# Dot1X

## Dot1X/Protocol

This table contains Dot1X protocol parameters table.

### XML structure

```
<Dot1X>
  <Protocol>
    <Enable></Enable>
    <AuthenMethod></AuthenMethod>
    <DomainDelimiterAt></DomainDelimiterAt>
    <DomainDelimiterSlash></DomainDelimiterSlash>
    <DomainDelimiterBackSlash></DomainDelimiterBackSlash>
    <DomainDelimiterDot></DomainDelimiterDot>
    <QuietEnable></QuietEnable>
    <QuietInterval></QuietInterval>
    <HandshakeInterval></HandshakeInterval>
    <ReauthenInterval></ReauthenInterval>
    <ServerInterval></ServerInterval>
    <SupplicantInterval></SupplicantInterval>
    <ReqIDInterval></ReqIDInterval>
    <RequestRetryCount></RequestRetryCount>
    <OnlineUserNum></OnlineUserNum>
  </Protocol>
</Dot1X>
```

### Table description

Item	Description
Feature name	Dot1X
Table name	Protocol
Table type	Single-instance table
Row name	None
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions
Enable	Dot1X globally enabled status	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled</li> <li><b>false</b>—Disabled</li> </ul>
AuthenMethod	Authentication Method of 802.1X	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Chap</li> <li><b>2</b>—PAP</li> <li><b>3</b>—EAP</li> </ul>
DomainDelimiterAt	Delimiter "@" between username and domain name	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled</li> <li><b>false</b>—Disabled</li> </ul>
DomainDelimiterSlash	Delimiter "/" between username and domain name	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled</li> <li><b>false</b>—Disabled</li> </ul>
DomainDelimiterBackslash	Delimiter "\" between username and domain name	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled</li> <li><b>false</b>—Disabled</li> </ul>
DomainDelimiterDot	Delimiter "." between username and domain name	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled</li> <li><b>false</b>—Disabled</li> </ul>
QuietEnable	Status Of Dot1X quiet function	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled</li> <li><b>false</b>—Disabled</li> </ul>
QuietInterval	Period value of Quiet timer	N/A	Unsigned integer. Value range: 10 to 120 seconds.
HandshakeInterval	Period value of handshake timer	N/A	Unsigned integer. Value range: 5 to 1024 seconds.
ReauthenInterval	Period value of re-authentication timer	N/A	Unsigned integer. Value range: 60 to 7200 seconds.
ServerInterval	Period value of server response timer	N/A	Unsigned integer. Value range: 100 to 300 seconds.
SupplicantInterval	Period value of supplicant response timer(other than EAP-Response/ID packets)	N/A	Unsigned integer. Value range: 1 to 120 seconds.
ReqIDInterval	Period value of supplicant EAP-Response/ID timer	N/A	Unsigned integer. Value range: 1 to 120 seconds.

Column name	Column description	Column type	Data type and restrictions
RequestRetryCount	Max count of retrying to send out dot1X's Request packets	N/A	Unsigned integer. Value range: 1 to 10.
OnlineUserNum	Current online user count	N/A	Unsigned integer.

## Dot1X/EAD

This table contains Dot1X's EAD(Endpoint Admission Defense) feature table.

## XML structure

```
<Dot1X>
  <EAD>
    <AssistEnable></AssistEnable>
    <AssistURL></AssistURL>
  </EAD>
</Dot1X>
```

## Table description

Item	Description
Feature name	Dot1X
Table name	EAD
Table type	Single-instance table
Row name	None
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions
AssistEnable	Status of EAD assistant function	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled</li> <li><b>false</b>—Disabled</li> </ul>
AssistURL	The redirect URL used with EAD assistant function	N/A	String. Length: 1 to 64 characters.

## DOT1X/EADFreeIPs

This table contains Dot1X's EAD assistant free IP.

## XML structure

```
<Dot1X>
  <EADFreeIPs>
    <FreeIP>
      <IPv4Address></IPv4Address>
      <IPv4Mask></IPv4Mask>
    </FreeIP>
  </EADFreeIPs>
</Dot1X>
```

## Table description

Item	Description
Feature name	Dot1X
Table name	EADFreeIPs
Table type	Multi-instance table
Row name	FreeIP
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
IPv4Address	IP address used in EAD assistance feature	Index	String, dotted decimal notation.
IPv4Mask	IP address mask	Index	IPv4Mask.

## Dot1X/Smarton

This table contains Dot1X's Smarton feature table.

## XML structure

```
<Dot1X>
  <Smarton>
    <SwitchID></SwitchID>
    <Password></Password>
    <RetryCount></RetryCount>
  </Smarton>
</Dot1X>
```

## Table description

Item	Description
Feature name	Dot1X
Table name	Smarton
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
SwitchID	Dot1x smarton switchid	N/A	String. Length: 1 to 30 characters.
Password	Dot1x smarton password	N/A	Null or ****Not return.
RetryCount	Maxium attempt count to send out Request packets with smarton notification	N/A	Unsigned integer. Value range: 1 to 10.

## Dot1 X/Interfaces

This table contains Dot1X interface's information.

## XML structure

```
<Dot1X>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Enable></Enable>
      <SmartonEnable></SmartonEnable>
      <PortControl></PortControl>
      <PortMethod></PortMethod>
      <PortRole></PortRole>
      <ReauthenEnable></ReauthenEnable>
      <MulticastTrigger></MulticastTrigger>
      <UnicastTrigger></UnicastTrigger>
      <HandshakeEnable></HandshakeEnable>
      <SecHandshakeEnable></SecHandshakeEnable>
      <ReauthUnreachableMode></ReauthUnreachableMode>
      <MandDomain></MandDomain>
```

```

<MaxUser></MaxUser>
<FailVLAN></FailVLAN>
<CriticalVLAN></CriticalVLAN>
<GuestVLAN></GuestVLAN>
<FailVSI></FailVSI>
<CriticalVSI></CriticalVSI>
<GuestVSI></GuestVSI>
<CriticalEapol></CriticalEapol>
<OnlineUserNum></OnlineUserNum>
<RcvPktNum></RcvPktNum>
<SndPktNum></SndPktNum>
<StartPktNum></StartPktNum>
<LogoffPktNum></LogoffPktNum>
<RespIDPktNum></RespIDPktNum>
<RespPktNum></RespPktNum>
<ReqIDPktNum></ReqIDPktNum>
<ReqPktNum></ReqPktNum>
<RcvErrorPktNum></RcvErrorPktNum>
</Interface>
</Interfaces>
</Dot1X>

```

## Table description

Item	Description
Feature name	Dot1X
Table name	Interfaces
Table type	Multi-instance table
Row name	interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
Enable	Enable Status of 802.1X	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled</li> <li><b>false</b>—Disabled</li> </ul>
SmartonEnable	Enable Status of Smarton feature	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled</li> <li><b>false</b>—Disabled</li> </ul>

Column name	Column description	Column type	Data type and restrictions
PortControl	Port control status of the interface	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—authorized-force</li> <li>2—unauthorized-force</li> <li>3—auto</li> </ul>
PortMethod	Control Method of the interface	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Portbased</li> <li>2—MACbased</li> </ul>
PortRole	Role of the interface in authentication	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Authenticator</li> </ul>
ReauthenEnable	Enable status of periodic reauthentication feature	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled</li> <li>false—Disabled</li> </ul>
FailVLAN	VLAN for users that have failed 802.1X authentication	N/A	Unsigned integer. Value range: 1 to 4094.
CriticalVLAN	VLAN for users that have failed 802.1X authentication because of unreachable servers	N/A	Unsigned integer. Value range: 1 to 4094.
GuestVLAN	VLAN used before 802.1X authentication	N/A	Unsigned integer. Value range: 1 to 4094.
FailVSI	VSI for users that have failed 802.1X authentication because of any reason other than unreachable servers	N/A	String. Length: 1 to 31 characters.
CriticalVSI	VSI for users that have failed 802.1X authentication because of unreachable servers	N/A	String. Length: 1 to 31 characters.
GuestVSI	VSI with restricted services for non-authenticated 802.1X users	N/A	String. Length: 1 to 31 characters.
CriticalEapol	Status of the feature that enables the device to send an EAP-Success packet to an 802.1X client when its client user is assigned to the critical VLAN or VSI on the interface	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul>
HandshakeEnable	Enable status of handshake feature on the interface	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled</li> <li>false—Disabled</li> </ul>
SecHandshakeEnable	Enable status of secure handshake feature on the interface	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled</li> <li>false—Disabled</li> </ul>

Column name	Column description	Column type	Data type and restrictions
ReauthUnreachableMode	Status of user online or offline when the AAA server is not available during re-authenticating	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Offline</li> <li>1—Online</li> </ul>
MandDomain	Mandatory authentication domain on this interface	N/A	String. Length: 1 to 255 characters.
MaxUser	Maximum user number on this interface	N/A	Unsigned integer. Value range: 1 to 4294967295.
MulticastTrigger	Enable status of multicast trigger function on the interface	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled</li> <li>false—Disabled</li> </ul>
UnicastTrigger	Enable status of unicast trigger function on the interface	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled</li> <li>false—Disabled</li> </ul>
OnlineUserNum	Number of online 802.1X users of the interface	N/A	Unsigned integer64. Value range: 0 to $2^{64} - 1$ .
RcvPktNum	Number of received EAPOL packets on the interface	N/A	Unsigned integer64. Value range: 0 to $2^{64} - 1$ .
SndPktNum	Number of sent EAPOL packets on the interface	N/A	Unsigned integer64. Value range: 0 to $2^{64} - 1$ .
StartPktNum	Number of received EAPOL-Start packets on the interface	N/A	Unsigned integer64. Value range: 0 to $2^{64} - 1$ .
LogoffPktNum	Number of received EAPOL-LogOff packets on the interface	N/A	Unsigned integer64. Value range: 0 to $2^{64} - 1$ .
RespIDPktNum	Number of received EAP-Response/ID packets on the interface	N/A	Unsigned integer64. Value range: 0 to $2^{64} - 1$ .
RespPktNum	Number of received EAP-Response(other than EAP-Response/ID) packets on the interface	N/A	Unsigned integer64. Value range: 0 to $2^{64} - 1$ .
ReqIDPktNum	Number of sent EAP-Request/ID packets on the interface	N/A	Unsigned integer64. Value range: 0 to $2^{64} - 1$ .
ReqPktNum	Number of sent EAP-Request (other than EAP-Request /ID) packets on the interface	N/A	Unsigned integer64. Value range: 0 to $2^{64} - 1$ .
RcvErrorPktNum	Number of received error packets on the interface	N/A	Unsigned integer64. Value range: 0 to $2^{64} - 1$ .

# Dot1X/InterfaceUsers

This table displays Dot1X users' information.

## XML structure

```
<Dot1X>
  <InterfaceUsers>
    <Interface>
      <IfIndex></IfIndex>
      <UserMAC></UserMAC>
      <Name></Name>
      <Domain></Domain>
      <Ipv4Addr></Ipv4Addr>
      <Ipv6Addr></Ipv6Addr>
      <InitialVLAN></InitialVLAN>
      <AuthzVLAN></AuthzVLAN>
      <AuthzACLGroup></AuthzACLGroup>
      <AuthzUserProfile></AuthzUserProfile>
      <TermAction></TermAction>
      <TimeoutPeriod></TimeoutPeriod>
      <LogonTime></LogonTime>
      <OnlineDuration></OnlineDuration>
    </Interface>
  </InterfaceUsers>
</Dot1X>
```

## Table description

Item	Description
Feature name	Dot1X
Table name	InterfaceUsers
Table type	Multi-instance table
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
UserMAC	MAC address of user on the interface.	Index	MAC address

Column name	Column description	Column type	Data type and restrictions
Name	User name when logs on	N/A	String. Length: 1 to 253 characters.
Domain	User's domain when logs on	N/A	String. Length: 1 to 255 characters.
Ipv4Addr	IPv4 address of the user	N/A	String, dotted decimal notation.
Ipv6Addr	IPv6 address of the user	N/A	Hexadecimal string, colon-separated.
InitialVLAN	VLAN ID used by the user when logs on	N/A	Unsigned integer Value range: 1 to 4094.
AuthzVLAN	VLAN ID allocated for authenticated user by the AAA server	N/A	Unsigned integer Value range: 1 to 4094.
AuthzACLGroup	ACL group number allocated for authenticated user by the AAA server	N/A	Unsigned integer
AuthzUserProfile	User Profile name allocated for authenticated user by the AAA server	N/A	String.
TermAction	Action attribute assigned by the AAA server when the session timeout timer expires	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Default.</li> <li>• <b>1</b>—Radius-request.</li> </ul>
TimeoutPeriod	Period value of session timeout timer assigned by the server timer	N/A	Unsigned integer
LogonTime	Time from which the user logs on	N/A	String.Format: YYYY-MM-DD HH:MM:SS.
OnlineDuration	Online duration of the user	N/A	Unsigned integer.

# 802.1X

## 802.1X/IF

Message	Explanation
Can't set a nonexistent VLAN as a guest VLAN. 无法将一个不存在的VLAN配置为Guest VLAN。	VLAN do not exist. 指定的VLAN不存在
Can't set a nonexistent VLAN as an Auth-Fail VLAN. 无法将一个不存在的VLAN配置为Auth-Fail VLAN。	VLAN do not exist. 指定的VLAN不存在
Can't set a nonexistent VLAN as a critical VLAN. 无法将一个不存在的VLAN配置为Critical VLAN。	VLAN do not exist. 指定的VLAN不存在
Failed to enable 802.1X on the interface, because it is a link aggregation member port 端口使能802.1X失败，因为端口为聚合口成员。	Failed to enable 802.1X on the interface, because it is a link aggregation member port 聚合口成员不能配置802.1X
Can't enable 802.1X for port security mode is configured on the port. 使能802.1X失败，因为该端口已经使能端口安全。	Can't enable 802.1X for port security mode is configured on the port. 使能802.1X失败，因为该端口已经使能端口安全。
Can't enable 802.1x for port security is enabled. 使能802.1x失败，因为已经使能端口安全。	Can't enable 802.1x for port security is enabled. 使能802.1x失败，因为已经使能端口安全。
Can't configure port-control for port security is enabled. 配置端口控制失败，因为已经使能端口安全。	Can't configure port-control for port security is enabled. 配置端口控制失败，因为已经使能端口安全。
Can't configure port-control for port security mode is configured on the port. 配置端口控制失败，因为该端口已经使能端口安全。	Can't configure port-control for port security mode is configured on the port. 配置端口控制失败，因为该端口已经使能端口安全。
Can't configure port-method for port security is enabled. 配置端口控制方式失败，因为已经使能端口安全。	Can't configure port-method for port security is enabled. 配置端口控制方式失败，因为已经使能端口安全。
Can't configure port-method for port security mode is configured on the port. 配置端口控制方式失败，因为该端口已经使能端口安全。	Can't configure port-method for port security mode is configured on the port. 配置端口控制方式失败，因为该端口已经使能端口安全。
Can't configure port-method for MAC authentication is enabled on the port. 配置端口控制方式失败，因为MACA认证已经使能。	Can't configure port-method for MAC authentication is enabled on the port. 配置端口控制方式失败，因为MACA认证已经使能。

Message	Explanation
The specified number must be higher than the current number of online users. 配置的最大用户数必须大于当前在线用户数。	The specified number must be higher than the current number of online users. 配置的最大用户数必须大于当前在线用户数。
Can't set a dynamic VLAN as an guest VLAN. 无法将一个动态VLAN配置成Guest VLAN。	Can't set a dynamic VLAN as an guest VLAN. 无法将一个动态VLAN配置成Guest VLAN。
Can't set a dynamic VLAN as a Auth-Fail VLAN. 无法将一个动态VLAN配置成Auth-Fail VLAN。	Can't set a dynamic VLAN as a Auth-Fail VLAN. 无法将一个动态VLAN配置成Auth-Fail VLAN。
Can't set a dynamic VLAN as a critical VLAN. 无法将一个动态VLAN配置成Critical VLAN。	Can't set a dynamic VLAN as a critical VLAN. 无法将一个动态VLAN配置成Critical VLAN。
Port security, MAC authentication, and 802.1X authentication are not supported on Layer 2 aggregate interfaces. 端口安全, MAC地址认证和802.1X认证不支持在二层以太网聚合接口上配置。	Port security, MAC authentication, and 802.1X authentication are not supported on Layer 2 aggregate interfaces. 端口安全, MAC地址认证和802.1X认证不支持在二层以太网聚合接口上配置。
This operation conflicts with VSI configuration. 此操作和VSI配置冲突。	VLAN configuration conflicts with VSI configuration. VLAN配置和VSI配置冲突。
This operation conflicts with VLAN configuration. 此操作和VLAN配置冲突。	VLAN configuration conflicts with VSI configuration. VLAN配置和VSI配置冲突。

## 802.1X /FreeIp

Message	Explanation
The maximum number of free-IP segments has reached. Free-IP 片段的最大数目无法达到。	The maximum number of free-IP segments has reached. Free-IP 片段数超限。
Invalid IP address or subnet mask. 无效的IP地址或子网掩码。	Invalid IP address or subnet mask. 无效的IP地址或子网掩码。

## 802.1X /Protocol

Message	Explanation
Can't enable 802.1x for port security is enabled. 使能802.1x失败, 因为已经使能端口安全。	Can't enable 802.1x for port security is enabled. 使能802.1x失败, 因为已经使能端口安全。
Can't disable 802.1X for port security is enabled. 去使能802.1x失败, 因为已经使能端口安全。	Can't disable 802.1X for port security is enabled. 去使能802.1x失败, 因为已经使能端口安全。

## 802.1X /EadAssist

Message	Explanation
Can't enable the EAD assistant function when MAC authentication is enabled globally. 使能EAD快速部署失败，因为已经使能MAC认证	Can't enable the EAD assistant function when MAC authentication is enabled globally. 使能EAD快速部署失败，因为已经使能MAC认证
Can't enable the EAD assistant function when port security is enabled globally. 使能EAD快速部署失败，因为已经使能端口安全	Can't enable the EAD assistant function when port security is enabled globally.. 使能EAD快速部署失败，因为已经使能端口安全

# DRNI

## DRNI/Base

This table contains DRNI Base information.

### XML structure

```
<DRNI>
  <Base>
    <SystemMAC></SystemMAC>
    <SystemPriority></SystemPriority>
    <SystemNumber></SystemNumber>
    <RestoreDelay></RestoreDelay>
    <AutoRecoveryReloadDelay></AutoRecoveryReloadDelay>
  </Base>
</DRNI>
```

### Table description

Item	Description
Feature name	DRNI
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SystemMAC	DR system MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 0-1-0-1-0-1 Configure the same DR MAC address for the DR member devices in a DR system.
SystemPriority	DR system priority	N/A	Unsigned integer. Value range: 0 to 65535.	Configure the same DR system priority for the DR member devices in a DR system.
SystemNumber	DR system number	N/A	Unsigned integer. Value range: 1 or 2.	Assign different DR system numbers to the DR member devices in a DR system.

RestoreDelay	Data restoration interval in seconds	N/A	Unsigned integer. Value range: 1 to 3600. Default: 30.	N/A
AutoRecoveryReloadDelay	Reload delay timer in seconds for DR system auto-recovery	N/A	Unsigned integer. Value range: 240 to 3600.	N/A

## DRNI/Role

This table contains DRNI Role information.

## XML structure

```
<DRNI>
  <Role>
    <LocalRolePriority></LocalRolePriority>
  </Role>
</DRNI>
```

## Table description

Item	Description
Feature name	DRNI
Table name	Role
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalRolePriority	DR role priority of the local DR member device	N/A	Unsigned integer. Value range: 0 to 65535. Default: 32768.	The lower the value,the higher the priority.

## DRNI/Keepalive

This table contains DRNI Keepalive information.

## XML structure

```
<DRNI>
  <Keepalive>
    <IPV4Addr>
      <KeepaliveDestinationIPV4></KeepaliveDestinationIPV4>
      <KeepaliveSourceIPV4></KeepaliveSourceIPV4>
    </IPV4Addr>
    <IPV6Addr>
      <KeepaliveDestinationIPV6></KeepaliveDestinationIPV6>
      <KeepaliveSourceIPV6></KeepaliveSourceIPV6>
    </IPV6Addr>
    <KeepaliveUDPPort></KeepaliveUDPPort>
    <KeepaliveInterval></KeepaliveInterval>
    <KeepaliveTimeout></KeepaliveTimeout>
    <KeepaliveHoldTime></KeepaliveHoldTime>
    <VRF></VRF>
  </Keepalive>
</DRNI>
```

## Table description

Item	Description
Feature name	DRNI
Table name	Keepalive
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPV4Addr	Source and destination IPv4 address of the keepalive link	Data structure	Members include: <ul style="list-style-type: none"><li>KeepaliveDestinationIPV4.</li><li>KeepaliveSourceIPV4.</li></ul>	N/A
KeepaliveDestinationIPV4	Destination IPv4 address of the keepalive link	N/A	String,dotted decimal notation.	Example: 1.1.1.1
KeepaliveSourceIPV4	Source IPv4 address of the keepalive link	N/A	String,dotted decimal notation.	Example: 1.1.1.2 This column must be with the <b>KeepaliveDestinationIPV4</b> column.

IPv6Addr	Source and destination IPv6 address of the keepalive link	Data structure	Members include: <ul style="list-style-type: none"> <li>KeepaliveDestinationIPv6.</li> <li>KeepaliveSourceIPv6.</li> </ul>	N/A
KeepaliveDestinationIPv6	Destination IPv6 address of the keepalive link	N/A	Hexadecimal string,colon-separated.	Example: 1:1::1:1
KeepaliveSourceIPv6	Source IPv6 address of the keepalive link	N/A	Hexadecimal string,colon-separated.	Example: 1:1::1:2 This column must be with the <b>KeepaliveDestinationIPv6</b> column.
KeepaliveUDPPort	Keepalive destination UDP port	N/A	Unsigned integer. Value range: 1 to 65535. Default: 6400	The <b>KeepaliveUDPPort</b> must be with the IP address and <b>KeepaliveUDPPort</b> will be deleted when you delete IP address.
KeepaliveInterval	Keepalive interval in milliseconds	N/A	Unsigned integer Value range: 100 to 10000. Default: 1000.	N/A
KeepaliveTimeout	Keepalive timeout time in seconds	N/A	Unsigned integer. Value range: 3 to 20 Default: 5.	The DR keepalive timeout timer must be two times the DR keepalive interval at minimum.
KeepaliveHoldTime	Keepalive hold time in seconds	N/A	Unsigned integer. Value range: 3 to 10. Default: 3.	N/A
VRF	VRF instance name	N/A	String, case-sensitive. Length: 0 to 31 characters.	If the local device is on the public network, the length of the string is 0.

## DRNI/IPPTable

This table contains information about IPP ports.

### XML structure

```

<DRNI>
  <IPPTable>
    <IPP>
      <IPPNumb></IPPNumb>
      <IfIndex></IfIndex>
    </IPP>
  </IPPTable>
</DRNI>

```

## Table description

Item	Description
Feature name	DRNI
Table name	IPPTable
Table type	Multi-instance table
Row name	IPP
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPPNNumber	IPP ID	Index	Unsigned integer.	The IPP ID must be fixed at 1.
IfIndex	Interface index	N/A	Unsigned integer.	N/A

## DRNI/DRPortTable

This table contains information about DR ports.

## XML structure

```
<DRNI>
  <DRPortTable>
    <DRPort>
      <DRGroupId></DRGroupId>
      <IfIndex></IfIndex>
    </DRPort>
  </DRPortTable>
</DRNI>
```

## Table description

Item	Description
Feature name	DRNI
Table name	DRPortTable
Table type	Multi-instance table
Row name	DRPort
Restrictions	None

Support for row creation and deletion	Yes
---------------------------------------	-----

## Columns

Column name	Column description	Column type	Data type and restrictions
DRGroupId	DR group ID	Index	Unsigned integer. Value range: 1 to 1024.
IfIndex	IfIndex value of the Layer 2 aggregate interface	N/A	Unsigned integer.

## DRNI/PortTable

This table contains information about DRNI ports.

## XML structure

```

<DRNI>
  <PortTable>
    <Port>
      <IfIndex></IfIndex>
      <DrpShortPeriodEnable></DrpShortPeriodEnable>
    </Port>
  </PortTable>
</DRNI>

```

## Table description

Item	Description

# DRNI

## DRNI/Base

This table contains DRNI Base information.

### XML structure

```
<DRNI>
  <Base>
    <SystemMAC></SystemMAC>
    <SystemPriority></SystemPriority>
    <SystemNumber></SystemNumber>
    <RestoreDelay></RestoreDelay>
    <AutoRecoveryReloadDelay></AutoRecoveryReloadDelay>
  </Base>
</DRNI>
```

### Table description

Item	Description
Feature name	DRNI
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SystemMAC	DR system MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 0-1-0-1-0-1. Configure the same DR MAC address for the DR member devices in a DR system.
SystemPriority	DR system priority	N/A	Unsigned integer. Value range: 0 to 65535.	Configure the same DR system priority for the DR member devices in a DR system.
SystemNumber	DR system number	N/A	Unsigned integer. Value range: 1 to 2.	Assign different DR system numbers to the DR member devices in a DR system.
RestoreDelay	Data restoration	N/A	Unsigned integer.	N/A

	interval in seconds		Value range: 1 to 3600.	
AutoRecoveryReloadDelay	Reload delay timer in seconds for DR system auto-recovery	N/A	Unsigned integer. Value range: 240 to 3600.	N/A

## DRNI/Role

This table contains DRNI Role information.

## XML structure

```

<DRNI>
  <Role>
    <LocalRolePriority></LocalRolePriority>
    <PeerRolePriority></PeerRolePriority>
    <LocalBridgeMAC></LocalBridgeMAC>
    <PeerBridgeMAC></PeerBridgeMAC>
    <LocalConfiguredRole></LocalConfiguredRole>
    <PeerConfiguredRole></PeerConfiguredRole>
    <LocalEffectiveRole></LocalEffectiveRole>
    <PeerEffectiveRole></PeerEffectiveRole>
  </Role>
</DRNI>

```

## Table description

Item	Description
Feature name	DRNI
Table name	Role
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalRolePriority	DR role priority of the local DR member device	N/A	Unsigned integer. Value range: 0 to 65535.	The lower the value, the higher the priority.
PeerRolePriority	DR role priority of the peer DR member device	N/A	Unsigned integer. Value range: 0 to 65535.	The lower the value, the higher the priority.

LocalBridgeMAC	Bridge MAC address of the local DR member device	N/A	Six groups of two hexadecimal digits,hyphen-separated.	N/A
PeerBridgeMAC	Bridge MAC address of the peer DR member device	N/A	Six groups of two hexadecimal digits,hyphen-separated.	N/A
LocalConfiguredRole	DR role calculated based on the role priority and bridge MAC address of the local DR member device	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—none.</li> <li>1—primary.</li> <li>2—secondary.</li> </ul>	N/A
PeerConfiguredRole	DR role calculated based on the role priority and bridge MAC address of the peer DR member device	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—none.</li> <li>1—primary.</li> <li>2—secondary.</li> </ul>	N/A
LocalEffectiveRole	Current role of the local DR member device	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—none.</li> <li>1—primary.</li> <li>2—secondary.</li> </ul>	N/A
PeerEffectiveRole	Current role of the peer DR member device	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—none.</li> <li>1—primary.</li> <li>2—secondary.</li> </ul>	N/A

## DRNI/Keepalive

This table contains DRNI Keepalive information.

### XML structure

```

<DRNI>
  <Keepalive>
    <IPV4Addr>
      <KeepaliveDestinationIPV4></KeepaliveDestinationIPV4>
      <KeepaliveSourceIPV4></KeepaliveSourceIPV4>
    </IPV4Addr>
    <IPV6Addr>
      <KeepaliveDestinationIPV6></KeepaliveDestinationIPV6>
      <KeepaliveSourceIPV6></KeepaliveSourceIPV6>
    </IPV6Addr>
    <KeepaliveUDPPort></KeepaliveUDPPort>
    <KeepaliveInterval></KeepaliveInterval>
    <KeepaliveTimeout></KeepaliveTimeout>
  </Keepalive>
</DRNI>

```

```

    <KeepaliveHoldTime></KeepaliveHoldTime>
    <KeepaliveLinkStatus></KeepaliveLinkStatus>
    <VRF></VRF>
  </Keepalive>
</DRNI>

```

## Table description

Item	Description
Feature name	DRNI
Table name	Keepalive
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4Addr	Source and destination IPv4 address of the keepalive link	Data structure	Members include: <ul style="list-style-type: none"> <li>KeepaliveDestinationIPv4.</li> <li>KeepaliveSourceIPv4.</li> </ul>	N/A
KeepaliveDestinationIPv4	Destination IPv4 address of the keepalive link	N/A	String,dotted decimal notation.	Example: 1.1.1.1
KeepaliveSourceIPv4	Source IPv4 address of the keepalive link	N/A	String,dotted decimal notation.	Example: 1.1.1.2 This column must be with the <b>KeepaliveDestinationIPv4</b> column.
IPv6Addr	Source and destination IPv6 address of the keepalive link	Data structure	Members include: <ul style="list-style-type: none"> <li>KeepaliveDestinationIPv6.</li> <li>KeepaliveSourceIPv6.</li> </ul>	N/A
KeepaliveDestinationIPv6	Destination IPv6 address of the keepalive link	N/A	Hexadecimal string,colon-separated.	Example: 1:1::1:1
KeepaliveSourceIPv6	Source IPv6 address of the keepalive link	N/A	Hexadecimal string,colon-separated.	Example: 1:1::1:2 This column must be with the <b>KeepaliveDestinationIPv6</b> column.
KeepaliveUDPPort	Keepalive destination UDP port	N/A	Unsigned integer. Value range: 1 to 65535.	The <b>KeepaliveUDPPort</b> must be with the IP address and <b>KeepaliveUDPPort</b> will be deleted when you

				delete IP address.
KeepaliveInterval	Keepalive Interval in milliseconds	N/A	Unsigned integer. Value range: 100 to 10000.	N/A
KeepaliveTimeout	Keepalive timeout time in seconds	N/A	Unsigned integer. Value range: 3 to 20.	The DR keepalive timeout timer must be two times the DR keepalive interval at minimum.
KeepaliveHoldTime	Keepalive hold time in seconds	N/A	Unsigned integer. Value range: 3 to 10.	N/A
KeepaliveLinkStatus	Keepalive link status	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—unknown.</li> <li>1—up.</li> <li>2—down.</li> </ul>	N/A
VRF	VPN instance name	N/A	String, case-sensitive. Length: 0 to 31 characters.	If the local device is on the public network, the length of the string is 0.

## DRNI/IPPTable

This table contains DRNI IPP information

## XML structure

```

<DRNI>
  <IPPTable>
    <IPP>
      <IPPNNumber></IPPNNumber>
      <IfIndex></IfIndex>
    </IPP>
  </IPPTable>
</DRNI>

```

## Table description

Item	Description
Feature name	DRNI
Table name	IPPTable
Table type	Multi -instance table
Row name	IPP
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPPNNumber	IPP ID	Index	Unsigned integer. Value range: 1.	The IPP ID must be fixed at 1.
IfIndex	Interface index	N/A	Unsigned integer.	N/A

## DRNI/DRPortTable

This table contains information about DR ports.

## XML structure

```
<DRNI>
  <DRPortTable>
    <DRPort>
      <DRGroupId></DRGroupId>
      <IfIndex></IfIndex>
    </DRPort>
  </DRPortTable>
</DRNI>
```

## Table description

Item	Description
Feature name	DRNI
Table name	DRPortTable
Table type	Multi-instance table
Row name	DRPort
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
DRGroupId	DR group ID	Index	Unsigned integer. Value range: 1 to 1024.
IfIndex	IfIndex value of the Layer 2 aggregate interface	N/A	Unsigned integer.

# DRNI/PortTable

This table contains information about DRNI ports.

