMP agent can communicate with each other if the following conditions exist:</p> <ul style="list-style-type: none"> <li>No SNMP context is configured on the NMS and the SNMP agent.</li> <li>The NMS and the SNMP agent use</li> </ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
				the same SNMP context.

## SNMP/CommunityMappings

This table contains SNMP communities information.

### XML structure

```

<SNMP>
  <CommunityMappings>
    <Mapping>
      <Community></Community>
      <Context></Context>
    </Mapping>
  </CommunityMappings>
</SNMP>

```

### Table description

Item	Description
Feature name	SNMP
Table name	CommunityMappings
Table type	Multi-instance table
Row name	Mapping
Restrictions	The max number of tables depends on SNMP/Capabilities/MaxCommunityMappings.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Community	Community name	Index	String. Length: 1 to 32 characters.	An NMS and an SNMP agent communicate with community, this community can map to a context name of processes in system, then the NMS can communicate with specified process.
Context	Context name	N/A	String. Length:1 to 32 characters.	N/A

# SNMP/MIBViews

This table contains SNMP MIB view information.

## XML structure

```
<SNMP>
  <MIBViews>
    <View>
      <Name></Name>
      <SubTree></SubTree>
      <Type></Type>
      <Mask></Mask>
      <Status></Status>
    </View>
  </MIBViews>
</SNMP>
```

## Table description

Item	Description
Feature name	SNMP
Table name	MIBViews
Table type	Multi-instance table
Row name	View
Restrictions	<p>The system creates the <b>ViewDefault</b> view when the SNMP agent is enabled.</p> <p>In this default MIB view, all MIB objects in the <b>iso</b> subtree but the <b>snmpUsmMIB</b>, <b>snmpVacmMIB</b>, and <b>snmpModules.18</b> subtrees are accessible.</p> <p>The max number of tables depends on SNMP/Capabilities/MaxMIBViews, including the 4 default MIB view records.</p> <p>After deleting, the default MIB view records will be restored after the system reboots, and the max number of rows can be created do not change.</p>

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	View name.	Index	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 32 characters.	
SubTree	A MIB subtree by its root node's OID or object name.	Index	String or dotted decimal notation string. Length: 1 to 255 characters.	Example for OID, 1.3.6.1.2.1.1. Example for object name, iso.  When creating a row with OIDs, the 'SubTree' will be transform to object name automatic if the whole MIB tree in the system contained these OIDs.
Type	Access type to any node in the subtree.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1 – included</li> <li>2 – excluded</li> </ul>	N/A
Mask	A MIB subtree mask	N/A	Hex String. Length: 1 to 32 characters.	N/A
Status	Status of the MIB view.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1 – active</li> <li>2 - inactive</li> </ul>	Only SNMP set operation can temporarily disable a MIB view without deleting it.

## SNMP/Groups

This table contains SNMP group information.

### XML structure

```

<SNMP>
  <Groups>
    <Group>
      <Name></Name>
      <SecurityMode></SecurityMode>
      <SecurityLevel></SecurityLevel>
      <ReadView></ReadView>
      <WriteView></WriteView>
      <NotifyView></NotifyView>
      <IPv4BasicACL>
        <Number></Number>
      </IPv4BasicACL>
      <IPv4AdvancedACL>
        <Number></Number>
      </IPv4AdvancedACL>
    </Group>
  </Groups>
</SNMP>

```

```

</IPv4AdvancedACL>

  <Number></Number>
</IPv6BasicACL>
<IPv6AdvancedACL>
  <Number></Number>
</IPv6AdvancedACL>
</Group>
</Groups>
</SNMP>

```

## Table description

Item	Description
Feature name	SNMP
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	<p>The max number of tables depends on SNMP/Capabilities/MaxGroups.</p> <p>'Number' and 'Name' are two configuration ways.</p> <p>Only one way can take effect at the same time for both 'IPv4BasicACL', 'IPv4AdvancedACL', 'IPv6BasicACL' and 'IPv6AdvancedACL'.</p>

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Group name.	Index	String. Length:1 to 32 characters.	N/A
SecurityMode	The security model by this group is provided.	Index	Enumeration: <ul style="list-style-type: none"> <li>1 – v1</li> <li>2 – v2c</li> <li>3 – v3</li> </ul>	N/A
SecurityLevel	Security Level.	Index	Enumeration: <ul style="list-style-type: none"> <li>1 – noAuthNoPriv</li> <li>2 – authNoPriv</li> <li>3 – authPriv</li> </ul>	When 'SecurityMode' is '1 – v2' and '2 – v2c', the applicable value is just '1 - noAuthNoPriv'.
ReadView	MIB view for read-only access.	N/A	String. Length:1 to 32 characters.	N/A
WriteView	MIB view for read and write access.	N/A	String. Length:1 to 32	If no read and write view is specified, this group cannot set any MIB

Column name	Column description	Column type	Data type and restrictions	Remarks
NotifyView	MIB view for notify access.	N/A	characters. String. Length:1 to 32 characters.	object.  The SNMP agent sends notifications to the NMS in this group only for the MIB objects included in the notify view.  If no notify view is specified, the SNMP agent does not send any notification to the NMS in this group.  If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent.
IPv4BasicACL	Specifies an IPv4 basic ACL to filter NMSs.	Data structure	Members include: • Number	If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv4 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A  If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent.
IPv4AdvancedACL	Specifies an IPv4 advanced ACL to filter NMSs.	Data structure	Members include: Number	If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv4 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A  If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent.
IPv6BasicACL	Specifies an IPv6 basic ACL to filter NMSs.	Data structure	Members include: • Number	If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv6 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv6AdvancedACL	Specifies an IPv6 advanced ACL to	Data structure	Members include:	If no ACL is specified, or the specified ACL does

Column name	Column description	Column type	Data type and restrictions	Remarks
	filter NMSs.		Number	not exist, all NMSs in this community can access the SNMP agent.  If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv6 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A

## SNMP/Users

This table contains SNMP user information.

## Table description

Item	Description
Feature name	SNMP
Table name	Users
Table type	Multi-instance table
Row name	User
Restrictions	<p>The max number of tables depends on SNMP/Capabilities/MaxUsers.</p> <p>'Group' and 'Role' are two configuration ways. Only one way can take effect at the same time.</p> <p>'Number' and 'Name' are two configuration ways. Only one way can take effect at the same time for both 'IPv4BasicACL', 'IPv4AdvancedACL', 'IPv6BasicACL' and 'IPv6AdvancedACL'.</p>

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SecurityMode	The security model by this user is provided.	Index	Enumeration: <ul style="list-style-type: none"> <li>1 – v1</li> <li>2 – v2c</li> <li>3 – v3</li> </ul>	N/A
Name	User name.	Index	String. Length:1 to 32 characters.	N/A
EngineId	SNMP engine ID.	Index	Hex String. Length: 0 or 10 to 64 characters.	<p>There are 2 ways to create a row:</p> <p>The first way is without engine ID for SNMPv3 local user or SNMPv1 and SNMPv2c user .</p> <p>In this way, the 'EngineId'and 'Adress'and 'VRF'must be zero-length.</p> <p>The second way is using</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
				the engine ID of remote SNMP manage.  In this way, the 'EngineId' 'Address' and 'VPN' in this row must be included.
				The number of characters must be even.  All-zero and all-F strings are invalid.
Address	Address of the remote manage.	index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	Only for remote SNMP manage.  IPv4 example: 1.1.1.1 IPv6 example: 1:2:3:4:5:6:7:8
VRF	VRF instance name.	index	String. Length: 0 to 31 characters.	Only for remote SNMP manage  VRF must be zero-length if the remote manage is on the public network.
GroupControl	Group control of this user.	Data structure	Members include: • Group • Role	'Group' and 'Role' can not be specified together.
Group	Group name.	N/A	String. Length: 1 to 32 characters.	N/A
Role	User role name.	N/A	String. Length: 1 to 63 characters.	Multi-instance.
SecurityParam	Security parameters of this user.	Data structure	Members include: • AuthProtocol • AuthKey • PrivProtocol • PrivKey	Applicable only when 'SecurityMode' is '3 - v3'.  Applicable only when 'SecurityMode' is '3 - v3'.  'PrivProtocol' and 'PrivKey' must be specified with 'AuthProtocol' and 'AuthKey' together.
AuthProtocol	Authentication algorithm.	N/A	Enumeration: • 1 - MD5 • 2 - SHA	N/A
AuthKey	Authentication key.	N/A	String. Length: 1 to 64 characters.	Plaintext key string.  Must be specified with 'AuthProtocol'.
PrivProtocol	Encryption	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	algorithm for privacy.		<ul style="list-style-type: none"> <li>1 – DES</li> <li>2 – AES</li> <li>3 – 3DES</li> <li>4 – AES192</li> <li>5 – AES256</li> </ul>	
PrivKey	Privacy key.	N/A	String. Length:1 to 64 characters.	Plaintext key string. Must be specified with 'PrivProtocol'.  If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent.
IPv4BasicACL	Specifies an IPv4 basic ACL to filter NMSs.	Data structure	Members include: <ul style="list-style-type: none"> <li>Number</li> </ul>	If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv4 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv4AdvancedACL	Specifies an IPv4 advanced ACL to filter NMSs.	Data structure	Members include: <ul style="list-style-type: none"> <li>Number</li> </ul>	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent. If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv4 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
IPv6BasicACL	Specifies an IPv6 basic ACL to filter NMSs.	Data structure	Members include: <ul style="list-style-type: none"> <li>Number</li> </ul>	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can access the SNMP agent. If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv6 basic ACL.	N/A	Unsigned integer. Value range: 2000 to 2999.	N/A
IPv6AdvancedACL	Specifies an IPv6 advanced ACL to filter NMSs.	Data structure	Members include: <ul style="list-style-type: none"> <li>Number</li> </ul>	If no ACL is specified, or the specified ACL does not exist, all NMSs in this community can

Column name	Column description	Column type	Data type and restrictions	Remarks
				access the SNMP agent. If the specified ACL does not have any rules, no NMS in this community can access the SNMP agent.
Number	Number of IPv6 advanced ACL.	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
Status	Status of the user.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1 – active</li> <li>2 - inactive</li> </ul>	Only SNMP set operation can temporarily disable a user without deleting it.

## SNMP/RemoteManages

This table contains SNMP remote manage information.

### XML structure

```

<SNMP>
  <RemoteManages>
    <Manage>
      <Address></Address>
      <VRF></VRF>
      <EngineId></EngineId>
    </Manage>
  </RemoteManages>
</SNMP>

```

### Table description

Item	Description
Feature name	SNMP
Table name	RemoteManages
Table type	Multi-instance table
Row name	Manage
Restrictions	The max number of tables depends on SNMP/Capabilities/MaxRemoteManages.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Address	Address of the remote manage.	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1 IPv6 example: 1:2:3:4:5:6:7:8
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	If the remote manage is on the public network, the length of characters is 0.
EngineId	SNMP engine ID of the remote manage.	N/A	Hex String. Length: 10 to 64 characters.	The number of characters must be even. All-zero and all-F strings are invalid.

## SNMP/TargetHosts

This table contains SNMP target host information.

## XML structure

```

<SNMP>
  <TargetHosts>
    <UdpHost>
      <TargetType></TargetType>
      <SecurityName></SecurityName>
      <Address></Address>
      <VRF></VRF>
      <SecurityMode></SecurityMode>
      <SecurityLevel></SecurityLevel>
      <Port></Port>
      <AddressType></AddressType>
    </UdpHost>
  </TargetHosts>
</SNMP>

```

## Table description

Item	Description
Feature name	SNMP
Table name	TargetHosts
Table type	Multi-instance table

Row name	UdpHost
Restrictions	The max number of tables depends on SNMP/Capabilities/MaxTargetHosts.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TargetType	Notifications type.	Index	Enumeration: <ul style="list-style-type: none"> <li>1 – InformRequest</li> <li>2 – Trap</li> </ul>	N/A
SecurityName	Authentication parameter.	Index	String. Length: 1 to 32 characters.	For SNMPv3, 'SecurityName' specifies an username.
Address	Address of the remote manage.	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. HostName: Case-insensitive string, Length: 1 to 253 characters.	IPv4 example: 1.1.1.1 IPv6 example: 1:2:3:4:5:6:7:8 HostName example: www.example.com
VRF	VRF instance name.	Index	String. Length: 0 to 31 characters.	If the remote manage is on the public network, the length of characters is 0.
SecurityMode	The Security model to be used when generating SNMP notifications.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1 – v1</li> <li>2 – v2c</li> <li>3 – v3</li> </ul>	If 'TargetType' is '1 – InformRequest', only '2 – v2c' and '3 – v3' are applicable.
SecurityLevel	Security Level.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1 – noAuthNoPriv</li> <li>2 – authNoPriv</li> <li>3 – authPriv</li> </ul>	Applicable only when 'SecurityMode' is '3 – v3'.
Port	UDP port for SNMP notifications	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
AddressType	Host name type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1 – IPv4 host name</li> <li>2 – IPv6 host name</li> </ul>	If this column is not included, the Address column is an IPv4 or IPv6 address.

## SNMP/Capabilities

This table contains capabilities information.

## XML structure

```
<SNMP>
  <Capabilities>
    <MaxCommunities></MaxCommunities>
    <MaxContexts></MaxContexts>
    <MaxCommunityMappings></MaxCommunityMappings>
    <MaxMIBViews></MaxMIBViews>
    <MaxGroups></MaxGroups>
    <MaxUsers></MaxUsers>
    <MaxRemoteManages></MaxRemoteManages>
    <MaxTargetHosts></MaxTargetHosts>
    <MaxV3Roles></MaxV3Roles>
  </Capabilities>
</SNMP>
```

## Table description

Item	Description
Feature name	SNMP
Table name	Capabilities
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxCommunities	Maximum number of communities.	N/A	Unsigned integer.	N/A
MaxContexts	Maximum number of contexts.	N/A	Unsigned integer.	N/A
MaxCommunityMappings	Maximum number of community to context mappings.	N/A	Unsigned integer.	Each community can only mapping to one context.
MaxMIBViews	Maximum number of MIB views.	N/A	Unsigned integer.	N/A
MaxGroups	Maximum number of groups.	N/A	Unsigned integer.	N/A
MaxUsers	Maximum number of users.	N/A	Unsigned integer.	N/A
MaxRemoteManages	Maximum number of remote manages.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxTargetHosts	Maximum number of target-hosts.	N/A	Unsigned integer.	N/A
MaxV3Roles	Maximum number of roles for one SNMPv3 user.	N/A	Unsigned integer.	Each SNMPv3 user can support multi-roles.

## SNMP/Statistics

This table contains SNMP statistics information.

### XML structure

```

## Table description

Item	Description
Feature name	SNMP
Table name	Statistics
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
InPkts	The total number of Messages delivered to the SNMP entity from the transport service.	N/A	Unsigned integer.	N/A
OutPkts	The total number of SNMP Messages which were passed from the SNMP protocol entity to the transport service.	N/A	Unsigned integer.	N/A
InBadVersions	The total number of SNMP Messages which were delivered to the SNMP protocol entity and were for an unsupported SNMP version	N/A	Unsigned integer.	N/A
InBadCommunityNames	The total number of SNMP Messages delivered to the SNMP protocol entity which used a SNMP community name not known to said entity.	N/A	Unsigned integer.	N/A
InBadCommunityUses	The total number of SNMP Messages delivered to the SNMP protocol entity which represented an	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	SNMP operation which was not allowed by the SNMP community named in the Message.			
InASNParseErrors	The total number of ASN.1 or BER errors encountered by the SNMP protocol entity when decoding received SNMP Messages.	N/A	Unsigned integer.	N/A
InTooBig	The total number of SNMP PDUs which were delivered to the SNMP protocol entity and for which the value of the error-status field is 'tooBig'.	N/A	Unsigned integer.	N/A
InNoSuchNames	The total number of SNMP PDUs which were delivered to the SNMP protocol entity and for which the value of the error-status field is 'noSuchName'.	N/A	Unsigned integer.	N/A
InBadValues	The total number of SNMP PDUs which were delivered to the SNMP protocol entity and for which the value of the error-status field is 'badValue'.	N/A	Unsigned integer.	N/A
InReadOnly	The total number valid SNMP PDUs which were delivered to the SNMP protocol entity and for which the value of the error-status field is 'readOnly'.	N/A	Unsigned integer.	N/A
InGenErrs	The total number of SNMP PDUs which were delivered to the SNMP protocol entity and for which the value of	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	the error-status field is 'genErr'			
InTotalReqVars	The total number of MIB objects which have been retrieved successfully by the SNMP protocol entity as the result of receiving valid SNMP Get-Request and Get-Next PDUs.	N/A	Unsigned integer.	N/A
InTotalSetVars	The total number of MIB objects which have been altered successfully by the SNMP protocol entity as the result of receiving valid SNMP Set-Request PDUs.	N/A	Unsigned integer.	N/A
InGetRequests	The total number of SNMP Get-Request PDUs which have been accepted and processed by the SNMP protocol entity.	N/A	Unsigned integer.	N/A
InGetNexts	The total number of SNMP Get-Next PDUs which have been accepted and processed by the SNMP protocol entity.	N/A	Unsigned integer.	N/A
InSetRequests	The total number of SNMP Set-Request PDUs which have been accepted and processed by the SNMP protocol entity.	N/A	Unsigned integer.	N/A
InGetResponses	The total number of SNMP Get-Response PDUs which have been accepted and processed by the SNMP protocol entity.	N/A	Unsigned integer.	N/A
InTraps	The total number	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	of SNMP Trap PDUs which have been accepted and processed by the SNMP protocol entity.			
OutTooBigs	The total number of SNMP PDUs which were generated by the SNMP protocol entity and for which the value of the error-status field is 'tooBig.'	N/A	Unsigned integer.	N/A
OutNoSuchNames	The total number of SNMP PDUs which were generated by the SNMP protocol entity and for which the value of the error-status is 'noSuchName'.	N/A	Unsigned integer.	N/A
OutBadValues	The total number of SNMP PDUs which were generated by the SNMP protocol entity and for which the value of the error-status field is 'badValue'.	N/A	Unsigned integer.	N/A
OutGenErrs	The total number of SNMP PDUs which were generated by the SNMP protocol entity and for which the value of the error-status field is 'genErr'.	N/A	Unsigned integer.	N/A
OutGetRequests	The total number of SNMP Get-Request PDUs which have been generated by the SNMP protocol entity.	N/A	Unsigned integer.	N/A
OutGetNexts	The total number of SNMP Get-Next PDUs which have been generated by the SNMP protocol entity.	N/A	Unsigned integer.	N/A
OutSetRequests	The total number of SNMP Set-Request	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	PDU's which have been generated by the SNMP protocol entity.			
OutGetResponses	The total number of SNMP Get-Response PDU's which have been generated by the SNMP protocol entity.	N/A	Unsigned integer.	N/A
OutTraps	The total number of SNMP Trap PDU's which have been generated by the SNMP protocol entity.	N/A	Unsigned integer.	N/A
SilentDrops	The total number of Confirmed Class PDU's (such as GetRequest-PDU's, GetNextRequest-PDU's, GetBulkRequest-PDU's, SetRequest-PDU's, and InformRequest-PDU's) delivered to the SNMP entity which were silently dropped because the size of a reply containing an alternate Response Class PDU (such as a Response-PDU) with an empty variable-bindings field was greater than either a local constraint or the maximum message size associated with the originator of the request.	N/A	Unsigned integer.	N/A

# SNMP

## SNMP/System

Message	Explanation
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。
Operation failed. Please separately set the AgentStatus column to Disable in the System table. 操作失败。请单独设置System表的AgentStatus列为Disable以关闭SNMP功能。	Disable snmp first. 请先去使能 SNMP 服务。

## SNMP/Agent

Message	Explanation
The number of hexadecimal characters must be even for an engine ID. 引擎ID的16进制字符个数必须是偶数。	Engine ID set failed. 引擎 ID 的 16 进制字符个数必须是偶数。
The engine ID can't be all 0s or all Fs. 引擎ID不能为零或者全F。	Engine ID set failed. 引擎 ID 不能为零或者全 F。
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

## SNMP/Notification

Message	Explanation
The interface has no IP address now. Please configure an IP address for the interface first. 接口未设置IP 地址。 请先指定接口的IP地址。	Set the interface for trap succeed, but the interface has no IP address now. 接口未设置 IP 地址。 请设置接口的 IP 地址。
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

# SNMP/Communities

Message	Explanation
Column Role can't be deleted for RBAC-based SNMP communities. 基于RBAC方式配置的团体，不能删除Role列。	'Delete' operation failed. 基于 RBAC 方式配置的团体，不能删除 Role 列。
Column Role must be specified for RBAC-based SNMP communities. 基于RBAC方式配置的团体，必须指定Role列。	SNMP communities of VACM convert to RBAC-based failed. Please specify 'Role'. 团体类型由 VACM 切换为 RBAC，请先指定团体角色。
When community type is read-only or read-write, column Role is invalid and can't be configured. 基于VACM方式配置团体时，Role列无效，且不能指定该列的值。	Column 'Role' is invalid for communities of VACM. VACM 类型团体，不需要配置 'Role'。
When community type is user-RBAC, column MIBView is invalid and can't be configured. 基于RBAC方式配置团体时，MIBView列无效，且不能指定该列的值。	Column 'MIBView' is invalid for communities of RBAC. RBAC 类型团体，不需要配置 'MIBView'。
Operation failed. The number of communities reached the upper limit. 创建的community数量已达到最大值。	Create community failed. 创建的 community 数量已达到最大值。
IPv4BasicACL and IPv4AdvancedACL can't be configured together. IPv4BasicACL和IPv4AdvancedACL不能同时配置。	Create or replace community failed. IPv4BasicACL 和 IPv4AdvancedACL 不能同时配置。
IPv6BasicACL and IPv6AdvancedACL can't be configured together. IPv6BasicACL和IPv6AdvancedACL不能同时配置。	Create or replace community failed. IPv6BasicACL 和 IPv6AdvancedACL 不能同时配置。
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

# SNMP/Contexts

Message	Explanation
Operation failed. The number of contexts reached the upper limit. 创建的上下文数量已达到上限最大值。	Failed to create context. 创建的上下文数量已达到上限最大值。
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

# SNMP/CommunityMappings

Message	Explanation
Column Context can't be deleted. Context列不能删除。	Can't delete the default context. Context 列不能删除。
Operation failed.The number of maps reached the upper limit. 创建的community maps数量已达到最大值。	Create community map failed. 创建的 community maps 数量已达到最大值。
Value for column Context must be specified. 必须指定Context列的值。	Create community map failed. 必须指定 Context 列的值。
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

# SNMP/MIBViews

Message	Explanation
Value for column Type must be specified. 必须指定Type列的值。	MIB view type must be specified. 必须指定 Type 列的值。
Operation failed. The number of user-defined MIB views reached the upper limit. 用户定义的MIB视图数量已达到最大值。	Failed to create MIB-view. 用户定义的 MIB 视图数量已达到最大值。
Invalid MIB sub-tree node name or OID. 指定的MIB节点名或OID无效。	Please specify 'SubTree' value in the message. 指定的 MIB 节点名或 OID 无效。
The number of hexadecimal characters must be even for a subtree mask. 子树掩码的16进制字符个数必须是偶数。	Failed to set MIB subtree mask. 子树掩码的 16 进制字符个数必须是偶数。
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

# SNMP/Groups

Message	Explanation
Security model of an SNMPv1 or SNMPv2c group can only be noAuthNoPriv. SNMPv1和SNMPv2c组不支持认证和加密。	Failed to set 'SecurityLevel'. Please set 'SecurityLevel' to 2. SNMPv1 和 SNMPv2c 组不支持认证和加密。
Operation failed.The number of groups reached the upper limit. 创建的group数量已达到最大值。	Create group failed. 创建的 group 数量已达到最大值。

Columns Role and Mibviews can't be configured together. Role列和MIBView列不能同时配置。	Create group failed. Role 列和 MIBView 列不能同时配置。
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

## SNMP/Users

Message	Explanation
The engine ID can't be all 0s or all Fs. 引擎ID不能为全零或者全F。	Invalid engine ID. 引擎 ID 不能为全零或者全 F。
Operation failed.The number of users reached the upper limit. 创建的用户数量已达到最大值。	Failed create new user. 创建的用户数量已达到最大值。
Can't find the remote engine ID specified by the IP address. 未找到该IP地址对应的远端引擎ID。	Failed to get, merge, replace or delete the remote engine. 未找到该 IP 地址对应的远端引擎 ID。
The last user role can't be deleted. 最后一个用户角色不能删除。	The last user role can't be deleted. 最后一个用户角色不能删除。
Operation failed. The number of user role reached the upper limit. 添加的用户角色数量已达到最大值。	Failed to add new user role. 添加的用户角色数量已达到最大值。
Value for column Group or Role must be specified. 必须指定Group或者Role列的值。	Parameters not complete in the message. 必须指定 Group 或者 Role 列的值。
Values for columns AuthProtocol and AuthKey must be specified together. 必须同时指定AuthProtocol和AuthKey的值。	'AuthProtocol' and 'AuthKey' must be specified together or not together. 必须同时指定 AuthProtocol 和 AuthKey 的值。
Values for columns PrivProtocol and PrivKey must be specified together. 必须同时指定PrivProtocol和PrivKey的值。	'PrivProtocol' and 'PrivKey' must be specified together or not together. 必须同时指定 PrivProtocol 和 PrivKey 的值。
When columns PrivProtocol and PrivKey are issued, columns AuthProtocol and AuthKey must be issued too. 当下发了PrivProtocol和PrivKey列, 必须同时下发 AuthProtocol和AuthKey列。	'AuthProtocol' and 'AuthKey', 'PrivProtocol' and 'PrivKey' must be specified together or not together. 当下发了 PrivProtocol 和 PrivKey 列, 必须同时下发 AuthProtocol 和 AuthKey 列。
Column Group or Role can't be deleted. 不能删除Group或者Role列。	Group control doesn't support delete operation. 不能删除 Group 或者 Role 列。
The engine ID mismatch the remote SNMP entity. 引擎ID和远端SNMP实体不匹配。	The engine ID mismatch with 'VPN name' and 'Address'. 引擎 ID 和远端 SNMP 实体不匹配。
Invalid user. 无效用户。	The engine ID mismatch with 'VPN name' and 'Address'. 引擎 ID 和 'VPN name'、'Address' 不匹配, 无效用户。
Value for column Group must be specified.	Group must be specified in 'create' and 'replace' operation.

必须指定Group列的值。	缺少 group 值，操作失败。
Column Group can't be deleted. 不能删除Group列。	Users of SNMPv1 and SNMPv2c can't delete group column. SNMPv1 和 SNMPv2c 用户不能删除 group 列。
EngineID, IP address and VRF are invalid for an SNMPv1 or SNMPv2c user. 对SNMPv1和SNMPv2c引擎ID,IP地址和VRF无效。	SNMPv1 or SNMPv2c user doesn't need 'EngineID', 'IP address' and 'VRF'. SNMPv1 和 SNMPv2c 用户没有引擎 ID,IP 地址和 VRF 等属性。
User role, authentication and privacy are all invalid for an SNMPv1 or SNMPv2c user. 对SNMPv1和SNMPv2c用户,用户角色,认证和加密都是无效的。	'User role', 'authentication' and 'privacy' are valid for SNMPv3 user. 用户角色,认证和加密是 SNMPv3 新增属性,对 SNMPv1 和 SNMPv2c 用户无效。
One user only support one Group. 一个用户仅支持一个组。	One user only support one Group. 一个用户仅支持一个组。
Values for columns AuthProtocol and AuthKey must be deleted together. 必须同时删除AuthProtocol和AuthKey的值。	'AuthProtocol' and 'AuthKey' can't be deleted separately. 必须同时删除 AuthProtocol 和 AuthKey 的值。
Values for columns PrivProtocol and PrivKey must be deleted together. 必须同时删除PrivProtocol和AuthKey的值。	'PrivProtocol' and 'PrivKey' can't be deleted separately. 必须同时删除 PrivProtocol 和 AuthKey 的值。
When columns AuthProtocol and AuthKey are deleted, PrivProtocol and PrivKey columns must be deleted too. 当删除AuthProtocol和AuthKey列,, 必须同时删除 PrivProtocol和PrivKey列。	'AuthProtocol', 'AuthKey' and 'PrivProtocol', 'PrivKey' can't be deleted separately. 当删除 AuthProtocol 和 AuthKey 列,, 必须同时删除 PrivProtocol 和 PrivKey 列。
Values for indexes EngineId or Address must be assigned for an SNMPv3 remote user. SNMPV3远端用户必须指定引擎ID或IP地址。	Please specify 'EngineId' and 'Address' for SNMPv3 remote users. SNMPV3 远端用户必须指定引擎 ID 或 IP 地址。
The shared key must contain uppercase letters, lowercase letters, digits, and symbols. 公钥必须包含大小写字母,数字和符号。	Set key for user of SNMPv3 failed. 公钥必须同时包含大小写字母,数字和符号。
The shared key must contain at least 15 characters. 公钥至少包含15个字符。	Set key for user of SNMPv3 failed. 公钥至少包含 15 个字符,设置密码失败。
Only users with the network-admin user role can configure SNMPv3 features. 只能具有network-admin 角色的用户才能配置 SNMPv3功能。	Set SNMPv3 feature failed. network-admin 角色的用户才能配置 SNMPv3 功能。
Value for index Address must be assigned for an SNMPv3 remote user. SNMPV3远端用户必须指定IP地址。	Value for index Address must be assigned for an SNMPv3 remote user. SNMPV3 远端用户必须指定 IP 地址。
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为 Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

# SNMP/RemoteManages

Message	Explanation
Operation failed. The number of configured remote engines reached the upper limit. 可配置的远端引擎数量已达到最大值。	Failed to set new remote engine. 可配置的远端引擎数量已达到最大值。
Invalid IP address for the remote SNMP entity. 远端SNMP实体的IP地址无效。	Failed to set new remote engine or delete remote engine. 远端 SNMP 实体的 IP 地址无效。
When Column VPN is issued, Column Address must be issued too. 当下发了VPN列，Address列必须和VPN列同时下发。	'VPN' and 'Address' must be specified together or not together. 当下发了 VPN 列，Address 列必须和 VPN 列同时下发。
Column Address or Column VPN can't be changed. Address或者VPN列不能被修改。	'VPN' and 'Address' can't be changed. Address 或者 VPN 列不能被修改或删除。
Column Address or VPN can't be deleted. Address或者VPN列不能被删除。	'VPN' and 'Address' can't be deleted. Address 或者 VPN 列不能被删除或修改。
Value for column EngineId must be specified. 必须指定引擎ID。	Please specify the engine ID. 引擎 ID 是必配属性，请指定。
Column EngineId can't be deleted. 引擎ID列不能删除。	Can't delete the default engine ID. 引擎 ID 是必配属性，不能删除。
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

# SNMP/TargetHosts

Message	Explanation
Value for column SecurityMode must be specified. 必须指定SecurityMode列的值。	The security model is used when generating SNMP notifications. SecurityMode 是必配属性，请指定。
Operation failed. The number of specified target hosts reached the upper limit. 指定的目标主机数量已达到最大值。	Failed to create target host. 指定的目标主机数量已达到最大值。
Invalid IP address for an SNMP target host. 无效的目标主机IP地址。	Invalid IP address in message. 无效的目标主机 IP 地址。
Column SecurityMode can't be deleted. SecurityMode列不能删除。	Please specify the security model to be deleted. SecurityMode 是必配属性，不能删除。
An SNMPv1 or SNMPv2c targethost can only receive notifications as traps. SNMPv1日志主机只能接收trap报文。	An SNMPv1 or SNMPv2c targethost can't receive notifications as inform. SNMPv1 日志主机只能接收 trap 报文。
Invalid target host IP address. 无效的目标主机IP地址。	Please confirm the IP address of the target host. 无效的目标主机 IP 地址。

Invalid host name. 无效的目标主机名。	Please confirm the valid host name. 无效的目标主机名。
Column AddressType can't be deleted. 不能删除AddressType列。	'AddressType' shows address is host name or IPv4, IPv6 address. 'AddressType' can't be deleted. 'AddressType'是必配属性，不能删除。
Value for column AddressType must be specified. 必须指定AddressType列的值。	'AddressType' must be specified for replace operation. 'AddressType'是必配属性，请指定。
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

## SNMP/Statistics

Message	Explanation
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

## SNMP/NotificationStatus

Message	Explanation
Operation failed. Please separately set the AgentStatus column to Enable in the System table. 操作失败。请单独设置System表的AgentStatus列为Enable以使能SNMP。	Enable snmp first. 请先使能 SNMP 服务。

## SSH/Server

This table contains information about global SSH Server functions.

### XML structure

```
<SSH>
  <Server>
    <STelnetState></STelnetState>
    <SFTPState></SFTPState>
    <SCPState></SCPState>
    <DSCP></DSCP>
    <DSCP6></DSCP6>
    <Ipv4ACLNum></Ipv4ACLNum>
    <Ipv6ACLNum></Ipv6ACLNum>
    <SFTPIidleTimeout></SFTPIidleTimeout>
    <RekeyInterval></RekeyInterval>
    <AuthRetries></AuthRetries>
    <AuthTimeout></AuthTimeout>
    <CompatibleSSH1XState></CompatibleSSH1XState>
  </Server>
</SSH>
```

### Table description

Item	Description
Feature name	SSH
Table name	Server
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global SSH Server functions.
Support for row creation and deletion	No

# Columns

Column name	Column description	Column type	Data type and restrictions
STelnetState	Global STelnet Server feature	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables STelnet Server.</li> <li><b>false</b>—Disables STelnet Server(default).</li> </ul>
SFTPState	Global SFTP Server feature	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables SFTP Server.</li> <li><b>false</b>—Disables SFTP Server(default).</li> </ul>
SCPState	Global SCP Server feature	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables SCP Server.</li> <li><b>false</b>—Disables SCP Server(default).</li> </ul>
DSCP	Set the IPv4 Differentiated Services Codepoint (DSCP) value	N/A	Unsigned integer. Value range: 0 to 63. Default value:48
DSCP6	Set the IPv6 Differentiated Services Codepoint (DSCP) value	N/A	Unsigned integer. Value range: 0 to 63. Default value:48.
Ipv4ACLNum	Specify an IPv4 ACL used to control the SSH clients' access	N/A	Unsigned integer. Value range: 2000 to 4999.
Ipv6ACLNum	Specify an IPv6 ACL used to control the SSH clients' access	N/A	Unsigned integer. Value range: 2000 to 4999.
SFTPIidleTimeout	Specify SFTP timeout value(minute)	N/A	Unsigned integer. Value range: 1 to 35791. Default value: 10.
RekeyInterval	Specify the SSH server key rekey-interval(hour)	N/A	Unsigned integer. Value range: 1 to 24.
AuthRetries	Specify authentication retry times	N/A	Unsigned integer. Value range: 1 to 5. Default value: 3.
AuthTimeout	Specify authentication timeout(second)	N/A	Unsigned integer. Value range: 1 to 120. Default value: 60
CompatibleSSH1XState	The SSH Server compatible ssh1x	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables SSH Server compatible ssh1x (default).</li> <li><b>false</b>—Disables SSH Server compatible ssh1x.</li> </ul>

    <SFTPIidleTimeout></SFTPIidleTimeout>
    <RekeyInterval></RekeyInterval>
    <AuthRetries></AuthRetries>
    <AuthTimeout></AuthTimeout>
    <CompatibleSSH1XState></CompatibleSSH1XState>
  </Server>
</SSH>
```

## Table description

Item	Description
Feature name	SSH
Table name	Server
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global SSH Server configurations.

## Columns

Column name	Column description	Column type	Data type and restrictions
STelnetState	Global STelnet Server feature	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enables STelnet Server.</li><li><b>false</b>—Disables STelnet Server(default).</li></ul>
SFTPState	Global SFTP Server feature	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enables SFTP Server.</li><li><b>false</b>—Disables SFTP Server(default).</li></ul>

Column name	Column description	Column type	Data type and restrictions
SCPState	Global SCP Server feature	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables SCP Server.</li> <li><b>false</b>—Disables SCP Server(default).</li> </ul>
DSCP	Set the IPv4 Differentiated Services Codepoint (DSCP) value	N/A	Unsigned integer. Value range: 0 to 63. Default value:48
DSCP6	Set the IPv6 Differentiated Services Codepoint (DSCP) value	N/A	Unsigned integer. Value range: 0 to 63. Default value:48.
Ipv4ACLNum	Specify an IPv4 ACL used to control the SSH clients' access	N/A	Unsigned integer. Value range: 2000 to 4999.
Ipv6ACLNum	Specify an IPv6 ACL used to control the SSH clients' access	N/A	Unsigned integer. Value range: 2000 to 4999.
SFTPIdeTimeout	Specify SFTP timeout value(minute)	N/A	Unsigned integer. Value range: 1 to 35791. Default value: 10. Unit: minute.
RekeyInterval	Specify the SSH server key rekey-interval(hour)	N/A	Unsigned integer. Value range: 1 to 24. Uint: hour.
AuthRetries	Specify authentication retry times	N/A	Unsigned integer. Value range: 1 to 5. Default value: 3.
AuthTimeout	Specify authentication timeout(second)	N/A	Unsigned integer. Value range: 1 to 120. Default value: 60 Unit: second.
CompatibleSSH1XState	The SSH Server compatible ssh1x	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables SSH Server compatible ssh1x (default).</li> <li><b>false</b>—Disables SSH Server compatible ssh1x.</li> </ul>

# SSH

## SSH/Server

Message	Explanation
There is the same configuration, failed to create. 存在相同配置无法创建。	If the current operation type is “create”, it does not support the existing configuration to be created again.
SSH Listens on port failed to open. SSH侦听端口使能失败	When the SSH service port number has been used by other services, it does not support to enable SSH server.
Failed to connect the SSH process. 连接SSH进程失败	If the daemon of SSH failed to connect, it will prompt this information.
The existence of default configuration, failed to delete. 删除时已经是默认配置	If the current operation type is “delete”, it does not support the default configuration to be deleted.

PKIDomain	Specify a PKI domain for the SSL server policy	N/A	String, case insensitive. Length: 1 to 31 characters.	N/A
CipherSuiteList	Cipher suite list for the SSL server policy	Data structure	Members include: <ul style="list-style-type: none"> <li>CipherItem.</li> </ul>	N/A
CipherItem	Cipher suite ID	N/A	Unsigned integer. Value range: 1 to 23. The cipher suite ID is defined by SSLCapabilities table.	A maximum of 11 CipherItems can be specified in CipherSuiteList.
ClientVerify	Whether to verify the SSL client	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Verify the SSL client.</li> <li><b>false</b>—Don't verify the SSL client</li> </ul>	N/A
ClientVerifyMode	Client authentication mode	N/A	Unsigned integer. <ul style="list-style-type: none"> <li><b>0</b>—SSL client authentication is disabled.</li> <li><b>1</b>—Mandatory SSL client authentication .</li> <li><b>2</b>—Optional SSL client authentication.</li> </ul>	N/A
SSLVersionControl	SSL version control	Data structure	Members include: <ul style="list-style-type: none"> <li>SSL3Enabled</li> <li>TLS1Dot0Enabled</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>TLS1Dot1Enabled</li> <li>TLS1Dot2Enabled</li> </ul>	
SSL3Enabled	Enabling status of SSL3.0	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
TLS1Dot0Enabled	Enabling status of TLS1.0	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
TLS1Dot1Enabled	Enabling status of TLS1.1	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
TLS1Dot2Enabled	Enabling status of TLS1.2	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A

## SSL/SSLCapabilities

This table displays all the algorithm capabilities that the SSL module support.

### XML structure

```

<SSL>
  <SSLCapabilities>
    <SSLCapability>
      <ID></ID>
      <Name></Name>
      <Strength></Strength>
      <IsDefaultCipherSuite></IsDefaultCipherSuite>
    </SSLCapability>
  </SSLCapabilities>
</SSL>

```

### Table description

Item	Description
Feature name	SSL
Table name	SSLCapabilities
Table type	Multi-instance table
Row name	SSLCapability
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	SSL supports algorithm ID	Index	Unsigned integer.	N/A
Name	SSL supports algorithm name	N/A	String. Length: 1 to 255 characters Case insensitive.	N/A
Strength	The strength of the algorithm	N/A	Unsigned integer	Biger Value, More stong.
IsDefaultCipherSuite	If the algorithm is default cipher suite.	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—The algorithm is the default</li><li><b>false</b>—The algorithm isn't the default</li></ul>	

## SSL/SSLGlobalConfig

This table is used to operate SSL global config.

## XML structure

```
<SSL>
  <SSLGlobalConfig>
    <SSL3Enabled></SSL3Enabled>
    <RenegotiationEnabled></RenegotiationEnabled>
    <TLS1Dot0Enabled></TLS1Dot0Enabled>
    <TLS1Dot1Enabled></TLS1Dot1Enabled>
    <TLS1Dot2Enabled></TLS1Dot2Enabled>
  </SSLGlobalConfig>
</SSL>
```

## Table description

Item	Description
Feature name	SSL
Table name	SSLGlobalConfig
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
SSL3Enabled	Enable SSL3.0.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Enable.</li><li>• <b>false</b>—Disable.</li></ul>
RenegotiationEnabled	Enable SSL renegotiation.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Enable.</li><li>• <b>false</b>—Disable.</li></ul>
TLS1Dot0Enabled	Enable TLS1.0	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Enable.</li><li>• <b>false</b>—Disable.</li></ul>
TLS1Dot1Enabled	Enable TLS1.1	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Enable.</li><li>• <b>false</b>—Disable.</li></ul>
TLS1Dot2Enabled	Enable TLS1.2	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Enable.</li><li>• <b>false</b>—Disable.</li></ul>

# SSLVPN

## SSLVPN/LogoutAlls

This table contains information about force logout of all SSL VPN users.

### XML structure

```
<SSLVPN>
  <LogoutAlls>
    <LogoutAll>
      <ContextName></ContextName>
    </LogoutAll>
  </LogoutAlls>
</SSLVPN>
```

### Table description

Item	Description
Feature name	SSLVPN
Table name	LogoutAlls
Table type	Multi-instance table
Row name	LogoutAll
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).

## SSLVPN/LogoutUsers

This table contains is used to log out all SSL VPN users.

### XML structure

```
<SSLVPN>
  <LogoutUsers>
    <LogoutUser>
```

```

        <ContextName></ContextName>
        <UserName></UserName>
    </LogoutUser>
</LogoutUsers>
</SSLVPN>

```

## Table description

Item	Description
Feature name	SSLVPN
Table name	LogoutUsers
Table type	Multi-instance table
Row name	LogoutUser
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
Username	Username	Index	String. Length: 1 to 63 characters.

## SSLVPN/LogoutSessions

This table contains information about force logout of SSL VPN users by session ID.

## XML structure

```

<SSLVPN>
  <LogoutSessions>
    <LogoutSession>
      <ContextName></ContextName>
      <SessionID></SessionID>
    </LogoutSession>
  </LogoutSessions>
</SSLVPN>

```

## Table description

Item	Description
Feature name	SSLVPN
Table name	LogoutSessions
Table type	Multi-instance table
Row name	LogoutSession
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
SessionID	User session ID	Index	Unsigned integer. Value range: 1 to 4294967295.	The ID is used only for sequencing. It is randomly assigned.

## SSLVPN/ClearAllIpacStats

This table contains information about resetting IP access statistics of all SSLVPN users.

## XML structure

```
<SSLVPN>
  <ClearAllIpacStats>
    <Clear></Clear>
  </ClearAllIpacStats>
</SSLVPN>
```

## Table description

Item	Description
Feature name	SSLVPN
Table name	ClearAllIpacStats
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Clears IP access statistics on all users.	N/A	This column must be empty.	Clear

## SSLVPN/ClearIpacStatsContexts

This table contains information about resetting IP access statistics of SSL VPN users within specific SSLVPN context.

## XML structure

```
<SSLVPN>
  <ClearIpacStatsContexts>
    <ClearIpacStatsContext>
      <ContextName></ContextName>
    </ClearIpacStatsContext>
  </ClearIpacStatsContexts>
</SSLVPN>
```

## Table description

Item	Description
Feature name	SSLVPN
Table name	ClearIpacStatsContexts
Table type	Multi-instance table
Row name	ClearIpacStatsContext
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A

# SSLVPN/ClearIpacStatsSessions

This table contains information about resetting IP access statistics of SSL VPN users by session ID.

## XML structure

```
<SSLVPN>
  <ClearIpacStatsSessions>
    <ClearIpacStatsSession>
      <ContextName></ContextName>
      <SessionID></SessionID>
    </ClearIpacStatsSession>
  </ClearIpacStatsSessions>
</SSLVPN>
```

## Table description

Item	Description
Feature name	SSLVPN
Table name	ClearIpacStatsSessions
Table type	Multi-instance table
Row name	ClearIpacStatsSession
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
SessionID	User session ID	Index	Unsigned integer. Value range: 1 to 4294967295.	The ID is used only for sequencing. It is randomly assigned.

# SSLVPN/GlobalCustoms

This table is used to customize SSL VPN user access clients.

## XML structure

```
<SSLVPN>
```

```

<GlobalCustoms>
  <GlobalCustom>
    <IPClientName></IPClientName>
  </GlobalCustom>
</GlobalCustoms>
</SSLVPN>

```

## Table description

Item	Description
Feature name	SSLVPN
Table name	GlobalCustoms
Table type	Multi-instance table
Row name	GlobalCustom
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPClientName	Name of the custom IP access client	Column	String, case insensitive. Length: 0 to 63 characters. The string cannot contain colons (:), question marks (?), asterisks (*), angle brackets (< >), ditto marks ("), slashes (/), backslashes (\), vertical bars ( ).	When the string length is 0, this column deletes the custom IP access client.

# SSLVPN

## SSLVPN/Gateways

This table contains SSL VPN gateway configuration information.

### XML structure

```
<SSLVPN>
  <Gateways>
    <Gateway>
      <Name></Name>
      <AddressType></AddressType>
      <Ipv4Address></Ipv4Address>
      <Ipv6Address></Ipv6Address>
      <PortNumber></PortNumber>
      <VRF></VRF>
      <SSLServerPolicy></SSLServerPolicy>
      <HTTPRedirect></HTTPRedirect>
      <RedirectPort></RedirectPort>
      <Enable></Enable>
    </Gateway>
  </Gateways>
</SSLVPN>
```

### Table description

Item	Description
Feature name	SSLVPN
Table name	Gateways
Table type	Multi-instance table
Row name	Gateway
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	SSL VPN gateway name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			letters, digits, and underscores (_).	
AddressType	Whether the SSL VPN gateway address is an IPv6 address	N/A	Boolean: <ul style="list-style-type: none"> <li>false—IPv4.</li> <li>true—IPv6.</li> </ul>	N/A
Ipv4Address	IPv4 address of the SSL VPN gateway	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address	IPv6 address of the SSL VPN gateway	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
PortNumber	Port number of the SSL VPN gateway	N/A	Unsigned integer. Value range: 443, 1025 to 65535. Default: 443.	N/A
VRF	Name of the VRF instance associated with the SSL VPN gateway	N/A	String. Length: 0 to 31 characters.	If the gateway is on the public network, the length of characters is 0.
SSLServerPolicy	Name of the SSL server policy used by the SSL VPN gateway	N/A	String, case insensitive. Length: 1 to 31 characters.	By default, no SSL server policy is used by the SSL VPN gateway.
HTTPRedirect	Whether HTTP traffic is redirected	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Redirected.</li> <li>false—Not redirected.</li> </ul>	N/A
RedirectPort	Port number of the redirected HTTP traffic	N/A	Unsigned integer. Value range: 80, 1025 to 65535. Default: 80.	N/A
Enable	Whether the SSL VPN gateway is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled (default).</li> </ul>	N/A

## SSLVPN/Contexts

This table contains SSL VPN context configuration information.

### XML structure

```

<SSLVPN>
  <Contexts>
    <Context>
      <Name></Name>
      <Gateway>

```

```

    <Name></Name>
    <AccessType></AccessType>
    <Domain></Domain>
    <VirtualHost></VirtualHost>
</Gateway>
<VRF></VRF>
<MaxUsers></MaxUsers>
<IdleTimeout></IdleTimeout>
<AADomain></AADomain>
<EMOServer>
    <Address></Address>
    <PortNumber></PortNumber>
</EMOServer>
<DefaultPolicyGroup></DefaultPolicyGroup>
<Enable></Enable>
</Context>
</Contexts>
</SSLVPN>

```

## Table description

Item	Description
Feature name	SSLVPN
Table name	Contexts
Table type	Multi-instance table
Row name	Context
Restrictions	The Contexts table does not support multiple links. Tables ContextGateways and contexts_v2 are added to support multiple links, and new features are added in the these two tables. The Contexts table is included only for compatibility. No new features will be added to this table. Use new tables ContextGateway and contexts_v2 instead of this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
Gateway	Associated gateway	Data structure	Members include: <ul style="list-style-type: none"> <li>Name.</li> <li>AccessType.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>Domain.</li> <li>VirtualHost.</li> </ul>	
Name	Associated gateway name	N/A	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
AccessType	Gateway access method	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—domain.</li> <li>2—virtual host.</li> </ul>	N/A
Domain	Domain specified for the associated gateway	N/A	String, case insensitive. Length: 1 to 127 characters. The string can contain only letters, digits, hyphens (-), and underscores (_).	N/A
VirtualHost	Virtual host specified for the associated gateway	N/A	String, case insensitive. Length: 1 to 127 characters. The string can contain only letters, digits, hyphens (-), underscores (_), and dots (.).	N/A
VRF	Name of the VRF instance associated with the SSL VPN context	N/A	String. Length: 0 to 31 characters.	If the context is on the public network, the length of characters is 0.
MaxUsers	Maximum number of SSL VPN user connections	N/A	Unsigned integer. Value range: 1 to 1048575.	N/A
IdleTimeout	User connection idle timeout time	N/A	Unsigned integer. Value range: 1 to 1440, in minutes. Default: 30 minutes.	N/A
AAADomain	SSL VPN context AAA domain	N/A	String, case insensitive. Length: 1 to 255 characters. The string cannot contain the following characters: / \   " : * ? < > @ The string cannot be any of the following values: d, de, def, defa, defau, default, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknow, or if-unknown.	N/A
EMOServer	EMO server	Data structure	Members include: <ul style="list-style-type: none"> <li>Address.</li> <li>PortNumber.</li> </ul>	N/A
Address	IPv4 address or host name of the	N/A	IPv4 address: String, dotted decimal notation.	IPv4 address example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
	EMO server		Host name: String, case insensitive. Length: 1 to 127 characters. The string can contain only letters, digits, hyphens (-), underscores (_), and dots (.).	Host name example: www.example.com.
PortNumber	Port number of the EMO server	N/A	Unsigned integer. Value range: 1025 to 65535.	N/A
DefaultPolicy Group	Default policy group	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
Enable	Whether the SSL VPN context is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled (default).</li> </ul>	N/A

## SSLVPN/Contexts\_v2

This table contains SSL VPN context\_v2 configuration information.

### XML structure

```

<SSLVPN>
  <Contexts_v2>
    <Context_v2>

  </Contexts_v2>
</SSLVPN>

```

```

    <DefaultPolicyGroup></DefaultPolicyGroup>
    <SSLClientPolicy></SSLClientPolicy>
    <Enable></Enable>
  </Context_v2>
</Contexts_v2>
</SSLVPN>

```

## Table description

Item	Description
Feature name	SSLVPN
Table name	Contexts_v2
Table type	Multi-instance table
Row name	Context_v2
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
VRF	Name of the VRF instance associated with the SSL VPN context	N/A	String. Length: 0 to 31 characters.	If the context is on the public network, the length of characters is 0.
MaxUsers	Maximum number of SSL VPN user connections	N/A	Unsigned integer. Value range: 1 to 1048575.	N/A
IdleTimeout	User connection idle timeout time	N/A	Unsigned integer. Value range: 1 to 1440, in minutes. Default: 30 minutes.	N/A
TrafficThreshold	Set the minimum traffic to avoid idle-cut	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
AAADomain	SSL VPN context AAA domain	N/A	String, case insensitive. Length: 1 to 255 characters. The string cannot contain the following characters:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			/\ ":*?<>@ The string cannot be any of the following values: d, de, def, defa, defau, default, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknow, or if-unknown.	
EMOServer	EMO server	Data structure	Members include: <ul style="list-style-type: none"> <li>Address.</li> <li>PortNumber.</li> </ul>	N/A
Address	IPv4 address or host name of the EMO server	N/A	IPv4 address: String, dotted decimal notation. Host name: String, case insensitive. Length: 1 to 127 characters. The string can contain only letters, digits, hyphens (-), underscores (_), and dots (.).	IPv4 address example: 1.1.1.1. Host name example: www.example.com.
PortNumber	Port number of the EMO server	N/A	Unsigned integer. Value range: 1025 to 65535.	N/A
MessageServer	Message server	Data structure	Members include: <ul style="list-style-type: none"> <li>Address.</li> <li>PortNumber.</li> </ul>	N/A
Address	IPv4 address or host name of the Message server	N/A	IPv4 address: String, dotted decimal notation. Host name: String, case insensitive. Length: 1 to 127 characters. The string can contain only letters, digits, hyphens (-), underscores (_), and dots (.).	IPv4 address example: 1.1.1.1. Host name example: www.example.com.
PortNumber	Port number of the Message server	N/A	Unsigned integer. Value range: 1025 to 65535.	N/A
SmsImcServer	Short Message Service of IMC server	Data structure	Members include: <ul style="list-style-type: none"> <li>Address.</li> <li>PortNumber.</li> </ul>	New feature, not compatible with the old table.
Address	IPv4 address of the IMC server	N/A	String, dotted decimal notation.	New feature, not compatible with the old table. Example: 1.1.1.1.
PortNumber	Port number of the IMC server	N/A	Unsigned integer. Value range: 1 to 65535.	New feature, not compatible with the old table.
VRF	Name of the VRF instance associated with the IMC server	N/A	String: Length: 0 to 31 characters.	If the IMC server is on the public network, the length of characters is 0.
SmsImc	Whether the SMS-IMC	N/A	Boolean:	New feature, not compatible with the old

Column name	Column description	Column type	Data type and restrictions	Remarks
	message authentication of the SSL VPN context is enabled.		<ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled (default).</li> </ul>	table.
DefaultPolicy Group	Default policy group	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
SSLClientPolicy	Name of the SSL client policy used by the SSL VPN context	N/A	String, case insensitive. Length: 1 to 31 characters.	New feature, not compatible with the old table.
Enable	Whether the SSL VPN context is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled (default).</li> </ul>	N/A

## SSLVPN/ContextGateways

This table contains information about the SSL VPN gateway associated with the [context](#).

### XML structure

```

<SSLVPN>
  <ContextGateways>
    <ContextGateway>
      <ContextName></ContextName>
      <GatewayName></GatewayName>
      <AccessType></AccessType>
      <Domain></Domain>
      <VirtualHost></VirtualHost>
    </ContextGateway>
  </ContextGateways>
</SSLVPN>

```

### Table description

Item	Description
Feature name	SSLVPN
Table name	ContextGateways
Table type	Multi-instance table
Row name	ContextGateway
Restrictions	None

Support for row creation and deletion	Yes
---------------------------------------	-----

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
GatewayName	Associated gateway name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
AccessType	Gateway access method	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—domain.</li> <li>2—virtual host.</li> </ul>	N/A
Domain	Domain specified for the associated gateway	N/A	String, case insensitive. Length: 1 to 127 characters. The string can contain only letters, digits, hyphens (-), and underscores (_).	N/A
VirtualHost	Virtual host specified for the associated gateway	N/A	String, case insensitive. Length: 1 to 127 characters. The string can contain only letters, digits, hyphens (-), underscores (_), and dots (.).	N/A

## SSLVPN/IpAcContexts

This table contains SSL VPN IP access configuration information for context.

## Table description

Item	Description
Feature name	SSLVPN
Table name	UISettings
Table type	Multi-instance table
Row name	UISetting
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
VerifyCode	Whether the verify code is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled (default).</li> </ul>
DPWD	Whether the dynamic password is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled (default).</li> </ul>
DisplayLogo	Whether the logo is displayed	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Displayed (default).</li> <li>false—Not displayed.</li> </ul>
HidePasswordInput	Whether to hide the password input box	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Hide the password box.</li> <li>false—Not hide the password box (default).</li> </ul>
LogoFile	Logo file path	N/A	String, case insensitive.

Column name	Column description	Column type	Data type and restrictions
			Length: 1 to 255 characters.
LoginMsg	Web login message	Data structure	Members include: <ul style="list-style-type: none"> <li>English.</li> <li>Chinese.</li> </ul>
English	English login message string	N/A	String. Length: 1 to 255 characters.
Chinese	Chinese login message string	N/A	String. Length: 1 to 255 characters.
Title	Web title	Data structure	Members include: <ul style="list-style-type: none"> <li>English.</li> <li>Chinese.</li> </ul>
English	English title string	N/A	String. Length: 1 to 255 characters.
Chinese	Chinese title string	N/A	String. Length: 1 to 255 characters.
CertificateAuthen	Whether certificate authentication of the SSL VPN context is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled (default).</li> </ul>
ResourcerLog	Whether Resource logging of the SSL VPN context is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled (default).</li> </ul>
Filter	Whether resource access log filtering is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled (default).</li> </ul>
Brief	Whether brief logging for resource access is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled (default).</li> </ul>
UserLog	Whether user logging of the SSL VPN context is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled (default).</li> </ul>
PasswordAuthen	Whether password authentication of the SSL VPN context is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled(default).</li> <li>false—Disabled.</li> </ul>
AuthenUse	The authentication methods required for user login.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—all(default).</li> <li>1—any-one.</li> </ul>

# SSLVPN/PortForwardLists

This table contains SSL VPN port forwarding list configuration information.

## XML structure

</SSLVPN>

```

### Table description

Item	Description
Feature name	SSLVPN
Table name	IpAcPolicys_v2
Table type	Multi-instance table

Row name	IpAcPolicy_v2
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
PGroupName	SSL VPN policy group name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
Ipv4AddressPool	Referenced address pool	Data structure	Members include: <ul style="list-style-type: none"> <li>Name.</li> <li>Ipv4PrefixLength.</li> </ul>	N/A
Name	SSL VPN IPv4 address pool name	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
Ipv4PrefixLength	SSL VPN IPv4 address pool prefix length	N/A	Unsigned integer. Value range: 1 to 30.	N/A
Ipv4AclNumber	Referenced IPv4 advanced ACL number	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
Ipv6AclNumber	Referenced IPv6 advanced ACL number	N/A	Unsigned integer. Value range: 3000 to 3999.	New feature, not compatible with the old table.
AccessRoute	Route issued to the client	Data structure	Members include: <ul style="list-style-type: none"> <li>RouteType.</li> <li>RouteList.</li> <li>Ipv4Address.</li> <li>Ipv4PrefixLength.</li> </ul>	N/A
RouteType	The way how the route is specified	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Route list.</li> <li>2—IPv4 address.</li> </ul>	N/A
ForceAll	Whether the force all is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>false—Enabled.</li> <li>true—Disabled.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RouteList	SSL VPN route list name	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	Available when RouteType is 1.
Ipv4Address	Destination IPv4 address of the route	N/A	String, dotted decimal notation.	Example: 1.1.1.1. Available when RouteType is 2.
Ipv4PrefixLength	IPv4 address prefix length	N/A	Unsigned integer. Value range: 0 to 32.	Available when RouteType is 2.
URIACLName	SSL VPN URI ACL name	N/A	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	New feature, not compatible with the old table.

## SSLVPN/URIACLs

This table contains SSL VPN URI ACL configuration information.

### XML structure

```

<SSLVPN>
  <URIACLs>
    <URIACL>
      <ContextName></ContextName>
      <URIACLName></URIACLName>
    </URIACL>
  </URIACLs>
</SSLVPN>

```

### Table description

Item	Description
Feature name	SSLVPN
Table name	URIACLs
Table type	Multi-instance table
Row name	URIACL
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
URIACLName	SSL VPN URI ACL name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).

## SSLVPN/URIACLItems

This table contains SSL VPN URI ACL entry configuration information.

## XML structure

```
<SSLVPN>
  <URIACLItems>
    <URIACLItem>
      <ContextName></ContextName>
      <URIACLName></URIACLName>
      <RuleNumber></RuleNumber>
      <Action></Action>
      <Pattern></Pattern>
    </URIACLItem>
  </URIACLItems>
</SSLVPN>
```

## Table description

Item	Description
Feature name	SSLVPN
Table name	URIACLItems
Table type	Multi-instance table
Row name	URIACLItem
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
URIACLName	SSL VPN URI ACL name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
RuleNumber	Rule ID	Index	Unsigned integer. Value range: 0 to 65534.
Action	Action	N/A	Unsigned integer. Value range: 1 to 2. <ul style="list-style-type: none"><li>1—Permit.</li><li>2—Deny.</li></ul>
Pattern	Rule pattern	N/A	String, case insensitive. Length: 1 to 256 characters.

## SSLVPN/WebAcPolicys

This table contains SSL VPN Web access configuration information for policy groups.

## XML structure

```
<SSLVPN>
  <WebAcPolicys>
    <WebAcPolicy>
      <ContextName></ContextName>
      <PGroupName></PGroupName>
      <Ipv4AclNumber></Ipv4AclNumber>
      <Ipv6AclNumber></Ipv6AclNumber>
      <URIACLName></URIACLName>
    </WebAcPolicy>
  </WebAcPolicys>
</SSLVPN>
```

## Table description

Item	Description
Feature name	SSLVPN
Table name	WebAcPolicys

Table type	Multi-instance table
Row name	WebAcPolicy
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	
PGroupName	SSL VPN policy group name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	
Ipv4AcNumber	Referenced IPv4 advanced ACL number	N/A	Unsigned integer. Value range: 3000 to 3999.	
Ipv6AcNumber	Referenced IPv6 advanced ACL number	N/A	Unsigned integer. Value range: 3000 to 3999.	
URIACLName	SSL VPN URI ACL name	N/A	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A

## SSLVPN/UrlLists

This table contains SSL VPN URL list configuration information.

## XML structure

```

<SSLVPN>
  <UrlLists>
    <UrlList>
      <ContextName></ContextName>
      <ListName></ListName>
      <Heading></Heading>
    </UrlList>
  </UrlLists>
</SSLVPN>

```

## Table description

Item	Description
Feature name	SSLVPN
Table name	UrlLists
Table type	Multi-instance table
Row name	UrlList
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
ListName	SSL VPN URL list name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.
Heading	SSL VPN URL list heading	N/A	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).

## SSLVPN/UrlItems

This table contains SSL VPN URL entry configuration information.

## XML structure

```
<SSLVPN>
  <UrlItems>
    <UrlItem>
      <ContextName></ContextName>
      <ListName></ListName>
      <UrlName></UrlName>

      <SnatPoolName></SnatPoolName>
    </SnatResource>
  </SnatResources>
</SSLVPN>

```

## Table description

Item	Description
Feature name	SSLVPN
Table name	SnatResources
Table type	Multi-instance table
Row name	SnatResource
Restrictions	None

Support for row creation and deletion	No
---------------------------------------	----

## Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
SnatPoolName	SSL VPN SNAT pool name	N/A	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).

## SSLVPN/UserControls

This table contains SSL VPN user control configuration information.

## XML structure

```

<SSLVPN>
  <UserControls>
    <UserControl>
      <ContextName></ContextName>
      <MaxOnlineNum></MaxOnlineNum>
      <ForceLogout></ForceLogout>
      <SessionConnectionNum></SessionConnectionNum>
    </UserControl>
  </UserControls>
</SSLVPN>

```

## Table description

Item	Description
Feature name	SSLVPN
Table name	UserControls
Table type	Multi-instance table
Row name	UserControl
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
MaxOnlineNum	Maximum online number of each SSL VPN user for the context	N/A	Unsigned integer. Value range: 0 to 1048575. Default: 32.	If the maxOnlineNum is 0, the context doesn't control the maximum online number of each SSL VPN user.
ForceLogout	Whether the force logout is enabled	N/A	Boolean: <ul style="list-style-type: none"><li>true—Enabled.</li><li>false—Disabled (default).</li></ul>	N/A
SessionConnNum	Maximum number of connections for each session	N/A	Unsigned integer. Value range: 0, 10 to 1000. Default: 64.	If the MaxSessionConnNum is 0, the context doesn't control the maximum number of connections for each session.

## SSLVPN/GlobalLog

This table contains SSL VPN global log configuration information.

## XML structure

```
<SSLVPN>
  <GlobalLog>
    <GlobalLogEnable></GlobalLogEnable>
  </GlobalLog>
</SSLVPN>
```

## Table description

Item	Description
Feature name	SSLVPN
Table name	GlobalLog
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalLogEnable	Whether the global log is enabled	N/A	Boolean: <ul style="list-style-type: none"><li>true—Enabled.</li><li>false—Disabled (default).</li></ul>	N/A

## SSLVPN/PortForwardCtxItems

This table contains SSL VPN port forwarding items control configuration information.

## XML structure

```
<SSLVPN>
  <PortForwardCtxItems>
    <PortForwardCtxItem>
      <ContextName></ContextName>

# SSLVPN

## SSLVPN/Gateways

This table contains SSL VPN gateway information.

### XML structure

```
<SSLVPN>
  <Gateways>
    <Gateway>
      <Name></Name>
      <AddressType></AddressType>
      <Ipv4Address></Ipv4Address>
      <Ipv6Address></Ipv6Address>
      <PortNumber></PortNumber>
      <VRF></VRF>
      <SSLServerPolicy></SSLServerPolicy>
      <HTTPRedirect></HTTPRedirect>
      <RedirectPort></RedirectPort>
      <Enable></Enable>
      <OperStatus></OperStatus>
      <DownReason></DownReason>
    </Gateway>
  </Gateways>
</SSLVPN>
```

### Table description

Item	Description
Feature name	SSLVPN
Table name	Gateways
Table type	Multi-instance table
Row name	Gateway
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	SSL VPN gateway name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			letters, digits, and underscores (_).	
AddressType	Whether the SSL VPN gateway address is an IPv6 address	N/A	Boolean: <ul style="list-style-type: none"> <li>false—IPv4.</li> <li>true—IPv6.</li> </ul>	N/A
Ipv4Address	IPv4 address of the SSL VPN gateway	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address	IPv6 address of the SSL VPN gateway	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
PortNumber	Port number of the SSL VPN gateway	N/A	Unsigned integer. Value range: 443, 1025 to 65535.	N/A
VRF	Name of the VRF instance associated with the SSL VPN gateway	N/A	String. Length: 0 to 31 characters.	If the gateway is on the public network, the length of characters is 0.
SSLServerPolicy	Name of the SSL server policy used by the SSL VPN gateway	N/A	String, case insensitive. Length: 1 to 31 characters.	N/A
HTTPRedirect	Whether HTTP traffic is redirected	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Redirected.</li> <li>false—Not redirected.</li> </ul>	N/A
RedirectPort	Port number of the redirected HTTP traffic	N/A	Unsigned integer. Value range: 80, 1025 to 65535.	N/A
Enable	Whether the SSL VPN gateway is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul>	N/A
OperStatus	SSL VPN gateway operation status	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—up.</li> <li>2—down.</li> </ul>	N/A
DownReason	Reason why the operation status of the SSL VPN gateway is down	N/A	String. Length: 1 to 127 characters.	This column is available only when the SSL VPN gateway operation status is down.

## SSLVPN/Contexts

This table contains SSL VPN context information.

## XML structure

<SSLVPN>

```

<Contexts>
  <Context>
    <Name></Name>
    <Gateway>
      <Name></Name>
      <AccessType></AccessType>
      <Domain></Domain>
      <VirtualHost></VirtualHost>
    </Gateway>
    <VRF></VRF>
    <MaxUsers></MaxUsers>
    <IdleTimeout></IdleTimeout>
    <AADDomain></AADDomain>
    <EMOServer>
      <Address></Address>
      <PortNumber></PortNumber>
    </EMOServer>
    <DefaultPolicyGroup></DefaultPolicyGroup>
    <Enable></Enable>
    <OperStatus></OperStatus>
    <DownReason></DownReason>
  </Context>
</Contexts>
</SSLVPN>

```

## Table description

Item	Description
Feature name	SSLVPN
Table name	Contexts
Table type	Multi-instance table
Row name	Context
Restrictions	The Contexts table does not support multiple links. Tables ContextGateways and contexts_v2 are added to support multiple links, and new features are added in the these two tables. The Contexts table is included only for compatibility. No new features will be added to this table. Use new tables ContextGateways and contexts_v2 instead of this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Gateway	Associated gateway	Data structure	Members include: <ul style="list-style-type: none"> <li>Name.</li> <li>AccessType.</li> <li>Domain.</li> <li>VirtualHost.</li> </ul>	N/A
Name	Associated gateway name	N/A	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
AccessType	Gateway access method	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—domain.</li> <li>2—virtual host.</li> </ul>	N/A
Domain	Domain specified for the associated gateway	N/A	String, case insensitive. Length: 1 to 127 characters. The string can contain only letters, digits, hyphens (-), and underscores (_).	N/A
VirtualHost	Virtual host specified for the associated gateway	N/A	String, case insensitive. Length: 1 to 127 characters. The string can contain only letters, digits, hyphens (-), underscores (_), and dots (.).	N/A
VRF	Name of the VRF instance associated with the SSL VPN context	N/A	String. Length: 0 to 31 characters.	If the context is on the public network, the length of characters is 0.
MaxUsers	Maximum number of SSL VPN user connections	N/A	Unsigned integer. Value range: 1 to 1048575.	N/A
IdleTimeout	User connection idle timeout time	N/A	Unsigned integer. Value range: 1 to 1440, in minutes.	N/A
AAADomain	SSL VPN context AAA domain	N/A	String, case insensitive. Length: 1 to 255 characters. The string cannot contain the following characters: / \   " : * ? < > @ The string cannot be any of the following values: d, de, def, defa, defau, default, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknow, or if-unknown.	N/A
EMOServer	EMO server	Data structure	Members include: <ul style="list-style-type: none"> <li>Address.</li> <li>PortNumber.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Address	IPv4 address or host name of the EMO server	N/A	IPv4 address: String, dotted decimal notation. Host name: String, case insensitive. Length: 1 to 127 characters. The string can contain only letters, digits, hyphens (-), underscores (_), and dots (.).	IPv4 address example: 1.1.1.1. Host name example: www.example.com.
PortNumber	Port number of the EMO server	N/A	Unsigned integer. Value range: 1025 to 65535.	N/A
DefaultPolicy Group	Default policy group	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
Enable	Whether the SSL VPN context is enabled.	N/A	Boolean: • true—Enabled. • false—Disabled.	N/A
OperStatus	SSL VPN context operation status	N/A	Enumeration: • 1—up. • 2—down.	N/A
DownReason	Reason why the operation status of the SSL VPN context is down	N/A	String. Length: 1 to 127 characters.	This column is available only when the SSL VPN context operation status is down.

## SSLVPN/Contexts\_v2

This table contains SSL VPN context information.

### XML structure

```

<SSLVPN>
  <Contexts_v2>
    <Context_v2>
      <Name></Name>
      <VRF></VRF>
      <MaxUsers></MaxUsers>

VerifyCode	Whether the verify code is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul>
DPWD	Whether the dynamic password is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul>
DisplayLogo	Whether the logo is displayed	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Displayed.</li> <li>false—Not displayed.</li> </ul>
HidePasswor dInput	Whether to hide the password input box	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Hide the password box.</li> <li>false—Not hide the password box (default).</li> </ul>
LogoFile	Logo file path	N/A	String, case insensitive. Length: 1 to 255 characters.
LoginMsg	Web login	Data	Members include:

Column name	Column description	Column type	Data type and restrictions
	message	structure	<ul style="list-style-type: none"> <li>English.</li> <li>Chinese.</li> </ul>
English	English login message string	N/A	String. Length: 1 to 255 characters.
Chinese	Chinese login message string	N/A	String. Length: 1 to 255 characters.
Title	Web title	Data structure	Members include: <ul style="list-style-type: none"> <li>English.</li> <li>Chinese.</li> </ul>
English	English title string	N/A	String. Length: 1 to 255 characters.
Chinese	Chinese title string	N/A	String. Length: 1 to 255 characters.
ResourcerLog	Whether Resource logging of the SSL VPN context is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul>
Filter	Whether resource access log filtering is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul>
Brief	Whether brief logging for resource access is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul>
CertificateAuthen	Whether certificate authentication of the SSL VPN context is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul>
UserLog	Whether user logging of the SSL VPN context is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul>
PasswordAuthen	Whether password authentication of the SSL VPN context is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul>
AuthenUse	The authentication methods required for user login.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—all.</li> <li>1—any-one.</li> </ul>

# SSLVPN/PortForwardLists

This table contains SSL VPN port forwarding list information.

## XML structure

```
<SSLVPN>
  <PortForwardLists>
    <PortForwardList>
      <ContextName></ContextName>
      <ListName></ListName>
    </PortForwardList>
  </PortForwardLists>
</SSLVPN>
```

## Table description

Item	Description
Feature name	SSLVPN
Table name	PortForwardLists
Table type	Multi-instance table
Row name	PortForwardList
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
ListName	SSL VPN port forwarding list name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.

# SSLVPN/PortForwardItems

This table contains SSL VPN port forwarding entry information.

# XML structure

```
<SSLVPN>
  <PortForwardItems>
    <PortForwardItem>
      <ContextName></ContextName>
      <ListName></ListName>
      <LocalPortNumber></LocalPortNumber>

      <RemotePortNumber></RemotePortNumber>
      <Description></Description>
    </PortForwardItem>
  </PortForwardItems>
</SSLVPN>
```

## Table description

Item	Description
Feature name	SSLVPN
Table name	PortForwardItems
Table type	Multi-instance table
Row name	PortForwardItem
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
ListName	SSL VPN port forwarding list name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.
LocalPortNumber	Port number of the local server	Index	Unsigned integer. Value range: 1 to 65535.
LocalName	Domain name of the local server	Index	String, case insensitive. Length: 1 to 253 characters. The string can contain only letters, digits, hyphens (-), underscores (_), square brackets ([]), colon(:) and dots (.).
RemoteServe	Domain name of	N/A	String, case insensitive.

Column name	Column description	Column type	Data type and restrictions
r	the remote server		Length: 1 to 253 characters. The string can contain only letters, digits, hyphens (-), underscores (_), square brackets ([]), colon(:) and dots (.).
RemotePortNumber	Port number of the remote server	N/A	Unsigned integer. Value range: 1 to 65535.
Description	Description for the port forwarding entry	N/A	String. Length: 1 to 63 characters.

## SSLVPN/Ipv4AddressPools

This table contains SSL VPN IPv4 address pool information.

### XML structure

```

<SSLVPN>
  <Ipv4AddressPools>
    <Ipv4AddressPool>
      <Name></Name>
      <Ipv4AddressStart></Ipv4AddressStart>
      <Ipv4AddressEnd></Ipv4AddressEnd>
    </Ipv4AddressPool>
  </Ipv4AddressPools>
</SSLVPN>

```

### Table description

Item	Description
Feature name	SSLVPN
Table name	Ipv4AddressPools
Table type	Multi-instance table
Row name	Ipv4AddressPool
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	SSL VPN IP address pool name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			are \t \r \n ?.	
Ipv4AddressStart	Start IPv4 address of the pool	N/A	String, dotted decimal notation.	Example: 1.1.1.1. Ipv4AddressStart cannot be larger than Ipv4AddressEnd.
Ipv4AddressEnd	End IPv4 address of the pool	N/A	String, dotted decimal notation.	Example: 1.1.1.1.

## SSLVPN/RouteLists

This table contains SSL VPN route list information.

### XML structure

```

<SSLVPN>
  <RouteLists>
    <RouteList>
      <ContextName></ContextName>
      <ListName></ListName>
    </RouteList>
  </RouteLists>
</SSLVPN>

```

### Table description

Item	Description
Feature name	SSLVPN
Table name	RouteLists
Table type	Multi-instance table
Row name	RouteList
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
ListName	SSL VPN route	Index	String, case insensitive.

Column name	Column description	Column type	Data type and restrictions
	list name		Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.

## SSLVPN/RouteItems

This table contains SSL VPN route item information.

## XML structure

```

<SSLVPN>
  <RouteItems>
    <RouteItem>
      <ContextName></ContextName>
      <ListName></ListName>
      <RouteType></RouteType>

URIACLName	SSL VPN URI ACL name	N/A	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).

## SSLVPN/UrlLists

This table contains SSL VPN URL list information for policy groups.

## XML structure

```

<SSLVPN>
  <UrlLists>

```

```

<UrlList>
  <ContextName></ContextName>
  <ListName></ListName>
  <Heading></Heading>
</UrlList>
</UrlLists>
</SSLVPN>

```

## Table description

Item	Description
Feature name	SSLVPN
Table name	UrlLists
Table type	Multi-instance table
Row name	UrlList
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
ListName	SSL VPN URL list name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.
Heading	SSL VPN URL list heading	N/A	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).

## SSLVPN/UrlItems

This table contains SSL VPN URL entry information for policy groups.