## XML structure

```
<DRNI>
  <PortTable>
    <Port>
      <IfIndex></IfIndex>
      <DrpcShortPeriodEnable></DrpcShortPeriodEnable>
      <PortStatus></PortStatus>
      <LocalDRCPState></LocalDRCPState>
      <PeerDRCPState></PeerDRCPState>
      <LocalSelectedMemberList></LocalSelectedMemberList>
      <PeerSelectedMemberList></PeerSelectedMemberList>
    </Port>
  </PortTable>
</DRNI>
```

## Table description

Item	Description
Feature name	DRNI
Table name	PortTable
Table type	Multi-instance table
Row name	Port
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
DrpcShortPeriodEnable	Short DRCP timeout timer flag	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enable the short DRCP timeout timer.</li><li><b>false</b>—Disabled the short DRCP timeout timer.</li></ul>
PortStatus	Port status	N/A	Enumeration: <ul style="list-style-type: none"><li>0—down.</li><li>1—up.</li></ul>
LocalDRCPState	DRCP state on the local port	N/A	DRCP state flags. The flag field is one byte long, represented by ABCDEFGH from the

			<p>lowest bit to the highest bit. A letter is displayed when its bit is 1 and is not displayed when its bit is 0.</p> <ul style="list-style-type: none"> <li>• <b>A</b>—Indicates whether DRCP is enabled on the local device. 1 indicates enabled. 0 indicates disabled.</li> <li>• <b>B</b>—Indicates whether DRCP is enabled on the DR peer. 1 indicates enabled. 0 indicates disabled.</li> <li>• <b>C</b>—Indicates whether DRCP is enabled on a third DR member device. 1 indicates enabled. 0 indicates disabled.</li> <li>• <b>D</b>—Indicates whether the local IPP has determined that DRCP is enabled on the DR peer. 1 indicates yes. 0 indicates no.</li> <li>• <b>E</b>—Indicates the DRCP timeout timer. 1 indicates the short timeout timer. 0 indicates the long timeout timer.</li> <li>• <b>F</b>—Indicates whether the local IPP permits the packets that contain the negotiated gateway conversation IDs. 1 indicates yes. 0 indicates no.</li> <li>• <b>G</b>—Indicates whether the local IPP permits the packets that contain the negotiated port conversation IDs. 1 indicates yes. 0 indicates no.</li> <li>• <b>H</b>—Indicates whether the local DRCPDU receive machine is in default or expired state. 1 indicates yes. 0 indicates no.</li> </ul>
PeerDRCPState	DRCP state on the peer port	N/A	This column has the same data type and restrictions as <b>LocalDRCPState</b> .
LocalSelectedMemberList	Local DR member device's selected aggregate member ports in a distributed relay group	N/A	<p>Bitmap. No length restrictions.</p> <p>Each octet within this value specifies a set of eight ports, with the first octet specifying ports 1 through 8, the second octet specifying ports 9 through 16, and so on. Within each octet, the most significant bit represents the lowest numbered port, and the least significant bit represents</p>

			the highest numbered port.Each port of the bridge is represented by a single bit within the value of this object.If a bit has a value of 1 then the port is included in the set of ports;a port is not included if its bit has a value of 0.
PeerSelected MemberList	Peer DR member device's selected aggregate member ports in a distributed relay group	N/A	This column has the same data type and restrictions as <b>LocalSelectedMemberList</b> .

# DRNI

## DRNI/Base

Message	Explanation
The MAC address cannot be an all-zero address, a multicast address, or a broadcast address. 不允许配置MAC地址为全零MAC地址、组播MAC地址或广播MAC地址。	The system MAC address cannot be an all-zero address, a multicast address, or a broadcast address.

## DRNI/Role

Message	Explanation
None. 无。	None.

## DRNI/Keepalive

Message	Explanation
Please specify the destination IP addresses of keepalive packets. 指定Keepalive报文的目的IP地址。	Specify the destination IP address of keepalive link.
The destination and source IP addresses cannot be the same. 目的IP地址和源IP地址不能相同。	The destination address must be different from the source.
You cannot specify both IPv4 and IPv6 addresses for keepalive packets. 不能同时指定IPv4地址和IPv6地址。	The destination and source address of keepalive link must be the same family.
Invalid destination or source IP address. 无效的源/目的IP地址。	The IP address is invalid,keepalive must config with a legal address.
Please delete all parameters of keepalive configuration. 请删除所有的keepalive配置参数。	You need to delete all parameters.
The source and destination IP addresses of keepalive packets must have the same internet protocol version. Keepalive报文的源IP地址和目的IP地址必须使用相同的IP地址协议。	The family of destination and source address must be the same.

## DRNI/IPPTable

Message	Explanation
The interface is already configured as a DR interface. 该接口已经是DR口。	The interface is a DR interface, you can't configure to an IPP again.
The device already has an IPP. 设备已经存在一个IPP口。	A device can only configure an IPP.
Please specify a valid interface index. 对于merge、create、replace操作，请指定有效的接口索引。	The ifindex must set to a interface exist.
The interface must be a Layer 2 aggregate interface or tunnel interface. 该接口必须是二层聚合接口或Tunnel接口。	The IPP must configure to a Layer 2 aggregate interface or tunnel interface.

## DRNI/DRPortTable

Message	Explanation
The interface is already configured as a DR interface. 该接口已经是DR口。	The interface is with another DR id.
The interface is already configured as an IPP. 该接口已经是IPP口。	The interface is already a IPP,you can not.set it to a DR interface again.
The interface must be a Layer 2 aggregate interface. 该接口必须是二层聚合接口。	The DR id must set to a Layer 2 aggregate interface.
The DR group with the specified ID is already configured on another interface. 该DR口ID已经存在。	A device can not have two group with the same DR id.
Please specify a valid interface index. 对于merge、create、replace操作，请指定有效的接口索引。	The ifindex must set to a interface exist.

## DRNI/PortTable

Message	Explanation
None. 无。	None.

# DRNI event stream

## BaseInfoEvent event

This event is used to report DRNI BaseInfo.

## XML structure for event subscription

```
<BaseInfoEvent>
</BaseInfoEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>DRNI</stream>
    <filter type="subtree">
      <BaseInfoEvent xmlns="http://www.h3c.com/netconf/event:1.0/DRNI:1.0">
      </BaseInfoEvent>
    </filter>
  </create-subscription>
</rpc>
```

### Table description

Item	Description
Event stream name	DRNI
Event name	BaseInfoEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/DRNI:1.0
Support for extended query	No

## XML structure for event report

```
<BaseInfoEvent>
  <BaseInfo>
    <SystemMAC></SystemMAC>
    <OperationType></OperationType>
  </BaseInfo>
</BaseInfoEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <BaseInfoEvent xmlns="http://www.h3c.com/netconf/event:1.0/DRNI:1.0">
    <BaseInfo>
      <SystemMAC>00-01-00-01-00-01</SystemMAC>
      <OperationType>1</OperationType>
```

```

        </BaseInfo>
    </BaseInfoEvent>
</notification>

```

### Table description

Column name	Column description	Data type and restrictions	Support for extended query	Remarks
SystemMAC	DR system MAC address	Six groups of two hexadecimal digits, hyphen-separated. Example: 00-01-00-01-00-01.	No	You must configure the same DR system MAC address for the DR member devices in a DR system.
OperationType	Operation type	Enumeration: <ul style="list-style-type: none"> <li>1—Create.</li> <li>2—Modify.</li> <li>3—Delete.</li> </ul>	No	The operation type specifies the operation that DRNI BaseInfo should perform.

## RoleInfoEvent event

This event is used to report DRNI RoleInfo.

### XML structure for event subscription

```

<RoleInfoEvent>
</RoleInfoEvent>

```

Example:

```

<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
    <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
        <stream>DRNI</stream>
        <filter type="subtree">
            <RoleInfoEvent xmlns="http://www.h3c.com/netconf/event:1.0/DRNI:1.0">
                </RoleInfoEvent>
            </filter>
        </create-subscription>
    </rpc>

```

### Table description

Item	Description
Event stream name	DRNI
Event name	RoleInfoEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/DRNI:1.0
Support for extended query	No

## XML structure for event report

```
<RoleInfoEvent>
  <LocalBridgeMAC></LocalBridgeMAC>
  <PeerBridgeMAC></PeerBridgeMAC>
</RoleInfoEvent>
```

### Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <RoleInfoEvent xmlns="http://www.h3c.com/netconf/event:1.0/DRNI:1.0">
    <RoleInfo>
      <LocalBridgeMAC>00-01-00-01-00-01</LocalBridgeMAC>
      <PeerBridgeMAC>00-01-00-01-00-03</PeerBridgeMAC>
    </RoleInfo>
  </RoleInfoEvent>
</notification>
```

### Table description

Column name	Column description	Data type and restrictions	Support for extended query
LocalBridgeMAC	Bridge MAC address of the local device	Six groups of two hexadecimal digits, hyphen-separated. Example: 00-01-00-01-00-01.	No
PeerBridgeMAC	Bridge MAC address of the peer device	Six groups of two hexadecimal digits, hyphen-separated. Example: 00-01-00-01-00-01.	No

## PortInfoEvent event

This event is used to report DRNI PortInfo.

## XML structure for event subscription

```
<PortInfoEvent>
</PortInfoEvent>
```

### Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>DRNI</stream>
    <filter type="subtree">
      <PortInfoEvent xmlns="http://www.h3c.com/netconf/event:1.0/DRNI:1.0">
        </PortInfoEvent>
      </filter>
    </create-subscription>
  </rpc>
```

## Table description

Item	Description
Event stream name	DRNI
Event name	PortInfoEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/DRNI:1.0
Support for extended query	No

## XML structure for event report

```
<PortInfoEvent>
  <PortInfo>
    <IfIndex></IfIndex>
    <DRGroupId></DRGroupId>
    <OperationType></OperationType>
  </PortInfo>
</PortInfoEvent>
```

### Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <PortInfoEvent xmlns="http://www.h3c.com/netconf/event:1.0/DRNI:1.0">
    <PortInfo>
      <IfIndex>66</IfIndex>
      <DRGroupId>66</DRGroupId>
      <OperationType>1</OperationType>
    </PortInfo>
  </PortInfoEvent>
</notification>
```

## Table description

Column name	Column description	Data type and restrictions	Support for extended query	Remarks
IfIndex	Aggregation interface ifIndex	Unsigned integer.	No	Interface name is not supported.
DRGroupId	DR group ID	Unsigned integer. Value range: 1 to 1024.	No	N/A
OperationType	Operation type	Enumeration: <ul style="list-style-type: none"><li>1—Create.</li><li>2—Modify.</li><li>3—Delete.</li></ul>	No	The operation type specifies the operation that DNRI PortInfo should perform.

</DropStatistics>
```

### Table description

Item	Description
Feature name	DropStatistics
Table name	ClearAppStatistics
Table type	Multi-instance table
Row name	ClearAppStatistic
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the interface resides.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID of the interface.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID.	Index	Unsigned integer. Value range: 0 to 7.	N/A
AppName	Name of the application	N/A	String. Length: 1 to 15 characters.	N/A
Clear	Clear statistics of packet loss for	N/A	This column must be empty.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	an application			

## DropStatistics/ExportPacket

This table is used to export captured packets to a file.

### XML structure

```
<DropStatistics>
  <ExportPacket>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
    <AppName></AppName>
  </ExportPacket>
</DropStatistics>
```

### Table description

Item	Description
Feature name	DropStatistics
Table name	ExportPacket
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the interface resides	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID of the interface	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID	N/A	Unsigned integer. Value range: 0 to 7.	N/A
AppName	Name of the application	N/A	String. Length: 1 to 15 characters.	This column is required.

# DropStatistics

## DropStatistics/SummaryStatistics

This table contains the summaries of packet loss.

### XML structure

```
<DropStatistics>
  <SummaryStatistics>
    <SummaryStatistic>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <SumStatisticsString></SumStatisticsString>
    </SummaryStatistic>
  </SummaryStatistics>
</DropStatistics>
```

### Table description

Item	Description
Feature name	DropStatistics
Table name	SummaryStatistics
Table type	Multi-instance table
Row name	SummaryStatistic
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the interface resides.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID of the interface.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID.	Index	Unsigned integer. Value range: 0 to 7.	N/A
SumStatistics String	Summaries of packet loss.	N/A	String.	Separate the pack loss applications with comma(.). Separate the application and value

Column name	Column description	Column type	Data type and restrictions	Remarks
				with colon(:). Can not contain spaces.

## DropStatistics/AppDetailStatistics

This table contains the details of packet loss for an application.

### XML structure

```

<DropStatistics>
  <AppDetailStatistics>
    < AppDetailStatistic>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <AppName></AppName>
      <AppDetailString></AppDetailString>
    </AppDetailStatistic>
  </AppDetailStatistics>
</DropStatistics>

```

### Table description

Item	Description
Feature name	DropStatistics
Table name	AppDetailStatistics
Table type	Multi-instance table
Row name	AppDetailStatistic
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the interface resides.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID of the interface.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID.	Index	Unsigned integer. Value range: 0 to 7.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Name of the Application	Index	String. Length: 1 to 15 characters.	N/A
AppDetailString	Details of the application's packet loss.	N/A	String.	Separate the packet loss types with comma(.). Separate the type and value with colon(:). Can not contain spaces.

## DropStatistics/AppSupportInfos

This table contains support of applications for packet capture.

### XML structure

```

<DropStatistics>
  <AppSupportInfos>
    <AppSupportInfo>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <AppName></AppName>
      <SupportPktCapture></SupportPktCapture>
    </AppSupportInfo>
  </AppSupportInfos>
</DropStatistics>

```

### Table description

Item	Description
Feature name	DropStatistics
Table name	AppSupportInfos
Table type	Multi-instance table
Row name	AppSupportInfo
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the interface resides	Index	Unsigned integer. Value range: 0 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Slot	Slot ID of the interface	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID.	Index	Unsigned integer. Value range: 0 to 7.	N/A
AppName	Name of the application	Index	String. Length: 1 to 15 characters.	N/A
SupportPktCapture	Support for packet capture	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Supports packet capture.</li> <li><b>false</b>—Does not support packet capture.</li> </ul>	N/A

## DropStatistics/AppDropAddresses

This table contains dropped-packet statistics for connections of features.

### XML structure

```

<DropStatistics>
  <AppDropAddresses>
    <AppDropAddress>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <AppName></AppName>
      <SrcAddress></SrcAddress>
      <DstAddress></DstAddress>
      <UserName></UserName>
      <DomainName></DomainName>
      <OriginalNum></OriginalNum>
      <ReplyNum></ReplyNum>
    </AppDropAddress>
  </AppDropAddresses>
</DropStatistics>

```

### Table description

Item	Description
Feature name	DropStatistics
Table name	AppDropAddresses
Table type	Multi-instance table
Row name	AppDropAddress
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the interface resides	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID of the interface	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
AppName	Feature name	Index	String. Length: 1 to 15 characters.	N/A
SrcAddress	Source address	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
DstAddress	Destination address	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
UserName	Username	N/A	String, case sensitive. Length: 1 to 55 characters.	N/A
DomainName	Domain name	N/A	String, case insensitive. Length: 1 to 255 characters.	N/A
OriginalNum	Number of packets dropped for original	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
ReplyNum	Number of packets dropped for reply	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A

## DropStatistics/AppDetailDropAddresses

This table contains detailed dropped-packet statistics for connections of features.

### XML structure

```

<DropStatistics>
  <AppDetailDropAddresses>
    <AppDetailDropAddress>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <AppName></AppName>
    
```

```

    <DropReason></DropReason>
    <SrcAddress></SrcAddress>
    <DstAddress></DstAddress>
    <UserName></UserName>
    <DomainName></DomainName>
    <OriginalNum></OriginalNum>
    <ReplyNum></ReplyNum>
  </AppDetailDropAddress>
</AppDetailDropAddresses>
</DropStatistics>

```

## Table description

Item	Description
Feature name	DropStatistics
Table name	AppDetailDropAddresses
Table type	Multi-instance table
Row name	AppDetailDropAddress
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the interface resides	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID of the interface	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
AppName	Feature name	Index	String. Length: 1 to 15 characters.	N/A
DropReason	Drop reason	Index	String. Length: 1 to 63 characters.	N/A
SrcAddress	Source address	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
DstAddress	Destination address	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
UserName	Username	N/A	String, case sensitive. Length: 1 to 55 characters.	N/A

DomainName	Domain name	N/A	String, case insensitive. Length: 1 to 255 characters.	N/A
OriginalNum	Number of packets dropped for original	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
ReplyNum	Number of packets dropped for reply	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A

## DropStatistics/StatisticsCfg

This table contains the dropped-packet statistics settings.

### XML structure

```

<DropStatistics>
  <StatisticsCfg>
    <FilterType></FilterType>
    <SrcAddress></SrcAddress>
    <DstAddress></DstAddress>
    <UserName></UserName>
    <DomainName></DomainName>
  </StatisticsCfg>
</DropStatistics>

```

### Table description

Item	Description
Feature name	DropStatistics
Table name	StatisticsCfg
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FilterType	Filter type	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Does not filter.</li> <li><b>1</b>—Filter by address.</li> <li><b>2</b>—Filters by user.</li> </ul>	Leaving this column empty has the same effect as setting it to <b>0</b> .
SrcAddress	Source address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string,	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.

Column name	Column description	Column type	Data type and restrictions	Remarks
			colon separated.	
DstAddress	Destination address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
UserName	UserName	N/A	String, case sensitive. Length: 1 to 55 characters.	N/A
DomainName	DomainName	N/A	String, case insensitive. Length: 1 to 255 characters.	N/A

## DropStatistics/SummaryIPCounts

This table is used to obtain the number of connections of a feature for which dropped-packet statistics are configured.

### XML structure

```

<DropStatistics>
  <SummaryIPCounts>
    <SummaryIPCount>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <AppName></AppName>
      <Count></Count>
    </SummaryIPCount>
  </SummaryIPCounts>
</DropStatistics>

```

### Table description

Item	Description
Feature name	DropStatistics
Table name	SummaryIPCounts
Table type	Multi-instance table
Row name	SummaryIPCount
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	ID of the member	Index	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
	where the interface resides		Value range: 0 to 65535.
Slot	Slot ID of the interface	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.
AppName	Feature name	Index	String. Length: 1 to 15 characters.
Count	Number of connections of a feature for which dropped-packet statistics are configured	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .

## DropStatistics/DetailIPCounts

This table is used to obtain the number of connections of a feature that have packets dropped due to a specific reason.

### XML structure

```

<DropStatistics>
  <DetailIPCounts>
    <DetailIPCount>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <AppName></AppName>
      <DropReason></DropReason>
      <Count></Count>
    </DetailIPCount>
  </DetailIPCounts>
</DropStatistics>

```

### Table description

Item	Description
Feature name	DropStatistics
Table name	DetailIPCounts
Table type	Multi-instance table
Row name	DetailIPCount
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	ID of the member where the interface resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the interface	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.
AppName	Feature name	Index	String. Length: 1 to 15 characters.
DropReason	Drop reason	Index	String. Length: 1 to 63 characters.
Count	Number of connections of a feature that have packets dropped due to a specific reason	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .

# DropStatistics

## DropStatistics/ExportPacket

Message	Explanation
Failed to create the file. 创建文件失败。	When saving the dropped packets to a file, the system failed to create the file due to insufficient space or other reasons. 保存报文到文件时由于空间不足或者其他原因导致失败。
No packets dropped. 没有报文被丢弃。	When saving the dropped packets to a file, there is no packet dropped. 没有需要保存到文件的报文。

## DropStatistics/StatisticsCfg

Message	Explanation
The source IP address field and destination IP address field cannot be null at the same time. 源IP和目的IP地址不能同时为空。	When configuring dropped packet counting based on IP addresses, the source IP and destination IP cannot be both null. 根据IP地址进行丢包统计时不允许源IP地址和目的IP地址都为空。
The source IP address and the destination IP address must be the same type. 源IP与目的IP地址类型必须一致。	When configuring dropped packet counting based on IP addresses, the source IP and the destination IP must belong to the same address family. 根据IP地址进行丢包统计时源IP地址和目的IP地址地址族必须一致。
Invalid source IP address or destination IP address. 源IP或者目的IP地址非法。	When configuring dropped packet counting based on IP addresses, but the source IP or the destination IP is invalid. 根据IP地址进行丢包统计时源IP地址或者目的IP地址非法。
A username is required. 用户名为空。	When configuring dropped packet counting based on users, the username cannot be null. 根据用户名进行丢包统计时用户名不允许为空。
A filter type is required. 过滤类型为空。	When configuring dropped packet counting based on filter conditions, the filter type cannot be null. 使用过滤条件进行丢包统计时过滤类型不能为空。
Not enough memory for the operation. 操作失败，当前设备内存不足。	When configuring dropped packet counting based on filter conditions, the device memory is not enough. 使用过滤条件进行丢包统计时设备内存空间不足。
Another statistics collection is in progress. Please wait... 同时只能有一个进程在配置，请稍候。	When configuring dropped packet counting based on filter conditions, another user is modifying the filter conditions. 使用过滤条件进行丢包统计时，其他用户尝试修改过滤条件。

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CliPolicyName	CLI policy name	Index	String. Length: 1 to 63 characters.	N/A
RunningTime	Action execution timeout	N/A	Unsigned integer. Value range: 0 to 31536000	0 means never time out.
CliPolicyEvent	CliPolicyEvent information of the CLI policy name	Subtable	N/A	For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyEvent table.
CliPolicyActions	CliPolicyActions information of the CLI policy name	Subtable	N/A	For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyActions table.
CliPolicyUserRoles	CliPolicyUserRoles information of the CLI policy name	Subtable	N/A	For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyUserRoles table.

# EAA/CliPolicys/CliPolicy/CliPolicyEvent

This table contains CLI policy information.

## XML structure

See the XML structure of EAA/CliPolicys

## Table description

Item	Description
Feature name	EAA
Table name	CliPolicyEvent
Table type	Single-instance table
Row name	N/A
Restrictions	Event tables are mutually exclusive and can not occur at the same time.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EventCli	Cli event information of the CLI policy	Subtable	N/A	EventCli tables are mutually exclusive with other event tables.  For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventCli table.
EventHotplug	Hotplug event information of the CLI policy name	Subtable	N/A	EventHotplug tables are mutually exclusive with other event tables.  For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventHotplug table.
EventInterface	Interface event information of the CLI policy name	Subtable	N/A	EventInterface tables are mutually exclusive with other event tables.  For more information, see

Column name	Column description	Column type	Data type and restrictions	Remarks
				the EAA/CliPolycys/CliPolicy/Cli PolicyEvent/EventInterface table.
EventProcess	Process event information of the CLI policy name	Subtable	N/A	EventProcess tables are mutually exclusive with other event tables.  For more information, see the EAA/CliPolycys/CliPolicy/Cli PolicyEvent/EventProcess table.
EventSnmp	Snmp event information of the CLI policy name	Subtable	N/A	EventSnmp tables are mutually exclusive with other event tables.  For more information, see the EAA/CliPolycys/CliPolicy/Cli PolicyEvent/EventSnmp table.
EventSnmpNotification	SnmpNotification event information of the CLI policy name	Subtable	N/A	EventSnmpNotification tables are mutually exclusive with other event tables.  For more information, see the EAA/CliPolycys/CliPolicy/Cli PolicyEvent/EventSnmpNot ification table.
EventSyslog	Syslog event information of the CLI policy name	Subtable	N/A	EventSyslog tables are mutually exclusive with other event tables.  For more information, see the EAA/CliPolycys/CliPolicy/Cli PolicyEvent/EventSyslog table.
EventTrack	Track event information of the CLI policy name	Subtable	N/A	EventTrack tables are mutually exclusive with other event tables.  For more information, see the EAA/CliPolycys/CliPolicy/Cli PolicyEvent/EventTrack

				table.

# EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventCli

This table contains EAA, CLI event, and monitor policy information.

## XML structure

See the XML structure of EAA/CliPolicys

## Table description

Item	Description
Feature name	EAA
Table name	EventCli
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CliStatus	CLI type status	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—sync.</li> <li>• <b>1</b>—async.</li> <li>• <b>2</b>—async-skip.</li> </ul>	N/A
Mode	CLI monitoring mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—tab.</li> <li>• <b>1</b>—help.</li> <li>• <b>2</b>—execute.</li> </ul>	N/A
Pattern	Regular expression matching command line	N/A	String. Length: 1 to 512 characters.	The actual length must be compatible with command line configuration. Users are required to ensure the validity of the length.

# EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventHotplug

This table contains EAA, hotplug event, and monitor policy information.

## XML structure

See the XML structure of EAA/CliPolicys.

## Table description

Item	Description
Feature name	EAA
Table name	EventHotplug
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HotplugStatus	Hotplug state	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—all.</li><li>• <b>1</b>—insert</li><li>• <b>2</b>—remove.</li></ul>	N/A
Chassis	Member ID of the member device where the entity resides	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SubSlot	SubSlot number of the slot	N/A	Unsigned integer. Value range: 0 to 65535.	65535 means not set subslot.

# EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventInterface

This table contains EAA, interface event, and monitor policy information.

# XML structure

See the XML structure of EAA/CliPolicys.

## Table description

Item	Description
Feature name	EAA
Table name	EventInterface
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfList	List of interface items	N/A	Number string. It is a comma-separated list of interface items. An item can be an individual interface name or an interface range. Use a hyphen (-) to separate the start and end interface item of a range. The string cannot end with a comma or hyphen, or contain any spaces.	Up to 8 items can be entered. Example: null0,GigabitEthernet0/0/1-GigabitEthernet0/0/2.
MonitorObj	Monitoring object	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—input-errors.</li><li>• 1—ouput-errors.</li><li>• 2—input-drops.</li><li>• 3—ouput-drops.</li><li>• 4—rcv-broadcasts.</li><li>• 5—rcv-bps.</li><li>• 6—rcv-pps.</li><li>• 7—tx-bps.</li><li>• 8—tx-pps.</li><li>• 9—tx-kbps.</li><li>• 10—rcv-kbps.</li><li>• 11—tx-kpps.</li><li>• 12—rcv-kpps.</li></ul>	N/A
StartOp	Comparison operator	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—gt.</li><li>• 1—ge.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>2—eq.</li> <li>3—ne.</li> <li>4—le.</li> <li>5—lt.</li> </ul>	
StartVal	Value of the monitored objects	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
RestartOp	Comparison operator	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—gt.</li> <li>1—ge.</li> <li>2—eq.</li> <li>3—ne.</li> <li>4—le.</li> <li>5—lt.</li> </ul>	N/A
RestartVal	Value of the monitored objects	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
Interval	Sampling period	N/A	Unsigned integer. Value range: 1 to 4294967295.	The default value is 300.

## EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventProcess

This table contains EAA, process event, and monitor policy information.

### XML structure

See the XML structure of EAA/CliPolicys.

### Table description

Item	Description
Feature name	EAA
Table name	EventProcess
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProcessType	Process type	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—start.</li><li>• 1—shutdown.</li><li>• 2—restart.</li><li>• 3—exception.</li></ul>	N/A
Name	Process name	N/A	String. Length: 1 to 63 characters.	N/A
Instance	Process ID	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
Chassis	Member ID of the member device where the entity resides	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

## EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventSnmp

This table contains EAA, SNMP event, and monitor policy information.

## XML structure

See the XML structure of EAA/CliPolicys.

## Table description

Item	Description
Feature name	EAA
Table name	EventSnmp
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Oid	SNMP OID	N/A	String. Length: 1 to 256 characters.	N/A
Monitor	Monitor object	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—get.</li> <li>2—get-next.</li> </ul>	N/A
StartOp	Comparison operator	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—gt.</li> <li>1—ge.</li> <li>2—eq.</li> <li>3—ne.</li> <li>4—le.</li> <li>5—lt.</li> </ul>	N/A
StartVal	Value of the monitored objects	N/A	String. Length: 1 to 512 characters.	N/A
RestartOp	Comparison operator	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—gt.</li> <li>1—ge.</li> <li>2—eq.</li> <li>3—ne.</li> <li>4—le.</li> <li>5—lt.</li> </ul>	N/A
RestartVal	Value of the monitored objects	N/A	String. Length: 1 to 512 characters.	N/A
Interval	Sampling period	N/A	Unsigned integer. Value range: 1 to 4294967295.	The default value is 300.

## EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventSnmpNotification

This table contains EAA, SNMP notification event, and monitor policy information.

## XML structure

See the XML structure of EAA/CliPolicys.

## Table description

Item	Description
Feature name	EAA
Table name	EventSnmpNotification
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Oid	Trap SNMP OID	N/A	String. Length: 1 to 256 characters.	N/A
OidVal	OID value	N/A	String. Length: 1 to 512 characters.	N/A
Option	Comparison operator	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—gt.</li><li>• <b>1</b>—ge.</li><li>• <b>2</b>—eq.</li><li>• <b>3</b>—ne.</li><li>• <b>4</b>—le.</li><li>• <b>5</b>—lt.</li></ul>	N/A
Drop	Drop trap	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>false</b> (default).</li><li>• <b>true</b>.</li></ul>	N/A

## EAA/CliPolycys/CliPolicy/CliPolicyEvent/EventSyslog

This table contains EAA, Syslog event, and monitor policy information.

## XML structure

See the XML structure of EAA/CliPolycys.

## Table description

Item	Description
Feature name	EAA
Table name	EventSyslog
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Priority	Log level	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—LOG_EMERG.</li><li>• 1—LOG_ALERT.</li><li>• 2—LOG_CRIT.</li><li>• 3—LOG_ERR.</li><li>• 4—LOG_WARNING.</li><li>• 5—LOG_NOTICE.</li><li>• 6—LOG_INFO.</li><li>• 7—LOG_DEBUG.</li><li>• 8—ALL.</li></ul>	N/A
Msg	Regular expression matching Syslog message	N/A	String. Length: 1 to 255 characters.	N/A
Occur	Occurrences	N/A	Unsigned integer. Value range: 1 to 32.	N/A
Period	Time range is seconds	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A

## EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventTrack

This table contains EAA, track event, and monitor policy information.

## XML structure

See the XML structure of EAA/CliPolicys.

## Table description

Item	Description
Feature name	EAA
Table name	EventTrack
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TrackList	List of track items	N/A	Number string. It is a comma-separated list of track items. An item can be an individual track ID or a track ID range. Use a hyphen (-) to separate the start and end track item of a range. The string cannot end with a comma or hyphen, or contain any spaces.	The track list is in the range of 1 to 1024. Up to 16 items can be entered. Example: 1,2,3,5-8,10-20.
State	Monitor change status of track items	N/A	Enumeration: <ul style="list-style-type: none"><li>1—positive.</li><li>2—negative.</li></ul>	N/A
SuppressTime	Suppress time	N/A	Unsigned integer.	The default value is 0.

## EAA/CliPolicys/CliPolicy/CliPolicyActions

This table contains information about the CLI policy action.

## XML structure

Item	Description
Feature name	EAA
Table name	ActionSyslog
Table type	Single-instance table
Row name	N/A
Restrictions	None

Support for row creation and deletion	Yes
---------------------------------------	-----

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Priority	Log level	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—LOG_EMERG.</li> <li>• <b>1</b>—LOG_ALERT.</li> <li>• <b>2</b>—LOG_CRIT.</li> <li>• <b>3</b>—LOG_ERR.</li> <li>• <b>4</b>—LOG_WARNING.</li> <li>• <b>5</b>—LOG_NOTICE.</li> <li>• <b>6</b>—LOG_INFO.</li> <li>• <b>7</b>—LOG_DEBUG.</li> </ul>	N/A
Facility	Logging facility used by the log host	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>128</b>—local0.</li> <li>• <b>136</b>—local1.</li> <li>• <b>144</b>—local2.</li> <li>• <b>152</b>—local3.</li> <li>• <b>160</b>—local4.</li> <li>• <b>168</b>—local5.</li> <li>• <b>176</b>—local6.</li> <li>• <b>184</b>—local7.</li> </ul>	N/A
Msg	Output log contents	N/A	String. Length: 1 to 512 characters.	The actual length must be compatible with command line configuration. Users are required to ensure the validity of the length.

## EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionReboot

This table contains information about the CLI policy action.

## XML structure

See the XML structure of EAA/CliPolicys.

## Table description

Item	Description
Feature name	EAA
Table name	ActionReboot
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Reboot	Reboot operation	N/A	EnableState: <ul style="list-style-type: none"><li><b>enable.</b></li></ul>	N/A
Chassis	Member ID of the member device where the entity resides	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SubSlot	SubSlot number of the slot	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

## EAA/CliPolycys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionSwitchover

This table contains information about the switchover policy action.

## XML structure

See the XML structure of EAA/CliPolycys.

## Table description

Item	Description
Feature name	EAA

Table name	ActionSwitchover
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
State	state of switchover	N/A	EnableState: • <b>enable.</b>	N/A

## EAA/CliPolycys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionCli

This table contains information about the CLI policy action.

## XML structure

See the XML structure of EAA/CliPolycys.

## Table description

Item	Description
Feature name	EAA
Table name	ActionCli
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Command	Command line	N/A	String.  Length: 1 to 512 characters.	The actual length must be compatible with command line configuration. Users are required to ensure the validity of the length.

# EAA/CliPolycys/CliPolicy/CliPolicyUserRoles

This table contains CLI policy information.

## XML structure

See the XML structure of EAA/CliPolycys.

## Table description

Item	Description
Feature name	EAA
Table name	CliPolicyUserRoles
Table type	Multi-instance table
Row name	CliPolicyUserRole
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserRoleName	CLI policy user role name	N/A	String. Length: 1 to 63 characters.	This column may not occur which mean no user role have set yet, or can repeat of up to 64.

# EAA/ScriptPolycys

This table contains Tcl policy information.

## XML structure

```
<EAA>
  <ScriptPolycys>
    <ScriptPolicy>
      <ScriptType></ScriptType>
      <PolicyName></PolicyName>
      <PolicyFile></PolicyFile>
    </ScriptPolicy>
  </ScriptPolycys>
</EAA>
```

## Table description

Item	Description
Feature name	EAA
Table name	ScriptPolicys
Table type	Multi-instance table
Row name	ScriptPolicy
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ScriptType	script policy type	Index	Enumeration: <ul style="list-style-type: none"><li>2—RTM_POLICYTYPE.</li></ul>	The script currently supported isTCL script, later may support other scripts.
PolicyName	script policy name	Index	String. Length: 1 to 63 characters.	N/A
PolicyFile	Script policy file	N/A	String. Length: 1 to 512 characters.	<p>The script currently supported isTCL script, later may support other scripts.</p> <p>The TCL file suffix must be ".tcl".</p> <p>TCL filename is case sensitive.</p> <p>The TCL file must be a file on the device storage medium.</p> <p>The actual length must be compatible with command line configuration. Users are required to ensure the validity of the length.</p>

## Appendix

EAA environment variables decouple the configuration of action arguments from the monitor policy so you can modify a policy easily.

An EAA environment variable is defined as a <variable\_name variable\_value> pair and can be used in different policies. When you define an action, you can enter a variable name with a leading dollar sign (\$variable\_name). EAA will replace the variable name with the variable value when it performs the action.

To change the value for an action argument, modify the value specified in the variable pair instead of editing each affected monitor policy.

EAA environment variables include system-defined variables and user-defined variables.

## System-defined variables

System-defined variables are provided by default, and they cannot be created, deleted, or modified by users. System-defined variable names start with an underscore (\_) sign. The variable values are set automatically depending on the event setting in the policy that uses the variables.

System-defined variables include the following types:

- **Public variable**—Available for any events.
- **Event-specific variable**—Available only for a type of event.

Table 1 shows all system-defined variables.

**Table 1 System-defined EAA environment variables by event type**

Variable name	Description
<b>Any event:</b>	
_event_id	Event ID.
_event_type	Event type.
_event_type_string	Event type description.
_event_time	Time when the event occurs.
_event_severity	Severity level of an event.
<b>CLI:</b>	
_cmd	Commands that are matched.
<b>Syslog:</b>	
_syslog_pattern	Log message content.
<b>Hotplug:</b>	
_slot	(Centralized devices.) 0. (Distributed devices) ID of the slot where card hot-swapping occurs. (Centralized IRF devices.) ID of the member device that joins or leaves the IRF fabric.
_subslot	ID of the subslot where subcard hot-swapping occurs.
<b>Interface:</b>	
_ifname	Interface name.
<b>SNMP:</b>	
_oid	OID of the MIB variable where an SNMP operation is performed.
_oid_value	Value of the MIB variable.
<b>SNMP-Notification:</b>	
_oid	OID that is included in the SNMP notification.

Variable name Process:	Description
_process_name	Process name.

## User-defined variables

You can use user-defined variables for all types of events.

User-defined variable names can contain digits, characters, and the underscore sign (\_), except that the underscore sign cannot be the leading character.

# EAA

## EAA/System

This table contains system information about EAA.

### XML structure

```
<EAA>
  <System>
    <RunStatus></RunStatus>
    <RtmSyslogBuffer>
      <SyslogBufferSize></SyslogBufferSize>
    </RtmSyslogBuffer>
  </System>
</EAA>
```

### Table description

Item	Description
Feature name	EAA
Table name	System
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RunStatus	Monitor status of EAA	N/A	EnableState: <ul style="list-style-type: none"><li><b>enable</b> (default).</li><li><b>disable</b>.</li></ul>	Monitor status of EAA.
RtmSyslogBuffer	RTM syslog buffer	Subtable	N/A	For more information, see the System/RtmSyslogBuffer table.

## EAA/System/RtmSyslogBuffer

This table contains syslog buffer information about EAA.

## XML structure

See the XML structure of EAA/System

## Table description

Item	Description
Feature name	EAA
Table name	RtmSyslogBuffer
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SyslogBuffer Size	Syslog buffer size	N/A	Unsigned integer. Value range: 1 to 500000	N/A

## EAA/Environments

This table contains environment information about EAA.

## XML structure

```
<EAA>
  <Environments>
    <Environment>
      <EnvironmentName></EnvironmentName>
      <EnvironmentValue></EnvironmentValue>
    </Environment>
  </Environments>
</EAA>
```

## Table description

Item	Description
Feature name	EAA
Table name	Environments
Table type	Multi-instance table

Row name	Environment
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Environment Name	Environment name	Index	String. Length: 1 to 63 characters.	N/A
Environment Value	Environment value	N/A	String. Length: 1 to 512 characters.	The actual length must be compatible with command line configuration. Users are required to ensure the validity of the length.  For environmental variables definition, please see "Appendix".

## EAA/CliPolicys

This table contains CLI policy information.

Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CliPolicy	CliPolicy table	Sublist	N/A	For more information, see the EAA/CliPolicys/CliPolicy table.

# EAA/CliPolicys/CliPolicy

This table contains CLI policy information.

## XML structure

See the XML structure of EAA/CliPolicys

## Table description

Item	Description
Feature name	EAA
Table name	CliPolicy
Table type	Multi-instance table
Row name	CliPolicy
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CliPolicyName	CLI policy name	Index	String. Length: 1 to 63 characters.	N/A
RunningTime	Action execution timeout	N/A	Unsigned integer. Value range: 0 to 31536000	0 means never time out.
CliPolicyEvent	CliPolicyEvent information of the CLI policy name	Subtable	N/A	For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyEvent table.
CliPolicyActions	CliPolicyActions information of the CLI policy name	Subtable	N/A	For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyActions table.
CliPolicyUserRoles	CliPolicyUserRoles information of the CLI policy name	Subtable	N/A	For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyUserRoles table.

# EAA/CliPolicys/CliPolicy/CliPolicyEvent

This table contains CLI policy information.

## XML structure

See the XML structure of EAA/CliPolicys

## Table description

Item	Description
Feature name	EAA
Table name	CliPolicyEvent
Table type	Single-instance table
Row name	N/A
Restrictions	Event tables are mutually exclusive and can not occur at the same time.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EventCli	Cli event information of the CLI policy	Subtable	N/A	EventCli tables are mutually exclusive with other event tables.  For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventCli table.
EventHotplug	Hotplug event information of the CLI policy name	Subtable	N/A	EventHotplug tables are mutually exclusive with other event tables.  For more information, see the EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventHotplug table.
EventInterface	Interface event information of the CLI policy name	Subtable	N/A	EventInterface tables are mutually exclusive with other event tables.  For more information, see

Column name	Column description	Column type	Data type and restrictions	Remarks
				the EAA/CliPolycys/CliPolicy/Cli PolicyEvent/EventInterface table.
EventProcess	Process event information of the CLI policy name	Subtable	N/A	EventProcess tables are mutually exclusive with other event tables.  For more information, see the EAA/CliPolycys/CliPolicy/Cli PolicyEvent/EventProcess table.
EventSnmp	Snmp event information of the CLI policy name	Subtable	N/A	EventSnmp tables are mutually exclusive with other event tables.  For more information, see the EAA/CliPolycys/CliPolicy/Cli PolicyEvent/EventSnmp table.
EventSnmpNotification	SnmpNotification event information of the CLI policy name	Subtable	N/A	EventSnmpNotification tables are mutually exclusive with other event tables.  For more information, see the EAA/CliPolycys/CliPolicy/Cli PolicyEvent/EventSnmpNot ification table.
EventSyslog	Syslog event information of the CLI policy name	Subtable	N/A	EventSyslog tables are mutually exclusive with other event tables.  For more information, see the EAA/CliPolycys/CliPolicy/Cli PolicyEvent/EventSyslog table.
EventTrack	Track event information of the CLI policy name	Subtable	N/A	EventTrack tables are mutually exclusive with other event tables.  For more information, see the EAA/CliPolycys/CliPolicy/Cli PolicyEvent/EventTrack

Pattern	Regular expression matching command line	N/A	String. Length: 1 to 512 characters.	The actual length must be compatible with command line configuration. Users are required to ensure the validity of the length.

# EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventHotplug

This table contains EAA, hotplug event, and monitor policy information.

## XML structure

See the XML structure of EAA/CliPolicys.

## Table description

Item	Description
Feature name	EAA
Table name	EventHotplug
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HotplugStatus	Hotplug state	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—all.</li><li>• <b>1</b>—insert</li><li>• <b>2</b>—remove.</li></ul>	N/A
Chassis	Member ID of the member device where the entity resides	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SubSlot	SubSlot number of the slot	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

# EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventInterface

This table contains EAA, interface event, and monitor policy information.

# XML structure

See the XML structure of EAA/CliPolicys.

## Table description

Item	Description
Feature name	EAA
Table name	EventInterface
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfList	List of interface items	N/A	Number string. It is a comma-separated list of interface items. An item can be an individual interface name or an interface range. Use a hyphen (-) to separate the start and end interface item of a range. The string cannot end with a comma or hyphen, or contain any spaces.	Up to 8 items can be entered. Example: null0,GigabitEthernet0/0/1-GigabitEthernet0/0/2.
MonitorObj	Monitoring object	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—input-errors.</li><li>• 1—output-errors.</li><li>• 2—input-drops.</li><li>• 3—output-drops.</li><li>• 4—rcv-broadcasts.</li><li>• 5—rcv-bps.</li><li>• 6—rcv-pps.</li><li>• 7—tx-bps.</li><li>• 8—tx-pps.</li><li>• 9—tx-kbps.</li><li>• 10—rcv-kbps.</li><li>• 11—tx-kpps.</li><li>• 12—rcv-kpps.</li></ul>	N/A
StartOp	Comparison operator	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—gt.</li><li>• 1—ge.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>• 2—eq.</li> <li>• 3—ne.</li> <li>• 4—le.</li> <li>• 5—lt.</li> </ul>	
StartVal	Value of the monitored objects	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
RestartOp	Comparison operator	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—gt.</li> <li>• 1—ge.</li> <li>• 2—eq.</li> <li>• 3—ne.</li> <li>• 4—le.</li> <li>• 5—lt.</li> </ul>	N/A
RestartVal	Value of the monitored objects	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
Interval	Sampling period	N/A	Unsigned integer. Value range: 1 to 4294967295.	The default value is 300.

## EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventProcess

This table contains EAA, process event, and monitor policy information.

### XML structure

See the XML structure of EAA/CliPolicys.

### Table description

Item	Description
Feature name	EAA
Table name	EventProcess
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProcessType	Process type	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—start.</li><li>• 1—shutdown.</li><li>• 2—restart.</li><li>• 3—exception.</li></ul>	N/A
Name	Process name	N/A	String.  Length: 1 to 63 characters.	N/A
Instance	Process ID	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
Chassis	Member ID of the member device where the entity resides	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

## EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventSnmp

This table contains EAA, SNMP event, and monitor policy information.

## XML structure

See the XML structure of EAA/CliPolicys.

## Table description

Item	Description
Feature name	EAA
Table name	EventSnmp
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Oid	SNMP OID	N/A	String. Length: 1 to 256 characters.	N/A
Monitor	Monitor object	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—get.</li> <li>2—get-next.</li> </ul>	N/A
StartOp	Comparison operator	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—gt.</li> <li>1—ge.</li> <li>2—eq.</li> <li>3—ne.</li> <li>4—le.</li> <li>5—lt.</li> </ul>	N/A
StartVal	Value of the monitored objects	N/A	String. Length: 1 to 512 characters.	N/A
RestartOp	Comparison operator	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—gt.</li> <li>1—ge.</li> <li>2—eq.</li> <li>3—ne.</li> <li>4—le.</li> <li>5—lt.</li> </ul>	N/A
RestartVal	Value of the monitored objects	N/A	String. Length: 1 to 512 characters.	N/A
Interval	Sampling period	N/A	Unsigned integer. Value range: 1 to 4294967295.	The default value is 300.

## EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventSnmpNotification

This table contains EAA, SNMP notification event, and monitor policy information.

## XML structure

See the XML structure of EAA/CliPolicys.

## Table description

Item	Description
Feature name	EAA
Table name	EventSnmpNotification
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Oid	Trap SNMP OID	N/A	String. Length: 1 to 256 characters.	N/A
OidVal	OID value	N/A	String. Length: 1 to 512 characters.	N/A
Option	Comparison operator	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—gt.</li><li>• <b>1</b>—ge.</li><li>• <b>2</b>—eq.</li><li>• <b>3</b>—ne.</li><li>• <b>4</b>—le.</li><li>• <b>5</b>—lt.</li></ul>	N/A
Drop	Drop trap	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>false</b> (default).</li><li>• <b>true</b>.</li></ul>	This column must be empty.

## EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventSyslog

This table contains EAA, Syslog event, and monitor policy information.

## XML structure

See the XML structure of EAA/CliPolicys.

## Table description

Item	Description
Feature name	EAA
Table name	EventSyslog
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Priority	Log level	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—LOG_EMERG.</li><li>• 1—LOG_ALERT.</li><li>• 2—LOG_CRIT.</li><li>• 3—LOG_ERR.</li><li>• 4—LOG_WARNING.</li><li>• 5—LOG_NOTICE.</li><li>• 6—LOG_INFO.</li><li>• 7—LOG_DEBUG.</li><li>• 8—ALL.</li></ul>	N/A
Msg	Regular expression matching Syslog message	N/A	String. Length: 1 to 255 characters.	N/A
Occur	Occurrences	N/A	Unsigned integer. Value range: 1 to 32.	N/A
Period	Time range is seconds	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A

## EAA/CliPolicys/CliPolicy/CliPolicyEvent/EventTrack

This table contains EAA, track event, and monitor policy information.

## XML structure

See the XML structure of EAA/CliPolicys.

## Table description

Item	Description
Feature name	EAA
Table name	EventTrack
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TrackList	List of track items	N/A	Number string. It is a comma-separated list of track items. An item can be an individual track ID or a track ID range. Use a hyphen (-) to separate the start and end track item of a range. The string cannot end with a comma or hyphen, or contain any spaces.	The track list is in the range of 1 to 1024. Up to 16 items can be entered. Example: 1,2,3,5-8,10-20.
State	Monitor change status of track items	N/A	Enumeration: <ul style="list-style-type: none"><li>1-positive.</li><li>2-negative.</li></ul>	N/A
SuppressTime	Suppress time	N/A	Unsigned integer.	The default value is 0.

## EAA/CliPolicys/CliPolicy/CliPolicyActions

This table contains information about the CLI policy action.

## XML structure

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Reboot	Reboot operation	N/A	EnableState: <b>enable.</b>	N/A
Chassis	Member ID of the member device where the entity resides	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SubSlot	SubSlot number of the slot	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

## EAA/CliPolicys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionSwitchover

This table contains information about the switchover policy action.

## XML structure

See the XML structure of EAA/CliPolicys.

## Table description

Item	Description
Feature name	EAA

Table name	ActionSwitchover
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
State	state of switchover	N/A	EnableState: • <b>enable.</b>	N/A

## EAA/CliPolycys/CliPolicy/CliPolicyActions/CliPolicyAction/ActionContent/ActionCli

This table contains information about the CLI policy action.

## XML structure

See the XML structure of EAA/CliPolycys.

## Table description

Item	Description
Feature name	EAA
Table name	ActionCli
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Command	Command line	N/A	String.  Length: 1 to 512 characters.	The actual length must be compatible with command line configuration. Users are required to ensure the validity of the length.

# EAA/CliPolicys/CliPolicy/CliPolicyUserRoles

This table contains CLI policy information.

## XML structure

See the XML structure of EAA/CliPolicys.

## Table description

Item	Description
Feature name	EAA
Table name	CliPolicyUserRoles
Table type	Multi-instance table
Row name	CliPolicyUserRole
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserRoleName	CLI policy user role name	N/A	String. Length: 1 to 63 characters.	This column may not occur which mean no user role have set yet, or can repeat of up to 64.

# EAA/ScriptPolicys

This table contains Tcl policy information.

## XML structure

```
<EAA>
  <ScriptPolicys>
    <ScriptPolicy>
      <ScriptType></ScriptType>
      <PolicyName></PolicyName>
      <PolicyFile></PolicyFile>
    </ScriptPolicy>
  </ScriptPolicys>
</EAA>
```

## Table description

Item	Description
Feature name	EAA
Table name	ScriptPolicys
Table type	Multi-instance table
Row name	ScriptPolicy
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ScriptType	script policy type	Index	Enumeration: <ul style="list-style-type: none"><li>2—RTM_POLICYTYPE.</li></ul>	The script currently supported isTCL script, later may support other scripts.
PolicyName	script policy name	Index	String. Length: 1 to 63 characters.	N/A
PolicyFile	Script policy file	N/A	String. Length: 1 to 512 characters.	<p>The script currently supported isTCL script, later may support other scripts.</p> <p>The TCL file suffix must be ".tcl".</p> <p>TCL filename is case sensitive.</p> <p>The TCL file must be a file on the device storage medium.</p> <p>The actual length must be compatible with command line configuration. Users are required to ensure the validity of the length.</p>

## EAA/ActivePolicy

This table contains information about the active policy.

## XML structure

```
<EAA>
  <ActivePolicys>
    <ActivePolicy>
      <JobID></JobID>
      <PolicyName></PolicyName>
      <PolicyType></PolicyType>
      <EventType></EventType>
      <TimeActive></TimeActive>
    </ActivePolicy>
  </ActivePolicys>
</EAA>
```

## Table description

Item	Description
Feature name	EAA
Table name	ActivePolicys
Table type	Multi-instance table
Row name	ActivePolicy
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
JobID	Job id	Index	Unsigned integer. Value range: 1 to 2147483647.	N/A
PolicyName	policy name	N/A	String. Length: 1 to 63 characters.	Monitoring strategy for executing action command.
PolicyType	Policy type	N/A	Enumeration: <ul style="list-style-type: none"><li>• 1—CLI.</li><li>• 2—TCL.</li></ul>	N/A
EventType	Event type	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—PROCESS.</li><li>• 1—INTERFACE.</li><li>• 2—HOTPLUG.</li><li>• 3—SYSLOG.</li><li>• 4—CLI.</li><li>• 5—SNMP.</li><li>• 6—SNMP_NOTIF.</li><li>• 7—TRACK.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>8—EMPTY</li> </ul>	
TimeActive	Active time	N/A	String. Length: 1 to 63 characters.	N/A

## EAA/RegisteredPolicy

This table contains information about the registered policy.

### XML structure

```

<EAA>
  <RegisteredPolicys>
    <RegisteredPolicy>
      <PolicyType></PolicyType>
      <PolicyName></PolicyName>
      <EventType></EventType>
      <TimeRegistered></TimeRegistered>
      <PolicyUserRole>
        <UserRoleName></UserRoleName>
      </PolicyUserRole>
    </RegisteredPolicy>
  </RegisteredPolicys>
</EAA>

```

### Table description

Item	Description
Feature name	EAA
Table name	RegisteredPolicy
Table type	Multi-instance table
Row name	RegisteredPolicy
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyType	Policy type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—CLI.</li> <li>2—TCL.</li> </ul>	N/A
PolicyName	policy name	Index	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 63 characters.	
EventType	Event type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—PROCESS.</li> <li>• 1—INTERFACE.</li> <li>• 2—HOTPLUG.</li> <li>• 3—SYSLOG.</li> <li>• 4—CLI.</li> <li>• 5—SNMP.</li> <li>• 6—SNMP_NOTIF.</li> <li>• 7—TRACK.</li> <li>• 8—EMPTY</li> </ul>	N/A
TimeRegistered	Registered time	N/A	String. Length: 1 to 63 characters.	N/A
PolicyUserRole	User role of a registration police.	Data structure	Members include: <ul style="list-style-type: none"> <li>• UserRoleName</li> </ul>	Multi-instance. The device can configure 64 effective user roles.
UserRoleName	Policy user role name	N/A	String. Length: 1 to 63 characters.	This column may not occur which mean no user role have set yet, or can repeat of up to 64.

## ETH/SubInterfaces

This table contains VLAN termination information.

### XML structure

```
<ETH>
  <SubInterfaces>
    <SubInterface>
      <IfIndex></IfIndex>
      <EncapType></EncapType>
      <VlanID></VlanID>
      <FirstVlanList></FirstVlanList>
      <EncapFlag></EncapFlag>
      <IsUserVlanMode></IsUserVlanMode>
    </SubInterface>
  </SubInterfaces>
</ETH>
```

### Table description

Item	Description
Feature name	ETH
Table name	SubInterfaces
Table type	Multi-instance table
Row name	SubInterface
Restrictions	No
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.

Column name	Column description	Column type	Data type and restrictions	Remarks
EncapType	VLAN termination type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None.</li> <li>1—Dot1q unambiguous.</li> <li>2—Dot1q ambiguous.</li> <li>5—Untagged.</li> <li>6—Default.</li> </ul>	N/A
VlanID	Outermost VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094	Outermost VLAN tag for unambiguous VLAN termination. Used when the "EncapType" column is 1.
FirstVlanList	Outermost VLAN ID list	N/A	String.	Specifies a space-separated VLAN ID list items. Each item specifies a VLAN ID or a range of VLAN IDs in the form of <i>vlan-id1</i> to <i>vlan-id2</i> . The value range for VLAN IDs is 1 to 4094. The value for the <i>vlan-id2</i> argument must be equal to or greater than the value for the <i>vlan-id1</i> argument. Used when the "EncapType" column is 2.
EncapFlag	Configures the subinterface to terminate packets that include one or more layers of VLAN tags	N/A	Unsigned integer. Value range: 0 to 1	<ul style="list-style-type: none"> <li>0—STRICT</li> <li>1—LOOSE</li> </ul>
IsUserVlanMode	VLAN termination mode	N/A	Boolean: <ul style="list-style-type: none"> <li>true—user-vlan.</li> <li>false—vlan-type.</li> </ul>	Some version might not support this column.

## ETH/VlanQinQTermination

This table contains QinQ VLAN termination information.

### XML structure

```
<ETH>
  <VlanQinQTermination>
```

```

<QinqTermination>
  <IfIndex></IfIndex>
  <VlanID></VlanID>
  <SecondVlan></SecondVlan>
  <QinqAny></QinqAny>
  <EncapFlag></EncapFlag>
  <IsUserVlanMode></IsUserVlanMode>
</QinqTermination>
</VlanQinqTermination>
</ETH>

```

## Table description

Item	Description
Feature name	ETH
Table name	VlanQinqTermination
Table type	Multi-instance table
Row name	QinqTermination
Restrictions	No
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
VlanID	Layer 1 VLAN ID	Index	Unsigned integer. Value range: 1 to 4094	N/A
SecondVlan	Layer 2 VLAN ID or VLAN ID list	N/A	String.	Specifies a space-separated VLAN ID list items. Each item specifies a VLAN ID or a range of VLAN IDs in the form of <i>vlan-id1</i> to <i>vlan-id2</i> . The value range for VLAN IDs is 1 to 4094. The value for the <i>vlan-id2</i> argument must be equal to or greater than the value for the <i>vlan-id1</i>

Column name	Column description	Column type	Data type and restrictions	Remarks
				argument. Note: The “SecondVlan” column and the “QinqAny” column cannot be configured at the same time.
QinqAny	Specifies all values between 1 and 4094	N/A	Unsigned integer. Value range: 1	Note: The “SecondVlan” column and the “QinqAny” column cannot be configured at the same time.
EncapFlag	Configures the subinterface to receive and terminate packets that include two or more layers of VLAN tags	N/A	Unsigned integer. Value range: 0 to 1	<ul style="list-style-type: none"> <li>• <b>0</b>—STRICT</li> <li>• <b>1</b>—LOOSE</li> </ul>
IsUserVlanMode	VLAN termination mode	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—user-vlan.</li> <li>• <b>false</b>—vlan-type.</li> </ul>	Some versions might not support this column.

## ETH/UnderlayForwardBypass

This table contains underlay forward bypass information.

### XML structure

```

<ETH>
  <UnderlayForwardBypass>
    <Bypass>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </Bypass>
  </UnderlayForwardBypass>
</ETH>

```

### Table description

Item	Description
Feature name	ETH
Table name	UnderlayForwardBypass
Table type	Multi-instance table

Item	Description
Row name	Bypass
Restrictions	No
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 physical interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Enable	Specifies the action of whether or not to bypass the VXLAN packets from ETH.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable the function.</li> <li><b>false</b>—Disable the function.</li> </ul>	N/A

## ETH/EthIfMacAddress

This table contains Ethernet interface MAC address information.

## XML structure

```

<ETH>
  <EthIfMacAddress>
    <IfMacAddress>
      <IfIndex></IfIndex>
      <MacAddress></MacAddress>
    </IfMacAddress>
  </EthIfMacAddress>
</ETH>

```

## Table description

Item	Description
Feature name	ETH
Table name	EthIfMacAddress
Table type	Multi-instance table
Row name	IfMacAddress
Restrictions	No
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
VlanID	Layer 1 VLAN ID	Index	Unsigned integer. Value range: 1 to 4094	N/A
SecondVlan	Layer 2 VLAN ID or VLAN ID list	N/A	String.	Specifies a space-separated VLAN ID list items. Each item specifies a VLAN ID or a range of VLAN IDs in the form of <i>vlan-id1</i> to <i>vlan-id2</i> . The value range for VLAN IDs is 1 to 4094. The value for the <i>vlan-id2</i> argument must be equal to or greater than the value for the <i>vlan-id1</i> argument.  Note: The "SecondVlan" column and the "QinqAny" column cannot be configured at the same time.
QinqAny	Specifies all values between 1 and 4094	N/A	Unsigned integer. Value range: 1	Note: The "SecondVlan" column and the "QinqAny" column cannot be configured at the same time.

Column name	Column description	Column type	Data type and restrictions	Remarks
EncapFlag	Configures the subinterface to receive and terminate packets that include two or more layers of VLAN tags	N/A	Unsigned integer. Value range: 0 to 1	<ul style="list-style-type: none"> <li>• <b>0</b>—STRICT</li> <li>• <b>1</b>—LOOSE</li> </ul>
IsUserVlanMode	VLAN termination mode	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—user-vlan.</li> <li>• <b>false</b>—vlan-type.</li> </ul>	Some versions might not support this column.

## ETH/UnderlayForwardBypass

This table contains underlay forward bypass information.

### XML structure

```

<ETH>
  <UnderlayForwardBypass>
    <Bypass>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </Bypass>
  </UnderlayForwardBypass>
</ETH>

```

### Table description

Item	Description
Feature name	ETH
Table name	UnderlayForwardBypass
Table type	Multi-instance table
Row name	Bypass
Restrictions	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 physical interfaces are supported. Some versions support interface name. For relevant

Column name	Column description	Column type	Data type and restrictions	Remarks
				information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Enable	Specifies the action of whether or not to bypass the VXLAN packets from ETH.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable the function.</li> <li><b>false</b>—Disable the function.</li> </ul>	N/A

## ETH/EthIfMacAddress

This table contains Ethernet interface MAC address information.

### XML structure

```

<ETH>
  <EthIfMacAddress>
    <IfMacAddress>
      <IfIndex></IfIndex>
      <MacAddress></MacAddress>
    </IfMacAddress>
  </EthIfMacAddress>
</ETH>

```

### Table description

Item	Description
Feature name	ETH
Table name	EthIfMacAddress

N/A	<p>Each bit represents a speed.</p> <p>As follows:</p> <ul style="list-style-type: none"> <li>• 1—1 Gbps.</li> <li>• 2—2 Gbps.</li> <li>• 4—10 Gbps.</li> <li>• 8—4 Gbps.</li> <li>• 16—8 Gbps.</li> <li>• 32—16 Gbps.</li> <li>• 64—32 Gbps.</li> <li>• 128—20 Gbps.</li> <li>• 256—40 Gbps.</li> <li>• 32768—The speed has not been obtained or cannot be obtained.</li> </ul>	Other values are reserved.

Column name	Column description	Column type	Data type and restrictions	Remarks
CurrentPortSpeed	Current port speed.	N/A	Each bit represents a speed. As follows: <ul style="list-style-type: none"> <li>• 1—1 Gbps.</li> <li>• 2—2 Gbps.</li> <li>• 4—10 Gbps.</li> <li>• 8—4 Gbps.</li> <li>• 16—8 Gbps.</li> <li>• 32—16 Gbps.</li> <li>• 64—32 Gbps.</li> <li>• 128—20 Gbps.</li> <li>• 256—40 Gbps.</li> <li>• 32768—The speed has not been obtained or cannot be obtained.</li> </ul>	Other values are reserved.
MaximumFrameSize	Maximum FC frame payload size.	N/A	Unsigned integer.	N/A
OSDeviceName	OS device name.	N/A	String. Length: 1 to 255 characters.	N/A
HostName	Name of the host associated with the Nx_Port.	N/A	String. Length: 1 to 255 characters.	N/A
NodeName	WWN of the node containing the port .	N/A	Eight groups of two hexadecimal digits, colon-separated.	Example: 50:01:43:80:12:09:54:f4.
PortFabricName	Port fabric name.	N/A	Eight groups of two hexadecimal digits, colon-separated.	Example: 20:01:00:e0:fc:a1:58:00.
PortState	Port state.	N/A	Unsigned integer.	N/A
DiscoveredPortNumber	Number of discovered ports.	N/A	Unsigned integer.	N/A
SmartSANServiceCategory	Smart SAN service category.	N/A	String. Length: 1 to 255 characters	N/A
SmartSANGUID	Smart SAN globally unique identifier.	N/A	Five groups of hexadecimal digits, hyphen-separated. Format: XXXXXXXX-XXXX-XXXX-XXX X-XXXXXXXXXXXX	Example: 50014380-1209-54f5-5001-4380120954f4.
SmartSANVersion	Smart SAN version.	N/A	String. Length: 1 to 255 characters	N/A
SmartSANProductName	Smart SAN product name (model).	N/A	String. Length: 1 to 255 characters	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SmartSANPortInformation	Smart SAN port information.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Physical.</li> <li>2—NPIV.</li> <li>3—SRIOV.</li> <li>Other—Unknown.</li> </ul>	N/A
SmartSANQoSsupport	Smart SAN QoS support.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Not supported.</li> <li>1—Supported.</li> <li>Other—Unknown.</li> </ul>	N/A
SmartSANSecuritySupport	Smart SAN security support.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Not supported.</li> <li>1—Tier-1.</li> <li>2—Tier-2.</li> <li>3—Tier-3.</li> <li>Other—Unknown.</li> </ul>	N/A
SmartSANConnectedPorts	Smart SAN connected ports. For Host Port registration, this field will display the connected Target Port information. For Target Port registration, this field will display the connected Initiator Port information.	N/A	The combination of the WWNs of ports, blank-separated.	N/A

## FDMI/DiagnosticParameterDescriptors

This table contains diagnostic parameter descriptors for the Fx\_Port and Nx\_Port.