## XML structure

```

<SSLVPN>
  <UrlItems>
    <UrlItem>
      <ContextName></ContextName>

```

```

    <ListName></ListName>

Row name	UrlItemResource
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
UrlListName	SSL VPN URL list name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
ItemName	URL item name	Index	String, case insensitive. Length: 1 to 31 characters.	N/A

## SSLVPN/SnatPools

This table contains SSL VPN SNAT pool information for policy groups.

## XML structure

```
<SSLVPN>
  <SnatPools>
    <SnatPool>
      <Name></Name>
      <Ipv4AddressStart></Ipv4AddressStart>
      <Ipv4AddressEnd></Ipv4AddressEnd>
    </SnatPool>
  </SnatPools>
</SSLVPN>
```

## Table description

Item	Description
Feature name	SSLVPN
Table name	SnatPools
Table type	Multi-instance table
Row name	SnatPool
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	SSL VPN SNAT pool name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
Ipv4AddressStart	Start IPv4 address of the SNAT pool	N/A	String, dotted decimal notation.	Example: 1.1.1.1. Ipv4AddressStart cannot be higher than Ipv4AddressEnd.
Ipv4AddressEnd	End IPv4 address of the SNAT pool	N/A	String, dotted decimal notation.	Example: 1.1.1.1.

## SSLVPN/Ipv6SnatPools

This table contains SSL VPN Ipv6 SNAT pool information for policy groups.

## XML structure

```
<SSLVPN>
  <Ipv6SnatPools>
    <Ipv6SnatPool>
      <Name></Name>
      <Ipv6AddressStart></Ipv6AddressStart>
      <Ipv6AddressEnd></Ipv6AddressEnd>
    </Ipv6SnatPool>
  </Ipv6SnatPools>
</SSLVPN>
```

## Table description

Item	Description
Feature name	SSLVPN
Table name	Ipv6SnatPools
Table type	Multi-instance table
Row name	Ipv6SnatPool
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	SSL VPN SNAT pool name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
Ipv6AddressStart	Start IPv6 address of the SNAT pool	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. Ipv6AddressStart cannot be higher than Ipv6AddressEnd.
Ipv6AddressEnd	End IPv6 address of the SNAT pool	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.

## SSLVPN/UrlResources

This table contains SSL VPN URL resource information for policy groups.

## XML structure

```
<SSLVPN>
  <UrlResources>
    <UrlResource>
      <ContextName></ContextName>
      <PGroupName></PGroupName>
      <ListName></ListName>
    </UrlResource>
  </UrlResources>
</SSLVPN>
```

## Table description

Item	Description
Feature name	SSLVPN
Table name	UrlResources
Table type	Multi-instance table
Row name	UrlResource
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
PGroupName	SSL VPN policy group name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.
ListName	SSL VPN URL list name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.

## SSLVPN/SnatResources

This table contains SSL VPN SNAT resource information for policy groups.

## XML structure

```
<SSLVPN>
  <SnatResources>
    <SnatResource>
      <ContextName></ContextName>
      <SnatPoolName></SnatPoolName>
    </SnatResource>
  </SnatResources>
</SSLVPN>
```

## Table description

Item	Description
Feature name	SSLVPN
Table name	SnatResources
Table type	Multi-instance table
Row name	SnatResource
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
SnatPoolName	SSL VPN SNAT pool name	N/A	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).

## SSLVPN/UserControls

This table contains SSL VPN user control information for policy groups.

## XML structure

```
<SSLVPN>
  <UserControls>
    <UserControl>
      <ContextName></ContextName>
      <MaxOnlineNum></MaxOnlineNum>
      <ForceLogout></ForceLogout>
      <SessionConnectionNum></SessionConnectionNum>
    </UserControl>
  </UserControls>
</SSLVPN>
```

## Table description

Item	Description
Feature name	SSLVPN
Table name	UserControls

Table type	Multi-instance table
Row name	UserControl
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
MaxOnlineNum	Maximum online number of each SSL VPN user for the context	N/A	Unsigned integer. Value range: 0 to 1048575.	If the maxOnlineNum is 0, the context doesn't control the maximum online number of each SSL VPN user.
ForceLogout	Whether the force logout is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled .</li> </ul>	N/A
SessionConnectionNum	Maximum number of connections for each session	N/A	Unsigned integer. Value range: 0, 10 to 1000.	If the SessionConnctionNum is 0, the context doesn't control the maximum number of connections for each session.

## SSLVPN/Specification

This table contains information about the SSLVPN function specification.

## XML structure

```

<SSLVPN>
  <Specifications>
    <ControllerType></ControllerType>
  </Specifications>
</SSLVPN>

```

## Table description

Item	Description
Feature name	SSLVPN
Table name	Specifications
Table type	Single-instance table

Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ControllerType	SSL VPN ControllerType	Column	Enumeration: <ul style="list-style-type: none"> <li>0—None.</li> <li>1—M9K.</li> </ul>	N/A

## SSLVPN/GlobalLog

This table contains SSLVPN global log configuration information.

## XML structure

```
<SSLVPN>
  <GlobalLog>
    <GlobalLogEnable></GlobalLogEnable>
  </GlobalLog>
</SSLVPN>
```

## Table description

Item	Description
Feature name	SSLVPN
Table name	GlobalLog
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalLogEnable	Whether the global log is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul>	N/A

## SSLVPN/IpAcStatistics

This table contains SSLVPN IP access packet statistics for each user .

## XML structure

```
<SSLVPN>
  <IpAcStatistics>
    <IpAcStatistic>
      <ContextName></ContextName>
      <UserName></UserName>
      <SessionID></SessionID>
      <UserAddressType></UserAddressType>
      <UserIpv4Address></UserIpv4Address>
      <UserIpv6Address></UserIpv6Address>
      <RecvReqPkts></RecvReqPkts>
      <SendReqPkts></SendReqPkts>
      <DropReqPkts></DropReqPkts>
      <RecvReplyPkts></RecvReplyPkts>
      <SendReplyPkts></SendReplyPkts>
      <DropReplyPkts></DropReplyPkts>
      <KeepalivePkts></KeepalivePkts>
      <KeepaliveReplyPkts></KeepaliveReplyPkts>
      <RecvUpdateCfgPkts></RecvUpdateCfgPkts>
      <SendUpdateCfgPkts></SendUpdateCfgPkts>
    </IpAcStatistic>
  </IpAcStatistics>
</SSLVPN>
```

## Table description

Item	Description
Feature name	SSLVPN
Table name	IpAcStatistics
Table type	Multi-instance table
Row name	IpAcStatistic
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
UserName	Username	Index	String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SessionID	User session ID	Index	Unsigned integer. Value range: 1 to 4294967295.	The ID is used only for sequencing. It is randomly assigned.
UserAddress Type	Type of user address	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4.</li> <li>2—IPv6.</li> </ul>	N/A
UserIpv4Address	User IPv4 address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
UserIpv6Address	User IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
RecvReqPkts	Number of received IP access request packets during a specific period	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
SendReqPkts	Number of sent IP access request packets during a specific period	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
DropReqPkts	Number of dropped IP access request packets during a specific period	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
RecvReplyPkts	Number of received IP access reply packets during a specific period	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
SendReplyPkts	Number of sent IP access reply packets during a specific period	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
DropReplyPkts	Number of dropped IP access reply packets during a specific period	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
KeepalivePkts	Number of keepalive packets during a specific period	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
KeepaliveReplyPkts	Number of keepalive reply packets during a specific period	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
RecvUpdateConfigPkts	Number of received configuration updating reply packets during a specific period	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SendUpdateCfgPkts	Number of sent configuration updating reply packets during a specific period	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A

## SSLVPN/IpAcContextStatistics

This table contains IP access packet statistics for each SSL VPN context.

### XML structure

```

<SSLVPN>
  <IpAcContextStatistics>
    <IpAcContextStatistic>
      <ContextName></ContextName>
      <ClientInBytes></ClientInBytes>
      <ClientOutBytes></ClientOutBytes>
      <ServerInBytes></ServerInBytes>
      <ServerOutBytes></ServerOutBytes>
    </IpAcContextStatistic>
  </IpAcContextStatistics>
</SSLVPN>

```

### Table description

Item	Description
Feature name	SSLVPN
Table name	IpAcContextStatistics
Table type	Multi-instance table
Row name	IpAcContextStatistic
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientInBytes	Number of IP access request bytes received from client during a specific period	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
ClientOutBytes	Number of IP access reply bytes sent to client during a specific period	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
ServerInBytes	Number of IP access reply bytes received from server during a specific period	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
ServerOutBytes	Number of IP access request packet bytes sent to server during a specific period	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A

## SSLVPN/PortForwardCtxItems

This table contains SSL VPN port forwarding items control configuration information.

### XML structure

```

<SSLVPN>
  <PortForwardCtxItems>
    <PortForwardCtxItem>
      <ContextName></ContextName>
      <ItemName></ItemName>
      <LocalPortNumber></LocalPortNumber>
      <LocalName></LocalName>

      <Description></Description>
      <Execution></Execution>
    </PortForwardCtxItem>
  </PortForwardCtxItems>
</SSLVPN>

```

## Table description

Item	Description
Feature name	SSLVPN
Table name	PortForwardCtxItems
Table type	Multi-instance table
Row name	PortForwardCtxItem
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
ItemName	Port forwarding item name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.
LocalPortNumber	Port number of the local server	N/A	Unsigned integer. Value range: 1 to 65535.
LocalName	Domain name of the local server	N/A	String, case insensitive. Length: 1 to 253 characters. The string can contain only letters, digits, hyphens (-), underscores (_), square brackets ([]), colon(:) and dots (.).
RemoteServer	Domain name of the remote server	N/A	String, case insensitive. Length: 1 to 253 characters. The string can contain only letters, digits, hyphens (-), underscores (_), square brackets ([]), colon(:) and dots (.).
RemotePortNumber	Port number of the remote server	N/A	Unsigned integer. Value range: 1 to 65535.
Description	Description for the port forwarding entry	N/A	String. Length: 1 to 63 characters.
Execution	Configure the script to execute for the port forwarding item	N/A	String, case insensitive. Length: 1 to 255 characters.

# SSLVPN/PortForwardItemResources

This table contains SSL VPN port forwarding item resource configuration information.

## XML structure

```
<SSLVPN>
  <PortForwardItemResources>
    <PortForwardItemResource>
      <ContextName></ContextName>
      <PortForwardName></PortForwardName>
      <ItemName></ItemName>

</SSLVPN>
```

## Table description

Item	Description
Feature name	SSLVPN
Table name	ShortcutRefers
Table type	Multi-instance table
Row name	ShortcutRefer
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
ShortcutListName	SSL VPN short cut list name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.
ShortcutName	SSL VPN short cut name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.

## SSLVPN/ShortcutPolicies

This table contains SSL VPN short cut information for policy groups.

## XML structure

```
<SSLVPN>
  <ShortcutPolicys>
    <ShortcutPolicy>
      <ContextName></ContextName>
      <PGroupName></PGroupName>
      <ShortcutListName></ShortcutListName>
    </ShortcutPolicy>
  </ShortcutPolicys>
</SSLVPN>
```

## Table description

Item	Description
Feature name	SSLVPN
Table name	ShortcutPolicys
Table type	Multi-instance table
Row name	ShortcutPolicy
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).
PGroupName	SSL VPN policy group name	Index	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.
ShortcutListName	SSL VPN shortcut list name	N/A	String, case insensitive. Length: 1 to 31 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.

## SSLVPN/Users

This table contains SSL VPN user bind address information.

## XML structure

```
<SSLVPN>
  <Users>
    <User>
      <ContextName></ContextName>
      <UserName></UserName>
      <BindAddress></BindAddress>
      <AutoBindAddressNum></AutoBindAddressNum>
    </User>
  </Users>
</SSLVPN>
```

## Table description

Item	Description
Feature name	SSLVPN
Table name	Users
Table type	Multi-instance table
Row name	User
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextName	SSL VPN context name	Index	String, case insensitive. Length: 1 to 31 characters. The string can contain only letters, digits, and underscores (_).	N/A
UserName	SSLVPN user	Index	String, case insensitive. Length: 1 to 63 characters. The value can contain Chinese characters. Invalid characters are \t \r \n ?.	N/A
BindAddress	IP address list	N/A	String, dotted decimal notation.	Example: 10.1.1.5,10.1.1.10-10.1.1.20
AutoBindAddressNum	Automatically allocate available IP addresses to the user	N/A	Unsigned integer. Value range: 1 to 10	This column is not displayed by the GET operation

# SSLVPN/GlobalCustomInfos

This table contains global customization information about SSL VPN user access clients.

## XML structure

```
<SSLVPN>
  <GlobalCustomInfos>

# SSLVPN

## SSLVPN/Gateways

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
Invalid IP address. IP地址无效。	When configuring an IP address,the specified address is invalid. 配置IP地址时，指定的地址无效。
Can't delete the gateway. It is associated with contexts. 指定的SSL VPN网关已经被SSL VPN访问实例引用，无法删除。	Delete the specified gateway,which is referenced by other access instances. 删除指定gateway时，此网关被其它访问实例引用。
The specified port number must be different from the HTTP redirection port number. 指定的端口号不能是HTTP重定向端口号。	Configuring the IP address port is the same as redirecting port. HTTPS的端口号不能与HTTP重定向端口相同。
The port has already been used. 此端口号已被占用。	Configuration redirection ports have been occupied by other configurations. 配置的重定向端口已被其它配置占用。
Can't enable the SSL VPN gateway: The gateway IP address is already used by another SSL VPN gateway. 开启当前的SSL VPN网关失败：该网关的IP地址已经被其它SSL VPN网关使用。	The address bound by the open gateway has been used by other gateways. 开启网关失败，此网关的IP地址被其它网关使用。
The specified IP address and port number can't be the same as those of other SSL VPN gateways. 指定IP地址和端口号不能与其他网关相同。	The configured IP address and port are the same as the existing gateway. 配置的IP地址和端口和已有的网关相同。
The specified IPv6 address and port number can't be the same as those of other SSL VPN gateways. 指定IPv6地址和端口号不能与其他网关相同。	The configured IPv6 address and port are the same as the existing gateway. 配置的IPv6地址和端口和已有的网关相同。

## SSLVPN/Contexts

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
Invalid IP address. IP地址无效。	When configuring an IP address,the specified address is invalid. 配置IP地址时，指定的地址无效
The specified SSL VPN gateway doesn't exist. 指定的SSL VPN网关不存在。	When adding the gateway,the specified name does not exist. 添加SSL VPN网关时，指定的名称不存在。

<p>A context has already been associated with the gateway without specifying a domain name or virtual host name.</p> <p>该SSL VPN网关已经被其他的SSL VPN访问实例引用，且引用时未指定域名和虚拟主机名。</p>	<p>Configure the gateway under the access instance, which has been monopolized by other access instances.</p> <p>访问实例下配置网关，此网关已经被其它访问实例独占。</p>
<p>The domain name is already used by a context associated with the gateway.</p> <p>不能为引用同一个SSL VPN网关的不同SSL VPN访问实例指定相同的域名。</p>	<p>Configure the gateway and domain name under the access instance, which has been referenced by the same domain name as other access instances.</p> <p>访问实例下配置网关和域名，此网关已经被其它访问实例以相同的域名引用。</p>
<p>The virtual host name is already used by a context associated with the gateway.</p> <p>不能为引用同一个SSL VPN网关的不同SSL VPN访问实例指定相同的虚拟主机名称。</p>	<p>Configure the gateway and virtual host name under the access instance, which has been referenced by the same virtual host name as other access instances.</p> <p>访问实例下配置网关和虚拟主机名，此网关已经被其它访问实例以相同的虚拟主机名引用。</p>
<p>Invalid AAA domain name.</p> <p>AAA域名非法。</p>	<p>The name specified for configuring the AAA domain name is invalid.</p> <p>配置AAA域名，指定的名称无效。</p>
<p>An address in the address pool conflicted with an address on the device.</p> <p>地址池中的地址和设备中的地址存在冲突。</p>	<p>The configured IP address pool conflicts with the address in the device.</p> <p>配置的IP地址池和设备中的地址有冲突。</p>
<p>Maximum number of associated gateways already reached.</p> <p>SSL VPN网关引用数已达上限。</p>	<p>The maximum number of reference gateways is reached.</p> <p>引用网关数达到最大值。</p>
<p>The virtual host name is already used in the URL mapping configuration of an URL item in the SSL VPN context.</p> <p>当前SSL VPN访问实例下的URL表项已经使用该虚拟主机名。</p>	<p>The reference gateway is a virtual host name, the same as the domain referenced by a resource map under a URL item in the current context.</p> <p>引用网关为虚拟主机名方式，与当前Context中某个URL表项下URL资源映射所引用的域名相同。</p>
<p>The gateway is already used in the URL mapping configuration of an URL item.</p> <p>该网关已被URL表项下的资源映射配置使用。</p>	<p>The reference gateway is an exclusive reference that has been referenced by the URL resource mapping under the context url table entry.</p> <p>引用网关为独占式引用，而该网关已经被Context URL表项下的URL资源映射所引用。</p>
<p>The gateway is already associated with another SSL VPN context through a domain name or virtual host name.</p> <p>该SSL VPN网关已经被其他SSL VPN访问实例以域名或虚拟主机名的方式引用。</p>	<p>Configure the gateway monopoly, which has been referenced by the domain name or virtual host name of other contexts.</p> <p>配置网关独占方式，而该网关已经被其它Context已域名或虚拟主机名的方式引用。</p>
<p>The specified gateway name and virtual host name are already used in the URL mapping configuration of an URL item.</p> <p>指定的网关及虚拟主机名已被URL表项使用。</p>	<p>The reference gateway is a virtual host name, gateway and virtual host names are already used in the URL mapping</p> <p>引用网关为虚拟主机名方式，其网关及虚拟主机名已被URL表项使用。</p>

## SSLVPN/Contexts\_v2

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
Invalid IP address. IP地址无效。	When configuring an IP address,the specified address is invalid. 配置IP地址时，指定的地址无效
Invalid AAA domain name. AAA域名非法。	The name specified for configuring the AAA domain name is invalid. 配置AAA域名，指定的名称无效。
An address in the address pool conflicted with an address on the device. 地址池中的地址和设备中的地址存在冲突。	The configured IP address pool conflicts with the address in the device. 配置的IP地址池和设备中的地址有冲突。

## SSLVPN/ContextGateways

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN gateway doesn't exist. 指定的SSL VPN网关不存在。	When adding the gateway,the specified name does not exist. 添加网关时，指定名称的网关不存在。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
A context has already been associated with the gateway without specifying a domain name or virtual host name. 该SSL VPN网关已经被其他的SSL VPN访问实例引用，且引用时未指定域名和虚拟主机名。	Configure the gateway under the access instance,which has been monopolized by other access instances. 访问实例下配置网关，此网关已经被其它访问实例独占
The domain name is already used by a context associated with the gateway. 不能为引用同一个SSL VPN网关的不同SSL VPN访问实例指定相同的域名。	Configure the gateway and domain name under the access instance,which has been referenced by the same domain name as other access instances. 访问实例下配置网关和域名，此网关已经被其它访问实例已相同的域名引用。
The virtual host name is already used by a context associated with the gateway. 不能为引用同一个SSL VPN网关的不同SSL VPN访问实例指定相同的虚拟主机名称。	Configure the gateway and virtual host name under the access instance,which has been referenced by the same virtual host name as other access instances. 访问实例下配置网关和虚拟主机名，此网关已经被其它访问实例以相同的虚拟主机名引用。
Maximum number of associated gateways already reached. SSL VPN网关引用数已达上限。	The maximum number of reference gateways is reached. 引用网关数达到最大值。

<p>The virtual host name is already used in the URL mapping configuration of an URL item in the SSL VPN context.</p> <p>当前SSL VPN访问实例下的URL表项已经使用该虚拟主机名。</p>	<p>The reference gateway is a virtual host name, the same as the domain referenced by a resource map under a URL item in the current context.</p> <p>引用网关为虚拟主机名方式，与当前Context中某个URL表项下URL资源映射所引用的域名相同。</p>
<p>The gateway is already used in the URL mapping configuration of an URL item.</p> <p>该网关已被URL表项下的资源映射配置使用。</p>	<p>The reference gateway is an exclusive reference that has been referenced by the URL resource mapping under the context turl table entry.</p> <p>引用网关为独占式引用，而该网关已经被Context URL表项下的URL资源映射所引用。</p>
<p>The gateway is already associated with another SSL VPN context through a domain name or virtual host name.</p> <p>该SSL VPN网关已经被其他SSL VPN访问实例以域名或虚拟主机名的方式引用。</p>	<p>Configure the gateway monopoly, which has been referenced by the domain name or virtual host name of other contexts.</p> <p>配置网关独占方式，而该网关已经被其它Context以域名或虚拟主机名的方式引用。</p>
<p>The specified gateway name and virtual host name are already used in the URL mapping configuration of an URL item.</p> <p>指定的网关及虚拟主机名已被URL表项使用。</p>	<p>The reference gateway is a virtual host name, gateway and virtual host names are already used in the URL mapping</p> <p>引用网关为虚拟主机名方式，其网关及虚拟主机名已被URL表项使用。</p>

## SSLVPN/IpAcContexts

Message	Explanation
<p>SSL VPN is not enabled.</p> <p>SSL VPN服务没有开启。</p>	<p>Get or configuration data when the SSLVPN process is not started.</p> <p>当SSLVPN进程没有开启时，获取数据或下发配置。</p>
<p>Invalid IP address.</p> <p>IP地址无效。</p>	<p>When configuring an IP address,the specified address is invalid.</p> <p>配置IP地址时，指定的地址无效</p>
<p>An address in the address pool conflicted with an address on the device.</p> <p>地址池中的地址和设备中的地址存在冲突。</p>	<p>The configured IP address pool conflicts with the address in the device.</p> <p>配置的IP地址池和设备中的地址有冲突。</p>

## SSLVPN/UISettings

Message	Explanation
<p>SSL VPN is not enabled.</p> <p>SSL VPN服务没有开启。</p>	<p>Get or configuration data when the SSLVPN process is not started.</p> <p>当SSLVPN进程没有开启时，获取数据或下发配置。</p>
<p>Invalid file name.</p> <p>文件名非法。</p>	<p>When configuring a file name,the specified name is invalid.</p> <p>配置文件名时，指定的名称无效</p>
<p>The logo file doesn't exist.</p> <p>logo文件不存在。</p>	<p>Configure the logo file,the specified file does not exist.</p> <p>配置logo文件，指定的文件不存在。</p>
<p>File size should not exceed 100KB.</p>	<p>The length of the file exceeds 100KB.</p>

文件大小不能超过100KB。	文件的大小超过100KB。
----------------	---------------

## SSLVPN/PortForwardLists

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
Can't delete the port-forwarding list. It is associated with policy groups. 指定的端口转发列表已经被策略组引用，无法删除。	Delete the port forward list,which has been referenced by the policy group. 删除端口转发列表时，此列表已被策略组引用。

## SSLVPN/PortForwardItems

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
Remote server name is required. 需要输入远端服务器名称。	Create a port to publish entry,the remote server name is not issued. 创建端口转发表项，并没有指定远端服务器名称。
Remote server port is required. 需要输入远端服务器端口号。	Create a port to publish entry,the remote server port is not issued. 创建端口转发表项，并没有指定远端服务器端口没有下发。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
Can't delete the port forwarding item. Reason: The item has been assigned to a port forwarding list. 无法删除端口转发表项，因为此表项已端口转发列表引用	Delete the referenced port forwarding item. 删除已被引用的端口转发列表。

## SSLVPN/Ipv4AddressPools

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The start IP address is required.	When configuring an address,there is no start IP.

需要输入地址池的起始地址。	配置地址时，没有指定起始地址。
The end IP address is required. 需要输入地址池的结束地址。	When configuring an address,there is no end IP. 配置地址时，没有指定结束地址。
The IP address range can't overlap with an existing IP address range. 地址范围不能与已有地址池的地址范围重叠。	Configure the IP address range to overlap the address range in the existing address pool. 配置IP地址范围和已有地址池中的地址范围重叠。
Invalid IP address. IP地址无效。	When configuring an IP address,the specified address is invalid. 配置IP地址时，指定的地址无效
The start IP address must be smaller than or equal to the end IP address. 地址池的起始地址必须小于或等于结束地址。	When configuring an IP address, the starting address is greater than the ending address. 配置IP地址时，起始地址大于结束地址。
The IP address range can't include loopback addresses. 地址池的地址范围不能包含环回地址。	The configured IP address contains the loopback address. 配置的IP地址中包含环回地址。
An address in the address pool conflicted with an address on the device. 地址池中的地址和设备中的地址存在冲突。	The configured IP address pool conflicts with the address in the device. 配置的IP地址池和设备中的地址有冲突。

## SSLVPN/RouteLists

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
Can't delete the route list. It is referenced by policy groups. 指定的路由列表已经被策略组引用，无法删除。	Delete the routing list referenced by the policy group. 删除已被策略组引用的路由列表。

## SSLVPN/RouteItems

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
Invalid IP address. IP地址无效。	When configuring an IP address,the specified address is invalid. 配置IP地址时，指定的地址无效
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。

## SSLVPN/PolicyGroups

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
Can't delete the policy group. It is associated with contexts. 指定的策略组已经被SSL VPN访问实例引用，无法删除。	Delete the referenced policy group. 删除已经被SSLVPN 访问实例引用的策略组。

## SSLVPN/TcpAcPolicys

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified port-forwarding list doesn't exist. 指定的端口转发列表不存在。	Configure a list of port forwarding references that do not exist. 配置引用不存在的端口转发列表。
The uri-acl does not exist. URI ACL不存在。	When configuring data, the URI ACL does not exist. 配置数据时，URI ACL不存在。

## SSLVPN/IpAcPolicys

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
Invalid IP address. IP地址无效。	When configuring an IP address,the specified address is invalid. 配置IP地址时，指定的地址无效
The route list doesn't exist. 引用的路由列表不存在。	Configure routing lists that do not exist. 配置引用不存在的路由列表。

## SSLVPN/IpAcPolicys\_v2

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
Invalid IP address. IP地址无效。	When configuring an IP address,the specified address is invalid. 配置IP地址时，指定的地址无效
The route list doesn't exist. 引用的路由列表不存在。	Configure routing lists that do not exist. 配置引用不存在的路由列表。
The uri-acl does not exist. URI ACL不存在。	When configuring data, the URI ACL does not exist. 配置数据时，URI ACL不存在。

## SSLVPN/Sessions

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。

## SSLVPN/ContextStatistics

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。

## SSLVPN/URIACLs

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
The uri-acl is in use. URI ACL正在被使用。	Delete the referenced URI ACL. 删除已被引用的URI ACL。

# SSLVPN/URIACLItems

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
The uri-acl does not exist. URI ACL不存在。	When configuring data, the URI ACL does not exist. 配置数据时，URI ACL不存在。
Invalid uri-acl rule ID. 无效的URI ACL规则ID。	When configuring an ID, the specified value is invalid. 配置URI ACL的ID时，指定的值无效。
Please input uri-acl rule action. 需要输入URI ACL规则动作。	When configuring data, no regular action is issued. 配置数据时，必须指定规则动作。
Please input uri-acl rule pattern. 需要输入URI ACL规则样式。	When configuring data, no rule style is issued. 配置数据时，必须指定规则样式。
Pattern string is invalid. 模式字符串不合法。	When configuring data, the specified pattern string is invalid. 配置数据时，指定的模式字符串无效。
Protocol string is invalid. 协议类型不合法	When configuring data, the specified protocol is invalid. 配置数据时，指定的协议无效。
Host name string is invalid. 主机地址或域名不合法。	When configuring data, the specified host address or domain name is invalid. 配置数据时，指定的主机地址或域名无效。
Port string is invalid. 端口不合法。	When configuring data, the specified port is invalid. 配置数据时，指定的端口无效。
Path string is invalid. 路径不合法。	When configuring data, the specified path is invalid. 配置数据时，指定的路径无效。

# SSLVPN/WebAcPolicys

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The uri-acl does not exist. URI ACL不存在。	When configuring data, the URI ACL does not exist. 配置数据时，URI ACL不存在。

## SSLVPN/UrlLists

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
Can't delete the url list: It is associated with policy groups. 指定的URL列表被策略组引用，无法删除。	Delete the URL list referenced by the policy group. 删除已被策略组引用的URL列表。

## SSLVPN/UrlItems

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
The specified url-list list doesn't exist. 指定的URL列表不存在。	When configuring data, the specified URL list does not exist. 配置数据时，指定的URL列表不存在。
Can't delete the URL item because it has been assigned to a URL list. 无法删除URL表项，因为该表项已被URL列表引用。	Delete the URL item referenced by the URL list. 删除已被URL 列表引用的URL表项。
The URL is already specified for another URL item in the SSL VPN context. 当前SSL VPN访问实例下的其他URL表项中已存在该URL。	In the case of resource mapping, the URL item is configured with the same value as the other URL item. 资源映射情况下，配置的URL表项和其它URL表项相同。

## SSLVPN/UrlCtxItems

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN gateway doesn't exist. 指定的SSL VPN网关不存在。	When adding the gateway,the specified name does not exist. 添加网关时，指定的名称不存在。
The specified SSL VPN context doesn't exist.	When the configuration is added,the context instance does not exist.

指定的SSL VPN访问实例不存在。	添加配置时，访问实例不存在。
The specified URL item doesn't exist. 指定的URL表项不存在。	When configuring data, the specified URL item does not exist. 配置数据时，指定的URL表项不存在。
The domain name is already used in the URL mapping configuration of another URL item in the SSL VPN context. 当前SSL VPN访问实例下的其他URL表项下域名映射配置已使用该域名。	The configuration domain name is the same as the domain name mapped under other URL item. 配置域名和其它URL表项下域名映射的域名相同。
The domain name specified in the URL item is the same as the gateway's virtual host name specified for the SSL VPN context. 该URL表项配置的域名与当前SSL VPN访问实例下配置的网关虚拟主机名相同。	The configured domain name is the same as the gateway virtual host name under the current access instance. 配置域名和当前SSLVPN访问实例下的网关虚拟主机名相同。
The URL specified for the URL item is the same as the URL specified for another URL item (in the same SSL VPN context) that has URL mapping configured. 指定的URL与当前SSL VPN访问实例下的其他URL表项中配置的URL相同。	Configuring URL mapping ,the URL configured under the URL item is the same as other URL item configured with resource mapping under the current context. 配置资源映射时，该URL表项下配置的URL与当前Context下的其它配置了资源映射的URL表项的URL相同
The gateway is already used in the URL mapping configuration of another URL item. 其他URL表项下的端口映射已配置该网关。	The referenced gateway is called an exclusive reference, the gateway is already referenced by the URL resource map under the url table entry of the context. 引用的网关名为独占引用，而该网关已经被Context 的URL表项下URL资源映射所引用
The gateway name and virtual host name are already associated with an SSL VPN context. 该URL表项配置的网关及虚拟主机名已经被SSL VPN访问实例使用。	The reference gateway name and virtual host name are the same as the gateway and virtual host name referenced by the context. 引用的网关名和虚拟主机名与Context引用的网关和虚拟主机名都相同
The gateway name and virtual host name specified in the URL item are already used in the URL mapping of another URL item. 该URL表项配置的网关及虚拟主机名已被其他URL表项使用。	When configuring URL mapping ,the configured gateway and virtual host names under the url table item have been used by other URL table items. 配置资源映射时，该URL表项下配置的网关及虚拟主机名已经被其它URL表项使用。
The gateway name specified in the URL item is already associated with an SSL VPN context. 该URL表项引用的网关已经和SSL VPN访问实例关联。	When configuring URL mapping ,the referenced gateway is already associated with the SSLVPN access instance. 配置资源映射时，引用的网关已经和SSLVPN访问实例关联。

## SSLVPN/UrlItemResources

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。

The specified url-list list doesn't exist. 指定的URL列表不存在。	When configuring data, the specified URL list does not exist. 配置数据时，指定的URL列表不存在。
The specified URL item doesn't exist. 指定的URL表项不存在。	When configuring data, the specified URL item does not exist. 配置数据时，指定的URL表项不存在。

## SSLVPN/SnatPools

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
Invalid IP address. IP地址无效。	When configuring an IP address,the specified address is invalid. 配置IP地址时，指定的地址无效
An address in the address pool conflicted with an address on the device. 地址池中的地址和设备中的地址存在冲突。	The configured IP address pool conflicts with the address in the device. 配置的IP地址池和设备中的地址有冲突。
The end address must be greater than or equal to the start address. 地址池的结束地址必须大于或等于起始地址。	When configuring an IP address, the end address is less than the beginning address. 配置IP地址时，结束地址小于起始地址。
Number of addresses in the SNAT pool exceeded the limit. 地址池内的地址数量已达上限。	When configuring an IP address, the number of addresses exceeds the maximum. 配置IP地址时，地址数量超过最大值。
The specified SNAT pool member can't overlap with an existing member in another SNAT pool. 地址范围不能与已有地址池的地址范围重叠。	Configure the IP address range to overlap the address range in the existing address pool. 配置IP地址范围和已有地址池中的地址范围重叠。
The start IP address is required. 需要输入SNAT POOL的起始地址。	When configuring an address,there is no start IP. 配置地址时，没有指定起始地址。
The end IP address is required. 需要输入SNAT POOL的结束地址。	When configuring an address,there is no end IP. 配置地址时，没有指定结束地址。

## SSLVPN/Ipv6SnatPools

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
Invalid IP address. IP地址无效。	When configuring an IP address,the specified address is invalid. 配置IPv6地址时，指定的地址无效
An address in the address pool conflicted with an address on the device. 地址池中的地址和设备中的地址存在冲突。	The configured IP address conflicts with the address in the device. 配置的IPv6地址池和设备中的地址有冲突。

The end address must be greater than or equal to the start address. 地址池的结束地址必须大于或等于起始地址。	When configuring an IP address, the end address is less than the beginning address. 配置IPv6地址时，结束地址小于起始地址。
Number of addresses in the SNAT pool exceeded the limit. 地址池内的地址数量已达上限。	When configuring an IP address, the number of addresses exceeds the maximum. 配置IPv6地址时，地址数量超过最大值。
The specified SNAT pool member can't overlap with an existing member in another SNAT pool. 地址范围不能与已有地址池的地址范围重叠。	Configure the IP address range to overlap the address range in the existing address pool. 配置IPv6地址范围和已有地址池中的地址范围重叠。
The start IP address is required. 需要输入SNAT POOL的起始地址。	When configuring an address,there is no start IP. 配置IPv6地址时，没有指定起始地址。
The end IP address is required. 需要输入SNAT POOL的结束地址。	When configuring an address,there is no end IP. 配置IPv6地址时，没有指定结束地址。

## SSLVPN/UrlResources

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
The specified policy group doesn't exist. 指定的策略组不存在。	When the configuration is added,the policy group instance does not exist. 添加配置时，策略组不存在。
The specified url-list list doesn't exist. 指定的URL列表不存在。	When configuring data, the specified URL list does not exist. 配置数据时，指定的URL列表不存在。

## SSLVPN/SnatResources

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified snat pool doesn't exist. 指定的SNAT地址池不存在。	When configuring data, the specified SNAT pool does not exist. 配置数据时，指定的SNAT地址池不存在。

## SSLVPN/UserControls

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。

## SSLVPN/GlobalLog

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。

## SSLVPN/IpAcStatistics

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。

## SSLVPN/IpAcContextStatistics

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。

## SSLVPN/PortForwardCtxItems

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 配置数据时，访问实例不存在。
Local name is required.	Add the configuration and the local server name is not issued.

需要指定本地服务器名称。	添加配置时，没有指定本地服务器名称。
Local port is required. 需要指定本地服务器端口号	Add the configuration and the local server port is not issued. 添加配置时，没有指定本地服务器端口。
The specified port forwarding item doesn't exist. 指定的端口转发表项不存在	When configuring data,the port forwarding list does not exist. 配置数据时，端口转发列表不存在。
Can't delete the port forwarding item. Reason: The item has been assigned to a port forwarding list. 无法删除端口转发表项，因为此表项已端口转发列表引用	Delete the referenced port forwarding item. 删除已被引用的端口转发列表。

## SSLVPN/PortForwardItemResources

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
The specified port forwarding item doesn't exist. 指定的端口转发表项不存在	When configuring data,the forwarding list does not exist. 配置数据时，端口转发列表不存在。

## SSLVPN/Shortcuts

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
Can't delete the shortcut. Reason: The shortcut has been assigned to a shortcut list. 无法删除快捷方式，因为此快捷方式已被快捷方式列表引用	Delete the referenced shortcut. 删除已被引用的快捷方式。

## SSLVPN/ShortCutLists

Message	Explanation
SSL VPN is not enabled.	Get or configuration data when the SSLVPN process is not started.

SSL VPN服务没有开启。	当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。
Can't delete the shortcut list. Reason: The list has been assigned to a policy group. 无法删除快捷方式列表，因为此快捷方式列表已被策略组引用。	Delete the referenced shortcut list. 删除已被引用的快捷方式列表。

## SSLVPN/ShortcutResources

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added, the context instance does not exist. 添加配置时，访问实例不存在。
The specified shortcut doesn't exist. 指定的快捷方式不存在。	When the configuration is added, the specified shortcut doesn't exist. 配置数据时，指定的快捷方式不存在。
The specified shortcut list doesn't exist. 指定的快捷方式列表不存在。	When the configuration is added, the specified shortcut list doesn't exist. 配置数据时，指定的快捷方式列表不存在。

## SSLVPN/ShortcutPolicys

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Gets or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。

## SSLVPN/Users

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The specified SSL VPN context doesn't exist. 指定的SSL VPN访问实例不存在。	When the configuration is added,the context instance does not exist. 添加配置时，访问实例不存在。

<p>Operation succeeded. However, invalid addresses are included: broadcast or network addresses, or addresses not in the IP access address pool.</p> <p>操作成功，但是包含无效地址：广播地址、网络地址或不在地址池中的地址。</p>	<p>Binding IP addresses contain broadcast addresses, network addresses, or addresses that are not in the address pool.</p> <p>绑定IP地址包含广播地址、网络地址或不在地址池中的地址。</p>
<p>Operation failed. Some of the addresses are already bound to other users.</p> <p>操作失败，部分地址已经被其它用户绑定。</p>	<p>Bind IP addresses, some of which have been bound by other users.</p> <p>绑定的IP地址，部分地址已经被其它用户绑定。</p>
<p>Operation failed. The available IP addresses in the address pool were not enough for auto allocation.</p> <p>操作失败，地址池中可用于分配的地址已经不足以自动分配。</p>	<p>Configuration automatically assigns more addresses than the number of addresses remaining in the address pool.</p> <p>配置自动分配地址数大于地址池中剩余地址数量。</p>
<p>Invalid IP address list.</p> <p>无效的IP地址列表。</p>	<p>The configured IP address is illegal.</p> <p>配置的IP地址无效。</p>
<p>The specified SSL VPN user doesn't exist.</p> <p>指定的SSL VPN用户不存在。</p>	<p>The configured user does not exist.</p> <p>配置下发的用户不存在。</p>
<p>The username cannot contain the following special characters:   / : * ? &lt; &gt; @.</p> <p>用户名不能包含以下特殊字符：  / : * ? &lt; &gt; @。</p>	<p>The username configured to issue contains illegal characters.</p> <p>配置下发的用户名包含非法字符。</p>
<p>Operation failed. No IP access address pool is available in the SSL VPN context.</p> <p>操作失败，在SSL VPN访问实例中不存在有效的地址池。</p>	<p>The SSLVPN access instance does not reference the address pool.</p> <p>SSLVPN访问实例没有引用地址池。</p>
<p>Operation failed. Maximum number of bound addresses already reached."</p> <p>操作失败，已经达到可绑定的最大地址数。</p>	<p>The number of addresses bound by the user exceeds the maximum.</p> <p>用户绑定的地址数超过最大限制。</p>
<p>BindAddress and AutoBindAddrNum cannot both be configured.</p> <p>BindAddress 和 AutoBindAddrNum 不能同时配置。</p>	<p>Simultaneously issue the specified and automatic IP address binding.</p> <p>不能同时下发指定和自动IP地址绑定。</p>

## SSLVPN/GlobalCustomInfos

Message	Explanation
<p>SSL VPN is not enabled.</p> <p>SSL VPN服务没有开启。</p>	<p>Get or configuration data when the SSLVPN process is not started.</p> <p>当SSLVPN进程没有开启时，获取数据或下发配置。</p>

## SSLVPN/LogoutAlls

Message	Explanation
<p>SSL VPN is not enabled.</p> <p>SSL VPN服务没有开启。</p>	<p>Get or configuration data when the SSLVPN process is not started.</p> <p>当SSLVPN进程没有开启时，获取数据或下发配置。</p>

## SSLVPN/LogoutUsers

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。

## SSLVPN/LogoutSessions

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。

## SSLVPN/GlobalCustoms

Message	Explanation
SSL VPN is not enabled. SSL VPN服务没有开启。	Get or configuration data when the SSLVPN process is not started. 当SSLVPN进程没有开启时，获取数据或下发配置。
The file size cannot exceed 50000 KB. 文件大小不能超过50M。	The configuration file size exceeds 50M. 配置文件大小超过50M。
The file does not exist. 文件不存在。	The configuration specified file does not exist. 配置指定的文件不存在。
Invalid file format. The file format must be EXE. 文件格式错误，必须为exe格式。	Configuring the specified file format is illegal. 配置指定的文件格式非法。

## Table description

Item	Description
Feature name	gsta-staticrt
Table name	srRoutes
Table type	Multi-instance table
Row name	srRoute
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
vrfName	Name of the VPN to which a prefix belongs.	Index	String, case-sensitive. Length: 1 to 31 characters.	A null string or a _public_ string indicates the public instance.
afType	Address family type.	Index	String: case-sensitive: <ul style="list-style-type: none"><li>ipv4unicast</li><li>ipv6unicast</li></ul>	N/A
prefix	Destination IP address.	Index	String, dotted decimal notation if afType is ipv4unicast, or colon-separated hexadecimal string if afType is ipv6unicast.	Example: 17.0.0.0, or 123:1::
maskLength	Mask length of an	Index	Unsigned integer.	No more than 32 if

Column name	Column description	Column type	Data type and restrictions	Remarks
	IP address.		Value range: 0 to 128.	afType is ipv4unicast, and no more than 128 if afType is ipv6unicast.
ifName	Output interface of a route.	Index	String, case-insensitive. Length: 0 to 64 characters.	N/A
destVrfName	Name of the destination VPN instance.	Index	String, case-sensitive. Length: 1 to 31 characters.	A <code>_public_</code> string indicates the public instance, and a null string indicates the invalid instance when ifName is not null.
nexthop	Next hop IP address of a route.	Index	String, dotted decimal notation if afType is ipv4unicast, or colon-separated hexadecimal string if afType is ipv6unicast.	Example: 1.1.1.1, or 1::1.
description	Description of a static route.	N/A	String, case-sensitive. Length: 1 to 150 characters.	N/A
preference	Set a priority for the static routing protocol. If no priority is specified, the global default priority is used.	N/A	Unsigned integer. Value range: 1 to 255.	Default value is 60.
tag	Tag of a static route.	N/A	Unsigned integer. Value range: 1 to 4294967295.	Default value is 0.
sessionName	Bind a static BFD session to a static route.	N/A	String, case-sensitive. Length: 1 to 64 characters.	
isPermanent	Enables the static route to be active permanently.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Permanent route.</li> <li><b>false</b>—Not a permanent route.</li> </ul>	Default value is false.

## Example

# Set an IPv6 static route: "ipv6 route-static vpn-instance test 2003:: 64 2001::1 preference 5 bfd static StaticRtBfd description Route to HZ"

```

## gsta-staticrt/staticrt/srRoutes

Message	Explanation
Route already exists. 路由已存在	Configuration already exists, when setting new configuration.
Maximum number of routes has been reached. 已达到最大路由条数	Maximum number of routes has been reached.
Route does not exist. 路由不存在	The specified configuration doesn't exist, when getting or deleting it.
The specified VRF name does not exist. 目的VRF索引不存在	Please create the VPN instance first.
The specified next hop VRF name does not exist. 下一跳VRF索引不存在	Please create the VPN instance first.
The interface is not supported. 接口不支持	Only routing interfaces are available.
Invalid destination address. 目的地址无效	Only class A, class B, and class C addresses are available.
Invalid next hop address. 下一跳无效	Only class A, class B, and class C addresses are available.
Next-hop address, outbound interface, or both must be specified one. 下一跳地址或者出接口索引必须至少设置一个	Next-hop address, outbound interface, or both must be specified.
The specified interface requires configuring a next hop address. 该接口需要配置下一跳地址	The specified interface requires configuring a next hop address.
The specified interface does not require configuring a next hop address. 该接口不需要配置下一跳	The specified interface does not require configuring a next hop address.
BFD cannot coexist with backup attribute. 静态路由的备份路径属性不能与BFD共存	BFD cannot coexist with backup attribute.
BFD cannot coexist with Track attribute. 静态路由的track属性不能与BFD共存	BFD cannot coexist with Track attribute.
Next hop VRF name should be set to (%s). 下一跳VRF名称应该填(%s)	Next hop VRF name should be set to the specified character string.
A valid output interface is required for a link-local address as the next hop.	A valid output interface is required for a link-local address as the next hop.

Link-local地址作为下一跳需要指定有效出接口	
BFD not supported. 不支持BFD	BFD service has not been started.
The interface does not support BFD. 指定接口不支持BFD	BFD cannot be configured when the output interface is NULL0.
The specified interface name does not exist. 接口名称不存在	The specified interface name does not exist.
BFD cannot coexist with permanent attribute. 静态路由的永久属性不能与BFD共存	BFD cannot coexist with permanent attribute.
Track cannot coexist with permanent attribute. 静态路由的永久属性不能与track共存	Track cannot coexist with permanent attribute.

### Table description

Item	Description
Feature name	StaticRoute
Table name	Ipv4StaticRouteConfigurations
Table type	Multi-instance table
Row name	RouteEntry
Restrictions	None

Item	Description
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DestVrfIndex	Destination VRF index.	Index	Unsigned integer.	Public network index is 0. Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VRFIndex, see "Appendix" in L3vpn NETCONF XML API Data Reference.
DestTopologyIndex	Destination topology index.	Index	Unsigned integer.	Public network index is 0.
Ipv4Address	Destination IPv4 address.	Index	String, dotted decimal notation.	Example: 1.1.1.1.
Ipv4PrefixLength	Length of the destination IPv4 address prefix.	Index	Unsigned integer. Value range: 0 to 32.	N/A
NextHopVrfIndex	Nexthop VRF index.	Index	Unsigned integer.	When the configuration includes a valid ifIndex, NextHopVrfIndex should be set to the invalid VRF index 0xFFFF. Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VRFIndex, see "Appendix" in L3vpn NETCONF XML API Data Reference.
NextHopIpv4Address	Nexthop IPv4 address.	Index	String, dotted decimal notation.	Example: 1.1.1.1. 0.0.0.0 is an invalid value.
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
Tag	Route tag.	N/A	Unsigned integer. Value range: 1 to 4294967295.	Default value is 0.
Preference	Route preference.	N/A	Unsigned integer. Value range: 1 to 255.	Default value is 60.
Description	Description information.	N/A	String, case-sensitive. Length: 1 to 150 characters.	N/A
Permanent	Permanent attribute.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true—Permanent route.</li> <li>• false—Not a Permanent route.</li> </ul>	Default value is false.
BackupPathAttribute	Backup path attribute.	Data structure	Members include: <ul style="list-style-type: none"> <li>• BackupIfIndex.</li> <li>• BackupNextHopIPv4Addresses.</li> </ul>	N/A
BackupIfIndex	Backup interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
BackupNextHopIPv4Address	Backup next hop IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. 0.0.0.0 is an invalid value.
BfdAttribute	BFD attribute.	Data structure	Members include: <ul style="list-style-type: none"> <li>• BfdWorkMode.</li> <li>• BfdSourceIPv4Address.</li> </ul>	N/A
BfdWorkMode	BFD work mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—Control-packet mode.</li> <li>• 2—Echo-packet mode.</li> </ul>	N/A
BfdSourceIPv4Address	BFD source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. 0.0.0.0 is an invalid value.
TrackEntryID	Track entry ID.	N/A	Unsigned integer. Value range: 1 to 1024.	N/A
RecursiveHost	Recursive lookup for ARP host routes.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true—Looks up for only ARP host routes.</li> <li>• false—Looks up for not only ARP host routes, but also other routes.</li> </ul>	Default value is false.

# StaticRoute/Ipv4Group

This table contains IPv4 group configuration information.

## XML structure

```
<StaticRoute>
  <Ipv4Group>
    <GroupEntry>
      <Group></Group>
    </GroupEntry>
  </Ipv4Group>
</StaticRoute>
```

## Table description

Item	Description
Feature name	StaticRoute
Table name	Ipv4Group
Table type	Multi-instance table
Row name	GroupEntry
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Group	Group name.	Index	String. Length: 1 to 31 characters.	After a group is created, it cannot be modified.

# StaticRoute/Ipv4GroupPrefix

This table contains IPv4 group prefix configuration information.

## XML structure

```
<StaticRoute>
  <Ipv4GroupPrefix>

Ipv6PrefixLength	Length of the destination IPv6 address prefix.	Index	Unsigned integer. Value range: 0 to 128.	N/A
NextHopVrfIndex	Nexthop VRF index.	Index	Unsigned integer.	When the configuration includes a valid ifIndex, NextHopVrfIndex should be set to the invalid VRF index 0xFFFF. Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VRFIndex, see “Appendix” in L3vpn NETCONF XML API Data Reference.
NextHopIpv6Address	Nexthop IPv6 address.	Index	Hexadecimal string, colon-separated.	Example: 1:1::1:1. 0::0 is an invalid value.
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Tag	Route tag.	N/A	Unsigned integer. Value range: 1 to 4294967295.	Default value is 0.
Preference	Route preference.	N/A	Unsigned integer. Value range: 1 to 255.	Default value is 60.
Description	Description information.	N/A	String, case-sensitive. Length: 1 to 150 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Permanent	Permanent attribute.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true—Permanent route.</li> <li>• false—Not a Permanent route.</li> </ul>	Default value is false.
BfdAttribute	BFD attribute.	Data structure	Members include: <ul style="list-style-type: none"> <li>• BfdWorkMode</li> <li>• BfdSourceIpv6Address.</li> </ul>	N/A
BfdWorkMode	BFD work mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—Control-packet mode.</li> <li>• 2—Echo-packet mode.</li> </ul>	N/A
BfdSourceIpv6Address	BFD source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. 0::0 is an invalid value.

# StaticRoute

## StaticRoute/Ipv4StaticRouteConfigurations

Message	Explanation
Route already exists. 路由已存在	Configuration already exists, when set new configuration.
Maximum number of routes has been reached. 已达到最大路由条数	Maximum number of routes has been reached.
Route does not exist. 路由不存在	The specified configuration doesn't exist, when getting or deleting it.
The specified VRF index does not exist. 目的VRF索引不存在	Please create vpn-instance first.
The specified next hop VRF index does not exist. 下一跳VRF索引不存在	Please create vpn-instance first.
The interface is not supported. 接口不支持	Only routed ports are available.
Invalid destination address. 目的地址无效	Only class A,class B,class C addresses are available.
Invalid next hop address. 下一跳无效	Only class A,class B,class C addresses are available.
Nexthop address or outbound interface must be specified one. 下一跳地址或者出接口索引必须至少设置一个	Nexthop address or outbound interface must be specified one.
The specified interface need to configure next hop address. 该接口需要配置下一跳地址	The specified interface need to configure next hop address.
The specified interface does not need to configure next hop address. 该接口不需要配置下一跳	The specified interface does not need to configure next hop address.
The backup interface is not supported. 备份接口不支持	Only routed ports are available.
The specified backup interface index need backup next hop address. 该备份出接口需要配置备份下一跳地址	The specified backup interface index need backup next hop address.
Invalid backup next hop address. 备份下一跳无效	The backup next hop address can not be all zero address.
Not need bfd source address to enable bfd, with outbound interface and nexthop have been configured. 静态路由已配置出接口及下一跳，使能BFD检测无需配置BFD源地址	Not need bfd source address to enable bfd, with outbound interface and nexthop have been configured.

Need bfd source address to enable bfd, if only nexthop address configured. 静态路由仅配置下一跳，使能BFD检测必须配置BFD源地址	Need bfd source address to enable bfd, if only nexthop address configured.
Invalid BFD source IP address. BFD源地址无效	Only class A,class B,class C addresses are available.
BFD can not coexist with backup attribute. 静态路由的备份路径属性不能与BFD共存	BFD can not coexist with backup attribute.
Track can not coexist with backup attribute. 静态路由的备份路径属性不能与track共存	Track can not coexist with backup attribute.
BFD can not coexist with track attribute. 静态路由的track属性不能与BFD共存	BFD can not coexist with track attribute.
Next hop VRF index should be set to . 下一跳VRF索引应该填	Next hop VRF index should be set to specified value.
The specified backup interface index does not need backup next hop address. 该备份接口不需要备份下一跳	The specified backup interface index does not need backup next hop address.
Interface has to be valid for a link-local address of nexthop. Link-local地址作为下一跳需要指定有效出接口	Interface has to be valid for a link-local address of nexthop.
Can not enable bfd echo mode for a link-local address of nexthop. Link-local地址作为下一跳不能使能BFD echo检测	Can not enable bfd echo mode for a link-local address of nexthop.
Backup interface can not been configured. 不允许配置备份出接口	Backup interface can not been configured when out interface is NULL0.
Can not enable bfd echo mode, if only next hop address configured. 静态路由仅配置下一跳，BFD Echo检测不可用	Please specify out interface.
The backup interface and next hop address can't be the same with the main interface and next hop address. 备份出接口及下一跳不能与主出接口及下一跳相同	The backup interface and next hop address can't be the same with the main interface and next hop address.
Not support BFD. 不支持BFD	BFD service has not been started.
The interface does not support BFD. 指定接口不支持BFD	BFD can not been configured when out interface is NULL0.
The specified interface index does not exist. 接口不存在	The specified interface index does not exist.
The specified backup interface index does not exist. 备份接口索引不存在	The specified backup interface index does not exist.
BFD can not coexist with permanent attribute. 静态路由的永久属性不能与BFD共存	BFD can not coexist with permanent attribute.

Track can not coexist with permanent attribute. 静态路由的永久属性不能与track共存	Track can not coexist with permanent attribute.
Please input BFD source IP address. 请输入BFD源IP地址	Please input BFD source IP address.
The specified topology index does not exist. 目的MT索引不存在	The specified topology index does not exist.
The VRF does not support topology. 私网下不支持多拓扑配置	DestTopologyIndex should be specified as zero.
The topology route does not support VRF next hop. 多拓扑路由不支持私网下一跳	DestTopologyIndex should be specified as zero.
The topology route does not support BFD. 多拓扑路由不支持关联BFD配置	DestTopologyIndex should be specified as zero.
The topology route does not support track. 多拓扑路由不支持关联track配置	DestTopologyIndex should be specified as zero.
The topology route does not support permanent attribute. 多拓扑路由不支持配置永久属性	DestTopologyIndex should be specified as zero.
Interface and Recursive look up host-route can't both be configured 出接口和迭代主机路由不能同时配置	Interface and Recursive look up host-route can't both be configured

## StaticRoute/Ipv6StaticRouteConfigurations

Message	Explanation
Route already exists. 路由已存在	Configuration already exists, when set new configuration.
Maximum number of routes has been reached. 已达到最大路由条数	Maximum number of routes has been reached.
Route does not exist. 路由不存在	The specified configuration doesn't exist, when getting or deleting it.
The specified VRF index does not exist. 目的VRF索引不存在	Please create vpn-instance first.
The specified next hop VRF index does not exist. 下一跳VRF索引不存在	Please create vpn-instance first.
The interface is not supported. 接口不支持	Only routed ports are available.
Invalid destination address. 目的地址无效	Only class A,class B,class C addresses are available.
Invalid next hop address.	Only class A,class B,class C addresses are available.

下一跳无效	
Nexthop address or outbound interface must be specified one. 下一跳地址或者出接口索引必须至少设置一个	Nexthop address or outbound interface must be specified one.
The specified interface need to configure next hop address. 该接口需要配置下一跳地址	The specified interface need to configure next hop address.
The specified interface does not need to configure next hop address. 该接口不需要配置下一跳	The specified interface does not need to configure next hop address.
The backup interface is not supported. 备份接口不支持	Only routed ports are available.
The specified backup interface index need backup next hop address. 该备份出接口需要配置备份下一跳地址	The specified backup interface index need backup next hop address.
Invalid backup next hop address. 备份下一跳无效	The backup next hop address can not be all zero address.
Not need bfd source address to enable bfd, with outbound interface and nexthop have been configured. 静态路由已配置出接口及下一跳，使能BFD检测无需配置BFD源地址	Not need bfd source address to enable bfd, with outbound interface and nexthop have been configured.
Need bfd source address to enable bfd, if only nexthop address configured. 静态路由仅配置下一跳，使能BFD检测必须配置BFD源地址	Need bfd source address to enable bfd, if only nexthop address configured.
Invalid BFD source IP address. BFD源地址无效	Only class A,class B,class C addresses are available.
BFD can not coexist with backup attribute. 静态路由的备份路径属性不能与BFD共存	BFD can not coexist with backup attribute.
Track can not coexist with backup attribute. 静态路由的备份路径属性不能与track共存	Track can not coexist with backup attribute.
BFD can not coexist with track attribute. 静态路由的track属性不能与BFD共存	BFD can not coexist with track attribute.
Next hop VRF index should be set to . 下一跳VRF索引应该填	Next hop VRF index should be set to specified value.
The specified backup interface index does not need backup next hop address. 该备份接口不需要备份下一跳	The specified backup interface index does not need backup next hop address.
Interface has to be valid for a link-local address of nexthop. Link-local地址作为下一跳需要指定有效出接口	Interface has to be valid for a link-local address of nexthop.
Can not enable bfd echo mode for a link-local address of nexthop. Link-local地址作为下一跳不能使能BFD echo检测	Can not enable bfd echo mode for a link-local address of nexthop.

Backup interface can not been configured. 不允许配置备份出接口	Backup interface can not been configured when out interface is NULL0.
Can not enable bfd echo mode, if only next hop address configured. 静态路由仅配置下一跳，BFD Echo检测不可用	Please specify out interface.
The backup interface and next hop address can't be the same with the main interface and next hop address. 备份出接口及下一跳不能与主出接口及下一跳相同	The backup interface and next hop address can't be the same with the main interface and next hop address.
Not support BFD. 不支持BFD	BFD service has not been started.
The interface does not support BFD. 指定接口不支持BFD	BFD can not been configured when out interface is NULL0.
The specified interface index does not exist. 接口不存在	The specified interface index does not exist.
The specified backup interface index does not exist. 备份接口索引不存在	The specified backup interface index does not exist.
BFD can not coexist with permanent attribute. 静态路由的永久属性不能与BFD共存	BFD can not coexist with permanent attribute.
Track can not coexist with permanent attribute. 静态路由的永久属性不能与track共存	Track can not coexist with permanent attribute.
Invalid next hop IPv6 address. It must be a global unicast address. 无效下一跳地址。下一跳必须是全球单播地址	Invalid next hop IPv6 address. It must be a global unicast address.
Invalid BFD source IPv6 address. BFD源IPv6地址无效	The BFD source IPv6 address cannot be all 0s ,multicast address or loopback address.,.
Please input BFD source IPv6 address. 请输入BFD源IPv6地址	Please input BFD source IPv6 address.
IPv6 address family does not support topology. IPv6地址族不支持多拓扑配置	DestTopologyIndex should be specified as zero.
Please input BFD source IP address. 请输入BFD源IP地址	Please input BFD source IP address.
The specified topology index does not exist. 目的MT索引不存在	The specified topology index does not exist.
The VRF does not support topology. 私网下不支持多拓扑配置	DestTopologyIndex should be specified as zero.
The topology route does not support VRF next hop. 多拓扑路由不支持私网下一跳	DestTopologyIndex should be specified as zero.
The topology route does not support BFD. 多拓扑路由不支持关联BFD配置	DestTopologyIndex should be specified as zero.
The topology route does not support track.	DestTopologyIndex should be specified as zero.

多拓扑路由不支持关联track配置	
The topology route does not support permanent attribute. 多拓扑路由不支持配置永久属性	DestTopologyIndex should be specified as zero.
Interface and Recursive look up host-route can't both be configured 出接口和迭代主机路由不能同时配置	Interface and Recursive look up host-route can't both be configured

## Openconfig-local-routing/local-routes/static-routes/static

Message	Explanation
It is not STATIC 不是静态路由协议号	The identifier should be specified as STATIC.
Instance name must be default 进程号必须为default	Instance name must be default when you configure a static route.

## STP/ClearAllIfStatistics

This table clear the statistics of STP on all interfaces.

### XML structure

```
<STP>
  <ClearAllIfStatistics>
    <Clear></Clear>
  </ClearAllIfStatistics>
</STP>
```

### Table description

Item	Description
Feature name	STP
Table name	ClearAllIfStatistics
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
Clear	Clear the STP statistics on all interfaces.	N/A	This column must be empty.

## STP/ClearInterfacesStatistics

This table clears the STP statistics information per interface.

### XML structure

```
<STP>
  <ClearInterfacesStatistics>
    <InterfaceStatistics>
      <IfIndex></IfIndex>
    </InterfaceStatistics>
  </ClearInterfacesStatistics>
</STP>
```

```

    <Clear></Clear>
  </InterfaceStatistics>
</ClearInterfacesStatistics>
</STP>

```

## Table description

Item	Description
Feature name	STP
Table name	ClearInterfacesStatistics
Table type	Multi-instance table
Row name	InterfaceStatistics
Restrictions	This table supports only Layer 2 Ethernet interfaces and Layer 2 aggregate interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
Clear	Clears statistics on the the specified interface.	N/A	This column must be empty.

## STP/MigrationCheck

This table performs the MCheck operation to migrate all ports back from STP mode to current configuration mode.

## XML structure

```

<STP>
  <MigrationCheck>
    <MCheck></MCheck>
  </MigrationCheck>
</STP>

```

## Table description

Item	Description
Feature name	STP

Table name	MigrationCheck
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
MCheck	Force all interfaces to send BPDUs according to the protocol version while working in RSTP or MSTP mode.	N/A	This column must be empty

# STP

## STP/Base

This table contains information about global STP functions.

### XML structure

```
<STP>
  <Base>
    <Enable></Enable>
    <BPDUProtect></BPDUProtect>
    <Mode></Mode>
    <TcProtect></TcProtect>
    <TcThreshold></TcThreshold>
    <PathCostMethod></PathCostMethod>
    <HelloTime></HelloTime>
    <MaxHops></MaxHops>
    <MaxAge></MaxAge>
    <ForwardDelay></ForwardDelay >
    <TcSnooping></TcSnooping>
    <DigestSnooping></DigestSnooping>
  </Base>
</STP>
```

### Table description

Item	Description
Feature name	STP
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global functions.
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions
Enable	Global STP feature	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enables STP.</li><li><b>false</b>—Disables STP.</li></ul>

Column name	Column description	Column type	Data type and restrictions
BPDUProtect	Global BPDU guard function	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables BPDU guard.</li> <li><b>false</b>—Disables BPDU guard (default).</li> </ul>
Mode	Working mode of the spanning tree protocol	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—STP.</li> <li><b>2</b>—RSTP.</li> <li><b>3</b>—MSTP(default).</li> <li><b>4</b>—PVST.</li> </ul>
TcProtect	Global TC-BPDU guard function	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables TC guard (default).</li> <li><b>false</b>—Disables TC guard.</li> </ul>
TcThreshold	Maximum number of TC-BPDUs that can be processed within an interval	N/A	Unsigned integer. <ul style="list-style-type: none"> <li><b>Value range:1-255.</b></li> <li>Default: 6.</li> </ul>
PathCostMethod	Path cost calculation method	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Legacy (default).</li> <li><b>1</b>—802.1D-1998.</li> <li><b>2</b>—802.1t.</li> </ul>
HelloTime	Hello timer in seconds	N/A	Unsigned integer. <ul style="list-style-type: none"> <li><b>Value range:1-10.</b></li> <li>Default: 2.</li> </ul>
MaxHops	Maximum hops of the MST region scope	N/A	Unsigned integer. <ul style="list-style-type: none"> <li><b>Value range:1-40.</b></li> <li>Default: 20.</li> </ul>
MaxAge	Maximum of message aging timer	N/A	Unsigned integer. <ul style="list-style-type: none"> <li><b>Value range:6-40.</b></li> <li>Default: 20.</li> </ul>
ForwardDelay	Forwarding delay timer in seconds	N/A	Unsigned integer. <ul style="list-style-type: none"> <li><b>Value range:4-30.</b></li> <li>Default: 15.</li> </ul>
TcSnooping	TC snooping function	N/A	<b>Boolean:</b> <ul style="list-style-type: none"> <li><b>true</b>—Enables TC snooping.</li> <li><b>false</b>—Disables TC snooping(default).</li> </ul>
DigestSnooping	Global MST digest snooping function	N/A	<b>Boolean:</b> <ul style="list-style-type: none"> <li><b>true</b>—Enables digest snooping.</li> <li><b>false</b>—Disables digest snooping(default).</li> </ul>

## STP/Region

This table contains information about MST region configuration.

## XML structure

```
<STP>
  <Region>
    <Name></Name>
    <RevisionLevel></RevisionLevel>
  </Region>
</STP>
```

## Table description

Item	Description
Feature name	STP
Table name	Region
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global functions.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	MST region name	N/A	String. Length: 1 to 32 characters. <ul style="list-style-type: none"><li>Default: Hex-string of the bridge MAC address.</li></ul>	When a new region name is configured, the active region configuration will be changed.
RevisionLevel	Revision level of the MST region	N/A	Unsigned integer. <ul style="list-style-type: none"><li><b>Value range: 0-65535.</b></li><li><b>Default: 0.</b></li></ul>	When a new revision level is configured, the active region configuration will be changed.

## STP/StiVlans

This table contains information about the VLAN allocation of an MST region.

## XML structure

```
<STP>
  <StiVlans>
    <StiVlan>
      <StiId></StiId>
    </StiVlan>
  </StiVlans>
</STP>
```

```

        <VlanList></VlanList>
    </StiVlan>
</StiVlans>
</STP>

```

## Table description

Item	Description
Feature name	STP
Table name	StiVlans
Table type	Multi-instance table
Row name	StiVlan
Restrictions	All rows should be wrapped within a whole configuration message, following the region table above.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Stild	Spanning tree index	Index	Unsigned integer. • <b>Value range: 1-4094.</b>	
VlanList	List of VLANs allocated to the MST instance	N/A	Number string. It is a comma-separated list of VLAN items. • The string must not end with a comma or hyphen, or include any whitespace characters. • <b>Default: All VLANs are allocated to spanning tree instance 0(CIST).</b>	<ul style="list-style-type: none"> <li>Each VLAN can only be allocated to one MST instance.</li> <li>Each item can be an individual VLAN ID or a VLAN ID range. A hyphen (-) indicates a VLAN range from the start VLAN ID to end VLAN ID. For example: 1, 2, 3, 5-8, and 10-20.</li> <li>VLAN ID range: 1-4094</li> </ul>

## STP/STIs

This table contains information about STP functions for a spanning tree.

## XML structure

```

<STP>
  <STIs>
    <STI>

```

```

    <StiId></StiId>
    <Priority></Priority>
    <RootType></RootType>
  </STI>
</STIs>
</STP>

```

## Table description

Item	Description
Feature name	STP
Table name	STIs
Table type	Multi-instance table
Row name	STI
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Stild	Spanning tree index	Index	Unsigned integer. • <b>Value range: 0-4094.</b>	
Priority	Bridge priority of the spanning tree	N/A	Unsigned integer. • <b>Value range: 0-61440, in increments of 4096 (as in 0, 4096, 8192).</b> • <b>Default: 32768.</b>	Configuration is not allowed when the root type is configured as primary root or secondary root, except for the following values combination:  1)priority is 0 when root type is 'primary'. 2)priority is 4096 when root type is 'secondary'".
RootType	Root type of the bridge	N/A	Enumeration: • <b>0</b> —Normal(default). • <b>1</b> —Secondary root. • <b>2</b> —Primary root.	

## STP/Interfaces

This table contains information about interface-level STP functions.

## XML structure

```
<STP>
```

```

<Interfaces>
  <Interface>
    <IfIndex></IfIndex>
    <Enable></Enable>
    <EdgedPort></EdgedPort>
    <PointToPoint></PointToPoint>
    <RootProtect></RootProtect>
    <LoopProtect></LoopProtect>
    <RoleRestrict></RoleRestrict>
    <TcRestrict></TcRestrict>
    <DigestSnooping></DigestSnooping>
    <TransmitHoldCount></TransmitHoldCount>
  </Interface>
</Interfaces>
</STP>

```

## Table description

Item	Description
Feature name	STP
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 Ethernet interfaces and Layer 2 aggregate interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer. Length: 32 bits.	In certain versions, this column supports interface name-to-index conversion. See the product xsd before use. See Table 1 for the format.
Enable	Interface STP feature	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables STP (default).</li> <li><b>false</b>—Disables STP.</li> </ul>	

Column name	Column description	Column type	Data type and restrictions	Remarks
EdgedPort	Interface edge port configuration	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Configures the interface as an edge port. <b>It should not be configured while the loop protection is enabled.</b></li> <li><b>false</b>—Configures the interface as a non-edge port (default).</li> </ul>	
PointToPoint	Interface point-to-point configuration status	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Force-true.</li> <li><b>2</b>—Force-false.</li> <li><b>3—Auto</b> (default).</li> </ul>	
RootProtect	Interface root guard function	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables root protection.</li> <li><b>It should not be configured while the loop protection is enabled.</b></li> <li><b>false</b>—Disables root protection</li> <li>(default).</li> </ul>	
LoopProtect	Interface loop guard function	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables loop protection.</li> <li><b>It should not be configured whether the root protection or edge-port is enabled.</b></li> <li><b>false</b>—Disables loop protection</li> <li>(default).</li> </ul>	
RoleRestrict	Interface role restriction function	N/A		Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables role restriction.</li> <li><b>false</b>—Disables role restriction (default).</li> </ul>
TcRestrict	Interface TC restriction function	N/A		Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables TC restriction.</li> <li><b>false</b>—Disables TC restriction (default).</li> </ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
DigestSnooping	Interface MST digest snooping function	N/A		<b>Boolean:</b> <ul style="list-style-type: none"> <li><b>true</b>—Enables digest snooping.</li> <li><b>false</b>—Disables digest snooping(default)</li> </ul>
TransmitHoldCount	Interface transmit hold count, which is the maximum number of BPDUs that can be transmitted per seconds	N/A		Unsigned integer. <ul style="list-style-type: none"> <li><b>Value range:1-255.</b></li> <li><b>Default: 10.</b></li> </ul>

**Table 1 Interface operation status**

Value	Operation status	Remarks
1	Single interface index	<IfIndex>1</IfIndex>
2	Single interface name	<IfIndex>GigabitEthernet 0/0/2</IfIndex>
3	Multiple interface names	<IfIndex>GigabitEthernet 0/0/2 to GigabitEthernet 0/0/3, GigabitEthernet 1/0/2 to GigabitEthernet 1/0/3, serial0/0/2</IfIndex>
4	Interface range name	<IfIndex>RangeName</IfIndex>
5	Mixture of interface range name and interface names	<IfIndex>RangeName ,GigabitEthernet 0/0/2 to GigabitEthernet 0/0/3, GigabitEthernet 1/0/2 to GigabitEthernet 1/0/3, serial0/0/2</IfIndex>

## STP/StiInterfaces

This table contains information about interface-level STP functions for a spanning tree.

### XML structure

```

<STP>
  <StiInterfaces>
    <StiInterface>
      <StiId></StiId>
      <IfIndex></IfIndex>
      <Priority></Priority>
      <PathCost></PathCost>
    </StiInterface>
  </StiInterfaces>
</STP>

```

## Table description

Item	Description
Feature name	STP
Table name	StilInterfaces
Table type	Multi-instance table
Row name	StilInterface
Restrictions	This table supports only Layer 2 Ethernet interfaces and Layer 2 aggregate interfaces.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
Stild	Spanning tree index	Index	Unsigned integer. <ul style="list-style-type: none"><li>• <b>Value range: 0-4094.</b></li></ul>
IfIndex	Interface index	Index	Unsigned integer.
Priority	Spanning tree priority of an interface	N/A	Unsigned integer. <ul style="list-style-type: none"><li>• <b>Value range: 0-240, in increments of 16 (as in 0, 16, 32).</b></li><li>• <b>Default: 128.</b></li></ul>
PathCost	Spanning tree path cost of an interface	N/A	Unsigned integer. <ul style="list-style-type: none"><li>• <b>Legacy value range: 0-200000.</b></li><li>• <b>802.1D-1998 value range: 0-65535.</b></li><li>• <b>802.1t value range: 0-200000000.</b></li><li>• <b>Default: 0. The actual cost will be automatically calculated according to the calculation method configured in STP Base table.</b></li></ul>

## STP/Vlans

This table contains information about PVST functions for a VLAN.

## XML structure

```
<STP>
  <VLANs>
    <VLAN>
      <VlanId></VlanId>
      <Enable></Enable>
      <Priority></Priority>
```

```

<RootType></RootType>
<BridgeTimes>
  <HelloTime></HelloTime>
  <MaxAge></MaxAge>
  <ForwardDelay></ForwardDelay>
</BridgeTimes>
</VLAN>
</VLANs>
</STP>

```

## Table description

Item	Description
Feature name	STP
Table name	VLANs
Table type	Multi-instance table
Row name	VLAN
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VlanId	VLAN index	Index	Unsigned integer. • <b>Value range: 1-4094.</b>	The max VLAN ID of some product may be 4093.
Enable	PVST feature status	N/A	Boolean: • <b>true</b> —Enables PVST(default). • <b>false</b> —Disables PVST.	
Priority	Priority of the VLAN	N/A	Unsigned integer. • <b>Value range: 0-61440, in increments of 4096 (as in 0, 4096, 8192).</b> • <b>Default: 32768.</b>	Configuration is not allowed when the root type is configured as primary root or secondary root, except for the following values combination: 1)priority is 0 when root type is 'primary'. 2)priority is 4096 when root type is 'secondary'.
RootType	Root type of the VLAN	N/A	Enumeration: • <b>0</b> —Normal(default). • <b>1</b> —Secondary root. • <b>2</b> —Primary root.	

Column name	Column description	Column type	Data type and restrictions	Remarks
BridgeTimes	The bridge timers currently used	N/A	Struct, include members: <ul style="list-style-type: none"> <li>HelloTime.</li> <li>MaxAge.</li> <li>ForwardDelay.</li> </ul>	
HelloTime	Hello timer in seconds	N/A	Unsigned integer. <ul style="list-style-type: none"> <li><b>Value range:1-10.</b></li> <li><b>Default: 2.</b></li> </ul>	
MaxAge	Maximum of message age	N/A	Unsigned integer. <ul style="list-style-type: none"> <li><b>Value range:6-40.</b></li> <li><b>Default: 20.</b></li> </ul>	
ForwardDelay	Forwarding delay timer in seconds	N/A	Unsigned integer. <ul style="list-style-type: none"> <li><b>Value range:4-30.</b></li> <li><b>Default: 15.</b></li> </ul>	

## STP/VlanInterfaces

This table contains information about interface-level PVST functions for a VLAN.

### XML structure

```

<STP>
  <VlanInterfaces>
    <VlanInterface>

# STP

## STP/Base

This table contains global STP information.

### XML structure

```
<STP>
  <Base>
    <Enable></Enable>
    <BPDUProtect></BPDUProtect>
    <Mode></Mode>
    <TcProtect></TcProtect>
    <TcThreshold></TcThreshold>
    <PathCostMethod></PathCostMethod>
    <HelloTime></HelloTime>
    <MaxHops></MaxHops>
    <MaxAge></MaxAge>
    <ForwardDelay></ForwardDelay>
    <TcSnooping></TcSnooping>
    <DigestSnooping></DigestSnooping>
  </Base>
</STP>
```

### Table description

Item	Description
Feature name	STP
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global configurations.

### Columns

Column name	Column description	Column type	Data type and restrictions
Enable	Global STP feature	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled.</li><li><b>false</b>—Disabled.</li></ul>
BPDUProtect	Global BPDU guard function	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled.</li><li><b>false</b>—Disabled.</li></ul>

Column name	Column description	Column type	Data type and restrictions
Mode	Working mode of the spanning tree protocol	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—STP.</li> <li>• <b>2</b>—RSTP.</li> <li>• <b>3</b>—MSTP.</li> <li>• <b>4</b>—PVST.</li> </ul>
TcProtect	Global TC-BPDU guard function	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Enabled.</li> <li>• <b>false</b>—Disabled.</li> </ul>
TcThreshold	Maximum number of TC-BPDUs that can be processed within an interval	N/A	Unsigned integer. Value range: 1 to 255.
PathCostMethod	Path cost calculation method	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Legacy.</li> <li>• <b>1</b>—802.1D-1998.</li> <li>• <b>2</b>—802.1t.</li> </ul>
HelloTime	Hello timer in seconds	N/A	Unsigned integer. Value range: 1 to 10.
MaxHops	Maximum hops of the MST region scope	N/A	Unsigned integer. Value range: 1 to 40.
MaxAge	Maximum of message aging timer	N/A	Unsigned integer. Value range: 6 to 40.
ForwardDelay	Forwarding delay timer in seconds	N/A	Unsigned integer. Value range: 4 to 30.
TcSnooping	TC snooping function	N/A	<b>Boolean:</b> <ul style="list-style-type: none"> <li>• <b>true</b>—Enables TC snooping.</li> <li>• <b>false</b>—Disables TC snooping.</li> </ul>
DigestSnooping	Global MST digest snooping function	N/A	<b>Boolean:</b> <ul style="list-style-type: none"> <li>• <b>true</b>—Enables digest snooping.</li> <li>• <b>false</b>—Disables digest snooping.</li> </ul>

## STP/Region

This table contains MST region configuration information.

## XML structure

```

<STP>
  <Region>
    <Name></Name>
    <RevisionLevel></RevisionLevel>
    <FormatSelector></FormatSelector>

```

```

    <ConfigDigest></ConfigDigest>
  </Region>
</STP>

```

## Table description

Item	Description
Feature name	STP
Table name	Region
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global configurations.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	The active MST region name	N/A	String. Length: 1 to 32 characters.	N/A
RevisionLevel	The active revision level of the MST region	N/A	Unsigned integer Value range: 0 to 65535.	N/A
FormatSelector	The configuration Identifier Format selector	N/A	Enumeration: <b>0</b> —Indicates the format specified in 802.1Q.	N/A
ConfigDigest	Digest of VLAN-to-instance mappings for the MST region	N/A	Octet string. Length: 34 octets.	It's a hex-string with a prefix of 0x.

## STP/StiVlans

This table contains information about the VLAN allocation of an MST region.

## XML structure

```

<STP>
  <StiVlans>
    <StiVlan>
      <StiId></StiId>
      <VlanList></VlanList>
    </StiVlan>
  </StiVlans>
</STP>

```

## Table description

Item	Description
Feature name	STP
Table name	StiVlans
Table type	Multi-instance table
Row name	StiVlan
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Stild	Spanning tree index	Index	Unsigned integer. <b>Value range: 0 to 4094.</b>	N/A
VlanList	List of VLANs allocated to the MST instance	N/A	Number string. It is a comma-separated list of VLAN items. The string must not end with a comma or hyphen, or include any whitespace characters.	<ul style="list-style-type: none"><li>Each VLAN can only be allocated to one MST instance.</li><li>Each item can be an individual VLAN ID or a VLAN ID range. A hyphen (-) indicates a VLAN range from the start VLAN ID to the end VLAN ID. For example: 1, 2, 3, 5-8, and 10-20.</li><li>VLAN ID range: 1 to 4094.</li></ul>

## STP/STIs

This table contains information about STP functions for a spanning tree.

## XML structure

```
<STP>
  <STIs>
    <STI>
      <StiId></StiId>
      <Priority></Priority>
      <RootType></RootType>
      <BridgeId></BridgeId>
      <TCs>
        <ReceiveTcOrTcn></ReceiveTcOrTcn>
        <LastTcTime></LastTcTime>
      </TCs>
    </STI>
  </STIs>
</STP>
```

```

<RootVector>
  <RootId></RootId>
  <ExtPathCost></ExtPathCost>
  <RegionRootId></RegionRootId>
  <IntPathCost></IntPathCost>
  <DesignateBridgeId></DesignateBridgeId>
  <DesignatePortId></DesignatePortId>
  <RootPort></RootPort>
</RootVector>
</STI>
</STIs>
</STP>

```

## Table description

Item	Description
Feature name	STP
Table name	STIs
Table type	Multi-instance table
Row name	STI
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Stild	Spanning tree index	Index	Unsigned integer. <b>Value range: 0 to 4094.</b>	If an instance is not in running state, and the values of the Priority and RootType columns are the default, the instance is not created, and data cannot be got.
Priority	Bridge priority of the spanning tree	N/A	Unsigned integer. <b>Value range: 0 to 61440</b>	N/A
RootType	Root type of the bridge	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Normal.</li> <li>1—Secondary root.</li> <li>2—Primary root.</li> </ul>	N/A
Bridgeld	Spanning tree bridge Identifier	N/A	Octet string. Length: 18 octets.	It's a hex-string with a prefix of 0x. The first hex-character indicates a bridge priority of 4 bits, and the 2-4 hex-character s indicates the system ID, the other hex-string indicates the bridge MAC address.

Column name	Column description	Column type	Data type and restrictions	Remarks
TCs	Topology change information	N/A	Struct, include members: <ul style="list-style-type: none"> <li><b>ReceiveTcOrTcn.</b></li> <li><b>LastTcTime.</b></li> </ul>	N/A
ReceiveTcOrTcn	Count of received TC or TCN	N/A	Unsigned integer. Length: 32 bits.	N/A
LastTcTime	Time of last received TC or detected TC, in 10ms	N/A	Unsigned integer. Length: 64 bits.	N/A
RootVector	Root priority vector	N/A	Struct, include members: <ul style="list-style-type: none"> <li><b>RootBridgeld.</b></li> <li><b>ExtPathCost.</b></li> <li><b>DesignateBridgeld.</b></li> <li><b>IntPathCost.</b></li> <li><b>RootPort.</b></li> </ul>	N/A
RootId	Root bridge Identifier	N/A	Octet string. Length: 18 octets. Not used by MSTIs.	As the remark of Bridgeld above.
ExtPathCost	External path cost.	N/A	Unsigned integer. Length: 32 bits. Not used by MSTIs.	N/A
RegionRootId	Region root bridge Identifier	N/A	Octet string. Length: 18 octets.	As the remark of Bridgeld above.
IntPathCost	Internal path cost	N/A	Unsigned integer. Length: 32 bits.	N/A
DesignateBridgeld	Designated bridge Identifier	N/A	Octet string. Length: 18 octets.	As the remark of Bridgeld above.
DesignatePortId	The transmitting Port identifier	N/A	Octet string. Length: 8 octets.	It's a hex-string with a prefix of 0x, and the first 2 hex-characters indicate a port priority, and the other hex-string indicates a port number.
RootPort	Interface index of root port	N/A	Unsigned integer. Length: 32 bits.	N/A

## STP/Interfaces

## Table description

Item	Description
Feature name	STP
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 Ethernet interfaces and Layer 2 aggregate interfaces.

# Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer. Length: 32 bits.
Enable	Interface STP feature	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
EdgedPort	Interface edge port configuration	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Edge port.</li> <li><b>false</b>—Non-edge port.</li> </ul>
OperEdgedPort	Interface operational edge port status	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Edge port.</li> <li><b>false</b>—Non-edge port.</li> </ul>
PointToPoint	Interface point-to-point configuration status	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Force-true.</li> <li><b>2</b>—Force-false.</li> <li><b>3</b>—Auto.</li> </ul>
OperPointToPoint	Interface operational point-to-point status	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Point-to-Point.</li> <li><b>false</b>—Not point-to-point.</li> </ul>
RootProtect	Interface root guard function	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
LoopProtect	Interface loop guard function	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
RoleRestrict	Interface role restriction function	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
TcRestrict	Interface TC restriction function	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
ProtectDown	Interface protection shutdown status	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Not shutdown.</li> <li><b>1</b>—Edge Port down.</li> <li><b>2</b>—PVST BPDU down.</li> </ul>
DigestSnooping	Interface MST digest snooping function	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
TransmitHoldCount	Interface transmission hold count	N/A	Unsigned integer. Value range: 1 to 255.
PortTimes	Interface protocol timers	N/A	Struct, include the following members: <ul style="list-style-type: none"> <li><b>HelloTime.</b></li> <li><b>ForwardDelay.</b></li> </ul>

Column name	Column description	Column type	Data type and restrictions
			<ul style="list-style-type: none"> <li>• <b>RemainHops.</b></li> <li>• <b>MaxAge.</b></li> <li>• <b>MessageAge.</b></li> </ul>
HelloTime	Hello timer in seconds	N/A	Unsigned integer. Value range: 1 to 10.
ForwardDelay	Interface forwarding delay timer in seconds	N/A	Unsigned integer. Value range: 4 to 30.
MaxAge	Interface maximum message age	N/A	Unsigned integer. Value range: 6 to 40.
MessageAge	Interface message age	N/A	Unsigned integer. Length: 32 bits.
PortBpduCount	Interface received or transmitted BPDU count per type	N/A	Struct, include the following members: <ul style="list-style-type: none"> <li>• <b>TxMstBpdu.</b></li> <li>• <b>RxMstBpdu.</b></li> <li>• <b>TxRstpBpdu.</b></li> <li>• <b>RxRstpBpdu.</b></li> <li>• <b>TxConfigBpdu.</b></li> <li>• <b>RxConfigBpdu.</b></li> <li>• <b>TxTcn.</b></li> <li>• <b>RxTcn.</b></li> <li>• <b>RxInvalidBpdu.</b></li> <li>• <b>LastInvalidBpduTime.</b></li> </ul>
TxMstBpdu	Count of transmitted MSTP BPDU	N/A	Unsigned integer. Length: 64 bits. Not used by PVST.
RxMstBpdu	Count of received MSTP BPDUs	N/A	Unsigned integer. Length: 64 bits. Not used by PVST.
TxRstBpdu	Count of transmitted RSTP BPDUs	N/A	Unsigned integer. Length: 64 bits.
RxRstBpdu	Count of received RSTP BPDUs	N/A	Unsigned integer. Length: 64 bits.
TxConfigBpdu	Count of transmitted 802.1D configuration BPDUs	N/A	Unsigned integer. Length: 64 bits.
RxConfigBpdu	Count of received 802.1D configuration BPDUs	N/A	Unsigned integer. Length: 64 bits.
TxTcn	Count of transmitted TCN messages	N/A	Unsigned integer. Length: 64 bits.
RxTcn	Count of received TCN messages	N/A	Unsigned integer. Length: 64 bits.
RxInvalidBpdu	Count of received invalid BPDUs	N/A	Unsigned integer. Length: 64 bits.

Column name	Column description	Column type	Data type and restrictions
LastInvalidBpduTime	Last time when an invalid BPDU was received, in seconds	N/A	Unsigned integer. Length: 64 bits.

## STP/StiInterfaces

```

### Table description

Item	Description
Feature name	STP
Table name	StiInterfaces
Table type	Multi-instance table
Row name	StiInterface
Restrictions	This table supports only Layer 2 Ethernet interfaces and Layer 2 aggregate interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Stild	Spanning tree index	Index	Unsigned integer. <b>Value range: 0 to 4094.</b>	If an instance is not in running state, and the values of the Priority and PathCost columns are the default, the instance is not created, and data cannot be got.
IfIndex	Interface index	Index	Unsigned integer.	N/A
Priority	Spanning tree priority of an interface	N/A	Unsigned integer. <b>Value range: 0 to 240</b>	N/A
PathCost	Administrative spanning tree path cost of an interface	N/A	Unsigned integer. <b>value range: 0 to 200000000.</b>	N/A
OperPathCost	Operational spanning tree path cost of an interface	N/A	Unsigned integer. <b>value range: 1 to 200000000.</b>	N/A
Role	Port role of a spanning tree	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Disabled port.</li> <li>• <b>1</b>—Alternate port.</li> <li>• <b>2</b>—Backup port.</li> <li>• <b>3</b>—Root port.</li> <li>• <b>4</b>—Designated port.</li> <li>• <b>5</b>—Master port.</li> </ul>	N/A
State	Port state of a spanning tree	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—Discarding.</li> <li>• <b>2</b>—Learning.</li> <li>• <b>3</b>—Forwarding.</li> </ul>	N/A
ProtectBlock	Reason for blocking a protection function	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>• <b>0x01</b>—Root protect.</li> <li>• <b>0x02</b>—Loop protect.</li> <li>• <b>0x04</b>—Loopback protect.</li> <li>• <b>0x08</b>—Dispute protect.</li> <li>• <b>0x10</b>—Port type inconsistent.</li> <li>• <b>0x20</b>—PVID inconsistent.</li> </ul>	N/A
RapidTransit	Forwarding state transition	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Rapid transition.</li> <li>• <b>false</b>—Slow transition.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RemainHops	Remaining hops	N/A	Unsigned integer. Length: 32 bits.	N/A
PortVector	Port priority vector	N/A	Struct, include members: <ul style="list-style-type: none"> <li>• <b>RootBridgeId.</b></li> <li>• <b>ExtPathCost.</b></li> <li>• <b>DesignateBridgeId.</b></li> <li>• <b>IntPathCost.</b></li> <li>• <b>RootPort.</b></li> </ul>	N/A
RootId	Root bridge Identifier	N/A	Octet string. Length: 18 octets.	It's a hex-string with a prefix of 0x. The first hex-character indicates a bridge priority of 4 bits, and the 2-4 hex-character s indicates the system ID, the other hex-string indicates the bridge MAC address.
ExtPathCost	External path cost	N/A	Unsigned integer. Length: 32 bits.	N/A
RegionRootId	Region root bridge Identifier	N/A	Octet string. Length: 18 octets.	As the remark of RootId above.
IntPathCost	Internal path cost	N/A	Unsigned integer. Length: 32 bits.	N/A
DesignateBridgeId	Designated bridge Identifier	N/A	Octet string. Length: 18 octets.	As the remark of RootId above.
DesignatePortId	The transmitting Port identifier	N/A	Octet string. Length: 8 octets.	It's a hex-string with a prefix of 0x, and the first hex-character indicates a port priority of 4 bits, the other hex-string indicates a port number.
RcvdPortId	Interface identifier	N/A	Octet string. Length: 8 octets.	As the remark of DesignatePortId above.

## Table description

Item	Description
Feature name	STP
Table name	VLANs
Table type	Multi-instance table
Row name	VLAN
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VlanId	VLAN index	Index	Unsigned integer. <b>Value range: 1 to 4094.</b>	If a VLAN is not in running state, and the values of the Priority and RootType columns are the default , the VLAN is not created, and data cannot be got.