## Table description

Item	Description
Feature name	FDMI
Table name	DiagnosticParameterDescriptors
Table type	Multi-instance table
Row name	Descriptor
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortName	WWN of the port.	Index	Eight groups of two hexadecimal digits, colon-separated.	Example: 28:05:00:e0:fc:f1:58:2a.
NodeName	WWN of the node containing the port.	N/A	Eight groups of two hexadecimal digits, colon-separated.	Example: 20:00:00:e0:fc:f1:e8:00.
FabricPortName	Name of a port on a node in the fabric.	N/A	Eight groups of two hexadecimal digits, colon-separated.	N/A
FabricNodeName	Name of a node in the fabric.	N/A	Eight groups of two hexadecimal digits, colon-separated.	This column takes effect only when the FabricPortName column is valid.
PortSpeed	Port speed descriptor.	Data structure	Members include: <ul style="list-style-type: none"> <li>SpeedCapabilities.</li> <li>OperatingSpeed.</li> </ul>	N/A
SpeedCapabilities	Port speed capabilities.	N/A	Each bit represents a port speed capability. As follows: <ul style="list-style-type: none"> <li>1—1 Gbps.</li> <li>2—2 Gbps.</li> <li>4—10 Gbps.</li> <li>8—4 Gbps.</li> <li>16—8 Gbps.</li> <li>32—16 Gbps.</li> <li>64—32 Gbps.</li> <li>Other—Unknown.</li> </ul>	N/A
OperatingSpeed	Port operating speed.	N/A	Each bit represents a port operating speed. As follows: <ul style="list-style-type: none"> <li>1—1 Gbps.</li> <li>2—2 Gbps.</li> <li>4—10 Gbps.</li> <li>8—4 Gbps.</li> <li>16—8 Gbps.</li> <li>32—16 Gbps.</li> <li>64—32 Gbps.</li> <li>32768—Speed not established.</li> <li>Other—Unknown.</li> </ul>	N/A
PortPhyType	Type of the physical interface for the PN_Port or PF_Port through which the RNID request was received.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—No Information about Phy Type is provided.</li> <li>64—FC.</li> <li>128—VFC.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
FCoELinkErrorStatusBlock	Link error status block format for FCoE	Data structure	Members include: <ul style="list-style-type: none"> <li>FCoELinkFailureCount.</li> <li>VirtualLinkFailureCount.</li> <li>MissingFIPCount.</li> <li>SymbolErrorCount.</li> <li>ErroredBlockCount.</li> <li>FCSErrorCount.</li> </ul>	This data structure takes effect only when the PortPhyType column is 128.
FCoELinkFailureCount	Number of link failures.	N/A	Unsigned integer.	N/A
VirtualLinkFailureCount	Number of Virtual Link failures.	N/A	Unsigned integer.	N/A
MissingFIPCount	Number of missing FIP keepalives or discovery advertisements.	N/A	Unsigned integer.	N/A
SymbolErrorCount	Number of symbol errors during carrier.	N/A	Unsigned integer.	N/A
ErroredBlockCount	Cumulative count of the events counted by the eight-bit errored blocks counter.	N/A	Unsigned integer.	N/A
FCSErrorCount	Number of frame check sequence errors.	N/A	Unsigned integer.	N/A
FCLinkErrorStatusBlock	Link error status block format for FC.	Data structure	Members include: <ul style="list-style-type: none"> <li>FCLinkFailureCount.</li> <li>LossOfSyncCount.</li> <li>LossOfSignalCount.</li> <li>ProtocolError.</li> <li>InvalidWord.</li> <li>InvalidCRCCCount.</li> </ul>	This data structure takes effect only when the PortPhyType column is 64.
FCLinkFailureCount	Number of link failures.	N/A	Unsigned integer.	N/A
LossOfSyncCount	Number of loss-of-synchronization errors.	N/A	Unsigned integer.	N/A
LossOfSignalCount	Number of loss-of-signal errors.	N/A	Unsigned integer.	N/A
ProtocolError	Number of primitive sequence protocol errors.	N/A	Unsigned integer.	N/A
InvalidWord	Number of invalid	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	transmission words.			
InvalidCRCCo unt	Number of invalid CRC errors.	N/A	Unsigned integer.	N/A
SFPDiagnosticsParameters	SFP diagnostic parameters descriptor.	Data structure	<p>Members include:</p> <ul style="list-style-type: none"> <li>• SFPNotValid.</li> <li>• SFPTemperature.</li> <li>• SFPTempState.</li> <li>• SFPTempHAlarm.</li> <li>• SFPTempLAlarm.</li> <li>• SFPTempHWarn.</li> <li>• SFPTempLWarn.</li> <li>• SFPVoltage.</li> <li>• SFPVoltageState.</li> <li>• SFPVoltageHAlarm.</li> <li>• SFPVoltageLAlarm.</li> <li>• SFPVoltageHWarn.</li> <li>• SFPVoltageLWarn.</li> <li>• TxBias.</li> <li>• TxBiasState.</li> <li>• TxBiasHAlarm.</li> <li>• TxBiasLAlarm.</li> <li>• TxBiasHWarn.</li> <li>• TxBiasLWarn.</li> <li>• TxPower.</li> <li>• TxPowerState.</li> <li>• TxPowerHAlarm.</li> <li>• TxPowerLAlarm.</li> <li>• TxPowerHWarn.</li> <li>• TxPowerLWarn.</li> <li>• RxPower.</li> <li>• RxPowerState.</li> <li>• RxPowerHAlarm.</li> <li>• RxPowerLAlarm.</li> <li>• RxPowerHWarn.</li> <li>• RxPowerLWarn.</li> <li>• SFPPortTxType.</li> <li>• SFPOpticalPort.</li> <li>• SFPConnectorType.</li> <li>• SFPFECActive.</li> </ul>	Data structure of SFPDiagnosticsParameters and data structure of QSFPDiagnosticsParameters are mutual exclusive and only one of them can be set in a single message.
SFPNotValid	SFP diagnostic parameters not valid.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>• 0—Valid.</li> <li>• 1—Invalid.</li> </ul>	<p>If the value is 1, the following columns are not valid:</p> <ul style="list-style-type: none"> <li>• SFPTemperature.</li> <li>• SFPTempState.</li> <li>• SFPTempHAlarm.</li> <li>• SFPTempLAlarm.</li> <li>• SFPTempHWarn.</li> <li>• SFPTempLWarn.</li> </ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
				<ul style="list-style-type: none"> <li>SFPVoltage.</li> <li>SFPVoltageState.</li> <li>SFPVoltageHAlarm.</li> <li>SFPVoltageLAlarm.</li> <li>SFPVoltageHWarn.</li> <li>SFPVoltageLWarn.</li> <li>TxBias.</li> <li>TxBiasState.</li> <li>TxBiasHAlarm.</li> <li>TxBiasLAlarm.</li> <li>TxBiasHWarn.</li> <li>TxBiasLWarn.</li> <li>TxPower.</li> <li>TxPowerState.</li> <li>TxPowerHAlarm.</li> <li>TxPowerLAlarm.</li> <li>TxPowerHWarn.</li> <li>TxPowerLWarn.</li> <li>RxPower.</li> <li>RxPowerState.</li> <li>RxPowerHAlarm.</li> <li>RxPowerLAlarm.</li> <li>RxPowerHWarn.</li> <li>RxPowerLWarn.</li> </ul>
SFPTemperature	Temperature.	N/A	Short. Unit is 1/256 °C.	N/A
SFPTempState	Running state of temperature.	N/A	Each bit represents a type. As follows: <ul style="list-style-type: none"> <li>0—Normal.</li> <li>1—Transgress the low warning level.</li> <li>2—Transgress the high warning level.</li> <li>4—Transgress the low alarm level.</li> <li>8—Transgress the high alarm level.</li> <li>Other—Unknown.</li> </ul>	N/A
SFPTempHAlarm	High alarm of temperature.	N/A	Short. Unit is 1/256 °C.	N/A
SFPTempLAlarm	Low alarm of temperature.	N/A	Short. Unit is 1/256 °C.	N/A
SFPTempHWarn	High warning of temperature.	N/A	Short. Unit is 1/256 °C.	N/A
SFPTempLWarn	Low warning of	N/A	Short.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Temperature	Temperature.		Unit is 1/256 °C.	
SFPVoltage	Voltage.	N/A	Unsigned short. Unit is 100uV.	N/A
SFPVoltageState	Running state of Voltage.	N/A	Each bit represents a type. As follows: <ul style="list-style-type: none"> <li>0—Normal.</li> <li>1—Transgress the low warning level.</li> <li>2—Transgress the high warning level.</li> <li>4—Transgress the low alarm level.</li> <li>8—Transgress the high alarm level.</li> <li>Other—Unknown.</li> </ul>	N/A
SFPVoltageHAlarm	High alarm of Voltage.	N/A	Unsigned short. Unit is 100uV.	N/A
SFPVoltageLAlarm	Low alarm of Voltage.	N/A	Unsigned short. Unit is 100uV.	N/A
SFPVoltageHWarn	High warning of Voltage.	N/A	Unsigned short. Unit is 100uV.	N/A
SFPVoltageLWarn	Low warning of Voltage.	N/A	Unsigned short. Unit is 100uV.	N/A
TxBias	Tx laser bias current.	N/A	Unsigned short. Unit is 2uA.	N/A
TxBiasState	Running state of TxBias.	N/A	Each bit represents a type. As follows: <ul style="list-style-type: none"> <li>0—Normal.</li> <li>1—Transgress the low warning level.</li> <li>2—Transgress the high warning level.</li> <li>4—Transgress the low alarm level.</li> <li>8—Transgress the high alarm level.</li> <li>Other—Unknown.</li> </ul>	N/A
TxBiasHAlarm	High alarm of TxBias.	N/A	Unsigned short. Unit is 2uA.	N/A
TxBiasLAlarm	Low alarm of TxBias.	N/A	Unsigned short. Unit is 2uA.	N/A
TxBiasHWarn	High warning of TxBias.	N/A	Unsigned short. Unit is 2uA.	N/A
TxBiasLWarn	Low warning of TxBias.	N/A	Unsigned short. Unit is 2uA.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TxPower	Tx output power.	N/A	Unsigned short. Unit is 0.1uW.	N/A
TxPowerState	Running state of TxPower.	N/A	Each bit represents a type. As follows: <ul style="list-style-type: none"> <li>0—Normal.</li> <li>1—Transgress the low warning level.</li> <li>2—Transgress the high warning level.</li> <li>4—Transgress the low alarm level.</li> <li>8—Transgress the high alarm level.</li> <li>Other—Unknown.</li> </ul>	N/A
TxPowerHAlarm	High alarm of TxPower.	N/A	Unsigned short. Unit is 0.1uW.	N/A
TxPowerLAlarm	Low alarm of TxPower.	N/A	Unsigned short. Unit is 0.1uW.	N/A
TxPowerHWarn	High warning of TxPower.	N/A	Unsigned short. Unit is 0.1uW.	N/A
TxPowerLWarn	Low warning of TxPower.	N/A	Unsigned short. Unit is 0.1uW.	N/A
RxPower	Received optical TxPower.	N/A	Unsigned short. Unit is 0.1uW.	N/A
RxPowerState	Running state of RxPower.	N/A	Each bit represents a type. As follows: <ul style="list-style-type: none"> <li>0—Normal.</li> <li>1—Transgress the low warning level.</li> <li>2—Transgress the high warning level.</li> <li>4—Transgress the low alarm level.</li> <li>8—Transgress the high alarm level.</li> <li>Other—Unknown.</li> </ul>	N/A
RxPowerHAlarm	High alarm of RxPower.	N/A	Unsigned short. Unit is 0.1uW.	N/A
RxPowerLAlarm	Low alarm of RxPower.	N/A	Unsigned short. Unit is 0.1uW.	N/A
RxPowerHWarn	High warning of RxPower.	N/A	Unsigned short. Unit is 0.1uW.	N/A
RxPowerLWarn	Low warning of RxPower.	N/A	Unsigned short. Unit is 0.1uW.	N/A
SFPPortTxTy	Port tx type.	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
pe			<ul style="list-style-type: none"> <li>0—Other or unknown.</li> <li>1—Short Wave Laser.</li> <li>2—Long Wave Laser LC 1310nm.</li> <li>3—Long Wave Laser LL 1550nm.</li> </ul>	
SFPOpticalPort	Optical port flag.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—No.</li> <li>1—Yes.</li> </ul>	If the value is 1, the FC_Port is an optical port. If the value is 0, the FC_Port is not an optical port.
SFPConnectorType	Connector type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Other or unknown.</li> <li>64—SFP+.</li> <li>Other—Reserved.</li> </ul>	N/A
SFPFECActive	State of FEC active	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—16G FEC status is inactive or unknown.</li> <li>1—16G FEC is active.</li> </ul>	N/A
QSFPDiagnosticsParameters	QSFP diagnostic parameters descriptor.	Data structure	Members include: <ul style="list-style-type: none"> <li>QSFPNotValid.</li> <li>QSFPTemperature.</li> <li>QSFPTempState.</li> <li>QSFPTempHAlarm.</li> <li>QSFPTempLAlarm.</li> <li>QSFPTempHWarn.</li> <li>QSFPTempLWarn.</li> <li>QSFPVoltage.</li> <li>QSFPVoltageState.</li> <li>QSFPVoltageHAlarm.</li> <li>QSFPVoltageLAlarm.</li> <li>QSFPVoltageHWarn.</li> <li>QSFPVoltageLWarn.</li> <li>LaneIdentifierFlag.</li> <li>LaneIdentifier.</li> <li>QSFP Tx Bias HAlarm.</li> <li>QSFP Tx Bias LAlarm.</li> <li>QSFP Tx Bias HWarn.</li> <li>QSFP Tx Bias LWarn.</li> <li>Lane0TxBias.</li> <li>Lane0TxBiasState.</li> <li>Lane1TxBias.</li> <li>Lane1TxBiasState.</li> <li>Lane2TxBias.</li> <li>Lane2TxBiasState.</li> <li>Lane3TxBias.</li> <li>Lane3TxBiasState.</li> <li>QSFP Tx Power HAlarm.</li> </ul>	Data structure of SFPDiagnosticsParameters and data structure of QSFPDiagnosticsParameters are mutual exclusive and only one of them can be set in a single message.

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>• QSFP TxPowerLAlarm.</li> <li>• QSFP TxPowerHWarn.</li> <li>• QSFP TxPowerLWarn.</li> <li>• Lane0TxPower.</li> <li>• Lane0TxPowerState.</li> <li>• Lane1TxPower.</li> <li>• Lane1TxPowerState.</li> <li>• Lane2TxPower.</li> <li>• Lane2TxPowerState.</li> <li>• Lane3TxPower.</li> <li>• Lane3TxPowerState.</li> <li>• QSFPRxPowerHAlarm.</li> <li>• QSFPRxPowerLAlarm.</li> <li>• QSFPRxPowerHWarn.</li> <li>• QSFPRxPowerLWarn.</li> <li>• Lane0RxPower.</li> <li>• Lane0RxPowerState.</li> <li>• Lane1RxPower.</li> <li>• Lane1RxPowerState.</li> <li>• Lane2RxPower.</li> <li>• Lane2RxPowerState.</li> <li>• Lane3RxPower.</li> <li>• Lane3RxPowerState.</li> <li>• QSFPPortTxType.</li> <li>• QSFPOpticalPort.</li> <li>• QSFPCconnectorType.</li> <li>• QSFPFECActive.</li> </ul>	
QSFPNotValid	Whether QSFP diagnostic parameters are valid.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>• 0—Valid.</li> <li>• 1—Invalid.</li> </ul>	<p>If the value is 1, the following columns are invalid:</p> <ul style="list-style-type: none"> <li>• QSFP Temperature.</li> <li>• QSFP TempState.</li> <li>• QSFP TempHAlarm.</li> <li>• QSFP TempLAlarm.</li> <li>• QSFP TempHWarn.</li> <li>• QSFP TempLWarn.</li> <li>• QSFP Voltage.</li> <li>• QSFP VoltageState.</li> <li>• QSFP VoltageHAlarm.</li> <li>• QSFP VoltageLAlarm.</li> <li>• QSFP VoltageHWarn.</li> <li>• QSFP VoltageLWarn.</li> </ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
				<ul style="list-style-type: none"> <li>• LaneIdentifierFlag.</li> <li>• LaneIdentifier.</li> <li>• QSFPTxBiasHAlarm.</li> <li>• QSFPTxBiasLAlarm.</li> <li>• QSFPTxBiasHWarn.</li> <li>• QSFPTxBiasLWarn.</li> <li>• Lane0TxBias.</li> <li>• Lane0TxBiasState.</li> <li>• Lane1TxBias.</li> <li>• Lane1TxBiasState.</li> <li>• Lane2TxBias.</li> <li>• Lane2TxBiasState.</li> <li>• Lane3TxBias.</li> <li>• Lane3TxBiasState.</li> <li>• QSFPTxPowerHAlarm.</li> <li>• QSFPTxPowerLAlarm.</li> <li>• QSFPTxPowerHWarn.</li> <li>• QSFPTxPowerLWarn.</li> <li>• Lane0TxPower.</li> <li>• Lane0TxPowerState.</li> <li>• Lane1TxPower.</li> <li>• Lane1TxPowerState.</li> <li>• Lane2TxPower.</li> <li>• Lane2TxPowerState.</li> <li>• Lane3TxPower.</li> <li>• Lane3TxPowerState.</li> <li>• QSFPRxPowerHAlarm.</li> <li>• QSFPRxPowerLAlarm.</li> <li>• QSFPRxPowerHWarn.</li> <li>• QSFPRxPowerLWarn.</li> <li>• Lane0RxPower.</li> <li>• Lane0RxPowerState.</li> <li>• Lane1RxPower.</li> </ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
				<ul style="list-style-type: none"> <li>• Lane1RxPowerState.</li> <li>• Lane2RxPower.</li> <li>• Lane2RxPowerState.</li> <li>• Lane3RxPower.</li> <li>• Lane3RxPowerState.</li> </ul>
QSFPTemperature	Temperature.	N/A	Short. Unit is 1/256 °C.	N/A
QSFPTempState	Running state of Temperature.	N/A	Each bit represents a type. As follows: <ul style="list-style-type: none"> <li>• 0—Normal.</li> <li>• 1—Transgress the low warning level.</li> <li>• 2—Transgress the high warning level.</li> <li>• 4—Transgress the low alarm level.</li> <li>• 8—Transgress the high alarm level.</li> <li>• Other—Unknown.</li> </ul>	N/A
QSFPTempHAlarm	High alarm of Temperature.	N/A	Short. Unit is 1/256 °C.	N/A
QSFPTempLAlarm	Low alarm of Temperature.	N/A	Short. Unit is 1/256 °C.	N/A
QSFPTempHWarn	High warning of Temperature.	N/A	Short. Unit is 1/256 °C.	N/A
QSFPTempLWarn	Low warning of Temperature.	N/A	Short. Unit is 1/256 °C.	N/A
QSFPVoltage	Voltage.	N/A	Unsigned short. Unit is 100uV.	N/A
QSFPVoltageState	Running state of Voltage.	N/A	Each bit represents a type. As follows: <ul style="list-style-type: none"> <li>• 0—Normal.</li> <li>• 1—Transgress the low warning level.</li> <li>• 2—Transgress the high warning level.</li> <li>• 4—Transgress the low alarm level.</li> <li>• 8—Transgress the high alarm level.</li> <li>• Other—Unknown.</li> </ul>	N/A
QSFPVoltageHAlarm	High alarm of Voltage.	N/A	Unsigned short. Unit is 100uV.	N/A
QSFPVoltage	Low alarm of	N/A	Unsigned short.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LAlarm	Voltage.		Unit is 100uV.	
QSFPVoltageHWarn	High warning of Voltage.	N/A	Unsigned short. Unit is 100uV.	N/A
QSFPVoltageLWarn	Low warning of Voltage.	N/A	Unsigned short. Unit is 100uV.	N/A
LaneIdentifierFlag	Lane identifier validity flag.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Invalid.</li> <li>1—Valid.</li> </ul>	If the value is 0, the LaneIdentifier column is not meaningful. If the value is 1, the single lane is indicated by the LaneIdentifier column.
LaneIdentifier	Lane identifier.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Lane 0.</li> <li>1—Lane 1.</li> <li>2—Lane 2.</li> <li>3—Lane 3.</li> </ul>	This column takes effect only when the LaneIdentifierFlag column is 1, and the value decide which lane is valide about TxBias, TxBiasState, TxPower, TxPowerState,RxPower and RxPowerState.
QSFTxBiasHAlarm	High alarm of TxBias of a lane.	N/A	Unsigned short. Unit is 2uA.	N/A
QSFTxBiasLAlarm	Low alarm of TxBias of a lane.	N/A	Unsigned short. Unit is 2uA.	N/A
QSFTxBiasHWarn	High warning of TxBias of a lane.	N/A	Unsigned short. Unit is 2uA.	N/A
QSFTxBiasLWarn	Low warning of TxBias of a lane.	N/A	Unsigned short. Unit is 2uA.	N/A
Lane0TxBias	Tx laser bias current of lane 0.	N/A	Unsigned short. Unit is 2uA.	N/A
Lane0TxBiasState	Running state of TxBias of lane 0.	N/A	Each bit represents a type. As follows: <ul style="list-style-type: none"> <li>0—Normal.</li> <li>1—Transgress the low warning level.</li> <li>2—Transgress the high warning level.</li> <li>4—Transgress the low alarm level.</li> <li>8—Transgress the high alarm level.</li> <li>Other—Unknown.</li> </ul>	N/A
Lane1TxBias	Tx laser bias current of lane 1.	N/A	Unsigned short. Unit is 2uA.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Lane1TxBias State	Running state of TxBias of lane 1.	N/A	Each bit represents a type. As follows: <ul style="list-style-type: none"> <li>0—Normal.</li> <li>1—Transgress the low warning level.</li> <li>2—Transgress the high warning level.</li> <li>4—Transgress the low alarm level.</li> <li>8—Transgress the high alarm level.</li> <li>Other—Unknown.</li> </ul>	N/A
Lane2TxBias	Tx laser bias current of lane 2.	N/A	Unsigned short. Unit is 2uA.	N/A
Lane2TxBias State	Running state of TxBias of lane 2.	N/A	Each bit represents a type. As follows: <ul style="list-style-type: none"> <li>0—Normal.</li> <li>1—Transgress the low warning level.</li> <li>2—Transgress the high warning level.</li> <li>4—Transgress the low alarm level.</li> <li>8—Transgress the high alarm level.</li> <li>Other—Unknown.</li> </ul>	N/A
Lane3TxBias	Tx laser bias current of lane 3.	N/A	Unsigned short. Unit is 2uA.	N/A
Lane3TxBias State	Running state of TxBias of lane 3.	N/A	Each bit represents a type. As follows: <ul style="list-style-type: none"> <li>0—Normal.</li> <li>1—Transgress the low warning level.</li> <li>2—Transgress the high warning level.</li> <li>4—Transgress the low alarm level.</li> <li>8—Transgress the high alarm level.</li> <li>Other—Unknown.</li> </ul>	N/A
QSFP TxPowerHAlarm	High alarm of TxPow of a lane.	N/A	Unsigned short. Unit is 0.1uW.	N/A
QSFP TxPowerLAlarm	Low alarm of TxPow of a lane.	N/A	Unsigned short. Unit is 0.1uW.	N/A
QSFP TxPowerHWarn	High warning of TxPow of a lane.	N/A	Unsigned short. Unit is 0.1uW.	N/A
QSFP TxPowerLWarn	Low warning of TxPow of a lane.	N/A	Unsigned short. Unit is 0.1uW.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Lane0TxPower	Tx output power of lane 0.	N/A	Unsigned short. Unit is 0.1uW.	N/A
Lane0TxPowerState	Running state of TxPow of lane 0.	N/A	Each bit represents a type. As follows: <ul style="list-style-type: none"> <li>0—Normal.</li> <li>1—Transgress the low warning level.</li> <li>2—Transgress the high warning level.</li> <li>4—Transgress the low alarm level.</li> <li>8—Transgress the high alarm level.</li> <li>Other—Unknown.</li> </ul>	N/A
Lane1TxPower	Tx output power of lane 1.	N/A	Unsigned short. Unit is 0.1uW.	N/A
Lane1TxPowerState	Running state of TxPow of lane 1.	N/A	Each bit represents a type. As follows: <ul style="list-style-type: none"> <li>0—Normal.</li> <li>1—Transgress the low warning level.</li> <li>2—Transgress the high warning level.</li> <li>4—Transgress the low alarm level.</li> <li>8—Transgress the high alarm level.</li> <li>Other—Unknown.</li> </ul>	N/A
Lane2TxPower	Tx output power of lane 2.	N/A	Unsigned short. Unit is 0.1uW.	N/A
Lane2TxPowerState	Running state of TxPow of lane 2.	N/A	Each bit represents a type. As follows: <ul style="list-style-type: none"> <li>0—Normal.</li> <li>1—Transgress the low warning level.</li> <li>2—Transgress the high warning level.</li> <li>4—Transgress the low alarm level.</li> <li>8—Transgress the high alarm level.</li> <li>Other—Unknown.</li> </ul>	N/A
Lane3TxPower	Tx output power of lane 3.	N/A	Unsigned short. Unit is 0.1uW.	N/A
Lane3TxPowerState	Running state of TxPow of lane 3.	N/A	Each bit represents a type. As follows: <ul style="list-style-type: none"> <li>0—Normal.</li> <li>1—Transgress the low</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			warning level. <ul style="list-style-type: none"> <li>• 2—Transgress the high warning level.</li> <li>• 4—Transgress the low alarm level.</li> <li>• 8—Transgress the high alarm level.</li> <li>• Other—Unknown.</li> </ul>	
QSFPRxPowerHAlarm	High alarm of RxPower of a lane.	N/A	Unsigned short. Unit is 0.1uW.	N/A
QSFPRxPowerLAlarm	Low alarm of RxPower of a lane.	N/A	Unsigned short. Unit is 0.1uW.	N/A
QSFPRxPowerHWarn	High warning of RxPower of a lane.	N/A	Unsigned short. Unit is 0.1uW.	N/A
QSFPRxPowerLWarn	Low warning of RxPower of a lane.	N/A	Unsigned short. Unit is 0.1uW.	N/A
Lane0RxPower	Received optical power of lane 0.	N/A	Unsigned short. Unit is 0.1uW.	N/A
Lane0RxPowerState	Running state of RxPower of lane 0.	N/A	Each bit represents a type. As follows: <ul style="list-style-type: none"> <li>• 0—Normal.</li> <li>• 1—Transgress the low warning level.</li> <li>• 2—Transgress the high warning level.</li> <li>• 4—Transgress the low alarm level.</li> <li>• 8—Transgress the high alarm level.</li> <li>• Other—Unknown.</li> </ul>	N/A
Lane1RxPower	Received optical power of lane 1.	N/A	Unsigned short. Unit is 0.1uW.	N/A
Lane1RxPowerState	Running state of RxPower of lane 1.	N/A	Each bit represents a type. As follows: <ul style="list-style-type: none"> <li>• 0—Normal.</li> <li>• 1—Transgress the low warning level.</li> <li>• 2—Transgress the high warning level.</li> <li>• 4—Transgress the low alarm level.</li> <li>• 8—Transgress the high alarm level.</li> <li>• Other—Unknown.</li> </ul>	N/A
Lane2RxPower	Received optical power of lane 2.	N/A	Unsigned short.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Unit is 0.1uW.	
Lane2RxPowerState	Running state of RxPower of lane 2.	N/A	<p>Each bit represents a type.</p> <p>As follows:</p> <ul style="list-style-type: none"> <li>0—Normal.</li> <li>1—Transgress the low warning level.</li> <li>2—Transgress the high warning level.</li> <li>4—Transgress the low alarm level.</li> <li>8—Transgress the high alarm level.</li> <li>Other—Unknown.</li> </ul>	N/A
Lane3RxPower	Received optical power of lane 3.	N/A	<p>Unsigned short.</p> <p>Unit is 0.1uW.</p>	N/A
Lane3RxPowerState	Running state of RxPower of lane 3.	N/A	<p>Each bit represents a type.</p> <p>As follows:</p> <ul style="list-style-type: none"> <li>0—Normal.</li> <li>1—Transgress the low warning level.</li> <li>2—Transgress the high warning level.</li> <li>4—Transgress the low alarm level.</li> <li>8—Transgress the high alarm level.</li> <li>Other—Unknown.</li> </ul>	N/A
QSFPPortTxType	Port tx type.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>0—Other or unknown.</li> <li>1—Short Wave Laser.</li> <li>2—Long Wave Laser LC.</li> </ul>	N/A
QSFPOpticalPort	Optical port flag.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>0—No.</li> <li>1—Yes.</li> </ul>	If the value is 1, the FC_Port is an optical port. If the value is 0, the FC_Port is not an optical port.
QSFPConnectorType	Connector type.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>0—Other or unknown.</li> <li>64—QSFP.</li> <li>Other—Reserved.</li> </ul>	N/A
QSFPFECActive	State of FEC active.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>0—16G FEC status is inactive or unknown.</li> <li>1—16G FEC is active.</li> </ul>	N/A
FECStatusDescriptor	FEC status descriptor.	Data structure	<p>Members include:</p> <ul style="list-style-type: none"> <li>CorrectedBlocks.</li> <li>UnCorrectableBlocks.</li> </ul>	N/A
CorrectedBlock	Number of FEC	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ks	encoding blocks reported as corrected by hardware.			
UnCorrectableBlocks	Number of FEC encoding blocks reported as uncorrectable by hardware.	N/A	Unsigned integer.	N/A
BufferCredit	Buffer Credit descriptor.	Data structure	Members include: <ul style="list-style-type: none"> <li>• BBCredit.</li> <li>• AttachedBBCredit.</li> <li>• RoundTripTime.</li> </ul>	N/A
BBCredit	FC_Port buffer-to-buffer credit.	N/A	Unsigned integer.	N/A
AttachedBBCredit	Attached FC_Port buffer-to-buffer credit.	N/A	Unsigned integer.	N/A
RoundTripTime	Nominal FC_Port RTT.	N/A	Unsigned integer.	A value of zero indicates the RTT is unknown and a non-zero value indicates the RTT of the link expressed in nanoseconds.
OpticalProductData	Optical Element Data Descriptor.	Data structure	Members include: <ul style="list-style-type: none"> <li>• VendorName.</li> <li>• Partnumber.</li> <li>• Serialnumber.</li> <li>• Revision.</li> <li>• Date.</li> </ul>	N/A
VendorName	Vendor name.	N/A	String. Length: 1 to 16 characters.	N/A
Partnumber	Vendor part number.	N/A	String. Length: 1 to 16 characters.	N/A
Serialnumber	Vendor serial number.	N/A	String. Length: 1 to 16 characters.	N/A
Revision	Vendor revision.	N/A	String. Length: 1 to 2 characters.	N/A
Date	Vendor's manufacturing date code.	N/A	String. Length: 1 to 8 characters.	N/A

# FDMI/RDPInterval

This table contains the interval for sending RDP request packets.

## XML structure

```
<FDMI>
  <RDPInterval>
    <Interval></Interval>
  </RDPInterval>
</FDMI>
```

## Table description

Item	Description
Feature name	FDMI
Table name	RDPInterval
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Interval	Interval for sending RDP request packet.	N/A	Unsigned integer. Value range: 5 to 1440.	N/A

# FFILTER

## FFILTER/Policy

This table contains file filter policie information.

### XML structure

```
<FFILTER>
  <Policies>
    <Policy>
      <PolicyName></PolicyName>
      <PolicyDescription></PolicyDescription>
    </Policy>
  </Policies>
</FFILTER>
```

### Table description

Item	Description
Feature name	FFILTER
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the file filter policy	Index	String, case-insensitive Length: 1 to 31 characters.	N/A
PolicyDescription	Description of the file filter policy	N/A	String, case-sensitive Length: 1 to 255 characters.	N/A

## FFILTER/PolicyInProfile

This table contains file filter policies applied to the profile.

## XML structure

```
<FFILTER>
  <PolicyInProfile>
    <Profile>
      <ProfileName></ProfileName>
      <PolicyName></PolicyName>
    </Profile>
  </PolicyInProfile>
</FFILTER>
```

## Table description

Item	Description
Feature name	FFILTER
Table name	PolicyInProfile
Table type	Multi-instance table
Row name	Profile
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Name of the profile	Index	String, case-insensitive Length: 1 to 100 characters.	N/A
PolicyName	Name of the policy	NA	String, case-insensitive Length: 1 to 31 characters.	N/A

## FFILTER/RuleInPolicy

This table contains information about rules in a file filter policy.

## XML structure

```
<FFILTER>
  <RuleInPolicy>
    <Rule>
      <PolicyName></PolicyName>
      <RuleName></RuleName>
      <FGroupName></FGroupName>
      <Application></Application>
      <Direction></Direction>
```

```

    <Action></Action>
    <Logging></Logging>
  </Rule>
</RuleInPolicy>
</FFILTER>

```

## Table description

Item	Description
Feature name	FFILTER
Table name	RuleInPolicy
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the policy	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
RuleName	Name of the rule	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
FGroupName	Name of the file type group	N/A	String, case-insensitive. Length: 0 to 31 characters.	N/A
Application	Application of the rule	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—HTTP</li> <li>2—FTP</li> <li>4—SMTP</li> <li>8—IMAP</li> <li>16—POP3</li> <li>32—NFS</li> <li>64—SMB</li> <li>128—RTMP</li> </ul>	Examples: 3—Application is HTTP and FTP.
Direction	Direction of the rule	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—upload</li> <li>1—download</li> <li>2—both</li> </ul>	Default is 0.
Action	Action for packets matching the rule	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—drop</li> <li>1—permit</li> </ul>	Default is 0.
Logging	Logging or not	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A

# FFILTER/FGroup

This table contains file filter file type group information.

## XML structure

```
<FFILTER>
  <FGroups>
    <FGroup>
      <FGroupName></FGroupName>
      <FGroupDescription></FGroupDescription>
    </FGroup>
  </FGroups>
</FFILTER>
```

## Table description

Item	Description
Feature name	FFILTER
Table name	FGroups
Table type	Multi-instance table
Row name	FGroup
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FGroupName	Name of the file type group	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
FGroupDescription	Description of the file type group	N/A	String, case-sensitive Length: 1 to 255 characters.	N/A

# FFILTER/PatternInFGroup

This table contains information about pattern in a file filter file type group.