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	PVST feature status	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables PVST.</li> <li><b>false</b>—Disables PVST.</li> </ul>	N/A
Priority	Priority of the VLAN	N/A	Unsigned integer. Length: 32 bits.	N/A
RootType	Root type of the VLAN	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Normal.</li> <li><b>1</b>—Secondary root.</li> <li><b>2</b>—Primary root.</li> </ul>	N/A
BridgeTimes	Bridge timers per VLAN	N/A	Struct, include members: <ul style="list-style-type: none"> <li><b>HelloTime.</b></li> <li><b>MaxAge.</b></li> <li><b>ForwardDelay.</b></li> </ul>	N/A
HelloTime	Hello timer per VLAN in seconds	N/A	Unsigned integer. Value range: 1 to 10.	N/A
MaxAge	Maximum of message age per VLAN	N/A	Unsigned integer. Value range: 6 to 40.	N/A
ForwardDelay	Forwarding delay timer per VLAN in seconds	N/A	Unsigned integer. Value range: 4 to 30.	N/A
Bridgeld	Spanning tree bridge identifier	N/A	Octet string. Length: 18 octets.	It's a hex-string with a prefix of 0x. The first hex-character indicates a bridge priority of 4 bits, the second through fourth hex-characters indicate the system ID, and the other hex-characters indicate the bridge MAC address.
TCs	Topology change information	N/A	Struct, include the following members: <ul style="list-style-type: none"> <li><b>ReceiveTcOrTcn.</b></li> <li><b>LastTcTime.</b></li> </ul>	N/A
ReceiveTcOrTcn	Count of received TC or TCN messages	N/A	Unsigned integer. Length: 32 bits.	N/A
LastTcTime	Time when the last TC message was received or detected, in 10 ms	N/A	Unsigned integer. Length: 64 bits.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RootVector	Root priority vector	N/A	Struct, include the following members: <ul style="list-style-type: none"> <li>• <b>RootBridgeId.</b></li> <li>• <b>PathCost.</b></li> <li>• <b>DesignateBridgeId.</b></li> <li>• <b>RootPort.</b></li> </ul>	N/A
RootBridgeId	Root bridge identifier	N/A	Octet string. Length: 18 octets.	Same as the remarks of the BridgeId column.
RootPathCost	Path cost to the root bridge	N/A	Unsigned integer. Length: 32 bits.	N/A
DesignateBridgeId	Designated bridge identifier	N/A	Octet string. Length: 18 octets.	Same as the remarks of the BridgeId column.
DesignatePortId	The transmitting port identifier	N/A	Octet string. Length: 8 octets.	It's a hex-string with a prefix of 0x. The first two hex-characters indicate the port priority, and the other hex-characters indicate the port number.
RootPort	Interface index of the root port	N/A	Unsigned integer. Length: 32 bits.	N/A

## STP/VlanInterfaces

This table contains information about interface-level PVST functions for a VLAN.

### XML structure

</VlanInterfaces>
</STP>

```

## Table description

Item	Description
Feature name	STP
Table name	VlanInterfaces
Table type	Multi-instance table
Row name	VlanInterface
Restrictions	This table supports only Layer 2 Ethernet interfaces and Layer 2 aggregate interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VlanId	VLAN index	Index	Unsigned integer. <b>Value range: 1 to 4094.</b>	If a VLAN is not in running state, and the values of the Priority and PathCost columns are the default, the VLAN is not created, and data cannot be got.
IfIndex	Interface index	Index	Unsigned integer. Length: 32 bits	N/A
Priority	Interface priority of a VLAN	N/A	Unsigned integer. <b>Value range: 0 to 240</b>	N/A
PathCost	Interface path cost of a VLAN	N/A	Unsigned integer. <b>value range: 0 to 200000000.</b>	N/A
OperPathCost	Interface path cost of a VLAN	N/A	Unsigned integer. <b>value range: 1 to 200000000.</b>	N/A
Role	Port role of a spanning tree	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Disabled port.</li> <li><b>1</b>—Alternate port.</li> <li><b>2</b>—Backup port.</li> <li><b>3</b>—Root port.</li> <li><b>4</b>—Designated port.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
State	Port state of a spanning tree	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Discarding.</li> <li>2—Learning.</li> <li>3—Forwarding.</li> </ul>	N/A
ProtectBlock	Reason for blocking a protection function	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>0x01—Root protect.</li> <li>0x02—Loop protect.</li> <li>0x04—Loopback protect.</li> <li>0x08—Dispute protect.</li> <li>0x10—Port type inconsistent.</li> <li>0x20—PVID inconsistent.</li> </ul>	N/A
RapidTransit	Forwarding state transition	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Rapid transition.</li> <li>false—Slow transition.</li> </ul>	N/A
PortTimes	Interface protocol timers	N/A	Struct, include members: <ul style="list-style-type: none"> <li>HelloTime.</li> <li>ForwardDelay.</li> <li>MaxAge.</li> <li>MessageAge.</li> </ul>	N/A
HelloTime	Hello timer in seconds	N/A	Unsigned integer. Value range: 1 to 10.	N/A
ForwardDelay	Forwarding delay timer in seconds	N/A	Unsigned integer. Value range: 4 to 30.	N/A
MaxAge	Maximum message age	N/A	Unsigned integer. Value range: 6 to 40.	N/A
MessageAge	Message age	N/A	Unsigned integer. Length: 32 bits.	N/A
PortVector	Port priority vector	N/A	Struct, include members: <ul style="list-style-type: none"> <li>RootBridgeId.</li> <li>RootPathCost.</li> <li>DesignateBridgeId.</li> </ul>	N/A
RootId	Root bridge Identifier	N/A	Octet string. Length: 18 octets.	It's a hex-string with a prefix of 0x. The first hex-character indicates a bridge priority of 4 bits, the other hex-string indicates the bridge MAC address.
RootPathCost	Path cost to the root	N/A	Unsigned integer. Length: 32 bits.	N/A
DesignateBridgeId	Designated bridge Identifier	N/A	Octet string. Length: 18 octets.	As the remark of RootId above.

Column name	Column description	Column type	Data type and restrictions	Remarks
DesignatePortId	The transmitting Port identifier	N/A	Octet string. Length: 8 octets.	It's a hex-string with a prefix of 0x, and the first hex-character indicates a port priority of 4 bits, the other hex-string indicates a port number.
RcvdPortId	Interface identifier	N/A	Octet string. Length: 8 octets.	As the remark of DesignatePortId above.

# Syslog

## Syslog/LogBuffer

This table contains information about the log buffer.

### XML structure

```
<Syslog>
  <LogBuffer>
    <State></State>
    <BufferSize></BufferSize>
  </LogBuffer>
</Syslog>
```

### Table description

Item	Description
Feature name	Syslog
Table name	LogBuffer
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions
State	Status of the log buffer	N/A	Enumeration: <ul style="list-style-type: none"><li>enable <b>(default)</b>.</li><li>disable.</li></ul>
BufferSize	Maximum log buffer size configured by the user	N/A	Unsigned integer. Value range: 0 to 65535.

## Syslog/LogHosts

This table contains information about log hosts.

## XML structure

```
<Syslog>
  <LogHosts>
    <Host>
      <Address></Address>
      <VRF></VRF>
      <Port></Port>
      <Facility></Facility>
    </Host>
  </LogHosts>
</Syslog>
```

## Table description

Item	Description
Feature name	Syslog
Table name	LogHosts
Table type	Multi-instance table
Row name	Host
Restrictions	Up to four log hosts can be configured.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Address	Address of the log host	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. HostName: Case-insensitive string, Length: 1 to 253 characters.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. HostName example: www.example.com.
VRF	VRF instance name	Index	String. Length: 0 to 31 characters.	If the log host is on the public network, the length of characters is 0.
Port	Port number of the log host	N/A	Unsigned integer. Value range: 1 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Facility	Logging facility used by the log host	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>128</b>—local0.</li> <li>• <b>136</b>—local1.</li> <li>• <b>144</b>—local2.</li> <li>• <b>152</b>—local3.</li> <li>• <b>160</b>—local4.</li> <li>• <b>168</b>—local5.</li> <li>• <b>176</b>—local6.</li> <li>• <b>184</b>—local7.</li> </ul>	N/A

## Syslog/Configuration

This table contains information about syslog (the information center).

### XML structure

```

<Syslog>
  <Configuration>
    <State></State>
    <DuplicateLogSuppression></DuplicateLogSuppression>
  </Configuration>
</Syslog>

```

### Table description

Item	Description
Feature name	Syslog
Table name	Configuration
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions
State	Status of syslog (the information center)	N/A	Enumeration: <ul style="list-style-type: none"> <li>• enable (<b>default</b>).</li> <li>• disable.</li> </ul>
DuplicateLogSuppression	Status of the duplicate log suppression feature	N/A	Enumeration: <ul style="list-style-type: none"> <li>• enable.</li> <li>• disable (<b>default</b>).</li> </ul>

# Syslog/OutputRules

This table contains information about syslog (the information center) output rules.

## XML structure

```
<Syslog>
  <OutputRules>
    <OutputRule>
      <Destination></Destination>
      <Module Name></Module Name>
      <Rule></Rule>
    </OutputRule>
  </OutputRules>
</Syslog>
```

## Table description

Item	Description
Feature name	Syslog
Table name	OutputRules
Table type	Multi-instance table
Row name	OutputRule
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
<b>Destination</b>	Specifies syslog output destination	Index	Enumeration: <ul style="list-style-type: none"><li>1-Console</li><li>2-Monitor terminal</li><li>3-Log buffer</li><li>4-Log host</li><li>5-Log file</li></ul>	N/A
Module Name	Specifies a module by its name.	Index	A case-insensitive string. Length: 1 to 8 characters.	For instance to output FTP information, specify this argument as FTP (or ftp for case-insensitive). Setting default: Specifies all modules. If you do not set an output rule for a module, the module uses the default output rule or the output rule set by using the default

Column name	Column description	Column type	Data type and restrictions	Remarks
				keyword.
Rule	A log output rule specifies the source modules and severity level of logs that can be output to a destination. Logs matching the output rule are output to the destination.	N/A	<p>Enumeration string:</p> <ul style="list-style-type: none"> <li>• emergency</li> <li>• alert</li> <li>• critical</li> <li>• error</li> <li>• warning</li> <li>• notification</li> <li>• informational</li> <li>• debugging</li> <li>• <b>deny</b></li> </ul>	<p>Set the severity level above which the system suppresses logs to the specified module. Setting the level to errors, for example, allows logs with levels emergencies, alerts, critical and errors to display.</p> <p>alert: Action must be taken immediately (severity=1)</p> <p>critical : Critical conditions (severity=2)</p> <p>debugging: Debug-level messages (severity=7)</p> <p>emergency: System is unusable (severity=0)</p> <p>error: Error conditions (severity=3)</p> <p>informational: Informational messages (severity=6)</p> <p>notification: Normal but significant conditions (severity=5)</p> <p>warning: Warning conditions (severity=4)</p> <p>deny: Disable log output.</p>

# Syslog

## Syslog/LogBuffer

This table contains log buffer information.

### XML structure

```
<Syslog>
  <LogBuffer>
    <State></State>
    <BufferSize></BufferSize>
    <BufferSizeLimit></BufferSizeLimit>
    <LogsCount></LogsCount>
    <DroppedLogsCount></DroppedLogsCount>
    <OverwrittenLogsCount></OverwrittenLogsCount>
    <LogsCountPerSeverity>
      <Emergency></Emergency>
      <Alert></Alert>
      <Critical></Critical>
      <Error></Error>
      <Warning></Warning>
      <Notice></Notice>
      <Informational></Informational>
      <Debug></Debug>
    </LogsCountPerSeverity>
  </LogBuffer>
</Syslog>
```

### Table description

Item	Description
Feature name	Syslog
Table name	LogBuffer
Table type	Single-instance table
Row name	None
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
State	Status of the log buffer	N/A	Enumeration: <ul style="list-style-type: none"> <li>enable.</li> <li>disable.</li> </ul>	N/A
BufferSize	Maximum log buffer size configured by the user	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
BufferSizeLimit	Maximum log buffer size supported by the device	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
LogsCount	Number of logs stored in the log buffer	N/A	Unsigned integer.	N/A
DroppedLogsCount	Number of dropped logs	N/A	Unsigned integer.	Number of logs dropped after the buffer size was decreased to a value that is smaller than the number of current logs.
OverwrittenLogsCount	Number of overwritten logs	N/A	Unsigned integer.	When the size of the log buffer exceeds the upper limit, new logs overwrites the earliest logs in the log buffer.
LogsCountPerSeverity	The number of each specified severity logs stored in the log buffer	Data structure	Members include: <ul style="list-style-type: none"> <li>Emergency</li> <li>Alert</li> <li>Critical</li> <li>Error</li> <li>Warning</li> <li>Notice</li> <li>Informational</li> <li>Debug</li> </ul>	N/A
Emergency	The number of emergency logs stored in the log buffer	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Alert	The number of alert logs stored in the log buffer	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Critical	The number of critical logs stored in the log buffer	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Error	The number of error logs stored in the log buffer	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Warning	The number of warning logs stored in the log buffer	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Notice	The number of notice logs stored in the log buffer	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Informational	The number of informational logs stored in the log buffer	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Debug	The number of debug logs stored in the log buffer	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

## Syslog/LogHosts

This table contains the log host information.

### XML structure

```

<Syslog>
  <LogHosts>
    <Host>
      <Address></Address>
      <VRF></VRF>
      <Port></Port>
      <Facility></Facility>
    </Host>
  </LogHosts>
</Syslog>

```

### Table description

Item	Description
Feature name	Syslog
Table name	LogHosts
Table type	Multi-instance table
Row name	Host
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Address	Address of the log host	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. HostName: Case-insensitive string, Length: 1 to 253 characters.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. HostName example: www. example.com.
VRF	VRF instance name	Index	String. Length: 0 to 31 characters.	If the log host is on the public network, the length of characters is 0.
Port	Port number of the log host	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
Facility	Logging facility used by the log host	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>128</b>—local0.</li> <li>• <b>136</b>—local1.</li> <li>• <b>144</b>—local2.</li> <li>• <b>152</b>—local3.</li> <li>• <b>160</b>—local4.</li> <li>• <b>168</b>—local5.</li> <li>• <b>176</b>—local6.</li> <li>• <b>184</b>—local7.</li> </ul>	N/A

## Syslog/Logs

This table contains information about the logs in the log buffer.

### XML structure

```

<Syslog>
  <Logs>
    <Log>
      <Index></Index>
      <Time></Time>
      <Group></Group>
      <Digest></Digest>
      <Severity></Severity>
      <Content></Content>
    </Log>
  </Logs>
</Syslog>

```

## Table description

Item	Description
Feature name	Syslog
Table name	Logs
Table type	Multi-instance table
Row name	Log
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Index	Serial number of the log	N/A	Unsigned integer. Value range: 0 to 65535.
Time	Time when the log was generated	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.
Group	Module that generated the log	N/A	String. Length: 1 to 8 characters.
Digest	Brief description of the log	N/A	String. Length: 1 to 32 characters.
Severity	Severity level of the log	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Emergency.</li><li>• <b>1</b>—Alert.</li><li>• <b>2</b>—Critical.</li><li>• <b>3</b>—Error.</li><li>• <b>4</b>—Warning.</li><li>• <b>5</b>—Notification.</li><li>• <b>6</b>—Informational.</li><li>• <b>7</b>—Debugging.</li></ul>
Content	Content of the log	N/A	String. Length: 0 to 1023 characters.

## Syslog/Configuration

This table contains information about syslog (the information center).

## XML structure

```
<Syslog>
  <Configuration>
    <State></State>
    <DuplicateLogSuppression></DuplicateLogSuppression>
  </Configuration>
```

</Syslog>

## Table description

Item	Description
Feature name	Syslog
Table name	Configuration
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
State	Status of syslog (the information center)	N/A	Enumeration: <ul style="list-style-type: none"><li>• enable.</li><li>• disable.</li></ul>
DuplicateLogSuppression	Status of the duplicate log suppression feature	N/A	Enumeration: <ul style="list-style-type: none"><li>• enable.</li><li>• disable.</li></ul>

## Syslog/OutputRules

This table contains information about syslog (the information center) output rules.

## XML structure

```
<Syslog>
  <OutputRules>
    <OutputRule>
      <Destination></Destination>
      <Module Name></Module Name>
      <Rule></Rule>
    </OutputRule>
  </OutputRules>
</Syslog>
```

## Table description

Item	Description
Feature name	Syslog
Table name	OutputRules
Table type	Multi-instance table

Row name	OutputRule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
<b>Destination</b>	Specifies syslog output destination	Index	Enumeration: <ul style="list-style-type: none"> <li>1-Console</li> <li>2-Monitor terminal</li> <li>3-Log buffer</li> <li>4-Log host</li> <li>5-Log file</li> </ul>	N/A
ModuleName	Specifies a module by its name.	Index	A case-insensitive string. Length: 1 to 8 characters.	If you do not set an output rule for a module, the module uses the default output rule or the output rule set by using the default keyword.
Rule	A log output rule specifies the source modules and severity level of logs that can be output to a destination. Logs matching the output rule are output to the destination.	N/A	Enumeration string: <ul style="list-style-type: none"> <li>emergency</li> <li>alert</li> <li>critical</li> <li>error</li> <li>warning</li> <li>notification</li> <li>informational</li> <li>debugging</li> <li><b>deny</b></li> </ul>	Set the severity level above which the system suppresses logs to the specified module. Setting the level to errors, for example, allows logs with levels emergencies, alerts, critical and errors to display. alert: Action must be taken immediately (severity=1) critical: Critical conditions (severity=2) debugging: Debug-level messages (severity=7) emergency: System is unusable (severity=0) error: Error conditions (severity=3) informational: Informational messages (severity=6) notification Normal but significant conditions (severity=5) warning: Warning conditions (severity=4) deny: Disable log output

# Contents

## Tacacs/GlobalNasIps

TACACS global NAS IP information table.

### XML structure

```
<Tacacs>
  <GlobalNasIps>
    <GlobalNasIp>
      <VRF></VRF>
      <IpType></IpType>
      <IpAddress></IpAddress>
    </GlobalNasIp>
  </GlobalNasIps>
</Tacacs>
```

### Table description

Item	Description
Feature name	Tacacs
Table name	GlobalNasIps
Table type	Multi-instance table
Row name	GlobalNasIp
Restrictions	The maximum number of global NAS IP addresses is 16.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name	Index	String. Length: 1 to 31 characters.	N/A
IpType	Source IP address type	Index	Enumeration: <ul style="list-style-type: none"><li>0—IPv4.</li><li>1—IPv6.</li></ul>	N/A
IpAddress	Source IP address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.0.0.1 IPv6 example: 2001:12::1:2

# Tacacs/Schemes

TACACS scheme table.

## XML structure

```
<Tacacs>
  <Schemes>
    <Scheme>
      <SchemeName></SchemeName>
      <RealAcctInterval></RealAcctInterval>
      <TimeOut></TimeOut>
      <QuietTime></QuietTime>
      <UserNameFormat></UserNameFormat>

      <AcctKey></AcctKey>
      <VRF></VRF>
    </Scheme>
  </Schemes>
</Tacacs>
```

## Table description

Item	Description
Feature name	Tacacs
Table name	Schemes
Table type	Multi-instance table
Row name	Scheme
Restrictions	The maximum number of TACACS schemes is 16.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeName	TACACS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
RealAcctInterval	Realtime accounting	N/A	Unsigned integer.	Default: 12 minutes.

Column name	Column description	Column type	Data type and restrictions	Remarks
	interval		Value range: 0 to 60, in minutes.	The value of 0 indicates that the device does not send realtime accounting information for online users to TACACS servers.
TimeOut	TACACS server response timeout timer	N/A	Unsigned integer. Value range: 1 to 300, in seconds.	Default: 5 seconds
QuietTime	Quiet timer for the servers specified in the TACACS scheme	N/A	Unsigned integer. Value range: 1 to 255, in minutes.	Default: 5 minutes
UserNameFormat	Format of user names to be sent to TACACS servers	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—keep-original.</li> <li>1—with-domain.</li> <li>2—without-domain.</li> </ul>	Default: 1
BytesUnit	Data flow measurement unit for traffic statistics	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—byte.</li> <li>1—kilo-byte.</li> <li>2—mega-byte.</li> <li>3—giga-byte.</li> </ul>	Default: 0
PacketsUnit	Packet measurement unit for traffic statistics	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—one-packet.</li> <li>1—kilo-packet.</li> <li>2—mega-packet.</li> <li>3—giga-packet.</li> </ul>	Default: 0
NasIpv4Address	Source IPv4 IP address for outgoing TACACS packets	N/A	String in dotted decimal notation.	For example, 10.1.1.1.
NasIpv6Address	Source IPv6 IP address for outgoing TACACS packets	N/A	Hexadecimal string, colon-separated.	For example, 2001:12::22:33.
AuthenKey	Shared key for secure TACACS authentication communication	N/A	In non-FIPS mode, the shared key is a string of 1 to 255 characters.  In FIPS mode, the shared key is a string of 15 to 255 characters that must contain digits, uppercase letters, lowercase letters, and special characters.	N/A
AuthorKey	Shared key for secure HWTACACS	N/A	In non-FIPS mode, the shared key is a string of 1 to 255 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	authorization communication		In FIPS mode, the shared key is a string of 15 to 255 characters that must contain digits, uppercase letters, lowercase letters, and special characters.	
AcctKey	Shared key for secure TACACS accounting communication	N/A	In non-FIPS mode, the shared key is a string of 1 to 255 characters.  In FIPS mode, the shared key is a string of 15 to 255 characters that must contain digits, uppercase letters, lowercase letters, and special characters.	N/A
VRF	VRF name	N/A	String. Length: 1 to 31 characters.	Default: Public network

## Tacacs/AuthServers

TACACS authentication server table.

### XML structure

```

<Tacacs>
  <AuthServers>
    <AuthServer>
      <SchemeName></SchemeName>
      <Priority></Priority>
      <VRF></VRF>
      <IpType></IpType>
      <Host></Host>
      <Port></Port>
      <Key></Key>
      <SingleConn></SingleConn>
    </AuthServer>
  </AuthServers>
</Tacacs>

```

### Table description

Item	Description
Feature name	Tacacs
Table name	AuthServers
Table type	Multi-instance table
Row name	AuthServer

Restrictions	You can configure one primary authentication server and a maximum of 16 secondary authentication servers for backup in each TACACS scheme. To change the primary authentication server, delete the existing primary server, and then configure a new primary server.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeName	TACACS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Priority	Priority	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Primary authentication server.</li> <li>1—Secondary authentication server.</li> </ul>	N/A
VRF	VRF name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
IpType	Type of the TACACS authentication server address	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> <li>2—FQDN.</li> </ul>	The value 2 for IpType is not supported currently. The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Host	TACACS authentication server	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. FQDN: String of 1 to 255 characters.	When the IpType value is 0, this column represents the IPv4 address of the server. When the IpType value is 1, this column represents the IPv6 address of the server. The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Port	Service port number of the TACACS authentication server	Index	Unsigned integer. Value range: 1 to 65535.	Default: 49
Key	Shared key for secure TACACS authentication communication	N/A	In non-FIPS mode, the shared key is a string of 1 to 255 characters. In FIPS mode, the shared key is a string of 15 to 255 characters that must	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			contain digits, uppercase letters, lowercase letters, and special characters.	
SingleConn	Whether to use the same TCP connection for authentication packet exchange for all users	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Default: false

## Tacacs/AuthorServers

TACACS authorization server table.

### XML structure

```

<Tacacs>
  <AuthorServers>
    <AuthorServer>
      <SchemeName></SchemeName>
      <Priority></Priority>
      <VRF></VRF>
      <IpType></IpType>
      <Host></Host>
      <Port></Port>
      <Key></Key>
      <SingleConn></SingleConn>
    </AuthorServer>
  </AuthorServers>
</Tacacs>

```

### Table description

Item	Description
Feature name	Tacacs
Table name	AuthorServers
Table type	Multi-instance table
Row name	AuthorServer
Restrictions	You can configure one primary authorization server and a maximum of 16 secondary authorization servers for backup in each TACACS scheme. To change the primary authorization server, delete the existing primary server, and then configure a new primary server.
Support for row creation and deletion	Yes

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeName	TACACS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Priority	Priority	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Primary authorization server.</li> <li>1—Secondary authorization server.</li> </ul>	N/A
VRF	VRF name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
IpType	Type of the TACACS authorization server address	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> <li>2—FQDN.</li> </ul>	The value 2 for IpType is not supported currently. The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.

# Tacacs

## Tacacs/GlobalNasIps

TACACS global NAS IP information table.

### XML structure

```
<Tacacs>
  <GlobalNasIps>
    <GlobalNasIp>
      <VRF></VRF>
      <IpType></IpType>
      <IpAddress></IpAddress>
    </GlobalNasIp>
  </GlobalNasIps>
</Tacacs>
```

### Table description

Item	Description
Feature name	Tacacs
Table name	GlobalNasIps
Table type	Multi-instance table
Row name	GlobalNasIp
Restrictions	The maximum number of global NAS IP addresses is 16.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name	Index	String. Length: 1 to 31 characters.	N/A
IpType	Source IP address type	Index	Enumeration: <ul style="list-style-type: none"><li>0—IPv4.</li><li>1—IPv6.</li></ul>	N/A
IpAddress	Source IP address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.0.0.1 IPv6 example: 2001:12::1:2

# Tacacs/Schemes

TACACS scheme table.

## XML structure

```
<Tacacs>
  <Schemes>
    <Scheme>
      <SchemeName></SchemeName>
      <RealAcctInterval></RealAcctInterval>
      <TimeOut></TimeOut>
      <QuietTime></QuietTime>
      <UserNameFormat></UserNameFormat>
      <BytesUnit></BytesUnit>
      <PacketsUnit></PacketsUnit>
      <NasIpv4Address></NasIpv4Address>
      <NasIpv6Address></NasIpv6Address>
      <VRF></VRF>
    </Scheme>
  </Schemes>
</Tacacs>
```

## Table description

Item	Description
Feature name	Tacacs
Table name	Schemes
Table type	Multi-instance table
Row name	Scheme
Restrictions	The maximum number of TACACS schemes is 16.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeName	TACACS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
RealAcctInterval	Realtime accounting interval	N/A	Unsigned integer. Value range: 0 to 60, in minutes.	Default: 12 minutes. The value of 0 indicates that the device does not send realtime accounting information for online users to TACACS servers.

Column name	Column description	Column type	Data type and restrictions	Remarks
TimeOut	TACACS server response timeout timer	N/A	Unsigned integer. Value range: 1 to 300, in seconds.	Default: 5 seconds
QuietTime	Quiet timer for the servers specified in the TACACS scheme	N/A	Unsigned integer. Value range: 1 to 255, in minutes.	Default: 5 minutes
UserNameFormat	Format of user names to be sent to TACACS servers	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—keep-original.</li> <li>1—with-domain.</li> <li>2—without-domain.</li> </ul>	Default: 1
BytesUnit	Data flow measurement unit for traffic statistics	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—byte.</li> <li>1—kilo-byte.</li> <li>2—mega-byte.</li> <li>3—giga-byte.</li> </ul>	Default: 0
PacketsUnit	Packet measurement unit for traffic statistics	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—one-packet.</li> <li>1—kilo-packet.</li> <li>2—mega-packet.</li> <li>3—giga-packet.</li> </ul>	Default: 0
NasIpv4Address	Source IPv4 IP address for outgoing TACACS packets	N/A	String in dotted decimal notation.	For example, 10.1.1.1.
NasIpv6Address	Source IPv6 IP address for outgoing TACACS packets	N/A	Hexadecimal string, colon-separated.	For example, 2001:12::22:33.
VRF	VRF name	N/A	String. Length: 1 to 31 characters.	Default: Public network

## Tacacs/AuthServers

TACACS authentication server table

### XML structure

```

<Tacacs>
  <AuthServers>
    <AuthServer>
      <SchemeName></SchemeName>
      <Priority></Priority>
      <VRF></VRF>
    </AuthServer>
  </AuthServers>
</Tacacs>

```

```

    <IpType></IpType>
    <Host></Host>
    <Port></Port>
    <SingleConn></SingleConn>
    <State></State>
  </AuthServer>
</AuthServers>
</Tacacs>

```

## Table description

Item	Description
Feature name	Tacacs
Table name	AuthServers
Table type	Multi-instance table
Row name	AuthServer
Restrictions	You can configure one primary authentication server and a maximum of 16 secondary authentication servers for backup in each TACACS scheme. To change the primary authentication server, delete the existing primary server, and then configure a new primary server.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SchemeName	TACACS scheme name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Priority	Priority	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Primary authentication server.</li> <li>1—Secondary authentication server.</li> </ul>	N/A
VRF	VRF name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
IpType	Type of the TACACS authentication server address	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> <li>2—FQDN.</li> </ul>	The value 2 for IpType is not supported currently. The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Host	TACACS authentication server	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. FQDN: String of 1 to 255	When the IpType value is 0, this column represents the IPv4 address of the server. When the IpType value is 1, this column represents

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters.	the IPv6 address of the server.  The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Port	Service port number of the TACACS authentication server.	Index	Unsigned integer. Value range: 1 to 65535.	Default: 49
SingleConn	Whether to use the same TCP connection for authentication packet exchange for all users	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Default: false
State	Status of the TACACS authentication server	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Active.</li> <li>1—Block.</li> </ul>	Default: 0

# TelemetryPBSR

## TelemetryPBSR/PBSRConfiguration

This table is used to configure the global configurations for the protobuf buffer status report (PBSR) function.

Caution: The columns "SourceIpv4Address", "SourcePort", "DestIpv4Address", and "DestPort" must be created or deleted together.

### XML structure

```
<TelemetryPBSR>
  <PBSRConfiguration>
    <PortCount></PortCount>
    <Interval></Interval>
    <SourceIpv4Address></SourceIpv4Address>
    <SourcePort></SourcePort>
    <DestIpv4Address></DestIpv4Address>
    <DestPort></DestPort>
    <VlanID></VlanID>
  </PBSRConfiguration>
</TelemetryPBSR>
```

### Table description

Item	Description
Feature name	TelemetryPBSR
Table name	PBSRConfiguration
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortCount	Number of ports	N/A	Unsigned integer.	N/A
Interval	Interval for sending the PBSR to the server	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SourceIPv4Address	Source IP address	N/A	String. IPv4 address string or IPv6 address string.	N/A
SourcePort	Source port number	N/A	Unsigned integer.	N/A
DestIPv4Address	Destination IP address	N/A	String. IPv4 address string or IPv6 address string.	N/A
DestPort	Destination port number	N/A	Unsigned integer.	N/A
VlanID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A

## TelemetryPBSR/PortPbsrConfigurations

This table is used to configure the interface for the PBSR function.

### XML structure

```

<TelemetryPBSR>
  <PortPbsrConfigurations>
    <PortPbsrConfiguration>
      <IfIndex></IfIndex>
      <State></State>
    </PortPbsrConfiguration>
  </PortPbsrConfigurations>
</TelemetryPBSR>

```

# TELNET

## TELNET/Capabilities

This table contains the capabilities information of the TELNET.

### XML structure

```
<TELNET>
  <Capabilities>
    <TelnetServerSupport></TelnetServerSupport>
  </Capabilities>
</TELNET>
```

### Table description

Item	Description
Feature name	TELNET
Table name	Capabilities
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
TelnetServerSupport	Whether The TELNET Server capability is supported.	N/A	Boolean: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>

## TELNET/Server

This table contains global TELNET Server information.

### XML structure

```
<TELNET>
  <Server>
    <State></State>
    <Ipv4DSCP></Ipv4DSCP>
    <Ipv6DSCP></Ipv6DSCP>
    <Ipv4ACLNum></Ipv4ACLNum>
  </Server>
</TELNET>
```

```

    <Ipv6ACLNum></Ipv6ACLNum>
    <Ipv4Port></Ipv4Port>
    <Ipv6Port></Ipv6Port>
  </Server>
</TELNET>

```

## Table description

Item	Description
Feature name	TELNET
Table name	Server
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global TELNET Server functions.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
State	Global TELNET Server feature	N/A	EnableState: <ul style="list-style-type: none"> <li>enable Enable TELNET Server</li> <li>disable Disable TELNET Server(default)</li> </ul>
Ipv4DSCP	Set the IPv4 Differentiated Services Codepoint (DSCP) value	N/A	Unsigned integer. Value range: 0 to 63. Default value:48
Ipv6DSCP	Set the IPv6 Differentiated Services Codepoint (DSCP) value	N/A	Unsigned integer. Value range: 0 to 63. Default value:48.
Ipv4ACLNum	Specify an IPv4 ACL used to control the TELNET clients' access	N/A	Unsigned integer. Value range: 2000 to 4999.
Ipv6ACLNum	Specify an IPv6 ACL used to control the TELNET clients' access	N/A	Unsigned integer. Value range: 2000 to 4999.
Ipv4Port	Set the IPv4 Server Port value	N/A	Unsigned integer. Value range: 23, 1025 to 65535. Default value: 23
Ipv6Port	Set the IPv6 Server Port value	N/A	Unsigned integer. Value range: 23, 1025 to 65535. Default value: 23.

# TELNET

## TELNET/Server

Message	Explanation
Failed to enable TELNET server. 使能TELNET server失败.	When the telnet service port number has been used by other services, it does not support to enable TELNET server.
Failed to specify ACL. 配置ACL失败.	If the ACL configuration can't be processed by the daemon of Telnet, the specified ACL configuration will fail.
Failed to specify DSCP. 配置DSCP失败.	If the DSCP configuration can't be processed by the daemon of Telnet, the specified DSCP configuration will fail.
Failed to specify port 配置端口失败.	If TELNET server has been enabled, the port number that has been used does not support configuration.

# TimeRange

## TimeRange/TimeRanges

This table contains time range information.

### XML structure

```
<TimeRange>
  <TimeRanges>
    <Range>
      <Name></Name>
    </Range>
  </TimeRanges>
</TimeRange>
```

### Table description

Item	Description
Feature name	TimeRange
Table name	TimeRanges
Table type	Multi-instance table
Row name	Range
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Time range name	Index	String, case-insensitive. Length: 1 to 32 characters. The string must start with an English letter.	The time range name cannot be <b>all</b> .

## TimeRange/AbsRanges

This table contains information about absolute time range statements.

### XML structure

```
<TimeRange>
```

```

<AbsRanges>
  <AbsRange>
    <TimeRangeName></TimeRangeName>
    <ID></ID>
    <Start>
      <StartTime></StartTime>
      <StartDate></StartDate>
    </Start>
    <End>
      <EndTime></EndTime>
      <EndDate></EndDate>
    </End>
  </AbsRange>
</AbsRanges>
</TimeRange>

```

## Table description

Item	Description
Feature name	TimeRange
Table name	AbsRanges
Table type	Multi-instance table
Row name	AbsRange
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TimeRangeName	Time range name	Index	String, case-insensitive. Length: 1 to 32 characters. The string must start with an English letter.	You must create a time range before you create, merge, or replace statements for it.
ID	Absolute statement ID	Index	Unsigned integer. Value range: 1 to 12.	If you set this column to 0, the system automatically assigns a new statement ID. This statement ID is the smallest available integer in the range of 1 to 12.

Column name	Column description	Column type	Data type and restrictions	Remarks
Start	Start time and date of an absolute statement	Data structure	Members include: <ul style="list-style-type: none"> <li>StartTime.</li> <li>StartDate.</li> </ul>	<ul style="list-style-type: none"> <li>You cannot specify a start time and date when you remove or delete a statement.</li> <li>You must specify a start time and date when you create, merge, or replace a statement.</li> </ul>
StartTime	Start time of an absolute statement	N/A	String. Format: hh:mm:ss. Value range: 00:00:00 to 23:59:59.	N/A
StartDate	Start date of an absolute statement	N/A	String. Format: YYYY-MM-DD. Value range: 1970-01-01 to 2100-12-31.	N/A
End	End time and date of an absolute statement	Data structure	Members include: <ul style="list-style-type: none"> <li>EndTime.</li> <li>EndDate.</li> </ul>	<ul style="list-style-type: none"> <li>You cannot specify an end time and date when you remove or delete a statement.</li> <li>You must specify an end time and date when you create, merge, or replace a statement.</li> </ul>
EndTime	End time of an absolute statement	N/A	String. Format: hh:mm:ss. Value range: 00:00:00 to 24:00:00.	N/A
EndDate	End date of an absolute statement	N/A	String. Format: YYYY-MM-DD. Value range: 1970-01-01 to 2100-12-31.	N/A

## TimeRange/PerRanges

This table contains information about periodic time range statements.

### XML structure

```

<TimeRange>
  <PerRanges>
    <PerRange>
      <TimeRangeName></TimeRangeName>
      <ID></ID>
      <StartTime></StartTime>

```

```

    <EndTime></EndTime>
  <DayOfWeek>
    <Sun></Sun>
    <Mon></Mon>
    <Tue></Tue>
    <Wed></Wed>
    <Thu></Thu>
    <Fri></Fri>
    <Sat></Sat>
  </DayOfWeek>
</PerRange>
</PerRanges>
</TimeRange>

```

## Table description

Item	Description
Feature name	TimeRange
Table name	PerRanges
Table type	Multi-instance table
Row name	PerRange
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remark
TimeRangeName	Time range name	Index	String, case-insensitive. Length: 1 to 32 characters. The string must start with an English letter.	You must create a time range before you create, merge, or replace statements for it.
ID	Periodic statement ID	Index	Unsigned integer. Value range: 1 to 32.	If you set this column to 0, the system automatically assigns a new statement ID. This statement ID is the smallest available integer in the range of 1 to 32.

Column name	Column description	Column type	Data type and restrictions	Remark
StartTime	Start time of a periodic statement	N/A	String. Format: hh:mm. Value range: 00:00 to 23:59.	<ul style="list-style-type: none"> <li>You cannot specify a start time when you remove or delete a statement.</li> <li>You must specify a start time when you create, merge, or replace a statement.</li> <li>Start time must be smaller than end time.</li> </ul>
EndTime	End time of a periodic statement	N/A	String. Format: hh:mm. Value range: 00:00 to 24:00.	<ul style="list-style-type: none"> <li>You cannot specify an end time when you remove or delete a statement.</li> <li>You must specify an end time when you create, merge, or replace a statement.</li> <li>End time must be greater than start time.</li> </ul>
DayOfWeek	Day of the week	Data structure	Members include: <ul style="list-style-type: none"> <li>Sun.</li> <li>Mon.</li> <li>Tue.</li> <li>Wed.</li> <li>Thu.</li> <li>Fri.</li> <li>Sat.</li> </ul>	<ul style="list-style-type: none"> <li>You cannot specify any day of the week when you remove or delete a statement.</li> <li>You must specify at least one day of the week when you create, merge, or replace a statement.</li> </ul>
Sun	Sunday	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Specified.</li> <li><b>false</b>—Not specified (default).</li> </ul>	N/A
Mon	Monday	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Specified.</li> <li><b>false</b>—Not specified (default).</li> </ul>	N/A
Tue	Tuesday	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Specified.</li> <li><b>false</b>—Not specified (default).</li> </ul>	N/A
Wed	Wednesday	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Specified.</li> <li><b>false</b>—Not specified (default).</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remark
Thu	Thursday	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Specified.</li> <li>• <b>false</b>—Not specified (default).</li> </ul>	N/A

## TimeRange

Message	Explanation
Invalid date or time settings. 配置中包含无效的日期和时间的设置。	The date or time entered is illegal. 输入的日期或时间是非法的。
The end time must be greater than the start time. 结束时间必须大于开始时间。	The end time entered is less than or equal to the start time. 输入的结束时间小于等于开始时间。
Maximum number of absolute statements already reached. 绝对时间段配置数达到上限。	The absolute number of configured times has reached the upper limit. 指配置的绝对时间数已经达到上限。
Maximum number of periodic statements already reached. 周期时间段配置数达到上限。	The periodic number of configured times has reached the upper limit. 配置的周期时间数已经达到上限。
Maximum number of time ranges already reached. 时间段配置数达到上限。	The configured number of time range names has reached the upper limit. 配置的时间段名称数已经达到上限。
At least one day of the week should be set for a periodic time range. 配置周期时间段时应至少指定一周中的一天。	The configured periodic time does not specify which day of the week. 配置周期时间时没有指定一周中哪天。
A time range with the same statements already exists. 相同的时间段配置已存在。	The same time range content has been configured. 已经配置了相同的时间段内容。

# Tracert

## Tracert/IPv4Tracert

This table contains tracert information. Tracert traces the path that the IPv4 packets traverse from source to destination.

### XML structure

```
<Tracert>
  <IPv4Tracert>
    <TracertTest>
      <Host></Host>
      <VRF></VRF>
      <OutputInterface></OutputInterface>
    </TracertTest>
  </IPv4Tracert>
</Tracert>
```

### Responded XML structure

```
<Tracert>
  <IPv4Tracert>
    <TracertTest>
      <Host></Host>
      <PayloadLength></PayloadLength>
      <Hops></Hops>
      <TracertReply>
        <Sequence></Sequence>
        <PassthroughRouter></PassthroughRouter>
        <ReplyTime></ReplyTime>
      </TracertReply>
      <TestResult></TestResult>
    </TracertTest>
  </IPv4Tracert>
</Tracert>
```

### Table description

Item	Description
Feature name	Tracert
Table name	IPv4Tracert
Table type	Multi-instance table
Row name	TracertTest

Item	Description
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Host	IPv4 address or host name of a remote system	Index	String. Length: 1 to 253 characters.	Example: 1.1.1.1 or host name.
VRF	VPN instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
OutputInterface	Name of the outgoing interface	N/A	String. Length: 0 to 46 characters.	An empty string indicates that no outgoing interface is specified.

## Responded columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Host	IPv4 address of the remote system	N/A	IPv4: String, dotted decimal notation.	Example: 1.1.1.1.
Hops	Maximum hop limit	N/A	Unsigned integer. Value range: 1 to 255.	N/A
PayloadLength	Payload length	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
TracertReply	Tracert reply information	Data structure	Members include: <ul style="list-style-type: none"> <li>Sequence.</li> <li>PassthroughRouter.</li> <li>ReplyTime.</li> </ul>	N/A
Sequence	Reply sequence	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
PassthroughRouter	Path that the packets pass through	N/A	IPv4: String, dotted decimal notation.	Example: 1.1.1.1.
ReplyTime	Response time	N/A	Unsigned integer. Value range: 0 to 4294967295 microseconds.	If the value is 4294967295, the reply has timed out.
TestResult	Test result	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Successful.</li> <li><b>false</b>—Failed.</li> </ul>	If the tracert operator does not receive a reply within 25 seconds, the tracert operation fails.

      </TypeLldp>
    </TrackEntry>
  </TrackEntries>
</TRACK>
```

## Table description

Item	Description
Feature name	TRACK
Table name	TrackEntries
Table type	Multi-instance table
Row name	TrackEntry
Restrictions	Only one tracked object type can be specified for a track entry. You cannot modify the settings of the track entry after creating it in this table. If you need to do this, you must delete the track entry and then create it again.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TrackIndex	Index of the track entry.	Index	Unsigned integer. Value range: 1 to 1024.	N/A
TypeInterface	Associates the track entry with an interface.	Data structure	Members include: <ul style="list-style-type: none"> <li>IfIndex.</li> <li>IfStateType.</li> </ul>	All the members must be specified.
IfIndex	Interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
IfStateType	Type of the interface state.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Link state.</li> <li>2—Physical state.</li> <li>3—IPv4 protocol state.</li> <li>4—IPv6 protocol state.</li> </ul>	N/A
TypeBfd	Associates the track entry with a BFD session.	Data structure	Members include: <ul style="list-style-type: none"> <li>EchoIfIndex.</li> <li>Remotelp.</li> <li>Locallp.</li> </ul>	All the members must be specified.
EchoIfIndex	Specifies the outgoing interface of the BFD echo packets.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration

				Reference.
Remotelp	Specifies the destination IP address of the BFD echo packets.	N/A	IPv4: String, dotted decimal notation.	N/A
LocalIp	Specifies the source IP address of the BFD echo packets.	N/A	IPv4: String, dotted decimal notation.	N/A
TypeCfd	Associates the track entry with CFD.	Data structure	Members include: <ul style="list-style-type: none"> <li>ServiceInstance.</li> <li>Mepld.</li> </ul>	All the members must be specified.
ServiceInstance	Specifies a service instance ID.	N/A	Unsigned integer. Value range: 1 to 32767.	N/A
Mepld	Specifies a MEP ID.	N/A	Unsigned integer. Value range: 1 to 8191.	N/A
TypeRoute	Associates the track entry with a route entry.	Data structure	Members include: <ul style="list-style-type: none"> <li>VRF.</li> <li>IpAddress.</li> <li>MaskLength.</li> </ul>	The IpAddress member and MaskLength member must be specified.
VRF	VRF instance name.	N/A	String. Length: 1 to 31 characters.	N/A
IpAddress	IP address of the route entry.	N/A	IPv4: String, dotted decimal notation.	N/A
MaskLength	Mask length of the route entry.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
TypeNqa	Associates the track entry with an NQA operation.	Data structure	Members include: <ul style="list-style-type: none"> <li>AdminName.</li> <li>OperationTag.</li> <li>ReactionNum.</li> </ul>	All the members must be specified.
AdminName	Administrator name of the NQA operation.	N/A	String. Length: 1 to 32 characters.	N/A
OperationTag	Operation tag of the NQA operation.	N/A	String. Length: 1 to 32 characters.	N/A
ReactionNum	Reaction entry associated with the NQA entry.	N/A	Unsigned integer. Value range: 1 to 10.	N/A
TypeList	Associates the track entry with a tracked list.	Data structure	Members include: <ul style="list-style-type: none"> <li>ListType.</li> </ul>	The ListType member must be specified.
ListType	Type of the tracked list.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Boolean AND list.</li> <li>2—Boolean OR list.</li> <li>3—Percentage threshold list.</li> </ul>	N/A

			<ul style="list-style-type: none"> <li>4—Weight threshold list.</li> </ul>	
TypeLldp	Associates the track entry with an LLDP neighbour.	Data structure	Members include: <ul style="list-style-type: none"> <li>IfIndex.</li> </ul>	The IfIndex member must be specified.
IfIndex	Interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

## TRACK/TrackObjectList

This table contains information about objects in tracked lists.

### XML structure

```

<TRACK>
  <ObjectList>
    <Object>
      <TrackIndex></TrackIndex>
      <ObjectIndex></ObjectIndex>
      <ObjectSign></ObjectSign>
      <ObjectWeight></ObjectWeight>
    </Object>
  </ObjectList>
</TRACK>

```

### Table description

Item	Description
Feature name	TRACK
Table name	ObjectList
Table type	Multi-instance table
Row name	Object
Restrictions	You can configure objects for a track entry only when the track entry exists in the TRACKEntries table and has TrackType set to TypeList.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TrackIndex	Index of the track entry.	Index	Unsigned integer. Value range: 1 to 1024.	N/A
ObjectIndex	Object index.	Index	Unsigned integer. Value range: 1 to 1024.	N/A
ObjectSign	Whether or not to negate the state of the object.	N/A	Boolean: <ul style="list-style-type: none"><li>true—Negates the state of the object.</li><li>false—Does not negate the state of the object (default).</li></ul>	This column can be specified only when the track entry is associated with a Boolean list.
ObjectWeight	Weight of the object.	N/A	Unsigned integer. Value range: 1 to 255. Default: 10.	This column can be specified only when the track entry is associated with a weight threshold list.

## TRACK/ TrackOper

This table contains operation information about track entries.

## XML structure

```
<TRACK>
  <TrackOper>
    <Operation>
      <TrackIndex></TrackIndex>
      <PositiveDelay></PositiveDelay>
      <NegativeDelay></NegativeDelay>
      <PositiveThresholdPercent></PositiveThresholdPercent>
      <NegativeThresholdPercent></NegativeThresholdPercent>
      <PositiveThresholdWeight></PositiveThresholdWeight>
      <NegativeThresholdWeight></NegativeThresholdWeight>
    </Operation>
  </TrackOper>
</TRACK>
```

## Table description

Item	Description
Feature name	TRACK
Table name	TrackOper

Table type	Multi-instance table
Row name	Operation
Restrictions	You can configure the operation information for a track entry only when the track entry exists in the TRACKEntries table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TrackIndex	Index of the track entry.	Index	Unsigned integer. Value range: 1 to 1024.	N/A
PositiveDelay	Specifies the positive state notification delay in seconds.	N/A	Unsigned integer. Value range: 0 to 300. Default: 0.	N/A
NegativeDelay	Specifies the negative state notification delay in seconds.	N/A	Unsigned integer. Value range: 0 to 300. Default: 0.	N/A
PositiveThresholdPercent	Specifies the positive state threshold in percentage.	N/A	Unsigned integer. Value range: 1 to 100. Default: 1.	This column can be specified only when the track entry is associated with a percentage threshold list.
NegativeThresholdPercent	Specifies the negative state threshold in percentage.	N/A	Unsigned integer. Value range: 0 to 99. Default: 0.	This column can be specified only when the track entry is associated with a percentage threshold list.
PositiveThresholdWeight	Specifies the positive state threshold in weight.	N/A	Unsigned integer. Value range: 1 to 255. Default: 1.	This column can be specified only when the track entry is associated with a weight threshold list.
NegativeThresholdWeight	Specifies the negative state threshold in weight.	N/A	Unsigned integer. Value range: 0 to 254. Default: 0.	This column can be specified only when the track entry is associated with a weight threshold list.

## TRACK/TrackEntries

Message	Explanation
Some required non-index columns are missing for the track entry of the specified type. Track类型中的非索引列不完整。	All the members of tracked object type must be specified
Only one tracked object type can be specified for a track entry. 只能为一个Track项指定一种类型。	Only one tracked object type can be specified for a track entry.
The tracked object type must be specified. 必须为一个Track项指定类型。	The tracked object type must be specified.
The interface doesn't exist or it doesn't support the configuration. 接口不存在或者接口不支持该配置。	The interface doesn't exist or it doesn't support the configuration.
The specified VRF doesn't exist. 指定的VRF不存在。	Please create vpn-instance first.
Invalid IP address. 无效的地址。	Only class A,class B,class C addresses are available.
The specified track entry has already existed." 指定的Track项已存在。	Configuration already exists, when set new configuration.
The specified track entry doesn't exist. 指定的Track项不存在。	The specified configuration doesn't exist, when getting or deleting it.
Failed to apply the configuration. 配置执行失败。	You cannot modify the settings of the track entry after creating it in this table. If you need do this, you must delete the track entry and then create it again.
Track is not configured. 未配置TRACK。	Track service has not been started.
Do not specify the non-index columns. 不能配置非索引列。	Do not specify the non-index columns when deleting it.

## TRACK/ObjectList

Message	Explanation
Failed to apply the configuration. 配置执行失败。	Please create track entry first.

# TRACK/TrackOper

Message	Explanation
A minimum of one non-index column is required. 至少需配置一条非索引列。	Please specify at least one of non-index column.
Failed to apply the configuration. 配置执行失败。	Please create track entry first.

    <VlanID></VlanID>
    <FileName></FileName>
    <RealFlowDiagTime></RealFlowDiagTime>
```

```

</StartPktTrace>
</TroubleShoot>

```

## Table description

Item	Description
Feature name	TroubleShoot
Table name	StartPktTrace
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Diagnosis type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Construct packet diagnosis.</li> <li>2—Real flow diagnosis.</li> <li>3—Import packet diagnosis.</li> </ul>	Required.
IfIndex	Interface index	N/A	Unsigned integer.	Required when diagnosis type is 1 or 3.
Protocol	Packet protocol type	N/A	Unsigned integer. Value range: 0 to 255.	Required when diagnosis type is 1.
IPAddrVer	IP version	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4.</li> <li>2—IPv6.</li> </ul>	Required.
SrcIP	Source IP address	N/A	IPv4 address or IPv6 address.	Required when diagnosis type is 1.
DstIP	Destination IP address	N/A	IPv4 address or IPv6 address.	Required when diagnosis type is 1.
SrcPort	Source port	N/A	Unsigned integer. Value range: 0 to 65535.	Required when diagnosis type is 1.
DstPort	Destination port	N/A	Unsigned integer. Value range: 0 to 65535.	Required when diagnosis type is 1.
SrcMAC	Source MAC address	N/A	MAC address.	N/A
DstMAC	Destination MAC address	N/A	MAC address.	N/A
VlanID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
FileName	Selects a .pcap or .cap file to import	N/A	String. Length: 1 to 253 characters.	Required when diagnosis type is 3.

Column name	Column description	Column type	Data type and restrictions	Remarks
RealFlowDiag Time	Duration for service diagnosis based on real traffic (seconds)	N/A	Unsigned integer. Value range: 5 to 600.	Default value: 10 seconds.

## TroubleShoot/StopPktTrace

This table is used to stop packet trace diagnosis.

### XML structure

```
<TroubleShoot>
  <StopPktTrace>
    <Stop></Stop>
  </StopPktTrace>
</TroubleShoot>
```

### Table description

## TroubleShoot/PktTraceInfos

This table contains packet trace diagnosis information.

### XML structure

```
<TroubleShoot>
  <PktTraceInfos>
    <PktTraceInfo>
      <FlowID></FlowID>
      <PacketID></PacketID>
      <ItemID></ItemID>
      <FlowDescription></FlowDescription>
      <PktDescription></PktDescription>
      <Time></Time>
      <ItemName></ItemName>
      <Result></Result>
      <ResultStr></ResultStr>
    </PktTraceInfo>
  </PktTraceInfos>
</TroubleShoot>
```

### Table description

Item	Description
Feature name	TroubleShoot
Table name	PktTraceInfos
Table type	Multi-instance table
Row name	PktTraceInfo
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
FlowID	Flow ID	Index	Unsigned integer.
PacketID	Packet ID	Index	Unsigned integer.
ItemID	Item ID	Index	Unsigned integer.
FlowDescription	Flow description	N/A	String. Length: 1 to 1023 characters.

Column name	Column description	Column type	Data type and restrictions
PktDescription	Packet description	N/A	String. Length: 1 to 1023 characters.
Time	Time when the diagnosis point is added.	N/A	String. Length: 1 to 31 characters.
ItemName	Diagnosis item name	N/A	String. Length: 1 to 63 characters.
Result	Diagnosis result	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Succeeded.</li> <li><b>false</b>—Failed.</li> </ul>
ResultStr	Diagnosis result description	N/A	String. Length: 1 to 1023 characters.

## TroubleShoot/PktTraceState

This table contains packet trace diagnosis status information.

### XML structure

```

<TroubleShoot>
  <PktTraceState>
    <State></State>
  </PktTraceState>
</TroubleShoot>

```

### Table description

Item	Description
Feature name	TroubleShoot

Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Tunnel ID.	Index	Unsigned integer.	N/A
Mode	Tunnel mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—GRE tunnel with the transport protocol being IPv4.</li> <li>2—GRE tunnel with the transport protocol being IPv6.</li> <li>3—IPv4 over IPv4 tunnel.</li> <li>4—IPv6 over IPv4 manually configured tunnel.</li> <li>5—IPv6 over IPv4 automatic tunnel.</li> <li>6—IPv6 over IPv4 6to4 tunnel.</li> <li>7—IPv6 over IPv4 ISATAP tunnel.</li> <li>8—IPv6 tunnel. Encapsulates IPv6 or IPv4 packets in IPv6.</li> <li>9—DVPN tunnel with the passenger protocol being</li> </ul>	Mode must be set when creating a tunnel, and cannot be modified after creating.

Column name	Column description	Column type	Data type and restrictions	Remarks
			<p>UDP and the transport protocol being IPv4.</p> <ul style="list-style-type: none"> <li>• 10—DVPN tunnel with the passenger protocol being GRE and the transport protocol being IPv4.</li> <li>• 11—DVPN tunnel with the passenger protocol being UDP and the transport protocol being IPv6.</li> <li>• 12—DVPN tunnel with the passenger protocol being GRE and the transport protocol being IPv6.</li> <li>• 13—CRLSP tunnel.</li> <li>• 14—Multicast GRE tunnel with the transport protocol being IPv4.</li> <li>• 15—Multicast GRE tunnel with the transport protocol being IPv6.</li> <li>• 16—IPsec tunnel with the transport protocol being IPv4.</li> <li>• 17—IPsec tunnel with the transport protocol being IPv6.</li> <li>• 18—EVI tunnel with the transport protocol being IPv4.</li> <li>• 19—EVI tunnel with the transport protocol being IPv6.</li> <li>• 20—EVI link with the transport protocol being IPv4.</li> <li>• 21—EVI link with the transport protocol being IPv6.</li> <li>• 22—DS-Lite AFTR tunnel.</li> <li>• 23—CRLSP automatic tunnel.</li> <li>• 24—VXLAN tunnel with the passenger protocol being UDP and the transport protocol being IPv4.</li> <li>• 25—VXLAN tunnel with the passenger protocol being UDP and the transport protocol being IPv6.</li> <li>• 26—NVE tunnel with the transport protocol being IPv4.</li> <li>• 27—NVE tunnel with the transport protocol being IPv6.</li> </ul>	

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>28—NVGRE tunnel with the passenger protocol being GRE and the transport protocol being IPv4.</li> <li>29—NVGRE tunnel with the passenger protocol being GRE and the transport protocol being IPv6.</li> <li>30—IPv6 over IPv6 tunnel.</li> <li>31—IPv4 over IPv6 tunnel.</li> <li>32—IPv6 over IPv4 6rd tunnel.</li> <li>33—VXLANDCI tunnel with the passenger protocol being UDP and the transport protocol being IPv4.</li> <li>34—VXLANDCI tunnel with the passenger protocol being UDP and the transport protocol being IPv6.</li> <li>35—MGRE tunnel with the passenger protocol being GRE and the transport protocol being IPv4.</li> <li>36—IPv4 GRE P2MP tunnel.</li> <li>37—IPv6 GRE P2MP tunnel.</li> <li>38—TE P2MP tunnel.</li> <li>39—IPv6 SRLSP tunnel.</li> </ul>	
IPv4Addr	IPv4 source and destination address of tunnel.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcAddr</li> <li>SrcIfIndex</li> <li>DstAddr</li> </ul>	This column is available only for tunnels with the transport protocol being IPv4.
SrcAddr	Tunnel source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
SrcIfIndex	Tunnel source interface index.	N/A	Unsigned integer.	This column is available when the SrcAddr column is empty.
DstAddr	Tunnel destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 2.2.2.2.
IPv6Addr	IPv6 source and destination address of tunnel.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcAddr</li> <li>SrcIfIndex</li> <li>DstAddr</li> </ul>	This column is available only for tunnels with the transport protocol being IPv6.

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcAddr	Tunnel source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
SrcIfIndex	Tunnel source interface index.	N/A	Unsigned integer.	This column is available when the SrcAddr column is empty.
DstAddr	Tunnel destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2:2::2:2.
Tos	ToS value in the IP header of the tunneled packet.	N/A	Unsigned integer. Value range: 0 to 255. Default: 0.	The value 0 indicates that it is copied from the IP header of the inner layer.
Dfbit	Indicates whether to set the DF bit in the IP header of the tunneled packet.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—sets DF bit</li> <li>false—does not set DF bit(default).</li> </ul>	N/A
Ttl	TTL(Time to live) value in the IP header of the tunneled packet.	N/A	Unsigned integer. Value range: 1 to 255. Default: 255.	N/A
OutIfIndex	Tunnel outbound interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Keepalive	Enable keepalive function of tunnel	Data structure	Members include: <ul style="list-style-type: none"> <li>interval.</li> <li>times.</li> </ul>	Currently, only GRE tunnel and EVI tunnel support this function.
Interval	Interval of transmitting keepalive packets	N/A	Unsigned integer. Value range: 1 to 32767(second). For GRE tunnel, default value is 10, for EVI tunnel, default value is 5.	N/A
Times	Maximum times of retransmitting keepalive packets	N/A	Unsigned integer. Value range: 1 to 255. For GRE tunnel, default value is 3, for EVI tunnel, default value is 2.	N/A
EncapLimit	Maximum number of nested encapsulations of a packet allowed on a tunnel interface	N/A	Unsigned integer. Value range: 0 to 10. Default: no limit to the nested encapsulations of a packet	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF to which the tunnel destination belongs.	N/A	String, case-sensitive. Length: 1 to 31 characters.	Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VRFIndex, see "Appendix" in L3vpn NETCONF XML API Data Reference.
GRE	Parameters of GRE tunnel	Data structure	Members include: <ul style="list-style-type: none"> <li>key.</li> <li>checksum.</li> </ul>	Only GRE tunnel support these parameters.
Key	Key to check for the validity of packets received on a GRE tunnel interface.	N/A	Unsigned integer. Value range: 0 to 4294967295. Default: no key is set.	N/A
Checksum	Whether to check GRE checksum	N/A	Boolean: <ul style="list-style-type: none"> <li>true—check GRE checksum.</li> <li>false—does not check GRE checksum(default).</li> </ul>	N/A
VpcEnable	Whether to carry VPC information in GRE packets.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Carry.</li> <li>false—Not carry.</li> </ul>	N/A
P2MPTemplate	GRE P2MP tunnel template.	N/A	String. Length: 1 to 31 characters.	N/A
ServiceClass	Service class for a tunnel.	N/A	Unsigned integer. The value range varies by device model.	N/A
P2MP	GRE P2MP tunnel parameters	Data structure	Members include: <ul style="list-style-type: none"> <li>AgingTime.</li> <li>BackupTunnel.</li> <li>BrachIPv4NetMaskLength.</li> <li>BrachIPv6NetMaskLength.</li> </ul>	Only GRE P2MP tunnel support these parameters.
AgingTime	The aging time of the GRE P2MP tunnel	N/A	Unsigned integer. Value range: 1 to 86400. Default: 5s.	N/A
BackupTunnel	The backup tunnel interface for a GRE P2MP tunnel	N/A	Unsigned integer.	N/A
BrachIPv4NetMaskLength	GRE P2MP branch IPv4 mask length	N/A	Unsigned integer. Value range: 0 to 32. Default: 32.	N/A
BrachIPv6NetMaskLength	GRE P2MP branch IPv6	N/A	Unsigned integer. Value range: 0 to 128.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	prefix length		Default: 128.	
StaticRoute	Static routing parameters of tunnel	Data structure	Members include: <ul style="list-style-type: none"> <li>enabel.</li> <li>preference.</li> </ul>	Only TE and P2MP tunnel support these parameters.
Enable	Whether to enable automatic configuration of a static route on the tunnel	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable(default).</li> </ul>	N/A
Preference	Preference of the static route	N/A	Unsigned integer. Value range: 1 to 255.	The default value of preference is 60. This column is configurable only if the enable column has a value of true.
SRV6	IPv6 SR tunnel parameters	Data structure	Members include: <ul style="list-style-type: none"> <li>SRv6SIDListName.</li> <li>SRv6BackupSIDListName.</li> </ul>	Only IPv6 SR tunnel support these parameters.
SRv6SIDListName	SID list name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
SRv6BackupSIDListName	Backup SID list name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A

## TUNNEL/GlobalConfig

This table contains global configuration information.

### XML structure

```

<TUNNEL>
  <GlobalConfig>
    <VxlanUdpPort></VxlanUdpPort>
    <DropInvalidChksumPkt></DropInvalidChksumPkt>
    <DropInvalidVlanTagPkt></DropInvalidVlanTagPkt>
    <VxlanIpForward></VxlanIpForward>
  </GlobalConfig>
</TUNNEL>

```

### Table description

Item	Description
Feature name	TUNNEL
Table name	GlobalConfig
Table type	Single-instance table

Item	Description
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VxlanUdpPort	UDP port on which tunnel receives VXLAN packets	N/A	Unsigned integer. Value range: 1 to 65535. Default: 4789.	N/A
DropInvalidChecksumPkt	Whether to drop VXLAN packets with invalid UDP checksum	N/A	Boolean: <ul style="list-style-type: none"> <li>true—drop</li> <li>false—not drop (default)</li> </ul>	N/A
DropInvalidVlanTagPkt	Whether to drop VXLAN packets with invalid VLAN tag after tunnel de-encapsulation	N/A	Boolean: <ul style="list-style-type: none"> <li>true—drop</li> <li>false—not drop (default)</li> </ul>	N/A
VxlanIpForward	Whether to use the L3 forwarding mode	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Use L3 forwarding mode (default)</li> <li>false—Use L2 forwarding mode</li> </ul>	N/A

## TUNNEL/GREP2MPTemplates

This table contains GRE P2MP tunnel templates.

## XML structure

```

<TUNNEL>
  <GREP2MPTemplates>
    <GREP2MPTemplate>
      <TemplateName></TemplateName>
    </GREP2MPTemplate>
  </GREP2MPTemplates>
</TUNNEL>

```

## Table description

Item	Description
Feature name	TUNNEL
Table name	GREP2MPTemplates
Table type	Multi-instance table

Item	Description
Row name	GREP2MPTemplate
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TemplateName	GRE P2MP tunnel template name.	Index	String. Length: 1 to 31 characters.	N/A

## TUNNEL/GREP2MPTemplateMaps

This table contains map information about tunnel mapping entries in GRE P2MP tunnel templates.

## XML structure

```

<TUNNEL>
  <GREP2MPTemplateMaps>
    <GREP2MPTemplateMap>
      <TemplateName></TemplateName>

			<ul style="list-style-type: none"> <li>• 9—DVPN tunnel with the passenger protocol being UDP and the transport protocol being IPv4.</li> <li>• 10—DVPN tunnel with the passenger protocol being GRE and the transport protocol being IPv4.</li> <li>• 11—DVPN tunnel with the passenger protocol being UDP and the transport protocol being IPv6.</li> <li>• 12—DVPN tunnel with the passenger protocol being GRE and the transport protocol being IPv6.</li> <li>• 13—CRLSP tunnel.</li> <li>• 14—Multicast GRE tunnel with the transport protocol being IPv4.</li> <li>• 15—Multicast GRE tunnel with the transport protocol being IPv6.</li> <li>• 16—IPsec tunnel with the transport protocol being IPv4.</li> <li>• 17—IPsec tunnel with the transport protocol being IPv6.</li> <li>• 18—EVI tunnel with the transport protocol being IPv4.</li> <li>• 19—EVI tunnel with the transport protocol being IPv6.</li> <li>• 20—EVI link with the transport protocol being IPv4.</li> <li>• 21—EVI link with the transport protocol being IPv6.</li> <li>• 22—DS-Lite AFTR tunnel.</li> <li>• 23—CRLSP automatic tunnel.</li> <li>• 24—VXLAN tunnel with the passenger protocol being UDP and the transport protocol being IPv4.</li> <li>• 25—VXLAN tunnel with the passenger protocol being UDP and the transport protocol being IPv6.</li> </ul>	
--	--	--	--	--

			<ul style="list-style-type: none"> <li>• 26—NVE tunnel with the transport protocol being IPv4.</li> <li>• 27—NVE tunnel with the transport protocol being IPv6.</li> <li>• 28—NVGRE tunnel with the passenger protocol being GRE and the transport protocol being IPv4.</li> <li>• 29—NVGRE tunnel with the passenger protocol being GRE and the transport protocol being IPv6.</li> <li>• 30—IPv6 over IPv6 tunnel.</li> <li>• 31—IPv4 over IPv6 tunnel.</li> <li>• 32—IPv6 over IPv4 6rd tunnel.</li> <li>• 33—VXLANCI tunnel with the passenger protocol being UDP and the transport protocol being IPv4.</li> <li>• 34—VXLANCI tunnel with the passenger protocol being UDP and the transport protocol being IPv6.</li> <li>• 35—MGRE tunnel with the passenger protocol being GRE and the transport protocol being IPv4.</li> <li>• 36—IPv4 GRE P2MP tunnel.</li> <li>• 37—IPv6 GRE P2MP tunnel.</li> <li>• 38—TE P2MP tunnel.</li> <li>• 39—IPv6 SRLSP tunnel.</li> </ul>	
IfIndex	Interface index of tunnel	N/A	Unsigned integer.	N/A
IPv4Addr	IPv4 source and destination address of tunnel.	Data structure	Members include: <ul style="list-style-type: none"> <li>• SrcAddr</li> <li>• SrcIfIndex</li> <li>• DstAddr</li> </ul>	This column is available only for tunnels with the transport protocol being IPv4.
SrcAddr	Tunnel source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
SrcIfIndex	Tunnel source interface index.	N/A	Unsigned integer.	This column is available when the SrcAddr column is empty.

DstAddr	Tunnel destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 2.2.2.2.
IPv6Addr	IPv6 source and destination address of tunnel.	Data structure	Members include: <ul style="list-style-type: none"> <li>• SrcAddr</li> <li>• SrcIfIndex</li> <li>• DstAddr</li> </ul>	This column is available only for tunnels with the transport protocol being IPv6.
SrcAddr	Tunnel source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
SrcIfIndex	Tunnel source interface index.	N/A	Unsigned integer.	This column is available when the SrcAddr column is empty.
DstAddr	Tunnel destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2:2::2:2.
Connectivity	Tunnel connectivity	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—Connected.</li> <li>• 2—Disconnected.</li> <li>• 3—Detecting.</li> <li>• 4—Unknown.</li> </ul>	Use "ping" to detect if tunnel remote is connected.
Tos	Tos value in the IP header of the tunneled packet.	N/A	Unsigned integer. Value range: 0 to 255.	The value 0 indicates that it is copied from the IP header of the inner layer.
Dfbit	Indicates whether to set the DF bit in the IP header of the tunneled packet.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true—sets DF bit</li> <li>• false—does not set DF bit.</li> </ul>	N/A
Ttl	TTL(Time to live) value in the IP header of the tunneled packet.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
OutIfIndex	Tunnel outbound interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Keepalive	Enable keepalive function of tunnel	Data structure	Members include: <ul style="list-style-type: none"> <li>• interval.</li> <li>• times.</li> </ul>	Currently, only GRE tunnel and EVI tunnel support this function.
Interval	Interval of transmitting keepalive packets	N/A	Unsigned integer. Value range: 1 to 32767(second).	N/A
Times	Maximum times of retransmitting keepalive packets	N/A	Unsigned integer. Value range: 1 to 255.	N/A
EncapLimit	Maximum number of nested encapsulations of	N/A	Unsigned integer. Value range: 0 to 10.	N/A

	a packet allowed on a tunnel interface			
VRF	VRF to which the tunnel destination belongs.	N/A	String, case-sensitive. Length: 1 to 31 characters.	Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VRFIndex, see "Appendix" in L3vpn NETCONF XML API Data Reference.
GRE	Parameters of GRE tunnel	Data structure	Members include: <ul style="list-style-type: none"> <li>key.</li> <li>checksum.</li> </ul>	Only GRE tunnel support these parameters.
Key	Key to check for the validity of packets received on a GRE tunnel interface.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
Checksum	Whether to check GRE checksum	N/A	Boolean: <ul style="list-style-type: none"> <li>true—check GRE checksum.</li> <li>false—does not check GRE checksum.</li> </ul>	N/A
VpcEnable	Whether to carry VPC information in GRE packets.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Carry.</li> <li>false—Not carry.</li> </ul>	N/A
P2MPTemplate	GRE P2MP tunnel template.	N/A	String. Length: 1 to 31 characters.	N/A
ServiceClasses	Service class for a tunnel.	N/A	Unsigned integer. The value range varies by device model.	N/A
P2MP	GRE P2MP tunnel parameters	Data structure	Members include: <ul style="list-style-type: none"> <li>AgingTime.</li> <li>BackupTunnel.</li> <li>BrachIPv4NetMaskLength.</li> <li>BrachIPv6NetMaskLength.</li> </ul>	Only GRE P2MP tunnel support these parameters.
AgingTime	The aging time of the GRE P2MP tunnel	N/A	Unsigned integer. Value range: 1 to 86400. Default: 5s.	N/A
BackupTunnel	The backup tunnel interface for a GRE P2MP tunnel	N/A	Unsigned integer.	N/A
BrachIPv4NetMaskLength	GRE P2MP branch IPv4 mask length	N/A	Unsigned integer. Value range: 0 to 32. Default: 32.	N/A
BrachIPv6NetMaskLength	GRE P2MP branch IPv6 prefix	N/A	Unsigned integer. Value range: 0 to 128.	N/A

th	length		Default: 128.	
StaticRoute	Static routing parameters of tunnel	Data structure	Members include: <ul style="list-style-type: none"> <li>• Enable.</li> <li>• Preference.</li> </ul>	Only TE and P2MP tunnel support these parameters.
Enable	Whether to enable automatic configuration of a static route on the tunnel	N/A	Boolean: <ul style="list-style-type: none"> <li>• true—Enable.</li> <li>• false—Disable.</li> </ul>	N/A
Preference	Preference of the static route	N/A	Unsigned integer. Value range: 1 to 255.	The default value of preference is 60. This column is configurable only if the enable column has a value of true.
SRV6	IPv6 SR tunnel parameters	Data structure	Members include: <ul style="list-style-type: none"> <li>• SRv6SIDListName.</li> <li>• SRv6BackupSIDListName.</li> </ul>	Only IPv6 SR tunnel support these parameters.
SRv6SIDListName	SID list name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
SRv6BackupSIDListName	SID list Backup name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A

## TUNNEL/AvailableTunnelID

This table contains the available tunnel ID.

### XML structure

```

<TUNNEL>
  <AvailableTunnelID>
    <ID></ID>
  </AvailableTunnelID>
</TUNNEL>

```

### Table description

Item	Description
Feature name	TUNNEL
Table name	AvailableTunnelID
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Available tunnel ID	N/A	Unsigned integer.	N/A

## TUNNEL/GlobalConfig

This table contains global configuration information.

## XML structure

```
<TUNNEL>
  <GlobalConfig>
    <VxlanUdpPort></VxlanUdpPort>
    <DropInvalidChksumPkt></DropInvalidChksumPkt>
    <DropInvalidVlanTagPkt></DropInvalidVlanTagPkt>
    <VxlanIpForwarding></VxlanIpForwarding>
    <SupportSRv6></SupportSRv6>
    <SRv6MaxSidDepth></SRv6MaxSidDepth>
  </GlobalConfig>
</TUNNEL>
```

## Table description

Item	Description
Feature name	TUNNEL
Table name	GlobalConfig
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VxlanUdpPort	Specifies the UDP port on which tunnel receive VXLAN packets.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
DropInvalidChksumPkt	Specifies the action of whether or not to drop VXLAN	N/A	Boolean: <ul style="list-style-type: none"><li>true—drop</li><li>false—not drop</li></ul>	N/A

	packets with invalid UDP checksum.			
DropInvalidVlanTagPkt	Specifies the action of whether or not to drop VXLAN packets with invalid VLAN tag after tunnel de-encapsulation.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—drop</li> <li>false—not drop</li> </ul>	N/A
VxlanIpForwarding	Specifies the action of whether or not to use the L3 forwarding mode.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—using L3 forwarding mode</li> <li>false—using L2 forwarding mode</li> </ul>	N/A
SupportSRv6	Whether the IPv6 SR is supported.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
SRv6MaxSidDepth	IPv6 SR SID list max index.	N/A	Unsigned integer.	N/A

## TUNNEL/TotalNums

This table contains total number of tunnels.

### XML structure

```

<TUNNEL>
  <TotalNums>
    <TotalNum>
      <Mode></Mode>
      <Num></Num>
    </TotalNum>
  </TotalNums>
</TUNNEL>

```

### Table description

Item	Description
Feature name	TUNNEL
Table name	TotalNums
Table type	Multi-instance table
Row name	TotalNum
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Mode	Tunnel mode.	Index	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>1—GRE tunnel with the transport protocol being IPv4.</li> <li>2—GRE tunnel with the transport protocol being IPv6.</li> <li>3—IPv4 over IPv4 tunnel.</li> <li>4—IPv6 over IPv4 manually configured tunnel.</li> <li>5—IPv6 over IPv4 automatic tunnel.</li> <li>6—IPv6 over IPv4 6to4 tunnel.</li> <li>7—IPv6 over IPv4 ISATAP tunnel.</li> <li>8—IPv6 tunnel. ## TUNNEL/IP6GREP2MPTemplateMaps

This table contains information about IPv6 tunnel mapping entries in GRE P2MP tunnel templates.

### XML structure

```
<TUNNEL>
  <IP6GREP2MPTemplateMaps>
    <IP6GREP2MPTemplateMap>
      <TemplateName></TemplateName>
      <VrfIndex></VrfIndex>
      <BranchNetworkIPAddr></BranchNetworkIPAddr>
      <BranchNetworkIPAddrMask></BranchNetworkIPAddrMask>
    </IP6GREP2MPTemplateMap>
  </IP6GREP2MPTemplateMaps>
</TUNNEL>
```

```

    <TunnelDestIPv6Addr></TunnelDestIPv6Addr>
    <ChecksumFill></ChecksumFill>
  </IP6GREP2MPTemplateMap>
</IP6GREP2MPTemplateMaps>
</TUNNEL>

```

## Table description

Item	Description
Feature name	TUNNEL
Table name	IP6GREP2MPTemplateMaps
Table type	Multi-instance table
Row name	IP6GREP2MPTemplateMap
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TemplateName	IPv6 GRE P2MP tunnel template name.	Index	String. Length: 1 to 31 characters.	N/A
VrfIndex	VPN index for a tunnel mapping.	Index	Unsigned integer.	Some versions support VRF name (VPN instance name). For more information, see the XSD document of your product. For information about VRFIndex, see "Appendix" in <i>L3vpn NETCONF XML API Data Reference</i> .
BranchNetworkIPAddr	Branch network IPv4 address for a tunnel mapping.	Index	String, dotted decimal notation.	Example: 1.1.1.1.
BranchNetworkIPAddrMask	Mask of the branch network IPv4 address.	Index	String, dotted decimal notation.	The member of BranchNetworkIPAddr must also be specified.
TunnelDestIPv6Addr	Tunnel destination IPv6 address for a tunnel mapping.	Index	Hexadecimal string, colon-separated.	Example: 2:2::2:2.
ChecksumFill	Checksum value.	N/A	String, dotted decimal notation.	Example: 3.3.3.3.

## TUNNEL/VXLANBFDs

This table contains VXLAN tunnel BFD information-

## XML structure

```
<TUNNEL>
  <VXLANBFDs>
    <VXLANBFD>
      <ID></ID>
      <Enable></Enable>
      <DMAC></DMAC>
      <MinRx></MinRx>
      <MinTx></MinTx>
    </VXLANBFD>
  </VXLANBFDs>
</TUNNEL>
```

## Table description

Item	Description
Feature name	TUNNEL
Table name	VXLANBFDs
Table type	Multi-instance table
Row name	VXLANBFD
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Tunnel ID	Index	Unsigned integer.	N/A
Enable	Whether BFD is enabled	N/A	Boolean: <ul style="list-style-type: none"><li>true—Enabled</li><li>false—Disabled</li></ul>	N/A
DMAC	Destination MAC address	N/A	String, six groups of two hexadecimal digits, hyphen-separated. Length: 1 to 17 characters.	N/A
MinRx	The minimum receiving interval of BFD	N/A	Unsigned integer. Unit: ms	Depend on device.
MinTx	The minimum sending interval of BFD	N/A	Unsigned integer. Unit: ms	Depend on device.

## TUNNEL/SRv6SIDLists

This table contains SID list node information of IPv6 SR tunnel.

## XML structure

```
<TUNNEL>
  <SRv6SIDLists>
    <SRv6SIDList>
      <SIDListName></SIDListName>
      <SIDAttribute>
        <Index></Index>
        <Sid></Sid>
      </SIDAttribute>
    </SRv6SIDList>
  </SRv6SIDLists>
</TUNNEL>
```

## Table description

Item	Description
Feature name	TUNNEL
Table name	SRv6SIDLists
Table type	Multi-instance table
Row name	SRv6SIDList
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SIDListName	IPv6 SR SID list name.	Index	String. Length: 1 to 31 characters.	N/A
SIDAttribute	IPv6 SR SID attribute.	Data structure	Members include: <ul style="list-style-type: none"><li>Index.</li><li>Sid.</li></ul>	N/A
Index	The index of the node in the IPv6 SR SID list.	N/A	Unsigned integer.	N/A
Sid	IPv6 address of the node.	N/A	Hexadecimal string, colon-separated.	Example: 1::1.

## TUNNEL/SRv6TunnelIngressBfds

This table contains ingress information of the IPv6 SR tunnel.

## XML structure

```
<TUNNEL>
```

```

<SRv6TunnelIngressBfds>
  <SRv6TunnelIngressBfd>
    <TunnelID></TunnelID>
    <SRv6BfdWorkMode></SRv6BfdWorkMode>
  </SRv6TunnelIngressBfd>
</SRv6TunnelIngressBfds>
</TUNNEL>

```

## Table description

Item	Description
Feature name	TUNNEL
Table name	SRv6TunnelIngressBfds
Table type	Multi-instance table
Row name	SRv6TunnelIngressBfd
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	IPv6 SR tunnel template name.	Index	Unsigned integer.	N/A
SRv6BfdWorkMode	IPv6 SR tunnel work mode.	N/A	Unsigned integer. Value range: 1 to 2.	2-turn on the BFD detection feature.

# UFLT

## UFLT/SignatureManualUpgrading

This table is used to update signature manually.

### XML structure

```
<UFLT>
  <SignatureManualUpgrading>
    <URL></URL>
  </SignatureManualUpgrading>
</UFLT>
```

### Table description

Item	Description
Feature name	UrlFilter
Table name	SignatureManualUpgrading
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	URL	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A

## UFLT/SignatureRollback

This table is used to rollback signature file.

### XML structure

```
<UFLT>
  <SignatureRollback>
    <Rollback></Rollback>
  </SignatureRollback>
</UFLT>
```

## Table description

Item	Description
Feature name	UrlFilter
Table name	SignatureRollback
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Rollback	Rollback flag	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Roll back to the original version</li><li>1—Roll back to the last version</li></ul>	N/A

## UFLT/PolicyCopy

This table is used to copy a policy to create a new policy

## XML structure

```
<UFLT>
  <PolicyCopy>
    <Policy>
      <SrcPolicy></SrcPolicy>
      <DstPolicy></DstPolicy>
    </Policy>
  </PolicyCopy>
</UFLT>
```

## Table description

Item	Description
Feature name	UFLT
Table name	PolicyCopy
Table type	Single-instance table
Row name	Policy

Restrictions	None
--------------	------

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcPolicy	Source policy name	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
DstPolicy	Destination policy name	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A

## UFLT/PolicyRename

This table is used to rename a policy.

## XML structure

```

<UFLT>
  <PolicyRename>
    <Policy>
      <PolicyOldName></PolicyOldName>
      <PolicyNewName></PolicyNewName>
    </Policy>
  </PolicyRename>
</UFLT>

```

## Table description

Item	Description
Feature name	UFLT
Table name	PolicyRename
Table type	Single-instance table
Row name	Policy
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyOldName	Old name	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
PolicyNewName	New name	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A

# UFLT/CategoryRename

This table is used to rename a category.

## XML structure

```
<UFLT>
  <CategoryRename>
    <Category>
      <CategoryOldName></CategoryOldName>
      <CategoryNewName></CategoryNewName>
    </Category>
  </CategoryRename>
</UFLT>
```

## Table description

Item	Description
Feature name	UFLT
Table name	CategoryRename
Table type	Single-instance table
Row name	Category
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CategoryOldName	Old name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
CategoryNewName	New name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

# UFLT/StatisticReset

This table is used to reset URL filter statistics

## XML structure

```
<UFLT>
  <StatisticReset>
    <Reset/>
  </StatisticReset>
```

</UFLT>

## Table description

Item	Description
Feature name	URL
Table name	StatisticReset
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Reset	Reset statistics information	N/A	This column must be empty.	N/A

## UFLT/SignatureAutoUpgradeNow

This table is used to update signature automatically now.

## XML structure

```
<UFLT>
  <SignatureAutoUpgradeNow>
    <AutoUpgradeNow></AutoUpgradeNow>
  </SignatureAutoUpgradeNow>
</UFLT>
```

## Table description

Item	Description
Feature name	UrlFilter
Table name	SignatureAutoUpgradeNow
Table type	Single-instance table
Row name	None
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AutoUpgradeNow	Immediate auto upgrade	N/A	This column must be empty.	N/A

# UFLT

## UFLT/Policies

This table contains URL filter policy information

### XML structure

```
<UFLT>
  <Policies>
    <Policy>
      <PolicyName></PolicyName>
      <DefaultAction></DefaultAction>
      <DefaultActInstance></DefaultActInstance>
      <DefaultActLoggingEnable></DefaultActLoggingEnable>
      <DefaultActLogging></DefaultActLogging>
      <CloudQuery></CloudQuery>
    </Policy>
  </Policies>
</UFLT>
```

### Table description

Item	Description
Feature name	UFLT
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the URL filter policy	Index	String: case-insensitive. Length: 1 to 31 characters.	N/A
DefaultAction	Default action	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—Permit.</li><li>• 1—Drop.</li><li>• 2—Reset.</li><li>• 3—Redirect.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>4—Block.</li> </ul>	
DefaultActInstance	Default action Instance	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
DefaultActLoggingEnable	Default action logging switch	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
DefaultActLogging	Default action logging instance	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
CloudQuery	CloudQuering	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Enable.</li> <li>1—Disable.</li> </ul>	N/A

## UFLT/PolicyFilter

This table contains information about URL filter category in a policy

### XML structure

```

<UFLT>
  <PolicyFilter>
    <Filter>
      <PolicyName></PolicyName>
      <CategoryName></CategoryName>
      <Action></Action>
      <Instance></Instance>
      <LoggingEnable></LoggingEnable>
      <Logging></Logging>
    </Filter>
  </PolicyFilter>
</UFLT>

```

### Table description

Item	Description
Feature name	UFLT
Table name	PolicyFilter
Table type	Multi-instance table
Row name	Filter
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the URL filter policy	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
CategoryName	Name of the URL filter category	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Action	Action type	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—Permit.</li><li>• 1—Drop.</li><li>• 2—Reset.</li><li>• 3—Redirect.</li><li>• 4—Block.</li></ul>	N/A
Instance	Instance name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
LoggingEnable	Whether logging is enabled or disabled	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—Disable.</li><li>• 1—Enable.</li></ul>	N/A
Logging	Logging instance	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

## UFLT/PolicyInProfile

This table contains information about a URL filter policy used by an APP profile.

## XML structure

```
<UFLT>
  <PolicyInProfile>
    <Policy>
      <ProfileName></ProfileName>
      <PolicyName></PolicyName>
    </Policy>
  </PolicyInProfile>
</UFLT>
```

## Table description

Item	Description
Feature name	UFLT
Table name	PolicyInProfile
Table type	Single-instance table
Row name	Policy

Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Name of the profile	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
PolicyName	Name of the URL filter policy	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A

## UFLT/Categories

This table contains information about the URL filter category.

## XML structure

```

<UFLT>
  <Categories>
    <Category>
      <CategoryName></CategoryName>
      <Critical></Critical>
      <CategoryType></CategoryType>
      <Description></Description>
      <PreCategoryReferred></PreCategoryReferred>
      <PreCategoryID></PreCategoryID>
    </Category>
  </Categories>
</UFLT>

```

## Table description

Item	Description
Feature name	UFLT
Table name	Categories
Table type	Multi-instance table
Row name	Category
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CategoryName	Name of the URL filter category	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
Critical	Critical	N/A	Unsigned short.	N/A
CategoryType	Category type	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Pre-define.</li><li>1—User-define.</li></ul>	N/A
Description	Description	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
PreCategoryReferred	Referenced previous defined category	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
PreCategoryID	Previous defined category ID	N/A	Unsigned short.	N/A

## UFLT/RuleInCategory

This table contains information about the URL filter rule in a category.

## XML structure

```
<UFLT>
  <RuleInCategory>
    <Rule>
      <CategoryName></CategoryName>
      <RuleID></RuleID>
      <HostType></HostType>
      <HostName></HostName>
      <URIType></URIType>
      <URIStrng></URIStrng>
    </Rule>
  </RuleInCategory>
</UFLT>
```

## Table description

Item	Description
Feature name	UFLT
Table name	RuleInCategory
Table type	Multi-instance table
Row name	Rule

Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CategoryName	Name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RuleID	RuleID	Index	Unsigned integer. Value range: 1 to 65535.	N/A
HostType	Host type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Text.</li> <li>2—Regex.</li> </ul>	N/A
HostName	Host name	N/A	If host type is text: <ul style="list-style-type: none"> <li>String, case-insensitive.</li> <li>Length: 3 to 224 characters.</li> </ul> If host type is regex: <ul style="list-style-type: none"> <li>OctectString.</li> <li>Length: 3 to 224 characters.</li> </ul>	N/A
URIType	URI type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Text.</li> <li>2—Regex.</li> </ul>	N/A
URIString	URI string	N/A	If URI type is text: <ul style="list-style-type: none"> <li>String, case-insensitive.</li> <li>Length: 3 to 255 characters.</li> </ul> If URI type is regex: <ul style="list-style-type: none"> <li>OctectString.</li> <li>Length: 3 to 253 characters.</li> </ul>	N/A

## UFLT/BlackWhiteList

This table contains information about blacklist and whitelist.

## XML structure

```

<UFLT>
  <BlackWhiteList>
    <PolicyRule>
      <PolicyName></PolicyName>
      <BlackOrWhite></BlackOrWhite>
      <RuleID></RuleID>
      <HostType></HostType>
      <HostName></HostName>
      <URIType></URIType>
      <URIString></URIString>
    </PolicyRule>
  </BlackWhiteList>
</UFLT>

```

```

    </PolicyRule>
  </BlackWhiteList>
</UFLT>

```

## Table description

Item	Description
Feature name	UFLT
Table name	BlackWhiteList
Table type	Multi-instance table
Row name	PolicyRule
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name	Index	String, case-insensitive. Length: 1 to 31 characters.	Case insensitive.
BlackOrWhite	Blacklist or whitelist	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Whitelist.</li> <li>2—Blacklist.</li> </ul>	N/A
RuleID	Rule ID	Index	Unsigned integer. Value range: 1 to 65535.	N/A
HostType	Host type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Text.</li> <li>2—Regex.</li> </ul>	N/A
HostName	Host name	N/A	If host type is text: <ul style="list-style-type: none"> <li>String, case-insensitive.</li> <li>Length: 3 to 224 characters.</li> </ul> If URI type is regex: <ul style="list-style-type: none"> <li>OctectString.</li> <li>Length: 3 to 224 characters.</li> </ul>	N/A
URIType	URI type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Text.</li> <li>2—Regex.</li> </ul>	N/A
URI String	URI string	N/A	If URI type is text: <ul style="list-style-type: none"> <li>String, case-insensitive.</li> <li>Length: 3 to 245 characters.</li> </ul> If URI type is regex: <ul style="list-style-type: none"> <li>OctectString.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>Length: 3 to 245 characters.</li> </ul>	

## UFLT/SignatureAutoUpgrading

This table contains information about auto upgrading of URL filter signatures.

### XML structure

```

<UFLT>
  <SignatureAutoUpgrading>
    <Enabled></Enabled>
    <StartTime></StartTime>
    <Type></Type>
    <Day></Day>
  </SignatureAutoUpgrading>
</UFLT>

```

### Table description

Item	Description
Feature name	UFLT
Table name	SignatureAutoUpgrading
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enabled	Enabled or disabled	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	Default is false.
StartTime	Time when the system performs auto upgrading	N/A	Time. Format: HH:MM:SS.	Default: 02:00:00.
Type	Type of the system auto upgrading	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Week.</li> <li>1—Periodic.</li> </ul>	Default: 1.

Column name	Column description	Column type	Data type and restrictions	Remarks
Day	Days	N/A	Unsigned integer. Value range: 0 to 6.	When Type is <b>0</b> , the value range is 0 to 6. Otherwise, the value is invalid.

## UFLT/CacheConfig

This table contains information about the cache configuration.

### XML structure

```
<UFLT>
  <CacheConfig>
    <DomainName></DomainName>
  </CacheConfig>
</UFLT>
```

### Table description

Item	Description
Feature name	UFLT
Table name	CacheConfig
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A

## UFLT/ActionInstance

This table contains action instance information.

### XML structure

```
<UFLT>
```

```

<ActionInstance>
  <InstanceConfig>
    <ActionType></ActionType>
    <InstanceName></InstanceName>
  </InstanceConfig>
</ActionInstance>
</UFLT>

```

## Table description

Item	Description
Feature name	UFLT
Table name	ActionInstance
Table type	Multi -instance table
Row name	InstanceConfig
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ActionType	Action	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Logging.</li> <li>2—Redirect.</li> <li>3—Block.</li> </ul>	N/A
InstanceName	Instance name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

## UFLT/CloudQueryConfig

This table contains cloud query configuration.

## XML structure

```

<UFLT>
  <CloudQueryConfig>
    <HostName></HostName>
    <CacheSize></CacheSize>
    <CacheTime></CacheTime>
  </CloudQueryConfig>
</UFLT>

```

## Table description

Item	Description
Feature name	UFLT
Table name	CloudQueryConfig
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HostName	Name of the host	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
CacheSize	Size of the cache	N/A	Unsigned integer. Value range: 8192 to 65535.	N/A
CacheTime	Lifetime of the cached entries	N/A	Unsigned integer. Value range: 10 to 720.	N/A

# UFLT

## UFLT/Policies

This table contains URL filter policy information

### XML structure

```
<UFLT>
  <Policies>
    <Policy>
      <PolicyName></PolicyName>
      <DefaultAction></DefaultAction>
      <DefaultActInstance></DefaultActInstance>
      <DefaultActLoggingEnable></DefaultActLoggingEnable>
      <DefaultActLogging></DefaultActLogging>
      <CloudQuery></CloudQuery>
    </Policy>
  </Policies>
</UFLT>
```

### Table description

Item	Description
Feature name	UFLT
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the URL filter policy	Index	String: case-insensitive. Length: 1 to 31 characters.	N/A
DefaultAction	Default action	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—Permit.</li><li>• 1—Drop.</li><li>• 2—Reset.</li><li>• 3—Redirect.</li><li>• 4—Block.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DefaultActInstance	Default action Instance	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
DefaultActLoggingEnable	Default action logging switch	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
DefaultActLogging	Default action logging instance	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
CloudQuery	CloudQuering	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Enable.</li> <li>1—Disable.</li> </ul>	N/A

## UFLT/PolicyFilter

This table contains information about URL filter category in a policy

### XML structure

```

<UFLT>
  <PolicyFilter>
    <Filter>
      <PolicyName></PolicyName>
      <CategoryName></CategoryName>
      <Action></Action>
      <Instance></Instance>
      <LoggingEnable></LoggingEnable>
      <Logging></Logging>
    </Filter>
  </PolicyFilter>
</UFLT>

```

### Table description

Item	Description
Feature name	UFLT
Table name	PolicyFilter
Table type	Multi-instance table
Row name	Filter
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the URL filter policy	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
CategoryName	Name of the URL filter category	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Action	Action type	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—Permit.</li><li>• 1—Drop.</li><li>• 2—Reset.</li><li>• 3—Redirect.</li><li>• 4—Block.</li></ul>	N/A
Instance	Instance name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
LoggingEnable	Whether logging is enabled or disabled	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—Disable.</li><li>• 1—Enable.</li></ul>	N/A
Logging	Logging instance	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

## UFLT/PolicyInProfile

This table contains information about a URL filter policy used by an APP profile.

## XML structure

```
<UFLT>
  <PolicyInProfile>
    <Policy>
      <ProfileName></ProfileName>
      <PolicyName></PolicyName>
    </Policy>
  </PolicyInProfile>
</UFLT>
```

## Table description

Item	Description
Feature name	UFLT
Table name	PolicyInProfile
Table type	Single-instance table
Row name	Policy

Restrictions	None
--------------	------

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Name of the profile	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
PolicyName	Name of the URL filter policy	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A

## UFLT/Categories

This table contains information about the URL filter category.

## XML structure

```

<UFLT>
  <Categories>
    <Category>
      <CategoryName></CategoryName>
      <Critical></Critical>
      <CategoryType></CategoryType>
      <Description></Description>
      <PreCategoryReferred></PreCategoryReferred>
      <PreCategoryID></PreCategoryID>
    </Category>
  </Categories>
</UFLT>

```

## Table description

Item	Description
Feature name	UFLT
Table name	Categories
Table type	Multi-instance table
Row name	Category
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CategoryName	Name of the URL filter category	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
Critical	Critical	N/A	Unsigned short.	N/A
CategoryType	Category type	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Pre-define.</li><li>1—User-define.</li></ul>	N/A
Description	Description	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
PreCategoryReferred	Referenced previous defined category	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
PreCategoryID	Previous defined category ID	N/A	Unsigned short.	N/A

## UFLT/RuleInCategory

This table contains information about the URL filter rule in a category.

## XML structure

```
<UFLT>
  <RuleInCategory>
    <Rule>
      <CategoryName></CategoryName>
      <RuleID></RuleID>
      <HostType></HostType>
      <HostName></HostName>
      <URIType></URIType>
      <URIStrng></URIStrng>
    </Rule>
  </RuleInCategory>
</UFLT>
```

## Table description

Item	Description
Feature name	UFLT
Table name	RuleInCategory
Table type	Multi-instance table
Row name	Rule

Restrictions	None
--------------	------

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CategoryName	Name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RuleID	RuleID	Index	Unsigned integer. Value range: 1 to 65535.	N/A
HostType	Host type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Text.</li> <li>2—Regex.</li> </ul>	N/A
HostName	Host name	N/A	If host type is text: <ul style="list-style-type: none"> <li>String, case-insensitive.</li> <li>Length: 3 to 224 characters.</li> </ul> If host type is regex: <ul style="list-style-type: none"> <li>OctectString.</li> <li>Length: 3 to 224 characters.</li> </ul>	N/A
URIType	URI type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Text.</li> <li>2—Regex.</li> </ul>	N/A
URIString	URI string	N/A	If URI type is text: <ul style="list-style-type: none"> <li>String, case-insensitive.</li> <li>Length: 3 to 255 characters.</li> </ul> If URI type is regex: <ul style="list-style-type: none"> <li>OctectString.</li> <li>Length: 3 to 253 characters.</li> </ul>	N/A

## UFLT/Statistic

This table contains the information about URL filter statistic.

## XML structure

```

<UFLT>
  <Statistic>
    <TotalRequests></TotalRequests>
    <PermittedRequests></PermittedRequests>
    <DeniedRequests></DeniedRequests>
    <MatchedBlacklist></MatchedBlacklist>
    <MatchedWhitelist></MatchedWhitelist>
    <MatchedUDEFCategory></MatchedUDEFCategory>
    <MatchedPDEFCategory></MatchedPDEFCategory>
    <MatchedCacheAction></MatchedCacheAction>
    <MatchedDefaultAction></MatchedDefaultAction>
  
```

```

    <PDEFURLNumbers></PDEFURLNumbers>
  </Statistic>
</UFLT>

```

## Table description

Item	Description
Feature name	UFLT
Table name	Statistic
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TotalRequests	Total HTTP Requests	N/A	Unsigned integer64.	N/A
PermittedRequests	Total Permitted Requests	N/A	Unsigned integer64.	N/A
DeniedRequests	Total Denied Requests	N/A	Unsigned integer64.	N/A
MatchedBlacklist	Total Matched Blacklist	N/A	Unsigned integer64.	N/A
MatchedWhitelist	Total Matched Whitelist	N/A	Unsigned integer64.	N/A
MatchedUDEFCategory	Matched User-defined Category	N/A	Unsigned integer64.	N/A
MatchedPDEFCategory	Matched Pre-defined Category	N/A	Unsigned integer64.	N/A
MatchedCacheAction	Matched Cache Action	N/A	Unsigned integer64.	N/A
MatchedDefaultAction	Matched Default Action	N/A	Unsigned integer64.	N/A
PDEFURLNumbers	Pre-defined URL Rule Numbers	N/A	Unsigned integer64.	N/A

## UFLT/BlackWhiteList

This table contains information about blacklist and whitelist.

## XML structure

```
<UFLT>
  <BlackWhiteList>
    <PolicyRule>
      <PolicyName></PolicyName>
      <BlackOrWhite></BlackOrWhite>
      <RuleID></RuleID>
      <HostType></HostType>
      <HostName></HostName>
      <URIType></URIType>
      <URIString></URIString>
    </PolicyRule>
  </BlackWhiteList>
</UFLT>
```

## Table description

Item	Description
Feature name	UFLT
Table name	BlackWhiteList
Table type	Multi-instance table
Row name	PolicyRule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name	Index	String, case-insensitive. Length: 1 to 31 characters.	Case insensitive
BlackOrWhite	Blacklist or whitelist	Index	Enumeration: <ul style="list-style-type: none"><li>1—Whitelist.</li><li>2—Blacklist.</li></ul>	N/A
RuleID	Rule ID	Index	Unsigned integer: Value range: 1 to 65535.	N/A
HostType	Host type	N/A	Enumeration: <ul style="list-style-type: none"><li>1—Text.</li><li>2—Regex.</li></ul>	N/A
HostName	Host name	N/A	If host type is text: <ul style="list-style-type: none"><li>String, case-insensitive.</li><li>Length: 3 to 224 characters.</li></ul> If URI type is regex: <ul style="list-style-type: none"><li>OctectString.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>Length: 3 to 224 characters.</li> </ul>	
URIType	URI type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Text.</li> <li>2—Regex.</li> </ul>	N/A
URI String	URI string	N/A	If URI type is text: <ul style="list-style-type: none"> <li>String, case-insensitive.</li> <li>Length: 3 to 245 characters.</li> </ul> If URI type is regex: <ul style="list-style-type: none"> <li>OctectString.</li> <li>Length: 3 to 245 characters.</li> </ul>	N/A

## UFLT/CacheConfig

This table contains information about the cache configuration.

### XML structure

```

<UFLT>
  <CacheConfig>
    <DomainName></DomainName>
  </CacheConfig>
</UFLT>

```

### Table description

Item	Description
Feature name	UFLT
Table name	CacheConfig
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A

# UFLT/SignatureAutoUpgrading

This table contains information about auto upgrading of URL filter signatures.

## XML structure

```
<UFLT>
  <SignatureAutoUpgrading>
    <Enabled></Enabled>
    <StartTime></StartTime>
    <Type></Type>
    <Day></Day>
  </SignatureAutoUpgrading>
</UFLT>
```

## Table description

Item	Description
Feature name	UFLT
Table name	SignatureAutoUpgrading
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enabled	Enabled or disabled	N/A	Boolean: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>	Default is false.
StartTime	Time when the system performs auto upgrading	N/A	Time. Format: HH:MM:SS.	Default: 02:00:00.
Type	Type of the system auto upgrading	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Week.</li><li>1—Periodic.</li></ul>	Default: 1.
Day	Days	N/A	Unsigned integer. Value range: 0 to 6.	When Type is 0, the value range is 0 to 6. Otherwise, the value is invalid.

# UFLT/UpdatePercentage

This table contains the information of the percent of upgrading.

## XML structure

```
<UFLT>
  <UpdatePercentage>
    <Percentage></Percentage>
    <ErrorCode></ErrorCode>
  </UpdatePercentage>
</UFLT>
```

## Table description

Item	Description
Feature name	UFLT
Table name	UpdatePercentage
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Percentage	The percentage of updating	N/A	Unsigned integer. Value range: 0 to 100.	When the value range is 0 to 100, it means in upgrading. Otherwise, means error.
ErrorCode	Error of update	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Success.</li><li>1—License check error.</li><li>2—SigFile check error.</li><li>3—Server connect error.</li></ul>	N/A

# UFLT/SignatureFileInfos

This table contains the signature file information.

## XML structure

```
<UFLT>
  <SignatureFileInfos>
    <FileInfo>
```

```

    <Version></Version>
    <FileName></FileName>
    <PublishedTime></PublishedTime>
    <Updates></Updates>
  </FileInfo>
</SignatureFileInfos>
</UFLT>

```

## Table description

Item	Description
Feature name	UFLT
Table name	SignatureFileInfos
Table type	Multi-instance table
Row name	FileInfo
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Version	Version	Index	Enumeration: <ul style="list-style-type: none"> <li>1—current.</li> <li>2—last.</li> <li>3—factory.</li> </ul>	N/A
FileName	File Name	N/A	String: case-insensitive. Length: 1 to 255 characters.	N/A
PublishedTime	Published Time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
Updates	Update information	N/A	String: case-insensitive. Length: 1 to 255 characters.	N/A

## UFLT/ActionInstance

This table contains URL filter action instance information.

## XML structure

```

<UFLT>
  <ActionInstance>
    <InstanceConfig>
      <ActionType></ActionType>
      <InstanceName></InstanceName>
    </InstanceConfig>
  </ActionInstance>
</UFLT>

```

```

    </ActionInstance>
  </UFLT>

```

## Table description

Item	Description
Feature name	UFLT
Table name	ActionInstance
Table type	Multi -instance table
Row name	InstanceConfig
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ActionType	Action	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Logging.</li> <li>2—Redirect.</li> <li>3—Block.</li> </ul>	N/A
InstanceName	Instance name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

## UFLT/CloudQueryConfig

This table contains cloud query configure information.

## XML structure

```

<UFLT>
  <CloudQueryConfig>
    <HostName></HostName>
    <CacheSize></CacheSize>
    <CacheTime></CacheTime>
  </CloudQueryConfig>
</UFLT>

```

## Table description

Item	Description
Feature name	UFLT
Table name	CloudQueryConfig
Table type	Single-instance table
Row name	None

Restrictions	None
--------------	------

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HostName	Name of the host	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
CacheSize	Size of the cache	N/A	Unsigned integer. Value range: 8192 to 65535.	N/A
CacheTime	Lifetime of the cached entries	N/A	Unsigned integer. Value range: 10 to 720.	N/A

## UFLT/CloudQueryState

This table contains cloud query status information.

## XML structure

```
<UFLT>
  <CloudQueryState>
    <HostName></HostName>
    <HostState></HostState>
    <HostStateErrCode></HostStateErrCode>
    <VersionState></VersionState>
  </CloudQueryState>
</UFLT>
```

## Table description

Item	Description
Feature name	UFLT
Table name	CloudQueryState
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HostName	Name of the host	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
HostState	Status of the host	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Available.</li> <li>1—Unavailable.</li> </ul>	N/A
HostStateErrCode	Error code of cloud query	N/A	Unsigned integer. Value range: 0 to 3.	N/A
VersionState	Comparison between the local signature version and cloud query result	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A

## UFLT/ParentCategories

This table contains information about the URL filter ParentCategory.

### XML structure

```

<UFLT>
  <ParentCategories>
    <ParentCategory>
      <ParentCategoryName></ParentCategoryName>
      <PreCategoryIDs>
        <PreCategoryID></PreCategoryID>
      </PreCategoryIDs>
    </ParentCategory>
  </ParentCategories>
</UFLT>

```

### Table description

Item	Description
Feature name	UFLT
Table name	ParentCategories
Table type	Multi-instance table
Row name	ParentCategory
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParentCategoryName	Name of the predefined	Index	String, case-insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	parent category		Length: 1 to 63 characters.	
PreCategoryIDs	List of predefined category ID	Data structure	Members include: <ul style="list-style-type: none"> <li>PreCategoryID</li> </ul>	N/A
PreCategoryID	Predefined category ID	N/A	Unsigned short. Value range: 0 to 255.	N/A

# URPF4

## URPF4/URPFIPv4

This table is used to configure IPv4 global uRPF policies.

### XML structure

```
<URPF4>
  <URPFIPv4>
    <URPFType></URPFType>
    <AllowDefaultRoute></AllowDefaultRoute>
    <ACLNumber></ACLNumber>
    <LinkCheck></LinkCheck>
  </URPFIPv4>
</URPF4>
```

### Table description

Item	Description
Feature name	URPF4
Table name	URPFIPv4
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
URPFType	Check type of uRPF4	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—strict.</li><li>• <b>1</b>—loose.</li><li>• <b>2</b>—none.</li></ul>	N/A
AllowDefaultRoute	Allow default route switch	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	N/A
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999.	N/A
LinkCheck	Link check switch	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	N/A

# URPF4/URPFInterfaces

This table is used to configure IPv4 uRPF policies on interfaces.

## XML structure

```
<URPF4>
  <URPFInterfaces>
    <Apply>
      <IfIndex></IfIndex>
      <URPFType></URPFType>
      <AllowDefaultRoute></AllowDefaultRoute>
      <ACLNumber></ACLNumber>
      <LinkCheck></LinkCheck>
    </Apply>
  </URPFInterfaces>
</URPF4>
```

## Table description

Item	Description
Feature name	URPF4
Table name	URPFInterfaces
Table type	Multi-instance table
Row name	Apply
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
URPFType	Check type of uRPF4	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—strict.</li><li>• <b>1</b>—loose.</li><li>• <b>2</b>—none.</li></ul>	N/A
AllowDefaultRoute	Allow default route switch	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	N/A
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999.	N/A
LinkCheck	Link check switch	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	N/A

# URPF4/URPFZones

This table is used to configure IPv4 uRPF policies on security zones.

## XML structure

```
<URPF4>
  <URPFZones>
    <Apply>
      <ZoneID></ZoneID>
      <URPFType></URPFType>
      <AllowDefaultRoute></AllowDefaultRoute>
      <ACLNumber></ACLNumber>
      <LinkCheck></LinkCheck>
    </Apply>
  </URPFZones>
</URPF4>
```

## Table description

Item	Description
Feature name	URPF4
Table name	URPFZones
Table type	Multi-instance table
Row name	Apply
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ZoneID	Security zone ID	Index	Unsigned integer.	N/A
URPFType	Check type of uRPF4	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—strict.</li><li>• <b>1</b>—loose.</li><li>• <b>2</b>—none.</li></ul>	N/A
AllowDefaultRoute	Allow default route switch	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	N/A
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999.	N/A
LinkCheck	Link check switch	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	N/A

# URPF4/URPF4Specification

This table contains information about support for the attributes on the device.

## XML structure

```
<URPF4>
  <URPF4Specification>
    <SupportGlobal></SupportGlobal>
    <SupportInterface></SupportInterface>
    <SupportZone></SupportZone>
    <SupportLoose></SupportLoose>
    <SupportStrict></SupportStrict>
    <SupportAllowDefaultRoute></SupportAllowDefaultRoute>
    <SupportACL></SupportACL>
    <SupportLinkCheck></SupportLinkCheck>
  </URPF4Specification>
</URPF4>
```

## Table description

Item	Description
Feature name	URPF4
Table name	URPF4Specification
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SupportGlobal	Support for global configuration	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	N/A
SupportInterface	Support for configuration on interfaces	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	N/A
SupportZone	Support for configuration on the security zone	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	N/A
SupportLoose	Support for loose check	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SupportStrict	Support for strict check	N/A	Boolean: • <b>true</b> • <b>false</b>	N/A
SupportAllowDefaultRoute	Support for default route check	N/A	Boolean: • <b>true</b> • <b>false</b>	N/A
SupportACL	Support for ACL check	N/A	Boolean: • <b>true</b> • <b>false</b>	N/A
SupportLinkCheck	Support for link layer check	N/A	Boolean: • <b>true</b> • <b>false</b>	N/A

## URPF4/InterfaceStatistics

This table contains information about the number of dropped packets and packets that are not dropped due to ACL drop suppression on an interface.

### XML structure

```

<URPF4>
  <InterfaceStatistics>
    <Statistics>
      <IfIndex></IfIndex>
      <DropCnt></DropCnt>
      <SuppressCnt></SuppressCnt>
    </Statistics>
  </InterfaceStatistics>
</URPF4>

```

### Table description

Item	Description
Feature name	URPF4
Table name	InterfaceStatistics
Table type	Multi-instance table
Row name	Statistics
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
DropCnt	Number of dropped packets	N/A	Unsigned integer.	N/A
SuppressCnt	Number of packets that are not dropped due to ACL drop suppression	N/A	Unsigned integer.	N/A

## URPF4/ZoneStatistics

This table contains information about the number of dropped packets and packets that are not dropped due to ACL drop suppression on a security zone.

## XML structure

```
<URPF4>
  <ZoneStatistics>
    <Statistics>
      <ZoneID></ZoneID>
      <DropCnt></DropCnt>
      <SuppressCnt></SuppressCnt>
    </Statistics>
  </ZoneStatistics>
</URPF4>
```

## Table description

Item	Description
Feature name	URPF4
Table name	ZoneStatistics
Table type	Multi-instance table
Row name	Statistics
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ZoneID	Security zone ID	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DropCnt	Number of dropped packets	N/A	Unsigned integer.	N/A
SuppressCnt	Number of packets that are not dropped due to ACL drop suppression	N/A	Unsigned integer.	N/A

# UserAccounts

## UserAccounts/ImportGuestAccount

Import guest user accounts.

### XML structure

```
<UserAccounts>
  <ImportGuestAccount>
    <Url></Url>
    <ValidityDateTime>
      <StartValidityDateTime></StartValidityDateTime>
      <EndValidityDateTime></EndValidityDateTime>
    </ValidityDateTime>
    <AutoCreateGroup></AutoCreateGroup>
    <Override></Override>
    <StartLine></StartLine>
  </ImportGuestAccount>
</UserAccounts>
```

### Table description

Item	Description
Feature name	UserAccounts
Table name	ImportGuestAccount
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the source .csv file to import guest account information	N/A	String, case-insensitive. Length: 1 to 255 characters.	The import path depends on the Web service frame. Select the filename on the webpage. The .csv file must use correct data format that complies with the export guest template.

Column name	Column description	Column type	Data type and restrictions	Remarks
ValidityDateTime	Account validity time period	Data structure	Members include: <ul style="list-style-type: none"> <li>StartValidityDateTime</li> <li>EndValidityDateTime</li> </ul>	N/A
StartValidityDateTime	Time from which the account becomes valid	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
EndValidityDateTime	Time at which the account expires	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
AutoCreateGroup	Whether to create groups automatically	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Default: false
Override	Whether to override existing guest accounts with the same name	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Default: false
StartLine	Start line to import users	N/A	Unsigned integer. Value range: 1 to 1048576.	Default: 1

## UserAccounts/ExportGuestAccount

Export guest accounts.

### XML structure

```

<UserAccounts>
  <ExportGuestAccount>
    <Url></Url>
  </ExportGuestAccount>
</UserAccounts>

```

### Table description

Item	Description
Feature name	UserAccounts
Table name	ExportGuestAccount
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the destination .csv file to export guest accounts to	N/A	String, case-insensitive. Length: 1 to 255 characters.	The export path depends on the Web service frame. Select the filename on the webpage.

## UserAccounts/GenerateGuestAccount

Create guest accounts in batches.

### XML structure

```
<UserAccounts>
  <GenerateGuestAccount>
    <NamePrefix></NamePrefix>
    <PasswordPrefix></PasswordPrefix>
    <NumberSuffix></NumberSuffix>
    <Count></Count>
    <GroupName></GroupName>
    <ValidityDateTime>
      <StartValidityDateTime></StartValidityDateTime>
      <EndValidityDateTime></EndValidityDateTime>
    </ValidityDateTime>
  </GenerateGuestAccount>
</UserAccounts>
```

### Table description

Item	Description
Feature name	UserAccounts
Table name	GenerateGuestAccount
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NamePrefix	Prefix of the guest account name	Column	String. Length: 1 to 45 characters.	The account name cannot be <b>a</b> , <b>al</b> , or <b>all</b> , and cannot include a domain name or \   / : * ? < > @, either.
PasswordPrefix	Password prefix	N/A	String. Length: 1 to 53 characters.	N/A
NumberSuffix	Numbering suffix	N/A	String. Length: 1 to 10 characters.	N/A
count	Number of generated guest accounts	N/A	Unsigned integer. Value range: 1 to 255.	N/A
GroupName	Name of the group the guest belongs to	N/A	String. Length: 1 to 32 characters.	N/A
ValidityDateTime	Account validity time period	Data structure	Members include: <ul style="list-style-type: none"><li>StartValidityDateTime</li><li>EndValidityDateTime</li></ul>	N/A
StartValidityDateTime	Time from which the account becomes valid	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
EndValidityDateTime	Time at which the account expires	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A

## UserAccounts/ApproveGuest

Examine and approve guest accounts.

### XML structure

```
<UserAccounts>
  <ApproveGuest>
    <Name></Name>
    <GroupName></GroupName>
    <SponsorFullName></SponsorFullName>
    <SponsorDepartment></SponsorDepartment>
    <SponsorEmail></SponsorEmail>
    <GuestDescription></GuestDescription>
    <ValidityDateTime>
      <StartValidityDateTime></StartValidityDateTime>
      <EndValidityDateTime></EndValidityDateTime>
    </ValidityDateTime>
  </ApproveGuest>
</UserAccounts>
```

```

    </ApproveGuest>
  </UserAccounts>

```

## Table description

Item	Description
Feature name	UserAccounts
Table name	ApproveGuest
Table type	Single-instance table
Row name	None

StartLine	Start line to import users	N/A	Unsigned integer. Value range: 1 to 1048576.	Default: 1

## UserAccounts/ExportNetworkUser

Export network user accounts, excluding guest accounts.

## XML structure

```
<UserAccounts>
  <ExportNetworkUser>
    <FileName></FileName>
    <GroupName></GroupName>
    <UserName></UserName>
  </ExportNetworkUser>
</UserAccounts>
```

## Table description

Item	Description
Feature name	UserAccounts
Table name	ExportNetworkUser
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the destination .csv file to export user accounts to	N/A	String, case-insensitive. Length: 1 to 255 characters.	The export path depends on the Web service frame. Select the filename on the webpage.
GroupName	Name of the group the user belongs to	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
UserName	User account name	N/A	String, case-sensitive. Length: 1 to 55 characters.	The user name cannot be <b>a</b> , <b>al</b> , or <b>all</b> , and cannot include a domain name or \   / : * ? < > @, either.

## UserAccounts/ExportTemplet

Template for exporting network user accounts.

## XML structure

```
<UserAccounts>
  <ExportTemplet>
    <FileName></FileName>
  </ExportTemplet>
</UserAccounts>
```

## Table description

Item	Description
Feature name	UserAccounts
Table name	ExportTemplet
Table type	Single-instance table

Item	Description
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the destination .csv file to export network user accounts to	N/A	String, case-insensitive. Length: 1 to 255 characters.	The export path depends on the Web service frame. Select the filename on the webpage.

## UserAccounts/OldPasswordCheck

Template for checking the old password of a user.

## XML structure

```

<UserAccounts>
  <OldPasswordCheck>
    <UserName></UserName>
    <Password></Password>
  </OldPasswordCheck>
</UserAccounts>

```

## Table description

Item	Description
Feature name	UserAccounts
Table name	OldPasswordCheck
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserName	User name entered by the user	Index	String in the format of <i>localusername@domain</i> or <i>localusername</i> . Length: 1 to 311 characters. <ul style="list-style-type: none"><li><i>localusername</i>—Local user name, case-sensitive string of 1 to 55 characters.</li><li>@—Domain name delimiter.</li><li><i>domain</i>—Domain name, case-insensitive string of 1 to 255 characters.</li></ul>	The local user name cannot be <b>a</b> , <b>al</b> , or <b>all</b> , and it cannot contain any of the following characters: \   / : * ? < > @
Password	Old password	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A

## UserAccounts/ChangeMyPassword

This table changes the password of the current device management user and verifies the old password during the password change process.

## XML structure

```
<UserAccounts>
  <ChangeMyPassword>
    <OldPassword></OldPassword>
    <Password></Password>
  </ChangeMyPassword>
</UserAccounts>
```

## Table description

Item	Description
Feature name	UserAccounts
Table name	ChangeMyPassword
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
OldPassword	Old password	N/A	String, case-sensitive. Length: 1 to 63 characters.	If the user has an old password, the old password must be provided.  If the user does not have an old password, do not include the OldPassword column or do not set a value for the OldPassword column.
Password	New password	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A

## UserAccounts/AutoPassword

This table creates a random password for a network user and sends a mail to the user's mailbox.

## XML structure

```
<UserAccounts>
  <AutoPassword>
    <UserName></UserName>
    <EmailAddress></EmailAddress>
  </AutoPassword>
</UserAccounts>
```

## Table description

    </Group>
  </UserGroups>
</UserAccounts>
```

### Table description

Item	Description
Feature name	UserAccounts
Table name	UserGroups
Table type	Multi-instance table
Row name	Group

Item	Description
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Group name	Index	String. Length: 1 to 32 characters.	The system has a predefined group named <b>system</b> .
AuthorizationInfo	Authorization information	Data structure	Members include: <ul style="list-style-type: none"> <li>• AclNumber</li> <li>• CallbackNumber</li> <li>• FTPHomeDir</li> <li>• IdleTimeout</li> <li>• PrimaryDNSServer</li> <li>• SecondaryDNSServer</li> <li>• URL</li> <li>• UserProfile</li> <li>• VLANID</li> <li>• VRF</li> <li>• IpPool</li> <li>• Ipv6Pool</li> <li>• SSLVPNPolicy</li> <li>• SessTimeout</li> </ul>	N/A
AclNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 5999.	N/A
CallbackNumber	Callback number	N/A	String. Length: 1 to 64 characters.	N/A
FTPHomeDir	FTP home directory	N/A	String. Length: 1 to 255 characters.	By default, the user can access the root directory of the device, which varies by device model.
IdleTimeout	Idle time	N/A	Unsigned integer. Value range: 1 to 120, in minutes.	N/A
PrimaryDNSServer	Primary DNS server	N/A	IPv4: String, dotted decimal notation.	N/A
PrimaryDNSIpv6Server	Primary DNS Ipv6 server.	N/A	IPv6: Hexadecimal string, colon-separated.	N/A
SecondaryDNSServer	Secondary DNS server	N/A	IPv4: String, dotted decimal notation.	N/A
SecondaryDNSIpv6Server	Secondary DNS Ipv6 Server.	N/A	IPv6: Hexadecimal string, colon-separated.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	URL information	N/A	String. Length: 1 to 255 characters.	N/A
UserProfile	Name of the user profile	N/A	String. Length: 1 to 31 characters.	The name can contain only letters, digits, and underscores, and must begin with a letter.
VLANID	VLAN ID assigned to the local user	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VRF	Name of the VPN instance accessible to the local user	N/A	String. Length: 1 to 31 characters.	N/A
IpPool	Name of the IP address pool available to the local user	N/A	String. Length: 1 to 63 characters.	N/A
Ipv6Pool	Name of the IPv6 address pool available to the local user	N/A	String. Length: 1 to 63 characters.	N/A
SSLVPNPolicy	Name of the SSL VPN policy assigned to the local user	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
SessTimeout	Session timeout	N/A	Unsigned integer. Value range: 1 to 1440, in minutes.	N/A
AuthorizationIpv6PrefixInfo	IPv6 address prefix assigned to the local user	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv6Address</li> <li>Ipv6PrefixLength</li> </ul>	N/A
Ipv6Address	IPv6 address prefix	N/A	Hexadecimal string, colon-separated.	For example, 2003:10::1:1.  This column is valid only when the Ipv6PrefixLength column is configured at the same time.
Ipv6PrefixLength	IPv6 address prefix length	N/A	Unsigned integer. Value range: 1 to 128.	This column is valid only when the Ipv6Address column is configured at the same time.

## UserAccounts/Management/Accounts

Management user information table.

# XML structure

```
<UserAccounts>
  <Management>
    <Accounts>
      <Account>
        <Name></Name>
        <Password></Password>
        <GroupName></GroupName>
        <FTP></FTP>
        <HTTP></HTTP>
        <HTTPS></HTTPS>
        <PAD></PAD>
        <SSH></SSH>
        <TELNET></TELNET>
        <Terminal></Terminal>
        <AccessLimit></AccessLimit>
        <FTPHomeDir></FTPHomeDir>
      </Account>
    </Accounts>
  </Management>
</UserAccounts>
```

## Table description

Item	Description
Feature name	UserAccounts
Table name	Accounts
Table type	Multi-instance table
Row name	Account
Restrictions	GroupName must be obtained from the UserAccounts/UserGroups table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Local user name	Index	String, case-sensitive. Length: 1 to 80 characters.	The name cannot be <b>a</b> , <b>al</b> , or <b>all</b> , and cannot contain any of the following characters: \   / : * ? < > @

Column name	Column description	Column type	Data type and restrictions	Remarks
Password	Password of the local user	N/A	String, case-sensitive. Length: <ul style="list-style-type: none"> <li>In non-FIPS mode, the password is a plaintext string of 1 to 63 characters.</li> <li>In FIPS mode, the password is a plaintext string of 15 to 63 characters. The string must contain digits, uppercase letters, lowercase letters, and special characters.</li> </ul>	N/A
GroupName	User group to which the local user belongs	N/A	String. Length: 1 to 32 characters.	The default is <b>system</b> .
FTP	Whether the FTP service is available to the local user	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	The default is false.
HTTP	Whether the HTTP service is available to the local user	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	The default is false.
HTTPS	Whether the HTTPS service is available to the local user	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	The default is false.
PAD	Whether the PAD service is available to the local user	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	The default is false.
SSH	Whether the SSH service is available to the local user	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	The default is false.
TELNET	Whether the telnet service is available to the local user	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	The default is false.
Terminal	Whether the Terminal service is available to the local user	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	The default is false.
AccessLimit	The maximum number of concurrent online users	N/A	Unsigned integer. Value range: 1 to 1024.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
FTPHomeDir	FTP home directory	N/A	String. Length: 1 to 255 characters.	The directory must already exist. By default, the user can access the root directory of the device, which varies by device model.

## UserAccounts/Management/UserRoles

Management user role information table.

### XML structure

```

<UserAccounts>
  <Management>
    <UserRoles>
      <UserRole>
        <UserName></UserName>
        <RoleName></RoleName>
      </UserRole>
    </UserRoles>
  </Management>
</UserAccounts>

```

### Table description

Item	Description
Feature name	UserAccounts
Table name	UserRoles
Table type	Multi-instance table
Row name	UserRole
Restrictions	UserName must be obtained from the UserAccounts/Management/Accounts table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Local user name	Index	String, case-sensitive. Length: 1 to 80 characters.	The name cannot be <b>a</b> , <b>al</b> , or <b>all</b> , and cannot contain any of the following characters: \   / : * ? < > @
RoleName	User role name	Index	String. Length: 1 to 63 characters.	N/A

## UserAccounts/Network/Accounts

Network user information table.

### XML structure

## Table description

Item	Description
Feature name	UserAccounts
Table name	GuestConfigure
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AutoDelete	Whether to enable automatic deletion	N/A	Boolean: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>	The default is false.

Column name	Column description	Column type	Data type and restrictions	Remarks
EmailFormat	Email address format	Data structure	Members include: <ul style="list-style-type: none"> <li>GuestSubject</li> <li>GuestBody</li> <li>GuestManagerSubject</li> <li>GuestManagerBody</li> <li>GuestSponsorSubject</li> <li>GuestSponsorBody</li> </ul>	N/A
GuestSubject	Email subject to send to the guest	N/A	String. Length: 1 to 127 characters.	N/A
GuestBody	Email body to send to the guest	N/A	String. Length: 1 to 255 characters.	N/A
GuestManager Subject	Email subject to send to the guest manager	N/A	String. Length: 1 to 127 characters.	N/A
GuestManager Body	Email body to send to the guest manager	N/A	String. Length: 1 to 255 characters.	N/A
GuestSponsorSubject	Email subject to send to the guest sponsor	N/A	String. Length: 1 to 127 characters.	N/A
GuestSponsorBody	Email body to send to the guest sponsor	N/A	String. Length: 1 to 255 characters.	N/A
GuestManager Email	Email address of the guest manager	N/A	String. Length: 1 to 255 characters.	The email address must include one at sign (@).
EmailSender	Email address of the addresser	N/A	String. Length: 1 to 255 characters.	The email address must include one at sign (@).
SmtpServer	URL of the SMTP server	N/A	String. Length: 1 to 255 characters.	N/A
WaitApprovalTime	The maximum waiting time for account approval	N/A	Unsigned integer. Value range: 1 to 720, in hours.	The default is 24 hours.

## UserAccounts/Identity/Users

Table of static user accounts for user identification.

### XML structure

```

<UserAccounts>
  <Identity>
    <Users>
      <User>

```

```

<Name></Name>
<IpType></IpType>
<IpAddress></IpAddress>
<MacAddress></MacAddress>
</User>
</Users>
</Identity>
</UserAccounts>

```

## Table description

Item	Description
Feature name	UserAccounts
Table name	Users
Table type	Multi-instance table
Row name	User
Restrictions	N/A
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	User name	Index	String, case-sensitive. Length: 1 to 80 characters.	The name cannot be <b>a</b> , <b>al</b> , or <b>all</b> , and cannot contain any of the following characters: \   / : * ? < > @
IpType	IP address type	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4</li> <li>1—IPv6</li> </ul>	N/A
IpAddress	IP address of the user	Index	IPv4 or IPv6 address	N/A
MacAddress	MAC address of the user	Index	MAC address format: XX-XX-XX-XX-XX-XX	If the column is empty, the system ignores the user MAC address.

## UserAccounts/Network/IdentityGroups

Table of identity groups associated with a user.

## XML structure

```

<UserAccounts>
  <Network>

```

```

<IdentityGroups>
  <IdentityGroup>
    <UserName></UserName>
    <GroupName></GroupName>
  </IdentityGroup>
</IdentityGroups>
</Network>
</UserAccounts>

```

## Table description

Item	Description
Feature name	UserAccounts
Table name	IdentityGroups
Table type	Multi-instance table
Row name	IdentityGroup
Restrictions	The GroupName value must be included in the UserAccounts/UserGroups table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserName	User name	Index	String, case-sensitive. Length: 1 to 80 characters.	The name cannot be <b>a</b> , <b>al</b> , or <b>all</b> , and cannot contain any of the following characters: \   / : * ? < > @
GroupName	Group name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

## UserAccounts/UserGroup/IdentityMembers

Table of member users in an identity group.

## XML structure

```

<UserAccounts>
  <UserGroup>
    <IdentityMembers>
      <IdentityMember>
        <GroupName></GroupName>
        <UserName></UserName>
      </IdentityMember>
    </IdentityMembers>
  </UserGroup>
</UserAccounts>

```

```

        </IdentityMember>
    </IdentityMembers>
</UserGroup>
</UserAccounts>

```

## Table description

Item	Description
Feature name	UserAccounts
Table name	IdentityMembers
Table type	Multi-instance table
Row name	IdentityMember
Restrictions	The GroupName value must be included in the UserAccounts/UserGroups table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the identity group	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
UserName	Name of the member user	Index	String, case-sensitive. Length: 1 to 80 characters.	The name cannot be <b>a</b> , <b>al</b> , or <b>all</b> , and cannot contain any of the following characters: \   / : * ? < > @

## UserAccounts/UserGroup/IdentityGroups

Table of member groups in an identity group.

## XML structure

```

<UserAccounts>
  <UserGroup>
    <IdentityGroups>
      <IdentityGroup>
        <GroupName></GroupName>
        <IdentityGroup></IdentityGroup>
      </IdentityGroup>
    </IdentityGroups>
  </UserGroup>
</UserAccounts>

```

## Table description

Item	Description
Feature name	UserAccounts
Table name	IdentityGroups
Table type	Multi-instance table
Row name	IdentityGroup
Restrictions	The GroupName value must be included in the UserAccounts/UserGroups table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the identity group	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
IdentityGroup	Name of the member group	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

## UserAccounts/IdentityEnable

Enable or disable the user identification feature.

## XML structure

```
<UserAccounts>
  <IdentityEnable>
    <Enable></Enable>
  </IdentityEnable>
</UserAccounts>
```

## Table description

Item	Description
Feature name	UserAccounts
Table name	IdentityEnable
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable or disable the user identification feature	N/A	Boolean: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>	The default is false.

## UserAccounts/ChangePasswords

Change user passwords.

### XML structure

```
<UserAccounts>
  <ChangePasswords>
    <ChangePassword>
      <UserName></UserName>
      <Password></Password>
    </ChangePassword>
  </ChangePasswords>
</UserAccounts>
```

### Table description

Item	Description
Feature name	UserAccounts
Table name	ChangePasswords
Table type	Multi-instance table
Row name	ChangePassword
Restrictions	The UserName value must be included in the UserAccounts/ChangePasswords table.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserName	User name entered by the user	Index	String in the format of <i>localusername@domain</i> or <i>localusername</i> . Length: 1 to 311 characters.	The local user name cannot be <b>a</b> , <b>al</b> , or <b>all</b> , and it cannot contain any of the following characters: \   / : * ? < >

			<ul style="list-style-type: none"> <li><i>localusername</i>—Local user name, case-sensitive string of 1 to 55 characters.</li> <li><i>@</i>—Domain name delimiter.</li> <li><i>domain</i>—Domain name, case-insensitive string of 1 to 255 characters.</li> </ul>	@
Password	New password	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A

## UserAccounts/NetworkMailConfigure

Global mail configuration table of local network access users.

### XML structure

```

<UserAccounts>
  <NetworkMailConfigure>
    <EmailFormat>
      <Subject></Subject>
      <Body></Body>
    </EmailFormat>
    <EmailSender></EmailSender>
    <SmtpServer></SmtpServer>
    <SmtpAuthentication>
      <UserName></UserName>
      <Password></Password>
    </SmtpAuthentication>
  </NetworkMailConfigure>
</UserAccounts>

```

### Table description

Item	Description
Feature name	UserAccounts
Table name	NetworkMailConfigure
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EmailFormat	Email address format	Data structure	Members include: <ul style="list-style-type: none"> <li>Subject.</li> <li>Body.</li> </ul>	N/A
Subject	Email subject to send	N/A	String. Length: 1 to 127 characters.	N/A
Body	Email body to send	N/A	String. Length: 1 to 255 characters.	N/A
EmailSender	Email address of the sender	N/A	String. Length: 1 to 255 characters.	The email address must include one at sign (@).
SmtpServer	URL of the SMTP server	N/A	String. Length: 1 to 255 characters.	N/A
SmtpAuthentication	SMTP server authentication configuration	Data structure	Members include: <ul style="list-style-type: none"> <li>UserName.</li> <li>Password.</li> </ul>	N/A
UserName	User name	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
Password	User password	N/A	String, case-sensitive. Length: 1 to 63 characters.	The password is set in plaintext form.

Row name	Group

Item	Description
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Group name	Index	String. Length: 1 to 32 characters.	N/A
AuthorizationInfo	Authorization information	Data structure	Members include: <ul style="list-style-type: none"> <li>• AclNumber</li> <li>• CallbackNumber</li> <li>• FTPHomeDir</li> <li>• IdleTimeout</li> <li>• PrimaryDNSServer</li> <li>• SecondaryDNSServer</li> <li>• URL</li> <li>• UserProfile</li> <li>• VLANID</li> <li>• VRF</li> <li>• IpPool</li> <li>• Ipv6Pool</li> <li>• SSLVPNPolicy</li> <li>• SessTimeout</li> </ul>	N/A
AclNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 5999.	N/A
CallbackNumber	Callback number	N/A	String. Length: 1 to 64 characters.	N/A
FTPHomeDir	FTP home directory	N/A	String. Length: 1 to 255 characters.	N/A
IdleTimeout	Idle time	N/A	Unsigned integer. Value range: 1 to 120 minutes.	N/A
PrimaryDNSServer	Primary DNS server	N/A	IPv4: String, dotted decimal notation.	N/A
PrimaryDNSIpv6Server	Primary DNS Ipv6 server.	N/A	IPv6: Hexadecimal string, colon-separated.	N/A
SecondaryDNSServer	Secondary DNS server	N/A	IPv4: String, dotted decimal notation.	N/A
SecondaryDNSIpv6Server	Secondary DNS Ipv6 Server.	N/A	IPv6: Hexadecimal string, colon-separated.	N/A
URL	URL information	N/A	String. Length: 1 to 255 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
UserProfile	Name of the user profile	N/A	String. Length: 1 to 31 characters.	The name can contain only letters, digits, and underscores, and must begin with a letter.
VLANID	VLAN ID assigned to the local user	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VRF	Name of the VPN instance accessible to the local user	N/A	String. Length: 1 to 31 characters.	N/A
IpPool	Name of the IP address pool available to the local user	N/A	String. Length: 1 to 63 characters.	N/A
Ipv6Pool	Name of the IPv6 address pool available to the local user	N/A	String. Length: 1 to 63 characters.	N/A
SSLVPNPolicy	Name of the SSL VPN policy assigned to the local user	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
SessTimeout	Session timeout	N/A	Unsigned integer. Value range: 1 to 1440, in minutes.	N/A
AuthorizationIpv6PrefixInfo	IPv6 address prefix assigned to the local user	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv6Address</li> <li>Ipv6PrefixLength</li> </ul>	N/A
Ipv6Address	IPv6 address prefix	N/A	Hexadecimal string, colon-separated.	For example, 2003:10::.
Ipv6PrefixLength	IPv6 address prefix length	N/A	Unsigned integer. Value range: 1 to 128.	N/A

## UserAccounts/Management/Accounts

Management user information table.

### XML structure

```

<UserAccounts>
  <Management>
    <Accounts>
      <Account>
        <Name></Name>
        <UID></UID>
      </Account>
    </Accounts>
  </Management>
</UserAccounts>

```

```

    <GroupName></GroupName>
    <FTP></FTP>
    <HTTP></HTTP>
    <HTTPS></HTTPS>
    <PAD></PAD>
    <SSH></SSH>
    <TELNET></TELNET>
    <Terminal></Terminal>
    <AccessLimit></AccessLimit>
    <CurrentAccessNum></CurrentAccessNum>
    <FTPHomeDir></FTPHomeDir>
  </Account>
</Accounts>
</Management>
</UserAccounts>

```

## Table description

Item	Description
Feature name	UserAccounts
Table name	Accounts
Table type	Multi-instance table
Row name	Account
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Local user name	Index	String. Length: 1 to 80 characters.	The name cannot be <b>a</b> , <b>al</b> , or <b>all</b> , and cannot contain any of the following characters: \   / : * ? < > @
UID	Local user ID	N/A	Unsigned integer. Value range: 1001 to $2^{32} - 1$ .	N/A
GroupName	User group to which the local user belongs	N/A	String. Length: 1 to 32 characters.	The default is <b>system</b> .
FTP	Whether the FTP service is available to the local user	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	The default is false.
HTTP	Whether the HTTP service is available to the local user	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	The default is false.

Column name	Column description	Column type	Data type and restrictions	Remarks
HTTPS	Whether the HTTPS service is available to the local user	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	The default is false.
PAD	Whether the PAD service is available to the local user	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	The default is false.
SSH	Whether the SSH service is available to the local user	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	The default is false.
TELNET	Whether the telnet service is available to the local user	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	The default is false.
Terminal	Whether the Terminal service is available to the local user	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	The default is false.
AccessLimit	The maximum number of concurrent online users	N/A	Unsigned integer. Value range: 1 to 1024.	N/A
CurrentAccess Num	Current number of online users	N/A	Unsigned integer. Value range: 1 to 1024.	N/A
FTPHomeDir	FTP home directory of the local user	N/A	String. Length: 1 to 255 characters.	The directory must already exist. By default, the user can access the root directory of the device, which varies by device model.

## UserAccounts/Management/UserRoles

Management user role information table.

### XML structure

```

<UserAccounts>
  <Management>
    <UserRoles>
      <UserRole>
        <UserName></UserName>
        <RoleName></RoleName>
      </UserRole>
    </UserRoles>
  
```

```

    </Management>
  </UserAccounts>

```

VLANID	VLAN ID assigned to the local user	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VRF	Name of the VPN instance accessible to the local user	N/A	String. Length: 1 to 31 characters.	N/A
Ipv4Address	IPv4 address of the local user	N/A	String in dotted decimal notation.	For example, 1.1.1.1.
Ipv6Address	IPv6 address of the local user	N/A	Hexadecimal string, colon-separated.	For example, 2003:10::1:1.

Column name	Column description	Column type	Data type and restrictions	Remarks
IpPool	Name of the IP address pool available to the local user	N/A	String. Length: 1 to 63 characters.	N/A
Ipv6Pool	Name of the IPv6 address pool available to the local user	N/A	String. Length: 1 to 63 characters.	N/A
SSLVPNPolicy	Name of the SSL VPN policy group assigned to the local user	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
AuthorizationIpv6PrefixInfo	IPv6 address prefix assigned to the local user	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv6Address</li> <li>Ipv6PrefixLength</li> </ul>	N/A
Ipv6Address	IPv6 address prefix	N/A	Hexadecimal string, colon-separated.	For example, 2003:10::
Ipv6PrefixLength	IPv6 address prefix length	N/A	Unsigned integer. Value range: 1 to 128.	N/A
BindingInfo	Binding attributes of the local user	Data structure	Members include: <ul style="list-style-type: none"> <li>CallNumber</li> <li>Interface</li> <li>Ipv4Address</li> <li>MacAddress</li> <li>VLANID</li> </ul>	N/A
CallNumber	Calling number of the local user	N/A	String. Length: 1 to 64 characters.	N/A
Interface	Interface of the local user	N/A	String. Length: 1 to 47 characters.	N/A
Ipv4Address	IP address of the local user	N/A	String in the dotted decimal notation.	IPv4 example: 1.1.1.1.
MacAddress	MAC address of the local user	N/A	String. Length: 17 characters.	For example, FF-FF-FF-FF-FF-FF.
VLANID	VLAN ID assigned to the local user	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
SessTimeout	Session timeout	N/A	Unsigned integer. Value range: 1 to 1440, in minutes.	N/A
ValidityDateTime	Account validity time period	Data structure	Members include: <ul style="list-style-type: none"> <li>StartValidityDateTime</li> <li>EndValidityDateTime</li> </ul>	N/A
StartValidityDateTime	Time from which the account becomes valid	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
EndValidityDate Time	Time at which the account expires	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
Description	Description of the local user	N/A	String. Length: 1 to 127 characters.	N/A

## UserAccounts/PasswordLimit

Password limit of the local user module.

### XML structure

```

<UserAccounts>
  <PasswordLimit>
    <MinLen></MinLen>
    <MaxLen></MaxLen>
    <MinTypeNum></MinTypeNum>
  </PasswordLimit>
</UserAccounts>

```

### Table description

Item	Description
Feature name	UserAccounts
Table name	PasswordLimit
Table type	Single-instance table
Row name	UserRole
Restrictions	<ul style="list-style-type: none"> <li>The configuration takes effect on the following items: <ul style="list-style-type: none"> <li>UserAccounts/Management/Accounts table &lt;Password&gt;&lt;/Password&gt;</li> <li>UserAccounts/Network/Accounts table &lt;Password&gt;&lt;/Password&gt;</li> </ul> </li> <li>Data restrictions acquired in FIPS mode are different from the data restrictions acquired in non-FIPS mode.</li> </ul>

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MinLen	The minimum length of a password	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxLen	The maximum length of a password	N/A	Unsigned integer.	N/A
MinTypeNum	The minimum number of character types that a password must contain	N/A	Unsigned integer.	Character types include digits, uppercase letters, lowercase letters, and special characters. For example, if the value is set to 3, the password string must include three or more character types.

## UserAccounts/Guest/Accounts

Table of network access guest information.

### XML structure

```

<UserAccounts>
  <Guest>
    <Accounts>
      <Account>
        <WaitApproval></WaitApproval>
        <Name></Name>
        <GroupName></GroupName>
        <FullName></FullName>
        <Phone></Phone>
        <Email></Email>
        <Company></Company>
        <Description></Description>
        <SponsorFullName></SponsorFullName>
        <SponsorEmail></SponsorEmail>
        <SponsorDepartment></SponsorDepartment>
        <ValidityDateTime>
          <StartValidityDateTime></StartValidityDateTime>
          <EndValidityDateTime></EndValidityDateTime>
        </ValidityDateTime>
      </Account>
    </Accounts>
  </Guest>
</UserAccounts>

```

## Table description

Item	Description
Feature name	UserAccounts
Table name	Accounts
Table type	Multi-instance table
Row name	Account
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
WaitApproval	Whether the guest is waiting for approval	Index	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
Name	User name	Index	String. Length: 1 to 80 characters.	The name cannot be <b>a</b> , <b>al</b> , or <b>all</b> , and cannot contain any of the following characters: \   / : * ? < > @
GroupName	User group to which the guest belongs	N/A	String. Length: 1 to 32 characters.	The default setting is <b>system</b> .
FullName	Guest name	N/A	String. Length: 1 to 255 characters.	N/A
Phone	Guest phone	N/A	String. Length: 1 to 32 characters.	N/A
Email	Guest phone	N/A	String. Length: 1 to 255 characters.	The email address must include one at sign (@).
Company	Guest company	N/A	String. Length: 1 to 255 characters.	N/A
Description	Guest description	N/A	String. Length: 1 to 255 characters.	N/A
SponsorFullName	Sponsor name	N/A	String. Length: 1 to 255 characters.	N/A
SponsorEmail	Sponsor Email	N/A	String. Length: 1 to 255 characters.	The email address must include one at sign (@).
SponsorDepartment	Sponsor department	N/A	String. Length: 1 to 127 characters.	N/A
ValidityDateTime	Account validity time period	Data structure	Members include: <ul style="list-style-type: none"> <li>StartValidityDateTime</li> <li>EndValidityDateTime</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
StartValidityDate	Time from which the account becomes valid	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
EndValidityDate	Time at which the account expires	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A

## UserAccounts/GuestConfigure

Global control of guest accounts table.

### XML structure

```

<UserAccounts>
  <GuestConfigure>
    <AutoDelete></AutoDelete>
    <EmailFormat>
      <GuestSubject></GuestSubject>
      <GuestBody></GuestBody>
      <GuestManagerSubject></GuestManagerSubject>
      <GuestManagerBody></GuestManagerBody>
      <GuestSponsorSubject></GuestSponsorSubject>
      <GuestSponsorBody></GuestSponsorBody>
    </EmailFormat>
    <GuestManagerEmail></GuestManagerEmail>
    <EmailSender></EmailSender>
    <SmtServer></SmtServer>
    <WaitApprovalTime></WaitApprovalTime>
  </GuestConfigure>
</UserAccounts>

```

### Table description

Item	Description
Feature name	UserAccounts
Table name	GuestConfigure
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AutoDelete	Whether to enable automatic deletion	Column	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	The default is false.
EmailFormat	Email address format	Data structure	Members include: <ul style="list-style-type: none"> <li>GuestSubject</li> <li>GuestBody</li> <li>GuestManagerSubject</li> <li>GuestManagerBody</li> <li>GuestSponsorSubject</li> <li>GuestSponsorBody</li> </ul>	N/A
GuestSubject	Email subject to send to the guest	N/A	String. Length: 1 to 127 characters.	N/A
GuestBody	Email body to send to the guest	N/A	String. Length: 1 to 255 characters.	N/A
GuestManager Subject	Email subject to send to the guest manager	N/A	String. Length: 1 to 127 characters.	N/A
GuestManager Body	Email body to send to the guest manager	N/A	String. Length: 1 to 255 characters.	N/A
GuestSponsorSubject	Email subject to send to the guest sponsor	N/A	String. Length: 1 to 127 characters.	N/A
GuestSponsorBody	Email body to send to the guest sponsor	N/A	String. Length: 1 to 255 characters.	N/A
GuestManager Email	Email address of the guest manager	N/A	String. Length: 1 to 255 characters.	The email address must include one at sign (@).
EmailSender	Email address of the addresser	N/A	String. Length: 1 to 255 characters.	The email address must include one at sign (@).
SmtpServer	URL of the SMTP server	N/A	String. Length: 1 to 255 characters.	N/A
WaitApprovalTime	The maximum waiting time for account approval	N/A	Unsigned integer. Value range: 1 to 720, in hours.	The default is 24 hours.

## UserAccounts/Identity/Users

Table of static user accounts for user identification.

## XML structure

```
<UserAccounts>
  <Identity>
    <Users>
      <User>
        <Name></Name>
        <IpType></IpType>
        <IpAddress></IpAddress>
        <MacAddress></MacAddress>
      </User>
    </Users>
  </Identity>
</UserAccounts>
```

## Table description

Item	Description
Feature name	UserAccounts
Table name	Users
Table type	Multi-instance table
Row name	User
Restrictions	N/A
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	User name	Index	String, case-sensitive. Length: 1 to 80 characters.	The name cannot be <b>a</b> , <b>al</b> , or <b>all</b> , and cannot contain any of the following characters: \   / : * ? < > @
IpType	IP address family	Index	Enumeration: <ul style="list-style-type: none"><li>0—IPv4</li><li>1—IPv6</li></ul>	N/A
IpAddress	The IP address of user	Index	IPv4 or IPv6 address.	N/A
MacAddress	The MAC address of user	Index	MAC address format: XX-XX-XX-XX-XX-XX	If the column is empty, the system ignores the user MAC address.

# UserAccounts/Network/IdentityGroups

Table of identity groups associated with a user.

## XML structure

```
<UserAccounts>
  <Network>
    <IdentityGroups>
      <IdentityGroup>
        <UserName></UserName>
        <GroupName></GroupName>
      </IdentityGroup>
    </IdentityGroups>
  </Network>
</UserAccounts>
```

## Table description

Item	Description
Feature name	UserAccounts
Table name	IdentityGroups
Table type	Multi-instance table
Row name	IdentityGroup
Restrictions	N/A
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserName	User name	Index	String, case-sensitive. Length: 1 to 80 characters.	The name cannot be <b>a</b> , <b>al</b> , or <b>all</b> , and cannot contain any of the following characters: \   / : * ? < > @
GroupName	Group name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

# UserAccounts/UserGroup/IdentityMembers

Table of member users in an identity group.

## XML structure

```
<UserAccounts>
  <UserGroup>
    <IdentityMembers>
      <IdentityMember>
        <GroupName></GroupName>
        <UserName></UserName>
      </IdentityMember>
    </IdentityMembers>
  </UserGroup>
</UserAccounts>
```

## Table description

Item	Description
Feature name	UserAccounts
Table name	IdentityMembers
Table type	Multi-instance table
Row name	IdentityMember
Restrictions	N/A
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the identity group	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
UserName	Name of the member user	Index	String, case-sensitive. Length: 1 to 80 characters.	The name cannot be <b>a</b> , <b>al</b> , or <b>all</b> , and cannot contain any of the following characters: \   / : * ? < > @

## UserAccounts/UserGroup/IdentityGroups

Table of member groups in an identity group.

## XML structure

```
<UserAccounts>
  <UserGroup>
    <IdentityGroups>
```

```

    <IdentityGroup>
      <GroupName></GroupName>
    </IdentityGroup></IdentityGroup>
  </IdentityGroups>
</UserGroup>
</UserAccounts>

```

## Table description

Item	Description
Feature name	UserAccounts
Table name	IdentityGroups
Table type	Multi-instance table
Row name	IdentityGroup
Restrictions	N/A
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the identity group	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
IdentityGroup	Name of the member group	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

## UserAccounts/IdentityUser

Table of online user information for user identification.

## XML structure

```

<UserAccounts>
  <Identity>
    <IdentityUsers>
      <IdentityUser>
        <UserName></UserName>
        <IpAddress></IpAddress>
        <MacAddress></MacAddress>
        <Type></Type>
      </IdentityUser>
    </IdentityUsers>
  </Identity>
</UserAccounts>

```

```

    </Identity>
  </UserAccounts>

```

## Table description

Item	Description
Feature name	UserAccounts
Table name	IdentityUsers
Table type	Multi-instance table
Row name	IdentityUser
Restrictions	N/A
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserName	User name	Index	String, case-sensitive. Length: 1 to 80 characters.	N/A
IpAddress	IP address of the user	Index	IPv4 or IPv6 address.	N/A
MacAddress	MAC address of the user	Index	MAC address format: XX-XX-XX-XX-XX-XX	If the column is empty, the system ignores the user MAC address.
Type	User type	N/A	Unsigned integer: <ul style="list-style-type: none"> <li>1—Static.</li> <li>2—Portal.</li> <li>3—IPoE.</li> <li>4—PPP.</li> </ul>	The online user can have various types at the same time. Obtain the value by displacement calculation.

## UserAccounts/IdentityEnable

Enable or disable the user identification feature.

## XML structure

```

<UserAccounts>
  <IdentityEnable>
    <Enable></Enable>
  </IdentityEnable>
</UserAccounts>

```

## Table description

Item	Description
Feature name	UserAccounts
Table name	IdentityEnable
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable or disable the user identification feature	N/A	Boolean: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>	The default is false.

## UserAccounts/ChangePasswords

Change user passwords.

## XML structure

```
<UserAccounts>
  <ChangePasswords>
    <ChangePassword>
      <UserName></UserName>
    </ChangePassword>
  </ChangePasswords>
</UserAccounts>
```

## Table description

Item	Description
Feature name	UserAccounts
Table name	ChangePasswords
Table type	Multi-instance table
Row name	ChangePassword
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserName	User name entered by the user	Index	<p>String in the format of <i>localusername@domain</i> or <i>localusername</i>.</p> <p>Length: 1 to 311 characters.</p> <ul style="list-style-type: none"> <li><i>localusername</i>—Local user name, case-sensitive string of 1 to 55 characters.</li> <li><i>@</i>—Domain name delimiter.</li> <li><i>domain</i>—Domain name, case-insensitive string of 1 to 255 characters.</li> </ul>	The local user name cannot be <b>a</b> , <b>al</b> , or <b>all</b> , and it cannot contain any of the following characters: \   : * ? < > @

## UserAccounts/NetworkMailConfigure

Global mail configuration table of local network access users.

## XML structure

```

<UserAccounts>
  <NetworkMailConfigure>
    <EmailFormat>
      <Subject></Subject>
      <Body></Body>
    </EmailFormat>
    <EmailSender></EmailSender>
    <SmtpServer></SmtpServer>
    <SmtpAuthentication>
      <UserName></UserName>
    </SmtpAuthentication>
  </NetworkMailConfigure>
</UserAccounts>

```

## Table description

Item	Description
Feature name	UserAccounts
Table name	NetworkMailConfigure
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EmailFormat	Email address format	Data structure	Members include: <ul style="list-style-type: none"><li>Subject.</li><li>Body.</li></ul>	N/A
Subject	Email subject to send	N/A	String. Length: 1 to 127 characters.	N/A
Body	Email body to send	N/A	String. Length: 1 to 255 characters.	N/A
EmailSender	Email address of the sender	N/A	String. Length: 1 to 255 characters.	The email address must include one at sign (@).
SmtpServer	URL of the SMTP server	N/A	String. Length: 1 to 255 characters.	N/A
SmtpAuthentication	SMTP server authentication configuration	Data structure	Members include: <ul style="list-style-type: none"><li>UserName.</li><li>Password.</li></ul>	N/A
UserName	User name	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A

## UserAccounts/Network/AccountsCount

This table contains the number of network access users filtered by user description.

### XML structure

```
<UserAccounts>
  <Network>
    <AccountsCount>
      <Count></Count>
      <DescFilter></DescFilter>
    </AccountsCount>
  </Network>
</UserAccounts>
```

### Table description

Item	Description

# Identity

## Identity/ResetOnlineUser

This table deletes online identity users.

### XML structure

```
<Identity>
  <ResetOnlineUser>
    <ResetType></ResetType>
    <DomainName></DomainName>
    <UserName></UserName>
    <IpAddress></IpAddress>
    <MacAddress></MacAddress>
  </ResetOnlineUser>
</Identity>
```

### Table description

Item	Description
Feature name	Identity
Table name	ResetOnlineUser
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ResetType	Deletion scope.	Index	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Deletes all online identity users.</li><li>• <b>1</b>—Deletes all online identity users in an identity domain.</li><li>• <b>2</b>—Deletes an online identity user with a specific IP or MAC address.</li><li>• <b>3</b>—Deletes an online identity user in an identity domain.</li></ul>	N/A
DomainName	Identity domain name.	Index	String, case-insensitive. Length: 1 to 255 characters.	If the index is empty, the domain is

Column name	Column description	Column type	Data type and restrictions	Remarks
			The domain name cannot contain a question mark (?).	null-domain.
UserName	Username.	Index	String. Length: 1 to 55 characters. The username cannot contain a question mark (?).	N/A
IpAddress	IP address of the user.	Index	IPv4 or IPv6 address.	N/A
MacAddress	MAC address of the user.	Index	MAC address format: ff-ff-ff-ff-ff.	If the index is empty, the system ignores the user MAC address.

## Identity/PolicyImportData

This table imports online identity users or identity user accounts from servers.

### XML structure

```

<Identity>
  <PolicyImportData>
    <PolicyName></PolicyName>
    <ImportDataType></ImportDataType>
  </PolicyImportData>
</Identity>

```

### Table description

Item	Description
Feature name	Identity
Table name	PolicyImportData
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
ImportDataType	Type of imported data.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—User accounts.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>1—Online users.</li> </ul>	

## Identity/ImportAccountUser

This table imports network access user accounts, excluding guest accounts.

### XML structure

```
<Identity>
  <ImportAccountUser>
    <FileName></FileName>
    <AutoCreateGroup></AutoCreateGroup>
    <Override></Override>
    <StartLine></StartLine>
  </ImportAccountUser>
</Identity>
```

### Table description

Item	Description
Feature name	Identity
Table name	ImportAccountUser
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the source .csv file to import user account information.	N/A	String, case-insensitive. Length: 1 to 255 characters.	The import path depends on the Web service frame. Select the filename on the webpage. The .csv file must use correct data format that complies with the export network access user account template.
AutoCreateGroup	Whether to create nonexistent groups automatically.	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	The default is false.

Column name	Column description	Column type	Data type and restrictions	Remarks
Override	Whether to override existing accounts with the same name.	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	The default is false.
StartLine	Start line to import user accounts.	N/A	Unsigned integer. Value range: 1 to 1048576.	The default is 1.

## Identity/ExportAccountUser

This table exports network access user accounts, excluding guest accounts.

### XML structure

```

<Identity>
  <ExportAccountUser>
    <FileName></FileName>
    <DomainName></DomainName>
    <UserName></UserName>
  </ExportAccountUser>
</Identity>

```

### Table description

Item	Description
Feature name	Identity
Table name	ExportAccountUser
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the destination .csv file to export user accounts to.	N/A	String, case-insensitive. Length: 1 to 255 characters.	The export path depends on the Web service frame. Select the filename on the webpage.
DomainName	Domain name.	N/A	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain a question mark (?).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
UserName	Username.	N/A	String, case-sensitive. Length: 1 to 55 characters. The username cannot contain a question mark (?).	N/A

## Identity/ExportTemplet

This table exports a network access user account template.

### XML structure

```
<Identity>
  <ExportTemplet>
    <FileName></FileName>
  </ExportTemplet>
</Identity>
```

### Table description

Item	Description
Feature name	Identity
Table name	ExportTemplet
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the destination .csv file to export network access user accounts to.	N/A	String, case-insensitive. Length: 1 to 255 characters.	The export path depends on the Web service frame. Select the filename on the webpage.

## Identity/ResetConfigGroup

This table deletes identity groups.

## XML structure

```
<Identity>
  <ResetConfigGroup>
    <ResetConfigType></ResetConfigType>
    <DomainName></DomainName>
    <GroupName></GroupName>
  </ResetConfigGroup>
</Identity>
```

## Table description

Item	Description
Feature name	Identity
Table name	ResetConfigGroup
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ResetConfigType	Deletion scope.	Index	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Deletes all identity groups.</li><li>• <b>1</b>—Deletes an identity group in an identity domain.</li><li>• <b>2</b>—Deletes all identity groups in an identity domain.</li></ul>	N/A
DomainName	Identity domain name.	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain a question mark (?).	If the index is empty, the domain is null-domain.
GroupName	Identity group name.	Index	String, case-insensitive. Length: 1 to 200 characters. The group name cannot contain a question mark (?).	N/A

## Identity/ResetConfigUser

This table deletes identity user accounts.

## XML structure

```
<Identity>
  <ResetConfigUser>
    <ResetType></ResetType>
    <DomainName></DomainName>
    <UserName></UserName>
  </ResetConfigUser>
</Identity>
```

## Table description

Item	Description
Feature name	Identity
Table name	ResetConfigUser
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks

# Identity

## Identity/StaticUsers

This table contains static identity user information.

### XML structure

```
<Identity>
  <StaticUsers>
    <StaticUser>
      <DomainName></DomainName>
      <Name></Name>
      <IpType></IpType>
      <IpAddress></IpAddress>
      <MacAddress></MacAddress>
    </StaticUser>
  </StaticUsers>
</Identity>
```

### Table description

Item	Description
Feature name	Identity
Table name	StaticUsers
Table type	Multi-instance table
Row name	StaticUser
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain a question mark (?).	If the index is empty, the domain is null-domain.
Name	Username.	Index	String. Length: 1 to 55 characters. The username cannot contain a question mark (?).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IpType	IP address family.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> </ul>	N/A
IpAddress	IP address of the user.	Index	IPv4 or IPv6 address.	N/A
MacAddress	MAC address of the user.	Index	MAC address format: ff-ff-ff-ff-ff-ff.	If the index is empty, the system ignores the user MAC address.

## Identity/IdentityEnable

This table enables or disables the user identification feature.

### XML structure

```

<Identity>
  <IdentityEnable>
    <Enable></Enable>
  </IdentityEnable>
</Identity>

```

### Table description

Item	Description
Feature name	Identity
Table name	IdentityEnable
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enables or disables the user identification feature.	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	The default is false.

# Identity/UserImportPolicies

This table contains identity user import policy information.

## XML structure

```
<Identity>
  <UserImportPolicies>
    <UserImportPolicy>
      <PolicyName></PolicyName>
      <UpdateInterval></UpdateInterval>
      <ImportType></ImportType>
    </UserImportPolicy>
  </UserImportPolicies>
</Identity>
```

## Table description

Item	Description
Feature name	Identity
Table name	UserImportPolicies
Table type	Multi-instance table
Row name	UserImportPolicy
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
UpdateInterval	Interval for automatic user account import.	N/A	Unsigned integer. Value range: 1 to 65536 hours.	The default value is 24.
ImportType	Import type for automatic user account import.	N/A	Enumeration: <ul style="list-style-type: none"><li>1—all.</li><li>2—group.</li><li>3—user.</li></ul>	N/A

# Identity/Policies/RestfulPolicies

This table contains Restful server information in the identity user import policy.

## XML structure

```
<Identity>
  <Policies>
    <RestfulPolicies>
      <RestfulPolicy>
        <PolicyName></PolicyName>
        <RestfulServerName></RestfulServerName>
      </RestfulPolicy>
    </RestfulPolicies>
  </Policies>
</Identity>
```

## Table description

Item	Description
Feature name	Identity
Table name	RestfulPolicies
Table type	Multi-instance table
Row name	RestfulPolicy
Restrictions	PolicyName can be chosen from Identity/UserImportPolicies.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
RestfulServerName	Restful server name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A

## Identity/Policies/LDAPPolicies

This table contains LDAP server information in the identity user import policy.

## XML structure

```
<Identity>
  <Policies>
    <LDAPPolicies>
      <LDAPPolicy>
        <PolicyName></PolicyName>
        <LDAPSchemeName></LDAPSchemeName>
      </LDAPPolicy>
    </LDAPPolicies>
  </Policies>
</Identity>
```

```

    </LDAPPolicies>
  </Policies>
</Identity>

```

## Table description

Item	Description
Feature name	Identity
Table name	LDAPPolicies
Table type	Multi-instance table
Row name	LDAPPolicy
Restrictions	PolicyName can be chosen from Identity/UserImportPolicies.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
LDAPSchemeName	LDAP scheme name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

## Identity/RestfulServers

This table contains information about the Restful server.

## XML structure

```

<Identity>
  <RestfulServers>
    <RestfulServer>
      <ServerName></ServerName>
      <LoginName></LoginName>
      <Password></Password>
      <GetUserDatabase></GetUserDatabase>
      <GetUserGroupDatabase></GetUserGroupDatabase>
      <GetOnlineUser></GetOnlineUser>
      <PutOnlineUser></PutOnlineUser>
      <PutOfflineUser></PutOfflineUser>
      <DetectEnable></DetectEnable>
      <DetectInterval></DetectInterval>
      <DetectMaxCount></DetectMaxCount>
      <VpnName></VpnName>
    </RestfulServer>
  </RestfulServers>
</Identity>

```

```

    </RestfulServers>
  </Identity>

```

## Table description

Item	Description
Feature name	Identity
Table name	RestfulServers
Table type	Multi-instance table
Row name	RestfulServer
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	Server name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
LoginName	Login name of the Restful server.	N/A	String. Length: 1 to 55 characters.	N/A
Password	Password of the Restful server.	N/A	Simple: String. Length: 1 to 63 characters. Cipher: String. Length: 1 to 117 characters.	N/A
GetUserDataBase	URI for requesting network access user account information.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
GetUserGroup Database	URI for requesting user group information.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
GetOnlineUser	URI for requesting online network access user information.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
PutOnlineUser	URI for uploading online user information.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
PutOfflineUser	URI for uploading	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	offline user information.			
DetectEnable	Enables or disables the connectivity detection feature of the Restful server.	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	The default is false.
DetectInterval	Interval for connectivity detection of the Restful server.	N/A	Unsigned integer. Value range: 1 to 10 minutes.	The default time is 5.
DetectMaxCount	Maximum number of probes per detection.	N/A	Unsigned integer. Value range: 1 to 5.	The default maximum number is 3.
VpnName	VPN instance name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A

## Identity/UserAccountsAutoImport

This table controls whether to automatically import identity user accounts.

### XML structure

```

<Identity>
  <UserAccountsAutoImport>
    <UserAccountAutoImport>
      <PolicyName></PolicyName>
      <Auto></Auto>
    </UserAccountAutoImport>
  </UserAccountsAutoImport>
</Identity>

```

### Table description

Item	Description
Feature name	Identity
Table name	UserAccountsAutoImport
Table type	Multi-instance table
Row name	UserAccountAutoImport
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
Auto	Enables or disables automatic user account import.	N/A	Boolean: <ul style="list-style-type: none"><li>true.</li><li>false.</li></ul>	The default is false.

## Identity/OnlineUserDomFormat

This table contains username match mode information for online identity users.

## XML structure

```
<Identity>
  <OnlineUserDomFormat>
    <DomainFormat></DomainFormat>
  </OnlineUserDomFormat>
</Identity>
```

## Table description

Item	Description
Feature name	Identity
Table name	OnlineUserDomFormat
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainFormat	Username match mode.	N/A	Enumeration: <ul style="list-style-type: none"><li>1—With domain.</li><li>2—Without domain.</li><li>3—Keep original.</li></ul>	The default is 3.

# Identity/SecManageServers

This table contains security management server set information.

## XML structure

```
<Identity>
  <SecManageServers>
    <SecManageServer>
      <ServerName></ServerName>
      <ListenPort></ListenPort>
      <EncrypAlgorithm></EncrypAlgorithm>
      <SharedKey></SharedKey>
    </SecManageServer>
  </SecManageServers>
</Identity>
```

## Table description

Item	Description
Feature name	Identity
Table name	SecManageServers
Table type	Multi-instance table
Row name	SecManageServer
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	Server set name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
ListenPort	Port to listen to the security management servers.	N/A	Unsigned integer. Value range: 1 to 65535.	The default value is 8001.
EncrypAlgorithm	Encryption method of the security management server set.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—3DES.</li><li>1—AES128.</li></ul>	N/A
SharedKey	Encryption secret key of the security management	N/A	Simple: String. Length varies by EncrypAlgorithm.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	server set.		<ul style="list-style-type: none"> <li>3DES: 1 to 24 characters,</li> <li>AES128: 1 to 16 characters.</li> </ul>	

## Identity/SecManageIPs

This table contains IP address information for security management servers.

### XML structure

```

<Identity>
  <SecManageIPs>
    <SecManageIP>
      <ServerName></ServerName>
      <Ipv4Address></Ipv4Address>
    </SecManageIP>
  </SecManageIPs>
</Identity>

```

### Table description

Item	Description
Feature name	Identity
Table name	SecManageIPs
Table type	Multi-instance table
Row name	SecManageIP
Restrictions	ServerName can be chosen from Identity/SecManageServers
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	Server name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
Ipv4Address	IPv4 address of a security management server.	Index	IPv4 address.	N/A

# Identity

## Identity/StaticUsers

This table contains static identity user information.

### XML structure