## XML structure

```
<FFILTER>
  <PatternInFGroups>
    <PatternInFGroup>
      <FGroupName></FGroupName>
```

```

    <PatternName></PatternName>
    <PatternValue></PatternValue>

# FileSystem

## FileSystem/Files

This table describes the actions that can be performed to the file.

### XML structure

```
<FileSystem>
  <Files>
    <File>
      <SrcName></SrcName>
      <DstName></DstName>
      <VRF></VRF>
      <Operations>
        <Delete></Delete>
        <UnReservedDelete></UnReservedDelete>
        <Copy></Copy>
        <Move></Move>
        <Rename></Rename>
        <Gzip></Gzip>
        <Gunzip></Gunzip>
        <sha256sum></sha256sum>
        <md5sum></md5sum>
        <Mkdir></Mkdir>
        <Rmdir></Rmdir>
      </Operations>
    </File>
  </Files>
</FileSystem>
```

### Table description

Item	Description
Feature name	FileSystem
Table name	Files
Table type	Multi-instance table
Row name	File
Restrictions	Delete, UnReservedDelete, Copy, Move, Rename, More, Gzip, Gunzip, Sha256sum, Md5sum, Mkdir and Rmdir are mutually exclusive.

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcName	Full path and file name. For examples: flash:/logfile/logfile.log chassis3#slot1#cfa0:/main.cfg	Index	NameString Length: 1 to 4096 characters.	N/A
DstName	Full path and file name. For examples: flash:/logfile/logfile.log chassis3#slot1#cfa0:/main.cfg	N/A	NameString Length: 1 to 4096 characters.	N/A
VRF	The VRF name.	N/A	String. Length: 1 to 31 Characters.	If VRF is not specified, it is represented that host is on the public network.
Delete	Delete a file.	N/A	This column must be empty.	N/A
UnReservedDelete	Delete a file permanently.	N/A	This column must be empty.	N/A
Copy	Copy a file.	N/A	This column must be empty. DstName column must not be empty.	N/A
Move	Move a file.	N/A	This column must be empty. DstName column must not be empty.	N/A
Rename	Rename a file or directory.	N/A	This column must be empty. DstName column must not be empty.	N/A
Gzip	Compress file.	N/A	This column must be empty. DstName column must be empty.	N/A
Gunzip	Decompress file.	N/A	This column must be empty. DstName column must be empty.	N/A
Sha256sum	Compute the hash digest of a file using the SHA256 algorithm.	N/A	This column must be empty. DstName column must be empty.	N/A
Md5sum	Compute the hash digest of a file using the MD5 algorithm.		This column must be empty. DstName column must be empty.	N/A
Mkdir	Create a new	N/A	This column must be empty.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	directory.		DstName column must be empty.	
RmDir	Remove an empty directory.	N/A	This column must be empty. DstName column must be empty.	N/A

## FileSystem/RecycleBin

This table describes the actions that can be performed to the file under recycle-bin.

### XML structure

```

<FileSystem>
  <RecycleBin>
    <RecycleBinFile>
      <Name></Name>
      <Operations>
        <Undelete></Undelete>
        <Clear></Clear>
      </Operations>
    </RecycleBinFile>
  </RecycleBin>
</FileSystem>

```

### Table description

Item	Description
Feature name	FileSystem
Table name	RecycleBin
Table type	Multi-instance table
Row name	RecycleBinFile
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Name	Full path and file name. For examples: flash:/logfile/logfile.log chassis3#slot1#cfa0:/main.cfg	Index	String. Length: 1 to 4096 characters.
Undelete	Recover a deleted file.	N/A	This column must be empty.
Clear	Delete a deleted file permanently.	N/A	This column must be empty.

## FileSystem/Media

This table describes the actions that can be performed to the media.

## XML structure

```
<FileSystem>
  <Media>
    <Medium>
      <Name></Name>
      <Fdisk></Fdisk>
      <Part1Size></Part1Size>
      <Part2Size></Part2Size>
      <Part3Size></Part3Size>
      <Part4Size></Part4Size>
    </Medium>
  </Media>
</FileSystem>
```

## Table description

Item	Description
Feature name	FileSystem
Table name	Media
Table type	Multi-instance table
Row name	Medium
Restrictions	Part1Size, Part2Size, Part3Size and Part4Size should be assigned in order. It is not permitted to assign Part2Size without Part1Size.

## Columns

Column name	Column description	Column type	Data type and restrictions
Name	Storage medium name. For examples: flash: chassis3#slot1#cfa:	Index	String. Length: 1 to 255 characters.
Fdisk	Partition a storage medium.	N/A	This column must be empty.
Part1Size	The size of partition1. Unit: Mbyte.	Unsigned integer.	N/A
Part2Size	The size of partition2. Unit: Mbyte.	Unsigned integer.	N/A
Part3Size	The size of partition3. Unit: Mbyte.	Unsigned integer.	N/A
Part4Size	The size of partition4. Unit: Mbyte.	Unsigned integer.	N/A

## FileSystem/Partitions

### XML structure

```
<FileSystem>
  <Partitions>
    <Partition>
      <Name></Name>
      <Operations>
        <Format></Format>
        <FixDisk></FixDisk>
        <Umount></Umount>
        <Mount></Mount>
      </Operations>
    </Partition>
  </Partitions>
</FileSystem>
```

### Table description

Item	Description
Feature name	FileSystem

Table name	Partitions
Table type	Multi-instance table
Row name	Partition
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Name	Storage medium partition name. For examples: flash: chassis3#slot1#cfa0:	Index	String. Length: 1 to 255 characters.
Format	Format a storage medium partition.	N/A	This column must be empty.
FixDisk	Check and repair a storage medium partition.	N/A	This column must be empty.
Umount	Unmount a storage medium partition.	N/A	This column must be empty.
Mount	Mount a storage medium partition.	N/A	This column must be empty.

# FileSystem

## FileSystem/Files

This table contains the file information.

### XML structure

```
<FileSystem>
  <Files>
    <File>
      <Name></Name>
      <Path></Path>
      <Size></Size>
      <Time></Time>
      <IsDirectory></IsDirectory>
    </File>
  </Files>
</FileSystem>
```

### Table description

Item	Description
Feature name	FileSystem
Table name	Files
Table type	Multi-instance table
Row name	File
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remark
Name	Fully qualified name of a directory or file	Index	String, case insensitive. Length: 1 to 4096 characters.	Examples: <ul style="list-style-type: none"><li>flash:/logfile/logfile.log</li><li>chassis3#slot1#cfa0:/main.cfg</li></ul>

Column name	Column description	Column type	Data type and restrictions	Remark
Path	Absolute path to the file	N/A	String, case insensitive. Length: 1 to 4096 characters.	Examples: <ul style="list-style-type: none"> <li>flash:/logfile</li> <li>chassis3#slot1#cfa0:</li> </ul>
Size	File size in bytes	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
Time	Latest modification time.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
IsDirectory	Whether the Name column carries a directory	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A

## FileSystem/RecycleBin

This Table contains recycle bin files information.

### XML structure

```

<FileSystem>
  <RecycleBin>
    <RecycleBinFile>
      <Medium></Medium>
      <TrashFiles>
        <FileName></FileName>
      </TrashFiles>
    </RecycleBinFile>
  </RecycleBin>
</FileSystem>

```

### Table description

Item	Description
Feature name	FileSystem
Table name	RecycleBin
Table type	Multi-instance table
Row name	RecycleBinFile
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remark
Medium	File system name	Index	String. Length: 1 to 255 characters.	Examples: <ul style="list-style-type: none"><li>chassis2#slot1#flash:</li><li>chassis1#slot2#cfa0:</li></ul>
TrashFiles	Files in the recycle bin	Data structure	Members: FileName	N/A
FileName	File name.	N/A	String, case insensitive. Length: 1 to 4096 characters.	Examples: <ul style="list-style-type: none"><li>logfile/logfile.log</li><li>main.cfg</li></ul>

## FileSystem/Media

This Table contains medium information.

## XML structure

```
<FileSystem>
  <Media>
    <Medium>
      <Name></Name>
      <PartitionCapability></PartitionCapability>
    </Medium>
  </Media>
</FileSystem>
```

## Table description

Item	Description
Feature name	FileSystem
Table name	Media
Table type	Multi-instance table
Row name	Medium
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remark
Name	Storage medium name	Index	String. Length: 1 to 255 characters.	Examples: <ul style="list-style-type: none"> <li>chassis2#slot1#flash:</li> <li>chassis1#slot2#cfa:</li> </ul>
PartitionCapability	Whether the medium can be partitioned	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A

## FileSystem/Partitions

This Table contains partition information.

### XML structure

```

<FileSystem>
  <Partitions>
    <Partition>
      <Name></Name>
      <Total></Total>
      <Used></Used>
      <Free></Free>
      <Bootable></Bootable>
      <MountState></MountState>
    </Partition>
  </Partitions>
</FileSystem>

```

### Table description

Item	Description
Feature name	FileSystem
Table name	Partitions
Table type	Multi-instance table
Row name	Partition
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remark
Name	Partition name	Index	String.	Examples:

Column name	Column description	Column type	Data type and restrictions	Remark
			Length: 1 to 255 characters.	<ul style="list-style-type: none"> <li>chassis2#slot1#flash:</li> <li>chassis1#slot2#cfa0:</li> </ul>
Total	Total size of the partition in bytes	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
Used	Used size of the partition in bytes.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
Free	Available size of the partition in bytes	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
Bootable	Whether the partition is the startup partition	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
MountState	Whether the partition is mounted	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	If the value of this column is false, only this column and the Name column can be read.

## FileSystem/Files

Message	Explanation
The destination file name can't be the same as the source file name. 目标文件名不能与源文件名相同。	During executing copy or move operation, the destination file name must not be the same as the source file name. 目标文件名不能与源文件名相同。
Permission denied. 权限不足。	During executing copy, move, delete or rename operation, user lacks permissions. 权限不足。
The file or directory doesn't exist. 文件或目录不存在。	During executing copy, move, delete or rename operation on a file or directory, the file or directory doesn't exist. 源文件或目标文件目录不存在。
Insufficient storage or disk space. 存储空间不足或者磁盘资源不足。	During executing copy or move operation, insufficient storage or disk space. 存储空间不足或者磁盘资源不足，拷贝失败。
Wrong file name or directory name. Please check. 文件名(或目录名)错误，请检查。	During executing rename operation, the source file name and the destination file name must not end with '\'. 文件名(或目录名)错误，请检查。
SrcName and DstName are not in the same directory. 源文件名和目标文件名中的路径不同。	During executing rename operation, the source file and the destination file must in the same parent directory. 重命名操作的源文件和目标文件路径必须相同。
The destination file name is already used. 目标文件名已经被使用。	During executing rename operation, the destination file name must not be used. 重命名操作的目标文件名已被使用。
The directory already exists. 该目录已经存在。	During executing make directory operation, the directory must not exist. 新创建的目录已经存在。
The parent directory doesn't exist. 指定目录不存在。	During executing make directory operation, the parent directory doesn't exist. 新创建目录路径错误，父目录不存在。
A file with the same name already exists. 已存在同名文件。	During executing make directory operation, the directory must not be the same as an exist file. 新创建目录名不能和已存在的文件重名。
Can't remove the directory because it is not empty. 目录非空，无法删除。	During executing delete directory operation, the directory must be empty. 目录非空，无法删除。
Can't execute this command. The security log file is already saved in the storage medium. 不能执行该命令，安全日志文件已经保存在该存储介质。	Before partition a storage device, delete all the saved security log files first. 安全日志文件所在存储介质不能做分区操作。
Please use 'Rmdir' to remove the directory. 请使用Rmdir删除文件夹。	The directory can't be deleted by 'Delete' operation, but 'Rmdir'. 删除目录需要用 'Rmdir' 命令。

Can't overwrite directory %s with non-directory %s. 不能将目录文件%s改写为非目录文件%s”。	During executing copy or move operation, the destination file name must not be the same as an exist directory. 不能拷贝目录文件到非目录文件。
DstName is not required for this operation. 该操作无需指定DstName列的值。	The 'DstName' must not be set in operation 'Delete', 'UnReservedDelete', 'Gzip', 'Gunzip', 'Sha256sum', 'Md5sum', 'Mkdir' and 'Rmdir'. 'Delete', 'UnReservedDelete', 'Gzip', 'Gunzip', 'Sha256sum', 'Md5sum', 'Mkdir' 和 'Rmdir'等操作不能有'DstName'参数。
Please enter a value for the DstName column. 请输入DstName列的值	The 'DstName' must be set in operation 'Copy', 'Move', 'Rename', 'Sha256sum', 'Md5sum', 'Mkdir' and 'Rmdir'. 'Copy', 'Move', 'Rename', 'Sha256sum', 'Md5sum', 'Mkdir' 和 'Rmdir'等操作必须有'DstName'参数。
Operation failed. Curl unsupported protocol. 操作失败，Curl不支持的协议类型。	Failed to copy file through network, unsupported protocol. 文件URL协议不支持，获取文件失败。
Operation failed. Remote server login denied. 操作失败，登录服务器失败，用户名或密码错误。	Failed to copy file through network, wrong user name or password. 用户名或密码错误，登录服务器失败。
Operation failed. Remote file or directory not found. 操作失败，远端服务器文件或目录不存在。	Failed to copy file through network, remote file or directory not found. 远端服务器文件或目录不存在，下载失败。
Operation failed. Remote server can't connect. 操作失败，远端服务器不可达。	Failed to copy file through network, remote server can't connect. 远端服务器不可达。
Invalid VPN name. 不可用的VPN名字。	Failed to copy file through network, invalid VPN name. 不可用的VPN名字。
Invalid URL. 不可用的URL。	Failed to copy file through network, invalid URL. 无效URL。

## FileSystem/Media

Message	Explanation
Storage device error. 存储设备错误。	Can't read storage device. 解析存储设备失败。
The storage space is too small to partition. 存储空间太小，无法分区。	Do not need to partition. 存储空间太小，无法分区。
The partition size must be greater than or equal to %dMB. 新建分区大小必须大于等于%dMB。	The partition size is set too small. 新建分区大小必须大于等于系统设定的最小值。
The partition size must be less than or equal to %uMB. 新建分区大小必须小于等于%uMB。	The partition size is set too big. 新建分区大小必须小于等于系统设定的最大值。
The remaining space is less than %uMB. 剩余空间不足%uMB。	The remaining space is not enough. 存储设备剩余空间不足。

# FileSystem/Partitions

Message	Explanation
The storage device is being used and locked by another process. 设备正在使用中，已被其他进程加锁。	Wait for the storage device to be released. 设备正在使用中，已被其他进程加锁。
Operation failed. The device is in use and locked by another process. 操作失败。此分区正在使用中。	Operation failed, wait for the storage device to be released. 操作失败。此分区正在使用中。

## FTP/Server

Message	Explanation
Failed to enable FTP server. 使能FTP server失败	When the FTP service port number has been used by other services, it does not support to enable FTP server.
Failed to set the idle-timeout interval for FTP connections. 配置空闲超时失败.	If the idle-timeout interval for FTP connections can't be processed by the daemon of FTP, the configuration of specified idle-timeout interval for FTP will fail.
Failed to specify ACL. 配置ACL失败.	If the ACL configuration can't be processed by the daemon of FTP, the specified ACL configuration will fail.
Failed to specify the SSL server policy. 配置SSL失败.	The specified SSL server policy name that need to be configured must already exist.

# Fundamentals

## Fundamentals/CurrentSessionOpt

This table describes the actions that can be performed to current session.

### XML structure

```
<Fundamentals>
  <CurrentSessionOpt>
    <DisableEditConfigWhenRollback/>
    <EnableLightRollback/>
  </CurrentSessionOpt>
</Fundamentals>
```

### Table description

Item	Description
Feature name	Fundamentals
Table name	CurrentSessionOpt
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DisableEditConfigWhenRollback	Reject edit-config request when system is performing rollback.	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b></li><li><b>false</b></li></ul>	N/A
EnableLightRollback	Enable rollback in a light weight method.	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b></li><li><b>false</b></li></ul>	This column is used to enable or disable the light rollback(a light way to rollback when you get an error in the edit-config operation while the error-option is set to be rollback-on-error). By default, it is false

AclName	Name of the ACL for HTTPS access control.	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.	Only basic ACLs are supported. This column and the <b>AclNumber</b> column overwrites each other. The name of an ACL cannot be <b>all</b> .

# Fundamentals/NetconfResXPath

This table contains NETCONF XML path information.

## XML structure

```
<Fundamentals>
  <NetconfResXPath>
    <XPath>
      <Path></Path>
      <Type></Type>
    </XPath>
  </NetconfResXPath>
</Fundamentals>
```

## Table description

Item	Description
Feature name	Fundamentals
Table name	NetconfResXPath
Table type	Multi-instance table
Row name	xPath
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Path	The operational XML resource path .	Index	String. case-insensitive.
Type	The type of the operational XML resource path .	N/A	Enumeration: <ul style="list-style-type: none"><li>0 —The XML path of NETCONF protocol. Example: “rpc/kill-session”.</li><li>1— The intermediate XML path of NETCONF protocol. Example: “rpc/”.</li><li>2 —The XML path of device resources. Example: “ifmgr/interfaces/interface/if index”.</li><li>3 —The intermediate</li></ul>

Column name	Column description	Column type	Data type and restrictions
			XML path of device resources. Example: "ifmgr/interfaces/interface/" .

## Fundamentals/WebMenuPath

This table contains web menu path information.

### XML structure

```

<Fundamentals>
  <WebMenuPath>
    <MenuPath>
      <Path></Path>
      <Title></Title>
      <Type></Type>
    </MenuPath>
  </WebMenuPath>
</Fundamentals>

```

### Table description

Item	Description
Feature name	Fundamentals
Table name	WebMenuPath
Table type	Multi-instance table
Row name	MenuPath
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Path	Web path of menu.	Index	String. Case-insensitive.	N/A
Title	The description of WEB menu.	N/A	String. Length: 1 to 31 characters.	Depend on the language of current user.
Type	The type of WEB	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	menu.		<ul style="list-style-type: none"> <li>0 – Leaf menu which is corresponding to the specific web page.</li> <li>1 – Intermediate menu node which is not corresponding to the specific web page.</li> </ul>	

## Fundamentals/SoapUI

This table contains SOAP service information.

### XML structure

```

<Fundamentals>
  <SoapUI>
    <HTTP>
      <IPv4AclNumber></IPv4AclNumber>
      <IPv4AclName></IPv4AclName>
      <IPv6AclNumber></IPv6AclNumber>
      <IPv6AclName></IPv6AclName>
    </HTTP>
  </SoapUI>
</Fundamentals>

```

### Table description

Item	Description

      <DesCbc></DesCbc>
    </Encryption>
  </GdoiGmGroup>
</GdoiGmGroups>
```

### Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiGmGroups
Table type	Multi-instance table
Row name	GdoiGmGroup
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the	Index	String.	N/A.

Column name	Column description GDOI GM group	Column type	Data type and restrictions	Remarks
			Length: 1 to 63 characters Case insensitive.	
IPVersion	GM group IP version.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4(Default).</li> <li>2—IPv6.</li> </ul>	N/A.
Identity	GDOI GM group ID.	Data structure	Members include: <ul style="list-style-type: none"> <li>Type</li> <li>Address</li> <li>Number</li> </ul>	Use Type to specify which member is valid
Type	Identity type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—invalid(Default)</li> <li>1—Number Type</li> <li>2—Address Type</li> </ul>	0 means Identity is not specified. In this case neither Address nor Number is valid. 1 means Identity is Address. In this case, only Address is valid. 2 means Identity is Number. In this case only Number is valid.
Number	A number to identify the GDOI GM group.	N/A	Unsigned integer. Value range of 0 to 2147483647.	Number is ignored if Type is not 2.
Address	IPv4 address to identify the GDOI GM group	N/A	IPv4 address.	Address is ignored if Type is not 1.
RegistrationInterface	Registration interface name for a group member	N/A	String, case-insensitive. Length: 1 to 63 characters The default is empty.	N/A.
Encryption	KEK encryption algorithms	Data structure	Members include: <ul style="list-style-type: none"> <li>ThreeDesCbc</li> <li>AesCbc128</li> <li>AesCbc192</li> <li>AesCbc256</li> <li>DesCbc</li> </ul>	The encryption algorithms is from 0 to 1."1"means the encryption algorithms is enable, "0" means disable.
ThreeDesCbc	The 3DES-CBC encryption algorithm	N/A	Unsigned integer. Value range: 0 to 1. The default is 1.	N/A
AesCbc128	The AES-CBC-128 encryption algorithm	N/A	Unsigned integer. Value range: 0 to 1. The default is 1	N/A
AesCbc192	The AES-CBC-192 encryption algorithm	N/A	Unsigned integer. Value range: 0 to 1. The default is 1.	N/A
AesCbc256	The AES-CBC-256 encryption algorithm	N/A	Unsigned integer. Value range: 0 to 1 The default is 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DecCbc	The DEC-CBC encryption algorithm	N/A	Unsigned integer. Value range: 0 to 1. The default is 1	N/A

## GdoiGmGroupServers

This table displays key servers (KS) of a GM group.

### XML structure

```

<GdoiGmGroupServers>
  <Server>
    <GroupName></GroupName>
    <Host></Host>
    <Vrf></Vrf>
  </Server>
</GdoiGmGroupServers>

```

### Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiGmGroupServers
Table type	Multi-instance table
Row name	Server
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the GDOI GM group	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A.
Host	Key server IP address or hostname	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. Hostname: String, 1 to 253 characters, case-sensitive.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. Hostname can contains letters, digits, hyphens (-), and underscores (_).
Vrf	VRF instance	Index	String, case-sensitive.	If the server is on the

Column name	Column description	Column type	Data type and restrictions	Remarks
	name		Length: 0 to 31 characters. The default is empty.	public network, the length of characters is 0.

## GdoiGmGroupTransformSets

This table displays transform sets of a GM group.

### XML structure

```

<GdoiGmGroupTransformSets>
  <TransformSet>
    <GroupName></GroupName>
    <TransformSetList>
      <TransformSetName></TransformSetName>
    </TransformSetList>
  </TransformSet>
</GdoiGmGroupTransformSets>

```

### Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiGmGroupTransformSets
Table type	Multi-instance table
Row name	TransformSet
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the GDOI GM group	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A.
TransformSet List	List of transform set names	Data structure	Members include: <ul style="list-style-type: none"> <li>TransformSetName</li> </ul>	N/A.
TransformSet Name	IPsec transform set name	Column	String, case-insensitive. Length :1 to 63 characters.	This Column can be repeated for 0 to 6 times.

# GdoiIPv4Policies

This table displays GDOI policies of a GM group.

## XML structure

```
<GdoiIPv4Policies>
  <Policy>
    <PolicyName></PolicyName>
    <SeqNum></SeqNum>
    <GroupName></GroupName>
    <ACL>
      <Name></Name>
      <Number></Number>
    </ACL>
  </Policy>
</GdoiIPv4Policies>
```

## Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiIPv4Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the IPsec policy	Index	String, case-insensitive. Length: 1 to 63 characters.	An IPv4 IPsec policy and an IPv6 IPsec policy can use the same PolicyName.
SeqNum	Sequence number of the IPsec policy entry	Index	Unsigned integer. <ul style="list-style-type: none"><li>Value range: 1 to 65535.</li></ul>	An IPv4 IPsec policy and an IPv6 IPsec policy can use the same sequence number.
GroupName	Name of the GDOI GM group	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A.
ACL	Reference an ACL for an IPsec	Data structure	Members include: <ul style="list-style-type: none"><li>Name</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	policy		<ul style="list-style-type: none"> <li>Number</li> </ul>	
Name	ACL name	N/A	String. <ul style="list-style-type: none"> <li>Length: 1 to 63 characters.</li> <li>Default is empty.</li> </ul>	If ACL Name is not empty, the ACL Number does not make sense.
Number	ACL number	N/A	Integer. Value range: 3000 to 3999. <ul style="list-style-type: none"> <li>Default is -1.</li> </ul>	<ul style="list-style-type: none"> <li>Only when the ACL Name is empty, does the ACL Number make sense.</li> </ul>

## GdoiIPv6Policies

This table displays GDOI IPv6 policies of a GM group.

### XML structure

```

<GdoiIPv6Policies>
  <Policy>
    <PolicyName></PolicyName>
    <SeqNum></SeqNum>
    <GroupName></GroupName>
    <ACL>
      <Name></Name>
      <Number></Number>
    </ACL>
  </Policy>
</GdoiIPv6Policies>

```

### Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiIPv6Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description		Column type	Data type and restrictions	Remarks
PolicyName	Name of the IPsec policy		Index	String, case-insensitive. Length: 1 to 63 characters.	An IPv4 IPsec policy and an IPv6 IPsec policy can use the same PolicyName.
SeqNum	Sequence number of the IPsec policy entry		Index	Unsigned integer. • Value range: 1 to 65535.	An IPv4 IPsec policy and an IPv6 IPsec policy can use the same sequence number.
GroupName	Name for the GDOI GM group		N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A.
ACL	Reference an ACL for an IPsec policy		Data structure	Members include: • Name • Number	N/A
Name	ACL name	N/A		String. • Length: 1 to 63 characters. • Default is empty.	If ACL Name is not empty, the ACL Number does not make sense.
Number	ACL number	N/A		Unsigned integer. Value range: 3000 to 3999. • Default is 0.	<ul style="list-style-type: none"> <li>Only when the ACL Name is empty, does the ACL Number make sense.</li> </ul>

# GDVPNGM

## GdoiGmGroups

This table displays GM group information.

### XML structure

```
<GdoiGmGroups>
  <GdoiGmGroup>
    <GroupName></GroupName>
    <IPVersion></IPVersion>
    <Identity>
      <Type></Type>
      <Number></Number>
      <Address></Address>
    </Identity>
    <RegistrationInterface></RegistrationInterface>
    <Encryption>
      <ThreeDesCbc></ThreeDesCbc>
      <AesCbc128></AesCbc128>
      <AesCbc192></AesCbc192>
      <AesCbc256></AesCbc256>
      <DesCbc></DesCbc>
    </Encryption>
  </GdoiGmGroup>
</GdoiGmGroups>
```

### Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiGmGroups
Table type	Multi-instance table
Row name	GdoiGmGroup
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the	Index	String, Case insensitive.	N/A.

Column name	Column description GDOI GM group	Column type	Data type and restrictions Length: 1 to 63 characters	Remarks
IPVersion	GM group IP version.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4(Default)</li> <li>2—IPv6</li> </ul>	It is not suggested to change a group's IPVersion from IPv4 to IPV6 or IPV6 to IPV4, some config of the group may lost.
Identity	GDOI GM group ID.	Data structure	Members include: <ul style="list-style-type: none"> <li>Type</li> <li>Address</li> <li>Number</li> </ul>	Use Type to specify which member is valid
Type	Identity type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—invalid(Default)</li> <li>1—Number Type</li> <li>2—Address Type</li> </ul>	0 means Identity is not specified,in this case neither Address nor Number is valid. 1 means Identity is Address,in this case, only Address is valid. 2 means Identity is Number,in this case only Number is valid.
Number	A number to identify the GDOI GM group.	N/A	Unsigned integer. Value range of 0 to 2147483647.	Number is ignored if Type is not 2.
Address	IPv4 address to identify the GDOI GM group	N/A	IPv4 address.	Address is ignored if Type is not 1.
RegistrationInterface	Registration interface name for a group member	N/A	String, Case insensitive. Length: 1 to 63 characters The default is empty.	N/A.
Encryption	KEK encryption algorithms	Data structure	Members include: <ul style="list-style-type: none"> <li>ThreeDesCbc</li> <li>AesCbc128</li> <li>AesCbc192</li> <li>AesCbc256</li> <li>DesCbc</li> </ul>	The encryption algorithms is from 0 to 1."1"means the encryption algorithms is enable, "0" means disable.
ThreeDesCbc	The 3DES-CBC encryption algorithm	N/A	Unsigned integer. Value range: 0 to 1. The default is 1.	N/A
AesCbc128	The AES-CBC-128 encryption algorithm	N/A	Unsigned integer. Value range: 0 to 1. The default is 1	N/A
AesCbc192	The AES-CBC-192 encryption algorithm	N/A	Unsigned integer. Value range: 0 to 1. The default is 1.	N/A
AesCbc256	The AES-CBC-256 encryption algorithm	N/A	Unsigned integer. Value range: 0 to 1 The default is 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DecCbc	The DEC-CBC encryption algorithm	N/A	Unsigned integer. Value range: 0 to 1. The default is 1	N/A

## GdoiGmGroupServers

This table displays key servers (KS) of a GM group.

### XML structure

```
<GdoiGmGroupServers>
  <Server>
    <GroupName></GroupName>
    <Host></Host>
    <Vrf></Vrf>
  </Server>
</GdoiGmGroupServers>
```

### Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiGmGroupServers
Table type	Multi-instance table
Row name	Server
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the GDOI GM group	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A.
Host	Key server IP address or hostname	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. Hostname: String, 1 to 253 characters, case-sensitive.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. Hostname can contains letters, digits, hyphens (-), and underscores (_).
Vrf	VRF instance name	Index	String, case-sensitive. Length: 0 to 31 characters.	If the server is on the public network, the length of characters is

Column name	Column description	Column type	Data type and restrictions	Remarks
			The default is empty.	0.

## GdoiGmGroupTransformSets

This table displays transform sets of a GM group.

### XML structure

```

<GdoiGmGroupTransformSets>
  <TransformSet>
    <GroupName></GroupName>
    <TransformSetList>
      <TransformSetName></TransformSetName>
    </TransformSetList>
  </TransformSet>
</GdoiGmGroupTransformSets>

```

### Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiGmGroupTransformSets
Table type	Multi-instance table
Row name	TransformSet
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the GDOI GM group	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A.
TransformSet List	List of transform set names	Data structure	Members include: <ul style="list-style-type: none"> <li>TransformSetName</li> </ul>	N/A.
TransformSet Name	IPsec transform set name	Column	String, case-insensitive. Length :1 to 63 characters.	This Column can be repeated for 0 to 6 times.

# GdoiGroupMembers

This table displays GDOI group members.

## XML structure

```
<GdoiGroupMembers>
  <GroupMember>
    <GroupName></GroupName>
    <IPAddress></IPAddress>
    <VRFName></VRFName>
    <RegStatus></RegStatus>
    <RegServer></RegServer>
    <ReRegTime></ReRegTime>
    <SucceedRegs></SucceedRegs>
    <AttemptedRegs></AttemptedRegs>
    <LastRekeyFrom></LastRekeyFrom>

    <AllowableRekeyHash></AllowableRekeyHash>
    <AllowableTransforms>
      <AllowableTransform></AllowableTransform>
    <AllowableTransforms>
    <RekeyCumulative>
      <TotalReceived></TotalReceived>
      <AfterLatestReg></AfterLatestReg>
      <LastRekeyReceivedFor></LastRekeyReceivedFor>
      <TotalRekeyAckSent></TotalRekeyAckSent>
    </RekeyCumulative>
  </GroupMember>
</GdoiGroupMembers>
```

## Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiGroupMembers
Table type	Multi-instance table
Row name	GroupMember
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	GDOI GM group name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPAddress	IP address of the GM.	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
VRFName	Name of the VRF to which the KS belongs.	N/A	String. Length: 0 to 31 characters. The default is empty.	If the KS belongs to the public network, this field is not displayed.
RegStatus	The registration status.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Not registered.</li> <li>2—Registering.</li> <li>3—Registered.</li> </ul>	N/A
RegServer	IP address or host name of the KS with which the GM registers.	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. Hostname: String, 1 to 253 characters.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. Hostname can contains letters, digits, hyphens (-), and underscores (_).
ReRegTime	Period of time after which the GM re-registers with a KS.	N/A	Unsigned integer.	Unit: second.
SucceedRegs	Number of successful registrations.	N/A	Unsigned integer.	N/A
AttemptedRegs	Number of registration attempts.	N/A	Unsigned integer.	N/A
LastRekeyFrom	KS from which the GM receives the last rekey message.	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. Hostname: String, 1 to 253 characters.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. Hostname can contains letters, digits, hyphens (-), and underscores (_).
LastRekeySeqNum	Sequence number of the last received rekey message.	N/A	Unsigned integer.	N/A
MulticastRekeysReceived	Number of multicast rekeys received.	N/A	Unsigned integer.	Valid only when the GDOI GM group is a multicast group.

Column name	Column description	Column type	Data type and restrictions	Remarks
UnicastRekeysReceived	Number of unicast rekeys received.	N/A	Unsigned integer.	Valid only when the GDOI GM group is a unicast group.
RekeyAckSent	Number of rekey ACK messages sent.	N/A	Unsigned integer.	This field is displayed only when the GDOI GM group is a unicast group.
AllowableRekeyCipher	Rekey encryption algorithms that the GM allows.	N/A	Each bit represents a algorithm As follows: <ul style="list-style-type: none"> <li>1—DES-CBC.</li> <li>2—3DES-CBC.</li> <li>4—AES-CBC-128.</li> <li>8—AES-CBC-192.</li> <li>16—AES-CBC-256.</li> </ul>	In non-FIPS mode, a GM supports DES-CBC, 3DES-CBC, AES-CBC-128, AES-CBC-192, and AES-CBC-256.  In FIPS mode, a GM supports AES-CBC-128, AES-CBC-192, and AES-CBC-256.
AllowableRekeyHash	Rekey hash algorithms that the GM allows.	N/A	Each bit represents a algorithm As follows: <ul style="list-style-type: none"> <li>1—MD5</li> <li>2—SHA1</li> <li>4—SHA2-224</li> <li>8—SHA2-256</li> <li>16—SHA2-384</li> <li>32—SHA2-512</li> <li>64—AES-XCBC</li> </ul>	0 represents any hash algorithm.
AllowableTransforms	List of transform set names	Data structure	Members include: <ul style="list-style-type: none"> <li>TransformSetName</li> </ul>	N/A
TransformSetName	IPsec transform set name	N/A	String, case-insensitive. Length :1 to 63 characters.	This column can be repeated for 0 to 6 times.
RekeyCumulative	Rekey statistics.	Data structure	Members include: <ul style="list-style-type: none"> <li>TotalReceived.</li> <li>AfterLatestReg.</li> <li>TotalRekeyAckSent.</li> </ul>	N/A
TotalReceived	Total number of rekeys that the GM has received.	N/A	Unsigned integer.	N/A
AfterLatestReg	Number of rekeys that the GM has received after the last successful registration.	N/A	Unsigned integer.	N/A
LastRekeyReceivedFor	Period of time for which the key has existed after the last rekey	N/A	Unsigned integer.	Unit: second 0 represents N/A.