```
<Identity>
  <StaticUsers>
    <StaticUser>
      <DomainName></DomainName>
      <Name></Name>
      <IpType></IpType>
      <IpAddress></IpAddress>
      <MacAddress></MacAddress>
    </StaticUser>
  </StaticUsers>
</Identity>
```

### Table description

Item	Description
Feature name	Identity
Table name	StaticUsers
Table type	Multi-instance table
Row name	StaticUser
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters.	If the index is empty, the domain is null-domain.
Name	Username.	Index	String. Length: 1 to 55 characters. The username cannot contain a question mark (?).	N/A
IpType	IP address family.	Index	Enumeration: <ul style="list-style-type: none"><li>0—IPv4.</li><li>1—IPv6.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IpAddress	IP address of the user.	Index	IPv4 or IPv6 address.	N/A
MacAddress	MAC address of the user.	Index	MAC address format: ff-ff-ff-ff-ff.	If the index is empty, the system ignores the user MAC address.

## Identity/OnlineUsers

This table contains online identity user information.

### XML structure

```

<Identity>
  <OnlineUsers>
    <OnlineUser>
      <DomainName></DomainName>
      <UserName></UserName>
      <IpAddress></IpAddress>
      <MacAddress></MacAddress>
      <Type></Type>
    </OnlineUser>
  </OnlineUsers>
</Identity>

```

### Table description

Item	Description
Feature name	Identity
Table name	OnlineUsers
Table type	Multi-instance table
Row name	OnlineUser
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain a question mark (?).	If the index is empty, the domain is null-domain.
UserName	Username.	Index	String. Length: 1 to 55 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			The username cannot contain a question mark (?).	
IpAddress	IP address.	Index	IPv4 or IPv6 address.	N/A
MacAddress	MAC address.	Index	MAC address format: ff-ff-ff-ff-ff.	If the index is empty, the system ignores the user MAC address.
Type	User type.	N/A	Unsigned integer.	An online identity user can have various types at the same time: <ul style="list-style-type: none"> <li>• 1—Static.</li> <li>• 2—Dynamic.</li> <li>• 3—Static and dynamic.</li> </ul>

## Identity/IdentityEnable

This table enables or disables the user identification feature.

### XML structure

```
<Identity>
  <IdentityEnable>
    <Enable></Enable>
  </IdentityEnable>
</Identity>
```

### Table description

Item	Description
Feature name	Identity
Table name	IdentityEnable
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enables or disables the user identification feature.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true.</li> <li>• false.</li> </ul>	The default is false.

# Identity/AccountUsers

This table contains identity user account information.

## XML structure

```
<Identity>
  <AccountUsers>
    <AccountUser>
      <DomainName></DomainName>
      <UserName></UserName>
    </AccountUser>
  </AccountUsers>
</Identity>
```

## Table description

Item	Description
Feature name	Identity
Table name	AccountUsers
Table type	Multi-instance table
Row name	AccountUser
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain a question mark (?).	If the index is empty, the domain is null-domain.
UserName	Username.	Index	String. Length: 1 to 55 characters. The username cannot contain a question mark (?).	N/A

# Identity/AccountGroups

This table contains identity group information.

## XML structure

```
<Identity>
```

```

<AccountGroups>
  <AccountGroup>
    <DomainName></DomainName>
    <GroupName></GroupName>
    <PureGroupName></PureGroupName>
  </AccountGroup>
</AccountGroups>
</Identity>

```

## Table description

Item	Description
Feature name	Identity
Table name	AccountGroups
Table type	Multi-instance table
Row name	AccountGroup
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain a question mark (?).	If the index is empty, the domain is null-domain.
GroupName	Identity group name.	Index	String, case-insensitive. Length: 1 to 200 characters.	N/A
PureGroupName	Name of the identity group at the lowest level	N/A	String, case-insensitive. Length: 1 to 200 characters.	N/A

## Identity/UserImportPolicies

This table contains identity user import policy information.

## XML structure

```

<Identity>
  <UserImportPolicies>
    <UserImportPolicy>
      <PolicyName></PolicyName>
      <UpdateInterval></UpdateInterval>
      <ImportType></ImportType>
    </UserImportPolicy>
  </UserImportPolicies>
</Identity>

```

```

    </UserImportPolicy>
  </UserImportPolicies>
</Identity>

```

## Table description

Item	Description
Feature name	Identity
Table name	UserImportPolicies
Table type	Multi-instance table
Row name	UserImportPolicy
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
UpdateInterval	Interval for automatic user account import.	N/A	Unsigned integer. Value range: 1 to 65536 hours.	The default value is 24.
ImportType	Import type for automatic user account import.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—all.</li> <li>2—group.</li> <li>3—user.</li> </ul>	N/A

## Identity/Policies/RestfulPolicies

This table contains Restful server information in the identity user import policy.

## XML structure

```

<Identity>
  <Policies>
    <RestfulPolicies>
      <RestfulPolicy>
        <PolicyName></PolicyName>
        <RestfulServerName></RestfulServerName>
      </RestfulPolicy>
    </RestfulPolicies>
  </Policies>
</Identity>

```

## Table description

Item	Description
Feature name	Identity
Table name	RestfulPolicies
Table type	Multi-instance table
Row name	RestfulPolicy
Restrictions	PolicyName can be chosen from Identity/UserImportPolicies.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
RestfulServerName	Restful server name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A

## Identity/Policies/LDAPPolicies

This table contains LDAP server information in the identity user import policy.

## XML structure

```
<Identity>
  <Policies>
    <LDAPPolicies>
      <LDAPPolicy>
        <PolicyName></PolicyName>
        <LDAPSchemeName></LDAPSchemeName>
      </LDAPPolicy>
    </LDAPPolicies>
  </Policies>
</Identity>
```

## Table description

Item	Description
Feature name	Identity
Table name	LDAPPolicies
Table type	Multi-instance table
Row name	LDAPPolicy

Restrictions	PolicyName can be chosen from Identity/UserImportPolicies.
--------------	--

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
LDAPSchemeName	LDAP scheme name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

## Identity/RestfulServers

This table contains information about the Restful server.

## XML structure

```

<Identity>
  <RestfulServers>
    <RestfulServer>
      <ServerName></ServerName>
      <LoginName></LoginName>
      <GetUserDatabase></GetUserDatabase>
      <GetUserGroupDatabase></GetUserGroupDatabase>
      <GetOnlineUser></GetOnlineUser>
      <PutOnlineUser></PutOnlineUser>
      <PutOfflineUser></PutOfflineUser>
      <DetectEnable></DetectEnable>
      <DetectInterval></DetectInterval>
      <DetectMaxCount></DetectMaxCount>
      <VpnName></VpnName>
      <ConnectState></ConnectState>
    </RestfulServer>
  </RestfulServers>
</Identity>

```

## Table description

Item	Description
Feature name	Identity
Table name	RestfulServers
Table type	Multi-instance table
Row name	RestfulServer
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	Server name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
LoginName	Login name of the Restful server.	N/A	String. Length: 1 to 55 characters.	N/A
GetUserDataBase	URI for requesting network access user account information.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
GetUserGroupDatabase	URI for requesting user group information.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
GetOnlineUser	URI for requesting online network access user information.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
PutOnlineUser	URI for uploading online user information.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
PutOfflineUser	URI for uploading offline user information.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
DetectEnable	Enables or disables the connectivity detection feature of the Restful server.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true.</li> <li>• false.</li> </ul>	The default is false.
DetectInterval	Interval for connectivity detection of the Restful server.	N/A	Unsigned integer. Value range: 1 to 10 minutes.	The default time is 5.
DetectMaxCount	Maximum number of probes per detection.	N/A	Unsigned integer. Value range: 1 to 5.	The default maximum number is 3.
VpnName	VPN instance name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
ConnectState	Connectivity state between the device and	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Reachable.</li> <li>• <b>false</b>—Unreachable.</li> </ul>	The default is false.

Column name	Column description	Column type	Data type and restrictions	Remarks
	the Restful server.			

## Identity/UserAccountsAutoImport

This table controls whether to automatically import identity user accounts.

### XML structure

```

<Identity>
  <UserAccountsAutoImport>
    <UserAccountAutoImport>
      <PolicyName></PolicyName>
      <Auto></Auto>
    </UserAccountAutoImport>
  </UserAccountsAutoImport>
</Identity>

```

### Table description

Item	Description
Feature name	Identity
Table name	UserAccountsAutoImport
Table type	Multi-instance table
Row name	UserAccountAutoImport
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
Auto	Enables or disables automatic user account import.	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	The default is false.

## Identity/OnlineUserDomFormat

This table contains username match mode information for online identity users.

## XML structure

```
<Identity>
  <OnlineUserDomFormat>
    <DomainFormat></DomainFormat>
  </OnlineUserDomFormat>
</Identity>
```

## Table description

Item	Description
Feature name	Identity
Table name	OnlineUserDomFormat
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainFormat	Username match mode.	N/A	Enumeration: <ul style="list-style-type: none"><li>1—With domain.</li><li>2—Without domain.</li><li>3—Keep original.</li></ul>	The default is 3.

## Identity/SecManageServers

This table contains security management server set information.

## XML structure

```
<Identity>
  <SecManageServers>
    <SecManageServer>
      <ServerName></ServerName>
      <ListenPort></ListenPort>
      <EncrypAlgorithm></EncrypAlgorithm>
    </SecManageServer>
  </SecManageServers>
</Identity>
```

## Table description

Item	Description
Feature name	Identity
Table name	SecManageServers
Table type	Multi-instance table
Row name	SecManageServer
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	Server set name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
ListenPort	Port to listen to security management servers.	N/A	Unsigned integer. Value range: 1 to 65535.	The default value is 8001.
EncrypAlgorithm	Encryption method of the security management server set.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—3DES.</li><li>1—AES128.</li></ul>	N/A

## Identity/SecManageIPs

This table contains IP address information for security management servers.

## XML structure

```
<Identity>
  <SecManageIPs>
    <SecManageIP>
      <ServerName></ServerName>
      <Ipv4Address></Ipv4Address>
    </SecManageIP>
  </SecManageIPs>
</Identity>
```

## Table description

Item	Description
Feature name	Identity
Table name	SecManageIPs

Table type	Multi-instance table
Row name	SecManageIP
Restrictions	ServerName can be chosen from Identity/SecManageServers.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	Server set name.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
Ipv4Address	IPv4 address of a security management server.	Index	IPv4 address.	N/A

## Identity/TopUsers

This table contains top user information for user identification. Top users refer to identity users that do not belong to any identity groups.

## XML structure

```

<Identity>
  <TopUsers>
    <TopUser>
      <DomainName></DomainName>
      <UserName></UserName>
    </TopUser>
  </TopUsers>
</Identity>

```

## Table description

Item	Description
Feature name	Identity
Table name	TopUsers
Table type	Multi-instance table
Row name	TopUser
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain a question mark (?).	If the index is empty, the domain is null-domain.
UserName	Username.	Index	String. Length: 1 to 55 characters. The username cannot contain a question mark (?).	N/A

## Identity/TopGroups

This table contains top user group information for user identification. Top groups refer to identity groups that do not belong to any parent identity groups.

## XML structure

```
<Identity>
  <TopGroups>
    <TopGroup>
      <DomainName></DomainName>
      <GroupName></GroupName>
      <PureGroupName></PureGroupName>
    </TopGroup>
  </TopGroups>
</Identity>
```

## Table description

Item	Description
Feature name	Identity
Table name	TopGroups
Table type	Multi-instance table
Row name	TopGroup
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive.	If the index is empty,

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 255 characters. The domain name cannot contain a question mark (?).	the domain is null-domain.
GroupName	Identity group name.	Index	String, case-insensitive. Length: 1 to 200 characters.	N/A
PureGroupName	Name of the identity group at the lowest level	N/A	String, case-insensitive. Length: 1 to 200 characters.	N/A

## Identity/ParentGroups

This table contains information about identity groups to which an identity user belongs.

### XML structure

```

<Identity>
  <ParentGroups>
    <ParentGroup>
      <DomainName></DomainName>
      <UserName></UserName>
      <GroupName></GroupName>
      <PureGroupName></PureGroupName>
    </ParentGroup>
  </ParentGroups>
</Identity>

```

### Table description

Item	Description
Feature name	Identity
Table name	ParentGroups
Table type	Multi-instance table
Row name	ParentGroup
Restrictions	To perform the get operation, you must enter values for all index columns. To perform the get-bulk operation, you must enter values for at least the first two index columns.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive.	If the index is empty, the domain is

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 255 characters. The domain name cannot contain a question mark (?).	null-domain.
UserName	Username.	Index	String. Length: 1 to 55 characters. The username cannot contain a question mark (?).	N/A
GroupName	Identity group name.	Index	String, case-insensitive. Length: 1 to 200 characters.	N/A
PureGroupName	Name of the identity group at the lowest level	N/A	String, case-insensitive. Length: 1 to 200 characters.	N/A

## Identity/MemberUsers

This table contains information about member identity users in an identity group.

### XML structure

```

<Identity>
  <MemberUsers>
    <MemberUser>
      <DomainName></DomainName>
      <GroupName></GroupName>
      <UserName></UserName>
    </MemberUser>
  </MemberUsers>
</Identity>

```

### Table description

Item	Description
Feature name	Identity
Table name	MemberUsers
Table type	Multi-instance table
Row name	MemberUser
Restrictions	To perform the get operation, you must enter values for all index columns. To perform the get-bulk operation, you must enter values for at least the first two index columns.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain a question mark (?).	If the index is empty, the domain is null-domain.
GroupName	Identity group name.	Index	String, case-insensitive. Length: 1 to 200 characters.	N/A
UserName	Username.	Index	String. Length: 1 to 255 characters. The username cannot contain a question mark (?).	N/A

## Identity/MemberGroups

This table contains information about member identity groups in an identity group.

## XML structure

```
<Identity>
  <MemberGroups>
    <MemberGroup>
      <DomainName></DomainName>
      <GroupName></GroupName>
      <MemberGroup></MemberGroup>
      <PureMemGroupName></PureMemGroupName>
    </MemberGroup>
  </MemberGroups>
</Identity>
```

## Table description

Item	Description
Feature name	Identity
Table name	MemberGroups
Table type	Multi-instance table
Row name	MemberGroup
Restrictions	To perform the get operation, you must enter values for all index columns. To perform the get-bulk operation, you must enter values for at least the first two index columns.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain a question mark (?).	If the index is empty, the domain is null-domain.
GroupName	Identity group name.	Index	String, case-insensitive. Length: 1 to 200 characters.	N/A
MemberGroup	Member group name.	Index	String, case-insensitive. Length: 1 to 200 characters.	N/A
PureMemGroupName	Name of the member identity group at the lowest level	N/A	String, case-insensitive. Length: 1 to 200 characters.	N/A

## Identity/Domains

This table contains information about identity domains.

### XML structure

```
<Identity>
  <Domains>
    <Domain>
      <DomainName></DomainName>
    </Domain>
  </Domains>
</Identity>
```

### Table description

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus(-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.
Direction	Application direction	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Inbound.</li> <li>1—Outbound.</li> </ul>	N/A
Type	Match type	Index	Enumeration: <ul style="list-style-type: none"> <li>4—Any</li> </ul>	N/A
CIR	Committed information rate in kbps	N/A	Unsigned integer.	Required. The value range for CIR varies by device model.
CBS	Committed burst size in bytes	N/A	Unsigned integer.	N/A
EBS	Excess burst size in bytes	N/A	Unsigned integer.	If <b>CBS</b> or PIR is not configured, <b>EBS</b> cannot be configured
PIR	Peak information rate in kbps	N/A	Unsigned integer.	The value range for PIR varies by device model.

## GTS/UserProfileGTS

This table contains GTS application on user profile.

## XML structure

```

<GTS>
  <UserProfileGTS>
    <Apply>
      <Name></Name>
      <Direction></Direction>
      <Type></Type>
      <Value></Value>
      <CIR></CIR>
      <CBS></CBS>
      <EBS></EBS>
      <PIR></PIR>
      <Queue-length></Queue-length>
    </Apply>
  </UserProfileGTS>

```

</GTS>

## Table description

Item	Description
Feature name	GTS
Table name	UserProfileGTS
Table type	Multi-instance table
Row name	Apply
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	User profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	The string can only contain English letters, digits, underscores (_), minus(-), and dots (.). The name can start with an English letter or digit, and cannot contain only digits. The name must be unique globally.
Direction	Application direction	Index	Enumeration: <ul style="list-style-type: none"><li>• 0—Inbound.</li><li>• 1—Outbound.</li></ul>	N/A
Type	Match type	Index	Enumeration: <ul style="list-style-type: none"><li>• 1—Any</li><li>• 4—Queue</li></ul>	N/A
Value	Match type value	Index	Unsigned integer.	When <b>Type</b> is <b>4</b> , the value range is 0 to 7. When <b>Type</b> is <b>1</b> , this column only can be configured as 0.
CIR	Committed information rate in kbps	N/A	Unsigned integer.	Required. The value of this column depends on the device model.
CBS	Committed burst size in bytes	N/A	Unsigned integer.	The value of this column depends on the device model.
EBS	Excess burst size in bytes	N/A	Unsigned integer.	The value of this column depends on the device model. If <b>CBS</b> or <b>PIR</b> is not configured, <b>EBS</b> cannot be configured

Column name	Column description	Column type	Data type and restrictions	Remarks
PIR	Peak information rate in kbps	N/A	Unsigned integer.	The value of this column depends on the device model.
Queue-length	Length of the buffer queue	N/A	Unsigned integer.	The value of this column depends on the device model.

## HardwareQueue/UserProfileQMPProfile

This table contains queue scheduling profile application on user profile.

### XML structure

```

<HardwareQueue>
  <UserProfileQMPProfile>
    <Apply>
      <UserProfileName></UserProfileName>
      <Direction></Direction>
      <SchedulingMode></SchedulingMode>
      <QMPProfileName></QMPProfileName>
    </Apply>
  </UserProfileQMPProfile>
</HardwareQueue>

```

### Table description

      <MacAddress></MacAddress>
      <ServerID></ServerID>
      <ServerDescription></ServerDescription>
    </Tunnels>
  </Tunnel>
</V2VTunnel>
```

### Table description

Item	Description
Feature name	V2VTunnel
Table name	Tunnel
Table type	Multi-instance table
Row name	Tunnels
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
ClientID	V2V virtual terminal access ID	N/A	Unsigned integer. Value range:1 to 99999.	N/A
MacAddress	V2V virtual terminal MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example:00-0c-af-e3-5d-c0.
ServerID	V2V virtual	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	terminal convergence ID		Value range:1 to 99999.	
ServerDescription	Service name	N/A	String. Length: 1 to 31 characters.	N/A

## V2VTunnel/FrameType

This table contains information about the V2V tunnel frame type.

### XML structure

```
<V2VTunnel>
  <FrameType>
    <IsArpFrameType></IsArpFrameType>
  </FrameType>
</V2VTunnel>
```

### Table description

Item	Description
Feature name	V2VTunnel
Table name	FrameType

      <Action>
        <ProfileName></ProfileName>
      </Action>
      <ModelId></ModelId>
    </Rule>
  </TrafficPolicyRules>
</AVC>
```

### Table description

Item	Description
Feature name	AVC
Table name	TrafficPolicyRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleNumber	Rule number	Index	Unsigned integer: Value range: 1 to 4294967295.	Rule number is the match order.
ParentRuleNumber	Parent Rule's rule number	N/A	Unsigned integer: Value range: 1 to 4294967295.	Optional

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleName	name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Name cannot be same with its siblings. Mandatory
Enable	Set this value to true to disable the rule	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	Optional
TimeRange	Time Range Name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Optional, Single value
ProfileName	TrafficPolify profile name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Optional
ModelId	Model rule number	N/A	Unsigned integer: Value range: 1 to 4294967295.	Optional

## AVC/RuleOptions

This table contains some multiple information about the AVC's rule option.

### XML structure

```

<AVC>
  <RuleOptions>
    <Option>
      <RuleNumber></RuleNumber>
      <OptionType></OptionType>
      <OptionVal></OptionVal>
    </Option>
  </RuleOptions>
</AVC>

```

### Table description

Item	Description
Feature name	AVC
Table name	RuleOptions
Table type	Multi-instance table
Row name	Option
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleNumber	Rule number	Index	Unsigned integer: Value range: 1 to 4294967295.	Rule number is the match order.
OptionType	Type of the configuration	Index	Enumeration: <ul style="list-style-type: none"> <li>1—SourceZones.</li> <li>2—DestZones.</li> <li>3—SourceAddressSets.</li> <li>4—DestAddressSets.</li> <li>5—Users.</li> <li>6—UserGroups.</li> <li>7—Applications.</li> <li>8—AppGroups.</li> <li>9—Services.</li> <li>10—Dscp.</li> </ul>	N/A
OptionVal	Value of the special type configuration	Index	String, case-insensitive. Length: 1 to 63 characters (for OptionTypes 7 and 8). Length: 1 to 31 characters ( for OptionTypes 1 through 4, and OptionType 9). Length: 1 to 100 characters (for OptionType 10). Length: 1 to 480 characters (for OptionTypes 5 and 6).	Values of OptionTypes 5 and 6 are in Json format.

## AVC/TrafficPolicyProfiles

This table contains information about the AVC traffic policy's Control profiles.

## Table description

Item	Description
Feature name	AVC
Table name	TrafficPolicyProfiles
Table type	Multi-instance table
Row name	Profile
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileNumber	Profile number	Index	Unsigned integer: Value range: 1 to 4294967295.	Rule option is the match order.
ProfileName	Profile Name, cannot be same with other profiles	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ReferenceMode	Rule shared mode	N/A	Unsigned integer: • 0—per-rule.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>1—rule-shared.</li> </ul>	
IpAverageEnable	Ip average enable	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	N/A
TotalMaxKbps	Total max kbps	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
TotalGuaranteedKbps	Total guaranteed kbps	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
TotalGuaranteedKbpsPerIP	Total guaranteed kbps per ip	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
TotalGuaranteedKbpsPerUser	Total guaranteed kbps per user	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
TotalMaxKbpsPerIP	Total max kbps per ip	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
TotalMaxKbpsPerUser	Total max kbps per user	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
DnGuaranteedKbpsPerIP	Down guaranteed kbps per ip	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
UpGuaranteedKbpsPerIP	Up guaranteed kbps per ip	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
DnGuaranteedKbpsPerUser	Down guaranteed kbps per user	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
UpGuaranteedKbpsPerUser	Up guaranteed kbps per user	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
DnGuaranteedKbps	Downstream Guaranteed bandwidth	N/A	Unsigned integer: Value range: 8 to 100,000,000.	Optional
UpGuaranteedKbps	Upstream guaranteed Kbps	N/A	Unsigned integer: Value range: 8 to 100,000,000.	Optional
DnMaxKbps	Downstream Max Kbps	N/A	Unsigned integer: Value range: 8 to 100,000,000.	Optional
UpMaxKbps	Upstream Max Kbps	N/A	Unsigned integer: Value range: 8 to 100,000,000.	Optional
DnMaxKbpsPerIP	Downstream Max Kbps per iP	N/A	Unsigned integer: Value range: 8 to 100,000,000.	Optional
UpMaxKbpsPerIP	Upstream Max Kbps Per IP	N/A	Unsigned integer: Value range: 8 to 100,000,000.	Optional. Per-IP and Per-User are exclusive.
DnMaxKbpsPerUser	Downstream Max Kbps per	N/A	Unsigned integer: Value range: 8 to 100,000,000.	Optional

Column name	Column description	Column type	Data type and restrictions	Remarks
	User			
UpMaxKbpsPerUser	Upstream Max Kbps PerUser	N/A	Unsigned integer: Value range: 8 to 100,000,000.	Optional
Priority	Stream Priority level	N/A	Unsigned integer: Value range: 1 to 7.	When the outbound bandwidth is limited, the priority of the stream is higher, the stream is prior to pass the interface.
RemarkDSCP	Dscp value	N/A	Unsigned integer: Value range: 0 to 63.	Optional
MaxConnNum	Max up connections	N/A	Unsigned integer: Value range: 1 to 12,000,000.	Optional
MaxConnNumPerIP	Max up connections per IP	N/A	Unsigned integer: Value range: 1 to 12,000,000.	Optional Per-IP and Per-User are exclusive.
MaxConnNumPerUser	Max up connections per User	N/A	Unsigned integer: Value range: 1 to 12,000,000.	Optional
MaxConnRate	Max up connections rate	N/A	Unsigned integer: Value range: 1 to 12,000,000 times per second.	Optional
MaxConnRatePerIP	Max up connections rate per IP	N/A	Unsigned integer: Value range: 1 to 12,000,000 times per second.	Optional Per-IP and Per-User are exclusive.
MaxConnRatePerUser	Max up connections rate per user	N/A	Unsigned integer: Value range: 1 to 12,000,000 times per second.	Optional
TCPMSS	TCP MSS value	N/A	Unsigned integer: Value range: 128 to 9158.	Optional

## AVC/ RuleJsonOptions

This table contains information about the AVC's rule options information.

# AVC

## AVC/TrafficParentRules

This table contains information about parent traffic rules.

### XML structure

```
<AVC>
  <TrafficParentRules>
    <Rule>
      <Position></Position>
      <RuleNumber></RuleNumber>
      <RuleName></RuleName>
      <OptionContent></OptionContent>
      <TotalCount></TotalCount>
      <FirstSonRuleNum></FirstSonRuleNum>
      <Enable></Enable>
      <TimeRange></TimeRange>
      <ProfileName></ProfileName>
    </Rule>
  </TrafficParentRules>
</AVC>
```

### Table description

Item	Description
Feature name	AVC
Table name	TrafficParentRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Position	Record the Number	Index	Unsigned integer: Value range: 0 to 200.	N/A
RuleNumber	Rule number	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
RuleName	Rule name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
OptionContent	Match criterion content	N/A	String, case-insensitive. Length: 1 to 65535 characters. Content: JSON array.	This column stores all match criteria of a parent traffic rule in the JSON array format. A JSON array is made up of JSON objects. A JSON object describes information about one match criterion type by using optionType and optionVal. The optionVal is a set of values for the match criterion. A JSON object contains a maximum of 64 characters.
TotalCount	Total number of rules	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
FirstSonRuleNum	Return the number of the first child rule	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
Enable	Set this value to true to enable the rule	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	N/A
TimeRange	Time range name	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
ProfileName	Traffic profile name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

## AVC/TrafficPolicyChildRules

This table contains information about child traffic rules.

### XML structure

```

<AVC>
  <TrafficPolicyChildRules>
    <Rule>
      <RuleNumber></RuleNumber>
      <ParentRuleNumber></ParentRuleNumber>
      <RuleName></RuleName>
      <FirstSonRuleNum></FirstSonRuleNum>
      <Enable></Enable>
      <TimeRange></TimeRange>
      <ProfileName></ProfileName>
      <OptionContent></OptionContent>
    </Rule>
  </TrafficPolicyChildRules>

```

< /AVC>

## Table description

Item	Description
Feature name	AVC
Table name	TrafficPolicyChildRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleNumber	Rule number	Index	Unsigned integer: Value range: 1 to 4294967295.	N/A
ParentRuleNumber	Number of the parent rule	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
RuleName	Rule name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
FirstSonRuleNum	Return the number of the first child rule	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
Enable	Set this value to true to enable the rule	N/A	Boolean: <ul style="list-style-type: none"><li>true.</li><li>false.</li></ul>	N/A
TimeRange	Time range name	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
ProfileName	Traffic profile name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
OptionContent	Match criterion content	N/A	String, case-insensitive. Length: 1 to 10240. Content: JSON array.	This column stores all match criteria of a parent traffic rule in the JSON array format. A JSON array is made up of JSON objects. A JSON object describes information about one match criterion type by using optionType and optionVal. The optionVal is a set of values for the match criterion. A JSON object contains a maximum of 64 characters.

# AVC/AvcRuleOptions

This table contains match criterion types.

## XML structure

```
<AVC>
  <AvcRuleOptions>
    <AvcOption>
      <AvcRuleNumber></AvcRuleNumber>
      <AvcSeqNum></AvcSeqNum>
      <AvcOptionType></AvcOptionType>
      <AvcOptionVal></AvcOptionVal>
    </AvcOption>
  </AvcRuleOptions>
</AVC>
```

## Table description

Item	Description
Feature name	AVC
Table name	AvcRuleOptions
Table type	Multi-instance table
Row name	AvcOption
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AvcRuleNumber	Rule number	Index	Unsigned integer: Value range: 1 to 4294967295.	N/A
AvcSeqNum	Sequence numbers for values of a match criterion	Index	Unsigned integer: Value range: 1 to 4294967295.	N/A
AvcOptionType	Match criterion type	N/A	Enumeration: <ul style="list-style-type: none"><li>• 1—SourceZones.</li><li>• 2—DestZones.</li><li>• 3—SourceAddressSets.</li><li>• 4—DestAddressSets.</li><li>• 5—Users.</li><li>• 6—UserGroups.</li><li>• 7—Applications.</li><li>• 8—AppGroups.</li><li>• 9—Services.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>10—Dscp.</li> </ul>	
AvcOptionVal	Match criterion value	N/A	String, case-insensitive. Length: 1 to 65535 characters . Content: JSON array. Such as: [Optionval1,optionval2,...].	A JSON array contains strings of 1 to 64 characters.

## AVC/TrafficPolicyQuery

This table contains information about each match criterion type.

### XML structure

```

<AVC>
  <TrafficPolicyQuery>
    <RuleQuery>
      <UserID></UserID>
      <Position></Position>
      <RuleNameFilter></RuleNameFilter>
      <EnableFilter></EnableFilter>

## AVC

### TrafficParentRules

This table contains information about parent rules.

### Properties

Column name	Column description	Column type	Data type and restrictions	Remarks
Position	Record the Number	Index	Unsigned integer: Value range: 0 to 200.	N/A
RuleNumber	Rule number	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
RuleName	Rule name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
OptionContent	Match criterion content	N/A	String, case-insensitive. Length: 1 to 65535 characters. Content: JSON array.	This column stores all match criteria of a parent traffic rule in the JSON array format. A JSON array is made up of JSON objects. A

Column name	Column description	Column type	Data type and restrictions	Remarks
				JSON object describes information about one match criterion type by using optionType and optionVal. The optionVal is a set of values for the match criterion. A JSON object contains a maximum of 64 characters.
TotalCount	Total number of rules	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
FirstSonRuleNum	Return the number of the first child rule	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
Enable	Set this value to true to enable the rule	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	N/A
TimeRange	Time range name	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
ProfileName	Traffic profile name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

## Example

Example 1: Get data from resource TrafficParentRules.

### Json Request

GET /api/v2/AVC/TrafficParentRules

### Json Response

200 OK

```
{
  TrafficParentRules:
  [{
    "RuleNumber" : 1,
    "RuleName" : "rlName",
    "Position" : 1,
    "OptionContent": "[
      {
        "optionType" : 1,
        "optionVal" : ["DMZ", "Local", "Management"]
      }
    ]"
```

```

    },
    {
        "optionType" : 2,
        "optionVal" : ["10","102","104"]
    },
    .
    .
    .
    ,{
        "optionType" : 10,
        "optionVal" : ["18","22"]
    }],
    "TotalCount" : 986,
    "Enable" : "true",
    "TimeRange" : "time1",
    "ProfileName" : "ftp"
}
}
}

```

## TrafficPolicyChildRules

This table contains information about child traffic rule.

### Properties

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleNumber	Rule number	Index	Unsigned integer: Value range: 1 to 4294967295.	N/A
ParentRuleNumber	Number of the parent rule	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
RuleName	Rule name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
FirstSonRuleNum	Return the number of the first child rule	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
Enable	Set this value to true to enable the rule	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	N/A
TimeRange	Time range name	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Traffic profile name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
OptionContent	Match criterion content	N/A	String, case-insensitive. Length: 1 to 10240 characters. Content: JSON array.	This column stores all match criteria of a parent traffic rule in the JSON array format. A JSON array is made up of JSON objects. A JSON object describes information about one match criterion type by using optionType and optionVal. The optionVal is a set of values for the match criterion. A JSON object contains a maximum of 64 characters.

## Example

Example 1: Get data from resource TrafficPolicyChildRules.

### Json Request

GET /api/v2/AVC/TrafficPolicyChildRules

### Json Response

200 OK

```
{
  TrafficPolicyChildRules:
  [{
    "RuleNumber" : 1,
    "ParentRuleNumber" : 2
    "RuleName" : "rlName",
    "Enable" : "true",
    "TimeRange" : "time1",
    "ProfileName" : "ftp",
    "OptionContent" : "[
      {
        "optionType" : 1,
        "optionVal" : ["DMZ","Local","Management"]
      },
      {
        "optionType" : 2,
```

```

        "optionVal" : ["10","102","104"]
    },
    .
    .
    .
    ,{
        "optionType" : 10,
        "optionVal" : ["18","22"]
    }],
    }
}

```

## AvcRuleOptions

This table contains match criterion types.

### Properties

Column name	Column description	Column type	Data type and restrictions	Remarks
AvcRuleNumber	Rule number	Index	Unsigned integer: Value range: 1 to 4294967295.	N/A
AvcSeqNum	Sequence numbers for values of a match criterion	Index	Unsigned integer: Value range: 1 to 4294967295.	N/A
AvcOptionType	Match criterion type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—SourceZones.</li> <li>• 2—DestZones.</li> <li>• 3—SourceAddressSets.</li> <li>• 4—DestAddressSets.</li> <li>• 5—Users.</li> <li>• 6—UserGroups.</li> <li>• 7—Applications.</li> <li>• 8—AppGroups.</li> <li>• 9—Services.</li> <li>• 10—Dscp.</li> </ul>	N/A
AvcOptionVal	Match criterion value	N/A	String, case-insensitive. Length: 1 to 65535 characters. Content: JSON array. Such as: [Optionval1,optionval2,...].	N/A

## Example

Example 1: Get data from resource AvcRuleOptions.

### Json Request

GET /api/v2/AVC/AvcRuleOptions

### Json Response

200 OK

```
{
  AvcRuleOptions:
  [{
    "AvcRuleNumber" : 1,
    "AvcSeqNum" : 8
    "AvcOptionType" : 7,
    "AvcOptionVal" : ["南阳网","051 健康","07073 游戏网","10010","中国移动官网","圣才学习网","1024 商务网"]
  }]
}
```

## TrafficPolicyQuery

This table contains information about each match criterion type.

## Properties

Column name	Column description	Column type	Data type and restrictions	Remarks
UserID	Record the user ID	Index	Unsigned integer: Value range: 1 to 65535.	N/A
Position	Record the last query position	Index	Unsigned integer: Value range: 0 to 200.	N/A
RuleNameFilter	Rule name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
EnableFilter	Set this value to true to enable the rule	N/A	Unsigned integer: <ul style="list-style-type: none"><li>0—Invalid.</li><li>1—disbale.</li><li>2—enable.</li></ul>	N/A
TimeRangeFilter	Time range name	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
ProfileNameFilter	Traffic profile name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcZoneFilter	Source zone name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
DestZoneFilter	Destination zone name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
SrcAddrSetFilter	Source address object name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
DestAddrSetFilter	Destination address object name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
UserFilter	User name	N/A	String, case-insensitive. Length: 1 to 55 characters.	N/A
UserGroupFilter	User group name	N/A	String, case-insensitive. Length: 1 to 200 characters.	N/A
ApplicationFilter	Application name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
AppGroupFilter	Application group name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ServiceFilter	Service name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
DscpFilter	DSCP value	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
ParentRuleNumber	Parent rule number	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
RuleNumber	Child rule number	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
RuleName	Rule name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
OptionContent	Match criterion content	N/A	String, case-insensitive. Length: 1 to 65535 characters. Content: JSON array.	This column stores all match criteria of a parent traffic rule in the JSON array format. A JSON array is made up of JSON objects. A JSON object describes information about one match criterion type by using optionType and optionVal. The optionVal is a set of values for the match criterion. A JSON object contains a maximum of 64 characters.
TotalCount	Total number of rules	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
Enable	Set this value to	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	true to enable the rule		<ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	
TimeRange	Time range name	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
ProfileName	Traffic profile name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
IsExistSonFlag	Set this value to the first son traffic ID to sign if this traffic has sons	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
DomainFilter	Domain value	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A

## Example

Example 1: Get data from resource TrafficPolicyQuery.

### Json Request

GET /api/v2/AVC/TrafficPolicyQuery

### Json Response

200 OK

```
{
  TrafficPolicyQuery:
  [{
    "UserID" : 2,
    "Position" : 1,
    "ApplicationFilter" : "南阳网",
    "RuleNumber" : 2,
    "RuleName" : "rlName",
    "OptionContent" : [
      {
        "OptionType" : 1,
        "OptionVal" : ["DMZ","Local","Management"]
      },
      {
        "OptionType" : 2,
        "OptionVal" : ["10","102","104"]
      }
    ]
  }
]
```

```

    .
    .
    .
    {
        "OptionType" : 5,
        "OptionVal" : [{"name":"xxx","domain":"xxx"}, {"name":"xxx"}]
    }
    ,{
        "OptionType" : 6,
        "OptionVal" : [{"name":"xxx","domain":"xxx"}, {"name":"xxx"}]
    }
    ,{
        "OptionType" : 7,
        "OptionVal" : ["南阳网","051 健康","07073 游戏网","10010","中国移动官网","圣才学习
网","1024 商务网"]
    }
    .
    .
    .
    ,{
        "OptionType" : 10,
        "OptionVal" : ["18","22"]
    }
    },
    "TotalCount" : 999,
    "Enable" : "true",
    "TimeRange" : "time1",
    "ProfileName" : "ftp"
    "IsExistSonFlag" : 5
    }}
}

```

## TrafficQueueParentRule

This table contains information about the parent rule for a child rule.

# Properties

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleNumber	Child rule number	Index	Unsigned integer: Value range: 1 to 4294967295.	N/A
PRuleNumber	Parent rule number	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
RuleName	Rule name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
OptionContent	Match criterion content	N/A	String, case-insensitive. Length: 1 to 10240 characters. Content: JSON array.	This column stores all match criteria of a parent traffic rule in the JSON array format. A JSON array is made up of JSON objects. A JSON object describes information about one match criterion type by using optionType and optionVal. The optionVal is a set of values for the match criterion. A JSON object contains a maximum of 64 characters.
Enable	Set this value to true to enable the rule	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	N/A
TimeRange	Time range name	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
ProfileName	Traffic profile name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

## Example

Example 1: Get data from resource TrafficQueParentRule.

### Json Request

GET /api/v2/AVC/TrafficQueParentRule

### Json Response

200 OK

```
{
  TrafficQueParentRule:
  [{
    "RuleNumber" : 2,
    "PRuleNumber" : 0
```

```

"RuleName" : "rlName",
"OptionContent" : [
{
"optionType" : 1,
"optionVal" : ["DMZ","Local","Management"]
},
.
.
.
{
"optionType" : 7,
"optionVal" : ["051 健康","07073 游戏网","10010","中国移动官网","圣才学习网","1024
商务网"]
},
.
.
.
{
"optionType" : 10,
"optionVal" : ["18","22"]
}},
"Enable" : "true",
"TimeRange" : "time1",
"ProfileName" : "ftp"
}]
}

```

## MoveTrafficPolicyRule

This table contains information about the AVC's rule number information.

### Properties

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleNumber	Rule number	Index	Unsigned integer: Value range: 1 to 4294967295.	Rule number is the match order.
NextRuleNumber	Next rule's rule number	N/A	Unsigned integer: Value range: 1 to 4294967295.	Singel value

## Example

Example 1: Change data for the assigned instance.

### Json Request

PUT /api/v2/AVC/MoveTrafficPolicyRule

```
{
  "RuleNumber" : 2
  "NextRuleNumber" : 1
}
```

### Json Response

204 No Content

## TrafficPolicyRules

This table contains information about the AVC's rule information.

## Properties

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleNumber	Rule number	Index	Unsigned integer: Value range: 1 to 4294967295.	Rule number is the match order.
ParentRuleNumber	Parent rule number	N/A	Unsigned integer: Value range: 1 to 4294967295.	Optional
RuleName	name	N/A	String, case-insensitive. Length: 1 to 63 characters.	The name cannot be the same with its siblings. Mandatory
Enable	Set this value to true to disable the rule	N/A	Boolean: <ul style="list-style-type: none"><li>true.</li><li>false.</li></ul>	Optional
TimeRange	Time range name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Optional, Single value
ProfileName	Traffic profile name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Optional
ModelId	Model rule number	N/A	Unsigned integer: Value range: 1 to 4294967295.	Optional

## Example

Example 1: Get data from resource TrafficPolicyRules.

### Json Request

GET /api/v3/AVC/TrafficPolicyRules

### Json Response

200 OK

```
{TrafficPolicyRules:[{
  "RuleNumber" : "7",
  "RuleName" : "test4",
  "Enable" : "true",
  "TimeRange" : "timer1",
  "Action" : {
    "ProfileName" : "profile1"
  }
}]}
```

Example 2: Add new instance for resource table

### Json Request

POST /api/v3/AVC/TrafficPolicyRules

```
{
  "RuleName" : test4,
  "TimeRange" : timer1,
  "ProfileName" : profile1
}
```

### Json Response

201 Created

Example 3: Change data for the assigned instance.

### Json Request

PUT /api/v3/AVC/TrafficPolicyRules

```
{
  "RuleNumber" : 7,
  "RuleName" : "test4",
  "TimeRange" : "timer2",
  "ProfileName" : "profile2"
}
```

### Json Response

204 No Content

Example 4: Delete the assigned instance from resource table.

### Json Request

DELETE /api/v3/AVC/TrafficPolicyRules

```
{  
  "RuleNumber" : 7  
}
```

### Json Response

204 No Content

## RuleOptions

This table contains some multiple information about the AVC's rule option.

## Properties

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleNumber	Rule number	Index	Unsigned integer: Value range: 1 to 4294967295.	N/A
OptionType	Type of the configuration	Index	Enumeration: <ul style="list-style-type: none"><li>• 1—SourceZones.</li><li>• 2—DestZones.</li><li>• 3—SourceAddressSets.</li><li>• 4—DestAddressSets.</li><li>• 5—Users.</li><li>• 6—UserGroups.</li><li>• 7—Applications.</li><li>• 8—AppGroups.</li><li>• 9—Services.</li><li>• 10—Dscp.</li></ul>	N/A
OptionVal	Value of the special type configuration	Index	String, case-insensitive. Length: 1 to 63 characters(for OptionTypes 7 and 8). Length: 1 to 31 characters (for OptionTypes 1 through 4, and OptionType 9). Length: 1 to 100 characters (for OptionType 10). Length: 1 to 480 characters (for OptionTypes 5 and 6).	Values of OptionTypes 5 and 6 are in Json format.

# Example

Example 1: Get data from resource RuleOptions.

## Json Request

GET /api/v3/AVC/RuleOptions

## Json Response

200 OK

```
{"RuleOptions":[{"RuleNumber":1,"OptionType":3,"OptionVal":"scrip1"},{"RuleNumber":1,"OptionType":5,"OptionVal":{"name":"xxx","domain":"xxx"}},{"RuleNumber":1,"OptionType":6,"OptionVal":{"name":"xxx","domain":"xxx"}}]}
```

Example 2: Add new instance for resource table

## Json Request

POST /api/v3/AVC/RuleOptions

```
{  "RuleNumber":1,  "OptionType":5,  "OptionVal":{"name":"xxx","domain":"xxx"}}
```

## Json Response

201 Created

Example 3: Delete the assigned instance from resource table.

### Json Request

DELETE /api/v3/AVC/RuleOptions

```
{  
  "RuleNumber" : 1,  
  "OptionType" : 5,  
  "OptionVal" : {"name":"xxx","domain":"xxx"}  
}
```

### Json Response

204 No Content

## TrafficPolicyProfiles

This table contains information about the AVC traffic policy's Control profiles.

### Properties

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileNumber	Profile number	Index	Unsigned integer: Value range:1 to 4294967295.	Rule option is the match order.
ProfileName	Profile name, which must be unique	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ReferenceMode	Rule shared mode	N/A	Unsigned integer: <ul style="list-style-type: none"><li>0—per-rule.</li><li>1—rule-shared.</li></ul>	N/A
IpAverageEnable	Ip average enable	N/A	Boolean: <ul style="list-style-type: none"><li>true.</li><li>false.</li></ul>	N/A
TotalMaxKbps	Total max kbps	N/A	Unsigned integer: Value range:8 to 100,000,000.	N/A
TotalGuaranteedKbps	Total guaranteed kbps	N/A	Unsigned integer: Value range:8 to 100,000,000.	N/A
TotalGuaranteedKbpsPerIP	Total guaranteed kbps per IP	N/A	Unsigned integer: Value range:8 to 100,000,000.	N/A
TotalGuaranteedKbpsPerUser	Total guaranteed kbps per user	N/A	Unsigned integer: Value range:8 to 100,000,000.	N/A
TotalMaxKbpsPerIP	Total max kbps per IP	N/A	Unsigned integer: Value range:8 to 100,000,000.	N/A
TotalMaxKbpsPerUser	Total max kbps per user	N/A	Unsigned integer:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range:8 to 100,000,000.	
DnGuaranteedKbpsPerIP	Down guaranteed kbps per IP	N/A	Unsigned integer: Value range:8 to 100,000,000.	N/A
UpGuaranteedKbpsPerIP	Up guaranteed kbps per IP	N/A	Unsigned integer: Value range:8 to 100,000,000.	N/A
DnGuaranteedKbpsPerUser	Down guaranteed kbps per user	N/A	Unsigned integer: Value range:8 to 100,000,000.	N/A
UpGuaranteedKbpsPerUser	Up guaranteed kbps per user	N/A	Unsigned integer: Value range:8 to 100,000,000.	N/A
DnGuaranteedKbps	Downstream Guaranteed bandwidth	N/A	Unsigned integer: Value range:8 to 100,000,000.	Optional
UpGuaranteedKbps	Upstream guaranteed Kbps	N/A	Unsigned integer: Value range:8 to 100,000,000.	Optional
DnMaxKbps	Downstream Max Kbps	N/A	Unsigned integer: Value range:8 to 100,000,000.	Optional
UpMaxKbps	Upstream Max Kbps	N/A	Unsigned integer: Value range:8 to 100,000,000.	Optional
DnMaxKbpsPerIP	Downstream Max Kbps per IP	N/A	Unsigned integer: Value range:8 to 100,000,000.	Optional
UpMaxKbpsPerIP	Upstream Max Kbps Per IP	N/A	Unsigned integer: Value range:8 to 100,000,000.	Optional. Per-IP and Per-User are exclusive.
DnMaxKbpsPerUser	Downstream Max Kbps per User	N/A	Unsigned integer: Value range:8 to 100,000,000.	Optional
UpMaxKbpsPerUser	Upstream Max Kbps PerUser	N/A	Unsigned integer: Value range:8 to 100,000,000.	Optional
Priority	Stream Priority	N/A	Unsigned integer: Value range:1 to 7.	When the outbound bandwidth is limited, the priority of the stream is higher, the stream is prior to pass the interface.
RemarkDSCP	Dscp value	N/A	Unsigned integer: Value range:0 to 63.	Optional
MaxConnNum	Max up connections	N/A	Unsigned integer: Value range:1 to 12,000,000.	Optional
MaxConnNumPerIP	Max up connections per IP	N/A	Unsigned integer: Value range:1 to 12,000,000.	Optional Per-IP and Per-User are exclusive
MaxConnRate	Max up connections rate	N/A	Unsigned integer: Value range:1 to 12,000,000	Optional

Column name	Column description	Column type	Data type and restrictions	Remarks
			times per second.	
MaxConnRatePerIP	Max up connections rate per IP	N/A	Unsigned integer: Value range:1 to 12,000,000 times per second.	Optional Per-IP and Per-User are exclusive
MaxConnRatePerUser	Max up connections rate per user	N/A	Unsigned integer: Value range:1 to 12,000,000 times per second.	Optional
TCPMSS	TCP MSS value	N/A	Unsigned integer: Value range: 128 to 9158.	Optional

## Example

Example 1: Get data from resource TrafficPolicyProfile.

### Json Request

GET /api/v3/AVC/TrafficPolicyProfile

### Json Response

200 OK

```
{
  "TrafficPolicyProfiles": [
    {
      "ProfileNumber": "1",
      "ProfileName": "profile1",
      "DnMaxKbps": "10000",
      "UpMaxKbps": "10000",
      "DnGuaranteedKbps": "10000",
      "UpGuaranteedKbps": "10000",
      "DnMaxKbpsPerIP": "10000",
      "UpMaxKbpsPerIP": "10000",
      "RemarkDSCP": "30",
      "MaxConnNum": "1000",
      "MaxConnNumPerIP": "100",
      "MaxConnRate": "1000",
      "MaxConnRatePerIP": "100",
      "TCPMSS": "128"
    }
  ]
}
```

Example 2: Add new instance for resource table

### Json Request

POST /api/v3/AVC/TrafficPolicyProfile

```
{
  "ProfileName" : "profile1",
  "DnGuaranteedKbps" : 10000,
  "UpGuaranteedKbps" : 10000,
  "DnMaxKbps" : 10000,
  "UpMaxKbps" : 10000,
  "DnMaxKbpsPerIP" : 10000,
  "UpMaxKbpsPerIP" : 10000
  "MaxConnNum" : 1000,
  "MaxConnNumPerIP" : 100,
  "MaxConnRate" : 1000,
  "MaxConnRatePerIP" : 100
  "RemarkDSCP" : 30,
  "Priority" : 1,
  "TCPMSS" : "128"
}
```

### Json Response

201 Created

Example 3: Change data for the assigned instance.

### Json Request

PUT /api/v3/AVC/TrafficPolicyProfile

```
{
  "ProfileNumber" : 5
  "DnMaxKbpsPerIP" : 10000,
  "UpMaxKbpsPerIP" : 10000
  "MaxConnNum" : 1000,
  "MaxConnNumPerIP" : 100,
  "MaxConnRate" : 1000,
  "MaxConnRatePerIP" : 100
  "RemarkDSCP" : 30,
  "Priority" : 1,
  "TCPMSS" : "128"
}
```

### Json Response

204 No Content

Example 4: Delete the assigned instance from resource table.

#### Json Request

DELETE /api/v3/AVC/TrafficPolicyProfile

```
{
  "ProfileNumber" : 5
}
```

#### Json Response

204 No Content

## RuleJsonOptions

This table contains information about the AVC's rule options information.

### Properties

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleJsonNumber	Rule number	Index	Unsigned integer: Value range: 1 to 4294967295.	Rule number is the match order.
OptionJsonType	Type of the configuration	Index	Enumeration: <ul style="list-style-type: none"><li>• 1—SourceZones.</li><li>• 2—DestZones.</li><li>• 3—SourceAddressSets.</li><li>• 4—DestAddressSets.</li><li>• 5—Users.</li><li>• 6—UserGroups.</li><li>• 7—Applications.</li><li>• 8—AppGroups.</li><li>• 9—Services.</li><li>• 10—Dscp.</li></ul>	N/A
OptionJsonVal	Json values of the special type configurations	Index	String, case-insensitive. Length: 1 to 65535 characters.	N/A

### Example

Example 1: Add new instance for resource table

#### Json Request

POST /api/v3/AVC/RuleJsonOptions

```
{
  RuleJsonNumber : 1,
```

```

OptionJsonType : 5,
OptionJsonVal : {"aaa": [{"name":"xxx","domain":"xxx"}, {"name":"xxx"}]}
}

```

### Json Response

201 Created

## AVCSpecification

This table contains the AVC specification information.

### Properties

Column name	Column description	Column type	Data type and restrictions	Remarks
SupportDomain	Whether the function of AVC domain is supported.	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	N/A

### Example

Example 1: Get AVC specification information.

#### Json Request

GET /api/v3/AVC/ AVCSpecification

#### Json Response

200 OK

```

{
  AVCSpecification:
  [{
    "SupportDomain" : "true"
  }]
}

```

RemoteBackupGrpEnable	Whether enable the remote-backup group.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	N/A
BackupEnable	Whether enable hot backup	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	N/A
BackupMode	Remote-backup group mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—active/standby</li> <li>1—dual/active.</li> </ul>	N/A
BackupRole	Remote-backup group role.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—master</li> <li>1—standby.</li> </ul>	N/A
DelayUpTime	Device delay up	N/A	Unsigned integer. Value range: 0 to 50. Default: 1.	The unit is minutes.
AutoSynEnable	Whether enable the switch of auto-synchronized configuration.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	N/A
ConfigCheckEnable	Whether enable the switch of checking configuration.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	N/A
ConfigCheckTimer	Check configuration timer	N/A	Unsigned integer. Value range: 1 to 168. Default: 24.	The unit is hours.
BackupDataChannel	Backup data channel	N/A	Members include: <ul style="list-style-type: none"> <li>BackupInterface.</li> <li>PeerIp.</li> </ul>	N/A
BackupInterface	Interface index or interface name	N/A	String. case-sensitive. Length: 1 to 99 characters.	This column can only be the index of local VA, global VA or Layer 3 interfaces except loopback, NULL, FC, FCB and encrypt interfaces.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration

Column name	Column description	Column type	Data type and restrictions	Remarks
				Reference.
Sourcelp	Source ip address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
PeerIp	Peer ip address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
PeerPort	Peer Port	N/A	Unsigned integer. Value range: 1024 to 65535.	NA

# Vtunnel

## Vtunnel/TunnelServer

This table contains Vtunnel server configuration information.

### XML structure

```
<Vtunnel>
  <TunnelServer>
    <Port></Port>
    <SrcAddr></SrcAddr>
  </TunnelServer>
</Vtunnel>
```

### Table description

Item	Description
Feature name	Vtunnel
Table name	TunnelServer
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Port	TCP port of Vtunnel	N/A	Unsigned integer. Value range: 1 to 65535.	Example:8000
SrcAddr	The source IPv4address of the Vtunnel	N/A	String, dotted decimal notation.	IPv4 example: 1.1.1.1.

# Vtunnel/IPv4Address

This table contains Vtunnel IPv4Address configuration information.

## XML structure

```
<Vtunnel>
  <IPv4Address>
    <IPv4Addr></IPv4Addr>
    <IPv4AddrMask></IPv4AddrMask>
  </IPv4Address>
</Vtunnel>
```

## Table description

Item	Description
Feature name	Vtunnel
Table name	IPv4Address
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4Addr	The IPv4address of the vtunnel interface	N/A	String, dotted decimal notation.	IPv4 example: 1.1.1.1.
IPv4AddrMask	The IPv4address Mask	N/A	String, dotted decimal notation.	IPv4 netmask: 255.255.255.0.

# Vtunnel/Nat

This table contains Vtunnel Nat configuration information.

## XML structure

```
<Vtunnel>
  <Nat>
    <NatEnable></NatEnable>
  </Nat>
</Vtunnel>
```

## Table description

Item	Description
Feature name	Vtunnel
Table name	Nat
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NatEnable	Nat enable	N/A	Boolean: <ul style="list-style-type: none"><li>true—Enable.</li><li>false—Disable(default).</li></ul>	N/A

## Vtunnel/ClientMap

This table contains Vtunnel ClientMap configuration information.

## XML structure

```
<Vtunnel>
  <ClientMap>
    <Map>
```

```

    <DstAddr></DstAddr>
    <DstAddrMask></DstAddrMask>
    <ClientAddr></ClientAddr>
  </Map>
</ClientMap>
</Vtunnel>

```

## Table description

Item	Description
Feature name	Vtunnel
Table name	ClientMap
Table type	Multi-instance table
Row name	Map
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DstAddr	The Destination IPv4address of the tunnel	Index	String, dotted decimal notation.	IPv4 example: 1.1.1.1.
DstAddrMask	The Destination IPv4address mask	Index	String, dotted decimal notation.	IPv4 netmask: 255.255.255.0. The Destination address is the value of DstAddr and DstAddrMask.
ClientAddr	The Destination IPv4address of the tunnel	Index	String, dotted decimal notation.	IPv4 example: 1.1.1.1.

# Vtunnel

## Vtunnel/TunnelServer

This table contains Vtunnel server configuration information.

### XML structure

```
<Vtunnel>
  <TunnelServer>
    <Port></Port>
    <SrcAddr></SrcAddr>
  </TunnelServer>
</Vtunnel>
```

### Table description

Item	Description
Feature name	Vtunnel
Table name	TunnelServer
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Port	TCP port of Vtunnel	N/A	Unsigned integer. Value range: 1 to 65535.	Example:8000
SrcAddr	The source IPv4address of the Vtunnel	N/A	String, dotted decimal notation.	IPv4 example: 1.1.1.1.

# Vtunnel/IPv4Address

This table contains Vtunnel IPv4Address configuration information.

## XML structure

```
<Vtunnel>
  <IPv4Address>
    <IPv4Addr></IPv4Addr>
    <IPv4AddrMask></IPv4AddrMask>
  </IPv4Address>
</Vtunnel>
```

## Table description

Item	Description
Feature name	Vtunnel
Table name	IPv4Address
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4Addr	The IPv4address of the Vtunnel interface	N/A	String, dotted decimal notation.	IPv4 example: 1.1.1.1.
IPv4AddrMask	The IPv4address Mask	N/A	String, dotted decimal notation.	IPv4 netmask: 255.255.255.0.

# Vtunnel/Nat

This table contains Vtunnel Nat configuration information.

## XML structure

```
<Vtunnel>
  <Nat>
    <NatEnable></NatEnable>
  </Nat>
</Vtunnel>
```

## Table description

Item	Description
Feature name	Vtunnel
Table name	Nat
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NatEnable	Nat enable	N/A	Boolean: <ul style="list-style-type: none"><li>true—Enable.</li><li>false—Disable.</li></ul>	N/A

## Vtunnel/ClientMap

This table contains Vtunnel ClientMap configuration information.

## XML structure

```
<Vtunnel>
  <ClientMap>
    <Map>
      <DstAddr></DstAddr>
      <DstAddrMask></DstAddrMask>
      <ClientAddr></ClientAddr>
    </Map>
  </ClientMap>
</Vtunnel>
```

```

    </Map>
  </ClientMap>
</Vtunnel>

```

## Table description

Item	Description
Feature name	Vtunnel
Table name	ClientMap
Table type	Multi-instance table
Row name	Map
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DstAddr	The Destination IPv4address of the tunnel	Index	String, dotted decimal notation.	IPv4 example: 1.1.1.1.
DstAddrMask	The Destination IPv4address mask	Index	String, dotted decimal notation.	IPv4 netmask: 255.255.255.0.
ClientAddr	The Destination IPv4address of the tunnel	Index	String, dotted decimal notation.	IPv4 example: 1.1.1.2.

## Vtunnel/TunnelSessions

This table contains Vtunnel Sessions information.

## XML structure

```

<Vtunnel>
  <TunnelSessions>
    <TunnelSession>

```

```

    <ClientIPAddr></ClientIPAddr>
    <ClientSerial></ClientSerial>
  </TunnelSession>
</TunnelSessions>
</Vtunnel>

```

## Table description

Item	Description
Feature name	Vtunnel
Table name	TunnelSessions
Table type	Multi-instance table
Row name	TunnelSession
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientIPAddr	The Client IPv4address of the vtunnel	Index	String, dotted decimal notation.	IPv4 example: 1.1.1.1.
ClientSerial	The equipment serial number of the client	N/A	String. Length: 1 to 128 characters	example: NXM59CN013411009EA 7600.

# VAMC

## EnableAllClient

This table is used to enable all VAM clients.

### XML structure

```
<ADVPN>
  <EnableAllClient>
    <Enable></Enable>
  </EnableAllClient>
</ADVPN>
```

### Table description

Item	Description
Feature name	VAMC
Table name	EnableAllClient
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether to enable all VAM clients	NA	Boolean: <ul style="list-style-type: none"><li>true—Enable</li><li>false—Disable</li></ul>	Must not be empty.

## ResetClientFsm

This table is used to reset FSMs for VAM clients.

### XML structure

```
<ADVPN>
  <ResetClientFsm>
    <Reset>
      <IPVersion></IPVersion>
      <ClientName></ClientName>
    </Reset>
  </ResetClientFsm>
</ADVPN>
```

</ADVPN>

## Table description

Item	Description
Feature name	VAMC
Table name	ResetClientFsm
Table type	Multi-instance table
Row name	Reset
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPVersion	The type of the VAM client	Index	Enumeration: <ul style="list-style-type: none"><li>4—IPv4</li><li>6—IPv6</li></ul>	N/A
ClientName	The name of the VAM client	Index	String Length: 1 to 63 characters	Case-insensitive and contains only letters, digits, and dots (.).

## ResetAllClientFsm

This table is used to reset all VAM clients.

## XML structure

```
<ADVPN>
  <ResetAllClientFsm>
    <Reset>
      <IPVersion></IPVersion>
    </Reset>
  </ResetAllClientFsm>
</ADVPN>
```

## Table description

Item	Description
Feature name	VAMC
Table name	ResetAllClientFsm
Table type	Single-instance table
Row name	Reset
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPVersion	The version of the IP protocol	Index	Enumeration: <ul style="list-style-type: none"><li>• 4—IPv4</li><li>• 6—IPv6</li></ul>	Must not be empty.

## ResetClientStats

This table is used to clear statistics of a VAM client.

## XML structure

```
<ADVPN>
  <ResetClientStats>
    <Reset>
      <ClientName></ClientName>
    </Reset>
  </ResetClientStats>
</ADVPN>
```

## Table description

Item	Description
Feature name	VAMC
Table name	ResetClientStats
Table type	Multi-instance table
Row name	Reset
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientName	The name of the VAM client	Index	String Length: 1 to 63 characters	Case-insensitive and contains only letters, digits, and dots (.).

## ResetAllClientStats

This table is used to clear all client statistics.

## XML structure

```
<ADVPN>
  <ResetAllClientStats>
    <Reset></Reset>
  </ResetAllClientStats>
</ADVPN>
```

## Table description

Item	Description
Feature name	VAMC

## Table description

Item	Description
Feature name	VMAC
Table name	ClientFsms
Table type	Multi-instance table
Row name	Fsm
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClientName	VAM client name	Index	String Length: 1 to 63 characters	Case-insensitive and contains only letters, digits, and dots (.).

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerType	The type of the server	Index	Enumeration: <ul style="list-style-type: none"> <li>• 0—Primary server</li> <li>• 1—Secondary server</li> </ul>	N/A
IPVersion	The type of the private address under the ADVPN tunnel	Index	Enumeration: <ul style="list-style-type: none"> <li>• 0—IPv4</li> <li>• 1—IPv6</li> </ul>	N/A
EnableStatus	Whether the VAM client is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>• true—Enabled</li> <li>• false—Disabled</li> </ul>	N/A
DomainName	ADVPN domain for a VAM client	N/A	String Length: 1 to 31 characters	Case-insensitive and contains only letters, digits, and dots (.).
ServerHost	The host name of VAM server	N/A	String Length: 1 to 253 characters	Hostname can contain letters, digits, hyphens (-), and underscores (_).
ServerAddress	The VAM server host	N/A	String.	IPv4 address IPv6 address
PrivateAddress	Private address that the VAM client has registered with the VAM server.	N/A	String.	IPv4 address IPv6 address
TunnelID	Tunnel ID	N/A	Unsigned integer	N/A
FsmState	Current state of the VAM client FSM	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—Offline</li> <li>• 1—Init1</li> <li>• 2—Init2</li> <li>• 3—Reg</li> <li>• 4—Online1</li> <li>• 5—Online2</li> <li>• 6—Dumb</li> </ul>	N/A
ClientType	VAM client type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—Unknown</li> <li>• 1—Spoke</li> <li>• 2—Hub</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
HoldingTime	Duration that the VAM client has been in the current state	N/A	Unsigned integer	Unit: seconds
EncryptionAlg	Negotiated encryption algorithm	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Unknown</li> <li>1—None</li> <li>2—DES</li> <li>3—3DES</li> <li>4—AES-CBC-128</li> <li>5—AES-CBC-192</li> <li>6—AES-CBC-256</li> <li>7—AES-CTR-128</li> <li>8—AES-CTR-192</li> <li>9—AES-CTR-256</li> </ul>	N/A
AuthenticationAlg	Negotiated authentication algorithm	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Unknown</li> <li>1—None</li> <li>2—HMAC-MD5-96</li> <li>3—HMAC-MD5</li> <li>4—HMAC-SHA1-96</li> <li>5—HMAC-SHA1</li> <li>6—HMAC-SHA2-256</li> <li>7—HMAC-AES-XCBC-MAC</li> </ul>	N/A
KeepaliveInterval	The keepalive interval	N/A	Unsigned integer Value range: 5 to 65535	Unit: second
KeepaliveCount	The maximum number of keepalive retries	N/A	Unsigned integer Value range: 1 to 6	N/A
HubsNum	Number of hubs on the VAM server	N/A	Unsigned integer	N/A

## IPv4ShortcutStats

This table displays IPv4 spoke-to-spoke tunnel establishment rule statistics for VAM clients.

## XML structure

```
<ADVPN>
  <IPv4ShortcutStats>
    <IPv4Shortcut>
      <ClientName></ClientName>

# VAMS

## EnableAllDomains

This table is used to enable the VAM server for all ADVPN domains.

### XML structure

```
<VAMS>
  <EnableAllDomains>
    <Enable></Enable>
  </EnableAllDomains>
</VAMS>
```

### Table description

Item	Description
Feature name	VAMS
Table name	EnableAllDomains
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether to enable the VAM server for all ADVPN domains	N/A	Boolean: <ul style="list-style-type: none"><li>true—Enable</li><li>false—Disable</li></ul>	Must not be empty.

## ResetAllAddressMapInfo

This table is used to clear all private-public address mapping information registered by VAM clients on the VAM server, by specifying the IP version of private addresses.

### XML structure

```
<VAMS>
  <ResetAllAddressMapInfo>
    <Reset>
      <IPVersion></IPVersion>
    </Reset>
  </ResetAllAddressMapInfo>
</VAMS>
```

```

    </Reset>
  </ResetAllAddressMapInfo>
</VAMS>

```

## Table description

Item	Description
Feature name	VAMS
Table name	ResetAllAddressMapInfo
Table type	Single-instance table
Row name	Reset
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPVersion	The IP version of private addresses	N/A	Enumeration: <ul style="list-style-type: none"> <li>4—IPv4</li> <li>6—IPv6</li> </ul>	Must not be empty.

## ResetAddressMapInfo

This table is used to clear IPv4 private-public address mapping information registered by VAM clients on the VAM server.

## XML structure

```

<VAMS>
  <ResetAddressMapInfo>
    <Reset>
      <IPVersion></IPVersion>
      <AdvpnDomainName></AdvpnDomainName>
      <PrivateAddress></PrivateAddress>
    </Reset>
  </ResetAddressMapInfo>
</VAMS>

```

## Table description

Item	Description
Feature name	VAMS
Table name	ResetAddressMapInfo

Item	Description
Table type	Multi-instance table
Row name	Reset
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPVersion	The IP version of private addresses	Index	Enumeration: <ul style="list-style-type: none"> <li>4—IPv4</li> <li>6—IPv6</li> </ul>	Must not be empty.
AdvpnDomainName	ADVPN domain name	Index	String Length: 1 to 31 characters	Case-insensitive and contains only letters, digits, and dots (.).
PrivateAddress	Private address	N/A	String	If this column is not specified, all map information of the specified ADVPN domain will be deleted.

## ResetAllDomainsStats

This table is used to clear statistics about all ADVPN domains on the VAM server.

## XML structure

```
<VAMS>
  <ResetAllDomainsStats>
    <Reset></Reset>
  </ResetAllDomainsStats>
</VAMS>
```

## Table description

    </PreSharedKey>
    <Enable></Enable>
  </AdvpnDomain>
</AdvpnDomains>
</VAMS>

```

## Table description

Item	Description
Feature name	VAMS
Table name	AdvpnDomains
Table type	Multi-instance table
Row name	AdvpnDomain
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	ADVPN domain name.	Index	String Length: 1 to 31 characters	Case-insensitive and contains only letters, digits, and dots (.).
DomainID	The ID of an ADVPN domain.	N/A	Unsigned integer Value range: 1 to 65535	An unique ID must be specified when you create an ADVPN domain.

Column name	Column description	Column type	Data type and restrictions	Remarks
AuthenAlgList	The algorithms for VAM protocol packet authentication	Data structure	Members include: <ul style="list-style-type: none"> <li>AuthenAlgItem</li> </ul>	AuthenAlgItem: the maxOccurs is 5.
AuthenAlgItem	The algorithm for VAM protocol packet authentication	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—NONE</li> <li>3—MD5</li> <li>5—SHA-1</li> <li>6—SHA-256</li> <li>7—AES-XCBC-MAC</li> </ul>	N/A
AuthenMethod	Authentication mode that the VAM server uses to authenticate clients	N/A	Members include: <ul style="list-style-type: none"> <li>Method</li> <li>ISPName</li> </ul>	N/A
Method	Authentication method	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—None</li> <li>2—PAP</li> <li>3—CHAP</li> </ul>	The default value is 3. If the value is 1, the ISPName will be ignored.
ISPName	ISP domain for authentication	N/A	String Length: 1 to 24 characters The default is empty	Case-insensitive and can't contain \,  , /, :, *, ?, ", <, > and @.
EncryptAlgList	The algorithms for VAM protocol packet encryption	Data structure	Members include: <ul style="list-style-type: none"> <li>EncryptAlgItem</li> </ul>	EncryptAlgItem: the maxOccurs is 9.
EncryptAlgItem	The algorithm for VAM protocol packet encryption	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—NONE</li> <li>2—DES-CBC</li> <li>3—3DES-CBC</li> <li>4—AES-CBC-128</li> <li>5—AES-CBC-192</li> <li>6—AES-CBC-256</li> <li>7—AES-CTR-128</li> <li>8—AES-CTR-192</li> <li>9—AES-CTR-256</li> </ul>	N/A
Keepalive	The parameters of keep-alive packet	Data structure	Members include: <ul style="list-style-type: none"> <li>Interval</li> <li>Retry</li> </ul>	N/A
Interval	The keepalive interval	N/A	Unsigned integer Value range: 5 to 65535 The default value is 180	Unit: second.
RetryTime	The maximum number of keepalive retries	N/A	Unsigned integer Value range: 1 to 6 The default value is 3	N/A
RetryInterval	The time interval for the server	N/A	Unsigned integer Value range: 3 to 30	Unit: second.

Column name	Column description	Column type	Data type and restrictions	Remarks
	resending request packet		The default value is 5	
PreSharedKey	The pre-shared key	Data structure	Members include: <ul style="list-style-type: none"> <li>Type</li> <li>Value</li> </ul>	N/A
Type	The form of pre-shared key	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—simple</li> <li>2—cipher</li> </ul>	If the Value is empty, the Type will be ignored.
Value	The pre-shared key	N/A	String The default value is empty	The plaintext key is a case-sensitive string of 1 to 31 characters. The ciphertext key is a case-sensitive string of 1 to 73 characters.
Enable	Whether the ADVPN domain is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable</li> <li>false—Disable</li> </ul>	The default value is false.

## HubGroups

This table is used to configure hub groups on the VAM server.

## XML structure

```

<VAMS>
  <HubGroups>
    <HubGroup>
      <DomainName></DomainName>
      <HubGroupName></HubGroupName>
      <DomainID></DomainID>
      <IPv4Shortcut>
        <AclMode></AclMode>
        <AclNum></AclNum>
        <AclName></AclName>
      </IPv4Shortcut>
      <IPv6Shortcut>
        <AclMode></AclMode>
        <AclNum></AclNum>
        <AclName></AclName>
      </IPv6Shortcut>
    </HubGroup>
  </HubGroups>
</VAMS>

```

## Table description

Item	Description
Feature name	VAMS
Table name	HubGroups
Table type	Multi-instance table
Row name	HubGroup
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	ADVPN domain name	Index	String. Length: 1 to 31 characters.	Case-insensitive and contains only letters, digits, and dots (.).
HubGroupName	Hub group name	Index	String. Length: 1 to 31 characters.	Case-insensitive and contains only letters, digits, and dots (.).
DomainID	The ID of an ADVPN domain.	N/A	Unsigned integer Value range: 1 to 65535	An unique ID must be specified when you create an ADVPN domain.
IPv4Shortcut	ACL to control establishing IPv4 spoke-to-spoke tunnels	Data structure	Members include: <ul style="list-style-type: none"> <li>• AclMode</li> <li>• AclNum</li> <li>• AclName</li> </ul>	N/A
AclMode	ACL mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—None</li> <li>• 1—ByNumber</li> <li>• 2—ByName</li> <li>• 3—All</li> </ul>	The default value is 0, which means not specifying the IPv4 shortcut interest. If the value is 3, the AclRule will be ignored. If the value is 1, AclNum works, AclName will be ignored. If the value is 2, AclName works, AclNum will be ignored.
AclNum	ACL number	N/A	Unsigned integer Value range: 2000 to 3999	2000 to 2999 for IPv4 basic ACLs. 3000 to 3999 for IPv4 advanced ACLs.
AclName	ACL Name	N/A	String. The default is empty.	Name: It must start with an English letter and to avoid confusion, it cannot be "all".

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6Shortcut	ACL to control establishing IPv6 spoke-to-spoke tunnels	Data structure	Members include: <ul style="list-style-type: none"> <li>• AclMode</li> <li>• AclNum</li> <li>• AclName</li> </ul>	N/A
AclMode	ACL mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—None</li> <li>• 1—Number</li> <li>• 2—Name</li> <li>• 3—All</li> </ul>	The default value is 0, which means not specifying the IPv4 shortcut interest. If the value is 3, the AclRule will be ignored. If the value is 1, AclNum works, AclName will be ignored. If the value is 2, AclName works, AclNum will be ignored.
AclNum	ACL number	N/A	Unsigned integer Value range: 2000 to 3999	2000 to 2999 for IPv6 basic ACLs. 3000 to 3999 for IPv6 advanced ACLs.
AclName	ACL Name	N/A	String. The default is empty.	Name: It must start with an English letter and to avoid confusion, it cannot be "all".

## IPv4Hubs

This table is used to configure the private IPv4 address of hubs on the VAM server.

## XML structure

```

<VAMS>
  <IPv4Hubs>
    <IPv4Hub>
      <DomainName></DomainName>
      <HubGroupName></HubGroupName>
      <PrivateAddress></PrivateAddress>
      <DomainID></DomainID>
      <PublicAddress>
        <IPVersion></IPVersion>
        <IPAddress></IPAddress>
      </PublicAddress>
      <AdvpnPort></AdvpnPort>
    </IPv4Hub>
  </IPv4Hubs>
</VAMS>

```

## Table description

Item	Description
Feature name	VAMS
Table name	IPv4Hubs
Table type	Multi-instance table
Row name	IPv4Hub
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	ADVPN domain name	Index	String Length: 1 to 31 characters	Case-insensitive and contains only letters, digits, and dots (.).
HubGroupName	Hub group name	Index	String Length: 1 to 31 characters	Case-insensitive and contains only letters, digits, and dots (.).
PrivateAddresses	The private IPv4 address of the hub	Index	IPv4 address	Must be an unicast address.
DomainID	The ID of an ADVPN domain.	N/A	Unsigned integer Value range: 1 to 65535	An unique ID must be specified when you create an ADVPN domain.
PublicAddress	The public IPv4 address of the hub	Data structure	Members include: <ul style="list-style-type: none"> <li>IPVersion</li> <li>IPAddress</li> </ul>	Use IPVersion to specify the IP version of the public address: IPv4, IPv6. Use IPAddress to store the public address. If you are not specify the public address, you can not specify the "PublicAddress" tag , the sub-tag "IPVersion" and "IPAddress".
IPVersion	IP version of the public address	N/A	Enumeration: <ul style="list-style-type: none"> <li>4—IPv4</li> <li>6—IPv6</li> </ul>	If IPVersion is 4, the IPAddress is an IPv4 address If IPVersion is 6, the IPAddress is an IPv6 address.
IPAddress	Public IP address	N/A	String. The default is empty.	IPv4 Address IPv6 Address
AdvpnPort	The ADVPN port number of the	N/A	Unsigned integer	If you are not specify the ADVPN port

Column name	Column description	Column type	Data type and restrictions	Remarks
	hub		Value range: 1025 to 65535	number, you can not specify the "AdvpnPort" tag.

## IPv6Hubs

This table is used to configure the private IPv6 address of hubs on the VAM server.

## XML structure

```

<VAMS>
  <IPv6Hubs>
    <IPv6Hub>
      <DomainName></DomainName>
      <HubGroupName></HubGroupName>
      <PrivateAddress></PrivateAddress>
      <DomainID></DomainID>
      <PublicAddress>
        <IPVersion></IPVersion>
        <IPAddress></IPAddress>
      </PublicAddress>
      <AdvpnPort></AdvpnPort>
    </IPv6Hub>
  </IPv6Hubs>
</VAMS>

```

## Table description

Item	Description

    </HubGroup>
  </HubGroups>
</VAMS>

```

## Table description

Item	Description
Feature name	VAMS
Table name	HubGroups
Table type	Multi-instance table
Row name	HubGroup
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	ADVPN domain name	Index	String. Length: 1 to 31 characters.	Case-insensitive and contains only letters, digits, and dots (.).
HubGroupName	Hub group name	Index	String. Length: 1 to 31 characters.	Case-insensitive and contains only letters, digits, and dots (.).
DomainID	The ID of an ADVPN domain.	N/A	Unsigned integer Value range: 1 to 65535	An unique ID must be specified when you create an ADVPN domain.
IPv4Shortcut	ACL to control establishing IPv4 spoke-to-spoke tunnels	Data structure	Members include: <ul style="list-style-type: none"> <li>• AclMode</li> <li>• AclNum</li> <li>• AclName</li> </ul>	N/A
AclMode	ACL mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—None</li> <li>• 1—ByNumber</li> <li>• 2—ByName</li> <li>• 3—All</li> </ul>	The default value is 0, which means not specifying the IPv4 shortcut interest. If the value is 3, the AclRule will be ignored. If the value is 1, AclNum works, AclName will be ignored. If the value is 2, AclName works, AclNum will be ignored.
AclNum	ACL number	N/A	Unsigned integer Value range: 2000 to 3999	2000 to 2999 for IPv4 basic ACLs. 3000 to 3999 for IPv4 advanced ACLs.
AclName	ACL name	N/A	String. The default is empty.	Name: It must start with an English letter and to avoid confusion, it cannot be "all".
IPv6Shortcut	ACL to control	Data	Members include:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	establishing IPv6 spoke-to-spoke tunnels	structure	<ul style="list-style-type: none"> <li>• AclMode</li> <li>• AclNum</li> <li>• AclName</li> </ul>	
AclMode	ACL mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—None</li> <li>• 1—Number</li> <li>• 2—Name</li> <li>• 3—All</li> </ul>	The default value is 0, which means not specifying the IPv6 shortcut interest. If the value is 3, the AclRule will be ignored. If the value is 1, AclNum works, AclName will be ignored. If the value is 2, AclName works, AclNum will be ignored.
AclNum	ACL number	N/A	Unsigned integer Value range: 2000 to 3999	2000 to 2999 for IPv6 basic ACLs. 3000 to 3999 for IPv6 advanced ACLs.
AclName	ACL name	N/A	String. The default is empty.	Name: It must start with an English letter and to avoid confusion, it cannot be "all".

## IPv4Hubs

This table displays the private IPv4 address configuration of hubs on the VAM server.

## XML structure

```

<VAMS>

## VBR/PE/SetConfiguration

This table contains PEX local forwarding capability information on a PEX.

### XML structure

```
<VBR>
  <PE>
    <SetConfiguration>
      <LocalForwarding></LocalForwarding>
      <ShutdownIfWhenOffline></ShutdownIfWhenOffline>
    </SetConfiguration>
  </PE>
</VBR>
```

### Table description

Item	Description
Feature name	VBR
Table name	SetConfiguration
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalForwarding	Whether PEX local forwarding capability is enabled	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>.</li><li><b>false</b> (default).</li></ul>	N/A
ShutdownIfWhenOffline	Whether all user-side ports will be shut down when the PEX is offline	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>.</li><li><b>false</b> (default).</li></ul>	N/A

## VBR/PE/Configuration

This table manages configuration for PEXs.

## XML structure

```
<VBR>
  <PE>
    <Configuration>
      <Save/>
      <Recover>
        <Associate></Associate>
        <Name></Name>
      </Recover>
    </Configuration>
  </PE>
</VBR>
```

## Response XML structure

```

## Table description

Item	Description
Feature name	VBR
Table name	UpgradePEXs

Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Server	IP address of the FTP server.	N/A	String, dotted decimal notation.	N/A
FtpUserName	User's name of the FTP server entered by user.	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
Password	password of the FtpUserName	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
IPEFile	Name of an .ipe image package file in the system.	N/A	String. Length: 1 to 127 characters.	N/A
PEXDeviceList	List of PEX device that user selected for upgrade.	N/A	Number string. It is a comma-separated list of PEX items. An item can be an individual PEX ID or a PEX ID range. Use a hyphen (-) to separate the start and end PEXs of a range.  The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 100,102,103,105-108,110-120.
PatchFile	Name of a patch image package file in the system.	N/A	String. Length: 1 to 127 characters.	"patch" means this is a patch image file.
Action	Specify which action to handle the patch image file.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—activate.</li> <li>2—deactivate.</li> </ul>	Action of "activate" will update the patch image file that the user selected, "deactivate" will unload the selected patch file.
DeleteIPEFile	Whether delete the .ipe image package file after decompress it.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Optional column, if not specify default is false.

## VBR/CB/Groups

This table contains PEX group information on the parent fabric.

### XML structure

```
<VBR>
  <CB>
    <Groups>
      <Group>
        <ID></ID>
        <Description></Description>
      </Group>
    </Groups>
  </CB>
</VBR>
```

### Table description

Item	Description
Feature name	VBR
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	PEX group ID.	index	Unsigned integer.	N/A
Description	PEX group description.	N/A	String, case-insensitive. Length: 1 to 79 characters. Default: PEX group XXX (XXX represents the PEX group ID).	N/A

## VBR/CB/CascadePorts

This table contains cascade port configuration information on the parent fabric.

## XML structure

```
<VBR>
  <CB>
    <CascadePorts>
      <CascadePort>
        <IfIndex></IfIndex>
        <Group></Group>
        <Associate></Associate>
        <LocalForwarding></LocalForwarding>
        <ShutdownIfWhenPEOffline></ShutdownIfWhenPEOffline>
      </CascadePort>
    </CascadePorts>
  </CB>
</VBR>
```

## Table description

Item	Description
Feature name	VBR
Table name	CascadePorts
Table type	Multi-instance table
Row name	CascadePort
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Aggregate interface index.	index	Unsigned integer.	Some versions support interface name. For more information, see the XSD document of your product.  For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
Group	PEX group ID.	N/A	Unsigned integer.	If this column has a valid value, the PEX connection capability of the aggregate interface is enabled. In other situations, the PEX connection capability of the aggregate interface is not enabled.
Associate	Associated virtual chassis number or slot number of the PEX port.	N/A	Unsigned integer.	For distributed parent devices, this object represents the virtual chassis number. For centralized parent devices, this object represents the virtual slot number.
LocalForwarding	Whether PEX local forwarding capability is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>.</li> <li>• <b>false</b> (default).</li> </ul>	N/A
ShutdownIfWhenPEOffline	Whether all user-side ports on the PEX will be shut down when the PEX is offline.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b> (default).</li> </ul>	N/A

## VBR/PE/SetConfiguration

This table contains PEX local forwarding capability information on a PEX.

### XML structure

```
<VBR>
  <PE>
    <SetConfiguration>
      <LocalForwarding></LocalForwarding>
      <ShutdownIfWhenOffline></ShutdownIfWhenOffline>
    </SetConfiguration>
  </PE>
</VBR>
```

### Table description

Item	Description
Feature name	VBR
Table name	SetConfiguration
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalForwarding	Whether PEX local forwarding capability is enabled.	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled.</li><li><b>false</b>—Not enabled.</li></ul>	N/A
ShutdownIfWhenOffline	Whether all user-side ports will be shut down when the PEX is offline.	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Shut down.</li><li><b>false</b>—Not shut down.</li></ul>	N/A

## VBR/PE/UpstreamPorts

This table contains upstreamports on the PEX.

## XML structure

```
<VBR>
  <PE>
    <UpstreamPorts>
      <UpstreamPort>
        <IfIndex></IfIndex>
        <PortInfo>
          <Name></Name>
          <Chassis></Chassis>
          <Slot></Slot>
          <SubSlot></SubSlot>
          <Combo></Combo>
        </PortInfo>
      </UpstreamPort>
    </UpstreamPorts>
  </PE>
</VBR>
```

## Table description

Item	Description
Feature name	VBR
Table name	UpstreamPorts
Table type	Multi-instance table
Row name	UpstreamPort
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	UpstreamPort IfIndex	index	Unsigned integer.	UpstreamPort IfIndex on PEX
Name	Full name of an interface	N/A	String. Length: 2 to 47 characters.	Full name of an interface on PEX
Chassis	Chassis ID which the UpstreamPort belonged to.	N/A	Unsigned integer. Value range: 0 to 65535.	If there is no chassis number, return 0.
Slot	Slot ID which the UpstreamPort belonged to.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SubSlot	SubSlot ID which the UpstreamPort belonged to.	N/A	Unsigned integer. Value range: 0 to 65535.	If there is no subslot number, return 0.

Column name	Column description	Column type	Data type and restrictions	Remarks
Combo	Combo mode of an interface	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—fiber mode</li> <li>2—copper mode</li> </ul>	Applicable to only Ethernet interfaces.

## VBR/CB/Groups

This table contains PEX group information on the parent fabric.

### XML structure

```

<VBR>
  <CB>
    <Groups>
      <Group>
        <ID></ID>
        <Description></Description>
      </Group>
    </Groups>
  </CB>
</VBR>

```

### Table description

Item	Description
Feature name	VBR
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	PEX group ID.	index	Unsigned integer.	N/A
Description	PEX group description.	N/A	String, case-insensitive. Length: 1 to 79	N/A

# VBR/CB/CascadePorts

This table contains cascade port configuration information on the parent fabric.

## XML structure

```
<VBR>
  <CB>
    <CascadePorts>
      <CascadePort>
        <IfIndex></IfIndex>
        <Group></Group>
        <Associate></Associate>
        <Member>
          <Local></Local>
          <Neighbour></Neighbour>
        </Member>
        <LocalForwarding></LocalForwarding>
        <ShutdownIfWhenPEOffline></ShutdownIfWhenPEOffline>
        <Tier></Tier>
        <Parent></Parent>
        <DeviceMAC></DeviceMAC>
      </CascadePort>
    </CascadePorts>
  </CB>
</VBR>
```

## Table description

Item	Description
Feature name	VBR
Table name	CascadePorts
Table type	Multi-instance table
Row name	CascadePort
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Aggregate interface index.	index	Unsigned integer.	Some versions support interface name. For more information, see the XSD document of your product.  For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Group	PEX group ID.	N/A	Unsigned integer.	If this column has a valid value, the PEX connection capability of the aggregate interface is enabled. In other situations, the PEX connection capability of the aggregate interface is not enabled.
Associate	Associated virtual chassis number or slot number of the PEX port.	N/A	Unsigned integer.	For distributed parent devices, this object represents the virtual chassis number.  For centralized parent devices, this object represents the virtual slot number.
Member	Member Interfaces of CascadePort	Data structure	Member: <ul style="list-style-type: none"> <li>Local</li> <li>Neighbour</li> </ul>	Multi-instance
Local	Local Interface name	N/A	String. Length: 2 to 47 characters.	N/A
Neighbour	Neighbour Interface name	N/A	String. Length: 2 to 47 characters.	N/A
LocalForwarding	Whether PEX local forwarding capability is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Not enabled.</li> </ul>	N/A
ShutdownIfWhenPEOffline	Whether all user-side ports on the PEX will be shut down when the PEX is offline.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Shut down.</li> <li><b>false</b>—Not shut down.</li> </ul>	N/A
Tier	Tier of the PEX	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Parent	Parent node of current PEX node	N/A	Unsigned integer.	If this column has an invalid value 0xFFFF, then current PEX's parent is CB. In other situations, this column's value is the ID of PEX.
DeviceMAC	PEX Device's bridge MAC address	N/A	String. Format: HH-HH-HH-HH-HH-HH	N/A

## VBR/CB/ExtendPorts

This table contains extendport list of the PEX.

### XML structure

```

<VBR>
  <CB>
    <ExtendPorts>
      <ExtendPort>
        <AssociateID></AssociateID>
        <IfIndex></IfIndex>
        <PortInfo>
          <Chassis></Chassis>
          <Slot></Slot>
          <SubSlot></SubSlot>
        </PortInfo>
      </ExtendPort>
    </ExtendPorts>
  </CB>
</VBR>

```

### Table description

Item	Description
Feature name	VBR
Table name	ExtendPorts
Table type	Multi-instance table
Row name	ExtendPort
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AssociateID	Associated virtual chassis number or slot number of the PEX .	index	Unsigned integer.	For distributed parent devices, this object represents the virtual chassis number. For centralized parent devices, this object represents the virtual slot number.
IfIndex	ExtendPort IfIndex	index	Unsigned integer.	N/A
Chassis	Chassis ID which the ExtendPort belonged to.	N/A	Unsigned integer. Value range: 0 to 65535.	If there is no chassis number, return 65535.
Slot	Slot ID which the ExtendPort belonged to.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SubSlot	SubSlot ID which the ExtendPort belonged to.	N/A	Unsigned integer. Value range: 0 to 65535.	If there is no subslot number, return 0.

## VBR/CB/UpstreamPorts

This table contains upstreamports on the PEX.

## XML structure

```

<VBR>
  <CB>
    <UpstreamPorts>
      <UpstreamPort>
        <AssociateID></AssociateID>
        <IfIndex></IfIndex>
        <PortInfo>
          <Name></Name>
          <Chassis></Chassis>
          <Slot></Slot>
          <SubSlot></SubSlot>
          <Combo></Combo>
        </PortInfo>
      </UpstreamPort>
    </UpstreamPorts>
  </CB>
</VBR>

```

## Table description

Item	Description
Feature name	VBR
Table name	UpstreamPorts
Table type	Multi-instance table
Row name	UpstreamPort
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AssociateID	Associated virtual chassis number or slot number of the PEX .	index	Unsigned integer.	For distributed parent devices, this object represents the virtual chassis number. For centralized parent devices, this object represents the virtual slot number.
IfIndex	UpstreamPort IfIndex	index	Unsigned integer.	N/A
Name	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
Chassis	Chassis ID which the UpstreamPort belonged to.	N/A	Unsigned integer. Value range: 0 to 65535.	If there is no chassis number, return 0.
Slot	Slot ID which the UpstreamPort belonged to.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SubSlot	SubSlot ID which the UpstreamPort belonged to.	N/A	Unsigned integer. Value range: 0 to 65535.	If there is no subslot number, return 0.
Combo	Combo mode of an interface	N/A	Enumeration: <ul style="list-style-type: none"><li>1—fiber mode</li><li>2—copper mode</li></ul>	Applicable to only Ethernet interfaces.

## VBR/CB/UpgradeOpResults

This table contains information of the upgrading status of PEX.

## XML structure

<VBR>

```

<CB>
  <UpgradeOpResults>
    <UpgradeOpResult>
      <AssociateID></AssociateID>
      <UpgradeStatus></UpgradeStatus>
      <FailedReason></FailedReason>
    </UpgradeOpResult>
  </UpgradeOpResults>
</CB>
</VBR>

```

## Table description

Item	Description
Feature name	VBR
Table name	UpgradeOpResults

## VLAN/BatchVLANs

This table is used to batch create or delete VLANs.

### XML structure

```
<VLAN>
  <BatchVlans>
    <CreateVlanList></CreateVlanList>
    <DestroyVlanList></DestroyVlanList>
  </BatchVlans>
</VLAN>
```

### Response XML structure

```
<VLAN>
  <BatchVlans>
    <CreateVlanList></CreateVlanList>
    <DestroyVlanList></DestroyVlanList>
  </BatchVlans>
</VLAN>
```

### Table description

Item	Description
Feature name	VLAN
Table name	BatchVlans
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Data type and restrictions	Remarks
CreateVlanList	List of VLANs to create	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string must not end with a comma	Example: 2,3,5-8,10-20.

Column name	Column description	Data type and restrictions	Remarks
		or hyphen, or include any whitespace characters.	
DestoryVlanList	List of VLANs to delete	<p>Number string.</p> <p>It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range.</p> <p>The string must not end with a comma or hyphen, or include any whitespace characters.</p>	<p>Example: 2,3,5-8,10-20.</p>

## Responded columns

Column name	Column description	Data type and restrictions	Remarks
CreateVlanList	List of VLANs that have been created successfully	<p>Number string.</p> <p>It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range.</p> <p>The string must not end with a comma or hyphen, or include any whitespace characters.</p>	<p>Example: 2,3,5-8,10-20.</p> <p>Responded only when CreateVlanList is submitted.</p>
DestoryVlanList	List of VLANs that have been deleted successfully	<p>Number string.</p> <p>It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range.</p> <p>The string must not end with a comma or hyphen, or include any whitespace characters.</p>	<p>Example: 2,3,5-8,10-20.</p> <p>Responded only when DestoryVlanList is submitted.</p>

# VLAN

## VLAN/VLANs

This table contains basic VLAN information.

### XML structure

```
<VLAN>
  <VLANs>
    <VLANID>
      <ID></ID>
      <Description></Description>
      <Name></Name>
      <AccessPortList></AccessPortList>
      <Ipv4>
        <Ipv4Address></Ipv4Address>
        <Ipv4Mask></Ipv4Mask>
      </Ipv4>
    </VLANID>
  </VLANs>
</VLAN>
```

### Table description

Item	Description
Feature name	VLAN
Table name	VLANs
Table type	Multi-instance table
Row name	VLANID
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
Description	VLAN description	N/A	String. Length: 1 to 255 characters. Default: <b>VLAN</b> <i>vlan-id</i> .	Example: VLAN 0001.

Column name	Column description	Column type	Data type and restrictions	Remarks
			The <i>vlan id</i> argument uses the four-digit form. If the VLAN ID has less than four digits, leading zeros are added.	
Name	VLAN name	N/A	String. Length: 1 to 32 characters. Default: <b>VLAN</b> <i>vlan-id</i> . The <i>vlan id</i> argument uses the four-digit form. If the VLAN ID has less than four digits, leading zeros are added.	Example: VLAN 0001.
AccessPortList	Access port list of the VLAN	N/A	Number string. It is a comma-separated list of port index items. An item can be an individual port index or a port index range. Use a hyphen (-) to separate the start and end port indexes of a range. The string cannot end with a comma or hyphen, or include any whitespace characters. By default, a VLAN does not have an access port list.	Example: 1,2,3,5-8,10-20. Available port indexes are in the PortIndex column in the Ifmgr/Interfaces table.
Ipv4	IPv4 address of the VLAN interface	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv4Address.</li> <li>Ipv4Mask.</li> </ul>	You must configure both the IP address and mask if the operation is <b>merge</b> , <b>create</b> , or <b>replace</b> . You can configure only the IP address if the operation is <b>delete</b> or <b>remove</b> .
Ipv4Address	IPv4 address of the VLAN interface	N/A	String, dotted decimal notation.	Example: 1.1.1.1. When you perform the <b>merge</b> , <b>create</b> , or <b>replace</b> operation, the system creates the VLAN interface automatically if the VLAN interface has not been created.
Ipv4Mask	IPv4 address mask	N/A	String, dotted decimal notation.	Example: 55.255.255.0.

## VLAN/AccessInterfaces

This table contains information about Access ports.

## XML structure

```
<VLAN>
  <AccessInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <PVID></PVID>
    </Interface>
  </AccessInterfaces>
</VLAN>
```

## Table description

Item	Description
Feature name	VLAN
Table name	AccessInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see Ifmgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
PVID	Port VLAN ID	N/A	Value range: 1 to 4094.	N/A

## VLAN/TrunkInterfaces

This table contains information about Trunk ports.

## XML structure

```
<VLAN>
  <TrunkInterfaces>
    <Interface>
```

```

    <IfIndex></IfIndex>
    <PermitVlanList></PermitVlanList>
    <PVID></PVID>
  </Interface>
</TrunkInterfaces>
</VLAN>

```

## Table description

Item	Description
Feature name	VLAN
Table name	TrunkInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see Ifmgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
PermitVlanList	List of permitted VLANs on the port	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range.  The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20.  The item is permitted to incremental edit. You can sign the flag like "<PermitVlanList base:incremental='true'>". If the value is true, the vlan list will be added or removed. Otherwise, it is the final result.
PVID	Port VLAN ID	N/A	Value range: 1 to 4094.	N/A

## VLAN/HybridInterfaces

This table contains information about Hybrid ports.

## XML structure

```
<VLAN>
  <HybridInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <UntaggedVlanList></UntaggedVlanList>
      <TaggedVlanList></TaggedVlanList>
      <PVID></PVID>
    </Interface>
  </HybridInterfaces>
</VLAN>
```

## Table description

Item	Description
Feature name	VLAN
Table name	HybridInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see Ifmgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
UntaggedVlanList	List of VLANs to which the port is assigned as an untagged VLAN member	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. Do not specify a VLAN both in this column and the <b>TaggedVlanList</b> column. The item is permitted to incremental edit. You can sign the flag like "<UntaggedVlanList base:incremental='true'>". If the value is true, the vlan list will be added or removed. Otherwise, it is the final result.
TaggedVlanList	List of VLANs to	N/A	Number string.	Example: 1,2,3,5-8,10-20.

Column name	Column description	Column type	Data type and restrictions	Remarks
	which the port is assigned as a tagged VLAN member		<p>It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range.</p> <p>The string cannot end with a comma or hyphen, or include any whitespace characters.</p> <p>By default, a port is not assigned to any VLANs as a tagged member.</p>	<p>Do not specify a VLAN both in this column and the <b>UntaggedVlanList</b> column.</p> <p>The item is permitted to incremental edit. You can sign the flag like "&lt;TaggedVlanList base:incremental='true'&gt;". If the value is true, the vlan list will be added or removed. Otherwise, it is the final result.</p>
PVID	Port VLAN ID	N/A	Value range: 1 to 4094.	N/A

## VLAN/QinQ

This table contains QinQ information of all ports.

## XML structure

```

<VLAN>
  <QinQ>
    <ServiceTPID></ServiceTPID>
    <CustomerTPID></CustomerTPID>
  </QinQ>
</VLAN>

```

## Table description

Item	Description
Feature name	VLAN
Table name	QinQ
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceTPID	TPID value in the service VLAN tag.	N/A	Unsigned integer. Value range: 1 to 65535.	Excluding the reserved EtherType

Column name	Column description	Column type	Data type and restrictions	Remarks
				values listed in <a href="#">Table 1</a> .
CustomerTPID	TPID value in the customer VLAN tag.	N/A	Unsigned integer. Value range: 1 to 65535.	Excluding the reserved EtherType values listed in <a href="#">Table 1</a> .

**Table 1 Reserved EtherType values**

Protocol type	Value
ARP	2054
PUP	512
RARP	32821
IP	2048
IPv6	34525
PPPoE	34915/34916
MPLS	34887/34888
IPX/SPX	33079
IS-IS	32768
LACP	34825
LLDP	35020
802.1X	34958
802.1ag	35074
Cluster	34983
Reserved	65533/65534/65535

## VLAN/QinQPorts

This table contains QinQ information for a port.

### XML structure

```

<VLAN>
  <QinQPorts>
    <Interface>
      <IfIndex></IfIndex>
      <QinQ></QinQ>
      <ServiceTPID></ServiceTPID>
      <CustomerTPID></CustomerTPID>
      <TransVlanList></TransVlanList>
    </Interface>
  </QinQPorts>
</VLAN>

```

## Table description

Item	Description
Feature name	VLAN
Table name	QinQPorts
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see Ifmgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
QinQ	Whether QinQ is enabled on the port.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
ServiceTPID	TPID value in the service VLAN tag on the port.	N/A	Unsigned integer. Value range: 1 to 65535.	Excluding the reserved EtherType values listed in <a href="#">Table 1</a> .
CustomerTPID	TPID value in the customer VLAN tag on the port.	N/A	Unsigned integer. Value range: 1 to 65535.	Excluding the reserved EtherType values listed in <a href="#">Table 1</a> .
TransVlanList	List of transparent VLANs on the port.	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20.  This VLANs cannot exist in CustomerOuterVlan on table VLAN/VLANMapping.

# VLAN/VLANnetworkNto1mapping

This table contains network-side many-to-one VLAN mapping information.

## XML structure

```
<VLAN>
  <VLANnetworkNto1mapping>
    <Interface>
      <IfIndex></IfIndex>
      <NNI></NNI>
    </Interface>
  </VLANnetworkNto1mapping>
</VLAN>
```

## Table description

Item	Description
Feature name	VLAN
Table name	VLANnetworkNto1mapping
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
			•	
			•	
NNI	Whether the network-side interface for VLAN mapping is enabled on the port.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	N/A

# VLAN/VLAN1to1mapping

This table contains VLAN one-to-one mapping information.

## XML structure

```
<VLAN>
  <VLAN1to1mapping>
    <Interface>
      <IfIndex></IfIndex>
      <OriginalVlan></OriginalVlan>
      <TranslatedVlan></TranslatedVlan>
    </Interface>
  </VLAN1to1mapping>
</VLAN>
```

## Table description

Item	Description
Feature name	VLAN
Table name	VLAN1to1mapping
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
OriginalVlan	Original VLAN for one to one VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A.
TranslatedVlan	Translated VLAN for one to one mapping.	N/A	Unsigned integer. Value range: 1 to 4094.	N/A

# VLAN/VLANUserNto1mapping

This table contains user-side many-to-one VLAN mapping information.

## XML structure

```
<VLAN>
  <VLANUserNto1mapping>
    <Interface>
      <IfIndex></IfIndex>
      <OriginalStartVlan></OriginalStartVlan>
      <OriginalEndVlan></OriginalEndVlan>
      <TranslatedVlan></TranslatedVlan>
    </Interface>
  </VLANUserNto1mapping>
</VLAN>
```

## Table description

Item	Description
Feature name	VLAN
Table name	VLANUserNto1mapping
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
OriginalStartVlan	Start VLAN of the original VLAN for many-to-one VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A.

Column name	Column description	Column type	Data type and restrictions	Remarks
Original EndVlan	End VLAN of the original VLAN for many-to-one VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A.
TranslatedVlan	Translated VLAN for many-to-one VLAN mapping.	N/A	Unsigned integer. Value range: 1 to 4094.	N/A.

## VLAN/VLAN1to2mapping

This table contains one-to-two VLAN mapping information.

### XML structure

```

<VLAN>
  <VLAN1to2mapping>
    <Interface>
      <IfIndex></IfIndex>
      <CustomerStartVlan></CustomerStartVlan>
      <CustomerEndVlan></CustomerEndVlan>
      <NestedVlan></NestedVlan>
    </Interface>
  </VLAN1to2mapping>
</VLAN>

```

### Table description

Item	Description

Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant

Column name	Column description	Column type	Data type and restrictions	Remarks
				information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
CustomerStartVlan	Start VLAN of the customer VLAN for one-to-two vlan mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A.
CustomerEndVlan	End VLAN of the customer VLAN for one-to-two VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A
NestedVlan	Nest VLAN for one-to-two VLAN mapping.	N/A	Unsigned integer. Value range: 1 to 4094.	N/A.

## VLAN/VLAN2to2mapping

This table contains VLAN two-to-two VLAN mapping information.

### XML structure

```

<VLAN>
  <VLAN2to2mapping>
    <Interface>
      <IfIndex></IfIndex>
      <OuterVlan></OuterVlan>
      <InnerVlan></InnerVlan>
      <TranslatedOuterVlan></TranslatedOuterVlan>
      <TranslatedInnerVlan></TranslatedInnerVlan>
    </Interface>
  </VLAN2to2mapping>
</VLAN>

```

### Table description

Item	Description
Feature name	VLAN
Table name	VLAN2to2mapping
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.

Item	Description
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
OuterVlan	Outer VLAN for two-to-two VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A.
InnerVlan	Inner VLAN for two-to-two VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A.
TranslatedOuterVlan	Translated outer VLAN for two-to-two VLAN mapping.	N/A	Unsigned integer. Value range: 1 to 4094.	N/A.
TranslatedInnerVlan	Translated inner VLAN for two-to-two VLAN mapping.	N/A	Unsigned integer. Value range: 1 to 4094.	N/A.

## VLAN/VLAN0to2mapping

This table contains zero-to-two VLAN mapping information.

## XML structure

```

<VLAN>
  <VLAN0to2mapping>
    <Interface>
      <IfIndex></IfIndex>
      <ServiceOuterVlan></ServiceOuterVlan>
      <ServiceInnerVlan></ServiceInnerVlan>
    </Interface>
  </VLAN0to2mapping>
</VLAN>

```

## Table description

Item	Description
Feature name	VLAN
Table name	VLAN0to2mapping
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
ServiceOuterVlan	Outer service VLAN for zero-to-two VLAN mapping.	N/A	Unsigned integer. Value range: 1 to 4094.	N/A.
ServiceInnerVlan	Inner service VLAN for zero-to-two VLAN mapping.	N/A	Unsigned integer. Value range: 1 to 4094.	N/A.

## VLAN/VLAN2to3mapping

This table contains two-to-three VLAN mapping information.

## XML structure

```
<VLAN>
  <VLAN2to3mapping>
    <Interface>
      <IfIndex></IfIndex>
      <OuterStartVlan></OuterStartVlan>
      <OuterEndVlan></OuterEndVlan>
      <InnerStartVlan></InnerStartVlan>
      <InnerEndVlan></InnerEndVlan>
      <NestedVlan></NestedVlan>
```

```

    </Interface>
  </VLAN2to3mapping>
</VLAN>

```

## Table description

Item	Description
Feature name	VLAN
Table name	VLAN2to3mapping
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
OuterStartVlan	Start VLAN of the outer VLAN for two-to-three VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A.
OuterEndVlan	End VLAN of the outer VLAN for two-to-three VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A
InnerStartVlan	Start VLAN of the inner vlan for two-to-three VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A.
InnerEndVlan	End VLAN of the inner VLAN for two-to-three VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A.
NestedVlan	Nest VLAN for two-to-three VLAN mapping.	N/A	Unsigned integer. Value range: 1 to 4094.	N/A.

# VLAN/VoiceInfo

This table contains voice VLAN information.

## XML structure

```
<VLAN>
  <VoiceInfo>
    <AgingTime></AgingTime>
    <LLDPTrack></LLDPTrack>
    <Mode></Mode>
  </VoiceInfo>
</VLAN>
```

## Table description

Item	Description
Feature name	VLAN
Table name	VoiceInfo
Table type	Single-instance table
Row name	N/A
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AgingTime	Voice VLAN aging time.	N/A	Unsigned integer, in minutes. Value range: 5 to 43200 minutes.	By default, the aging time is 1440 minutes.
LLDPTrack	Whether LLDP is enabled for automatic IP phone discovery.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	N/A
Mode	Voice VLAN security mode.	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>1—Security.</b></li><li>• <b>2—Normal.</b></li></ul>	By default, the voice VLAN security mode is enabled.

# VLAN/VoiceOUI

This table contains voice VLAN OUI address information.

## XML structure

```
<VLAN>
  <VoiceOUI>
    <OUI>
      <Address></Address>
      <Mask></Mask>
      <Description></Description>
    </OUI>
  </VoiceOUI>
</VLAN>
```

## Table description

Item	Description
Feature name	VLAN
Table name	VoiceOUI
Table type	Multi-instance table
Row name	OUI
Restrictions	This table does not support merge, replace, remove operations.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Address	Source MAC address of voice traffic	Index	Six groups of two hexadecimal digits, hyphen-separated.	For example, 12-34-12-34-12-34.
Mask	Valid length of the OUI address by a mask.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	The mask contains consecutive 1s and 0s. For example, FF-FF-00-00-00-00.
Description	OUI address description.	N/A	Case-sensitive string of 1 to 30 characters.	N/A

## VLAN/VoicePorts

This table contains voice VLAN information for a port.

## XML structure

```
<VLAN>
  <VoicePorts>
    <Interface>
      <IfIndex></IfIndex>
```

```

    <Vlan></Vlan>
    <Mode></Mode>
    <QoS>
      <Trust></Trust>
      <CoS></CoS>
      <DSCP></DSCP>
    </QoS>
  </Interface>
</VoicePorts>
</VLAN>

```

## Table description

Item	Description
Feature name	VLAN
Table name	VoicePorts
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see Ifmgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Vlan	Voice VLAN ID on the port.	N/A	Unsigned integer. Value range: 2 to 4094	Valid only on a hybrid or trunk port operating in automatic voice VLAN assignment mode.
Mode	Voice VLAN assignment mode on the port.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Automatic.</li> <li>2—Manual.</li> </ul>	By default, a port operates in automatic voice VLAN assignment mode.
QoS	QoS information of voice VLAN on the port.	N/A	Include: <ul style="list-style-type: none"> <li><b>Trust.</b></li> <li><b>CoS.</b></li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li><b>DSCP.</b></li> </ul>	
Trust	Whether the QoS priority settings is trusted for incoming voice VLAN packets.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	When a port trusts the QoS priority settings in incoming voice VLAN packets, the port does not modify their CoS and DSCP values.
CoS	CoS value for incoming voice VLAN packets on the port.	N/A	Unsigned integer. Value range: 0 to 7	Valid only when the Trust label above is false. The value is 6 by default.
DSCP	DSCP value for incoming voice VLAN packets on the port.	N/A	Unsigned integer. Value range: 0 to 63	Valid only when the Trust label above is false,. The value is 46 by default.

## VLAN/MACPorts

This table contains MAC-based VLAN information for a port.

### XML structure

```

<VLAN>
  <MACPorts>
    <Interface>
      <IfIndex></IfIndex>
      <MACVlanEnable></MACVlanEnable>
      <MACVlanTriggerEnable></MACVlanTriggerEnable>
    </Interface>
  </MACPorts>
</VLAN>

```

### Table description

Item	Description
Feature name	VLAN
Table name	MACPorts
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only ports where MAC-based VLAN can be configured are included.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
MACVlanEnable	MAC-based vlan enable on the port.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Disable.</li> <li>2—Enable.</li> </ul>	N/A
MACVlanTrigger Enable	MAC-based vlan Trigger enable on the port.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Disable.</li> <li>2—Enable.</li> </ul>	N/A

# VLAN

## VLAN/VLANs

This table contains basic VLAN information.

### XML structure

```
<VLAN>
  <VLANs>
    <VLANID>
      <ID></ID>
      <Description></Description>
      <Name></Name>
      <RouteIfIndex></RouteIfIndex>
      <UntaggedPortList></UntaggedPortList>
      <TaggedPortList></TaggedPortList>
      <AccessPortList></AccessPortList>
      <Ipv4>
        <Ipv4Address></Ipv4Address>
        <Ipv4Mask></Ipv4Mask>
      </Ipv4>
      <Shared></Shared>
    </VLANID>
  </VLANs>
</VLAN>
```

### Table description

Item	Description
Feature name	VLAN
Table name	VLANs
Table type	Multi-instance table
Row name	VLANID
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
Description	VLAN description	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 255 characters.	
Name	VLAN name	N/A	String. Length: 1 to 32 characters.	N/A
RoutelIndex	VLAN interface index	N/A	Unsigned integer.	This column is not displayed if the VLAN interface does not exist.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
UntaggedPortList	List of ports that are assigned to the VLAN as untagged VLAN members	N/A	Number string.  It is a comma-separated list of port index items. An item can be an individual port index or a port index range. Use a hyphen (-) to separate the start and end port indexes of a range.  The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20.  Available port indexes are in the PortIndex column in the Ifmgr/Interfaces table.  These ports forward traffic with the VLAN tag removed.
TaggedPortList	List of ports that are assigned to the VLAN as tagged VLAN members	N/A	Number string.  It is a comma-separated list of port index items. An item can be an individual port index or a port index range. Use a hyphen (-) to separate the start and end port indexes of a range.  The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20.  Available port indexes are in the PortIndex column in the Ifmgr/Interfaces table.  These ports forward traffic without removing the VLAN tag.
AccessPortList	Access port list of the VLAN	N/A	Number string.  It is a comma-separated list of port index items. An item can be an individual port index or a port index range. Use a hyphen (-) to separate the start and end port indexes of a range.	Example: 1,2,3,5-8,10-20.  Available port indexes are in the PortIndex column in the Ifmgr/Interfaces table.

Column name	Column description	Column type	Data type and restrictions	Remarks
			The string cannot end with a comma or hyphen, or include any whitespace characters. By default, a VLAN does not have an access port list.	
Ipv4	IPv4 address of the VLAN interface	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv4Address.</li> <li>Ipv4Mask.</li> </ul>	You must configure both the IP address and mask if the operation is <b>merge</b> , <b>create</b> , or <b>replace</b> . You can configure only the IP address if the operation is <b>delete</b> or <b>remove</b> .
Ipv4Address	IPv4 address of the VLAN interface	N/A	String, dotted decimal notation.	Example: 1.1.1.1. When you perform the <b>merge</b> , <b>create</b> , or <b>replace</b> operation, the system creates the VLAN interface automatically if the VLAN interface has not been created.
Ipv4Mask	IPv4 address mask	N/A	String, dotted decimal notation.	Example: 55.255.255.0.
Shared	Whether the VLAN is shared	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A

## VLAN/Interfaces

This table contains VLAN information for a port.

## XML structure

```

<VLAN>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Name></Name>
      <LinkType></LinkType>
      <PVID></PVID>
      <UntaggedVlanList></UntaggedVlanList>
      <TaggedVlanList></TaggedVlanList>
      <PermitVlanList></PermitVlanList>
    </Interface>
  </Interfaces>

```

</VLAN>

## Table description

Item	Description
Feature name	VLAN
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Name	Full name of the interface, including the interface type and number	N/A	String. Length: 2 to 47 characters.	N/A
LinkType	Port link type	N/A	Enumeration: <ul style="list-style-type: none"><li>• 1—Access.</li><li>• 2—Trunk.</li><li>• 3—Hybrid.</li></ul>	N/A
PVID	Port VLAN ID	N/A	Value range: 1 to 4094.	N/A
UntaggedVlanList	List of VLANs to which the port is assigned as an untagged VLAN member	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20.

Column name	Column description	Column type	Data type and restrictions	Remarks
TaggedVlanList	List of VLANs to which the port is assigned as a tagged VLAN member	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. The column is available only for trunk and hybrid ports.
PermitVlanList	List of permitted VLANs on the port	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. The column is available only for trunk ports.

## VLAN/AccessInterfaces

This table contains information about Access ports.

### XML structure

```

<VLAN>
  <AccessInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <PVID></PVID>
    </Interface>
  </AccessInterfaces>
</VLAN>

```

### Table description

Item	Description
Feature name	VLAN
Table name	AccessInterfaces
Table type	Multi-instance table
Row name	Interface

Item	Description
Restrictions	This table supports only Layer 2 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
PVID	Port VLAN ID	N/A	Value range: 1 to 4094.	N/A

## VLAN/TrunkInterfaces

This table contains information about Trunk ports.

## XML structure

```

<VLAN>
  <TrunkInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <PermitVlanList></PermitVlanList>
      <PVID></PVID>
    </Interface>
  </TrunkInterfaces>
</VLAN>

```

## Table description

Item	Description
Feature name	VLAN
Table name	TrunkInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
PermitVlanList	List of permitted VLANs on the port	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range.  The string cannot end with a comma or hyphen, or include any whitespace characters.	N/A
PVID	Port VLAN ID	N/A	Value range: 1 to 4094.	N/A

## VLAN/HybridInterfaces

This table contains information about Hybrid ports.

## XML structure

```

<VLAN>
  <HybridInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <UntaggedVlanList></UntaggedVlanList>
      <TaggedVlanList></TaggedVlanList>
      <PVID></PVID>
    </Interface>
  </HybridInterfaces>
</VLAN>

```

## Table description

Item	Description
Feature name	VLAN
Table name	HybridInterfaces

Item	Description
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
UntaggedVlanList	List of VLANs to which the port is assigned as an untagged VLAN member	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	N/A
TaggedVlanList	List of VLANs to which the port is assigned as a tagged VLAN member	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters. By default, a port is not assigned to any VLANs as a tagged member.	N/A
PVID	Port VLAN ID	N/A	Value range: 1 to 4094.	N/A

## VLAN/QinQ

This table contains QinQ information of all ports.

## XML structure

```
<VLAN>
  <QinQ>
    <ServiceTPID></ServiceTPID>
    <CustomerTPID></CustomerTPID>
  </QinQ>
</VLAN>
```

## Table description

Item	Description
Feature name	VLAN
Table name	QinQ
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceTPID	TPID value in the service VLAN tag.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
CustomerTPID	TPID value in the customer VLAN tag.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A

## VLAN/QinQPorts

This table contains QinQ information for a port.

## XML structure

```
<VLAN>
  <QinQPorts>
    <Interface>
      <IfIndex></IfIndex>
      <QinQ></QinQ>
      <ServiceTPID></ServiceTPID>
      <CustomerTPID></CustomerTPID>
      <TransVlanList></TransVlanList>
    </Interface>
  </QinQPorts>
</VLAN>
```

## Table description

Item	Description
Feature name	VLAN
Table name	QinQPorts
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
QinQ	Whether QinQ is enabled on the port.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
ServiceTPID	The TPID value in the service VLAN tag on the port.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
CustomerTPID	The TPID value in the customer VLAN tag on the port.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
TransVlanList	List of transparent VLANs on the port.	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20.  This VLANs cannot exist in CustomerOuterVlan on table VLAN/VLANMapping.

# VLAN/QinQCapabilities

This table contains QinQ capabilities information.

## XML structure

```
<VLAN>
  <QinQCapabilities>
    <GlobalServiceTPID></GlobalServiceTPID>
    <GlobalCustomerTPID></GlobalCustomerTPID>
    <QinQState></QinQState>
    <ServiceTPID></ServiceTPID>
    <CustomerTPID></CustomerTPID>
    <TransVlan></TransVlan>
  </QinQCapabilities>
</VLAN>
```

## Table description

Item	Description
Feature name	VLAN
Table name	QinQCapabilities
Table type	Single-instance table
Row name	None

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
OuterStartVlan	Start VLAN of the outer VLAN for two-to-three VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A.
OuterEndVlan	End VLAN of the outer VLAN for two-to-three VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A.
InnerStartVlan	Start VLAN of the inner VLAN for two-to-three VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A.
InnerEndVlan	End VLAN of the inner VLAN for two-to-three VLAN mapping.	Index	Unsigned integer. Value range: 1 to 4094.	N/A.
NestedVlan	Nest VLAN for two-to-three VLAN mapping .	N/A	Unsigned integer. Value range: 1 to 4094.	N/A.

# VLAN/VoiceInfo

This table contains voice VLAN basic information.

## XML structure

```
<VLAN>
  <VoiceInfo>
    <AgingTime></AgingTime>
    <LLDPTrack></LLDPTrack>
    <Mode></Mode>
    <CurNum></CurNum>
  </VoiceInfo>
</VLAN>
```

## Table description

Item	Description
Feature name	VLAN
Table name	VoiceInfo
Table type	Single-instance table
Row name	N/A
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AgingTime	Voice VLAN aging time.	N/A	Unsigned integer, in minutes. Value range: 5 to 43200 minutes.	By default, the aging time is 1440 minutes.
LLDPTrack	Whether LLDP is enabled for automatic IP phone discovery.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	N/A
Mode	Voice VLAN security mode.	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>1—Security</b></li><li>• <b>2—Normal</b></li></ul>	By default, the voice VLAN security mode is enabled.
CurNum	Number of existing voice VLANs.	N/A	Unsigned integer.	N/A

# VLAN/VoiceOUI

This table contains voice VLAN OUI address information.

## XML structure

```
<VLAN>
  <VoiceOUI>
    <OUI>
      <Address></Address>
      <Mask></Mask>
      <Description></Description>
    </OUI>
  </VoiceOUI>
</VLAN>
```

## Table description

Item	Description
Feature name	VLAN
Table name	VoiceOUI
Table type	Multi-instance table
Row name	OUI
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Address	Source MAC address of voice traffic	Index	Six groups of two hexadecimal digits, hyphen-separated.	For example, 1234-1234-1234.
Mask	Valid length of the OUI address by a mask.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	The mask contains consecutive 1s and 0s. For example, FFFF-0000-0000.
Description	OUI address description.	N/A	Case-sensitive string of 1 to 30 characters.	N/A

# VLAN/VoicePorts

This table contains voice VLAN information for a port.

## XML structure

```
<VLAN>
  <VoicePorts>
    <Interface>
      <IfIndex></IfIndex>
      <Vlan></Vlan>
      <Mode></Mode>
      <QoS>
        <Trust></Trust>
        <CoS></CoS>
        <DSCP></DSCP>
      </QoS>
    </Interface>
  </VoicePorts>
</VLAN>
```

## Table description

Item	Description
Feature name	VLAN
Table name	VoicePorts
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only includes ports where voice VLAN can be configured. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Vlan	Voice VLAN ID on the port.	N/A	Unsigned integer. Value range: 2 to 4094	Valid only on a hybrid or trunk port operating in automatic voice

Column name	Column description	Column type	Data type and restrictions	Remarks
				VLAN assignment mode.
Mode	Voice VLAN assignment mode on the port.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Automatic.</li> <li>2—Manual.</li> </ul>	By default, a port operates in automatic voice VLAN assignment mode.
QoS	QoS information of voice VLAN on the port.	N/A	Include: <ul style="list-style-type: none"> <li><b>Trust.</b></li> <li><b>CoS.</b></li> <li><b>DSCP.</b></li> </ul>	N/A
Trust	Whether the QoS priority settings is trusted for incoming voice VLAN packets.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	When a port trusts the QoS priority settings in incoming voice VLAN packets, the port does not modify their CoS and DSCP values.
CoS	CoS value for incoming voice VLAN packets on the port.	N/A	Unsigned integer. Value range: 0 to 7	Valid only when the Trust label above is false. The value is 6 by default.
DSCP	The DSCP values for incoming voice VLAN packets on the port.	N/A	Unsigned integer. Value range: 0 to 63	Valid only when the Trust label above is false. The value is 46 by default.

## VLAN/MACPorts

This table contains MAC-based VLAN information for a port.

### XML structure

```

<VLAN>
  <MACPorts>
    <Interface>
      <IfIndex></IfIndex>
      <MACVlanEnable></MACVlanEnable>
      <MACVlanTriggerEnable></MACVlanTriggerEnable>
    </Interface>
  </MACPorts>
</VLAN>

```

### Table description

# Vlan

## Vlan/Vlans

Message	Explanation
Please set the link type of the port to access first. 请先把接口链路类型改成Access。	During executing merge operation for vlan type of interfaces info table, please set the link type of the port to access first. 在对接口信息表的 vlan type 进行 Merge 操作时, 请先把接口链路类型改成 Access。
The VLAN doesn't support the operation. 该VLAN不支持当前操作。	During executing merge operation for vlan type of interfaces info table, the VLAN doesn't support it. 在对接口信息表的 vlan type 进行 Merge 操作时, 该 VLAN 不支持当前操作。
Can't change the link type of %s because it is not an access port. 不能更改%s的链路类型因为它当前不是 Access 端口。	During executing merge operation for vlan type of interfaces info table, it can't change the link type because it is not an access port. 在对接口信息表的 vlan type 进行 Merge 操作时, 不能更改该端口的链路类型因为它当前不是 Access 端口。
Failed to configure some VLANs. 部分VLAN设置失败。	During executing set operation for adding vlan for port by vlan list, it failed to configure some VLANs. 根据 vlanlist 对端口进行添加 vlan , 部分 VLAN 设置失败。
Can't assign ports to or remove ports from the default VLAN. 不能向缺省VLAN添加或者删除端口。	During executing merge operation for port range of vlan info table, it can't assign ports to or remove ports from the default VLAN. 对 vlan 信息表的 portrange 字段进行 merge 操作时, 不能向缺省 VLAN 添加或者删除端口。
Invalid IP address or subnet mask. 无效IP地址或子网掩码。	During executing merge operation for IpInfo of vlan info table, the IP address or subnet mask is invalid. 对 vlan 信息表的 portrange 字段进行 merge 操作时, 无效 IP 地址或子网掩码。
The IP address you entered is in the same subnet as the IP address of another interface. 不同接口的IP地址不能在相同网段。	暂未引用

<p>The VLAN name already exists.</p> <p>VLAN名称已经存在。</p>	<p>During executing merge operation for vlan name of vlan info table, it already exists.</p> <p>对 vlan 信息表的 VlanName 字段进行 merge 操作时，VLAN 名称已经存在。</p>
<p>Cannot use the default name of another VLAN.</p> <p>不能配置成其它VLAN的默认VLAN名称。</p>	<p>During executing merge operation for vlan name of vlan info table, it cannot use the default name of another VLAN.</p> <p>对 vlan 信息表的 VlanName 字段进行 merge 操作时，不能配置成其它 VLAN 的默认 VLAN 名称。</p>
<p>The port %u doesn't exist.</p> <p>端口%u不存在。</p>	<p>During executing merge operation for port range of vlan info table, the port doesn't exist.</p> <p>对 vlan 信息表的 portrange 字段进行 merge 操作时，该端口不存在。</p>
<p>The port %u is not an access port.</p> <p>端口%u不是一个Access端口。</p>	<p>During executing merge operation for port range of vlan info table, the port is not an access port.</p> <p>对 vlan 信息表的 portrange 字段进行 merge 操作时，该端口不是一个 Access 端口。</p>
<p>Allocated VLANs can't be set as the port PVID.</p> <p>已经被分配的VLAN不能设置成端口PVID。</p>	<p>During executing merge operation for port range of vlan info table, allocated VLANs can't be set as the port PVID.</p> <p>对 vlan 信息表的 portrange 字段进行 merge 操作时，已经被分配的 VLAN 不能设置成端口 PVID。</p>
<p>Maximum number of addresses on the interface already reached.</p> <p>接口下的已配置的地址数达到上限。</p>	<p>During executing merge operation for IpInfo of vlan info table, the maximum number of addresses on the interface already reached.</p> <p>对 vlan 信息表的 IpInfo 字段进行 merge 操作时，接口下的已配置的地址数达到上限。</p>
<p>Please configure the primary address first.</p> <p>请先配置主地址。</p>	<p>During executing merge operation for IpInfo of vlan info table, please configure the primary address first.</p> <p>对 vlan 信息表的 IpInfo 字段进行 merge 操作时，请先配置主地址。</p>
<p>Please delete secondary addresses first.</p> <p>请先删除从地址。</p>	<p>During executing merge operation for IpInfo of vlan info table, please delete secondary addresses first.</p> <p>对 vlan 信息表的 IpInfo 字段进行 merge 操作时，请先删除从地址。</p>
<p>Address types don't match.</p> <p>IP地址类型不匹配。</p>	<p>During executing merge operation for IpInfo of vlan info table, address types don't match.</p>

	对 vlan 信息表的 IpInfo 字段进行 merge 操作时, IP 地址类型不匹配。
The IP address doesn't exist. 该IP地址不存在。	During executing merge operation for IpInfo of vlan info table, the IP address doesn't exist. 对 vlan 信息表的 IpInfo 字段进行 merge 操作时, 该 IP 地址不存在。
Operation failed. 操作失败。	During executing merge operation for IpInfo of vlan info table, the operation failed. 对 vlan 信息表的 IpInfo 字段进行 merge 操作时, 操作失败。
This IP address has been assigned to another MDC. 该IP地址已经分配给其它MDC。	During executing merge operation for IpInfo of vlan info table, this IP address has been assigned to another MDC. 对 vlan 信息表的 IpInfo 字段进行 merge 操作时, 该 IP 地址已经分配给其它 MDC。
Can't change a primary IP address to a secondary IP address. 不能直接将主地址转成从地址。	During executing merge operation for IpInfo of vlan info table, it can't change a primary IP address to a secondary IP address. 对 vlan 信息表的 IpInfo 字段进行 merge 操作时, 不能直接将主地址转成从地址。
This address conflicts with the IP address of another interface. 与其他接口地址冲突。	During executing merge operation for IpInfo of vlan info table, this address conflicts with the IP address of another interface. 对 vlan 信息表的 IpInfo 字段进行 merge 操作时, 与其他接口地址冲突。
Operation is not supported. 操作不支持。	During executing set operation for voice-vlan qos, the operation is not supported. 对 vlan 信息表的 IpInfo 字段进行 merge 操作时, 操作不支持。
The VLAN doesn't exist. 该VLAN不存在。	During executing merge operation for vlans table, the VLAN doesn't exist. 在对 vlans 信息表进行 Merge 操作时, 该 VLAN 不存在。
MAC VLAN can be enabled on only hybrid ports. MAC VLAN 功能仅支持在 Hybrid 端口上配置。	During executing set operation for mac ports table, MAC VLAN can be enabled on only hybrid ports. 在对 mac ports 表进行设置操作时, MAC VLAN 功能仅支持在 Hybrid 端口上配置。
Please disable MAC VLAN trigger first.	During executing set operation for mac ports table,

请先关闭端口上的 MAC VLAN 动态触发功能。	Please disable MAC VLAN trigger first. 在对 mac ports 表进行设置操作时，请先关闭端口上的 MAC VLAN 动态触发功能。
Operation is not supported. 端口不支持开启 MAC VLAN 功能。	During executing set operation for mac ports table, Operation is not supported. 在对 mac ports 表进行设置操作时，端口不支持开启 MAC VLAN 功能。
Cannot delete the system default VLAN. 无法删除系统默认 VLAN。	During executing set operation for vlans table, the system default VLAN cannot be deleted. 在对 VLAN 表进行设置操作时，不能删除系统默认 VLAN。

## Vlan/AccessInterfaces

Message	Explanation
The VLAN doesn't exist. 该VLAN不存在。	During executing merge operation for PVID of AccessInterfaces table, the VLAN doesn't exist. 在对 Access 接口信息表的 PVID 进行 Merge 操作时，该 VLAN 不存在。
This is not a hybrid port. 不是一个Hybrid端口。	During executing merge operation for PVID of AccessInterfaces table, this is not a hybrid port. 在对 Access 接口信息表的 PVID 进行 Merge 操作时，不是一个 Hybrid 端口。
This is not a trunk port. 不是一个Trunk端口。	During executing merge operation for PVID of AccessInterfaces table, this is not a trunk port. 在对 Access 接口信息表的 PVID 进行 Merge 操作时，不是一个 Trunk 端口。
This is not an access port. 不是一个Access端口。	During executing merge operation for PVID of AccessInterfaces table, this is not an access port. 在对 Access 接口信息表的 PVID 进行 Merge 操作时，不是一个 Access 端口。
The VLAN doesn't exist. 该VLAN不存在。	During executing merge operation for PVID of AccessInterfaces table, the VLAN doesn't exist. 在对 Access 接口信息表的 PVID 进行 Merge 操作时，该 VLAN 不存在。

## Vlan/VoiceInfo

Message	Explanation
Can't change the port mode because the port is assigned to the voice VLAN. 端口已加入语音VLAN，不能切换端口模式。	During executing set operation for mode of voice info table, it can't change the port mode because the port is assigned to the voice VLAN. 在对 Voice 信息表的 mode 进行设置操作时，该端口已加入语音 VLAN，故不能切换端口模式。
Can't change the port mode because the access port is enabled with the voice VLAN feature. Access端口已使能语音VLAN，不能切换端口模式。	During executing set operation for mode of voice info table, it can't change the port mode because the access port is enabled with the voice VLAN feature. 在对 Voice 信息表的 mode 进行设置操作时，Access 端口已使能语音 VLAN，不能切换端口模式。
Can't change the voice VLAN mode to security, because some ports in the VLAN don't support this mode. 不能更改语音VLAN为安全模式，因为一些端口不支持语音VLAN安全模式。	During executing set operation for mode of voice info table, it can't change the voice VLAN mode to security, because some ports in the VLAN don't support this mode. 在对 Voice 信息表的 mode 进行设置操作时，不能更改语音 VLAN 为安全模式，因为一些端口不支持语音 VLAN 安全模式。
Please create the VLAN first. 请先创建该VLAN。	During executing set operation for voice info table, please create the VLAN first. 在对 Voice 信息表进行设置操作时，请先创建该 VLAN。

## Vlan/VoiceOUI

Message	Explanation
Invalid MAC address. MAC地址不合法。	During executing set operation for address of voiceOUI table, the MAC address is invalid. 在对 VoiceOUI 信息表的 address 字段进行设置操作时，MAC 地址不合法。
Invalid OUI mask. OUI掩码错误。	During executing set operation for address of voiceOUI table, the OUI mask is invalid. 在对 VoiceOUI 信息表的 address 字段进行设置操作时，OUI 掩码错误。
Maximum number of OUI addresses already reached.	暂未引用

已到达OUI上限。	
The OUI address already exists. 本OUI地址已存在。	During executing set operation for address of voiceOUI table, the OUI address already exists. 在对 VoiceOUI 信息表的 address 字段进行设置操作时，本 OUI 地址已存在。
Not enough resources available. 资源不足。	During executing set operation for address of voiceOUI table, no enough resources are available. 在对 VoiceOUI 信息表的 address 字段进行设置操作时，资源不足。

## Vlan/VoicePorts

Message	Explanation
The VLAN is not a voice VLAN. 本VLAN不是语音VLAN。	During executing set operation for voice port table, the VLAN is not a voice VLAN. 在对 Voice port 信息表的进行设置操作时，本 VLAN 不是语音 VLAN。
Another voice VLAN has been enabled on this port. 本端口已经使能了另外一个语音VLAN。	During executing set operation for voice port table, another voice VLAN has been enabled on this port. 在对 Voice port 信息表的进行设置操作时，本端口已经使能了另外一个语音 VLAN。
Trunk and hybrid ports that are in automatic mode and enabled with the voice VLAN feature can't be added to or removed from the voice VLAN manually. 自动模式下，已使能了语音VLAN的Trunk或Hybrid端口不能手动加入、退出语音VLAN。	During executing set operation for voice port table, trunk and hybrid ports that are in automatic mode and enabled with the voice VLAN feature can't be added to or removed from the voice VLAN manually. 在对 Voice port 信息表的进行设置操作时，在自动模式下已使能了语音 VLAN 的 Trunk 或 Hybrid 端口不能手动加入、退出语音 VLAN。
Can't delete the voice VLAN. 语音VLAN不能删除。	暂未引用
Can't change the link type of trunk or hybrid ports that are enabled with the voice VLAN feature. 使能了语音VLAN的Trunk或Hybrid端口不能切换链路类型。	During executing set operation for vlan port table, it can't change the link type of trunk or hybrid ports that are enabled with the voice VLAN feature. 在对 Voice port 信息表的进行设置操作时，使能了语音 VLAN 的 Trunk 或 Hybrid 端口不能切换链路类型。
Can't configure QoS settings on ports	During executing set operation for voice port table, it

<p>that are enabled with the voice VLAN feature.</p> <p>使能了语音VLAN的端口不能设置QoS参数。</p>	<p>can't configure QoS settings on ports that are enabled with the voice VLAN feature.</p> <p>在对 Voice port 信息表的进行设置操作时，使能了语音 VLAN 的端口不能设置 QoS 参数。</p>
<p>Can't configure nonstatic VLANs as voice VLANs.</p> <p>非静态VLAN不能配置为语音VLAN。</p>	<p>During executing set operation for voice port table, it can't configure nonstatic VLANs as voice VLANs.</p> <p>在对 Voice port 信息表的进行设置操作时，非静态 VLAN 不能配置为语音 VLAN。</p>
<p>Parameter settings conflict.</p> <p>参数配置冲突。</p>	<p>During executing set operation for voice port table, parameter settings conflict.</p> <p>在对 voice port 信息表的 VLANID 进行 Merge 操作时，参数配置冲突。</p>
<p>Can't enable the automatic mode on an access port.</p> <p>Access端口不能配置为自动模式。</p>	<p>During executing set operation for voice port table, it can't enable the automatic mode on an access port.</p> <p>在对 voice port 信息表进行设置操作时，Access 端口不能配置为自动模式。</p>
<p>Can't enable the voice VLAN feature on trunk or hybrid ports that are operating in automatic mode and have been assigned to voice VLANs.</p> <p>自动模式下，已加入语音VLAN的Trunk或Hybrid端口不能使能语音VLAN。</p>	<p>During executing set operation for voice port table, it can't enable the voice VLAN feature on trunk or hybrid ports that are operating in automatic mode and have been assigned to voice VLANs.</p> <p>在对 voice port 信息表进行设置操作时，在自动模式下已加入语音 VLAN 的 Trunk 或 Hybrid 端口不能使能语音 VLAN。</p>
<p>Can't configure the system default VLAN as a voice VLAN.</p> <p>默认VLAN不能配置为语音VLAN。</p>	<p>During executing set operation for voice port table, it can't configure the system default VLAN as a voice VLAN.</p> <p>在对 voice port 信息表进行设置操作时，默认 VLAN 不能配置为语音 VLAN。</p>
<p>Super VLANs don't support the configuration.</p> <p>Super VLAN不支持该配置。</p>	<p>During executing set operation for voice port table, super VLANs don't support the configuration.</p> <p>在对 voice port 信息表进行设置操作时，Super VLAN 不支持该配置。</p>
<p>Can't configure protocol-based VLANs as voice VLANs.</p> <p>协议VLAN不能配置为语音VLAN。</p>	<p>During executing set operation for voice port table, can't configure protocol-based VLANs as voice VLANs.</p> <p>在对 voice port 信息表进行设置操作时，协议 VLAN 不能配置为语音 VLAN。</p>

# Vlan/VLANMapping

Message	Explanation
<p>Can't enable network-side many-to-one VLAN mapping on the port, because user-side many-to-one VLAN mapping has been enabled.</p> <p>接口已经配置了用户侧N:1 VLAN映射，不能再配置网络侧N:1 VLAN映射。</p>	<p>During executing set operation for VLAN Mapping table, can't enable network-side many-to-one VLAN mapping on the port, because user-side many-to-one VLAN mapping has been enabled.</p> <p>在对 VLAN Mapping 映射表的进行设置操作时，接口已经配置了用户侧 N:1 VLAN 映射，不能再配置网络侧 N:1 VLAN 映射。</p>
<p>Can't enable user-side many-to-one VLAN mapping on the port, because network-side many-to-one VLAN mapping has been enabled.</p> <p>接口已经配置了网络侧 N:1 VLAN 映射，不能再配置用户侧 N:1 VLAN 映射。</p>	<p>During executing set operation for VLAN Mapping table, can't enable user-side many-to-one VLAN mapping on the port, because network-side many-to-one VLAN mapping has been enabled.</p> <p>在对 VLAN Mapping 映射表的进行设置操作时，接口已经配置了网络侧 N:1 VLAN 映射，不能再配置用户侧 N:1 VLAN 映射。</p>
<p>The input translated or nested VLANs conflict with existing VLAN mapping entries on the interface.</p> <p>配置的转换后 VLAN 或添加的外层 VLAN 与接口已有 VLAN 映射表项冲突。</p>	<p>During executing set operation for VLAN Mapping table, the input translated or nested VLANs conflict with existing VLAN mapping entries on the interface.</p> <p>在对 VLAN Mapping 映射表的进行设置操作时，配置的转换后 VLAN 或添加的外层 VLAN 与接口已有 VLAN 映射表项冲突。</p>
<p>The input original VLANs conflict with existing VLAN mapping entries on the interface.</p> <p>配置的原始 VLAN 与接口已有 VLAN 映射表项冲突。</p>	<p>During executing set operation for VLAN Mapping table, the input original VLANs conflict with existing VLAN mapping entries on the interface.</p> <p>在对 VLAN Mapping 映射表的进行设置操作时，配置的原始 VLAN 与接口已有 VLAN 映射表项冲突。</p>
<p>The VLAN mapping configuration conflicts with QinQ transparent VLAN configuration on the interface.</p> <p>VLAN 映射的配置与接口上 QinQ 透传 VLAN 的配置冲突。</p>	<p>During executing set operation for VLAN Mapping table, the VLAN mapping configuration conflicts with QinQ transparent VLAN configuration on the interface.</p> <p>在对 VLAN Mapping 映射表的进行设置操作时，VLAN 映射的配置与接口上 QinQ 透传 VLAN 的配置冲突。</p>
<p>The configuration conflicts with QinQ configuration.</p> <p>配置与接口上 QinQ 的配置冲突。</p>	<p>During executing set operation for VLAN Mapping table, the configuration conflicts with QinQ configuration.</p> <p>在对 VLAN Mapping 映射表的进行设置操作时，配置与接口上 QinQ 的配置冲突。</p>
<p>Failed to remove VLAN mapping configuration from the interface. Please make sure the removed VLANs are in the</p>	<p>During executing set operation for VLAN Mapping table, failed to remove VLAN mapping configuration from the interface. Please make sure the removed VLANs are in</p>

configured VLAN range. 取消 VLAN 映射的配置失败，请检查指定的 VLAN 范围。	the configured VLAN range. 在对 VLAN Mapping 映射表的进行设置操作时，取消 VLAN 映射的配置失败，请检查指定的 VLAN 范围。
Configuration failed because of conflicts. 存在冲突，配置失败。	During executing set operation for VLAN Mapping table, configuration failed because of conflicts. 在对 VLAN Mapping 映射表的进行设置操作时，存在冲突，配置失败。
The operation is not supported on the port. 不支持本操作。	During executing set operation for VLAN Mapping table, the operation is not supported on the port. 在对 VLAN Mapping 映射表的进行设置操作时，不支持本操作。
Not enough resources for the operation on the interface. 硬件资源不足，配置失败。	During executing set operation for VLAN Mapping table, Not enough resources for the operation on the interface. 在对 VLAN Mapping 映射表的进行设置操作时，硬件资源不足，配置失败。
Can't execute the command multiple times on the interface. To modify the configuration, first remove the original configuration. 不支持多次执行本命令，请先取消原有配置后重新执行。	During executing set operation for VLAN Mapping table, can't execute the command multiple times on the interface. To modify the configuration, first remove the original configuration. 在对 VLAN Mapping 映射表的进行设置操作时，不支持多次执行本命令，请先取消原有配置后重新执行。
To modify the two-to-three VLAN mapping, first remove the original configuration. 接口上已经存在指定内、外层 VLAN ID 的 2:3 VLAN 映射表项，请先取消原有配置后重新执行。	During executing set operation for VLAN Mapping table, first remove the original configuration when to modify the two-to-three VLAN mapping. 在对 VLAN Mapping 映射表的进行设置操作时，接口上已经存在指定内、外层 VLAN ID 的 2:3 VLAN 映射表项，请先取消原有配置后重新执行。
Can't configure both two-to-three VLAN mapping and two-to-two VLAN mapping for the same double-tagged packets on the interface. 对于同一报文，不允许同时配置 2:2 VLAN 映射和 2:3 VLAN 映射。	During executing set operation for VLAN Mapping table, can't configure both two-to-three VLAN mapping and two-to-two VLAN mapping for the same double-tagged packets on the interface. 在对 VLAN Mapping 映射表的进行设置操作时，对于同一报文，不允许同时配置 2:2 VLAN 映射和 2:3 VLAN 映射。
Configuration failed on the interface. 配置失败。	During executing set operation for VLAN Mapping table, configuration failed on the interface. 在对 VLAN Mapping 映射表的进行设置操作时，配置失败。
Cannot map VLAN to itself. 不能映射成自己。	During executing set operation for VLAN Mapping table, cannot map VLAN to itself.

	在对 VLAN Mapping 映射表的进行设置操作时, 不能映射成自己。
<p>The end VLAN ID must be equal to or greater than the start VLAN ID.</p> <p>指定 VLAN 列表时, VLAN 范围的结束值必须大于等于起始值。</p>	<p>During executing check operation for VLAN range list , the end VLAN ID must be equal to or greater than the start VLAN ID.</p> <p>在对 VLAN range list 列表的进行检查操作时, VLAN 范围的结束值必须大于等于起始值。</p>
<p>The input original VLAN range(s) overlapped.</p> <p>输入的原始 VLAN 叠套了。</p>	<p>During executing check operation for CVLAN range cross , the input original VLAN range(s) overlapped.</p> <p>对 CVLAN range cross 的进行检查操作时, 输入的原始 VLAN 叠套了。</p>
<p>Please input both the inner and outer VLAN IDs.</p> <p>请同时输入为 Untagged 报文添加的外层 VLAN ID 和内层 VLAN ID。</p>	<p>During executing set operation for VLAN Mapping 0To2 table, please input both the inner and outer VLAN IDs.</p> <p>在对 VLAN Mapping 0To2 table 映射表的进行设置操作时, 请同时输入为 Untagged 报文添加的外层 VLAN ID 和内层 VLAN ID。</p>
<p>Invalid interface name or interface index.</p> <p>无效的接口名称或接口索引。</p>	暂未引用
<p>This operation is not supported on the interface.</p> <p>接口不支持本操作。</p>	<p>During executing set operation for VLAN Mapping 2To3 table, this operation is not supported on the interface.</p> <p>在对 VLAN Mapping 2To3 table 映射表的进行设置操作时, 接口不支持本操作。</p>
<p>Can't configure both an original outer VLAN ID range and an original inner VLAN ID range for the two-to-three VLAN mapping.</p> <p>配置 2:3 映射时, 原始内层 VLAN 和原始外层 VLAN 不允许都指定为 VLAN 列表。</p>	<p>During executing set operation for VLAN Mapping 2To3 table, can't configure both an original outer VLAN ID range and an original inner VLAN ID range for the two-to-three VLAN mapping.</p> <p>在对 VLAN Mapping 2To3 table 映射表的进行设置操作时, 原始内层 VLAN 和原始外层 VLAN 不允许都指定为 VLAN 列表。</p>
<p>Please input the original outer VLAN ID, the original inner VLAN ID, the translated outer VLAN ID, and the translated inner VLAN ID.</p> <p>配置 2:2VLAN 映射时, 请同时输入原始外层 VLAN ID、内层 VLAN ID 和转换后的外层 VLAN ID、内层 VLAN ID。</p>	<p>During executing set operation for VLAN Mapping 2To2 table, please input the original outer VLAN ID, the original inner VLAN ID, the translated outer VLAN ID, and the translated inner VLAN ID.</p> <p>在对 VLAN Mapping 2To2 table 映射表的进行设置操作时, 请同时输入原始外层 VLAN ID、内层 VLAN ID 和转换后的外层 VLAN ID、内层 VLAN ID。</p>
Please input the translated VLAN ID or nested	During executing set operation for VLAN Mapping

# VMM

## VMM/CreateVMPassword

This table is used to create password for a virtual machine.

### XML structure

```
<VMM>
  <CreateVMPassword>
    <VM>
      <IpAddress></IpAddress>
      <Password></Password>
    </VM>
  </CreateVMPassword>
</VMM>
```

### Table description

Item	Description
Feature name	VMM
Table name	CreateVMPassword
Table type	Multi-instance table
Row name	VM
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IpAddress	The IP address of a virtual machine	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated..	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
Password	The password to be created	N/A	String. Length: 4 to 32 characters.	

## VMM/DeleteVMPassword

This table is used to delete the password of a virtual machine.

## XML structure

```
<VMM>
  <DeleteVMPassword>
    <VM>
      <IpAddress></IpAddress>
    </VM>
  </DeleteVMPassword>
</VMM>
```

## Table description

# VPLS

## VPLS/SignalingLDPs

This table contains PW information of VPLS signaling LDP.

### XML structure

```
<VPLS>
  <SignalingLDPs>
    <SignalingLDP>
      <VsiName></VsiName>
      <Revertive>
        <Type></Type>
        <Time></Time>
      </Revertive>
    </SignalingLDP>
  </SignalingLDPs>
</VPLS>
```

### Table description

Item	Description
Feature name	VPLS
Table name	SignalingLDPs
Table type	Multi-instance table
Row name	SignalingLDP
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	You must create a VSI instance first before you merge, replace or create SignalingLDPs.
Revertive	Switch traffic back to the primary PW when it recovers	N/A	Members include: <ul style="list-style-type: none"><li>Type.</li><li>Time.</li></ul>	The member of Type must be specified.
Type	Revertive	N/A	Enumeration:	This member must

Column name	Column description	Column type	Data type and restrictions	Remarks
	member. Revertive type.		<ul style="list-style-type: none"> <li>1—Never.</li> <li>2—WTR.</li> </ul>	be specified.
Time	Revertive member. Time for WTR.	N/A	Unsigned integer. Value range: 0 to 3600 sec.	Only works and must be specified when the revertive type is WTR.

## VPLS/LDPPeers

This table contains PW peer information of VPLS using LDP signaling.

### XML structure

```

<VPLS>
  <LDPPeers>
    <LDPPeer>
      <VsiName></VsiName>
      <PeerAddr></PeerAddr>
      <PWID></PWID>
      <Hub></Hub>
      <SplitHorizon></SplitHorizon>
      <PWClass></PWClass>
      <TunnelPolicy></TunnelPolicy>
      <Statistics></Statistics>
    </LDPPeer>
  </LDPPeers>
</VPLS>

```

### Table description

Item	Description
Feature name	VPLS
Table name	LDPPeers
Table type	Multi-instance table
Row name	LDPPeer
Restrictions	No modification.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String.	You must create a

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 31 characters.	VSI instance first before you merge, replace or create VPLSPeers.
PeerAddr	LSR ID of the peer PE	Index	String, dotted decimal notation.	N/A
PWID	PW ID for the PW	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
Hub	Hub spoke attribute for the PW	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Hub.</li> <li>false—Spoke(default).</li> </ul>	You must first enable the VSI with the hub-spoke capability. No modification.
SplitHorizon	Split horizon forwarding for the PW	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled(default).</li> <li>false—Disabled.</li> </ul>	No modification.
PWClass	PW class related to the PW	N/A	String. Length: 1 to 19 characters.	No modification.
TunnelPolicy	Tunnel policy related to the PW	N/A	String. Length: 1 to 19 characters.	No modification.
Statistics	Statistics for the PW	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled(default).</li> </ul>	Support for this command depends on the device model.

## VPLS/LDPBackupPeers

This table contains PW backup peer information of VPLS using signaling LDP.

### XML structure

```

<VPLS>
  <LDPBackupPeers>
    <LDPBackupPeer>
      <VsiName></VsiName>
      <MainPeerAddr></MainPeerAddr>
      <MainPWID></MainPWID>
      <PeerAddr></PeerAddr>
      <PWID></PWID>
      <PWClass></PWClass>
      <TunnelPolicy></TunnelPolicy>
    </LDPBackupPeer>
  </LDPBackupPeers>
</VPLS>

```

## Table description

Item	Description
Feature name	VPLS
Table name	LDPBackupPeers
Table type	Multi-instance table
Row name	LDPBackupPeer
Restrictions	No modification.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	You must create a VSI instance first before you merge, replace or create VPLSPeers.
MainPeerAddr	LSR ID of the peer PE	Index	String, dotted decimal notation.	N/A
MainPWID	PW ID for the PW	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
PeerAddr	LSR ID of the peer PE	Index	String, dotted decimal notation.	N/A
PWID	PW ID for the PW	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
PWClass	PW class related to the PW	N/A	String. Length: 1 to 19 characters.	No modification.
TunnelPolicy	Tunnel policy related to the PW	N/A	String. Length: 1 to 19 characters.	No modification.

## VPLS/SignalingStatics

This table contains PW information of VPLS signaling STATIC.

## XML structure

```
<VPLS>
  <SignalingStatics>
    <SignalingStatic>
      <VsiName></VsiName>
      <Revertive>
        <Type></Type>
```

```

        <Time></Time>
    </Revertive>
</SignalingStatic>
</SignalingStatics>
</VPLS>

```

## Table description

Item	Description
Feature name	VPLS
Table name	SignalingStatics
Table type	Multi-instance table
Row name	SignalingStatic
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	You must create a VSI instance first before you merge, replace or create SignalingLDPs.
Revertive	Switch traffic back to the primary PW when it recovers	N/A	Members include: <ul style="list-style-type: none"> <li>Type.</li> <li>Time.</li> </ul>	The member of Type must be specified.
Type	Revertive member. Revertive type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Never.</li> <li>2—WTR.</li> </ul>	This member must be specified.
Time	Revertive member. Time for WTR.	N/A	Unsigned integer. Value range: 0 to 3600 sec.	Only works and must be specified when the revertive type is WTR.

## VPLS/StaticPeers

This table contains PW peer information of VPLS using static signaling.

## XML structure

```

<VPLS>
  <StaticPeers>
    <StaticPeer>

```

```

    <VsiName></VsiName>
    <PeerAddr></PeerAddr>
    <PWID></PWID>
    <InLabel></InLabel>
    <OutLabel></OutLabel>
    <Hub></Hub>
    <SplitHorizon></SplitHorizon>
    <PWClass></PWClass>
    <TunnelPolicy></TunnelPolicy>
    <Statistics></Statistics>    </StaticPeer>
</StaticPeers>
</VPLS>

```

## Table description

Item	Description
Feature name	VPLS
Table name	StaticPeers
Table type	Multi-instance table
Row name	StaticPeer
Restrictions	No modification.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	You must create a VSI instance first before you merge, replace or create VPLSPeers.
PeerAddr	LSR ID of the peer PE	Index	String, dotted decimal notation.	N/A
PWID	PW ID for the PW	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
InLabel	Incoming label of the PW	N/A	Unsigned integer. The value range varies by device model.	The signaling type must be STATIC. No modification.
OutLabel	Outgoing label of the PW	N/A	Unsigned integer. The value range varies by device model.	The signaling type must be STATIC. No modification.
Hub	Hub spoke attribute for the PW	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Hub.</li> <li>false—Spoke(default).</li> </ul>	You must first enable the VSI with the hub-spoke capability.

Column name	Column description	Column type	Data type and restrictions	Remarks
				No modification.

Revertive	Switch traffic back to the primary PW when it recovers	N/A	Members include: <ul style="list-style-type: none"> <li>Type.</li> <li>Time.</li> </ul>	N/A
Type	Revertive member. Revertive type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Never.</li> <li>2—WTR.</li> </ul>	N/A
Time	Revertive member. Time for WTR.	N/A	Unsigned integer. Value range: 0 to 3600 sec.	N/A

## VPLS/StaticPeers

This table contains PW peer information of VPLS using static signaling.

## XML structure

```

<VPLS>
  <StaticPeers>
    <StaticPeer>

```

```

    <VsiName></VsiName>
    <PeerAddr></PeerAddr>
    <PWID></PWID>
    <InLabel></InLabel>
    <OutLabel></OutLabel>
    <Hub></Hub>
    <SplitHorizon></SplitHorizon>
    <PWClass></PWClass>
    <TunnelPolicy></TunnelPolicy>
    <Statistics></Statistics>
  </StaticPeer>
</StaticPeers>
</VPLS>

```

## Table description

Item	Description
Feature name	VPLS
Table name	StaticPeers
Table type	Multi-instance table
Row name	StaticPeer
Restrictions	No modification.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
PeerAddr	LSR ID of the peer PE	Index	String, dotted decimal notation.	N/A
PWID	PW ID for the PW	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
InLabel	Incoming label of the PW	N/A	Unsigned integer. The value range varies by device model.	N/A
OutLabel	Outgoing label of the PW	N/A	Unsigned integer. The value range varies by device model.	N/A
Hub	Hub spoke attribute for the PW	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Hub.</li> <li>false—Spoke(default).</li> </ul>	You must first enable the VSI with the hub-spoke capability.
SplitHorizon	Split horizon forwarding for	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled(default).</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	the PW		<ul style="list-style-type: none"> <li>false—Disabled.</li> </ul>	
PWClass	PW class related to the PW	N/A	String. Length: 1 to 19 characters.	N/A
TunnelPolicy	Tunnel policy related to the PW	N/A	String. Length: 1 to 19 characters.	N/A
Statistics	PW Statistics	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled(default).</li> </ul>	Support for this command depends on the device model.

## VPLS/StaticBackupPeers

This table contains PW backup peer information of VPLS using static signaling.

### XML structure

```

<VPLS>
  <StaticBackupPeers>
    <StaticBackupPeer>
      <VsiName></VsiName>
      <MainPeerAddr></MainPeerAddr>
      <MainPWID></MainPWID>
      <PeerAddr></PeerAddr>
      <PWID></PWID>
      <InLabel></InLabel>
      <OutLabel></OutLabel>
      <Hub></Hub>
      <SplitHorizon></SplitHorizon>
      <PWClass></PWClass>
      <TunnelPolicy></TunnelPolicy>
      <Statistics></Statistics>
    </StaticBackupPeer>
  </StaticBackupPeers>
</VPLS>

```

### Table description

Item	Description
Feature name	VPLS
Table name	StaticBackupPeers
Table type	Multi-instance table
Row name	StaticBackupPeer
Restrictions	No modification.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
MainPeerAddr	LSR ID of the peer PE	Index	String, dotted decimal notation.	N/A
MainPWID	PW ID for the PW	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
PeerAddr	LSR ID of the peer PE	Index	String, dotted decimal notation.	N/A
PWID	PW ID for the PW	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
InLabel	Incoming label of the PW	N/A	Unsigned integer. The value range varies by device model.	N/A.
OutLabel	Outgoing label of the PW	N/A	Unsigned integer. The value range varies by device model.	N/A
Hub	Hub spoke attribute for the PW	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Hub.</li> <li>false—Spoke(default).</li> </ul>	You must first enable the VSI with the hub-spoke capability.
SplitHorizon	Split horizon forwarding for the PW	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled(default).</li> <li>false—Disabled.</li> </ul>	N/A
PWClass	PW class related to the PW	N/A	String. Length: 1 to 19 characters.	N/A
TunnelPolicy	Tunnel policy related to the PW	N/A	String. Length: 1 to 19 characters.	N/A
Statistics	PW Statistics	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled(default).</li> </ul>	Support for this command depends on the device model.

## VPLS/RmtMACs

This table contains information about remote MAC addresses of each VPLS VSI.

### XML structure

```
<VPLS>
  <RmtMACs>
    <MAC>
```

```

    <VsiName></VsiName>
    <MacAddr></MacAddr>
    <LinkID></LinkID>
    <MACState></MACState>
    <Aging></Aging>
    <AgingTime></AgingTime>
  </MAC>
</RmtMACs>
</VPLS>

```

## Table description

Item	Description
Feature name	VPLS
Table name	RmtMACs
Table type	Multi-instance table
Row name	MAC
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String, Length: 1 to 31 characters.	N/A
MacAddr	Remote MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
LinkID	Link ID of the Mac	N/A	Unsigned integer.	N/A
MACState	State	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—dynamic.</li> </ul>	N/A
Aging	Whether in aging state	N/A	<ul style="list-style-type: none"> <li>true—Aging.</li> <li>false—Not aging</li> </ul>	N/A
AgingTime	When it is true in aging state	N/A	Unsigned integer. The value range varies by device model.	N/A

## Table description

Item	Description
Feature name	VPWS
Table name	Connections
Table type	Multi-instance table
Row name	Connection
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
XCGName	XCG Name	Index	String. Length: 1 to 31 characters.	You must create the XCG first.
ConnectionName	Connection Name	Index	String. Length: 1 to 20 characters.	N/A
Interworking	Interworking for a cross-connect	N/A	Enumeration: <ul style="list-style-type: none"><li>1—None(default).</li><li>2—IPV4.</li></ul>	Support for this command depends on the device model.

Column name	Column description	Column type	Data type and restrictions	Remarks
MTU	MTU	N/A	Unsigned integer. Value range: The value range varies by device model. Default: 1500 bytes.	N/A
ArpSuppression	ARP flooding suppression	N/A	Boolean: true—Enabled. false—Disabled(default).	Support for this command depends on the device model.
DualReceive	Dual receive function for PW redundancy	N/A	Boolean: • true—Enabled. • false—Disabled(default).	Support for this command depends on the device model.
Revertive	Switch traffic back to the primary PW when it recovers	N/A	Members include: • Type. • Time.	The member of Type must be specified.
Type	Revertive member. Revertive type.	N/A	Enumeration: • 1—Never. • 2—WTR.	This member must be specified.
Time	Revertive member. Time for WTR.	N/A	Unsigned integer. Value range: 0 to 3600 sec. Default: 0 sec.	Only works when the revertive type is WTR.

## VPWS/LDP Peers

This table contains PW peer information of VPWS using LDP signaling.

### XML structure

```

<VPWS>
  <LDPPeers>
    <LDPPeer>
      <XCGName></XCGName>
      <ConnectionName></ConnectionName>
      <PeerAddr></PeerAddr>
      <PWID></PWID>
      <PWClass></PWClass>
      <TunnelPolicy></TunnelPolicy>
      <Statistics></Statistics>
    </LDPPeer>
  </LDPPeers>
</VPWS>

```

## Table description

Item	Description
Feature name	VPWS
Table name	LDPPeers
Table type	Multi-instance table
Row name	LDPPeer
Restrictions	No modification.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
XCGName	XCG Name	Index	String. Length: 1 to 31 characters.	You must create the XCG first.
ConnectionName	Connection Name	Index	String. Length: 1 to 20 characters.	You must create the connection first.
PeerAddr	LSR ID of the peer PE	Index	String, dotted decimal notation.	N/A
PWID	PW ID for the PW	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
PWClass	PW class related to the PW	N/A	String. Length: 1 to 19 characters.	No modification.
TunnelPolicy	Tunnel policy related to the PW	N/A	String. Length: 1 to 19 characters.	No modification.
Statistics	PW Statistics	N/A	Boolean: <ul style="list-style-type: none"><li>true—Enabled.</li><li>false—Disabled(default).</li></ul>	Support for this command depends on the device model.

## Table description

Item	Description
Feature name	VPWS
Table name	PWs
Table type	Multi-instance table
Row name	PW
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
XCGName	XCG name	Index	String. Length: 1 to 31 characters.	N/A
ConnectionName	Connection Name	Index	String. Length: 1 to 20 characters.	N/A
PeerAddr	LSR ID of the peer PE	Index	String, dotted decimal notation.	N/A
PWID	PW ID for the PW	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
Protocol	Signaling protocol.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—STATIC</li> <li>2—LDP</li> </ul>	N/A
InLabel	Incoming label of the PW	N/A	Unsigned integer. The value range varies by device model.	N/A
OutLabel	Outgoing label of the PW	N/A	Unsigned integer. The value range varies by device model.	N/A
MTU	MTU	N/A	Unsigned integer.	N/A
TunnelGroupID	Tunnel group ID.	N/A	Unsigned integer (64).	N/A
TunnelNHLFEIDs	Tunnel NHLFE IDs.	N/A	Unsigned integer.	Repeat supported.
IsMainPW	Is main PW or not.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Main PW.</li> <li>false—Backup PW.</li> </ul>	N/A
ControlWord	Whether using control word.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled</li> <li>false—Disabled.</li> </ul>	N/A
PWType	PW type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Unknown</li> <li>1—FR_DLCL_MARTINI</li> </ul>	N/A

# VRRP

## VRRP/VRRPOper

This table contains VRRP operation information.

### XML structure

```
<VRRP>
  <VRRPOper>
    <Operation>
      <AddressType></AddressType>
      <IfIndex></IfIndex>
      <VrID></VrID>
      <PriorityConfig></PriorityConfig>
      <AuthTypeConfig></AuthTypeConfig>
      <AuthKey></AuthKey>
      <AdverInterval></AdverInterval>
      <PreemptMode></PreemptMode>
      <PreemptDelay></PreemptDelay>
    </Operation>
  </VRRPOper>
</VRRP>
```

### Table description

Item	Description
Feature name	VRRP
Table name	VRRPOper
Table type	Multi-instance table
Row name	Operation
Restrictions	Only supported on Layer 3 interfaces
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type	Index	Enumeration: <ul style="list-style-type: none"><li>0—IPv4.</li><li>1—IPv6.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
VrID	Virtual router ID	Index	Unsigned integer. Value range: 1 to 255.	The value range depends on the device model.
PriorityConfig	Priority of virtual router	N/A	Unsigned integer. Value range: 1 to 254. Default: 100.	A larger value indicates a higher priority.
AuthTypeConfig	Authentication type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Simple password.</li> <li>2—Authentication header.</li> </ul>	By default, no authentication is specified for VRRP. IPv6 VRRP does not support authentication configuration. Both AuthTypeConfig and AuthKey must be configured for the merge, create, replace, delete and remove operations.
AuthKey	Authentication key	N/A	String, case-sensitive. Length: 1 to 8 characters.	Only plaintext password is supported. AuthKey cannot be configured when no AuthTypeConfig is configured.
AdverInterval	Advertisement interval	N/A	Unsigned integer. Value range: 10 to 4095. Default: 100.	The unit is centiseconds.
PreemptMode	Preempt mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Preemptive mode.</li> <li>2—Non-preemptive mode.</li> </ul> Default: preemptive mode.	For the merge, create, and replace operations, configure the preemptive mode and the preemption delay, or configure the non-preemptive mode without the preemption delay. Both the preempt mode and preemption delay must be configured for the delete and remove operations.
PreemptDelay	Preemption delay	N/A	Unsigned integer. Value range: 0 to 180000. Default: 0.	The unit is centiseconds. The default value is 0, which means to preempt immediately.

## VRRP/VRRPAssolpAddr

This table contains information about VRRP associated addresses.

## XML structure

```
<VRRP>
```

```

<VRRPAssoIpAddress>
  <AssoIpAddr>
    <AddressType></AddressType>
    <IfIndex></IfIndex>
    <VrID></VrID>
    <IpAddress></IpAddress>
    <LinkLocal></LinkLocal>
    <Group></Group>
  </AssoIpAddr>
</VRRPAssoIpAddress>
</VRRP>

```

## Table description

Item	Description
Feature name	VRRP
Table name	VRRPAssoIpAddress
Table type	Multi-instance table
Row name	AssoIpAddr
Restrictions	Only supported on Layer 3 interfaces
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> </ul>	N/A
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
VrID	Virtual router ID	Index	Unsigned integer. Value range: 1 to 255.	The value range depends on the device model.
IpAddress	VRRP virtual IP address	Index	String, dotted decimal notation. Or Hexadecimal string, colon-separated.	For example, 1.1.1.1, or 1::1.
LinkLocal	LinkLocal keyword.	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	For the merge, create, and replace operations, you cannot configure the LinkLocal keyword when the VRRP virtual IP

Column name	Column description	Column type	Data type and restrictions	Remarks
				address is an IPv4 address. You must configure the LinkLocal keyword when the VRRP virtual IP address is an IPv6 address. When the IPv6 address is a link-local address, set the value to <b>true</b> . Otherwise, set the value to <b>false</b> . For the delete and remove operations, the LinkLocal keyword cannot be configured.
Group	Group type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Not associated with RBM.</li> <li>1—Associate the VRRP group with RBM by adding the router to the active group.</li> <li>2—Associate the VRRP group with RBM by adding the router to the standby group.</li> </ul>	The state of the RBM-associated virtual router is determined by RBM.  Whether this column is supported depends on the device model.

## VRRP/VRRPTrack

This table contains information about VRRP Track.

### XML structure

```

<VRRP>
  <VRRPTrack>
    <Track>
      <AddressType></AddressType>
      <IfIndex></IfIndex>
      <VrID></VrID>
      <TrackID></TrackID>
      <TrackMode></TrackMode>
      <ReducePriority></ReducePriority>
    </Track>
  </VRRPTrack>
</VRRP>

```

### Table description

Item	Description
Feature name	VRRP

Table name	VRRPTrack
Table type	Multi-instance table
Row name	Track
Restrictions	Only supported on Layer 3 interfaces
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> </ul>	N/A
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
VrID	Virtual router ID	Index	Unsigned integer. Value range: 1 to 255.	The value range depends on the device model.
TrackID	Track ID	Index	Unsigned integer. Value range: 1 to 1024.	N/A
TrackMode	Track mode	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Switchover.</li> <li>2—Priority reduced.</li> </ul>	For reduced mode: when the track switches to Negative, reduce the VRRP priority of local router.  For switchover mode: when the track switches to Negative, if local router's VRRP state is Backup, switch to Master at once.
ReducePriority	Value of reduced priority	N/A	Unsigned integer. Value range: 1 to 255.	ReducePriority cannot be configured when TrackMode is <b>switchover</b> .  The default value is 10 when TrackMode is priority <b>reduced</b> .

## VRRP/VRRPInterface

This table contains information about VRRP interfaces.

## XML structure