Column name	Column description	Column type	Data type and restrictions	Remarks
	operation.			
TotalRekeyAckSent	Number of rekey ACK messages sent.	N/A	Unsigned integer.	N/A

## GdoiGmDownloadIPv4AclRules

This table displays ACL information that the GM downloaded from the KS.

### XML structure

```

<GdoiGmDownloadIPv4AclRules>
  <Rule>
    <GroupName></GroupName>
    <ID></ID>
    <KeyServer></KeyServer>
    <Action></Action>

Feature name	GDVPNGM

Table name	GdoiKeks
Table type	Multi-instance table
Row name	KEK
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	GDOI GM group name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RekeyTransportType	Transport type of rekey messages.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Unicast</li> <li>2—Multicast</li> </ul>	N/A
RemainingKeyLifetime	KEK lifetime in seconds.	N/A	Unsigned integer.	Unit: second
EncryptionAlgorithm	KEK encryption algorithm.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—DES-CBC.</li> <li>2—3DES-CBC.</li> <li>3—AES-CBC.</li> </ul>	N/A
KeySize	KEK key length.	N/A	Unsigned integer	N/A
SignatureAlg	KEK signature algorithm.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—RSA.</li> <li>2—DSS.</li> <li>3—ECDSS.</li> <li>4—ECDSS-256.</li> <li>5—ECDSS-384.</li> <li>6—ECDSS-521.</li> </ul>	N/A
SignatureHashAlg	KEK signature hash algorithm.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—MD5.</li> <li>2—SHA1.</li> <li>3—SHA256.</li> <li>4—SHA384.</li> <li>5—SHA512.</li> </ul>	N/A
SignatureKeyLength	KEK signature key length in bits.	N/A	Unsigned integer.	N/A

## GdoiGmTeks

This table displays TEK information of a group member.

## XML structure

```

```

```

<TEK>
  <GroupName></GroupName>
  <SPI></SPI>
  <Transform>
    <EncryptAlg></EncryptAlg>
    <AuthAlg></AuthAlg>
  </Transform>
  <RemainLifetime></RemainLifetime>
</TEK>
</GdoiGmTeks>

```

## Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiGmTeks
Table type	Multi-instance table
Row name	TEK
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name for the GDOI GM group	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A.
SPI	SPI of the IPsec SA.	Index	Unsigned integer. Value range: 256 to 4294967295.	N/A
Transform	Transform encryption and authentication algorithm	Data structure	Members include: <ul style="list-style-type: none"> <li>EncryptAlg.</li> <li>AuthAlg.</li> </ul>	N/A
EncryptAlg	Encryption algorithm.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—NULL.</li> <li>1—3DES-CBC.</li> <li>2—AES-CBC-128.</li> <li>3—AES-CBC-192.</li> <li>4—AES-CBC-256.</li> <li>5—DES-CBC.</li> <li>6—Unknown.</li> </ul>	N/A
AuthAlg	Authentication algorithm	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—NULL.</li> <li>1—MD5.</li> <li>2—SHA1.</li> <li>3—Unknown.</li> </ul>	N/A
RemainLifetime	IPsec SA remaining	N/A	Unsigned integer.	Unit: second.

Column name	Column description	Column type	Data type and restrictions	Remarks
	lifetime in seconds.			

## GdoiIPv4Policies

This table displays GDOI policies of a GM group.

### XML structure

```

<GdoiIPv4Policies>
  <Policy>
    <PolicyName></PolicyName>
    <SeqNum></SeqNum>
    <GroupName></GroupName>
    <ACL>
      <Name></Name>
      <Number></Number>
    </ACL>
  </Policy>
</GdoiIPv4Policies>

```

### Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiIPv4Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the IPsec policy	Index	String, case-insensitive. Length: 1 to 63 characters.	An IPv4 IPsec policy and an IPv6 IPsec policy can use the same PolicyName.
SeqNum	Sequence number of the IPsec policy entry	Index	Unsigned integer. Value range: 1 to 65535.	An IPv4 IPsec policy and an IPv6 IPsec policy can use the same sequence

Column name	Column description	Column type	Data type and restrictions	Remarks
				number.
GroupName	Name of the GDOI GM group	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A.
ACL	Reference an ACL for an IPsec policy	Data structure	Members include: <ul style="list-style-type: none"> <li>Name</li> <li>Number</li> </ul>	Use Type to specify which member is valid.
Name	ACL name	N/A	String. Length: 1 to 63 characters. Default is empty.	If ACL Name is not empty, the ACL Number does not make sense.
Number	ACL number	N/A	Unsigned integer. Value range: 3000 to 3999. Default is 0.	<ul style="list-style-type: none"> <li>Only when the ACL Name is empty, does the ACL Number make sense.</li> </ul>

## GdoiIPv6Policies

This table displays GDOI IPv6 policies of a GM group.

### XML structure

```

<GdoiIPv6Policies>
  <Policy>
    <PolicyName></PolicyName>
    <SeqNum></SeqNum>
    <GroupName></GroupName>
    <ACL>
      <Name></Name>
      <Number></Number>
    </ACL>
  </Policy>
</GdoiIPv6Policies>

```

### Table description

Item	Description
Feature name	GDVPNGM
Table name	GdoiIPv6Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the IPsec policy	Index	String, case-insensitive. Length: 1 to 63 characters.	An IPv4 IPsec policy and an IPv6 IPsec policy can use the same PolicyName.
SeqNum	Sequence number for the IPsec policy entry	Index	Unsigned integer. Value range: 1 to 65535.	An IPv4 IPsec policy and an IPv6 IPsec policy can use the same sequence number.
GroupName	Name for the GDOI GM group	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A.
ACL	Reference an ACL for an IPsec policy	Data structure	Members include: <ul style="list-style-type: none"> <li>Name</li> <li>Number.</li> </ul>	N/A
Name	ACL name	N/A	String. Length: 1 to 63 characters. Default is empty.	If ACL Name is not empty, the ACL Number does not make sense.
Number	ACL number	N/A	Unsigned integer. Value range: 3000 to 3999. Default is 0.	<ul style="list-style-type: none"> <li>Only when the ACL Name is empty, does the ACL Number make sense.</li> </ul>

# GLB

## GLB/ClearDNSMapStats

This table is used to clear the statistics of the DNS mapping.

### XML structure

```
<GLB>
  <ClearDNSMapStats>
    <ClearDNSMapStat>
      <Name></Name>
      <Clear></Clear>
    </ClearDNSMapStat>
  </ClearDNSMapStats>
</GLB>
```

### Table description

Item	Description
Feature name	GLB
Table name	ClearDNSMapStats
Table type	Multi-instance table
Row name	ClearDNSMapStat
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS mapping.	Index	String, case-insensitive. <ul style="list-style-type: none"><li>Length: 1 to 63 characters.</li></ul>	N/A
Clear	Action of clearing the specified DNS mapping.	N/A	This column must be empty.	<ul style="list-style-type: none"><li>N/A</li></ul>

## GLB/ClearAllDNSMapStats

This table is used to clear all DNS mapping' statistics.

## XML structure

```
<GLB>
  <ClearAllDNSMapStats>
    <Clear></Clear>
  </ClearAllDNSMapStats>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	ClearAllDNSMapStats
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Clear all DNS mapping' statistics.	N/A	This column must be empty.	<ul style="list-style-type: none"><li>N/A</li></ul>

## GLB/TestIpv4Requests

This table is used to test IPv4 DNS requests in the specified VPN.

```

## Table description

Item	Description
Feature name	GLB
Table name	TestIpv4Requests/TestIpv4Results
Table type	Multi-instance table
Row name	TestIpv4Request/TestIpv4Result
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	A null string indicates the public network.
DstIpv4Address	The IPv4 destination address of DNS request packets.	Index	String. Dotted decimal notation.	N/A
DstPort	The destination port of DNS request packets.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
SrcIpv4Address	The IPv4 source address of DNS request packets.	Index	String. Dotted decimal notation.	N/A
SrcPort	The source port of DNS request packets.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Type	The type of DNS request packets.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—A.</li> <li>1—AAAA.</li> <li>2—MX.</li> <li>3—NS.</li> <li>4—CNAME.</li> <li>5—SOA.</li> <li>6—PTR.</li> <li>7—TXT.</li> <li>8—SRV.</li> </ul>	N/A
DomainName	The domain of DNS request packets.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.). If the type is set to PTR, the DomainName must be set in the format of "1.1.1.1.in-addr.arpa." or "1.1.0.0.1.1.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.1.1.0.0.1.1.0.0.ip6.arpa". It means you must translate an IPv4 or IPv6 address to a domain name manually.
ChassisID	Chassis ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Slot ID of the card on the device.	Index	Unsigned integer. Value range: 0 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A

## Return columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	A null string indicates the public network.
DstIpv4Address	The IPv4 destination address of DNS request packets.	Index	String. Dotted decimal notation.	N/A
DstPort	The destination port of DNS request packets.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
SrcIpv4Address	The IPv4 source address of DNS request packets.	Index	String. Dotted decimal notation.	N/A
SrcPort	The source port of DNS request packets.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Type	The type of DNS request packets.	Index	Enumeration: <ul style="list-style-type: none"> <li>• 0—A.</li> <li>• 1—AAAA.</li> <li>• 2—MX.</li> <li>• 3—NS.</li> <li>• 4—CNAME.</li> <li>• 5—SOA.</li> <li>• 6—PTR.</li> <li>• 7—TXT.</li> <li>• 8—SRV.</li> </ul>	N/A
DomainName	The domain of DNS request packets.	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.). If the type is set to PTR, the DomainName must be set in the format of "1.1.1.1.in-addr.arpa." or "1.1.0.0.1.1.0.0.0.0.0.0.0.0.0.0.0.0.0.0.1.1.0.0.1.1.0.0.ip6.arpa".
ChassisID	Chassis ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SlotID	Slot ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
DNSListener	Name of the DNS listener.	N/A	String, case-insensitive. Length: 0 to 63 characters.	A null string indicates the label is not configured.
DNSZone	Name of the DNS zone or reverse zone.	N/A	String, case-insensitive. Length: 0 to 253 characters.	A null string indicates the label is not configured.
DNSMap	Name of the DNS mapping.	N/A	String, case-insensitive. Length: 0 to 63 characters.	A null string indicates the label is not configured.
VSP	Name of the virtual server pool.	N/A	String, case-insensitive. Length: 0 to 63 characters.	A null string indicates the label is not configured.
PreferredAlgorithm	Algorithm.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None</li> <li>1—Round-robin</li> <li>2—Random.</li> <li>3—Least-connection.</li> <li>4—Topology</li> <li>5—Proximity.</li> <li>6—Hash source address.</li> <li>7—Hash source port.</li> <li>8—Hash destination address.</li> <li>9—Bandwidth.</li> <li>10—Inbound bandwidth.</li> <li>11—Outbound bandwidth.</li> <li>12—Max bandwidth.</li> <li>13—Max inbound bandwidth.</li> <li>14—Max outbound bandwidth.</li> </ul>	N/A
AlternateAlgorithm	Algorithm.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None</li> <li>1—Round-robin</li> <li>2—Random.</li> <li>3—Least-connection.</li> <li>4—Topology</li> <li>5—Proximity.</li> <li>6—Hash source address.</li> <li>7—Hash source port.</li> <li>8—Hash destination address.</li> <li>9—Bandwidth.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>10—Inbound bandwidth.</li> <li>11—Outbound bandwidth.</li> <li>12—Max bandwidth.</li> <li>13—Max inbound bandwidth.</li> <li>14—Max outbound bandwidth.</li> </ul>	
FallbackAlgorithm	Algorithm.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None</li> <li>1—Round-robin</li> <li>2—Random.</li> <li>3—Least-connection.</li> <li>4—Topology</li> <li>5—Proximity.</li> <li>6—Hash source address.</li> <li>7—Hash source port.</li> <li>8—Hash destination address.</li> <li>9—Bandwidth.</li> <li>10—Inbound bandwidth.</li> <li>11—Outbound bandwidth.</li> <li>12—Max bandwidth.</li> <li>13—Max inbound bandwidth.</li> <li>14—Max outbound bandwidth.</li> </ul>	N/A
PrfAlgorithmFailedCause	The cause of preferred algorithm schedule failure.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Successful.</li> <li>1—No matched DNS listener.</li> <li>2—No matched DNS mapping.</li> <li>3—No matched virtual server pool.</li> <li>4—No matched DNS zone.</li> <li>5—No matched DNS reverse zone.</li> <li>6—Fails to get buffer.</li> <li>7—Fails to get MDC.</li> <li>8—No matched record.</li> <li>9—No enough memory resource.</li> <li>10—Fails to parse domain.</li> <li>11—Fails to find DNS listener by ID.</li> <li>12—No scheduling content.</li> <li>13—Scheduling failed.</li> <li>14—No matched virtual server.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AltAlgorithmFailedCause	The cause of alternate algorithm schedule failure.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Successful.</li> <li>1—No matched DNS listener.</li> <li>2—No matched DNS mapping.</li> <li>3—No matched virtual server pool.</li> <li>4—No matched DNS zone.</li> <li>5—No matched DNS reverse zone.</li> <li>6—Fails to get buffer.</li> <li>7—Fails to get MDC.</li> <li>8—No matched record.</li> <li>9—No enough memory resource.</li> <li>10—Fails to parse domain.</li> <li>11—Fails to find DNS listener by ID.</li> <li>12—No scheduling content.</li> <li>13—Scheduling failed.</li> <li>14—No matched virtual server.</li> </ul>	N/A
FbkAlgorithmFailedCause	The cause of fallback algorithm schedule failure.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Successful.</li> <li>1—No matched DNS listener.</li> <li>2—No matched DNS mapping.</li> <li>3—No matched virtual server pool.</li> <li>4—No matched DNS zone.</li> <li>5—No matched DNS reverse zone.</li> <li>6—Fails to get buffer.</li> <li>7—Fails to get MDC.</li> <li>8—No matched record.</li> <li>9—No enough memory resource.</li> <li>10—Fails to parse domain.</li> <li>11—Fails to find DNS listener by ID.</li> <li>12—No scheduling content.</li> <li>13—Scheduling failed.</li> <li>14—No matched virtual server.</li> </ul>	N/A
VirtualServer	Name of the virtual server.	N/A	String, case-insensitive.	A null string indicates the label is not

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 0 to 63 characters.	configured.
RespondType	Response type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Send response.</li> <li>1—Send rejected.</li> <li>2—No response.</li> <li>3—Proxy.</li> </ul>	N/A
FailedCause	The cause of DNS request parse failure.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Successful.</li> <li>1—No matched DNS listener.</li> <li>2—No matched DNS mapping.</li> <li>3—No matched virtual server pool.</li> <li>4—No matched DNS zone.</li> <li>5—No matched DNS reverse zone.</li> <li>6—Fails to get buffer.</li> <li>7—Fails to get MDC.</li> <li>8—No matched record.</li> <li>9—No enough memory resource.</li> <li>10—Fails to parse domain.</li> <li>11—Fails to find DNS listener by ID.</li> <li>12—No scheduling content.</li> <li>13—Scheduling failed.</li> <li>14—No matched virtual server.</li> </ul>	N/A

ChassisID	Chassis ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SlotID	Slot ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A

## Return columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	A null string indicates the public network.
DstIpv6Address	The IPv6 destination address of DNS request packets.	Index	String. Dotted decimal notation.	N/A
DstPort	The destination port of DNS request packets.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
SrcIpv6Address	The IPv6 source address of DNS request packets.	Index	String. Dotted decimal notation.	N/A
SrcPort	The source port of DNS request packets.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Type	The type of DNS request packets.	Index	Enumeration: <ul style="list-style-type: none"> <li>• 0—A.</li> <li>• 1—AAAA.</li> <li>• 2—MX.</li> <li>• 3—NS.</li> <li>• 4—CNAME.</li> <li>• 5—SOA.</li> <li>• 6—PTR.</li> <li>• 7—TXT.</li> <li>• 8—SRV.</li> </ul>	N/A
DomainName	The domain of DNS request packets.	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.). If the type is set to PTR, the DomainName must be set in the format of "1.1.1.1.in-addr.arpa." or "1.1.0.0.1.1.0.0.0.0.0.0.0.0.0.0.0.0.0.0.1.1.0.0.1.1.0.0.ip6.arpa".
ChassisID	Chassis ID of the device that holds	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	the card.		Value range: 0 to 255.	
SlotID	Slot ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
DNSListener	Name of the DNS listener.	N/A	String, case-insensitive. Length: 0 to 63 characters.	A null string indicates the label is not configured.
DNSZone	Name of the DNS zone or reverse zone.	N/A	String, case-insensitive. Length: 0 to 253 characters.	A null string indicates the label is not configured.
DNSMap	Name of the DNS mapping.	N/A	String, case-insensitive. Length: 0 to 63 characters.	A null string indicates the label is not configured.
VSP	Name of the virtual server pool.	N/A	String, case-insensitive. Length: 0 to 63 characters.	A null string indicates the label is not configured.
PreferredAlgorithm	Algorithm.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—None</li> <li>• 1—Round-robin</li> <li>• 2—Random.</li> <li>• 3—Least-connection.</li> <li>• 4—Topology</li> <li>• 5—Proximity.</li> <li>• 6—Hash source address.</li> <li>• 7—Hash source port.</li> <li>• 8—Hash destination address.</li> <li>• 9—Bandwidth.</li> <li>• 10—Inbound bandwidth.</li> <li>• 11—Outbound bandwidth.</li> <li>• 12—Max bandwidth.</li> <li>• 13—Max inbound bandwidth.</li> <li>• 14—Max outbound bandwidth.</li> </ul>	N/A
AlternateAlgorithm	Algorithm.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—None</li> <li>• 1—Round-robin</li> <li>• 2—Random.</li> <li>• 3—Least-connection.</li> <li>• 4—Topology</li> <li>• 5—Proximity.</li> <li>• 6—Hash source address.</li> <li>• 7—Hash source port.</li> <li>• 8—Hash destination address.</li> <li>• 9—Bandwidth.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>10—Inbound bandwidth.</li> <li>11—Outbound bandwidth.</li> <li>12—Max bandwidth.</li> <li>13—Max inbound bandwidth.</li> <li>14—Max outbound bandwidth.</li> </ul>	
FallbackAlgorithm	Algorithm.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None</li> <li>1—Round-robin</li> <li>2—Random.</li> <li>3—Least-connection.</li> <li>4—Topology</li> <li>5—Proximity.</li> <li>6—Hash source address.</li> <li>7—Hash source port.</li> <li>8—Hash destination address.</li> <li>9—Bandwidth.</li> <li>10—Inbound bandwidth.</li> <li>11—Outbound bandwidth.</li> <li>12—Max bandwidth.</li> <li>13—Max inbound bandwidth.</li> <li>14—Max outbound bandwidth.</li> </ul>	N/A
PrfAlgorithmFailedCause	The cause of preferred algorithm schedule failure.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Successful.</li> <li>1—No matched DNS listener.</li> <li>2—No matched DNS mapping.</li> <li>3—No matched virtual server pool.</li> <li>4—No matched DNS zone.</li> <li>5—No matched DNS reverse zone.</li> <li>6—Fails to get buffer.</li> <li>7—Fails to get MDC.</li> <li>8—No matched record.</li> <li>9—No enough memory resource.</li> <li>10—Fails to parse domain.</li> <li>11—Fails to find DNS listener by ID.</li> <li>12—No scheduling content.</li> <li>13—Scheduling failed.</li> <li>14—No matched virtual server.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AltAlgorithmFailedCause	The cause of alternate algorithm schedule failure.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Successful.</li> <li>1—No matched DNS listener.</li> <li>2—No matched DNS mapping.</li> <li>3—No matched virtual server pool.</li> <li>4—No matched DNS zone.</li> <li>5—No matched DNS reverse zone.</li> <li>6—Fails to get buffer.</li> <li>7—Fails to get MDC.</li> <li>8—No matched record.</li> <li>9—No enough memory resource.</li> <li>10—Fails to parse domain.</li> <li>11—Fails to find DNS listener by ID.</li> <li>12—No scheduling content.</li> <li>13—Scheduling failed.</li> <li>14—No matched virtual server.</li> </ul>	N/A
FbkAlgorithmFailedCause	The cause of fallback algorithm schedule failure.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Successful.</li> <li>1—No matched DNS listener.</li> <li>2—No matched DNS mapping.</li> <li>3—No matched virtual server pool.</li> <li>4—No matched DNS zone.</li> <li>5—No matched DNS reverse zone.</li> <li>6—Fails to get buffer.</li> <li>7—Fails to get MDC.</li> <li>8—No matched record.</li> <li>9—No enough memory resource.</li> <li>10—Fails to parse domain.</li> <li>11—Fails to find DNS listener by ID.</li> <li>12—No scheduling content.</li> <li>13—Scheduling failed.</li> <li>14—No matched virtual server.</li> </ul>	N/A
VirtualServer	Name of the virtual server.	N/A	String, case-insensitive.	A null string indicates the label is not

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 0 to 63 characters.	configured.
RespondType	Response type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Send response.</li> <li>1—Send rejected.</li> <li>2—No response.</li> <li>3—Proxy.</li> </ul>	N/A
FailedCause	The cause of DNS request parse failure.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Successful.</li> <li>1—No matched DNS listener.</li> <li>2—No matched DNS mapping.</li> <li>3—No matched virtual server pool.</li> <li>4—No matched DNS zone.</li> <li>5—No matched DNS reverse zone.</li> <li>6—Fails to get buffer.</li> <li>7—Fails to get MDC.</li> <li>8—No matched record.</li> <li>9—No enough memory resource.</li> <li>10—Fails to parse domain.</li> <li>11—Fails to find DNS listener by ID.</li> <li>12—No scheduling content.</li> <li>13—Scheduling failed.</li> <li>14—No matched virtual server.</li> </ul>	N/A

## GLB/ClearAllDNSRecords

This table is used to clear all DNS parsing failure records.

### XML structure

```

<GLB>
  <ClearAllDNSRecords>
    <Clear></Clear>
  </ClearAllDNSRecords>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	ClearAllDNSRecords
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Clear all DNS parsing failure records.	N/A	This column must be empty.	<ul style="list-style-type: none"><li>N/A</li></ul>

## GLB/ClearGlobalDNSListenerStats

This table is used to clear the statistics of a global DNS listener.

## XML structure

```
<GLB>
  <ClearGlobalDNSListenerStats>
    <ClearGlobalDNSListenerStat>
      <Name></Name>
      <Clear></Clear>

# GLB

## GLB/DNSMaps

This table contains information about DNS map.

### XML structure

```
<GLB>
  <DNSMaps>
    <DNSMap>
      <Name></Name>
      <VRF></VRF>
      <TTL></TTL>
      <VirtualServerPool></VirtualServerPool>
      <ServiceEnable></ServiceEnable>
    </DNSMap>
  </DNSMaps>
</GLB>
```

### Table description

Item	Description
Feature name	GLB
Table name	DNSMaps
Table type	Multi-instance table
Row name	DNSMap
Restrictions	Only DNS map can be configured by this table.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS map.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates public network.
TTL	TTL time of the	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	DNS recorder.		Value range: 0 to $2^{32}-1$ . Unit: second. By default, the value is 3600s.	
VirtualServerPool	Name of the virtualserverpool.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ServiceEnable	Enable the DNS map.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A

## GLB/DNSMapDomains

This table contains information about DNS map domain.

### XML structure

```

<GLB>
  <DNSMapDomains>
    <DNSMapDomain>
      <DNSMap></DNSMap>
      <Domain></Domain>
    </DNSMapDomain>
  </DNSMapDomains>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	DNSMapDomains
Table type	Multi-instance table
Row name	DNSMapDomain
Restrictions	Only DNS map domain can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DNSMap	Name of the DNS map.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
				<p>The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).</p> <p>The domain name supports wildcards including question marks (?) and asterisks (*).</p> <p>The following rules apply when you use wildcards:</p> <p>Use a question mark (?) to replace one character, except the dot (.).</p> <p>Multiple question marks can appear in the domain name.</p> <p>Use an asterisk (*) to replace multiple characters, except the dot (.).</p> <p>Multiple asterisks can appear in the domain name.</p> <p>Question marks and asterisks can appear in the domain name at the same time.</p>
Domain	Domain for the DNS map.	Index	String, case-insensitive. Length: 1 to 253 characters.	

## GLB/VirtualServerPools

This table contains information about virtual server pool.

### XML structure

```

<GLB>
  <VirtualServerPools>
    <VirtualServerPool>
      <Name></Name>
      <PredictorAlternate></PredictorAlternate>
      <PredictorFallback></PredictorFallback>
      <PredictorPreferred></PredictorPreferred>
      <BusyProtectEnable></BusyProtectEnable>
      <HashPreIpv4PrefixLength></HashPreIpv4PrefixLength>
      <HashPreIpv6PrefixLength></HashPreIpv6PrefixLength>
      <HashAltIpv4PrefixLength></HashAltIpv4PrefixLength>
      <HashAltIpv6PrefixLength></HashAltIpv6PrefixLength>
      <HashFbIpv4PrefixLength></HashFbIpv4PrefixLength>
      <HashFbIpv6PrefixLength></HashFbIpv6PrefixLength>
    </VirtualServerPool>
  </VirtualServerPools>

```

</GLB>

## Table description

Item	Description
Feature name	GLB
Table name	VirtualServerPools
Table type	Multi-instance table
Row name	VirtualServerPool
Restrictions	Only virtual server pool can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
PredictorAlternate	Predictor alternate algorithm for LB to select a virtual server to be the DNS recorder for client response.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—None</li><li>1—Round-robin</li><li>2—Random.</li><li>3—Least-connection.</li><li>4—Topology</li><li>5—Proximity.</li><li>6—Hash source address.</li><li>7—Hash source port.</li><li>8—Hash destination address.</li><li>9—Bandwidth.</li><li>10—Inbound bandwidth.</li><li>11—Outbound bandwidth.</li><li>12—Max bandwidth.</li><li>13—Max inbound bandwidth.</li><li>14—Max outbound bandwidth.</li></ul>	N/A
PredictorFallback	Predictor fallback	N/A	Enumeration: <ul style="list-style-type: none"><li>0—None</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	algorithm for LB to select a virtual server to be the DNS recorder for client response.		<ul style="list-style-type: none"> <li>• 1—Round-robin</li> <li>• 2—Random.</li> <li>• 3—Least-connection.</li> <li>• 4—Topology</li> <li>• 5—Proximity.</li> <li>• 6—Hash source address.</li> <li>• 7—Hash source port.</li> <li>• 8—Hash destination address.</li> <li>• 9—Bandwidth.</li> <li>• 10—Inbound bandwidth.</li> <li>• 11—Outbound bandwidth.</li> <li>• 12—Max bandwidth.</li> <li>• 13—Max inbound bandwidth.</li> <li>• 14—Max outbound bandwidth.</li> </ul>	
PredictorPreferred	Predictor preferred algorithm for LB to select a virtual server to be the DNS recorder for client response.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—Round-robin (default).</li> <li>• 2—Random.</li> <li>• 3—Least-connection.</li> <li>• 4—Topology</li> <li>• 5—Proximity</li> <li>• 6—Hash source address.</li> <li>• 7—Hash source port.</li> <li>• 8—Hash destination address.</li> <li>• 9—Bandwidth.</li> <li>• 10—Inbound bandwidth.</li> <li>• 11—Outbound bandwidth.</li> <li>• 12—Max bandwidth.</li> <li>• 13—Max inbound bandwidth.</li> <li>• 14—Max outbound bandwidth.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BusyProtect Enable	Enable the busy protection.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
HashPreIpv4PrefixLength	Length of IPv4 address mask for preferred hash algorithm.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column only can be configured when the Predictor is hash source address (6), hash source port (7) and hash destination address (8).
HashPreIpv6PrefixLength	Length of IPv6 address prefix for preferred hash algorithm.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	The column only can be configured when the Predictor hash source address (6), hash source port (7) and hash destination address (8).
HashAltIpv4PrefixLength	Length of IPv4 address mask for alternate hash algorithm.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column only can be configured when the Predictor is hash source address (6), hash source port (7) and hash destination address (8).
HashAltIpv6PrefixLength	Length of IPv6 address prefix for alternate hash algorithm.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	The column only can be configured when the Predictor hash source address (6), hash source port (7) and hash destination address (8).
HashFbIpv4PrefixLength	Length of IPv4 address mask for fallback hash algorithm.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column only can be configured when the Predictor is hash source address (6), hash source port (7) and hash destination address (8).
HashFbIpv6PrefixLength	Length of IPv6 address prefix for fallback hash algorithm.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	The column only can be configured when the Predictor hash source address (6), hash source port (7) and hash destination address (8).

## GLB/VSPVirtualServers

This table contains information about Virtual Server Pool Virtual Server.

### XML structure

```

<GLB>
  <VSPVirtualServers>
    <VSPVirtualServer>
      <VirtualServerPool></VirtualServerPool>
      <VirtualServer></VirtualServer>
      <Link></Link>
      <Weight></Weight>
    </VSPVirtualServer>
  </VSPVirtualServers>

```

</GLB>

## Table description

Item	Description
Feature name	GLB
Table name	VSPVirtualServers
Table type	Multi-instance table
Row name	VSPVirtualServer
Restrictions	Only VSP virtual server can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VirtualServerPool	Name of the virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VirtualServer	Virtual server of the virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Link	Link of the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Weight	Weight of the virtual server.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	Larger number means higher weight.

## GLB/DNSZones

This table contains information about DNS zone.

## XML structure

```
<GLB>
  <DNSZones>
    <DNSZone>
      <DomainName></DomainName>
      <TTL></TTL>
    </DNSZone>
  </DNSZones>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	DNSZones
Table type	Multi-instance table
Row name	DNSZone
Restrictions	Only DNS zone can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain Name	Domain name of the DNS zone,.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
TTL	TTL time of the DNS zone.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second. By default, the value is 3600s.	N/A

## GLB/DNSZoneSOAs

This table contains information about DNS zone soa resource record.

## XML structure

```
<GLB>
  <DNSZoneSOAs>
    <DNSZoneSOA>
      <Zone></Zone>
      <PrimaryNS></PrimaryNS>
      <ResponsibleMail></ResponsibleMail>
      <Serial></Serial>
      <Refresh></Refresh>
      <Retry></Retry>
      <Expire></Expire>
      <MinTTL></MinTTL>
    </DNSZoneSOA>
  </DNSZoneSOAs>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	DNSZoneSOAs
Table type	Multi-instance table
Row name	DNSZoneSOA
Restrictions	Only DNS zone soa resource record can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
PrimaryNS	Name of the Primary name server.	N/A	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Responsible Mail	Responsible mail address.	N/A	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Serial	Serial number	N/A	Unsigned integer. Value range: 1 to $2^{32}-1$ . By default, the value is 1.	N/A
Refresh	Refresh interval	N/A	Unsigned integer. Value range: 300 to 2419200. Unit: second. By default, the value is 3600s.	N/A
Retry	Retry interval	N/A	Unsigned integer. Value range: 500 to $2^{32}-1$ . Unit: second. By default, the value is 600s.	N/A
Expire	Expire time	N/A	Unsigned integer. Value range: 500 to $2^{32}-1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Unit: second. By default, the value is 86400s.	
MinTTL	Minimum TTL	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second. By default, the value is 3600s.	N/A

## GLB/DNSZoneMXRRs

This table contains information about DNS zone mx resource record.

### XML structure

```

<GLB>
  <DNSZoneMXRRs>
    <DNSZoneMXRR>
      <Zone></Zone>
      <Host></Host>
      <MailServer></MailServer>
      <Preference></Preference>
      <TTL></TTL>
    </DNSZoneMXRR>
  </DNSZoneMXRRs>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	DNSZoneMXRRs
Table type	Multi-instance table
Row name	DNSZoneMXRR
Restrictions	Only DNS zone mx resource record can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Host	Host name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
MailServer	Mail exchange name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Preference	Preference value	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
TTL	TTL time of the resource record.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second. By default, the value is 3600s.	N/A

## GLB/DNSZoneCNAMERRs

This table contains information about DNS zone cname resource record.

## XML structure

```

<GLB>
  <DNSZoneCNAMERRs>
    <DNSZoneCNAMERR>
      <Zone></Zone>
      <Alias></Alias>
      <Canonical></Canonical>
      <TTL></TTL>
    </DNSZoneCNAMERR>
  </DNSZoneCNAMERRs>
</GLB>

```

## Table description

Item	Description
Feature name	GLB

Table name	DNSZoneCNAMERRs
Table type	Multi-instance table
Row name	DNSZoneCNAMERR
Restrictions	Only DNS zone cname resource record can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Alias	Alias name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Canonical	Canonical name	N/A	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
TTL	TTL time of the resource record.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second. By default, the value is 3600s.	N/A

## GLB/DNSZoneNSRRs

This table contains information about DNS zone ns resource record.

## XML structure

```

<GLB>
  <DNSZoneNSRRs>
    <DNSZoneNSRR>
      <Zone></Zone>
      <SubName></SubName>
      <NameServerName></NameServerName>
      <TTL></TTL>
    </DNSZoneNSRR>
  </DNSZoneNSRRs>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	DNSZoneNSRRs
Table type	Multi-instance table
Row name	DNSZoneNSRR
Restrictions	Only DNS zone ns resource record can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
SubName	Sub domain name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
NameServer Name	Authoritative nameserver name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
TTL	TTL time of the resource record.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second. By default, the value is 3600s.	N/A

## GLB/DNSRevZones

This table contains information about DNS reverse zone.

## XML structure

```
<GLB>
  <DNSRevZones>
    <DNSRevZone>
      <IPv4Address></IPv4Address>
      <IPv4PrefixLength></IPv4PrefixLength>
    </DNSRevZone>
  </DNSRevZones>
</GLB>
```

```

    </DNSRevZones>
  </GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	DNSRevZones
Table type	Multi-instance table
Row name	DNSRevZone
Restrictions	Only DNS reverse zone can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4Addresses	IPv4 address of the reverse zone.	Index	String. Dotted decimal notation.	Example: 1.1.1.1.
IPv4PrefixLength	IPv4 mask length of the reverse zone.	Index	Unsigned integer. Value range: 0 to 32.	N/A

## GLB/DNSRevZoneRRs

This table contains information about DNS reverse zone resource record.

## XML structure

```

<GLB>
  <DNSRevZoneRRs>
    <DNSRevZoneRR>
      <ReverseZoneIP></ReverseZoneIP>
      <ReverseZoneMask></ReverseZoneMask>
      <IPv4Address></IPv4Address>
      <DomainName></DomainName>
      <TTL></TTL>
    </DNSRevZoneRR>
  </DNSRevZoneRRs>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	DNSRevZoneRRs
Table type	Multi-instance table
Row name	DNSRevZoneRR
Restrictions	Only DNS reverse zone resource record can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ReverseZoneIP	IPv4 address of the reverse zone.	Index	String. Dotted decimal notation.	Example: 1.1.1.1.
ReverseZoneMask	IPv4 mask length of the reverse zone.	Index	Unsigned integer. Value range: 0 to 32.	N/A
IPv4Addresses	IPv4 address of the PTR resource record.	Index	String. Dotted decimal notation. By default, no IPv4 address is specified.	N/A
DomainName	Domain name	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
TTL	TTL time of the resource record.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second. By default, the value is 3600s.	N/A

## GLB/DNSRevZoneIPv6s

This table contains information about DNS ipv6 reverse zone.

## XML structure

```
<GLB>
  <DNSRevZoneIPv6s>
```

```

<DNSRevZoneIPv6>
  <IPv6Address></IPv6Address>
  <IPv6PrefixLength></IPv6PrefixLength>
</DNSRevZoneIPv6>
</DNSRevZoneIPv6s>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	DNSRevZoneIPv6s
Table type	Multi-instance table
Row name	DNSRevZoneIPv6
Restrictions	Only DNS ipv6 reverse zone can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6Addresses	IPv6 address of the reverse zone.	Index	Hexadecimal string, colon-separated.	Example: 2::2.
IPv6PrefixLength	IPv6 prefix length of the reverse zone.	Index	Unsigned integer. Value range: 0 to 128.	N/A

## GLB/DNSRevZoneIPv6RRs

This table contains information about DNS reverse zone ipv6 resource record.

## XML structure

```

<GLB>
  <DNSRevZoneIPv6RRs>
    <DNSRevZoneIPv6RR>
      <ReverseZoneIPv6></ReverseZoneIPv6>
      <ReverseZonePrefix></ReverseZonePrefix>
      <IPv6Address></IPv6Address>
      <DomainName></DomainName>
      <TTL></TTL>
    </DNSRevZoneIPv6RR>
  </DNSRevZoneIPv6RRs>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	DNSRevZoneIPv6RRs
Table type	Multi-instance table
Row name	DNSRevZoneIPv6RR
Restrictions	Only DNS reverse zone ipv6 resource record can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ReverseZoneIPv6	IPv6 address of the reverse zone.	Index	Hexadecimal string, colon-separated.	Example: 2::2.
ReverseZoneMask	IPv6 prefix length of the reverse zone.	Index	Unsigned integer. Value range: 0 to 128.	N/A
IPv6Addresses	IPv6 address of the PTR resource record.	Index	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	N/A
DomainName	Domain name	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
TTL	TTL time of the resource record.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second. By default, the value is 3600s.	N/A

## GLB/DNSRecordMaxNum

This table contains information about DNS record max number.

## XML structure

```
<GLB>
  <DNSRecordMaxNum>
    <MaxNumber></MaxNumber>
  </DNSRecordMaxNum>
```

</GLB>

## Table description

Item	Description
Feature name	GLB
Table name	DNSRecordMaxNum
Table type	Simple-instance table
Row name	DNSRecordMaxNum
Restrictions	Only DNS Record max number can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxNumber	The max number of the DNS record.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 10000.	N/A

## GLB/DNSRecordType

This table contains information about DNS record type.

## XML structure

```
<GLB>
  <DNSRecordType>
    <A></A>
    <AAAA></AAAA>
    <CNAME></CNAME>
    <MX></MX>
    <NS></NS>
    <SOA></SOA>
    <SRV></SRV>

      <CipherKey></CipherKey>
      <SimpleKey></SimpleKey>
    </LocalDefaultSyncGroupMem>
  </LocalDefaultSyncGroupMems>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	LocalDefaultSyncGroupMems
Table type	Multi-instance table
Row name	LocalDefaultSyncGroupMem
Restrictions	None.

Support for row creation and deletion	Yes
---------------------------------------	-----

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the local default synchronization group member.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Port	Specify the communication port number of the local default synchronization group member.	N/A	Unsigned integer. Value range: 1024 to 65535. By default, the value is 3936.	N/A
ServiceEnable	Enable the communicating function of the local default synchronization group member.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
Interval	Specify the probe interval for the local default synchronization group member.	N/A	Unsigned integer. Value range: 1 to 259200. Unit: second. By default, the value is 5 seconds.	N/A
RetryTimes	Specify the probe retry times for the local default synchronization group member.	N/A	Unsigned integer. Value range: 1 to 10. By default, the value is 5.	N/A
CipherKey	Specify an authentication key in encrypted form.	N/A	String, case-sensitive. Length: 1 to 53 characters.	Configure <b>CipherKey</b> or <b>SimpleKey</b> , but not both.
SimpleKey	Specify an authentication key in plaintext form.	N/A	String, case-sensitive. Length: 1 to 16 characters.	Configure <b>CipherKey</b> or <b>SimpleKey</b> , but not both.

## GLB/RemoteDefaultSyncGroupMems

This table contains information about a remote default synchronization group member.

## XML structure

```
<GLB>
  <RemoteDefaultSyncGroupMems>
    <RemoteDefaultSyncGroupMem>
      <Name></Name>
      <Port></Port>
    </RemoteDefaultSyncGroupMem>
  </RemoteDefaultSyncGroupMems>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	RemoteDefaultSyncGroupMems
Table type	Multi-instance table
Row name	RemoteDefaultSyncGroupMem
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the remote default synchronization group member.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Port	Specify the communication port number of the remote default synchronization group member.	N/A	Unsigned integer. Value range: 1024 to 65535. By default, the value is 3936.	N/A

## GLB/SyncGroupMemberIPAddresses

This table contains information about the IP address of the synchronization group member.

## XML structure

```
<GLB>
  <SyncGroupMemberIPAddresses>
```

```

<SyncGroupMemberIPAddress>
  <SyncGroupMemberType></SyncGroupMemberType>
  <SyncGroupMemberName></SyncGroupMemberName>
  <Ipv4Address></Ipv4Address>
</SyncGroupMemberIPAddress>
</SyncGroupMemberIPAddresses>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	SyncGroupMemberIPAddresses
Table type	Multi-instance table
Row name	SyncGroupMemberIPAddress
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SyncGroupMemberType	Type of the synchronization group member.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Local</li> <li>1—Remote</li> </ul>	N/A
SyncGroupMemberName	Name of the synchronization group member.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	Specify the IPv4 address of the synchronization group member.	Index	Hexadecimal string, colon-separated.	Example: 1.1.1.1. Loopback addresses, multicast addresses and broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either.

## GLB/DataCenters

This table contains information about a data center.

## XML structure

```

<GLB>
  <DataCenters>

```

```

<DataCenter>
  <Name></Name>
  <Description></Description>
  <ServiceEnable></ServiceEnable>
</DataCenter>
</DataCenters>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	DataCenters
Table type	Multi-instance table
Row name	DataCenter
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Specify the description of the data center.	N/A	String, case-insensitive. Length: 1 to 127 characters.	N/A
ServiceEnable	Enable the data center function.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A

## GLB/DataCenterLinks

This table contains information about the links of a data center.

## XML structure

```

<GLB>
  <DataCenterLinks>
    <DataCenterLink>
      <DataCenter></DataCenter>

```

```

    <Link></Link>
  </DataCenterLink>
</DataCenterLinks>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	DataCenterLinks
Table type	Multi-instance table
Row name	DataCenterLink
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DataCenter	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Link	Name of the link.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

## GLB/Servers

This table contains information about a server.

## XML structure

```

<GLB>
  <Servers>
    <Server>
      <DataCenter></DataCenter>
      <Name></Name>
      <ServiceEnable></ServiceEnable>
      <Interval></Interval>
      <User></User>
      <CipherPassword></CipherPassword>
      <SimplePassword></SimplePassword>
    </Server>
  </Servers>
</GLB>

```

```
</Servers>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	Servers
Table type	Multi-instance table
Row name	Server
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DataCenter	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Name	Server name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ServiceEnable	Enable the server function.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
Interval	Specify the communication interval of the server.	N/A	Unsigned integer. Value range: 5 to 2419200. By default, the value is 10.	N/A
User	Specify the communication user of the server.	N/A	String, case-sensitive. Length: 1 to 55 characters.	N/A
CipherPassword	Specify the encrypted password of the server.	N/A	String, case-sensitive. Length: 1 to 113 characters.	Configure CipherPassword <b>or</b> SimplePassword, but not both.
SimplePassword	Specify the plaintext password of the server.	N/A	String, case-sensitive. Length: 1 to 63 characters.	Configure CipherPassword <b>or</b> SimplePassword, but not both.

# GLB/LocalServers

This table contains information about the local server.

## XML structure

```
<GLB>
  <LocalServers>
    <LocalServer>
      <DataCenter></DataCenter>
      <Name></Name>
      <ServiceEnable></ServiceEnable>
    </LocalServer>
  </LocalServers>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	LocalServers
Table type	Multi-instance table
Row name	LocalServer
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DataCenter	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Name	Local server name.	Index	String, case-insensitive. Must be localhost.	N/A
ServiceEnable	Enable the server function.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Disable (default).</li><li>1—Enable.</li></ul>	N/A

# GLB/ServerIPAddresses

This table contains information about the IP address of a server.

## XML structure

```
<GLB>
  <ServerIPAddresses>
    <ServerIPAddress>
      <DataCenter></DataCenter>
      <Server></Server>
      <Ipv4Address></Ipv4Address>
    </ServerIPAddress>
  </ServerIPAddresses>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	ServerIPAddresses
Table type	Multi-instance table
Row name	ServerIPAddress
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DataCenter	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Server	Server name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	Specify the IPv4 address of the server.	Index	Hexadecimal string, colon-separated.	Example: 1.1.1.1. Loopback addresses, multicast addresses and broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either.

# GLB/LocalVirtualServers

This table contains information about the virtual server of a local server.

## XML structure

```
<GLB>
  <LocalVirtualServers>
    <LocalVirtualServer>
      <DataCenter></DataCenter>
      <LocalServer></LocalServer>
      <VirtualServerType></VirtualServerType>
      <VirtualServer></VirtualServer>
    </LocalVirtualServer>
  </LocalVirtualServers>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	LocalVirtualServers
Table type	Multi-instance table
Row name	LocalVirtualServer
Restrictions	Only virtual server of local server can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DataCenter	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
LocalServer	Local server name.	Index	String, case-insensitive.	Must be localhost.
VirtualServerType	Virtual server type.	Index	Enumeration: <ul style="list-style-type: none"><li>0—virtual server</li><li>1—virtual IP.</li></ul>	N/A
VirtualServer	Virtual server name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

# GLB/GlobalDNSListeners

This table contains information about a global DNS listener.

## XML structure

```
<GLB>
  <GlobalDNSListeners>
    <GlobalDNSListener>
      <Name></Name>
      <Ipv4Address></Ipv4Address>
      <Ipv4PortNumber></Ipv4PortNumber>
      <ServiceEnable></ServiceEnable>
      <Fallback></Fallback>
    </GlobalDNSListener>
  </GlobalDNSListeners>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSListeners
Table type	Multi-instance table
Row name	GlobalDNSListener
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the global DNS listener.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, and broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either.
Ipv4PortNumber	IPv4 port number.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			is 53.	
ServiceEnable	Enable the global DNS listener.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
Fallback	Fallback action.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—No response.</li> <li>1—Reject (default).</li> </ul>	N/A

## GLB/GlobalDNSMaps

This table contains information about a global DNS map.

### XML structure

```

<GLB>
  <GlobalDNSMaps>
    <GlobalDNSMap>
      <Name></Name>
      <TTL></TTL>
      <PredictorAlternate></PredictorAlternate>
      <PredictorFallback></PredictorFallback>
      <PredictorPreferred></PredictorPreferred>
      <ServiceEnable></ServiceEnable>
    </GlobalDNSMap>
  </GlobalDNSMaps>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSMaps
Table type	Multi-instance table
Row name	GlobalDNSMap
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the global DNS map.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
TTL	TTL time of the DNS recorder.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second. By default, the value is 3600 seconds.	N/A
PredictorAlternate	Alternative predictor algorithm for GLB to select a virtual server pool to service a DNS request.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None.</li> <li>1—Round-robin.</li> <li>2—Random.</li> <li>3—Topology.</li> <li>4—Proximity.</li> </ul>	N/A
PredictorFallback	Backup predictor algorithm for GLB to select a virtual server pool to service a DNS request.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None.</li> <li>1—Round-robin.</li> <li>2—Random.</li> <li>3—Topology.</li> <li>4—Proximity.</li> </ul>	N/A
PredictorPreferred	Preferred predictor algorithm for GLB to select a virtual server pool to service a DNS request.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Round-robin (default).</li> <li>2—Random.</li> <li>3—Topology.</li> <li>4—Proximity.</li> </ul>	N/A
ServiceEnable	Enable the global DNS map.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A

## GLB/GlobalDNSMapDomains

This table contains information about the domains of a global DNS map.

## XML structure

```

<GLB>
  <GlobalDNSMapDomains>
    <GlobalDNSMapDomain>
      <GlobalDNSMap></GlobalDNSMap>
    
```

```

    <Domain></Domain>
  </GlobalDNSMapDomain>
</GlobalDNSMapDomains>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSMapDomains
Table type	Multi-instance table
Row name	GlobalDNSMapDomain
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalDNS Map	Name of the global DNS map.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Domain	Domain for the global DNS map.	Index	String, case-insensitive. Length: 1 to 253 characters.	<p>The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).</p> <p>The domain name supports wildcards including question marks (?) and asterisks (*).</p> <p>The following rules apply when you use wildcards:</p> <ul style="list-style-type: none"> <li>• Use a question mark (?) to replace one character, except the dot (.).</li> <li>• Multiple question marks can appear in the domain name.</li> <li>• Use an asterisk (*) to replace multiple characters, except the dot (.).</li> <li>• Multiple asterisks can appear in the domain name.</li> <li>• Question marks and asterisks can appear in the domain name at the same time.</li> </ul>

## GLB/GlobalDNSMapVirtualServerPools

This table contains information about the virtual server pool of a global DNS map.

## XML structure

```
<GLB>
  <GlobalDNSMapVirtualServerPools>
    <GlobalDNSMapVirtualServerPool>
      <GlobalDNSMap></GlobalDNSMap>
      <GlobalVirtualServerPool></GlobalVirtualServerPool>
      <Weight></Weight>
    </GlobalDNSMapVirtualServerPool>
  </GlobalDNSMapVirtualServerPools>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSMapVirtualServerPools
Table type	Multi-instance table
Row name	GlobalDNSMapVirtualServerPool
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalDNSMap	Name of the global DNS map.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
GlobalVirtualServerPool	Virtual server pool for the global DNS map.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Weight	Weight of the global virtual pool.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger number means a higher weight.

## GLB/GlobalVirtualServerPools

This table contains information about a global virtual server pool.

## XML structure

```
<GLB>
```

```

<GlobalVirtualServerPools>
  <GlobalVirtualServerPool>
    <Name></Name>
    <ProbeSuccessCriteria></ProbeSuccessCriteria>
    <PredictorAlternate></PredictorAlternate>
    <PredictorFallback></PredictorFallback>
    <PredictorPreferred></PredictorPreferred>
    <BusyProtectEnable></BusyProtectEnable>
  </GlobalVirtualServerPool>
</GlobalVirtualServerPools>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalVirtualServerPools
Table type	Multi-instance table
Row name	GlobalVirtualServerPool
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ProbeSuccessCriteria	Probe success criteria for virtual server pool.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 0, which indicates that probe success criteria is all.	N/A
PredictorAlternate	Alternative predictor algorithm for GLB to select a virtual server to be the DNS recorder for client response.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None.</li> <li>1—Round-robin.</li> <li>2—Random.</li> <li>3—Least-connection (not supported)</li> <li>4—Topology.</li> <li>5—Proximity.</li> <li>15—First-available.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PredictorFallback	Backup predictor algorithm for GLB to select a virtual server to be the DNS recorder for client response.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None.</li> <li>1—Round-robin.</li> <li>2—Random.</li> <li>3—Least-connection (not supported)</li> <li>4—Topology.</li> <li>5—Proximity.</li> <li>15—First-available.</li> </ul>	N/A
PredictorPreferred	Preferred predictor algorithm for GLB to select a virtual server to be the DNS recorder for client response.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Round-robin (default).</li> <li>2—Random.</li> <li>3—Least-connection (not supported)</li> <li>4—Topology.</li> <li>5—Proximity.</li> <li>15—First-available.</li> </ul>	N/A
BusyProtectEnable	Enable link protection.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A

## GLB/GVSPVirtualServers

This table contains information about a virtual server of the global virtual server pool.

### XML structure

```

<GLB>
  <GVSPVirtualServers>
    <GVSPVirtualServer>
      <GlobalVirtualServerPool></GlobalVirtualServerPool>
      <DataCenter></DataCenter>
      <Server></Server>
      <VirtualServer></VirtualServer>
      <ProbeSuccessCriteria></ProbeSuccessCriteria>
      <Link></Link>
      <Weight></Weight>
    </GVSPVirtualServer>
  </GVSPVirtualServers>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	GVSPVirtualServers
Table type	Multi-instance table
Row name	GVSPVirtualServer
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalVirtualServerPool	Name of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
DataCenter	Name of the virtual server's data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Server	Name of the virtual server's server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VirtualServer	Virtual server of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ProbeSuccessCriteria	Probe success criteria for virtual server pool.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 0, which indicates that probe success criteria is all.	N/A
Link	Link of the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Weight	Weight of the virtual server.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger number means a higher weight.

## GLB/GVSPVirtualIPs

This table contains information about the virtual IP address of a global virtual server pool.

# XML structure

```
<GLB>
  <GVSPVirtualIPs>
    <GVSPVirtualIP>
      <GlobalVirtualServerPool></GlobalVirtualServerPool>
      <DataCenter></DataCenter>
      <Server></Server>
      <VirtualIP></VirtualIP>
      <ProbeSuccessCriteria></ProbeSuccessCriteria>
      <Link></Link>
      <Weight></Weight>
    </GVSPVirtualIP>
  </GVSPVirtualIPs>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	GVSPVirtualIPs
Table type	Multi-instance table
Row name	GVSPVirtualIP
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalVirtualServerPool	Name of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
DataCenter	Name of the virtual IP's data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Server	Name of the virtual IP's server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VirtualIP	Virtual IP address of the global virtual server pool.	Index	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
ProbeSucces	Probe success	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ssCriteria	criteria for virtual IP.		Value range: 0 to $2^{32}-1$ . By default, the value is 0, which indicates that probe success criteria is all.	
Link	Link of the virtual IP.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Weight	Weight of the virtual IP.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger number means a higher weight.

## GLB/GVSPProbes

This table contains information the probe method of a global virtual server pool.

### XML structure

```

<GLB>
  <GVSPProbes>
    <GVSPProbe>
      <GlobalVirtualServerPool></GlobalVirtualServerPool>
      <Probe></Probe>
    </GVSPProbe>
  </GVSPProbes>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	GVSPProbes
Table type	Multi-instance table
Row name	GVSPProbe
Restrictions	Only global virtual server pool probe can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalVirtualServerPool	Name of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Probe	Probe method for the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

## GLB/GVSPVirtualServerProbes

This table contains information the probe method of a virtual server.

## XML structure

```
<GLB>
  <GVSPVirtualServerProbes>
    <GVSPVirtualServerProbe>
      <GlobalVirtualServerPool></GlobalVirtualServerPool>
      <DataCenter></DataCenter>

Table name	GVSPVIPProbes
Table type	Multi-instance table
Row name	GVSPVIPProbe

Restrictions	Only global virtual ip probe can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalVirtualServerPool	Name of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
DataCenter	Name of the virtual IP's data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Server	Name of the virtual IP's server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VirtualIP	Virtual IP address of the virtual IP.	Index	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Probe	Probe method for the virtual IP.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

## GLB/GTopoRegionVSPs

This table contains information about the mapping between a global region and a global virtual server pool.

## XML structure

```

<GLB>
  <GTopoRegionVSPs>
    <GTopoRegionVSP>
      <GlobalRegion></GlobalRegion>
      <GlobalVirtualServerPool></GlobalVirtualServerPool>
      <Priority></Priority>
    </GTopoRegionVSP>
  </GTopoRegionVSPs>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	GTopoRegionVSPs
Table type	Multi-instance table
Row name	GTopoRegionVSP
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalRegion	Name of the global region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
GlobalVirtualServerPool	Name of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Priority	Priority of the global region.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger number means a higher priority.

## GLB/GTopoRegionIPv4s

This table contains information about the mapping between a global region and an IP address.

## XML structure

```
<GLB>
  <GTopoRegionIPv4s>
    <GTopoRegionIPv4>
      <GlobalRegion></GlobalRegion>
      <IPv4Address></IPv4Address>
      <IPv4MaskLength></IPv4MaskLength>
      <Priority></Priority>
    </GTopoRegionIPv4>
  </GTopoRegionIPv4s>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	GTopoRegionIPv4s
Table type	Multi-instance table
Row name	GTopoRegionIPv4
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalRegion	Name of the global region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPv4Addresses	IPv4 address.	Index	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
IPv4MaskLength	IPv4 mask length.	Index	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column cannot be configured if no IPv4 address is configured.
Priority	Priority of the global region.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger number means a higher priority.

## GLB/GlobalRegions

This table contains information about a global region.

## XML structure

```
<GLB>
  <GlobalRegions>
    <GlobalRegion>
      <Name></Name>
    </GlobalRegion>
  </GlobalRegions>
```

</GLB>

## Table description

Item	Description
Feature name	GLB
Table name	GlobalRegions
Table type	Multi-instance table
Row name	GlobalRegion
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the global region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

## GLB/GlobalRegionISPs

This table contains information about the global ISP for a global region.

## XML structure

```
<GLB>
  <GlobalRegionISPs>
    <GlobalRegionISP>
      <GlobalRegion></GlobalRegion>
      <GlobalISP></GlobalISP>
    </GlobalRegionISP>
  </GlobalRegionISPs>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalRegionISPs
Table type	Multi-instance table
Row name	GlobalRegionISP

Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalRegion	Name of the global region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
GlobalISP	ISP for the global region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

## GLB/GlobalSPs

This table contains information about a global ISP.

## XML structure

```

<GLB>
  <GlobalISPs>
    <GlobalISP>
      <Name></Name>
    </GlobalISP>
  </GlobalISPs>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalISPs
Table type	Multi-instance table
Row name	GlobalISP
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the global ISP.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

## GLB/GlobalIpv4ISPAddressGroups

This table contains information about a global IPv4 ISP address group.

## XML structure

```
<GLB>
  <GlobalIpv4ISPAddressGroups>
    <GlobalIpv4ISPAddressGroup>
      <GlobalISP></GlobalISP>
      <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLength></Ipv4PrefixLength>
    </GlobalIpv4ISPAddressGroup>
  </GlobalIpv4ISPAddressGroups>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	Globalpv4ISPAddressGroups
Table type	Multi-instance table
Row name	Globalpv4ISPAddressGroup
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalISP	Name of the global ISP.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	IPv4 address.	Index	String.	The value must be equal to the summation of the address and the

Column name	Column description	Column type	Data type and restrictions	Remarks
			Dotted decimal notation. By default, no IPv4 address is specified.	mask. Example: 1.1.1.0/24.
Ipv4PrefixLength	IPv4 mask length.	Index	Unsigned integer. Value range: 1 to 32.	N/A

## GLB/GlobalISPFile

This table contains information about a global ISP file.

### XML structure

```

<GLB>
  <GlobalISPFile>
    <FileName></FileName>
  </GlobalISPFile>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	GlobalISPFile
Table type	Single-instance table
Row name	N/A
Restrictions	None.
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the global ISP file.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A

## GLB/GlobalVRFProximityParameters

This table contains information about global proximity parameters.

## XML structure

```
<GLB>
  <GlobalVRFPximityParameters>
    <GlobalVRFPximityParameter>
      <VRF></VRF>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <Timeout></Timeout>
      <RTTWeight></RTTWeight>
      <TTLWeight></TTLWeight>
      <InBandwidthWeight></InBandwidthWeight>
      <OutBandwidthWeight></OutBandwidthWeight>
      <CostWeight></CostWeight>
      <MaxNumber></MaxNumber>
      <DefaultProbe></DefaultProbe>
    </GlobalVRFPximityParameter>
  </GlobalVRFPximityParameters>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalVRFPximityParameters
Table type	Multi-instance table
Row name	GlobalVRFPximityParameter
Restrictions	None.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	The null string indicates the public network.
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 24.	Zero means a natural mask.
Timeout	The lifetime of global proximity entries.	N/A	Unsigned integer. Value range: 60 to 3600. By default, the value is 60.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RTTWeight	The weight of RTT.	N/A	Unsigned integer. Value range: 0 to 255. By default, the value is 100.	N/A
TTLWeight	The weight of TTL.	N/A	Unsigned integer. Value range: 0 to 255. By default, the value is 100.	N/A
InBandwidthWeight	The weight of inbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 255. By default, the value is 100.	N/A
OutBandwidthWeight	The weight of outbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 255. By default, the value is 100.	N/A
CostWeight	The weight of link cost.	N/A	Unsigned integer. Value range: 0 to 255. By default, the value is 100.	N/A
MaxNumber	Upper limit for global proximity entries.	N/A	Unsigned integer. Value range: 0 to 10000000. By default, the value is 0, which indicates the number of global proximity entries is unlimited.	N/A
DefaultProbe	Default probe method for the global proximity.	N/A	String, case-insensitive. Length: 1 to 32 characters. By default, no default probe is specified.	N/A

## GLB/GlobalDNSZones

This table contains information about a global DNS zone.

### XML structure

```

<GLB>
  <GlobalDNSZones>
    <GlobalDNSZone>
      <DomainName></DomainName>
      <TTL></TTL>
    </GlobalDNSZone>
  </GlobalDNSZones>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSZones
Table type	Multi-instance table
Row name	GlobalDNSZone
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain Name	Domain name of the global DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
TTL	TTL time of the global DNS zone.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second. By default, the value is 3600 seconds.	N/A

## GLB/GlobalDNSZoneSOAs

This table contains information about an SOA resource record for a global DNS zone.

## XML structure

```
<GLB>
  <GlobalDNSZoneSOAs>
    <GlobalDNSZoneSOA>
      <Zone></Zone>
      <PrimaryNS></PrimaryNS>
      <ResponsibleMail></ResponsibleMail>
      <Serial></Serial>
      <Refresh></Refresh>
      <Retry></Retry>
      <Expire></Expire>
      <MinTTL></MinTTL>
    </GlobalDNSZoneSOA>
  </GlobalDNSZoneSOAs>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSZoneSOAs
Table type	Multi-instance table
Row name	GlobalDNSZoneSOA
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the global DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
PrimaryNS	Name of the primary name server.	N/A	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Responsible Mail	Responsible mail address.	N/A	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Serial	Serial number	N/A	Unsigned integer. Value range: 1 to $2^{32}-1$ . By default, the value is 1.	N/A
Refresh	Refresh interval	N/A	Unsigned integer. Value range: 300 to 2419200. Unit: second. By default, the value is 3600 seconds.	N/A
Retry	Retry interval	N/A	Unsigned integer. Value range: 500 to $2^{32}-1$ . Unit: second. By default, the value is 600 seconds.	N/A
Expire	Expiration time	N/A	Unsigned integer. Value range: 500 to $2^{32}-1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Unit: second. By default, the value is 86400 seconds.	
MinTTL	Minimum TTL	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second. By default, the value is 3600 seconds.	N/A

## GLB/GlobalDNSZoneMXRRs

This table contains information about MX resource records for a global DNS zone.

### XML structure

```

<GLB>
  <GlobalDNSZoneMXRRs>
    <GlobalDNSZoneMXRR>
      <Zone></Zone>
      <Host></Host>
      <MailServer></MailServer>
      <Preference></Preference>
    </GlobalDNSZoneMXRR>
  </GlobalDNSZoneMXRRs>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSZoneMXRRs
Table type	Multi-instance table
Row name	GlobalDNSZoneMXRR
Restrictions	None.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the global DNS	Index	String, case-insensitive.	The string can contain letters, numbers, hyphens (-), underscores

Column name	Column description	Column type	Data type and restrictions	Remarks
	zone.		Length: 1 to 253 characters.	(_), and dots (.).
Host	Host name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
MailServer	Mail exchange name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Preference	Preference value	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

## GLB/GlobalDNSZoneCNAMERRs

This table contains information about CNAME resource records for a global DNS zone.

### XML structure

```

<GLB>
  <GlobalDNSZoneCNAMERRs>
    <GlobalDNSZoneCNAMERR>
      <Zone></Zone>
      <Alias></Alias>
      <Canonical></Canonical>
    </GlobalDNSZoneCNAMERR>
  </GlobalDNSZoneCNAMERRs>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSZoneCNAMERRs
Table type	Multi-instance table
Row name	GlobalDNSZoneCNAMERR
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the global DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Alias	Alias name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Canonical	Canonical name	N/A	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).

## GLB/GlobalDNSZoneNSRRs

This table contains information about NS resource records for a global DNS zone.

## XML structure

```
<GLB>
  <GlobalDNSZoneNSRRs>
    <GlobalDNSZoneNSRR>
      <Zone></Zone>
      <SubName></SubName>
      <NameServerName></NameServerName>
    </GlobalDNSZoneNSRR>
  </GlobalDNSZoneNSRRs>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSZoneNSRRs
Table type	Multi-instance table
Row name	GlobalDNSZoneNSRR
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the global DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
SubName	Sub domain name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
NameServer Name	Authoritative name server name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).

## GLB/GlobalDNSRevZones

This table contains information about a global DNS reverse zone.