```
<VRRP>
  <VRRPInterface>
    <Interface>
      <IfIndex></IfIndex>
      <Ipv4Dot1QVLANID></Ipv4Dot1QVLANID>
      <Ipv4SecondDot1QVLANID></Ipv4SecondDot1QVLANID>
      <Ipv4Version></Ipv4Version>
      <Ipv4RecoverDelay></Ipv4RecoverDelay>
      <Ipv6RecoverDelay></Ipv6RecoverDelay>
    </Interface>
  </VRRPInterface>
</VRRP>
```

## Table description

Item	Description
Feature name	VRRP
Table name	VRRPInterface
Table type	Multi-instance table
Row name	Interface
Restrictions	Only supported on Layer 3 interfaces
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	IPv4 VRRP control VLAN configuration takes effect on only Layer 3 Ethernet subinterfaces and aggregate subinterfaces. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Ipv4Dot1QVLANID	Outer VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.	For the delete and remove operations, if you configure the outer VLAN ID, you must also configure the inner VLAN ID.

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4SecondDot1QVLANID	Inner VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.	For the merge, create, and replace operations, you must configure both the outer VLAN ID and inner VLAN ID.
Ipv4Version	IPv4 VRRP version.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>2</b>—VRRPv2.</li> <li>• <b>3</b>—VRRPv3.</li> </ul> Default: VRRPv3.	N/A
Ipv4RecoverDelay	Delay time for the IPv4 VRRP group to transition from Initialize to Master or Backup state	N/A	Unsigned integer. Value range: 0 to 60 seconds. Default: 0.	The unit is seconds. The default value is 0, which means to recover immediately.
Ipv6RecoverDelay	Delay time for the IPv6 VRRP group to transition from Initialize to Master or Backup state	N/A	Unsigned integer. Value range: 0 to 60 seconds. Default: 0.	The unit is seconds. The default value is 0, which means to recover immediately.

# VRRP

## VRRP/Base

This table contains VRRP operation table.

### XML structure

```
<VRRP>
  <VRRPOper>
    <Operation>
      <AddressType></AddressType>
      <IfIndex></IfIndex>
      <VrID></VrID>
      <OperState></OperState>
      <PriorityConfig></PriorityConfig>
      <PriorityRun></PriorityRun>
      <IpAddressCount></IpAddressCount>
      <MasterIpAddress></MasterIpAddress>
      <AuthTypeConfig></AuthTypeConfig>
      <AuthTypeRun></AuthTypeRun>
      <AdverInterval></AdverInterval>
      <PreemptMode></PreemptMode>
      <PreemptDelay></PreemptDelay>
    </Operation>
  </VRRPOper>
</VRRP>
```

### Table description

Item	Description
Feature name	VRRP
Table name	VRRPOper
Table type	Multi-instance table
Row name	Operation
Restrictions	Only supported on Layer 3 interfaces

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> </ul>	N/A
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
VrID	Virtual router ID	Index	Unsigned integer. Value range: 1 to 255.	The value range depends on the device model.
OperState	Virtual router state	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Inactive.</li> <li>1—Initialize.</li> <li>2—Backup.</li> <li>3—Master.</li> </ul>	N/A
PriorityConfig	Configured priority of virtual router	N/A	Unsigned integer. Value range: 1 to 254. Default: 100.	A larger value indicates a higher priority.
PriorityRun	Running priority of virtual router	N/A	Unsigned integer. Value range: 0 to 255.	The larger value indicates higher priority.
IPAddressCount	Count of associated addresses	N/A	Unsigned integer. Value range: 0 to 16.	N/A
MasterIpAddress	IP address of the Master router	N/A	String, dotted decimal notation. Or Hexadecimal string, colon-separated.	For example, 1.1.1.1, or 1::1.
AuthTypeConfig	Configured authentication type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—no authentication</li> <li>1—Simple password</li> <li>2—Authentication header.</li> </ul>	N/A
AuthTypeRun	Running authentication type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—no authentication</li> <li>1—Simple Password</li> <li>2—Authentication header.</li> </ul>	The value is 0 for VRRPv3
AdverInterval	Advertisement interval	N/A	Unsigned integer. Value range: 10 to 4095.	The unit is centiseconds.

Column name	Column description	Column type	Data type and restrictions	Remarks
PreemptMode	Preempt mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Preemptive mode.</li> <li>2—Non-preemptive mode.</li> </ul> Default: preemptive mode.	N/A
PreemptDelay	Preemption delay	N/A	Unsigned integer. Value range: 0 to 180000.	The unit is centiseconds. The default value is 0, which means to preempt immediately. If PreemptMode is non-preemptive mode, this value cannot be obtained.

## VRRP/VRRPAssolpAddr

This table contains information about VRRP associated IP addresses.

### XML structure

```

<VRRP>
  <VRRPAssoIpAddress>
    <AssoIpAddr>
      <AddressType></AddressType>
      <IfIndex></IfIndex>
      <VrID></VrID>
      <IpAddress></IpAddress>
      <LinkLocal></LinkLocal>
      <Group></Group>
    </AssoIpAddr>
  </VRRPAssoIpAddress>
</VRRP>

```

### Table description

Item	Description
Feature name	VRRP
Table name	VRRPAssolpAddr
Table type	Multi-instance table
Row name	AssolpAddr
Restrictions	Only supported on Layer 3 interfaces

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type	Index	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—IPv4.</li> <li>• <b>1</b>—IPv6.</li> </ul>	N/A
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
VrID	Virtual router ID	Index	Unsigned integer. Value range: 1 to 255.	The value range depends on the device model.
IpAddress	Virtual IP address	Index	String, dotted decimal notation. Or Hexadecimal string, colon-separated.	For example, 1.1.1.1, or 1::1.
LinkLocal	LinkLocal keyword.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true.</b></li> <li>• <b>false.</b></li> </ul>	If IpAddress is IPv4 address, this value cannot be obtained.
Group	Group type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Not associated with RBM.</li> <li>• <b>1</b>—Associate the VRRP group with RBM by adding the router to the active group.</li> <li>• <b>2</b>—Associate the VRRP group with RBM by adding the router to the standby group.</li> </ul>	The state of the RBM-associated virtual router is determined by RBM.  This value is always 0 if the device does not support this column.

## VRRP/VRRPTrack

This table contains information about VRRP Track.

## XML structure

```

<VRRP>
  <VRRPTrack>
    <Track>
      <AddressType></AddressType>
      <IfIndex></IfIndex>
      <VrID></VrID>
    </Track>
  </VRRPTrack>
</VRRP>

```

```

    <TrackID></TrackID>
    <TrackMode></TrackMode>
    <ReducePriority></ReducePriority>
  </Track>
</VRRPTrack>
</VRRP>

```

## Table description

Item	Description
Feature name	VRRP
Table name	VRRPTrack
Table type	Multi-instance table
Row name	Track
Restrictions	Only supported on Layer 3 interfaces

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> </ul>	N/A
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
VrID	Virtual router ID	Index	Unsigned integer. Value range: 1 to 255.	The value range depends on the device model.
TrackID	Track ID	Index	Unsigned integer. Value range: 1 to 1024.	N/A
TrackMode	Track mode	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Switchover.</li> <li>2—Priority reduced.</li> </ul>	For reduced mode: when the track switches to Negative, reduce the VRRP priority of local router.  For switchover mode: when the track switches to Negative, if local router's VRRP state is Backup, switch to Master at once.

Column name	Column description	Column type	Data type and restrictions	Remarks
ReducePriority	Value of reduced priority	N/A	Unsigned integer. Value range: 1 to 255.	If TrackMode is switchover, this value cannot be obtained.

## VRRP/VRRPInterface

This table contains VRRP interface information.

### XML structure

```

<VRRP>
  <VRRPInterface>
    <Interface>
      <IfIndex></IfIndex>
      <Ipv4Dot1QVLANID></Ipv4Dot1QVLANID>
      <Ipv4SecondDot1QVLANID></Ipv4SecondDot1QVLANID>
      <Ipv4Version></Ipv4Version>
      <Ipv4RecoverDelay></Ipv4RecoverDelay>
      <Ipv6RecoverDelay></Ipv6RecoverDelay>
    </Interface>
  </VRRPInterface>
</VRRP>

```

### Table description

Item	Description
Feature name	VRRP
Table name	VRRPInterface
Table type	Multi-instance table
Row name	Interface
Restrictions	Only supported on Layer 3 interfaces

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	IPv4 VRRP control VLAN configuration takes effect on only Layer 3 Ethernet subinterfaces and aggregate subinterfaces.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Ipv4Dot1QVLANID	Outer VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.	This value cannot be obtained if it's not configured.
Ipv4SecondDot1QVLANID	Inner VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.	This value cannot be obtained if it's not configured.
Ipv4Version	IPv4 VRRP version.	N/A	Enumeration: <ul style="list-style-type: none"> <li>2—VRRPv2.</li> <li>3—VRRPv3.</li> </ul>	N/A
Ipv4RecoverDelay	Delay time for the IPv4 VRRP group to transition from Initialize to Master or Backup state	N/A	Unsigned integer. Value range: 0 to 60 seconds. Default: 0.	The unit is seconds. The default value is 0, which means to recover immediately.
Ipv6RecoverDelay	Delay time for the IPv6 VRRP group to transition from Initialize to Master or Backup state	N/A	Unsigned integer. Value range: 0 to 60 seconds. Default: 0.	The unit is seconds. The default value is 0, which means to recover immediately.

## VRRP/VRRP Specification

This table contains VRRP specification information.

## XML structure

```
<VRRP>
  <VRRPSpecification>
```

```

    <MaxVrID></MaxVrID>
  </VRRPSpecification>
</VRRP>

```

## Table description

Item	Description
Feature name	VRRP
Table name	VRRPSpecification
Table type	Single-instance table
Row name	N/A

# VRRP

## VRRP/VRRPOper

Message	Explanation
Maximum number of VRRP groups on the device already reached. 设备上存在的备份组数目已经达到上限。	Maximum number of VRRP groups on the device already reached.For more information,please reference to product manuals.
Maximum number of VRRP groups on the interface already reached. 接口上存在的备份组数目已经达到上限。	Maximum number of VRRP groups on the interface already reached.For more information,please reference to product manuals.
Invalid IP address. 非法的IPv4地址。	Only class A,class B,class C addresses are available.
Invalid IPv6 address. 非法的IPv6地址。	The VRRP virtual IPv6 address cannot be all 0s or loopback address.,.
Configuration items don't meet the requirements. 不符合配置要求。	<ol style="list-style-type: none"><li>1. Cannot set new configurations without non-index column.</li><li>2. Preempt mode and preempt delay have to be configured together.</li></ol>
VRID of the VRRP group is out of range. 备份组号达到产品定制的最大值。	VRID of the VRRP group is out of range.For more information,please reference to product manuals.
Authkey can't include backslashes (\). 认证字中不能有转义字符。	Please change your authkey,and do not include '\'.
VRRP4 is not configured. VRRP4未配置。	VRRP4 service has not been started.
VRRP6 is not configured. VRRP6未配置。	VRRP6 service has not been started.
This configuration is not supported on interfaces of this type. 该类型接口不支持此配置。	Only routed ports are available.

## VRRP/VRRPAssolpAddr

Message	Explanation
The virtual address has already been assigned to the VRRP group. 虚拟地址已经在备份组中存在。	Cannot assign same virtual address for different VRRP groups.
Maximum number of virtual addresses assigned to the VRRP group already reached. 备份组中配置的虚拟地址个数已经达到上限。	The maximum number of virtual address of VRRP groups is 16.
Please delete all other virtual IPv6 addresses	Please delete all other virtual IPv6 addresses before deleting the

before deleting the link-local address. 在删除链路本地地址前请先删除该备份组的其他所有虚拟地址。	link-local address.
The first assigned virtual IPv6 address must be a link-local address. 第一个指定的虚拟IPv6地址必须是链路本地地址。	Please assign link-local IPv6 address first.
Specify the link-local option when configuring a virtual link-local address. 当配置虚拟链路本地地址时须指定link-local关键字。	Specify the link-local option when configuring a virtual link-local address.
The link-local option can't be specified. 不需要link-local关键字。	Do not specify the link-local option when configuring a non-link-local address.
VRID of the VRRP group is out of range. 备份组号达到产品定制的最大值。	VRID of the VRRP group is out of range. For more information, please reference to product manuals.
Configuration items don't meet the requirements. 不符合配置要求。	The linklocal column must be specified when configure IPv6 addresses.
Can't associate a virtual router with RBM in load balancing mode. 负载均衡模式VRRP下不允许将备份组与RBM模块关联。	You can associate a virtual router with RBM only in normal mode. 只有工作在标准模式下的VRRP备份组支持与RBM模块关联。
Can't switch to load balancing mode for an RBM-associated virtual router. 存在RBM关联备份组时，不允许切换到负载均衡VRRP模式。	To set VRRP to work in load balancing mode, first delete all virtual routers associated with RBM. 如果VRRP备份组已经关联了RBM，如果要将VRRP备份组切换为负载均衡模式，需要先删除所有RBM关联备份组。
Can't configure the RBM attribute for an existing virtual router. 如果VRRP备份组已存在，不允许关联RBM属性。	You can associate a virtual router with RBM only when creating the virtual router. 仅允许在备份组创建时增加关联RBM属性。
Can't remove the RBM attribute for a virtual router. 不允许取消VRRP备份组与RBM关联。	To cancel the association with RBM, first delete the virtual router. 如果一个VRRP备份组已经关联RBM，不允许取消与RBM关联。需要先删除整个VRRP备份组。
Can't modify the RBM attribute for a virtual router. 不允许修改VRRP备份组与RBM关联。	To modify the association with RBM, first delete the virtual router. 如果一个VRRP备份组已经关联RBM，不允许修改RBM关联方式。需要先删除整个VRRP备份组。
Can't configure multiple virtual IP address for an RBM-associated virtual router. 不允许关联RBM的VRRP备份组配置多个虚IP地址。	Can't configure multiple virtual IP addresses for a virtual router associated with RBM. 如果一个VRRP备份组已经关联RBM，不允许配置多个虚IP地址。
Can't associate RBM with a virtual router that has already been associated with Track. 如果VRRP备份组已经关联Track，不能再关联RBM。	Can't associate a virtual router with RBM if the virtual router has been associated with Track. 如果一个VRRP备份组已经关联Track，则不允许再关联RBM。
Can't associate Track with a virtual router that has already been associated with RBM. 如果VRRP备份组已经关联RBM，不能再关联Track。	Can't associate a virtual router with Track if the virtual router has been associated with RBM. 如果一个VRRP备份组已经关联RBM，则不允许再关联Track。
This device model doesn't support configure RBM attribute for VRRP.	The device doesn't support the RBM option. 设备不支持RBM选项。

设备不支持“VRRP备份组支持RBM”功能。	
------------------------	--

## VRRP/VRRPTrack

Message	Explanation
Maximum number of associated track entries already reached. 关联的Track项数目已经达到上限。	The maximum number of track entries of VRRP groups is 8.
VRID of the VRRP group is out of range. 备份组号达到产品定制的最大值。	VRID of the VRRP group is out of range.For more information,please reference to product manuals.
This configuration is not supported on interfaces of this type. 该类型接口不支持此配置。	Only route ports are available.

## VRRP/VRRPInterface

Message	Explanation
This configuration is not supported on interfaces of this type. 该类型接口不支持此配置。	Only route ports are available.
Configuration items don't meet the requirements. 不符合配置要求。	<ol style="list-style-type: none"> <li>1. Cannot configure second dot1q without dot1q.</li> <li>2. Cannot remove dot1q without second dot1q.</li> </ol>

# VXLAN

## VXLAN/Base

This table contains information about global VXLAN functions.

### XML structure

```
<VXLAN>
  <Base>
    <RmtMacLearn></RmtMacLearn>
    <RmtArpLearn></RmtArpLearn>
    <RmtNdLearn></RmtNdLearn>
    <LocMacNtf></LocMacNtf>
    <ReservedVxlanID></ReservedVxlanID>
    <EvpnMultihomingAdvertise></EvpnMultihomingAdvertise>
    <EvpnMultihomingTimerDFDelay></EvpnMultihomingTimerDFDelay>
    <EvpnArpMobilitySuppression></EvpnArpMobilitySuppression>
  </Base>
</VXLAN>
```

### Table description

Item	Description
Feature name	VXLAN
Table name	Base
Table type	Single-instance table
Row name	N/A
Restrictions	This table supports only global functions.
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RmtMacLearn	Remote MAC address learning function	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled(default).</li><li><b>false</b>—Disabled.</li></ul>	N/A
RmtArpLearn	Remote ARP learning function	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled(default).</li><li><b>false</b>—Disabled.</li></ul>	You must enable L2VPN feature globally at first.
RmtNdLearn	Remote ND learning	N/A	Boolean:	You must enable L2VPN

Column name	Column description	Column type	Data type and restrictions	Remarks
	function		<ul style="list-style-type: none"> <li><b>true</b>—Enabled(default).</li> <li><b>false</b>—Disabled.</li> </ul>	feature globally at first.
LocMacNtf	Local MAC address report function	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled(default).</li> </ul>	N/A
ReservedVxlanID	Reserved VXLAN ID	N/A	Unsigned integer, Value range: 0 to 16777215.	You must enable L2VPN feature globally at first. You must specify this column for tunnel BFD. The value must be different from that of VxlanID column in VXLANs table. The available value can be get from the NextVxlanID column in Base table.
EvpnMultihomingAdvertise	EVPN multihoming route advertisement	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled (default).</li> <li><b>false</b>—Disabled.</li> </ul>	You must enable L2VPN feature globally at first.
EvpnMultihomingTimerDFDelay	EVPN multihoming DF election delay	N/A	Unsigned integer, Value range: 1 to 1200.	You must enable L2VPN feature globally at first.
EvpnArpMobilitySuppression	EVPN ARP mobility event suppression	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled (default).</li> </ul>	You must enable L2VPN feature globally at first.

## VXLAN/VXLANs

This table contains information about VXLAN configurations.

### XML structure

```

<VXLAN>
  <VXLANs>
    <Vxlan>
      <VxlanID></VxlanID>
      <VsiName></VsiName>
      <Ipv4Group>
        <GroupAddr></GroupAddr>
        <SrcAddr></SrcAddr>
      </Ipv4Group>
      <TunnelAll></TunnelAll>
    </Vxlan>
  </VXLANs>
</VXLAN>

```

## Table description

Item	Description
Feature name	VXLAN
Table name	VXLANs
Table type	Multi-instance table
Row name	Vxlan
Restrictions	You must enable global L2VPN feature at first.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VxlanID	VXLAN ID	Index	Unsigned integer, Value range: 0-16777215.	N/A
VsiName	VSI name	N/A	String, Length: 1 to 31 characters.	You must create a VSI first before you merge, replace or create VXLANs. You must specify this column when the operation is merge, create or replace. You can't specify this column when the operation is delete or remove. Can not be modified after creation.
Ipv4Group	VXLAN multicast group structure	Data structure	Members include: <ul style="list-style-type: none"> <li>GroupAddr.</li> <li>SrcAddr.</li> </ul>	You must specify both the GroupAddr and SrcAddr when the operation is merge, create or replace.
GroupAddr	IPv4 multicast address	N/A	String, dotted decimal notation.	Example: 224.1.1.1.
SrcAddr	IPv4 source address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
TunnelAll	All tunnels	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled(default).</li> </ul>	If you assign VXLAN tunnels to a VXLAN one by one, you cannot remove all the VXLAN tunnels by using this column.

## VXLAN/Tunnels

批注 [c0(1)]: Need confirmed by product

This table contains information about tunnels associated with VXLANs.

### XML structure

```
<VXLAN>
  <Tunnels>
    <Tunnel>
      <VxlanID></VxlanID>
      <TunnelID></TunnelID>
      <FloodingProxy></FloodingProxy>
      <RelayAgent></RelayAgent>
    </Tunnel>
  </Tunnels>
</VXLAN>
```

### Table description

Item	Description
Feature name	VXLAN

Table type	Multi-instance table
Row name	Tunnel
Restrictions	You must enable global L2VPN feature at first.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VxlanID	VXLAN ID	Index	Unsigned integer, Value range:0-16777215.	You must create a VXLAN first before you merge, replace or create tunnels.
TunnelID	Tunnel ID	Index	Unsigned integer.	You must create a tunnel first before you merge, replace or create tunnels.
FloodingProxy	Flooding proxy	N/A	Boolean: • <b>true</b> —Enabled. • <b>false</b> —Disabled(default).	Can't be modified after creation.
RelayAgent	Relay agent	N/A	Enumeration: • <b>0</b> —Disabled(default).	Support for this column depends on the device

			<ul style="list-style-type: none"> <li>1—PPPoE.</li> <li>2—IPoE.</li> <li>3—The combination of the two type above.</li> </ul>	model.
--	--	--	---	--------

## VXLAN/RmtMACs

This table contains information about remote MAC addresses of each VXLAN.

### XML structure

```
<VXLAN>
  <RmtMACs>
    <MAC>
      <VsiName></VsiName>
      <MacAddr></MacAddr>
      <TunnelID></TunnelID>
    </MAC>
  </RmtMACs>
</VXLAN>
```

### Table description

Item	Description
Feature name	VXLAN
Table name	RmtMACs
Table type	Multi-instance table
Row name	MAC
Restrictions	You must enabled global L2VPN feature at first.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	You must create a VSI first before you merge, replace or create MACs.
MacAddr	Remote MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated. The value must be unicast address.	Example: 00-0c-af-e3-5d-c0.
TunnelID	Tunnel ID	N/A	Unsigned integer	You must create a

Column name	Column description	Column type	Data type and restrictions	Remarks
				tunnel first before you merge, replace or create MACs.  You must specify this column when the operation is merge, create or replace. You can't specify this column when the operation is delete or remove.

## VXLAN/Allocations

This table contains VXLAN allocate information in context.

### XML structure

```

<VXLAN>
  <Allocations>
    <Allocation>
      <ContextID></ContextID>
      <Vxlan></Vxlan>
    </Allocation>
  </Allocations>
</VXLAN>

```

### Table description

Item	Description
Feature name	VXLAN
Table name	Allocations
Table type	Multi-instance table
Row name	Allocation
Restrictions	You must enable global L2VPN feature at first.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context ID	Index	Unsigned integer.	N/A

Vxlan	VXLAN ID list	N/A	Numeric string separated by commas and a maximum of one minus sign. The string cannot contain blank spaces or end with a comma or minus sign. Such as: 1,3,5,8,10-20	N/A
-------	---------------	-----	---	-----

批注 [c0(2)]: Need confirmed by product

## VXLAN/EvpnVxlanEncaps

This table contains information about EVPN with VXLAN encapsulation.

### XML structure

```
<VXLAN>

    <SupportRelayAgent></SupportRelayAgent>
    <EvpnMultihomingAdvertise></EvpnMultihomingAdvertise>
    <EvpnMultihomingTimerDFDelay></EvpnMultihomingTimerDFDelay>
    <EvpnArpMobilitySuppression></EvpnArpMobilitySuppression>
  </Base>
</VXLAN>
```

### Table description

Item	Description
Feature name	VXLAN
Table name	Base
Table type	Single-instance table
Row name	N/A
Restrictions	This table supports only global functions.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RmtMacLearn	Remote MAC address learning function	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled.</li><li><b>false</b>—Disabled.</li></ul>	N/A
RmtArpLearn	Remote ARP learning function	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled.</li><li><b>false</b>—Disabled.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RmtNdLearn	Remote ND learning function	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
LocMacNtf	Local MAC address report function	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
NextVxlanID	Next useful VXLAN ID	N/A	Unsigned integer, Value range: 0 to 16777215.	You must enable global L2VPN feature at first. The invalid value 4294967295 indicates that no ID can be set.
TotalVxlanNum	Total number of existing VXLANs	N/A	Unsigned integer	You must enable global L2VPN feature at first.
ReservedVxlanID	Reserved VXLAN ID	N/A	Unsigned integer, Value range: 0-16777215.	You must enable L2VPN feature globally at first.
SupportRelayAgent	Relay agent supporting function	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Disabled.</li> <li><b>1</b>—PPPoE.</li> <li><b>2</b>—IPoE.</li> <li><b>3</b>—The combination of the two type above.</li> </ul>	N/A
EvpnMultihomingAdvertise	EVPN multihoming route advertisement	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	You must enable L2VPN feature globally at first.
EvpnMultihomingTimerDFDelay	EVPN multihoming DF election delay	N/A	Unsigned integer, Value range: 1 to 1200.	You must enable L2VPN feature globally at first.
EvpnArpMobilitySuppression	EVPN ARP mobility event suppression	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	You must enable L2VPN feature globally at first.

## VXLAN/VXLANS

This table contains information about VXLAN configurations.

### XML structure

```

<VXLAN>
  <VXLANS>

Table type	Multi-instance table
Row name	VxlanRT
Restrictions	You must enabled global L2VPN feature at first.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
RTType	Route target type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Import</li> <li>2—Export</li> </ul>	N/A
RTEntry	VPN target	Index	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn	N/A

## VXLAN/VRFs

This table contains VNIs associated with VPN instances.

### XML structure

```
<VXLAN>
  <VRFs>
    <VRF>
      <VRF></VRF>
      <VNI></VNI>
    </VRF>
  </VRFs>
</VXLAN>
```

### Table description

Item	Description
Feature name	VXLAN
Table name	VRFs
Table type	Multi-instance table
Row name	VRF
Restrictions	You must enable L2VPN globally first.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name	Index	String, case-sensitive. Length: 0 to 31 characters.	This column must be empty.
VNI	Layer 3VNI for the tenant	N/A	Unsigned integer. Value range: 0 to 16777215.	N/A

## VXLAN/EvpnESs

This table contains EVPN Ethernet segment information.

### XML structure

```
<VXLAN>
  <EvpnESs>
```

```

<EvpnES>
  <Esi></Esi>
  <VLANID></VLANID>
  <VxlanID></VxlanID>
  <SelfAddr></SelfAddr>
  <MemberGroup>
    <MemberAddr></MemberAddr>
    <bDF></bDF>
  </MemberGroup>
</EvpnES>
</EvpnESs>
</VXLAN>

```

## Table description

Item	Description
Feature name	VXLAN
Table name	EvpnESs
Table type	Multi-instance table
Row name	EvpnES
Restrictions	You must first enable the L2VPN feature globally.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Esi	Ethernet segment identifier	Index	Five groups of four hexadecimal digits, hyphen-separated.	Example: 0011.2233.4455.6677.8899  The value of an ESI starts with 00 and cannot be all 0s.
VLANID	VLAN mapped to the Ethernet segment	Index	Unsigned integer.	If multiple VLANs are mapped to the Ethernet segment, this value is the lowest VLAN ID. The value of this column also indicates AC types: <ul style="list-style-type: none"> <li>2147483649 for tagged ACs.</li> <li>2147483650 for untagged ACs.</li> <li>0 for the others.</li> </ul>
VxlanID	Mapped VXLAN ID	N/A	Unsigned integer.	N/A
SelfAddr	Local IP address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.

GroupMember	Ethernet segment group membership	Data structure	Members include: <ul style="list-style-type: none"> <li>• MemberAddr.</li> <li>• bDF.</li> </ul>	Multiple Ethernet segment group members can exist.
MemberAddr	Member IP address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
bDF	Designated forwarder role	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—DF.</li> <li>• <b>false</b>—Not DF.</li> </ul>	N/A

# WebAuth

## WebAuth/WebServers

This table contains information about web-auth server.

### XML structure

```
<WebAuth>
  <WebServers>
    <WebServer>
      <ServerName></ServerName>
      <IPAddress></IPAddress>
      <Port></Port>
      <Url></Url>
    </WebServer>
  </WebServers>
</WebAuth>
```

### Table description

Item	Description
Feature name	WebAuth
Table name	WebServers
Table type	Multi-instance table
Row name	WebServer
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	Name of the web-auth server	Index	String. <ul style="list-style-type: none"><li>Length: 1 to 32 characters.</li></ul>	N/A
IPAddress	IPv4 address of the web-auth server	N/A	String, dotted decimal notation. Default is not configured.	The column supports IPv4-only format.
Port	URL of the web-auth server	N/A	Unsigned integer. <ul style="list-style-type: none"><li>Value range:</li></ul>	The column must be defined when the IPAddress exists.

Column name	Column description	Column type	Data type and restrictions	Remarks
			1-65535. Default is not configured.	
Url	Name of the web-auth server	N/A	String. <ul style="list-style-type: none"> <li>Length: 1 to 256 characters.</li> </ul> Default is not configured.	N/A

## WebAuth/UrlParams

This table contains information about Url parameters.

### XML structure

```

<WebAuth>
  <UrlParams>
    <UrlParam>
      <ServerName></ServerName>
      <ParamName></ParamName>
      <ParamType></ParamType>
      <SelfDefValue></SelfDefValue>
    </UrlParam>
  </UrlParams>
</WebAuth>

```

### Table description

Item	Description
Feature name	WebAuth
Table name	UrlParams
Table type	Multi-instance table
Row name	UrlParam
Restrictions	Row creation is allowed only when the web-server exists.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	Name of the web-auth server	Index	String. case-insensitive. <ul style="list-style-type: none"><li>Length: 1 to 32 characters.</li></ul>	N/A
ParamName	Parameter name of the URL	Index	String. <ul style="list-style-type: none"><li>Length: 1 to 32 characters.</li></ul>	The column configures the parameter name carried in the redirect URL.
ParamType	Parameter type	N/A	Enumeration: <ul style="list-style-type: none"><li>0—source-address</li><li>1—source-mac</li><li>2—original-url</li><li>3—selfdefine</li></ul>	The column must be defined.
SelfDefValue	Self-defined parameter	N/A	String. Length: 1 to 256 Characters. Default is not configured.	The column takes effect when ParamType is selfdefine.

## WebAuth/Interfaces

This table contains interface configuration of web-auth.

### XML structure

```
<WebAuth>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <AuthEnable></AuthEnable>
      <ApplyServer></ApplyServer>
      <ApplyDomain></ApplyDomain>
      <MaxUser></MaxUser>
      <AuthFailVlan></AuthFailVlan>
      <OfflineDetectInterval></OfflineDetectInterval>
    </Interface>
  </Interfaces>
</WebAuth>
```

## Table description

Item	Description
Feature name	WebAuth
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface names. For more information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
AuthEnable	Enable the Web-Auth function	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Yes.</li><li>• <b>false</b>—No(Default).</li></ul>	Can not enable with port security funtion at same time.
ApplyServer	Apply authentication server	N/A	String. case-insensitive. <ul style="list-style-type: none"><li>• Length: 1 to 32 characters.</li></ul> Default is not configured.	N/A
ApplyDomain	Apply IPv4 authentication domain	N/A	String, <ul style="list-style-type: none"><li>• Length: 1 to 24.</li></ul> Default is not configured.	N/A
MaxUser	Maximum number of users on the interface	N/A	Unsigned integer.	The value range depends on the device model.
AuthFailVlan	VLAN for users failed in authentication	N/A	Unsigned integer. <ul style="list-style-type: none"><li>• Value range: 1 to 4094.</li></ul> Default Value is not configured.	N/A
OfflineDetectInterval	Detecting offline user timer	N/A	Unsigned integer <ul style="list-style-type: none"><li>• Value range: 60 to 65535 seconds.</li></ul> Default is not configured.	N/A

# WebAuth/FreeIPs

This table contains free ip configuration of web-auth.

## XML structure

```
<WebAuth>
  <FreeIPs>
    <FreeIP>
      <IPv4Address></IPv4Address>
      <IPv4Mask></IPv4Mask>
    </FreeIP>
  </FreeIPs>
</WebAuth>
```

## Table description

Item	Description
Feature name	WebAuth
Table name	FreeIPs
Table type	Multi-instance table
Row name	FreeIP
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4Address	IP address used in EAD assistance feature	Index	String, dotted decimal notation.	The column supports IPv4-only format.
IPv4Mask	IP address mask	Index	Ipv4Mask.	N/A

# WebAuth/ProxyPorts

This table contains proxy port configuration of web-auth.

## XML structure

```
<WebAuth>
  <ProxyPorts>
    <ProxyPort>
      <PortNumber></PortNumber>
    </ProxyPort>
  </ProxyPorts>
</WebAuth>
```

```

    </ProxyPort>
  </ProxyPorts>
</WebAuth>

```

## Table description

Item	Description
Feature name	WebAuth
Table name	ProxyPorts
Table type	Multi-instance table
Row name	ProxyPort
Restrictions	No.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
PortNumber	Port number of TCP	Index	Unsigned integer. <ul style="list-style-type: none"> <li>Value <b>range: 1-65535</b>.</li> </ul> Default is not configured.

# WLANClient

## WLANClient/ServiceTemplates

This table contains service template information.

### XML structure

```
<WLANClient>
  <ServiceTemplates>
    <Template>
      <Name></Name>
      <SSID></SSID>
      <DefaultVlan></DefaultVlan>
      <HideSsid></HideSsid>
      <MaxClientCnt></MaxClientCnt>
      <Enable></Enable>
      <ForwardingLocation></ForwardingLocation>
      <LocalForwardVlanList></LocalForwardVlanList>
      <PolicyForwarding></PolicyForwarding>
      <PolicyName></PolicyName>
      <AssociationLocation></AssociationLocation>
      <AuthenticationLocation></AuthenticationLocation>
      <QuikAssociation></QuikAssociation>
      <HotspotPolicyNum></HotspotPolicyNum>
      <UserIsolation></UserIsolation>
      <Description></Description>
    </Template>
  </ServiceTemplates>
</WLANClient>
```

### Table description

Item	Description
Feature name	WLANClient
Table name	ServiceTemplates
Table type	Multi-instance table
Row name	ServiceTemplate
Restrictions	None
Support for row creation and deletion	Yes

# Columns

Column name	Column description	Column type	Data type and restrictions
Name	Service template name	Index	String, letter, number or '-', '[', ']', '/', '\'. The length is 1 to 63.
SSID	Identifier of service set.		String, the length is 1 to 32.
DefaultVlan	DefaultVlan.		Unsigned integer. Value range: 1 to 4094. The default value is 1.
HideSsid	Hiding status of SSID		Boolean: <ul style="list-style-type: none"> <li><b>true</b>—enabled.</li> <li><b>false</b>—disabled, default value.</li> </ul>
MaxClientCnt	Maximum clients of the BSS.		Unsigned integer. Value range: 1 to 2007. The default value is 0.
Enable	Status of service template.		Boolean: <b>True or 1</b> : enabled. <b>False or 0</b> : disabled. <b>The default value is false.</b>
ForwardingLocation	Client forwarding location.		Enumeration:. <ul style="list-style-type: none"> <li>4—On AP</li> <li>2—On AC</li> </ul> Default value is 2.
LocalForwardVlanList	Client local forwarding vlan list.		VlanRange
PolicyForwarding	Status of policy forwarding.		Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul> Default value is false.
PolicyName	Name of policy forwarding.		String, letter, number or '\'. The length is 1 to 31.
AssociationLocation	Client association location.		Enumeration: <ul style="list-style-type: none"> <li>4—On AP</li> <li>2—On AC</li> </ul> Default value is 2.
AuthenticationLocation	Client authentication location.		Enumeration: <ul style="list-style-type: none"> <li>1—On MAC</li> <li>2—On AC</li> <li>4—On AP</li> </ul> Default value is 2.
QuickAssociation	Status of quick association.		Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> </ul>

Column name	Column description	Column type	Data type and restrictions
			<ul style="list-style-type: none"> <li>false—Disabled. Default value is false.</li> </ul>
HotspotPolicyNum	Hotspot policy number		Unsigned integer. Value range: 1 to 32.
UserIsolation	Status of user isolation.		Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul> Default value is false.
Description	Description of service template.		Text. The length is 1 to 64.

## WLANClient/ServiceBindings

This table contains service template binding information.

### XML structure

```

<WLANClient>
  <ServiceBindings>
    <Binding>
      <ApName></ApName>
      <RadioId></RadioId>
      <ServiceTemplateName></ServiceTemplateName>
      <Vlan></Vlan>
      <VlanGroup></VlanGroup>
      <NasID></NasID>
      <NasPortID></NasPortID>
      <HideSsid></HideSsid>
    </Binding>
  </ServiceBindings>
</WLANClient>

```

### Table description

Item	Description
Feature name	WLANClient
Table name	ServiceBindings
Table type	Multi-instance table
Row name	Binding
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
ApName	AP name	Index	String, lowercase. Length: 1 to 63 characters.
RadioId	Radio identifier.	Index	Unsigned char. Value range: 1 to 4
ServiceTemplateName	Service template name.	Index	String, letter, number or '-', '[', ']', '/', '_'. The length is 1 to 63.
Vlan	VLAN.		Unsigned integer. Value range: 1 to 4094. .
VlanGroup	VlanGroup		String. Length: 1 to 31 characters.
NasID	Network access server identifier.		Text. Length: 1 to 63 characters.
NasPortID	Network access server port identifier.		Text. Length: 1 to 63 characters.
HideSsid	Hide the identifier of service set in beacon frames		Boolean: <ul style="list-style-type: none"> <li><b>true</b>—enabled.</li> <li><b>false</b>—disabled.</li> </ul> <b>Default value is false.</b>

## WLANClient/APGroupServiceBindings

This table contains service template binding information of AP group radios.

### XML structure

```

<WLANClient>
  <APGroupServiceBindings>
    <Binding>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <RadioID></RadioID>
      <ServiceTemplateName></ServiceTemplateName>
      <Vlan></Vlan>
      <VlanGroup></VlanGroup>
      <NasID></NasID>
      <NasPortID></NasPortID>
    
```

```

        <HideSsid></HideSsid>
    </Binding>
</APGroupServiceBindings>
</WLANClient>

```

## Table description

Item	Description
Feature name	WLANClient
Table name	APGroupServiceBindings
Table type	Multi-instance table
Row name	Binding
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	AP group	Index	String, lowercase. Length: 1 to 31 characters.
ModelName	AP model name	Index	String, case-insensitive. Length: 1 to 63 characters.
RadioId	Radio identifier.	Index	Unsigned char. Value range: 1 to 4
ServiceTemplateName	Service template name.	Index	String, letter, number or '-', '[', ']', '/', '-'. The length is 1 to 63.
Vlan	VLAN.		Unsigned integer. Value range: 1 to 4094. .
VlanGroup	VlanGroup		String. Length: 1 to 31 characters.
NasID	Network access server identifier.		Text. Length: 1 to 63 characters.
NasPortID	Network access server port identifier.		Text. Length: 1 to 63 characters.
HideSsid	Hide the identifier of service set in beacon frames		Boolean: <ul style="list-style-type: none"> <li><b>true</b>—enabled.</li> <li><b>false</b>—disabled.</li> </ul> <b>Default value is false.</b>

# WLANClient/ServiceSecurity

This table contains security information of service template.

## XML structure

```
<WLANClient>
  <ServiceSecurity>
    <Security>
      <Name></Name>
      <WpaIeSelected></WpaIeSelected>
      <RsnIeSelected></RsnIeSelected>
      <TkipSelected></TkipSelected>
      <CcmpSelected></CcmpSelected>
      <Wep40Selected></Wep40Selected>
      <Wep104Selected></Wep104Selected>
      <Wep128Selected></Wep128Selected>
      <WepMode></WepMode>
      <AkmMode></AkmMode>
      <PskInputMode></PskInputMode>
      <PskPassPhraseKey></PskPassPhraseKey>
      <PskRawKey></PskRawKey>
      <PtkLifeTime></PtkLifeTime>
      <GtkUpdateEnable></GtkUpdateEnable>
      <GtkUpdateMode></GtkUpdateMode>
      <GtkUpdateTime></GtkUpdateTime>
      <GtkPacketNumber></GtkPacketNumber>
      <ClientOffUpdateGtk></ClientOffUpdateGtk>
      <TkipCmTime></TkipCmTime>
    </Security>
  </ServiceSecurity>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	ServiceSecurity
Table type	Multi-instance table
Row name	Security
Restrictions	None
Support for row creation and deletion	No

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Service template name	Index	String, letter, number or '-', '[', ']', '/', ' '. The length is 1 to 63.	N/A
WpaSelected	Is Security IE WPA selected.		Boolean. True or 1 : selected. False or 0 : no selected. The default value is false.	N/A
RsnSelected	Is Security IE RSN selected.		Boolean. True or 1 : selected. False or 0 : no selected. The default value is false.	N/A
TkipSelected	Tkip is selected cipher		Boolean. True or 1 : selected. False or 0 : no selected. The default value is false.	N/A
CcmpSelected	Ccmp is selected cipher		Boolean. True or 1 : selected. False or 0 : no selected. The default value is false.	N/A
Wep40Selected	Wep40 is selected cipher		Boolean. True or 1 : selected. False or 0 : no selected. The default value is false.	N/A
Wep104Selected	Wep104 is selected cipher		Boolean. True or 1 : selected. False or 0 : no selected. The default value is false.	N/A
Wep128Selected	Wep128 is selected cipher		Boolean. True or 1 : selected. False or 0 : no selected. The default value is false.	N/A
WepMode	Wep mode		Enumeration. 0: static WEP. 1: dynamic WEP. The default value is 0.	N/A
AkmMode	AKM mode.		Enumeration.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			1: 802.1x. 2: PSK.	
PskInputMode	PSK input mode.		Enumeration. 1: pass-phrase. 2: rawkey.	N/A
PskPassPhraseKey	Pre-shared key.		String.	PSK is a string including 8-63 alphanumeric characters.
PskRawKey	Raw key		String	PSK is a string including 64 hex characters.
PtkLifeTime	PTK life time.		Unsigned integer. Unit is second. Value range: 180-604800. The default value is 43200.	N/A
GtkUpdateEnable	Whether GTK update is enabled.		Boolean. True or 1 : update. False or 0 : no update. The default value is true.	N/A
GtkUpdateMode	GTK update mode.		Enumeration. 1 : based on time. 2 : based on packet number. The default value is 1.	N/A
GtkUpdateTime	GTK update time interval.		Unsigned integer. Unit is second. Value range is 180 to 604800. The default value is 86400.	N/A
GtkPacketNumber	GTK update packet number threshold.		Unsigned integer. Value range is 5000 to 4294967295. The default value is 10000000.	N/A
ClientOffUpdateGtk	Whether to update GTK when client goes offline.		Boolean. True or 1: update. False or 0 : no update. The default value is false.	N/A
TkipCmTime	Interval time of TKIP counter measures.		Unsigned integer. Value range is 0 to 3600. Unit is second. The default value is 0 which means no counter measures.	N/A

# WLANClient/ServiceWepKey

This table contains security wep key information of service template.

## XML structure

```
<WLANClient>
  <ServiceWepKey>
    <WepKey>
      <ServiceName></ServiceName>
      <WepKeyId></WepKeyId>
      <CipherSuite></CipherSuite>
      <KeyInputType></KeyInputType>
      <Wep40PassPhraseKey></Wep40PassPhraseKey>
      <Wep40RawKey></Wep40RawKey>
      <Wep104PassPhraseKey></Wep104PassPhraseKey>
      <Wep104RawKey></Wep104RawKey>
      <Wep128PassPhraseKey></Wep128PassPhraseKey>
      <Wep128RawKey></Wep128RawKey>
      <IsSelected></IsSelected>
    </WepKey>
  </ServiceWepKey>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	ServiceWepKey
Table type	Multi-instance table
Row name	WepKey
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceName	Service template name	Index	String, letter, number or '-', '[', ']', '/', '\'. The length is 1 to 63.	N/A
WepKeyId	WEP key ID	Index	Enumeration. Value range: 1 to 4.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CipherSuite	WEP cipher suite.		Enumeration. 1 : wep40. 5 : wep104. 7 : wep128.	N/A
KeyInputType	Key Type		Enumeration. 1 : PassPhrase. 2 : RawKey	N/A
Wep40PassPhraseKey	Wep40 key in pass-phrase		String.	The key is 5 alphanumeric characters.
Wep40RawKey	Wep40 key in raw		String.	The key is 10 hex characters.
Wep104PassPhraseKey	Wep104 key in pass-phrase		String.	The key is 13 alphanumeric characters.
Wep104RawKey	Wep104 key in raw		String.	The key is 26 hex characters.
Wep128PassPhraseKey	Wep128 key in pass-phrase		String.	The key is 16 alphanumeric characters.
Wep128RawKey	Wep128 key in raw		String.	The key is 32 hex characters.
IsSelected	Is this wep key Selected.		Boolean. True or 1 : selected. False or 0 : no selected. The default value is false.	N/A

## WLANClient/RadioWmm

This table contains radio WMM information.

### XML structure

```

<WLANClient>
  <RadioWmm>
    <Wmm>
      <ApName></ApName>
      <RadioId></RadioId>
      <Enable></Enable>
      <SvpMapAc></SvpMapAc>
      <CacPolicy></CacPolicy>
      <CacUserNum></CacUserNum>
      <CacChannelUtilization></CacChannelUtilization>
    </Wmm>
  </RadioWmm>
</WLANClient>

```

```

</RadioWmm>
</WLANClient>

```

## Table description

Item	Description
Feature name	WLANClient
Table name	RadioWmm
Table type	Multi-instance table
Row name	Wmm
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
ApName	AP name	Index	String, lowercase. Length: 1 to 63 characters.
RadioId	Radio identifier.	Index	Unsigned char. Value range: 1 to 4
Enable	WMM status of radio		Boolean. True or 1 : enabled False or 0 : disabled The default value is true.
SvpMapAc	Access category of SVP		Enumeration 2 : vi 3 : vo
CacPolicy	CAC policy		Enumeration. 1 : channel utilization. 2 : based on client number. The default value is 2.
CacUserNum	CAC client number threshold		Unsigned integer. Value range is 0 to 124. The default value is 20.
CacChannelUtilization	CAC channel utilization threshold.		Unsigned integer. Unit is percent. Value range is 0 to 100. The default value is 65.

# WLANClient/ClientEdca

This table contains client EDCA information.

## XML structure

```
<WLANClient>
  <ClientEdca>
    <Edca>
      <ApName></ApName>
      <RadioId></RadioId>
      <AccessCategory></AccessCategory>
      <Aifsn></Aifsn>
      <TxOpLimit></TxOpLimit>
      <Ecwmin></Ecwmin>
      <Ecwmax></Ecwmax>
      <CacEnable></CacEnable>
    </Edca>
  </ClientEdca>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	ClientEdca
Table type	Multi-instance table
Row name	Edca
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, lowercase. Length: 1 to 63 characters.	N/A
RadioId	Radio identifier.	Index	Unsigned char. Value range is 1 to 4	N/A
AccessCategory	Access category.	Index	Enumeration. 0 : be. 1 : bk.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			2 : vi 3 : vo	
Aifsn	Arbitration Inter Frame Spacing Number		Unsigned integer. Value range is 2 to 15, and is restricted by chipset.	N/A
TxOpLimit	Transmission opportunity limit		Unsigned number. Value range is 0 to 65535. Unit is millisecond.	N/A
Ecwmin	Exponent form of CWmin		Unsigned integer. Value range is 1 to 15.	N/A
Ecwmax	Exponent form of CWmax		Unsigned integer. Value range is 1 to 15.	N/A
CacEnable	Whether CAC is enabled.		Boolean. True or 1 : enabled. False or 0 : disabled. The default value is false.	When ac is vi or vo, Cac can be configured.

## WLANClient/MobilityRole

This table contains mobility role information.

### XML structure

```

<WLANClient>
  <MobilityRole>
    <Role></Role>
    <MAIPv4Address></MAIPv4Address>
    <MAIPv6Address></MAIPv6Address>
  </MobilityRole>
</WLANClient>

```

### Table description

Item	Description
Feature name	WLANClient
Table name	MobilityRole
Table type	single-instance table
Row name	None
Restrictions	None

Support for row creation and deletion	No
---------------------------------------	----

## Columns

Column name	Column description	Column type	Data type and restrictions
Role	Mobility role of the device.		Enumeration. 0 : not configured, default value. 1 : ma 2 : mc
MAIPv4Address	IPv4 address of mobility agent.		Ipv4Address
MAIPv6Address	IPv6 address of mobility agent.		Ipv6Address 若Ipv4和Ipv6同时存在下，则Ipv6有效

## WLANClient/MobilityGroups

This table contains mobility group information.

## XML structure

```

<WLANClient>
  <MobilityGroups>
    <MobilityGroup>
      <Name></Name>
      <TunnelType></TunnelType>
      <SourceIpv4Address></SourceIpv4Address>
      <SourceIpv6Address></SourceIpv6Address>
      <Enable></Enable>
    </MobilityGroup>
  </MobilityGroups>
</WLANClient>

```

## Table description

Item	Description
Feature name	WLANClient
Table name	MobilityGroups
Table type	Multi-instance table

Row name	MobilityGroup
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
Name	Mobility group name	Index	String. Length is 1 to 15 characters. Case sensitive.
TunnelType	Tunnel IP address type.		Enumeration. 2 : IPv4 10 : IPv6
SourceIpv4 Address	Source IPv4 address		Ipv4Address
SourceIpv6 Address	Source IPv6 address		Ipv6Address
Enable	Status of mobility group.		Boolean. True or 1 : enabled. False or 0 : disabled. The default value is false.

## WLANClient/MobilityIPv4Members

This table contains mobility group IPv4 member information.

## XML structure

```

<WLANClient>
  <MobilityIPv4Members>
    <Member>
      <GroupName></GroupName>
      <MemberIpv4Address></MemberIpv4Address>
    </Member>
  </MobilityIPv4Members>
</WLANClient>

```

## Table description

Item	Description
Feature name	WLANClient

Table name	MobilityIPv4Members
Table type	Multi-instance table
Row name	Member
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Mobility group name	Index	String. Length is 1 to 15 characters. Case sensitive.
MemberIpv4 Address	IPv4 address of member.	Index	Ipv4Address.

## WLANClient/MobilityIPv6Members

This table contains mobility group IPv6 member information.

## XML structure

```

<WLANClient>
  <MobilityIPv6Members>
    <Member>
      <GroupName></GroupName>
      <MemberIpv6Address></MemberIpv6Address>
    </Member>
  </MobilityIPv6Members>
</WLANClient>

```

## Table description

Item	Description
Feature name	WLANClient
Table name	MobilityIPv6Members
Table type	Multi-instance table
Row name	Member
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Mobility group name	Index	String. Length is 1 to 15 characters. Case sensitive.
MemberIpv6 Address	IPv6 address of member.	Index	Ipv6Address.

## WLANClient/MobilityPeerGroups

This table contains mobility peer group information.

## XML structure

```
<WLANClient>
  <MobilityPeerGroups>
    <MobilityPeerGroup>
      <Name></Name>
      <TunnelType></TunnelType>
      <Enable></Enable>
    </MobilityPeerGroup>
  </MobilityPeerGroups>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	MobilityPeerGroups
Table type	Multi-instance table
Row name	MobilityPeerGroup
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
Name	Mobility peer group name	Index	String. Length is 1 to 15 characters. Case sensitive.

Column name	Column description	Column type	Data type and restrictions
TunnelType	Tunnel IP address type.		Enumeration. 2 : IPv4 10 : IPv6
Enable	Status of mobility peer group.		Boolean. True or 1: enabled. False or 0 : disabled. The default value is false.

## WLANClient/PeerGroupIPv4Members

This table contains mobility peer group IPv4 member information.

### XML structure

```

<WLANClient>
  <PeerGroupIPv4Members>
    <Member>
      <GroupName></GroupName>
      <MemberIpv4Address></MemberIpv4Address>
    </Member>
  </PeerGroupIPv4Members>
</WLANClient>

```

### Table description

Item	Description
Feature name	WLANClient
Table name	PeerGroupIPv4Members
Table type	Multi-instance table
Row name	Member
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Mobility peer group name	Index	String. Length is 1 to 15 characters. Case sensitive.

Column name	Column description	Column type	Data type and restrictions
MemberIpv4 Address	IPv4 address of member.	Index	Ipv4Address.

## WLANClient/PeerGroupIPv6Members

This table contains mobility peer group IPv6 member information.

### XML structure

```

<WLANClient>
  <PeerGroupIPv6Members>
    <Member>
      <GroupName></GroupName>
      <MemberIpv6Address></MemberIpv6Address>
    </Member>
  </PeerGroupIPv6Members>
</WLANClient>

```

### Table description

Item	Description
Feature name	WLANClient
Table name	PeerGroupIPv6Members
Table type	Multi-instance table
Row name	Member
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Mobility peer group name	Index	String. Length is 1 to 15 characters. Case sensitive.
MemberIpv6 Address	IPv6 address of member.	Index	Ipv6Address.

# WLANClient/Layer2Authentication

This table contains WLAN access security's authenticating configurations in service template.

## XML structure

```
<WLANClient>
  <Layer2Authentication>
    <Authentication>
      <ServiceTemplateName></ServiceTemplateName>
      <AuthenticationMode></AuthenticationMode>
      <IntrusionProtectionEnable></IntrusionProtectionEnable>
      <IntrusionProtectionOperation></IntrusionProtectionOperation>
      <TemporaryServiceStopTimer></TemporaryServiceStopTimer>
      <TemporaryBlockTimer></TemporaryBlockTimer>
      <IgnoreAuthorization></IgnoreAuthorization>
      <AuthorizationFailOffline></AuthorizationFailOffline>
      <Dot1xHandshakeEnable></Dot1xHandshakeEnable>
      <Dot1xSecurityHandshakeEnable></Dot1xSecurityHandshakeEnable>
      <Dot1xReauthenticationEnable></Dot1xReauthenticationEnable>
      <Dot1xMandatoryDomain></Dot1xMandatoryDomain>
      <Dot1xMaxUserCount></Dot1xMaxUserCount>
      <MACAuthenticationDomain></MACAuthenticationDomain>
      <MACAuthenticationMaxUserCount></MACAuthenticationMaxUserCount>
      <FailVLAN></FailVLAN>
    </Authentication>
  </Layer2Authentication>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	Layer2Authentication
Table type	Multi-instance table
Row name	Authentication
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceTem	Service template	Index	String, letter, number or '-', '[', ']', '/', '\', '.'	

Column name	Column description	Column type	Data type and restrictions	Remarks
plateName	name.		The length is 1 to 63.	
AuthenticationMode	Authentication mode of the service template	N/A	Enumeration: 0 : bypass. 1 : mac authentication 2 : mac then dot1x authentication 3 : dot1x authentication 4 : dot1x then mac authentication 5 : oui then dot1x	Default status is bypass.
IntrusionProtectionEnable	Enable Intrusion Protection of the Service Template	N/A	Boolean: <b>True or 1</b> : enabled. <b>False or 0</b> : disabled.	Default status is disabled.
IntrusionProtectionOperation	Operation mode when intrusion detected	N/A	Enumeration: <b>0</b> : temporary block mac. <b>1</b> : temporary stop the service <b>2</b> : stop service	
TemporaryServiceStopTimer	Period value of temporarily stop service	N/A	Unsigned integer Value range is 10 to 300.	Default value is 20 s.
TemporaryBlockTimer	Period value of temporarily block user mac	N/A	Unsigned integer Value range is 60 to 300.	Default value is 180 s.
IgnoreAuthorization	Ignore all authorization information set by server.	N/A	<b>Boolean:</b> <b>True or 1</b> : enabled. <b>False or 0</b> : disabled.	Default status is disabled.
AuthorizationFailOffline	Users are offline if the authorizing failed.	N/A	<b>Boolean:</b> <b>True or 1</b> : enabled. <b>False or 0</b> : disabled.	Default status is disabled
Dot1xHandshakeEnable	Enable handshake feature of dot1x	N/A	Boolean: <b>True or 1</b> : enabled. <b>False or 0</b> : disabled.	Default status is disabled
Dot1xSecurityHandshakeEnable	Enable secure handshake feature of dot1x	N/A	Boolean: <b>True or 1</b> : enabled. <b>False or 0</b> : disabled.	Default status is disabled, and handshake feature should be enabled first.
Dot1xReauthenticationEnable	Enable re-authentication feature of dot1x	N/A	Boolean: <b>True or 1</b> : enabled. <b>False or 0</b> : disabled.	Default status is disabled.
Dot1xMandatoryDomain	Mandatory domain of users for the service template	N/A	String, case-insensitive. Length: 1 to 255 characters	No default value.

Column name	Column description	Column type	Data type and restrictions	Remarks
Dot1xMaxUserCount	Max dot1x user numbers for a bss bound to this service template	N/A	Unsigned integer Value range is 1 to 4096.	Default value is 4096.
MACAuthenticationDomain	Domain of users for the service template	N/A	String, case-insensitive. Length: 1 to 255 characters	
MACAuthenticationMaxUserCount	Max MAC authentication user numbers for a bss bound to this service template	N/A	Unsigned integer Value range is 1 to 4096.	
FailVLAN	VLAN used	N/A	Unsigned integer Value range: 1 to 4094.	No default value

## WLANClient/APs

This table contains AP configuration information.

### XML structure

```

<WLANClient>
  <APs>
    <AP>
      <Name></Name>
      <IdleTime></IdleTime>
      <KeepAliveTime></KeepAliveTime>
      <BandNaviStatus></BandNaviStatus>
    </AP>
  </APs>
</WLANClient>

```

### Table description

Item	Description
Feature name	WLANClient
Table name	APs
Table type	Multi-instance table
Row name	AP
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP name	Index	String, lowercase. Length: 1 to 64 characters.	N/A
IdleTime	Station Idle time	N/A	Unsigned integer. Value range: 60s to 86400s. The default value is 3600s.	N/A
KeepAliveTime	Keeping alive time of station	N/A	Unsigned integer. Value range: 3s to 1800s. The default value is 300s, which means disabled.	N/A
BandNaviStatus	Band navigation status	N/A	Enumeration. <ul style="list-style-type: none"><li>0—disabled.</li><li>1—enabled.</li><li>2—inherit(default).</li></ul>	Effective only when global BandNaviStatus is enabled.

## WLANClient/APGroup

This table contains AP group configuration information.

## XML structure

```
<WLANClient>
  <APGroup>
    <Group>
      <Name></Name>
      <BandNaviStatus></BandNaviStatus>
    </Group>
  </APGroup>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	APGroup
Table type	Multi-instance table

Row name	Group
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
BandNaviStatus	Band navigation status	N/A	Boolean. <ul style="list-style-type: none"> <li>false—disabled</li> <li>true—enabled (default)</li> </ul>	Effective only when global BandNaviStatus is enabled.

## WLANClient/BandNavigation

This table contains band navigation information.

## XML structure

```

<WLANClient>
  <BandNavigation>
    <GlobalStatus></GlobalStatus>
    <AgingTime></AgingTime>
    <DenialCnt></DenialCnt>
    <Session></Session>
    <Gap></Gap>
    <Threshold></Threshold>
  </BandNavigation>
</WLANClient>

```

## Table description

Item	Description
Feature name	WLANClient
Table name	BandNavigation
Table type	Single-instance table
Row name	N/A
Restrictions	None

Support for row creation and deletion	No
---------------------------------------	----

## Columns

Column name	Column description	Column type	Data type and restrictions
GlobalStatus	Global status of band navigation	N/A	Boolean. <ul style="list-style-type: none"> <li>false—disabled(default).</li> <li>true—enabled.</li> </ul>
AgingTime	Client information aging time	N/A	Unsigned integer. Unit is second. Value range: 10 to 600. The default value is 180.
DenialCnt	Maximum number of denials for 5 GHz association requests	N/A	Unsigned integer. Value range: 1 to 10. The default value is 0.
Session	Client number threshold for the 5 GHz radio	N/A	Unsigned integer. Value range: 2 to 255.
Gap	Threshold for the session gap between the current 5 GHz radio and the radio that has the fewest clients	N/A	Unsigned integer. Value range: 1 to 8. The default value is 4.
Threshold	RSSI threshold	N/A	Unsigned integer. Unit is dB. Value range: 5 to 100. The default value is 15.

## WLANClient/LoadBalance

This table contains load balancing information.

### XML structure

```

<WLANClient>
  <LoadBalance>
    <Status></Status>
    <Mode></Mode>
    <Bandwidth></Bandwidth>
    <BandwidthGap></BandwidthGap>
    <Session></Session>
    <SessionGap></SessionGap>
    <Traffic></Traffic>
    <TrafficGap></TrafficGap>
    <DenialNum></DenialNum>
    <Threshold></Threshold>
  </LoadBalance>
</WLANClient>

```

## Table description

Item	Description
Feature name	WLANClient
Table name	LoadBalance
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	WLAN load balancing status	N/A	Boolean. <ul style="list-style-type: none"> <li>false—disabled(default).</li> <li>true—enabled.</li> </ul>	N/A
Mode	Load balancing mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—session-mode(default).</li> <li>2—traffic-mode.</li> <li>3—bandwidth-mode.</li> </ul>	N/A
Session	Session threshold in number of clients	N/A	Unsigned integer. Value range:1 to 120. The default value is 20.	This column can be configured only when the Mode is session-mode (1).To delete value just input Mode label.
Session Gap	Session gap threshold	N/A	Unsigned integer. Value range:1 to 12. The default value is 4.	This column cannot be configured if the Session is not configured. To delete value just input Mode label.
Bandwidth	Bandwidth threshold	N/A	Unsigned integer. Unit is Mbps. Value range:1 to 500. The default value is 40.	This column can be configured only when the Mode is bandwidth-mode (3). To delete value just input Mode label.
Bandwidth Gap	Bandwidth gap threshold	N/A	Unsigned integer. Unit is Mbps. Value range:1 to 200. The default value is 20.	This column cannot be configured if the Bandwidth is not configured. To delete value just input Mode label.
Traffic	Traffic threshold	N/A	Unsigned integer. Unit is percent. Value range:1 to 80. The default value is 30.	This column can be configured only when the Mode is traffic -mode (2). To delete value just input Mode label.

Column name	Column description	Column type	Data type and restrictions	Remarks
TrafficGap	Traffic gap threshold	N/A	Unsigned integer. Unit is percent. Value range:10 to 40. The default value is 20.	This column cannot be configured if theTraffic is not configured. To delete value just input Mode label.
DenialNum	Maximum number of denials for association requests	N/A	Unsigned integer. Value range:2 to 10.The default value is 10.	N/A
Threshold	RSSI threshold	N/A	Unsigned integer. Unit is dB. Value range:5 to 100.The default value is 25.	N/A

## WLANClient/LoadBalanceGroup

This table contains load balancing group information.

### XML structure

```

<WLANClient>
  <LoadBalanceGroup>
    <Group>
      <GroupId></GroupId>
      <GroupDescription></GroupDescription>
    </Group>
  </LoadBalanceGroup>
</WLANClient>

```

### Table description

Item	Description
Feature name	WLANClient
Table name	LoadBalanceGroup
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
GroupId	Load balancing group identifier	Index	Unsigned integer. Value range: 1 to 65535.
GroupDescription	Description for the load balancing group	N/A	String, case-sensitive. Length: 1 to 64 characters.

## WLANClient/RadioInLBGroup

This table contains radio information of radios in the load balancing group.

## XML structure

```
<WLANClient>
  <RadioInLBGroup>
    <Radio>
      <GroupId></GroupId>
      <ApName></ApName>
      <RadioId></RadioId>
    </Radio>
  </RadioInLBGroup>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	RadioInLBGroup
Table type	Multi-instance table
Row name	Radio
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
GroupId	Load balancing group identifier	Index	Unsigned integer. Value range: 1 to 65535.

Column name	Column description	Column type	Data type and restrictions
ApName	AP name	Index	String, lowercase. Length: 1 to 64 characters.
Radioid	Radio identifier	Index	Unsigned integer. Value range: 1 to 31

## WLANClient/WhiteList

This table contains information of white list.

### XML structure

```
<WLANClient>
  <WhiteList>
    <MacList>
      <MacAddress></MacAddress>
    </MacList>
  </WhiteList>
</WLANClient>
```

### Table description

Item	Description
Feature name	WLANClient
Table name	WhiteList
Table type	Multi-instance table
Row name	MacList
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	Client MAC address.	Index	<ul style="list-style-type: none"> <li>MAC address.</li> </ul>	Example: 00-0c-af-e3-5d-c0.

## WLANClient/StaticBlackList

This table contains information of static black list.

## XML structure

```
<WLANClient>
  <StaticBlackList>
    <MacList>
      <MacAddress></MacAddress>
    </MacList>
  </StaticBlackList>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	StaticBlackList
Table type	Multi-instance table
Row name	MacList
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	Client MAC address.	Index	<ul style="list-style-type: none"><li>MAC address.</li></ul>	Example: 00-0c-af-e3-5d-c0.

## WLANClient/DynamicBlackListCfg

This table contains configuration of dynamic black list.

## XML structure

```
<WLANClient>
  <DynamicBlackListCfg>
    <LifeTime></LifeTime>
  </DynamicBlackListCfg>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	DynamicBlackListCfg

Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
LifeTime	Global life time of dynamic black list.		Unsigned integer. Value range:1 to 3600.Unit is second.

## WLANClient/pmfConfiguration

This table contains Protected management frames information.

## XML structure

```

<WLANClient>
  <PmfConfiguration>
    <Information>
      <ServiceTemplateName></ServiceTemplateName>
      <KeyDerivation></KeyDerivation>
      <PmfSwitch></PmfSwitch>
      <ComeBackTime></ComeBackTime>
      <RetryCnt></RetryCnt>
      <RetryTime></RetryTime>
    </Information>
  </PmfConfiguration >
</WLANClient>

```

## Table description

Item	Description
Feature name	WLANClient
Table name	PmfConfiguration
Table type	Multi-instance table
Row name	Information
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ServiceTemplateName	Service template name.	Index	String, letter, number or '-', '[,]', '/', '-', lowercase. The length is 1 to 63.
KeyDerivation	Key derivation		Enumeration: 1 : SHA1 2 : SHA256 3: SHA1 and SHA256 The default value is 1.
PmfSwitch	Pmf function switch		Enumeration: 0 : disable 1 : optional 2 : mandatory The default value is 0
ComeBackTime	Association comeback interval		Unsigned int. The value range is 1 to 20. Unit is second. The default value is 1 (s)
RetryCnt	Maximum number of SA query request retransmission		Unsigned int. The value range is 1 to 16. The default value is 4.
RetryTime	Retry interval for SA query response		Unsigned int. The value range is 100 to 500. Unit is millisecond. The default value is 200 (ms) .

## WLANClient/FtConfiguration

This table contains FT configuration information.

### XML structure

```

<WLANClient>
  <FtConfiguration>
    <Configuration>
      <ServiceTemplateName></ServiceTemplateName>
      <Enable></Enable>
      <Method></Method>
      <ReassocTime></ReassocTime>
    </Configuration>
  </FtConfiguration>
</WLANClient>

```

## Table description

Item	Description
Feature name	WLANClient
Table name	FtConfiguration
Table type	Multi-instance table
Row name	Configuration
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ServiceTemplateName	Service template name.	Index	String, letter, number or '-', '[,]', '/', '-', lowercase. The length is 1 to 63.
Enable	Status of fast BSS transition protocol.		Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—enabled.</li><li>• <b>false</b>—disabled.</li></ul> The default value is false.
Method	Fast BSS transition method.		Unsigned char. 0:over-the-air; 1:over-the-ds. The default value is 0.
ReassocTime	Reassociation timeout.		Unsigned int. The value range is 1 to 100. The default value is 20. Unit is second.

## WLANClient/Layer2AccessControl

This table contains Layer 2 access control information.

## XML structure

```
<WLANClient>
  <Layer2AccessControl>
    <AccessControl>
      <ServiceTemplateName></ServiceTemplateName>
      <AclNum></AclNum>
    </AccessControl>
  </Layer2AccessControl>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	Layer2AccessControl
Table type	Multi-instance table
Row name	AccessControl
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
ServiceTemplateName	Service template name	Index	String, lowercase. Length: 1 to 63 characters.
AcNum	ACL number	N/A	Unsigned integer Value range: 4000 to 4999.

# WLANClient

## WLANClient/APAssociations

This table contains AP association information.

### XML structure

```
<WLANClient>
  <APAssociations>
    <Association>
      <Name></Name>
      <Total></Total>
      <Reassociation></Reassociation>
      <Failure></Failure>
      <Rejection></Rejection>
      <Exception></Exception>
      <Current></Current>
    </Association>
  </APAssociations>
</WLANClient>
```

### Table description

Item	Description
Feature name	WLANClient
Table name	APAssociations
Table type	Multi-instance table
Row name	Association
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
Name	AP name	Index	String, lowercase. Length: 1 to 63 characters.
Total	Total associations		Unsigned integer

Column name	Column description	Column type	Data type and restrictions
Reassociation	Reassociations		Unsigned integer
Failure	Association failures		Unsigned integer
Rejection	Rejections of association		Unsigned integer
Exception	Exceptional associations		Unsigned integer
Current	Current associations		Unsigned integer

## WLANClient/ServiceTemplates

This table contains service template information.

### XML structure

```

<WLANClient>
  <ServiceTemplates>
    <Template>
      <Name></Name>
      <SSID></SSID>
      <DefaultVlan></DefaultVlan>
      <HideSsid></HideSsid>
      <MaxClientCnt></MaxClientCnt>
      <Enable></Enable>
      <ForwardingLocation></ForwardingLocation>
      <LocalForwardVlanList></LocalForwardVlanList>
      <PolicyForwarding></PolicyForwarding>
      <PolicyName></PolicyName>
      <AssociationLocation></AssociationLocation>
      <AuthenticationLocation></AuthenticationLocation>
      <QuikAssociation></QuikAssociation>
      <HotspotPolicyNum></HotspotPolicyNum>
      <UserIsolation></UserIsolation>
      <Description></Description>
    </Template>
  </ServiceTemplates>
</WLANClient>

```

### Table description

Item	Description
Feature name	WLANClient

Table name	ServiceTemplates
Table type	Multi-instance table
Row name	Template
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Name	Service template name	Index	String, letter, number or '-', '[', ']', '/', '\'. The length is 1 to 63.
SSID	Identifier of service set.		String, the length is 1 to 32.
DefaultVlan	DefaultVlan		Unsigned integer. Value range: 1 to 4094. The default value is 1.
HideSsid	Hiding status of SSID		Boolean: <ul style="list-style-type: none"> <li>true—enabled.</li> <li>false—disabled, default value.</li> </ul>
MaxClientCnt	Maximum clients of the BSS.		Unsigned integer. Value range: 1 to 2007. The default value is 0. Value 0 : the number is not restricted.
Enable	Status of service template.		Boolean: <ul style="list-style-type: none"> <li>true—enabled.</li> <li>false—disabled, default value.</li> </ul>
ForwardingLocation	Client forwarding location.		Enumeration: <ul style="list-style-type: none"> <li>4—On AP</li> <li>2—On AC</li> </ul> Default value is 2.
LocalForwardVlanList	Client local forwarding vlan list.		VlanRange
PolicyForwarding	Status of policy forwarding.		Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul> Default value is false.
PolicyName	Name of policy forwarding.		String, letter, number or '_'. The length is 1 to 31.
Association Location	Client association location.		Enumeration: <ul style="list-style-type: none"> <li>4—On AP</li> <li>2—On AC</li> </ul>

Column name	Column description	Column type	Data type and restrictions
			Default value is 2.
AuthenticationLocation	Client authentication location.		Enumeration: <ul style="list-style-type: none"> <li>1—On MAC</li> <li>2—On AC</li> <li>4—On AP</li> </ul> Default value is 2.
QuikAssociation	Status of quik association.		Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul> Default value is false.
HotspotPolicyNum	Hotspot policy number		Unsigned integer. Value range: 1 to 32.
UserIsolation	Status of user isolation.		Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul> Default value is false.
Description	Description of service template.		Text. The length is 1 to 64.

## WLANClient/ServiceBindings

This table contains service template binding information.

### XML structure

```

<WLANClient>
  <ServiceBindings>
    <Binding>
      <ApName></ApName>
      <RadioId></RadioId>
      <ServiceTemplateName></ServiceTemplateName>
      <Vlan></Vlan>

```

### Table description

Item	Description
Feature name	WLANClient

Table name	ServiceBindings
Table type	Multi-instance table
Row name	Binding
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ApName	AP name	Index	String, lowercase. Length: 1 to 63 characters.
Radioid	Radio identifier.	Index	Unsigned char. Value range: 1 to 4
ServiceTemplateName	Service template name.	Index	String, letter, number or '-', '[', ']', '/', '\'. The length is 1 to 63.
Vlan	VLAN.		Unsigned integer. Value range: 1 to 4094.
VlanGroup	VlanGroup		String. Length: 1 to 31 characters.
NasID	Network access server identifier.		Text. Length: 1 to 63 characters.
NasPortID	Network access server port identifier.		Text. Length: 1 to 63 characters.
HideSsid	Hide the identifier of service set in beacon frames		Boolean: <ul style="list-style-type: none"> <li><b>true</b>—enabled.</li> <li><b>false</b>—disabled.</li> </ul> <b>Default value is false.</b>

## WLANClient/APGroupServiceBindings

This table contains service template binding information of AP group radios.

## XML structure

```

<WLANClient>
  <APGroupServiceBindings>
    <Binding>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <RadioID></RadioID>
    </Binding>
  </APGroupServiceBindings>
</WLANClient>

```

```

    <ServiceTemplateName></ServiceTemplateName>
    <Vlan></Vlan>
    <VlanGroup></VlanGroup>
    <NasID></NasID>
    <NasPortID></NasPortID>
    <HideSsid></HideSsid>
  </Binding>
</APGroupServiceBindings>
</WLANClient>

```

## Table description

Item	Description
Feature name	WLANClient
Table name	APGroupServiceBindings
Table type	Multi-instance table
Row name	Binding
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	AP group	Index	String, lowercase. Length: 1 to 31 characters.
ModelName	AP model name	Index	String, case-insensitive. Length: 1 to 63 characters.
Radiold	Radio identifier.	Index	Unsigned char. Value range: 1 to 4
ServiceTemplateName	Service template name.	Index	String, letter, number or '-', '[', ']', '/', '\'. The length is 1 to 63.
Vlan	VLAN.		Unsigned integer. Value range: 1 to 4094. .
VlanGroup	VlanGroup		String. Length: 1 to 31 characters.
NasID	Network access server identifier.		Text. Length: 1 to 63 characters.
NasPortID	Network access server		Text. Length: 1 to 63 characters.

Column name	Column description	Column type	Data type and restrictions
	port identifier.		
HideSsid	Hide the identifier of service set in beacon frames		Boolean: <ul style="list-style-type: none"> <li><b>true</b>—enabled.</li> <li><b>false</b>—disabled.</li> </ul> <b>Default value is false.</b>

## WLANClient/ServiceConnections

This table contains service template connection information.

### XML structure

```

<WLANClient>
  <ServiceConnections>
    <Connection>
      <Name></Name>
      <ApName></ApName>
      <RadioId></RadioId>
    </Connection>
  </ServiceConnections>
</WLANClient>

```

### Table description

Item	Description
Feature name	WLANClient
Table name	ServiceConnections
Table type	Multi-instance table
Row name	Connection
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
Name	Service template name.	Index	String, letter, number or '-', '[', ']', '/', '\'. The length is 1 to 63.
ApName	AP name	Index	String, lowercase. Length: 1 to 63 characters.
RadioId	Radio	Index	Unsigned char.

Column name	Column description	Column type	Data type and restrictions
	identifier.		Value range: 1 to 4

## WLANClient/ServiceSecurity

This table contains security information of service template.

### XML structure

```

<WLANClient>
  <ServiceSecurity>

</WLANClient>

```

### Table description

Item	Description
Feature name	WLANClient
Table name	ServiceSecurity
Table type	Multi-instance table
Row name	Security
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Service template name	Index	String, letter, number or '-', '[', ']', '/', '.'. The length is 1 to 63.	N/A
WpaSelected	Is Security IE WPA selected.		Boolean: <ul style="list-style-type: none"> <li>true—selected.</li> <li>false—no selected, The default value is false..</li> </ul>	N/A
RsnSelected	Is Security IE RSN selected.		Boolean: <ul style="list-style-type: none"> <li>true—selected.</li> <li>false—no selected, The default value is false..</li> </ul>	N/A
TkipSelected	Tkip is selected cipher		Boolean: <ul style="list-style-type: none"> <li>true—selected.</li> <li>false—no selected, The default value is false..</li> </ul>	N/A
CcmpSelected	Ccmp is selected cipher		Boolean: <ul style="list-style-type: none"> <li>true—selected.</li> <li>false—no selected, The default value is false..</li> </ul>	N/A
Wep40Selected	Wep40 is selected cipher		Boolean: <ul style="list-style-type: none"> <li>true—selected.</li> <li>false—no selected, The default value is false..</li> </ul>	N/A
Wep104Selected	Wep104 is selected cipher		Boolean: <ul style="list-style-type: none"> <li>true—selected.</li> <li>false—no selected, The default value is false..</li> </ul>	N/A
Wep128Selected	Wep128 is selected cipher		Boolean: <ul style="list-style-type: none"> <li>true—selected.</li> <li>false—no selected, The default value is false..</li> </ul>	N/A
WepMode	Wep mode		Enumeration. 0: static WEP.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			1: dynamic WEP. The default value is 0.	
AkmMode	AKM mode.		Enumeration. 1 : 802.1x. 2 : PSK.	N/A
PskInputMode	PSK input mode.		Enumeration. 1 : pass-phrase. 2 : rawkey.	N/A
PskPassPhraseKey	Pre-shared key.		String.	PSK is a string including 8-63 alphanumeric characters.
PskRawKey	Raw key		String	PSK is a string including 64 hex characters.
PtkLifeTime	PTK life time.		Unsigned integer. Unit is second. Value range is 180 to 604800. The default value is 43200.	N/A
GtkUpdateEnable	Whether GTK update is enabled.		Boolean: <ul style="list-style-type: none"> <li>true—selected.</li> <li>false—no selected, The default value is false..</li> </ul>	N/A
GtkUpdateMode	GTK update mode.		Enumeration. 1: based on time. 2 : based on packet number.	N/A
GtkUpdateTime	GTK update time interval.		Unsigned integer. Unit is second. Value range is 180 to 604800. The default value is 86400.	N/A
GtkPacketNumber	GTK update packet number threshold.		Unsigned integer. Value range is 5000 to 4294967295. The default value is 10000000.	N/A
ClientOffUpdateGtk	Whether to update GTK when client goes offline.		Boolean: <ul style="list-style-type: none"> <li>true—selected.</li> <li>false—no selected, The default value is false..</li> </ul>	N/A
TkipCmTime	Interval time of TKIP counter measures.		Unsigned integer. Value range is 0 to 3600. Unit is second. The default value is 0 which means no counter measures.	N/A

# WLANClient/ServiceWepKey

This table contains security wep key information of service template.

## XML structure

```
<WLANClient>
  <ServiceWepKey>
    <WepKey>

      <CacUserNum></CacUserNum>
      <CacChannelUtilization></CacChannelUtilization>
    </Wmm>
  </RadioWmm>
</WLANClient>

```

### Table description

Item	Description
Feature name	WLANClient
Table name	RadioWmm
Table type	Multi-instance table
Row name	Wmm

Restrictions	None
--------------	------

## Columns

Column name	Column description	Column type	Data type and restrictions
ApName	AP name	Index	String, lowercase. Length: 1 to 63 characters.
RadioId	Radio identifier.	Index	Unsigned char. Value range: 1 to 4
Enable	WMM status of radio		Boolean: <ul style="list-style-type: none"> <li>true—enable.</li> <li>false—disable, The default value is false.</li> </ul>
SvpMapAc	Access category of SVP		Enumeration. 2 : vi 3 : vo
CacPolicy	CAC policy		Enumeration. 1 : channel utilization. 2 : based on client number. The default value is 2.
CacUserNum	CAC client number threshold		Unsigned integer. Value range is 0 to 124. The default value is 20.
CacChUtilValue	CAC channel utilization threshold.		Unsigned integer. Unit is percent. Value range is 0 to 100. The default value is 65.

## WLANClient/ClientEdca

This table contains client EDCA information.

## XML structure

```

<WLANClient>
  <ClientEdca>
    <Edca>
      <ApName></ApName>
      <RadioId></RadioId>
      <AccessCategory></AccessCategory>
      <Aifsn></Aifsn>
    </Edca>
  </ClientEdca>
</WLANClient>

```

```

    <TxOpLimit></TxOpLimit>

  </Edca>
</ClientEdca>
</WLANClient>

```

## Table description

Item	Description
Feature name	WLANClient
Table name	ClientEdca
Table type	Multi-instance table
Row name	Edca
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, lowercase. Length: 1 to 63 characters.	N/A
Radiold	Radio identifier.	Index	Unsigned char. Value range: 1 to 4	N/A
AccessCategory	Access category.	Index	Enumeration. 0 : be. 1 : bk. 2 : vi 3 : vo	N/A
Aifsn	Arbitration Inter Frame Spacing Number		Unsigned integer. Value range is 2 to 15, and is restricted by chipset.	N/A
TxOpLimit	Transmission opportunity limit		Unsigned number. Value range is 0 to 65535. Unit is millisecond.	N/A
Ecwmin	Exponent form of CWmin		Unsigned integer. Value range is 1 to 15.	N/A
Ecwmax	Exponent form of CWmax		Unsigned integer. Value range is 1 to 15.	N/A
CacEnable	Whether CAC is enabled.		Boolean: • true—enable.	When ac is vi or vo, Cac can be configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>false—disable, The default value is false.</li> </ul>	

## WLANClient/StationWmmInformation

This table contains station WMM information.

### XML structure

```
<WLANClient>
  <StationWmmInformation>
    <Wmm>
      <MacAddress></MacAddress>
      <SSID></SSID>
      <QoSMode></QoSMode>
    </Wmm>
  </StationWmmInformation>
</WLANClient>
```

### Table description

Item	Description
Feature name	WLANClient
Table name	StationWmmInformation
Table type	Multi-instance table
Row name	Wmm
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	MacAddress of station	Index	MAC address	N/A
SSID	SSID		String	N/A
QoSMode	QoS mode		0 : doesn't support any qos mode 1 : support mode WMM 2 : support mode 11e 3 : support mode WMM	N/A

			and 11e	
--	--	--	---------	--

## WLANClient/MobilityRole

This table contains mobility role information.

### XML structure

```
<WLANClient>
  <MobilityRole>
    <Role></Role>
    <MAIPv4Address></MAIPv4Address>
    <MAIPv6Address></MAIPv6Address>
  </MobilityRole></WLANClient>
```

### Table description

Item	Description
Feature name	WLANClient
Table name	MobilityRole
Table type	single-instance table
Row name	Noe
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
Role	Mobility role of the device.		Enumeration. 0 : not configured, default value. 1 : ma 2 : mc
MAIPv4Address	IPv4 address of mobility agent.		Ipv4Address
MAIPv6Address	IPv6 address of mobility agent.		Ipv6Address 若Ipv4和Ipv6同时存在下，则Ipv6有效

# WLANClient/MobilityGroups

This table contains mobility group information.

## XML structure

```
<WLANClient>
  <MobilityGroups>
    <MobilityGroup>
      <Name></Name>
      <TunnelType></TunnelType>
      <SourceIpv4Address></SourceIpv4Address>
      <SourceIpv6Address></SourceIpv6Address>
      <Enable></Enable>
    </MobilityGroup>
  </MobilityGroups>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	MobilityGroups
Table type	Multi-instance table
Row name	MobilityGroup
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Name	Mobility group name	Index	String. Length is 1 to 15 characters. Case sensitive.
TunnelType	Tunnel IP address type.		Enumeration. 2 : IPv4. 10 : IPv6
SourceIpv4 Address	Source IPv4 address		Ipv4Address
SourceIpv6 Address	Source IPv6 address		Ipv6Address
Enable	Status of mobility group.		Boolean: <ul style="list-style-type: none"><li>true—enable.</li><li>false—disable,</li></ul>

Column name	Column description	Column type	Data type and restrictions
			The default value is false.

## WLANClient/MobilityIPv4Members

This table contains mobility group IPv4 member information.

### XML structure

```

<WLANClient>
  <MobilityIPv4Members>
    <Member>
      <GroupName></GroupName>
      <MemberIpv4Address></MemberIpv4Address>
      <Status></Status>
      <UpTime></UpTime>
    </Member>
  </MobilityIPv4Members>
</WLANClient>

```

### Table description

Item	Description
Feature name	WLANClient
Table name	MobilityIPv4Members
Table type	Multi-instance table
Row name	Member
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Mobility group name	Index	String. Length is 1 to 15 characters. Case sensitive.
MemberIpv4 Address	IPv4 address of member.	Index	Ipv4Address.
Status	Mobility Status		Enumeration. 1 : up 2 : down

Column name	Column description	Column type	Data type and restrictions
UpTime	Online Time		Unsigned integer.

## WLANClient/MobilityIPv6Members

This table contains mobility group IPv6 member information.

### XML structure

```

<WLANClient>
  <MobilityIPv6Members>
    <Member>
      <GroupName></GroupName>
      <MemberIpv6Address></MemberIpv6Address>
      <Status></Status>
      <UpTime></UpTime>
    </Member>
  </MobilityIPv6Members>
</WLANClient>

```

### Table description

Item	Description
Feature name	WLANClient
Table name	MobilityIPv4Members
Table type	Multi-instance table
Row name	Member
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Mobility group name	Index	String. Length is 1 to 15 characters. Case sensitive.
MemberIpv6 Address	IPv6 address of member.	Index	Ipv6Address.
Status	Mobility Status		Enumeration. 1 : up 2 : down
UpTime	Online Time		Unsigned integer.

# WLANClient/RoamInStation

This table contains station roam in information.

## XML structure

```
<WLANClient>
  <RoamInStation>
    <Station>
      <MacAddress></MacAddress>
      <BssID></BssID>
      <VlanID></VlanID>
      <OnlineTime></OnlineTime>
      <HomeAcIpv4></HomeAcIpv4>
      <HomeAcIpv6></HomeAcIpv6>
    </Station>
  </RoamInStation>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	RoamInStation
Table type	Multi-instance table
Row name	Station
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	MacAddress of station	Index	MAC address	N/A
BssID	BSS ID		MAC address	N/A
VlanID	VLAN-ID		Unsigned integer 1 to 4094	N/A
OnlineTime	Online time in seconds		Unsigned integer	N/A
HomeAcIpv4	Home AC IPv4		String	N/A
HomeAcIpv6	Home AC Ipv6		String	N/A

# WLANClient/RoamOutStation

This table contains station roam out information.

## XML structure

```
<WLANClient>  <RoamOutStation>
  <RoamOutStaInfo>
    <MacAddress></MacAddress>
    <BssID></BssID>
    <VlanID></VlanID>
    <OnlineTime></OnlineTime>
    <ForeignAcIpv4></ForeignAcIpv4>
    <ForeignAcIpv6></ForeignAcIpv6>
  </RoamOutStaInfo>
</RoamOutStation>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	RoamOutStation
Table type	Multi-instance table
Row name	RoamOutStaInfo
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	MacAddress of station	Index	MAC address	N/A
BssID	BSS ID		MAC address	N/A
VlanID	VLAN-ID		Unsigned integer 1 to 4094	N/A
OnlineTime	Online time in seconds		Unsigned integer	N/A
HomeAcIpv4	Foreign AC Ipv4		String	N/A
ForeignAcIpv6	Foreign AC Ipv6		String	N/A

# WLANClient/StationRoamTrack

This table contains station roam track information.

## XML structure

```
<WLANClient>
  <StationRoamTrack>
    <RoamTrack>
      <MacAddress></MacAddress>
      <TrackCnt></TrackCnt>
      <BssId></BssId>
      <OnlineTime></OnlineTime>
      <AcIpv4Addr></AcIpv4Addr>
      <AcIpv6Addr></AcIpv6Addr>
    </RoamTrack>
  </StationRoamTrack>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	StationRoamTrack
Table type	Multi-instance table
Row name	RoamTrack
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	MacAddress of station	Index	MAC address	N/A
TrackCnt	Track count	Index	Unsigned integer	N/A
BssId	BSS ID		MAC address	N/A
OnlineTime	Online time in seconds		Unsigned integer	N/A
AcIpv4Addr	Ipv4 address of AC		String	N/A
AcIpv6Addr	Ipv6 address of AC		String	N/A

# WLANClient/MobilityPeerGroups

This table contains mobility peer group information.

## XML structure

```
<WLANClient>
  <MobilityPeerGroups>
    <MobilityPeerGroup>
      <Name></Name>
      <TunnelType></TunnelType>
      <Enable></Enable>
    </MobilityPeerGroup>
  </MobilityPeerGroups>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	MobilityPeerGroups
Table type	Multi-instance table
Row name	MobilityPeerGroup
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Name	Mobility peer group name	Index	String. Length is 1 to 15 characters. Case sensitive.
TunnelType	Tunnel IP address type.		Enumeration. 2 : IPv4. 10 : IPv6
Enable	Status of mobility peer group.		Boolean: <ul style="list-style-type: none"><li>true—enable.</li><li>false—disable, The default value is false.</li></ul>

# WLANClient/PeerGroupIPv4Members

This table contains mobility peer group IPv4 member information.

## XML structure

```
<WLANClient>
  <PeerGroupIPv4Members>
    <Member>
      <GroupName></GroupName>
      <MemberIPv4Address></MemberIPv4Address>
    </Member>
  </PeerGroupIPv4Members>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	PeerGroupIPv4Members
Table type	Multi-instance table
Row name	Member
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Mobility peer group name	Index	String. Length is 1 to 15 characters. Case sensitive.
MemberIPv4 Address	IPv4 address of member.	Index	Ipv4Address.

## WLANClient/PeerGroupIPv6Members

This table contains mobility peer group IPv6 member information.

## XML structure

```
<WLANClient>
  <PeerGroupIPv6Members>
    <Member>
      <GroupName></GroupName>
      <MemberIPv6Address></MemberIPv6Address>
    </Member>
  </PeerGroupIPv6Members>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	PeegGroupIPv6Members
Table type	Multi-instance table
Row name	Member
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	Mobility peer group name	Index	String. Length is 1 to 15 characters. Case sensitive.
MemberIPv6 Address	IPv6 address of member.	Index	Ipv6Address.

## WLANClient/Layer2Authentication

This table contains WLAN access security's authenticating configurations in service template.

## XML structure

```
<WLANClient>
  <Layer2Authentication>
    <Authentication>
      <ServiceTemplateName></ServiceTemplateName>
      <AuthenticationMode></AuthenticationMode>
      <IntrusionProtectionEnable></IntrusionProtectionEnable>
      <IntrusionProtectionOperation></IntrusionProtectionOperation>
      <TemporaryServiceStopTimer></TemporaryServiceStopTimer>
      <TemporaryBlockTimer></TemporaryBlockTimer>
      <IgnoreAuthorization></IgnoreAuthorization>
      <AuthorizationFailOffline></AuthorizationFailOffline>
      <Dot1xHandshakeEnable></Dot1xHandshakeEnable>
      <Dot1xSecurityHandshakeEnable></Dot1xSecurityHandshakeEnable>
      <Dot1xReauthenticationEnable></Dot1xReauthenticationEnable>
      <Dot1xMandatoryDomain></Dot1xMandatoryDomain>
      <Dot1xMaxUserCount></Dot1xMaxUserCount>
      <MACAuthenticationDomain></MACAuthenticationDomain>
      <MACAuthenticationMaxUserCount></MACAuthenticationMaxUserCount>
    
```

```

    <FailVLAN></FailVLAN>
  </Authentication>
</Layer2Authentication>
</WLANClient>

```

## Table description

Item	Description
Feature name	WLANClient
Table name	Layer2Authentication
Table type	Multi-instance table
Row name	Authentication
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceTemplateName	Service template name.	Index	String, letter, number or '-', '[,]', '/', '.'. The length is 1 to 63.	
AuthenticationMode	Authentication mode of the service template	N/A	Enumeration: 0 : bypass. 1 : mac authentication 2 : mac then dot1x authentication 3 : dot1x authentication 4 : dot1x then mac authentication 5 : oui then dot1x	Default mode is bypass
IntrusionProtectionEnable	Enable Intrusion Protection of the Service Template	N/A	Boolean: <ul style="list-style-type: none"> <li>true—enable.</li> <li>false—disable, The default value is false.</li> </ul>	Default status is disabled
IntrusionProtectionOperation	Operation mode when intrusion detected	N/A	Enumeration: 0 : temporary block mac. 1 : temporary stop the service 2 : stop service	Column name
TemporaryServiceStopTimer	Period value of temporarily stop service	N/A	Unsigned integer Value range: 10 to 300.	Default value is 20 s.
TemporaryBlockTimer	Period value of temporarily block user mac	N/A	Unsigned integer Value range: 60 to 300.	Default value is 180 s.
IgnoreAutho	Ignore all	N/A	Boolean:	Default status is disabled

Column name	Column description	Column type	Data type and restrictions	Remarks
Authorization	authorization information set by server.		<ul style="list-style-type: none"> <li>true—enable.</li> <li>false—disable, The default value is false.</li> </ul>	
AuthorizationFailOffline	Users are offline if the authorizing failed.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—enable.</li> <li>false—disable, The default value is false.</li> </ul>	Default status is disabled
Dot1xHandshakeEnable	Enable handshake feature of dot1x	N/A	Boolean: <ul style="list-style-type: none"> <li>true—enable.</li> <li>false—disable, The default value is false.</li> </ul>	Default status is disabled
Dot1xSecurityHandshakeEnable	Enable secure handshake feature of dot1x	N/A	Boolean: <ul style="list-style-type: none"> <li>true—enable.</li> <li>false—disable, The default value is false.</li> </ul>	Default status is disabled, and handshake feature should be enabled first.
Dot1xReauthenticationEnable	Enable re-authentication feature of dot1x	N/A	Boolean: <ul style="list-style-type: none"> <li>true—enable.</li> <li>false—disable, The default value is false.</li> </ul>	Default status is disabled
Dot1xMandatoryDomain	Mandatory domain of users for the service template	N/A	String, case-insensitive. Length: 1 to 255 characters	No default value
Dot1xMaxUserCount	Max dot1x user numbers for a bss bound to this service template	N/A	Unsigned integer Value range: 1 to 4096.	Default value is 4096.
MACAuthenticationDomain	Domain of users for the service template	N/A	String, case-insensitive. Length: 1 to 255 characters	
MACAuthenticationMaxUserCount	Max MAC authentication user numbers for a bss bound to this service template	N/A	Unsigned integer Value range: 1 to 4096.	
FailVLAN	VLAN used	N/A	Unsigned integer Value range: 1 to 4094.	No default value

# WLANClient/StationLayer2Authentication

This table contains wlan authenticated station's connection information.

## XML structure

```
<WLANClient>
  <StationLayer2Authentication>
    <Information>
      <MACAddress></MACAddress>
      <AuthenDomain></AuthenDomain>
      <AuthenMode></AuthenMode>
      <AuthenMethod></AuthenMethod>
      <AuthorACLIndex></AuthorACLIndex>
      <AuthorUserProfile></AuthorUserProfile>
    </Information>
  </StationLayer2Authentication>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLAS
Table name	StationLayer2Authentication
Table type	Multi-instance table
Row name	Information
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions
MACAddress	Station MAC address	Index	MAC address
AuthenDomain	Domain of the user.	N/A	String, case-insensitive. Length: 1 to 255 characters.
AuthenMode	Authentication Mode.	N/A	Enumeration: 0 : BYPASS. 1 : MAC authentication. 2 : Dot1X. 3 : OUI.

Column name	Column description	Column type	Data type and restrictions
AuthenMethod	Authentication Method of Dot1X user.	N/A	Enumeration: 1 : Chap. 2 : PAP. 3 : EAP
AuthorACLIndex	Authorization ACL group index allocated by the server.	N/A	Unsigned integer.
AuthorUserProfile	Authorization User Profile name allocated by the server.	N/A	String Length: 1 to 31 characters.

## WLANClient/APs

This table contains AP configuration information.

### XML structure

```

<WLANClient>
  <APs>
    <AP>
      <Name></Name>
      <IdleTime></IdleTime>
      <KeepAliveTime></KeepAliveTime>
      <BandNaviStatus></BandNaviStatus>
    </AP>
  </APs>
</WLANClient>

```

### Table description

Item	Description
Feature name	WLANClient
Table name	APs
Table type	Multi-instance table
Row name	AP
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP name	Index	String, lowercase. Length: 1 to 64 characters.	N/A
IdleTime	Station Idle time	N/A	Unsigned integer. Value range: 60s to 86400s.	N/A
KeepAliveTime	Keeping alive time of station	N/A	Unsigned integer. Value range: 3s to 1800s.	N/A
BandNaviStatus	Band navigation status	N/A	Enumeration. <ul style="list-style-type: none"><li>0—disabled</li><li>1—enabled</li><li>2—inherit</li></ul>	Effective only when global BandNaviStatus is enabled.

## WLANClient/APGroup

This table contains AP group configuration information.

### XML structure

```
<WLANClient>
  <APGroup>
    <Group>
      <Name></Name>
      <BandNaviStatus></BandNaviStatus>
    </Group>
  </APGroup>
</WLANClient>
```

### Table description

Item	Description
Feature name	WLANClient
Table name	APGroup
Table type	Multi-instance table
Row name	Group
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
BandNaviStatus	Band navigation status	N/A	Boolean. <ul style="list-style-type: none"><li>false—disabled.</li><li>true—enabled.</li></ul>	Effective only when global BandNaviStatus is enabled.

## WLANClient/BandNavigation

This table contains band navigation information.

### XML structure

```
<WLANClient>
  <BandNavigation>
    <GlobalStatus></GlobalStatus>
    <AgingTime></AgingTime>
    <DenialCnt></DenialCnt>
    <Session></Session>
    <Gap></Gap>
    <Threshold></Threshold>
  </BandNavigation>
</WLANClient>
```

### Table description

Item	Description
Feature name	WLANClient
Table name	BandNavigation
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
GlobalStatus	Global status of band navigation	N/A	Boolean. <ul style="list-style-type: none"><li>false—disabled.</li><li>true—enabled.</li></ul>
AgingTime	Client information aging time	N/A	Unsigned integer. Unit is second. Value range: 10 to 600.
DenialCnt	Maximum number of denials for 5 GHz association requests	N/A	Unsigned integer. Value range: 1 to 10.
Session	Client number threshold for the 5 GHz radio	N/A	Unsigned integer. Value range: 2 to 255.
Gap	Threshold for the session gap between the current 5 GHz radio and the radio that has the fewest clients	N/A	Unsigned integer. Value range: 1 to 8.
Threshold	RSSI threshold	N/A	Unsigned integer. Unit is dB. Value range: 5 to 100.

## WLANClient/LoadBalance

This table contains load balancing information.

### XML structure

```
<WLANClient>
  <LoadBalance>
    <Status></Status>
    <Mode></Mode>
    <Bandwidth></Bandwidth>
    <BandwidthGap></BandwidthGap>
    <Session></Session>
    <SessionGap></SessionGap>
    <Traffic></Traffic>
    <TrafficGap></TrafficGap>
    <DenialNum></DenialNum>
    <Threshold></Threshold>
  </LoadBalance>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	LoadBalance
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	WLAN load balancing status	N/A	Boolean. <ul style="list-style-type: none"> <li>false—disabled.</li> <li>true—enabled.</li> </ul>	N/A
Mode	Load balancing mode	N/A	Enumeration. <ul style="list-style-type: none"> <li>1—session-mode.</li> <li>2—traffic-mode.</li> <li>3—bandwidth-mode.</li> </ul>	N/A
Session	Session threshold in number of clients	N/A	Unsigned integer. Value range:1 to 120.	This column can be configured only when the Mode is session-mode (1).
Session Gap	Session gap threshold	N/A	Unsigned integer. Value range:1 to 12.	This column cannot be configured if the Session is not configured.
Bandwidth	Bandwidth threshold	N/A	Unsigned integer. Unit is Mbps. Value range:1 to 500.	This column can be configured only when the Mode is bandwidth-mode (3).
Bandwidth Gap	Bandwidth gap threshold	N/A	Unsigned integer. Unit is Mbps. Value range:1 to 200.	This column cannot be configured if the Bandwidth is not configured.
Traffic	Traffic threshold	N/A	Unsigned integer. Unit is percent. Value range:1 to 80.	This column can be configured only when the Mode is traffic -mode (2).
TrafficGap	Traffic gap threshold	N/A	Unsigned integer. Unit is percent. Value range:10 to 40.	This column cannot be configured if the Traffic is not configured.
DenialNum	Maximum number of denials for association requests	N/A	Unsigned integer. Value range:2 to 10.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Threshold	RSSI threshold	N/A	Unsigned integer. Unit is dB. Value range:5 to 100.	N/A

## WLANClient/LoadBalanceGroup

This table contains load balancing group information.

### XML structure

```

<WLANClient>
  <LoadBalanceGroup>
    <Group>
      <GroupId></GroupId>
      <GroupDescription></GroupDescription>
    </Group>
  </LoadBalanceGroup>
</WLANClient>

```

### Table description

Item	Description
Feature name	WLANClient
Table name	LoadBalanceGroup
Table type	Multi-instance table
Row name	Group
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
GroupId	Load balancing group identifier	Index	Unsignedinteger. Value range: 1 to 65535.
GroupDescription	Description for the load balancing group	N/A	String, case-sensitive. Length: 1 to 64 characters.

## WLANClient/RadioInLBGroup

This table contains radio information of radios in the load balancing group.

## XML structure

```
<WLANClient>
  <RadioInLBGroup>
    <Radio>
      <GroupId></GroupId>
      <ApName></ApName>
      <RadioId></RadioId>
    </Radio>
  </RadioInLBGroup>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	RadiInLBGroup
Table type	Multi-instance table
Row name	Radio
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
GroupId	Load balancing group identifier	Index	Unsigned integer. Value range: 1 to 65535.
ApName	AP name	Index	String, lowercase. Length: 1 to 64 characters.
RadioId	Radio identifier	Index	Unsigned integer. Value range:1 to 31

## WLANClient/APStations

This table contains information about clients associated with an AP.

## XML structure

```
<WLANClient>
  <APStations>
    <APStation>
      <ApName></ApName>
```

```

    <MacAddress></MacAddress>
    <Ipv4Address></Ipv4Address>
    <Ipv6Address></Ipv6Address>
    <UpTime></UpTime>
  </APStation>
</APStations>
</WLANClient>

```

## Table description

Item	Description
Feature name	WLANClient
Table name	APStations
Table type	Multi-instance table
Row name	APStation
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String	Length: 1 to 64 characters.
MacAddress	MAC address of the client	Index	MAC address	N/A
Ipv4Address	IPv4 address of the client		IPv4 address.	N/A
Ipv6Address	IPv6 address of the client		IPv6 address.	N/A
UpTime	Uptime		Integer	N/A

## WLANClient/APStationsNum

This table contains the number of clients associated with an AP.

## XML structure

```

<WLANClient>
  <APStationsNum>
    <StationNum>
      <ApName></ApName>
      <StaNum></StaNum>
    </StationNum>
  </APStationsNum>

```

</WLANClient>

## Table description

Item	Description
Feature name	WLANClient
Table name	APStationsNum
Table type	Multi-instance table
Row name	StationNum
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String	Length: 1 to 64 characters.
StaNum	Number of clients associated with the AP		Integer	N/A

## WLANClient/WhiteList

This table contains information of white list.

## XML structure

```
<WLANClient>
  <WhiteList>
    <MacList>
      <MacAddress></MacAddress>
    </MacList>
  </WhiteList>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	WhiteList
Table type	Multi-instance table
Row name	MacList

Restrictions	None
--------------	------

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	Client MAC address.	Index	<ul style="list-style-type: none"> <li>MAC address.</li> </ul>	Example: 00-0c-af-e3-5d-c0.

## WLANClient/StaticBlackList

This table contains information of static black list.

## XML structure

```

<WLANClient>
  <StaticBlackList>
    <MacList>
      <MacAddress></MacAddress>
    </MacList>
  </StaticBlackList>
</WLANClient>

```

## Table description

Item	Description
Feature name	WLANClient
Table name	StaticBlackList
Table type	Multi-instance table
Row name	MacList
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	Client MAC address.	Index	<ul style="list-style-type: none"> <li>MAC address.</li> </ul>	Example: 00-0c-af-e3-5d-c0.

## WLANClient/DynamicBlackListCfg

This table contains configuration of dynamic black list.

## XML structure

```
<WLANClient>
  <DynamicBlackListCfg>
    <LifeTime></LifeTime>
  </DynamicBlackListCfg>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	DynamicBlackListCfg
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
LifeTime	Global life time of dynamic black list.		Unsigned integer. Value range:1 to 3600.Unit is second.

## WLANClient/pmfConfiguration

This table contains Protected management frames information.

## XML structure

```
<WLANClient>
  <PmfConfiguration>
    <Information>
      <ServiceTemplateName></ServiceTemplateName>
      <KeyDerivation></KeyDerivation>
      <PmfSwitch></PmfSwitch>
      <ComeBackTime></ComeBackTime>
      <RetryCnt></RetryCnt>
      <RetryTime></RetryTime>
    </Information>
  </PmfConfiguration >
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	PmfConfiguration
Table type	Multi-instance table
Row name	Information
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ServiceTemplateName	Service template name.	Index	String, letter, number or '-', '[,]', '/', '-', lowercase. The length is 1 to 63.
KeyDerivation	Key derivation		Enumeration: 1 : SHA1 2 : SHA256 3: SHA1 and SHA256 The default value is 1.
PmfSwitch	Pmf function switch		Enumeration: 0 : disable 1 : optional 2 : mandatory The default value is 0
ComeBackTime	Association comeback interval		Unsigned int. The value range is 1 to 20. Unit is second. The default value is 1 (s)
RetryCnt	Maximum number of SA query request retransmission		Unsigned int. The value range is 1 to 16. The default value is 4.
RetryTime	Retry interval for SA query response		Unsigned int. The value range is 100 to 500. Unit is millisecond. The default value is 200 (ms) .

## WLANClient/FtConfiguration

This table contains FT configuration information.

## XML structure

```
<WLANClient>
```

```

<FtConfiguration>
  <Configuration>
    <ServiceTemplateName></ServiceTemplateName>
    <Enable></Enable>
    <Method></Method>
    <ReassocTime></ReassocTime>
  </Configuration>
</FtConfiguration>
</WLANClient>

```

## Table description

Item	Description
Feature name	WLANClient
Table name	FtConfiguration
Table type	Multi-instance table
Row name	Configuration
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ServiceTemplateName	Service template name.	Index	String, letter, number or '-', '[,]', '/', '-', lowercase. The length is 1 to 63.
Enable	Status of fast BSS transition protocol.		Boolean: <ul style="list-style-type: none"> <li><b>true</b>—enabled.</li> <li><b>false</b>—disabled.</li> </ul> The default value is false.
Method	Fast BSS transition method.		Unsigned char. 0:over-the-air; 1:over-the-ds. The default value is 0.
ReassocTime	Reassociation timeout.		Unsigned int. The value range is 1 to 100. The default value is 20. Unit is second.

## WLANClient/Layer2AccessControl

This table contains Layer 2 access control ACL information..

## XML structure

```
<WLANClient>
  <Layer2AccessControl>
    <AccessControl>
      <ServiceTemplateName></ServiceTemplateName>
      <AclNum></AclNum>
    </AccessControl>
  </Layer2AccessControl>
</WLANClient>
```

## Table description

Item	Description
Feature name	WLANClient
Table name	Layer2AccessControl
Table type	Multi-instance table
Row name	AccessControl
Restrictions	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
ServiceTemplateName	Service template name	Index	String, lowercase. Length: 1 to 63 characters.
AclNum	ACL number	N/A	Unsigned integer Value range: 4000 to 4999.

# WlanMesh

## WlanMesh/Profile

This table contains mesh profile information.

### XML structure

```
<WlanMesh>
  <Profile>
    <ProfileEntry>
      <ProfileIndex></ProfileIndex>
      <MeshID></MeshID>
      <KeepAlive></KeepAlive>
      <AKMMode></AKMMode>
      <SimpleKey></SimpleKey>
      <IsKeyConfig></IsKeyConfig>
      <ProfileEnable></ProfileEnable>
    </ProfileEntry>
  </Profile>
</WlanMesh>
```

### Table description

Item	Description
Feature name	WlanMesh
Table name	Profile
Table type	Multi-instance table
Row name	ProfileEntry
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions
ProfileIndex	Mesh profile number	Index	Unsigned integer. Value range: 1 to 32.
MeshID	Mesh ID for the mesh profile	N/A	String. Length: 1 to 32 characters.
KeepAlive	Mesh link keepalive interval	N/A	Unsigned integer. Value range: 1 to 1800.

Column name	Column description	Column type	Data type and restrictions
AKMMMode	SAE mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Enabled.</li> <li>2—Disabled.</li> </ul>
SimpleKey	Plain text string	N/A	String. Length: 8 to 63 characters.
IsKeyConfig	SimpleKey configuration state	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—The simpleKey has been configured.</li> <li><b>false</b>—The simpleKey is not configured.</li> </ul>
ProfileEnable	Mesh profile enabling state	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>

## WlanMesh/Policy

This table contains mesh policy information.

### XML structure

```

<WlanMesh>
  <Policy>
    <PolicyEntry>
      <PolicyName></PolicyName>
      <PolicyEnable></PolicyEnable>
      <MlspEnable></MlspEnable>
      <MlspMode></MlspMode>
      <TransmitLevel></TransmitLevel>
      <ProbRequestInterval></ProbRequestInterval>
      <LinkHoldRSSI></LinkHoldRSSI>
      <WaveGuideHoldRSSI></WaveGuideHoldRSSI>
      <TransMissionMethod></TransMissionMethod>
      <WaveGuideSwitch></WaveGuideSwitch>
      <LinkHoldTime></LinkHoldTime>
      <SwitchMargin></SwitchMargin>
      <LinkSaturationRSSI></LinkSaturationRSSI>
      <LinkRateMode></LinkRateMode>
      <MaxLinkNum></MaxLinkNum>
      <MlspOptimize></MlspOptimize>
      <LinkOptimizeThreshold></LinkOptimizeThreshold>
      <MlspLog></MlspLog>
      <MlspLogInterval></MlspLogInterval>
      <TempLinkEnable></TempLinkEnable>
      <ActiveKeepaliveCount></ActiveKeepaliveCount>
      <LinkEstablishThreshold></LinkEstablishThreshold>

```

```

    </PolicyEntry>
  </Policy>
</WlanMesh>

```

## Table description

Item	Description
Feature name	WlanMesh
Table name	Policy
Table type	Multi-instance table
Row name	PolicyEntry
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Mesh policy name	Index	String. Length: 1 to 31 characters.	N/A
PolicyEnable	Mesh policy enabling state	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
MlspEnable	MLSP enabling state	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	Only available for fat APs.
MlspMode	MLSP mode	N/A	Unsigned integer. Value range: 0 to 1.	Only available for fat APs.
TransmitLevel	Keepalive packet limit	N/A	Unsigned integer. Value range: 0 to 4.	Only available for ACs.
ProbRequestInterval	Probe request interval	N/A	Unsigned integer. Value range: 100 to 8191.	N/A
LinkHoldRSSI	Mesh link hold RSSI	N/A	Unsigned integer. Value range: 5 to 100.	N/A
WaveGuideHoldRSSI	Waveguide hold RSSI	N/A	Unsigned integer. Value range: 5 to 100.	Only available for fat APs.
TransMissionMethod	Transmission method	N/A	Unsigned integer. Value range: 0 to 1.	Only available for ACs.

Column name	Column description	Column type	Data type and restrictions	Remarks
WaveGuideSwitch	Fast waveguide switch state	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	Only available for fat APs.
LinkHoldTime	Mesh link hold time	N/A	Unsigned integer. Value range: 1000 to 20000.	Only available for fat APs.
SwitchMargin	Mesh link switch threshold	N/A	Unsigned integer. Value range: 1 to 100.	Only available for fat APs.
LinkSaturationRSSI	Mesh link saturation RSSI	N/A	Unsigned integer. Value range: 30 to 150.	N/A
LinkRateMode	Mesh link rate mode	N/A	Unsigned integer. Value range: 1 to 2.	N/A
MaxLinkNum	Maximum number of links that an MP can form	N/A	Unsigned integer. Value range: 1 to 8.	N/A
MLspOptimize	MLSP optimization state	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	Only available for fat APs.
LinkOptimizeThreshold	Mesh link optimization threshold	N/A	Unsigned integer. Value range: 30 to 120.	Only available for fat APs.
MLspLog	MLSP logging enabling state	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	Only available for fat APs.
MLspLogInterval	MLSP logging interval	N/A	Unsigned integer. Value range: 500 to 4000.	Only available for fat APs.
TempLinkEnable	Temporary link enabling state	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	Only available for ACs.
ActiveKeepaliveCount	Mesh link active keepalive packet limit	N/A	Unsigned integer. Value range: 1 to 100.	Only available for fat APs.
LinkEstablishThreshold	Mesh link establishment threshold	N/A	Unsigned integer. Value range: 1 to 100.	N/A

## WlanMesh/ MLSPProxy

This table contains MLSP proxy information.

## XML structure

```
<WlanMesh>
  <MLSPProxy>
    <MLSPProxyEntry>
      <PolicyName></PolicyName>
      <ProxyMac></ProxyMac>
      <VlanID></VlanID>
      <IPAddress></IPAddress>
    </MLSPProxyEntry>
  </MLSPProxy>
</WlanMesh>
```

## Table description

Item	Description
Feature name	WlanMesh
Table name	MLSPProxy
Table type	Multi-instance table
Row name	MLSPProxyEntry
Restrictions	The table is applicable only to fat APs and MLSP must be enabled first.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Mesh policy name	Index	String. Length: 1 to 31 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
ProxyMac	Proxy MAC address	Index	MAC address. Six groups of two hexadecimal digits, hyphen-separated.	It cannot be an all zero address or broadcast address or multicast address, 00-0c-af-e3-5d-c0 for example.
VlanID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
IPAddress	IP address	N/A	String. Dotted decimal notation.	It cannot be an all zero address or broadcast address or multicast address, 192.168.0.1 for example.

# WlanMesh/RadioCfg

This table contains radio configuration information.

## XML structure

```
<WlanMesh>
  <RadioCfg>
    <Radio>
      <ApName></ApName>
      <RadioId></RadioId>
      <RadioType></RadioType>
      <PolicyName></PolicyName>
      <BindInterface></BindInterface>
      <ProfileIndex></ProfileIndex>
    </Radio>
  </RadioCfg>
</WlanMesh>
```

## Table description

Item	Description
Feature name	WlanMesh
Table name	RadioCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String. Length: 1 to 64 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
RadioId	Radio ID	Index	Unsigned integer. Value range: 1 to 31	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RadioType	Radio type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—802.11b.</li> <li>2—802.11a.</li> <li>3—802.11g.</li> <li>4—802.11n(2.4GHz).</li> <li>5—802.11n(5GHz).</li> <li>6—802.11ac(2.4GHz).</li> <li>7—802.11ac(5GHz).</li> </ul>	N/A
PolicyName	Name of the policy bound to the radio	N/A	String. Length: 1 to 31 characters.	N/A
BindInterface	Index of the interface bound to the radio	N/A	Unsigned integer. Value range: 0 to 1023.	N/A
ProfileIndex	Index of the profile bound to the radio	N/A	Unsigned integer. Value range: 1 to 32.	N/A

## WlanMesh/APCfg

This table contains AP configuration information.

### XML structure

```

<WlanMesh>
  <APCfg>
    <CfgInfo>
      <ApName></ApName>
      <PortalEnable></PortalEnable>
    </CfgInfo>
  </APCfg>
</WlanMesh>

```

### Table description

Item	Description
Feature name	WlanMesh
Table name	APCfg
Table type	Multi-instance table
Row name	CfgInfo
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String. Length: 1 to 64 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
PortalEnable	Portal service enabling state	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled.</li><li><b>false</b>—Disabled.</li></ul>	N/A

## WlanMesh/ WDSPeerMac

This table contains WDS peer MAC information.

## XML structure

```
<WlanMesh>
  <WDSPeerMac>
    <PeerMacEntry>
      <ApName></ApName>
      <RadioId></RadioId>
      <PeerMac></PeerMac>
    </PeerMacEntry>
  </WDSPeerMac>
</WlanMesh>
```

## Table description

Item	Description
Feature name	WlanMesh
Table name	WDSPeerMac
Table type	Multi-instance table
Row name	PeerMacEntry
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String. Length: 1 to 64 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
RadioId	Radio ID	Index	Unsigned integer. Value range: 1 to 31	N/A
PeerMac	Peer MP's MAC address	Index	MAC address. Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

## WlanMesh/APGroupRadioCfg

This table contains radio configuration information for an AP group.

## XML structure

```
<WlanMesh>
  <APGroupRadioCfg>
    <GroupRadio>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <RadioId></RadioId>
      <PolicyName></PolicyName>
      <BindInterface></BindInterface>
      <ProfileIndex></ProfileIndex>
    </GroupRadio>
  </APGroupRadioCfg>
</WlanMesh>
```

## Table description

Item	Description
Feature name	WlanMesh
Table name	APGroupRadioCfg
Table type	Multi-instance table
Row name	GroupRadio
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String. Length: 1 to 31 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
ModelName	AP model name	Index	String. Length: 1 to 63 characters.	N/A
RadioId	Radio ID	Index	Unsigned integer. Value range: 1 to 31	N/A
PolicyName	Name of the policy bound to the radio	N/A	String. Length: 1 to 31 characters.	N/A
BindInterface	Index of the interface bound to the radio	N/A	Unsigned integer. Value range: 0 to 1023.	N/A
ProfileIndex	Index of the profile bound to the radio	N/A	Unsigned integer. Value range: 1 to 32.	N/A

## WlanMesh/APGroupAPCfg

This table contains AP group configuration information.

## XML structure

```
<WlanMesh>
  <APGroupAPCfg>
    <GroupCfgInfo>
      <GroupName></GroupName>
      <PortalEnable></PortalEnable>
    </GroupCfgInfo>
  </APGroupAPCfg>
</WlanMesh>
```

## Table description

Item	Description
Feature name	WlanMesh
Table name	APGroupAPCfg
Table type	Multi-instance table
Row name	GroupCfgInfo
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	AP group name	Index	String. Length: 1 to 31 characters.
PortalEnable	Portal service enabling state	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled.</li><li><b>false</b>—Disabled.</li></ul>

## WlanMesh/APGroupWDSPeerMac

This table contains WDS peer MAC address information for an AP group.

## XML structure

```
<WlanMesh>
  <APGroupWDSPeerMac>
    <GroupPeerMacEntry>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <RadioId></RadioId>
      <PeerMac></PeerMac>
    </GroupPeerMacEntry>
  </APGroupWDSPeerMac>
</WlanMesh>
```

## Table description

Item	Description
Feature name	WlanMesh
Table name	APGroupWDSPeerMac
Table type	Multi-instance table
Row name	GroupPeerMacEntry
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String. Length: 1 to 31 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
ModelName	AP model name	Index	String. Length: 1 to 63 characters.	N/A
RadioId	Radio ID	Index	Unsigned integer. Value range: 1 to 31	N/A
PeerMac	Peer MP MAC address	Index	MAC address. Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

## WlanMesh/GlobalCfg

This table contains global configuration information.

## XML structure

```
<WlanMesh>
  <GlobalCfg>
    <PeerConfig></PeerConfig>
    <PortalEnable></PortalEnable>
  </GlobalCfg>
</WlanMesh>
```

## Table description

Item	Description
Feature name	WlanMesh
Table name	GlobalCfg
Table type	Multi-instance table
Row name	GroupCfgInfo
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
PeerConfig	Mesh peer configuration state	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Enabled.</li><li>• <b>false</b>—Disabled.</li></ul>
PortalEnable	Portal service enabling state	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Enabled.</li><li>• <b>false</b>—Disabled.</li></ul>

    <ActiveKeepaliveCount></ActiveKeepaliveCount>
    <LinkEstablishThreshold></LinkEstablishThreshold>
  </PolicyEntry>
</Policy>
</WlanMesh>

```

## Table description

Item	Description
Feature name	WlanMesh
Table name	Policy
Table type	Multi-instance table
Row name	PolicyEntry
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Mesh policy name	Index	String. Length: 1 to 31 characters.	N/A
PolicyEnable	Mesh policy enabling state	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
MlspEnable	MLSP enabling state	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	Only available for fat APs.
MlspMode	MLSP mode	N/A	Unsigned integer. Value range: 0 to 1.	Only available for fat APs.
TransmitLevel	Keepalive packet limit	N/A	Unsigned integer. Value range: 0 to 4.	Only available for ACs.
ProbRequestInterval	Probe request interval	N/A	Unsigned integer. Value range: 100 to 8191.	N/A
LinkHoldRSSI	Mesh link hold RSSI	N/A	Unsigned integer. Value range: 5 to 100.	N/A
WaveGuideHoldRSSI	Waveguide hold RSSI	N/A	Unsigned integer. Value range: 5 to 100.	Only available for fat APs.

Column name	Column description	Column type	Data type and restrictions	Remarks
TransMissionMethod	Transmission method	N/A	Unsigned integer. Value range: 0 to 1.	Only available for ACs.
WaveGuideSwitch	Fast waveguide switch state	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	Only available for fat APs.
LinkHoldTime	Mesh link hold time	N/A	Unsigned integer. Value range: 1000 to 20000.	Only available for fat APs.
SwitchMargin	Mesh link switch threshold	N/A	Unsigned integer. Value range: 1 to 100.	Only available for fat APs.
LinkSaturationRSSI	Mesh link saturation RSSI	N/A	Unsigned integer. Value range: 30 to 150.	N/A
LinkRateMode	Mesh link rate mode	N/A	Unsigned integer. Value range: 1 to 2.	N/A
MaxLinkNum	Maximum number of links that an MP can form	N/A	Unsigned integer. Value range: 1 to 8.	N/A
MLspOptimize	MLSP optimization state	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	Only available for fat APs.
LinkOptimizeThreshold	Mesh link optimization threshold	N/A	Unsigned integer. Value range: 30 to 120.	Only available for fat APs.
MLspLog	MLSP logging enabling state	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	Only available for fat APs.
MLspLogInterval	MLSP logging interval	N/A	Unsigned integer. Value range: 500 to 4000.	Only available for fat APs.
TempLinkEnable	Temporary link enabling state	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	Only available for ACs.
ActiveKeepaliveCount	Mesh link active keepalive packet limit	N/A	Unsigned integer. Value range: 1 to 100.	Only available for fat APs.
LinkEstablishThreshold	Mesh link establishment threshold	N/A	Unsigned integer. Value range: 1 to 100.	N/A

## WlanMesh/ MLSPProxy

This table contains MLSP proxy information.

## XML structure

```
<WlanMesh>
  <MLSPProxy>
    <MLSPProxyEntry>
      <PolicyName></PolicyName>
      <ProxyMac></ProxyMac>
      <VlanID></VlanID>
      <IPAddress></IPAddress>
    </MLSPProxyEntry>
  </MLSPProxy>
</WlanMesh>
```

## Table description

Item	Description
Feature name	WlanMesh
Table name	MLSPProxy
Table type	Multi-instance table
Row name	MLSPProxyEntry
Restrictions	The table is applicable only to fat APs and MLSP must be enabled first.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Mesh policy name	Index	String. Length: 1 to 31 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
ProxyMac	Proxy MAC address	Index	MAC address. Six groups of two hexadecimal digits, hyphen-separated.	It cannot be an all zero address or broadcast address or multicast address, 00-0c-af-e3-5d-c0 for example.
VlanID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
IPAddress	IP address	N/A	String. Dotted decimal notation.	It cannot be an all zero address or broadcast address or multicast address, 192.168.0.1 for example.

# WlanMesh/RadioCfg

This table contains radio configuration information.

## XML structure

```
<WlanMesh>
  <RadioCfg>

    <Radio>
      <ApName></ApName>

  </RadioCfg>
</WlanMesh>
```

## Table description

Item	Description
Feature name	WlanMesh
Table name	RadioCfg
Table type	Multi-instance table
Row name	Radio
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String. Length: 1 to 64 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
RadioId	Radio ID	Index	Unsigned integer. Value range: 1 to 31	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RadioType	Radio type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—802.11b.</li> <li>2—802.11a.</li> <li>3—802.11g.</li> <li>4—802.11n(2.4GHz).</li> <li>5—802.11n(5GHz).</li> <li>6—802.11ac(2.4GHz).</li> <li>7—802.11ac(5GHz).</li> </ul>	N/A
PolicyName	Name of the policy bound to the radio	N/A	String. Length: 1 to 31 characters.	N/A
BindInterface	Index of the interface bound to the radio	N/A	Unsigned integer. Value range: 0 to 1023.	N/A
ProfileIndex	Index of the profile bound to the radio	N/A	Unsigned integer. Value range: 1 to 32.	N/A

## WlanMesh/APCfg

This table contains AP configuration information.

### XML structure

```

<WlanMesh>
  <APCfg>
    <CfgInfo>
      <ApName></ApName>
      <PortalEnable></PortalEnable>
    </CfgInfo>
  </APCfg>
</WlanMesh>

```

### Table description

Item	Description
Feature name	WlanMesh
Table name	APCfg
Table type	Multi-instance table
Row name	CfgInfo
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String. Length: 1 to 64 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
PortalEnable	Portal service enabling state	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled.</li><li><b>false</b>—Disabled.</li></ul>	N/A

## WlanMesh/ WDSPeerMac

This table contains WDS peer MAC information.

## XML structure

```
<WlanMesh>
  <WDSPeerMac>
    <PeerMacEntry>
      <ApName></ApName>
      <RadioId></RadioId>
      <PeerMac></PeerMac>
    </PeerMacEntry>
  </WDSPeerMac>
</WlanMesh>
```

## Table description

Item	Description
Feature name	WlanMesh
Table name	WDSPeerMac
Table type	Multi-instance table
Row name	PeerMacEntry
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String. Length: 1 to 64 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
Radioid	Radio ID	Index	Unsigned integer. Value range: 1 to 31	N/A
PeerMac	Peer MP's MAC address	Index	MAC address. Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

## WlanMesh/LinkStatus

This table contains mesh link state information.

### XML structure

```
<WlanMesh>
  <LinkStatus>
    <LinkStatusEntry>
      <IfIndex></IfIndex>
      <IfName></IfName>
      <BssID></BssID>

```

    </NbrStatusEntry>
  </NbrStatus>
</WlanMesh>

```

## Table description

Item	Description
Feature name	WlanMesh
Table name	NbrStatus
Table type	Multi-instance table
Row name	NbrStatusEntry
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ApName	AP name	Index	String. Length: 1 to 64 characters.
NbrIndex	Neighbor index	Index	Unsigned integer.
RadiolD	Radio ID	N/A	Unsigned integer.
RadioType	Radio mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—802.11b.</li> <li>2—802.11a.</li> <li>3—802.11g.</li> <li>4—802.11n(2.4GHz).</li> <li>5—802.11n(5GHz).</li> <li>6—802.11ac(2.4GHz).</li> <li>7—802.11ac(5GHz).</li> </ul>
LocalMeshID	Local mesh ID	N/A	String. Length: 1 to 32 characters.
NbrMeshID	Peer mesh ID	N/A	String. Length: 1 to 32 characters.
BSSID	Base service set ID	N/A	MAC address. Six groups of two hexadecimal digits, hyphen-separated.
PeerMac	Peer MAC address	N/A	MAC address. Six groups of two hexadecimal digits, hyphen-separated.
IfIndex	Interface index	N/A	Unsigned integer.
Status	Link status	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Active.</li> <li>2—Standby.</li> </ul>

Column name	Column description	Column type	Data type and restrictions
Channel	Radio channel	N/A	Unsigned integer.
Age	Link aging timer	N/A	Unsigned integer.
RSSI	Link RSSI	N/A	Unsigned integer.
SNR	Signal noise ratio	N/A	Unsigned integer.

## WlanMesh/APMeshIF

This table contains mesh interface information for an AP.

### XML structure

```

<WlanMesh>
  <APMeshIF>
    <APMeshIFEntry>
      <ApName></ApName>
      <MeshIFNum></MeshIFNum>
      <MeshIFName></MeshIFName>
      <LinkType></LinkType>
      <PVID></PVID>
    </APMeshIFEntry>
  </APMeshIF>
</WlanMesh>

```

### Table description

Item	Description
Feature name	WlanMesh
Table name	APMeshIF
Table type	Multi-instance table
Row name	APMeshIFEntry
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String. Length: 1 to 64 characters.	N/A
MeshIFNum	Mesh interface number	Index	Unsigned integer: Value range: 0 to 1023	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MeshIFName	Mesh interface name	N/A	String. Length: 1 to 47 characters.	N/A
LinkType	Mesh interface type	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>1—Access.</li> <li>2—Trunk.</li> <li>3—Hybrid.</li> </ul>	N/A
PVID	Mesh interface PVID	N/A	Unsigned integer. Value range: 1 to 4094	N/A

## WlanMesh/GroupMeshIF

This table contains mesh interface information for an AP group.

### XML structure

```

<WlanMesh>
  <GroupMeshIF>
    <GroupMeshIFEntry>
      <GroupName></GroupName>
      <MeshIFNum></MeshIFNum>
      <MeshIFName></MeshIFName>
      <LinkType></LinkType>
      <PVID></PVID>
    </GroupMeshIFEntry>
  </GroupMeshIF>
</WlanMesh>

```

### Table description

Item	Description
Feature name	WlanMesh
Table name	GroupMeshIF
Table type	Multi-instance table
Row name	GroupMeshIFEntry
Restrictions	Support only for AC

### Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	AP group name	Index	String. Length: 1 to 31 characters.

Column name	Column description	Column type	Data type and restrictions
MeshIFNum	Mesh interface number	Index	Unsigned integer. Value range: 0 to 1023
MeshIFName	Mesh interface name	N/A	String. Length: 1 to 47 characters.
LinkType	Mesh interface type	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>1—Access.</li> <li>2—Trunk.</li> <li>3—Hybrid.</li> </ul>
PVID	Mesh interface PVID	N/A	Unsigned integer. Value range: 1 to 4094

## WlanMesh/APGroupRadioCfg

This table contains radio configuration information for an AP group.

### XML structure

```

<WlanMesh>
  <APGroupRadioCfg>
    <GroupRadio>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <RadioId></RadioId>
      <PolicyName></PolicyName>
      <BindInterface></BindInterface>
      <ProfileIndex></ProfileIndex>
    </GroupRadio>
  </APGroupRadioCfg>
</WlanMesh>

```

### Table description

Item	Description
Feature name	WlanMesh
Table name	APGroupRadioCfg
Table type	Multi-instance table
Row name	GroupRadio
Restrictions	Applicable only to ACs

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String. Length: 1 to 31 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
ModelName	AP model name	Index	String. Length: 1 to 63 characters.	N/A
RadioId	Radio ID	Index	Unsigned integer. Value range: 1 to 31.	N/A
PolicyName	Name of the policy bound to the radio	N/A	String. Length: 1 to 31 characters.	N/A
BindInterface	Index of the interface bound to the radio	N/A	Unsigned integer. Value range: 0 to 1023.	N/A
ProfileIndex	Index of the profile bound to the radio	N/A	Unsigned integer. Value range: 1 to 32.	N/A

## WlanMesh/APGroupAPCfg

This table contains AP configuration information for an AP group.

## XML structure

```
<WlanMesh>
  <APGroupAPCfg>
    <GroupCfgInfo>
      <GroupName></GroupName>
      <PortalEnable></PortalEnable>
    </GroupCfgInfo>
  </APGroupAPCfg>
</WlanMesh>
```

## Table description

Item	Description
Feature name	WlanMesh
Table name	APGroupAPCfg
Table type	Multi-instance table
Row name	GroupCfgInfo
Restrictions	Support only for AC

## Columns

Column name	Column description	Column type	Data type and restrictions
GroupName	AP group name	Index	String. Length: 1 to 31 characters.
PortalEnable	Portal service enabling state	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled.</li><li><b>false</b>—Disabled.</li></ul>

## WlanMesh/APGroupWDSPeerMac

This table contains WDS peer MAC address information for an AP group.

## XML structure

```
<WlanMesh>
  <APGroupWDSPeerMac>
    <GroupPeerMacEntry>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <RadioId></RadioId>
      <PeerMac></PeerMac>
    </GroupPeerMacEntry>
  </APGroupWDSPeerMac>
</WlanMesh>
```

## Table description

Item	Description
Feature name	WlanMesh
Table name	APGroupWDSPeerMac
Table type	Multi-instance table
Row name	GroupPeerMacEntry
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String. Length: 1 to 31 characters.	If this column contains an uppercase character, it will be converted to lowercase automatically.
ModelName	AP model name	Index	String. Length: 1 to 63 characters.	N/A
RadioId	Radio ID	Index	Unsigned integer. Value range: 1 to 31	N/A
PeerMac	Peer MP MAC address	Index	MAC address. Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

## WlanMesh/GlobalCfg

This table contains global configuration information.

## XML structure

```
<WlanMesh>
  <GlobalCfg>
    <PeerConfig></PeerConfig>
    <PortalEnable></PortalEnable>
  </GlobalCfg>
</WlanMesh>
```

## Table description

Item	Description
Feature name	WlanMesh
Table name	GlobalCfg
Table type	Multi-instance table
Row name	GroupCfgInfo
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
PeerConfig	Mesh peer configuration state	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Enabled.</li><li>• <b>false</b>—Disabled.</li></ul>
PortalEnable	Portal service enabling state	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Enabled.</li><li>• <b>false</b>—Disabled.</li></ul>

# WLOC

## WLOC/AeroScout

This table contains AeroScout of AP protocol related parameters information.

### XML structure

```
<WLOC>
  <AeroScout>
    <AP>
      <ApName></ApName>
      <Status></Status>
      <VersionID></VersionID>
      <EngineDetectionMode></EngineDetectionMode>
      <EngineAddress></EngineAddress>
      <EnginePort></EnginePort>
      <VendorPort></VendorPort>
      <TimeStamp></TimeStamp>
      <ReportMode></ReportMode>
      <MulticastAddress></MulticastAddress>
    </AP>
  </AeroScout>
</WLOC>
```

### Table description

Item	Description
Feature name	WLOC
Table name	AeroScout
Table type	Multi-instance table
Row name	AP
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP Name	Index	String, case-insensitive. Length: 1 to 64 characters.	N/A
Status	Wireless locating through the	N/A	Enumeration: <ul style="list-style-type: none"><li>1—enable</li></ul>	N/A

	AeroScout protocol		<ul style="list-style-type: none"> <li>2—disable</li> </ul>	
VersionID	Specify the AeroScout version ID	N/A	Enumeration: <ul style="list-style-type: none"> <li>2—V2</li> <li>3—V3</li> </ul>	N/A
EngineDetectionMode	Specify the AeroScout engine address mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—static</li> <li>2—dynamic</li> </ul>	N/A
EngineAddress	Specify a locating server IP address to which the AP sends packets, this column must configure with EnginePort	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1.
EnginePort	Specify a locating server port to which the AP sends packets, this column must configure with EngineAddress	N/A	Unsigned integer. Value range: 1 to 65535.	EngineAddress and EnginePort must set together.
VendorPort	Specify the Vendor portnum of AP	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
TimeStamp	Configure the timestamp field in MU reports	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—absolute</li> <li>2—relative</li> </ul>	N/A
ReportMode	Specify the module of report to the server	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—local</li> <li>2—central</li> </ul>	N/A
MulticastAddress	MACAddress of tag Multicast	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 01-34-ED-66-89-23.

## WLOC/BLE

This table contains BLE of AP protocol related parameters information.

## XML structure

```

<WLOC>
  <BLE>
    <AP>
      <ApName></ApName>
      <Status></Status>
      <AgingTime></AgingTime>
      <EngineAddress></EngineAddress>
      <EnginePort></EnginePort>
    </AP>
  </BLE>
</WLOC>

```

```

<ReportStatus></ReportStatus>
<ReportInterval></ReportInterval>
<RssiThresholdStatus></RssiThresholdStatus>
<RssiThreshold></RssiThreshold>
<VendorPort></VendorPort>
<CmdPasswdSimple></CmdPasswdSimple>
<CmdPasswdCipher></CmdPasswdCipher>
<RealTimeReportStatus></RealTimeReportStatus>
<RealTimeReportPrefix></RealTimeReportPrefix>
<RealTimeReportInterval></RealTimeReportInterval>
<RealTimeReportEngineAddress></RealTimeReportEngineAddress>
<RealTimeReportEnginePort></RealTimeReportEnginePort>
<ReportMode></ReportMode>
<ReportFormat></ReportFormat>
</AP>
</BLE>
</WLOC>

```

## Table description

Item	Description
Feature name	WLOC
Table name	BLE
Table type	Multi-instance table
Row name	AP
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP Name	Index	String, case-insensitive. Length: 1 to 64 characters.	N/A
Status	Wireless locating through the BLE protocol	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
AgingTime	Specify a neighbor aging time for BLE location	N/A	Unsigned integer Value range:60 to 3600.	N/A
EngineAddress	Specify the locating server IP address to which the AP sends packets, this column must	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1.

	configure with EnginePort			
EnginePort	Specify the locating server port to which the AP sends packets, this column must configure with EngineAddress	N/A	Unsigned integer. Value range: 1 to 65535.	EngineAddress and EnginePort must set together.
ReportStatus	Specify the status of neighbor list report	N/A	Enumeration: • 1—enable • 2—disable	N/A
ReportInterval	Specify the interval for sending client list report	N/A	Unsigned integer. Value range: 1 to 86400.	N/A
RssiThresholdStatus	Configure Rssi-Threshold status	N/A	Enumeration: • 1—enable • 2—dsable	N/A
RssiThreshold	Specify the Rssi-Threshold value	N/A	Unsigned integer. Value range: 5 to 255.	N/A
VendorPort	Specify the Vendor portnum of AP	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
CmdPasswd Simple	Specify the simple Command password	N/A	String. Length: 12	N/A
CmdPasswd Cipher	Specify the cipher Command password	N/A	String. Length: 49	N/A
RealTimeReportStatus	Specify the status of real-time wireless locating	N/A	Enumeration: • 1—enable • 2—disable	N/A
RealTimeReportPrefix	Specify the prefix of manufacturers	N/A	String. Hexadecimal Length: 8 to 18(even number)	N/A
RealTimeReportInterval	Specify the interval for sending client list report	N/A	Unsigned integer. Value range: 1 to 30	N/A
RealTimeReportEngineAddress	Specify the locating server IP address to which the AP sends packets, this column must configure with EnginePort	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example:1.1.1.1.
RealTimeReportEnginePort	Specify the locating server	N/A	Unsigned integer. Value range: 1 to 65535.	EngineAddress and EnginePort must set together.

	port to which the AP sends packets, this column must configure with EngineAddress			
ReportMode	Specify the module of report to the server	N/A	Enumeration: • 1—local • 2—central	N/A
ReportFormat	Frame format	N/A	Enumeration: • 1—general • 2—lightweight	N/A

## WLOC/CUPID

This table contains CUPID of AP protocol related parameters information.

### XML structure

```

<WLOC>
  <CUPID>
    <AP>
      <ApName></ApName>
      <Status></Status>
      <EngineAddress></EngineAddress>
      <EnginePort></EnginePort>
      <VendorPort></VendorPort>
      <ReportStatus></ReportStatus>
      <ReportInterval></ReportInterval>
      <UnassociateReportStatus></UnassociateReportStatus>
      <UnassoMeasStatus></UnassoMeasStatus>
      <ReportMode></ReportMode>
      <ReportFormat></ReportFormat>
      <LocalCalculate></LocalCalculate>
    </AP>
  </CUPID>
</WLOC>

```

### Table description

Item	Description
Feature name	WLOC
Table name	CUPID
Table type	Multi-instance table
Row name	AP
Restrictions	None

Support for row creation and deletion	No
---------------------------------------	----

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP Name	Index	String, case-insensitive. Length: 1 to 64 characters.	N/A
Status	Wireless locating through the Cupid protocol	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
EngineAddress	Specify the locating server IP address, this column must configure with EnginePort	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1.
EnginePort	Specify the locating server port to which the AP sends packets, this column must configure with EngineAddress	N/A	Unsigned integer. Value range: 1 to 65535.	EngineAddress and EnginePort must set together.
VendorPort	Specify the Vendor portnum of AP	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
ReportStatus	Specify the status of client list report	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
ReportInterval	Specify the interval for sending client list report	N/A	Unsigned integer. Value range: 1 to 10.	N/A
UnassociateReportStatus	Unassociated report to the server	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
UnassoMeasStatus	Unassociated Measurement report to the server	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
ReportMode	Specify the module of report to the server	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—local</li> <li>2—central</li> </ul>	N/A
ReportFormat	Frame format	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—general</li> <li>2—lightweight</li> </ul>	N/A

# WLOC/FingerPrint

This table contains FingerPrint of AP protocol related parameters information.

## XML structure

```
<WLOC>
  <FingerPrint>
    <AP>
      <ApName></ApName>
      <Status></Status>
      <EngineAddress></EngineAddress>
      <EnginePort></EnginePort>
      <VendorPort></VendorPort>
      <RawFrameStatus></RawFrameStatus>
      <MuReportStatus></MuReportStatus>
      <ReportMode></ReportMode>
      <ReportFormat></ReportFormat>
      <MulticastAddress></MulticastAddress>
    </AP>
  </FingerPrint>
</WLOC>
```

## Table description

Item	Description
Feature name	WLOC
Table name	FingerPrint
Table type	Multi-instance table
Row name	AP
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP Name	N/A	String, case-insensitive. Length: 1 to 64 characters.	N/A
Status	Wireless locating through the FingerPrint protocol	N/A	Enumeration: <ul style="list-style-type: none"><li>1—enable</li><li>2—disable</li></ul>	N/A
EngineAddress	Specify the locating server IP address, this	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1.

	column must configure with EnginePort			
EnginePort	Specify the locating server port to which the AP sends packets, this column must configure with EngineAddress	N/A	Unsigned integer. Value range: 1 to 65535.	EngineAddress and EnginePort must set together.
VendorPort	Specify the Vendor portnum of AP	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
RawFrameStatus	Specify the status of report raw frame information	N/A	Enumeration: • 1—enable • 2—disable	N/A
MuReportStatus	Specify the status of report MU information	N/A	Enumeration: • 1—enable • 2—disable	N/A
ReportMode	Specify the module of report to the server	N/A	Enumeration: • 1—local • 2—central	N/A
ReportFormat	Frame format	N/A	Enumeration: • 1—general • 2—lightweight • 3—cupid-hybrid	N/A
MulticastAddress	MACAddress of tag Multicast	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 01-34-ED-66-89-23.

## WLOC/CommonConf

This table contains CommonConf of AP protocol related parameters information.

### XML structure

```

<WLOC>
  <CommonConf>
    <AP>
      <ApName></ApName>
      <ClientRateLimitStatus></ClientRateLimitStatus>
      <ClientRateLimitCir></ClientRateLimitCir>
      <ClientRateLimitCbs></ClientRateLimitCbs>
      <DilutionStatus></DilutionStatus>
      <DilutionFactor></DilutionFactor>
      <DilutionTimeout></DilutionTimeout>
      <IgnoreBeaconStatus></IgnoreBeaconStatus>
      <RateLimitStatus></RateLimitStatus>
      <RateLimitCir></RateLimitCir>
      <RateLimitCbs></RateLimitCbs>

```

```

    <RssiStatus></RssiStatus>
    <RssiThreshold></RssiThreshold>
    <IgnoreApFrameStatus></IgnoreApFrameStatus>
    <KeepAliveStatus></KeepAliveStatus>
  </AP>
</CommonConf>
</WLOC>

```

## Table description

Item	Description
Feature name	WLOC
Table name	CommonConf
Table type	Multi-instance table
Row name	AP
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP Name	Index	String, case-insensitive. Length: 1 to 64 characters.	N/A
ClientRateLimitStatus	Limit the rate for clients to send locating packets to the AP status	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
ClientRateLimitCir	Configure the committed information rate	N/A	Unsigned integer. Value range: 1 to 1300000.	N/A
ClientRateLimitCbs	Configure the committed burst size, this column must configure with ClientRateLimitCir	N/A	Unsigned integer. Value range: 80 to 130000000.	Optional parameter
DilutionStatus	Configure dilution for locating packets	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
DilutionFactor	Configure the dilution factor, this column must configure with DilutionTimeout	N/A	Unsigned integer. Value range: 1 to 10000.	DilutionFactor and DilutionTimeout must set together.
DilutionTimeout	Configure the dilution timeout,	N/A	Unsigned integer. Value range: 1 to 60.	DilutionFactor and DilutionTimeout must

	this column must configure with DilutionFactor			set together.
IgnoreBeaconStatus	Ignore beacon frames	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
RateLimitStatus	Limit the rate for sending locating packets	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
RateLimitCir	Configure the committed information rate, this column must configure with RateLimitCbs	N/A	Unsigned integer. Value range: 8 to 1300000.	N/A
RateLimitCbs	Configure the committed burst size, this column must configure with RateLimitCir	N/A	Unsigned integer. Value range: 500 to 130000000.	Optional parameter
RssiStatus	Specify the Rssi-Threshold value	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
RssiThreshold	Specify the Rssi-Threshold value	N/A	Unsigned integer. Value range: 5 to 100.	N/A
IgnoreApFrameStatus	Ignore Ap frames	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
KeepAliveStatus	Configure wireless location keepalive	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable</li> </ul>	N/A

## WLOC/AeroScoutOfApgroup

This table contains AeroScout of APGroup protocol related parameters information.

### XML structure

```

<WLOC>
  <AeroScoutOfApgroup>
    <APGroup>
      <ApGroupName></ApGroupName>
      <Status></Status>

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApGroupName	APGroup Name	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
Status	Wireless locating through the BLE protocol	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
AgingTime	Specify a neighbour aging time for BLE location	N/A	Unsigned integer. Value range: 60 to 3600.	N/A
EngineAddress	Specify the locating server IP address, this column must configure with EnginePort	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1.
EnginePort	Specify the locating server port to which the AP sends packets, this column must configure with EngineAddress	N/A	Unsigned integer. Value range: 1 to 65535.	EngineAddress and EnginePort must set together.
ReportStatus	Specify the status of client list report	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
ReportInterval	Specify the interval for sending client list report	N/A	Unsigned integer. Value range: 1 to 86400.	N/A
RssiThresholdStatus	Specify the Rssi-Threshold value	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
RssiThreshold	Specify the Rssi-Threshold value	N/A	Unsigned integer. Value range: 5 to 255.	N/A
VendorPort	Specify the Vendor portnum of AP	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
CmdPasswd	Specify the	N/A	String.	N/A

Simple	simple Command password		Length: 12	
CmdPasswd Cipher	Specify the cipher cipher Command password	N/A	String. Length: 49	N/A
RealTimeReportStatus	Specify the RSSI threshold status	N/A	Enumeration: • 1—enable • 2—disable	N/A
RealTimeReportPrefix	Specify the prefix of manufacturers	N/A	String. Hexadecimal Length: 8 to 18(even number)	N/A
RealTimeReportInterval	Specify the interval for sending client list report	N/A	Unsigned integer. Value range: 1 to 30	N/A
RealTimeReportEngineAddress	Specify the locating server IP address to which the AP sends packets, this column must configure with EnginePort	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1.
RealTimeReportEnginePort	Specify the locating server port to which the AP sends packets, this column must configure with EngineAddress	N/A	Unsigned integer. Value range: 1 to 65535.	EngineAddress and EnginePort must set together.
ReportMode	Specify the module of report to the server	N/A	Enumeration: • 1—local • 2—central	N/A
ReportFormat	Frame format	N/A	Enumeration: • 1—general • 2—lightweight	N/A

## WLOC/CUPIDOfApgroup

```

## Table description

Item	Description
Feature name	WLOC
Table name	BLEOfGlobal
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Wireless locating through the BLE protocol	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable(default)</li> </ul>	N/A
AgingTime	Specify a neighbour aging time for BLE location	N/A	Unsigned integer. Value range: 60 to 3600. Default:180	N/A
EngineAddress	Specify the locating server IP address, this column must configure with EnginePort	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1.
EnginePort	Specify the locating server port to which the AP sends packets, this column must configure with EngineAddress	N/A	Unsigned integer. Value range: 1 to 65535.	EngineAddress and EnginePort must set together.
ReportStatus	Specify the	N/A	Enumeration:	N/A

	status of client list report		<ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable(default)</li> </ul>	
ReportInterval	Specify the interval for sending client list report	N/A	Unsigned integer. Value range: 1 to 86400. Default:900	N/A
RssiThresholdStatus	Configure Rssi-Threshold status	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable(default)</li> </ul>	N/A
RssiThreshold	Specify the Rssi-Threshold value	N/A	Unsigned integer. Value range: 5 to 255. Default:5	N/A
VendorPort	Specify the Vendor portnum of AP	N/A	Unsigned integer. Value range: 1 to 65535. Default:1144	N/A
CmdPasswdSimple	Specify the simple Command password	N/A	String. Length: 12	N/A
CmdPasswdCipher	Specify the cipher Command password	N/A	String. Length: 49	N/A
RealTimeReportStatus	Specify the status of real-time wireless locating	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable(default)</li> </ul>	N/A
RealTimeReportPrefix	Specify the prefix of manufacturers	N/A	String. Hexadecimal Length: 8 to 18 (even number)	N/A
RealTimeReportInterval	Specify the interval for sending client list report	N/A	Unsigned integer. Value range: 1 to 30	N/A
RealTimeReportEngineAddress	Specify the locating server IP address to which the AP sends packets, this column must configure with EnginePort	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1.
RealTimeReportEnginePort	Specify the locating server port to which the AP sends packets, this column must configure with EngineAddress	N/A	Unsigned integer. Value range: 1 to 65535.	EngineAddress and EnginePort must set together.
ReportMode	Specify the module of report to the server	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—local(default)</li> <li>2—central</li> </ul>	N/A

ReportFormat	Frame format	N/A	Enumeration: • 1—general(default) • 2—lightweight	N/A
--------------	--------------	-----	---	-----

## WLOC/CUPIDOfGlobal

This table contains CUPID of Global protocol related parameters information.

### XML structure

# WLOC

## WLOC/AeroScout

This table contains AeroScout of AP protocol related parameters information.

### XML structure

```
<WLOC>
  <AeroScout>
    <AP>
      <ApName></ApName>
      <Status></Status>
      <VersionID></VersionID>
      <EngineDetectionMode></EngineDetectionMode>
      <EngineAddress></EngineAddress>
      <EnginePort></EnginePort>
      <VendorPort></VendorPort>
      <TimeStamp></TimeStamp>
      <ReportMode></ReportMode>
      <MulticastAddress></MulticastAddress>
    </AP>
  </AeroScout>
</WLOC>
```

### Table description

Item	Description
Feature name	WLOC
Table name	AeroScout
Table type	Multi-instance table
Row name	AP
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP Name	Index	String, case-insensitive. Length: 1 to 64 characters.	N/A
Status	Wireless locating through the AeroScout protocol	N/A	Enumeration: <ul style="list-style-type: none"><li>0—inherit</li><li>1—enable</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>2—disable</li> </ul>	
VersionID	Specify the AeroScout version ID	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>2—V2</li> <li>3—V3</li> </ul>	N/A
EngineDetectionMode	Specify the AeroScout engine address mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—static</li> <li>2—dynamic</li> </ul>	N/A
EngineAddress	Specify the locating server IP address to which the AP sends packets	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1. Zero means inherited.
EnginePort	Specify the locating server port to which the AP sends packets	N/A	Unsigned integer. Value range: 0 to 65535.	EngineAddress and EnginePort must set together. Zero means inherited.
VendorPort	Specify an AP port for the locating server vendor	N/A	Unsigned integer. Value range: 0 to 65535.	Zero means inherited.
TimeStamp	Configure the timestamp field in MU reports	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—absolute</li> <li>2—relative</li> </ul>	N/A
ReportMode	Specify the module of report to the server	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—local</li> <li>2—central</li> </ul>	N/A
MulticastAddress	MACAddress of tag Multicast	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 01-34-ED-66-89-23.

## WLOC/BLE

This table contains BLE of AP protocol related parameters information.

## XML structure

```

<WLOC>
  <BLE>
    <AP>
      <ApName></ApName>
      <Status></Status>
      <AgingTime></AgingTime>
      <EngineAddress></EngineAddress>

```

```

    <EnginePort></EnginePort>
    <ReportStatus></ReportStatus>
    <ReportInterval></ReportInterval>
    <RssiThresholdStatus></RssiThresholdStatus>
    <RssiThreshold></RssiThreshold>
    <VendorPort></VendorPort>
    <CmdPasswdSimple></CmdPasswdSimple>
    <CmdPasswdCipher></CmdPasswdCipher>
    <RealTimeReportStatus></RealTimeReportStatus>
    <RealTimeReportPrefix></RealTimeReportPrefix>
    <RealTimeReportInterval></RealTimeReportInterval>
    <RealTimeReportEngineAddress></RealTimeReportEngineAddress>
    <RealTimeReportEnginePort></RealTimeReportEnginePort>
    <ReportMode></ReportMode>
    <ReportFormat></ReportFormat>
  </AP>
</BLE>
</WLOC>

```

## Table description

Item	Description
Feature name	WLOC
Table name	BLE
Table type	Multi-instance table
Row name	AP
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP Name	Index	String, case-insensitive. Length: 1 to 64 characters.	N/A
Status	Wireless locating through the BLE protocol	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
AgingTime	Specify a neighbour aging time for BLE location	N/A	Unsigned integer. Value range:0 or 60 to 3600.	Zero means inherited.
EngineAddress	Specify the locating server IP address to which the AP sends packets	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1. Zero means inherited.

Column name	Column description	Column type	Data type and restrictions	Remarks
EnginePort	Specify the locating server port to which the AP sends packets	N/A	Unsigned integer. Value range: 0 to 65535.	EngineAddress and EnginePort must set together. Zero means inherited.
ReportStatus	Specify the status of neighbor list report	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
ReportInterval	Set the interval for sending client list report	N/A	Unsigned integer. Value range: 0 to 86400.	N/A
RssiThresholdStatus	Specify the Rssi-Threshold status	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
RssiThreshold	Specify the RSSI threshold value	N/A	Unsigned integer. Value range: 0 or 5 to 255.	Zero means inherited.
VendorPort	Specify an AP port for the locating server vendor	N/A	Unsigned integer. Value range: 0 to 65535.	Zero means inherited.
CmdPasswd Simple	Specify the simple Command password	N/A	String. Length: 12	N/A
CmdPasswd Cipher	Specify the cipher Command password	N/A	String. Length: 49	N/A
RealTimeReportStatus	Specify the status of Real-time wireless locating	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
RealTimeReportPrefix	Specify the prefix of manufacturers	N/A	String. Hexadecimal Length: 8to 18(even number)	N/A
RealTimeReportInterval	Specify the interval for sending client list report	N/A	Unsigned integer. Value range: 0 to 30	N/A
RealTimeReportEngineAddress	Specify the locating server IP address to which the AP sends packets, this column must configure with EnginePort	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1. Zero means inherited.
RealTimeReportEnginePort	Specify the locating server port to which the	N/A	Unsigned integer. Value range: .0 to 65535.	EngineAddress and EnginePort must set together.

Column name	Column description	Column type	Data type and restrictions	Remarks
	AP sends packets, this column must configure with EngineAddress			Zero means inherited.
ReportMode	Specify the module of report to the server	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—local</li> <li>2—central</li> </ul>	N/A
ReportFormat	Frame format	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—general</li> <li>2—lightweight</li> </ul>	N/A

## WLOC/CUPID

This table contains CUPID of AP protocol related parameters information.

### XML structure

```

<WLOC>
  <CUPID>
    <AP>
      <ApName></ApName>
      <Status></Status>
      <EngineAddress></EngineAddress>
      <EnginePort></EnginePort>
      <VendorPort></VendorPort>
      <ReportStatus></ReportStatus>
      <ReportInterval></ReportInterval>
      <UnassociateReportStatus></UnassociateReportStatus>
      <UnassoMeasStatus></UnassoMeasStatus>
      <ReportMode></ReportMode>
      <ReportFormat></ReportFormat>
      <LocalCalculate></LocalCalculate>
    </AP>
  </CUPID>
</WLOC>

```

### Table description

Item	Description
Feature name	WLOC
Table name	CUPID
Table type	Multi-instance table

Row name	AP
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP Name	Index	String, case-insensitive. Length: 1 to 64 characters.	N/A
Status	Wireless locating through the Cupid protocol	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
EngineAddress	Specify the locating server IP address	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1. Zero means inherited.
EnginePort	Specify the locating server port to which the AP sends packets	N/A	Unsigned integer. Value range: 0 to 65535.	EngineAddress and EnginePort must set together. Zero means inherited.
VendorPort	Specify an AP port for the locating server vendor	N/A	Unsigned integer. Value range: 0 to 65535.	Zero means inherited.
ReportStatus	Specify the status client list report	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
ReportInterval	Set the interval for sending client list report	N/A	Unsigned integer. Value range: 0 to 10.	Zero means inherited.
UnassociateReportStatus	Unassociated report to the server	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
UnassoMeasStatus	Unassociated measurement report to the server	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
ReportMode	Specify the module of report to the server	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—local</li> <li>2—central</li> </ul>	N/A
ReportFormat	Frame format	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—general</li> <li>2—lightweight</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalCalculate	Participate in local calculating	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—enable</li> <li>2—disable</li> </ul>	N/A

## WLOC/FingerPrint

This table contains FingerPrint of AP protocol related parameters information.

### XML structure

```

<WLOC>
  <FingerPrint>
    <AP>
      <ApName></ApName>
      <Status></Status>
      <EngineAddress></EngineAddress>

Table name	FingerPrint
Table type	Multi-instance table
Row name	AP
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP Name	Index	String, case-insensitive. Length: 1 to 64 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Wireless locating through the FingerPrint protocol	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
EngineAddress	Specify the locating server IP address	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1. If it is 0, it means inherited
EnginePort	Specify the locating server port to which the AP sends packets	N/A	Unsigned integer. Value range: 0 to 65535.	EngineAddress and EnginePort must set together. Zero means inherited.
VendorPort	Specify an AP port for the locating server vendor	N/A	Unsigned integer. Value range: 0 to 65535.	Zero means inherited.
RawFrameStatus	Specify the status of report raw frame information	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
MuReportStatus	Specify the status of report MU information	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
ReportMode	Specify the module of report to the server	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—local</li> <li>2—central</li> </ul>	N/A
ReportFormat	Frame format	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—general</li> <li>2—lightweight</li> <li>3—cupid-hybrid</li> </ul>	N/A
MulticastAddress	MACAddress of tag Multicast	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 01-34-ED-66-89-23.

Table type	Multi-instance table
Row name	APGroup
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApGroupName	APGroup Name	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
Status	Wireless locating through the BLE protocol	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
AgingTime	Specify a neighbour aging time for BLE location	N/A	Unsigned integer. Value range: 0 or 60 to 3600.	Zero means inherited.
EngineAddress	Specify the locating server IP address	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1. Zero means inherited.
EnginePort	Specify the locating server port to which the AP sends packets	N/A	Unsigned integer. Value range: 0 to 65535.	EngineAddress and EnginePort must set together. Zero means inherited.
ReportStatus	Specify the status of neighbor list report	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
ReportInterval	Set the interval for sending client list report	N/A	Unsigned integer. Value range: 0 to 86400.	Zero means inherited.
RssiThresholdStatus	Specify the Rssi-Threshold status	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—enable</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>2—disable</li> </ul>	
RssiThreshold	Limit the RSSI of locating packets	N/A	Unsigned integer. Value range: 0 or 5 to 255.	Zero means inherited.
VendorPort	Specify an AP port for the locating server vendor	N/A	Unsigned integer. Value range: 0 to 65535.	Zero means inherited.
CmdPasswd Simple	Specify the simple Command password	N/A	String. Length: 12	N/A
CmdPasswd Cipher	Specify the cipher Command password	N/A	String. Length: 49	N/A
RealTimeReportStatus	Specify the status of Real-time wireless locating	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
RealTimeReportPrefix	Specify the prefix of manufacturers	N/A	String. Hexadecimal Length: 8 to 18(even number)	N/A
RealTimeReportInterval	Specify the interval for sending client list report	N/A	Unsigned integer. Value range: 0 to 30	N/A
RealTimeReportEngineAddress	Specify the locating server IP address to which the AP sends packets, this column must configure with EnginePort	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example: 1.1.1.1. Zero means inherited.
RealTimeReportEnginePort	Specify the locating server port to which the AP sends packets, this column must configure with EngineAddress	N/A	Unsigned integer. Value range: 0 to 65535.	EngineAddress and EnginePort must set together. Zero means inherited.
ReportMode	Specify the module of report to the server	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—local</li> <li>2—central</li> </ul>	N/A
ReportFormat	Frame format	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—inherit</li> <li>1—general</li> <li>2—lightweight</li> </ul>	N/A

ReportStatus	Specify the status of neighbor list report	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
ReportInterval	Set the interval for sending client list report	N/A	Unsigned integer. Value range: 1 to 86400.	N/A
RssiThresholdStatus	Specify the Rssi-Threshold status	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
RssiThreshold	Limit the RSSI of locating packets	N/A	Unsigned integer. Value range: 5 to 255.	N/A
VendorPort	Specify an AP port for the locating server vendor	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
CmdPasswdSimple	Specify the simple Command password	N/A	String. Length: 12	N/A
CmdPasswdCipher	Specify the cipher Command password	N/A	String. Length: 49	N/A
RealTimeReportStatus	Specify the status of Real-time wireless locating	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—enable</li> <li>2—disable</li> </ul>	N/A
RealTimeReportPrefix	Specify the prefix of manufacturers	N/A	String. Hexadecimal Length: 8 to 18(even number)	N/A
RealTimeReportInterval	Specify the interval for sending client list report	N/A	Unsigned integer. Value range: 1 to 30	N/A
RealTimeReportEngineAddress	Specify the locating server IP address to which the AP sends packets, this column must configure with EnginePort	N/A	String, dotted decimal notation.	EngineAddress and EnginePort must set together. Example:1.1.1.1.
RealTimeReportEnginePort	Specify the locating server port to which the AP sends packets, this column must configure with EngineAddress	N/A	Unsigned integer. Value range: 1 to 65535.	EngineAddress and EnginePort must set together.

Column name	Column description	Column type	Data type and restrictions	Remarks
ReportMode	Specify the module of report to the server	N/A	Enumeration: • 1—local • 2—central	N/A
ReportFormat	Frame format	N/A	Enumeration: • 1—general • 2—lightweight	N/A

## WLOC/CUPIDOfGlobal

This table contains CUPID of Global protocol related parameters information.

### XML structure

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IOTAddress	IP Address of IOTserver	N/A	String, dotted decimal notation.	IOTAddress and IOTPort must set together. Example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
IOTPort	PortNum of IOT server	N/A	Unsigned integer. Value range: 1 to 65535.	IOTAddress and IOTPort must set together.

# WRED

## WRED/Tables

This table contains information about WRED tables.

### XML structure

```
<WRED>
  <Tables>
    <Table>
      <Name></Name>
    </Table>
  </Tables>
</WRED>
```

### Table description

Item	Description
Feature name	WRED
Table name	Tables
Table type	Multi-instance table
Row name	Table
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	WRED table name	Index	String. Length: 1 to 32 characters.	N/A

## WRED/DropParameter

This table contains information about WRED drop parameters.

### XML structure

```
<WRED>
  <DropParameter>
    <Parameter>
```

```

    <Name></Name>
    <QueueID></QueueID>
    <DropLevel></DropLevel>
    <LowLimit></LowLimit>
    <HighLimit></HighLimit>
    <DiscardProbability></DiscardProbability>
  </Parameter>
</DropParameter>
</WRED>

```

## Table description

Item	Description
Feature name	WRED
Table name	DropParameter
Table type	Multi-instance table
Row name	Parameter
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	WRED table name	Index	String. Length: 1 to 32 characters.	N/A
QueueID	Queue ID	Index	Unsigned integer.	The value range for this column depends on the device model.
DropLevel	Packet drop level	Index	Unsigned integer.	The value range for this column depends on the device model.
LowLimit	Queue length low limit	N/A	Unsigned integer.	The value range for this column depends on the device model.
HighLimit	Queue length high limit	N/A	Unsigned integer.	The value range for this column depends on the device model.
DiscardProbability	Packet discard probability	N/A	Unsigned integer.	The value range for this column depends on the device model.

## WRED/QueueParameter

This table contains information about WRED queue parameters.

## XML structure

```
<WRED>
  <QueueParameter>
    <Queue>
      <Name></Name>
      <QueueID></QueueID>
      <WeightingConstant></WeightingConstant>
      <Ecn></Ecn>
    </Queue>
  </QueueParameter>
</WRED>
```

## Table description

Item	Description
Feature name	WRED
Table name	QueueParameter
Table type	Multi-instance table
Row name	Queue
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	WRED table name	Index	String. Length: 1 to 32 characters.	N/A
QueueID	Queue ID	Index	Unsigned integer.	The value range for this column depends on the device model.
WeightingConstant	Queue length weighting constant	N/A	Unsigned integer.	The value range for this column depends on the device model.
Ecn	Enable explicit congestion notification	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enable.</li><li><b>false</b>—Disable (default).</li></ul>	N/A

## WRED/IfApplyTable

This table contains information about WRED table applications.

## XML structure

```
<WRED>
  <IfApplyTable>
    <Table>
      <IfIndex></IfIndex>
      <Name></Name>
    </Table>
  </IfApplyTable>
</WRED>
```

## Table description

Item	Description
Feature name	WRED
Table name	IfApplyTable
Table type	Multi-instance table
Row name	Table
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Name	WRED table name	N/A	String. Length: 1 to 32 characters.	N/A

# WRED

## WRED/DefDropParameter

This table contains information about default WRED drop parameters.

### XML structure

```
<WRED>
  <DefDropParameter>
    <Parameter>
      <QueueID></QueueID>
      <DropLevel></DropLevel>
      <LowLimit></LowLimit>
      <HighLimit></HighLimit>
      <DiscardProbability></DiscardProbability>
    </Parameter>
  </DefDropParameter>
</WRED>
```

### Table description

Item	Description
Feature name	WRED
Table name	DefDropParameter
Table type	Multi-instance table
Row name	Parameter
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
QueueID	Queue ID	Index	Unsigned integer.	N/A
DropLevel	Packet drop level	Index	Unsigned integer.	N/A
LowLimit	Queue length low limit	N/A	Unsigned integer.	N/A
HighLimit	Queue length high limit	N/A	Unsigned integer.	N/A
DiscardProbability	Packet discard probability	N/A	Unsigned integer.	N/A

# WRED/DefWeightingConstant

This table contains information about the default WRED weighting constant parameter.

## XML structure

```
<WRED>
  <DefWeightingConstant>
    <Queue>
      <QueueID></QueueID>
      <WeightingConstant></WeightingConstant>
    </Queue>
  </DefWeightingConstant>
</WRED>
```

## Table description

Item	Description
Feature name	WRED
Table name	DefWeightingConstant
Table type	Multi-instance table
Row name	Queue
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
QueueID	Queue ID	Index	Unsigned integer.	N/A
WeightingConstant	Queue length weighting constant	N/A	Unsigned integer.	N/A

## WRED/Tables

This table contains information about WRED tables.

## XML structure

```
<WRED>
  <Tables>
    <Table>
      <Name></Name>
```

```

    </Table>
  </Tables>
</WRED>

```

## Table description

Item	Description
Feature name	WRED
Table name	Tables
Table type	Multi-instance table
Row name	Table
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	WRED table name	Index	String. Length: 1 to 32 characters.	N/A

## WRED/DropParameter

This table contains information about WRED drop parameters.

## XML structure

```

<WRED>
  <DropParameter>
    <Parameter>
      <Name></Name>
      <QueueID></QueueID>
      <DropLevel></DropLevel>
      <LowLimit></LowLimit>
      <HighLimit></HighLimit>
      <DiscardProbability></DiscardProbability>
    </Parameter>
  </DropParameter>
</WRED>

```

## Table description

Item	Description
Feature name	WRED

Table name	DropParameter
Table type	Multi-instance table
Row name	Parameter
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	WRED table name	Index	String. Length: 1 to 32 characters.	N/A
QueueID	Queue ID	Index	Unsigned integer.	N/A
DropLevel	Packet drop level	Index	Unsigned integer.	N/A
LowLimit	Queue length low limit	N/A	Unsigned integer.	N/A
HighLimit	Queue length high limit	N/A	Unsigned integer.	N/A
DiscardProbability	Packet discard probability	N/A	Unsigned integer.	N/A

## WRED/QueueParameter

This table contains information about WRED queue parameters.

## XML structure

```

<WRED>
  <QueueParameter>
    <Queue>
      <Name></Name>
      <QueueID></QueueID>
      <WeightingConstant></WeightingConstant>
      <Ecn></Ecn>
    </Queue>
  </QueueParameter>
</WRED>

```

## Table description

Item	Description