## XML structure

```
<GLB>
  <GlobalDNSRevZones>
    <GlobalDNSRevZone>
      <IPv4Address></IPv4Address>
      <IPv4PrefixLength></IPv4PrefixLength>
      <TTL></TTL>
    </GlobalDNSRevZone>
  </GlobalDNSRevZones>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSRevZones
Table type	Multi-instance table
Row name	GlobalDNSRevZone
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4Addresses	IPv4 address of the global reverse zone.	Index	String. Dotted decimal notation.	Example: 1.1.1.1.
IPv4PrefixLength	IPv4 mask length of the global reverse zone.	Index	Unsigned integer. Value range: 0 to 32.	N/A
TTL	TTL time of the global reverse zone.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second. By default, the value is 3600 seconds.	N/A

## GLB/GlobalDNSRevZoneRRs

This table contains information about a resource record for a global DNS reverse zone.

## XML structure

```
<GLB>
  <GlobalDNSRevZoneRRs>
    <GlobalDNSRevZoneRR>
      <ReverseZoneIP></ReverseZoneIP>
      <ReverseZoneMask></ReverseZoneMask>
      <IPv4Address></IPv4Address>
      <DomainName></DomainName>
    </GlobalDNSRevZoneRR>
  </GlobalDNSRevZoneRRs>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSRevZoneRRs
Table type	Multi-instance table
Row name	GlobalDNSRevZoneRR
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ReverseZoneIP	IPv4 address of the global reverse zone.	Index	String. Dotted decimal notation.	Example: 1.1.1.1.
ReverseZoneMask	IPv4 mask length of the global reverse zone.	Index	Unsigned integer. Value range: 0 to 32.	N/A
IPv4Addresses	IPv4 address of the PTR resource record.	Index	String. Dotted decimal notation. By default, no IPv4 address is specified.	N/A
DomainName	Domain name	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).

## GLB/GlobalIpv4ISPLists

This table contains information about a global IPv4 ISP address group.

## XML structure

```
<GLB>
  <GlobalIpv4ISPLists>
    <GlobalIpv4ISPList>
      <GlobalISP></GlobalISP>
      <IsIncrement></IsIncrement>
      <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLength></Ipv4PrefixLength>
    </GlobalIpv4ISPList>
  </GlobalIpv4ISPLists>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalIpv4ISPLists
Table type	Multi-instance table
Row name	GlobalIpv4ISPList
Restrictions	None.
Support for row creation and	Yes

---

deletion

---

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalISP	Name of the global ISP.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IsIncrement	Whether to increment the data.	Index	Enumeration: <ul style="list-style-type: none"><li>• 0—False.</li><li>• 1—True.</li></ul>	N/A
Ipv4Address	IPv4 address.	Index	String. Dotted decimal notation. By default, no IPv4 address is specified.	The value must be equal to the summation of the address and the mask. Example: 1.1.1.0/24.
Ipv4PrefixLength	IPv4 mask length.	Index	Unsigned integer. Value range: 1 to 32.	N/A

# GLB

## GLB/DNSMaps

This table contains information about DNS map.

### XML structure

```
<GLB>
  <DNSMaps>
    <DNSMap>
      <Name></Name>
      <VRF></VRF>
      <TTL></TTL>
      <VirtualServerPool></VirtualServerPool>
      <ServiceEnable></ServiceEnable>
    </DNSMap>
  </DNSMaps>
</GLB>
```

### Table description

Item	Description
Feature name	GLB
Table name	DNSMaps
Table type	Multi-instance table
Row name	DNSMap
Restrictions	Only DNS map can be gotten by this table.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS map.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VRF	VRF name.	N/A	String, Length: 0 to 31 characters.	The null string indicates public network.
TTL	TTL time of the DNS recorder.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Unit: second.	
VirtualServerPool	Name of the virtualserverpool.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ServiceEnable	Enable the DNS map.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable</li> <li>1—Enable.</li> </ul>	N/A

## GLB/DNSMapDomains

This table contains information about DNS map domain.

### XML structure

```

<GLB>
  <DNSMapDomains>
    <DNSMapDomain>
      <DNSMap></DNSMap>
      <Domain></Domain>
    </DNSMapDomain>
  </DNSMapDomains>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	DNSMapDomains
Table type	Multi-instance table
Row name	DNSMapDomain
Restrictions	Only DNS map domain can be gotten by this table.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DNSMap	Name of the DNS map.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Domain	Domain for the DNS map.	Index	String, case-insensitive. Length: 1 to 253	The string can contain letters, numbers, hyphens (-), underscores

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters.	<p>(_), and dots (.).</p> <p>The domain name supports wildcards including question marks (?) and asterisks (*).</p> <p>The following rules apply when you use wildcards:</p> <p>Use a question mark (?) to replace one character, except the dot (.).</p> <p>Multiple question marks can appear in the domain name.</p> <p>Use an asterisk (*) to replace multiple characters, except the dot (.).</p> <p>Multiple asterisks can appear in the domain name.</p> <p>Question marks and asterisks can appear in the domain name at the same time.</p>

## GLB/DNSMapStats

This table contains stat information about DNS map.

## XML structure

```

<GLB>
  <DNSMapStats>
    <DNSMapStat>
      <Name></Name>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
      <CPUID></CPUID>
      <MatchedDnsReqs></MatchedDnsReqs>
    </DNSMapStat>
  </DNSMapStats>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	DNSMapStats
Table type	Multi-instance table
Row name	DNSMapStat
Restrictions	Only stats of DNS map can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS map.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
MatchedDnsReqs	Matched DNS Requests that the DNS listener received.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A

## GLB/VirtualServerPools

This table contains information about virtual server pool.

### XML structure

```

<GLB>
  <VirtualServerPools>
    <VirtualServerPool>
      <Name></Name>
      <PredictorAlternate></PredictorAlternate>
      <PredictorFallback></PredictorFallback>
      <PredictorPreferred></PredictorPreferred>
      <BusyProtectEnable></BusyProtectEnable>
      <TotalVirtualServers></TotalVirtualServers>
      <ActiveVirtualServers></ActiveVirtualServers>
      <HashPreIpv4PrefixLength></HashPreIpv4PrefixLength>
      <HashPreIpv6PrefixLength></HashPreIpv6PrefixLength>
      <HashAltIpv4PrefixLength></HashAltIpv4PrefixLength>
      <HashAltIpv6PrefixLength></HashAltIpv6PrefixLength>
      <HashFbIpv4PrefixLength></HashFbIpv4PrefixLength>
      <HashFbIpv6PrefixLength></HashFbIpv6PrefixLength>
    </VirtualServerPool>
  </VirtualServerPools>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	VirtualServerPools
Table type	Multi-instance table
Row name	VirtualServerPool
Restrictions	Only virtual server can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
PredictorAlternate	Predictor alternate algorithm for LB to select a virtual server to be the DNS recorder for client response.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None</li> <li>1—Round-robin</li> <li>2—Random.</li> <li>3—Least-connection.</li> <li>4—Topology</li> <li>5—Proximity.</li> <li>6—Hash source address.</li> <li>7—Hash source port.</li> <li>8—Hash destination address.</li> <li>9—Bandwidth.</li> <li>10—Inbound bandwidth.</li> <li>11—Outbound bandwidth.</li> <li>12—Max bandwidth.</li> <li>13—Max inbound bandwidth.</li> <li>14—Max outbound bandwidth.</li> </ul>	N/A
PredictorFallback	Predictor fallback algorithm for LB to select a	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None</li> <li>1—Round-robin</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	virtual server to be the DNS recorder for client response.		<ul style="list-style-type: none"> <li>• 2—Random.</li> <li>• 3—Least-connection.</li> <li>• 4—Topology</li> <li>• 5—Proximity.</li> <li>• 6—Hash source address.</li> <li>• 7—Hash source port.</li> <li>• 8—Hash destination address.</li> <li>• 9—Bandwidth.</li> <li>• 10—Inbound bandwidth.</li> <li>• 11—Outbound bandwidth.</li> <li>• 12—Max bandwidth.</li> <li>• 13—Max inbound bandwidth.</li> <li>• 14—Max outbound bandwidth.</li> </ul>	
PredictorPreferred	Predictor preferred algorithm for LB to select a virtual server to be the DNS recorder for client response.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—Round-robin.</li> <li>• 2—Random.</li> <li>• 3—Least-connection.</li> <li>• 4—Topology</li> <li>• 5—Proximity.</li> <li>• 6—Hash source address.</li> <li>• 7—Hash source port.</li> <li>• 8—Hash destination address.</li> <li>• 9—Bandwidth.</li> <li>• 10—Inbound bandwidth.</li> <li>• 11—Outbound bandwidth.</li> <li>• 12—Max bandwidth.</li> <li>• 13—Max inbound bandwidth.</li> <li>• 14—Max outbound bandwidth.</li> </ul>	N/A
BusyProtectEnable	Enable the busy	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	protection.		<ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	
TotalVirtualServers	Total number of virtual servers in the virtual server pool.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
ActiveVirtualServer	Active number of virtual servers in the virtual server pool.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
HashPreIpv4PrefixLength	Length of IPv4 address mask for preferred hash algorithm.	N/A	Unsigned integer. Value range: 0 to 32.	The column only can be configured when the Predictor is hash source address (6), hash source port (7) and hash destination address (8).
HashPreIpv6PrefixLength	Length of IPv6 address prefix for preferred hash algorithm.	N/A	Unsigned integer. Value range: 0 to 128.	The column only can be configured when the Predictor hash source address (6), hash source port (7) and hash destination address (8).
HashAltIpv4PrefixLength	Length of IPv4 address mask for alternate hash algorithm.	N/A	Unsigned integer. Value range: 0 to 32.	The column only can be configured when the Predictor is hash source address (6), hash source port (7) and hash destination address (8).
HashAltIpv6PrefixLength	Length of IPv6 address prefix for alternate hash algorithm.	N/A	Unsigned integer. Value range: 0 to 128.	The column only can be configured when the Predictor hash source address (6), hash source port (7) and hash destination address (8).
HashFbIpv4PrefixLength	Length of IPv4 address mask for fallback hash algorithm.	N/A	Unsigned integer. Value range: 0 to 32.	The column only can be configured when the Predictor is hash source address (6), hash source port (7) and hash destination address (8).
HashFbIpv6PrefixLength	Length of IPv6 address prefix for fallback hash algorithm.	N/A	Unsigned integer. Value range: 0 to 128.	The column only can be configured when the Predictor hash source address (6), hash source port (7) and hash destination address (8).

## GLB/VSPVirtualServers

This table contains information about Virtual Server Pool Virtual Server.

### XML structure

```

<GLB>
  <VSPVirtualServers>
    <VSPVirtualServer>

```

```

<VirtualServerPool></VirtualServerPool>
<VirtualServer></VirtualServer>
<Link></Link>
<Weight></Weight>
<Ipv4Address></Ipv4Address>
<Ipv6Address></Ipv6Address>
<PortNumber></PortNumber>
<State></State>
</VSPVirtualServer>
</VSPVirtualServers>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	VSPVirtualServers
Table type	Multi-instance table
Row name	VSPVirtualServer
Restrictions	Only VSP virtual server can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VirtualServerPool	Name of the virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VirtualServer	Virtual server of the virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Link	Link of the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Weight	Weight of the virtual server.	N/A	Unsigned integer. Value range: 1 to 255.	Larger number means higher weight.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
State	State of the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Unavailable.</li> <li>1—Available.</li> <li>2—Busy.</li> </ul>	N/A

## GLB/DNSZones

This table contains information about DNS zone.

## XML structure

```

<GLB>
  <DNSZones>
    <DNSZone>
      <DomainName></DomainName>
      <TTL></TTL>
    </DNSZone>
  </DNSZones>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	DNSZones
Table type	Multi-instance table
Row name	DNSZone
Restrictions	Only DNS zone can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain Name	Domain name of the DNS zone,.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
TTL	TTL time of the DNS zone.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			By default, the value is 3600s.	

## GLB/DNSZoneSOAs

This table contains information about DNS zone soa resource record.

### XML structure

```

<GLB>
  <DNSZoneSOAs>
    <DNSZoneSOA>
      <Zone></Zone>
      <PrimaryNS></PrimaryNS>
      <ResponsibleMail></ResponsibleMail>
      <Serial></Serial>
      <Refresh></Refresh>
      <Retry></Retry>
      <Expire></Expire>
      <MinTTL></MinTTL>
    </DNSZoneSOA>
  </DNSZoneSOAs>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	DNSZoneSOAs
Table type	Multi-instance table
Row name	DNSZoneSOA
Restrictions	Only DNS zone soa resource record can be configured by this table.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).

Column name	Column description	Column type	Data type and restrictions	Remarks
PrimaryNS	Name of the Primary name server.	N/A	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Responsible Mail	Responsible mail address.	N/A	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Serial	Serial number	N/A	Unsigned integer. Value range: 1 to $2^{32}-1$ . By default, the value is 1.	N/A
Refresh	Refresh interval	N/A	Unsigned integer. Value range: 300 to 2419200. Unit: second. By default, the value is 3600s.	N/A
Retry	Retry interval	N/A	Unsigned integer. Value range: 500 to $2^{32}-1$ . Unit: second. By default, the value is 600s.	N/A
Expire	Expire time	N/A	Unsigned integer. Value range: 500 to $2^{32}-1$ . Unit: second. By default, the value is 86400s.	N/A
MinTTL	Minimum TTL	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second. By default, the value is 3600s.	N/A

## GLB/DNSZoneMXRRs

This table contains information about DNS zone mx resource record.

### XML structure

```

<GLB>
  <DNSZoneMXRRs>
    <DNSZoneMXRR>

```

```

    <Zone></Zone>
    <Host></Host>
    <MailServer></MailServer>
    <Preference></Preference>
    <TTL></TTL>
  </DNSZoneMXRR>
</DNSZoneMXRRs>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	DNSZoneMXRRs
Table type	Multi-instance table
Row name	DNSZoneMXRR
Restrictions	Only DNS zone mx resource record can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Host	Host name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
MailServer	Mail exchange name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Preference	Preference value	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
TTL	TTL time of the resource record.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second. By default, the value is 3600s.	N/A

# GLB/DNSZoneCNAMERRs

This table contains information about DNS zone cname resource record.

## XML structure

```
<GLB>
  <DNSZoneCNAMERRs>
    <DNSZoneCNAMERR>
      <Zone></Zone>
      <Alias></Alias>
      <Canonical></Canonical>
      <TTL></TTL>
    </DNSZoneCNAMERR>
  </DNSZoneCNAMERRs>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	DNSZoneCNAMERRs
Table type	Multi-instance table
Row name	DNSZoneCNAMERR
Restrictions	Only DNS zone cname resource record can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Alias	Alias name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Canonical	Canonical name	N/A	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
TTL	TTL time of the resource	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	record.		Value range: 0 to $2^{32}-1$ . Unit: second. By default, the value is 3600s.	

## GLB/DNSZoneNSRRs

This table contains information about DNS zone ns resource record.

### XML structure

```

<GLB>
  <DNSZoneNSRRs>
    <DNSZoneNSRR>
      <Zone></Zone>
      <SubName></SubName>
      <NameServerName></NameServerName>
      <TTL></TTL>
    </DNSZoneNSRR>
  </DNSZoneNSRRs>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	DNSZoneNSRRs
Table type	Multi-instance table
Row name	DNSZoneNSRR
Restrictions	Only DNS zone ns resource record can be configured by this table.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
SubName	Sub domain	Index	String,	The string can contain letters,

Column name	Column description	Column type	Data type and restrictions	Remarks
	name		case-insensitive. Length: 1 to 254 characters.	numbers, hyphens (-), underscores (_), and dots (.).
NameServer Name	Authoritative nameserver name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
TTL	TTL time of the resource record.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second. By default, the value is 3600s.	N/A

## GLB/DNSRevZones

This table contains information about DNS reverse zone.

### XML structure

```

<GLB>
  <DNSRevZones>
    <DNSRevZone>
      <IPv4Address></IPv4Address>
      <IPv4PrefixLength></IPv4PrefixLength>
    </DNSRevZone>
  </DNSRevZones>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	DNSRevZones
Table type	Multi-instance table
Row name	DNSRevZone
Restrictions	Only DNS reverse zone can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4Addresses	IPv4 address of the reverse zone.	Index	String. Dotted decimal notation.	Example: 1.1.1.1.
IPv4PrefixLength	IPv4 mask length of the reverse zone.	Index	Unsigned integer. Value range: 0 to 32.	N/A

## GLB/DNSRevZoneRRs

This table contains information about DNS reverse zone resource record.

## XML structure

```
<GLB>
  <DNSRevZoneRRs>
    <DNSRevZoneRR>
      <ReverseZoneIP></ReverseZoneIP>
      <ReverseZoneMask></ReverseZoneMask>
      <IPv4Address></IPv4Address>
      <DomainName></DomainName>
      <TTL></TTL>
    </DNSRevZoneRR>
  </DNSRevZoneRRs>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	DNSRevZoneRRs
Table type	Multi-instance table
Row name	DNSRevZoneRR
Restrictions	Only DNS reverse zone resource record can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ReverseZoneIP	IPv4 address of the reverse zone.	Index	String. Dotted decimal notation.	Example: 1.1.1.1.
ReverseZoneMask	IPv4 mask length of the reverse zone.	Index	Unsigned integer. Value range: 0 to 32.	N/A
IPv4Addresses	IPv4 address of the PTR resource record.	Index	String. Dotted decimal notation.	N/A
DomainName	Domain name	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
TTL	TTL time of the resource record.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second.	N/A

## GLB/DNSRevZoneIPv6s

This table contains information about DNS ipv6 reverse zone.

## XML structure

```
<GLB>
  <DNSRevZoneIPv6s>
    <DNSRevZoneIPv6>
      <IPv6Address></IPv6Address>
      <IPv6PrefixLength></IPv6PrefixLength>
    </DNSRevZoneIPv6>
  </DNSRevZoneIPv6s>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	DNSRevZoneIPv6s
Table type	Multi-instance table
Row name	DNSRevZoneIPv6
Restrictions	Only DNS ipv6 reverse zone can be configured by this table.

Support for row creation and deletion	Yes
---------------------------------------	-----

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6Addresses	IPv6 address of the reverse zone.	Index	Hexadecimal string, colon-separated.	Example: 2::2.
IPv6PrefixLength	IPv6 prefix length of the reverse zone.	Index	Unsigned integer. Value range: 0 to 128.	N/A

## GLB/DNSRevZoneIPv6RRs

This table contains information about DNS reverse zone ipv6 resource record.

## XML structure

```
<GLB>
  <DNSRevZoneIPv6RRs>
    <DNSRevZoneIPv6RR>
      <ReverseZoneIPv6></ReverseZoneIPv6>
      <ReverseZonePrefix></ReverseZonePrefix>
      <IPv6Address></IPv6Address>
      <DomainName></DomainName>
      <TTL></TTL>
    </DNSRevZoneIPv6RR>
  </DNSRevZoneIPv6RRs>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	DNSRevZoneIPv6RRs
Table type	Multi-instance table
Row name	DNSRevZoneIPv6RR
Restrictions	Only DNS reverse zone ipv6 resource record can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ReverseZoneIPv6	IPv6 address of the reverse zone.	Index	Hexadecimal string, colon-separated.	Example: 2::2.
ReverseZoneMask	IPv6 prefix length of the reverse zone.	Index	Unsigned integer. Value range: 0 to 128.	N/A
IPv6Addresses	IPv6 address of the PTR resource record.	Index	Hexadecimal string, colon-separated.	N/A
DomainName	Domain name	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
TTL	TTL time of the resource record.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second.	N/A

## GLB/DNSRecordMaxNum

This table contains information about the DNS record max number.

### XML structure

```
<GLB>
  <DNSRecordMaxNum>
    <MaxNumber></MaxNumber>
  </DNSRecordMaxNum>
</GLB>
```

### Table description

Item	Description
Feature name	GLB
Table name	DNSRecordMaxNum
Table type	Simple-instance table
Row name	DNSRecordMaxNum
Restrictions	Only DNS Record max number can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxNumber	The max number of DNS records.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A

## GLB/DNSRecordType

This table contains information about DNS record types.

## XML structure

```
<GLB>
  <DNSRecordType>
    <A></A>
    <AAAA></AAAA>
    <CNAME></CNAME>
    <MX></MX>
    <NS></NS>
    <SOA></SOA>
    <SRV></SRV>
    <TXT></TXT>
    <PTR></PTR>
  </DNSRecordType>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	DNSRecordType

```

## Table description

Item	Description
Feature name	GLB
Table name	DNSRecord
Table type	Simple-instance table
Row name	DNSRecord
Restrictions	Only DNS Record can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
OrderNumber	The number of DNS records.	Index	Unsigned integer. Value range: 1 to $2^{32}-1$ .	N/A
Time	Time when the DNS request was received.	N/A	DateTime. Format: YYYY-MM-DDTHH:M M:SS.	N/A
Type	The type of the DNS record.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—A .</li> <li>1—AAAA .</li> <li>2—MX .</li> <li>3—NS .</li> <li>4—CNAME .</li> <li>5—SOA .</li> <li>6—PTR .</li> <li>7—TXT.</li> <li>8—SRV.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcIpAddresses	The IP source address of DNS record.	N/A	String. Dotted decimal notation.	N/A
SrcPort	The source port of DNS record.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstIpAddresses	The IP destination address of DNS record.	N/A	String. Dotted decimal notation.	N/A
DstPort	The destination port of DNS record.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
VRF	The VRF name of the DNS record.	N/A	String. Length: 0 to 31 characters.	N/A
Domain	The domain of the DNS record.	N/A	String, case-insensitive. Length: 1 to 253 characters.	N/A
FailedCause	The failure cause of the DNS record.	N/A	Enumeration. <ul style="list-style-type: none"> <li>0—" ".</li> <li>1—No matched DNS listener.</li> <li>2—No matched DNS map.</li> <li>3—No matched virtual-server-pool.</li> <li>4—No matched DNS zone.</li> <li>5—Failed to get buffer.</li> <li>6—Failed to get MDC.</li> <li>7—No matched record.</li> <li>8 No enough memory resource.</li> <li>9—Failed to parse domain.</li> <li>10—Failed to find DNS listener by ID.</li> <li>11—No schedule content.</li> <li>12—Schedule failed.</li> <li>13—No matched virtual-server-member.</li> </ul>	N/A

# GLB/DNSZoneTXTRRs

This table contains information about DNS zone txt resource records.

## XML structure

```
<GLB>
  <DNSZoneTXTRRs>
    <DNSZoneTXTRR>
      <Zone></Zone>
      <Sub></Sub>
      <Description></Description>
      <TTL></TTL>
    </DNSZoneTXTRR>
  </DNSZoneTXTRRs>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	DNSZoneTXTRRs
Table type	Multi-instance table
Row name	DNSZoneTXTRR
Restrictions	Only DNS zone txt resource record can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Sub	Sub name of the resource record.	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Description	Description text of the resource record.	Index	String, case-insensitive. Length: 1 to 255 characters.	N/A
TTL	TTL time of the resource	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	record.		Value range: 0 to $2^{32}-1$ . Unit: second.	

## GLB/DNSZoneSRVRRs

This table contains information about DNS zone srv resource records.

### XML structure

```

<GLB>
  <DNSZoneSRVRRs>
    <DNSZoneSRVRR>
      <Zone></Zone>
      <ServiceName></ServiceName>
      <HostName></HostName>
      <Port></Port>
      <Priority></Priority>
      <Weight></Weight>
      <TTL></TTL>
    </DNSZoneSRVRR>
  </DNSZoneSRVRRs>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSZoneSRVRRs
Table type	Multi-instance table
Row name	GlobalDNSZoneSRVRR
Restrictions	Only Global DNS zone ns resource record can be configured by this table.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceName	Service name.	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
HostName	Host name offering the service.	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Port	Port number of the resource record.	Index	Unsigned integer. Value range: 0 to 65535.	Index
Priority	Priority of the resource record.	N/A	Unsigned integer. Value range: 0 to 100.	The smaller the value, the higher the priority.
Weight	Weight value of the resource record.	N/A	Unsigned integer. Value range: 0 to 100.	N/A
TTL	TTL time of the resource record.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second.	N/A

## GLB/LocalDefaultSyncGroupMems

This table contains information about the local default synchronization group member.

### XML structure

```

<GLB>
  <LocalDefaultSyncGroupMems>
    <LocalDefaultSyncGroupMem>
      <Name></Name>
      <Port></Port>
      <ServiceEnable></ServiceEnable>
      <Interval></Interval>
      <RetryTimes></RetryTimes>
      <CipherKey></CipherKey>
      <Role></Role>
      <Online></Online>
    </LocalDefaultSyncGroupMem>
  </LocalDefaultSyncGroupMems>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	LocalDefaultSyncGroupMems
Table type	Multi-instance table
Row name	LocalDefaultSyncGroupMem
Restrictions	Only local default synchronization group member can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the local default synchronization group member.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Port	Specify the communication port number of the local default synchronization group member.	N/A	Unsigned integer. Value range: 1024 to 65535.	N/A
ServiceEnable	Enable the communicating function of the local default synchronization group member.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Disable</li><li>1—Enable</li></ul>	N/A
Interval	Specify the probe interval for the local default synchronization group member.	N/A	Unsigned integer. Value range: 1 to 259200. Unit: second.	N/A
RetryTimes	Specify the probe retry times for the local default synchronization group member.	N/A	Unsigned integer. Value range: 1 to 10.	N/A
CipherKey	Specify an authentication key in encrypted	N/A	String, case-sensitive. Length: 1 to 53 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	form.			
Role	Role of the default synchronization group member.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Master</li> <li>2—Standby</li> </ul>	N/A
Online	Online state of the default synchronization group member.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Offline</li> <li>1—Online</li> </ul>	N/A

## GLB/RemoteDefaultSyncGroupMems

This table contains information about a remote default synchronization group member.

### XML structure

```

<GLB>
  <RemoteDefaultSyncGroupMems>
    <RemoteDefaultSyncGroupMem>
      <Name></Name>
      <Port></Port>
      <Role></Role>
      <ConnectState></ConnectState>
      <Online></Online>
    </RemoteDefaultSyncGroupMem>
  </RemoteDefaultSyncGroupMems>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	RemoteDefaultSyncGroupMems
Table type	Multi-instance table
Row name	RemoteDefaultSyncGroupMem
Restrictions	Only remote default synchronization group member can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the remote default synchronization group member.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Port	Specify the communication port number of the remote default synchronization group member.	N/A	Unsigned integer. Value range: 1024 to 65535.	N/A
Role	Role of the default synchronization group member.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Master</li> <li>2—Standby</li> </ul>	N/A
ConnectState	Connection state of the default synchronization group member.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disabled</li> <li>1—Connecting</li> <li>2—Listening</li> <li>3—Established</li> </ul>	N/A
Online	Online state of the default synchronization group member.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Offline</li> <li>1—Online.</li> </ul>	N/A

## GLB/SyncGroupMemberIPAddresses

This table contains information about the IP address of the synchronization group member.

### XML structure

```

<GLB>
  <SyncGroupMemberIPAddresses>
    <SyncGroupMemberIPAddress>
      <SyncGroupMemberType></SyncGroupMemberType>
      <SyncGroupMemberName></SyncGroupMemberName>
      <Ipv4Address></Ipv4Address>
    </SyncGroupMemberIPAddress>
  </SyncGroupMemberIPAddresses>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	SyncGroupMemberIPAddresses
Table type	Multi-instance table
Row name	SyncGroupMemberIPAddress
Restrictions	Only synchronization group member IP address can be configured by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SyncGroupMemberType	Type of the synchronization group member.	Index	Enumeration: <ul style="list-style-type: none"><li>0—Local</li><li>1—Remote</li></ul>	N/A
SyncGroupMemberName	Name of the synchronization group member.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	Specify the IPv4 address of the synchronization group member.	Index	Hexadecimal string, colon-separated.	Example: 1.1.1.1. Loopback addresses, multicast addresses and broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either.

## GLB/DataCenters

This table contains information about a data center.

## XML structure

```
<GLB>
  <DataCenters>
    <DataCenter>
      <Name></Name>
      <Description></Description>
      <ServiceEnable></ServiceEnable>
      <Online></Online>
      <Servers></Servers>
      <Links></Links>
    </DataCenter>
  </DataCenters>
```

</GLB>

## Table description

Item	Description
Feature name	GLB
Table name	DataCenters
Table type	Multi-instance table
Row name	DataCenter
Restrictions	Only data center can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Specify the description of the data center.	N/A	String, case-insensitive. Length: 1 to 127 characters.	N/A
ServiceEnable	Enable the data center function.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Disable.</li><li>1—Enable.</li></ul>	N/A
Online	Online state of the data center.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Offline</li><li>1—Online.</li></ul>	N/A
Servers	The server num of the data center.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
Links	The link num of the data center.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A

## GLB/DataCenterLinks

This table contains information about the links of a data center.

## XML structure

```
<GLB>
  <DataCenterLinks>
    <DataCenterLink>
```

```

    <DataCenter></DataCenter>
    <Link></Link>
    <InputRate></InputRate>
    <OutputRate></OutputRate>
  </DataCenterLink>
</DataCenterLinks>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	DataCenterLinks
Table type	Multi-instance table
Row name	DataCenterLink
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DataCenter	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Link	Name of the link.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
InputRate	Input rate of the link.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ . Unit: Bytes/s.	N/A
OutputRate	Output rate of the link.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ . Unit: Bytes/s.	N/A

## GLB/Servers

This table contains information about a server.

## XML structure

```
<GLB>
  <Servers>
    <Server>
      <DataCenter></DataCenter>
      <Name></Name>
      <ServiceEnable></ServiceEnable>
      <Interval></Interval>
      <User></User>
      <CipherPassword></CipherPassword>
      <SimplePassword></SimplePassword>
      <Online></Online>
      <VirtualServers></VirtualServers>
    </Server>
  </Servers>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	Servers
Table type	Multi-instance table
Row name	Server
Restrictions	Only server of server can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DataCenter	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Name	Server name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ServiceEnable	Enable the server function.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Disable.</li><li>1—Enable.</li></ul>	N/A
Interval	Specify the communication interval of the server.	N/A	Unsigned integer. Value range: 5 to 2419200.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
User	Specify the communication user of the server.	N/A	String, case-sensitive. Length: 1 to 55 characters.	N/A
CipherPassword	Specify the encrypted password of the server.	N/A	String, case-sensitive. Length: 1 to 113 characters.	N/A
SimplePassword	Specify the plaintext password of the server.	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
Online	Online state of the server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Offline</li> <li>1—Online.</li> </ul>	N/A
VirtualServers	The virtual server number of the server.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A

## GLB/LocalServers

This table contains information about the local server.

### XML structure

```

<GLB>
  <LocalServers>
    <LocalServer>
      <DataCenter></DataCenter>
      <Name></Name>
      <ServiceEnable></ServiceEnable>
      <Online></Online>
    </LocalServer>
  </LocalServers>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	LocalServers
Table type	Multi-instance table
Row name	LocalServer
Restrictions	None.
Support for row creation and	No

---

deletion

---

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DataCenter	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Name	Local server name.	Index	String, case-insensitive.	Must be localhost.
ServiceEnable	Enable the server function.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Disable</li><li>1—Enable.</li></ul>	N/A
Online	Online state of the local server.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Offline</li><li>1—Online.</li></ul>	N/A

## GLB/ServerIPAddresses

This table contains information about the IP address of a server.

## XML structure

```
<GLB>
  <ServerIPAddresses>
    <ServerIPAddress>
      <DataCenter></DataCenter>
      <Server></Server>
      <Ipv4Address></Ipv4Address>
    </ServerIPAddress>
  </ServerIPAddresses>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	ServerIPAddresses
Table type	Multi-instance table
Row name	ServerIPAddress
Restrictions	Only server address can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DataCenter	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Server	Server name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	Specify the IPv4 address of the server.	Index	Hexadecimal string, colon-separated.	Example: 1.1.1.1. Loopback addresses, multicast addresses and broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either.

## GLB/ServerVirtualServers

This table contains information about the virtual servers of a server.

### XML structure

```
<GLB>
  <ServerVirtualServers>
    <ServerVirtualServer>
      <DataCenter></DataCenter>
      <Server></Server>
      <VirtualServer></VirtualServer>
    </ServerVirtualServer>
  </ServerVirtualServers>
</GLB>
```

### Table description

Item	Description
Feature name	GLB
Table name	ServerVirtualServers
Table type	Multi-instance table
Row name	ServerVirtualServer
Restrictions	Only virtual server of server can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DataCenter	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Server	Server name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VirtualServer	Virtual server name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

## GLB/LocalVirtualServers

This table contains information about the virtual server of a local server.

### XML structure

```
<GLB>
  <LocalVirtualServers>
    <LocalVirtualServer>
      <DataCenter></DataCenter>
      <LocalServer></LocalServer>
      <VirtualServerType></VirtualServerType>
      <VirtualServer></VirtualServer>
    </LocalVirtualServer>
  </LocalVirtualServers>
</GLB>
```

### Table description

Item	Description
Feature name	GLB
Table name	LocalVirtualServers
Table type	Multi-instance table
Row name	LocalVirtualServer
Restrictions	Only virtual server of local server can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DataCenter	Name of the data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
LocalServer	Local server name.	Index	String, case-insensitive.	Must be localhost.
VirtualServerType	Virtual server type.	Index	Enumeration: <ul style="list-style-type: none"><li>• 0—virtual server</li><li>• 1—virtual IP.</li></ul>	N/A
VirtualServer	Virtual server name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

## GLB/GlobalDNSListeners

This table contains information about a global DNS listener.

## XML structure

```
<GLB>
  <GlobalDNSListeners>
    <GlobalDNSListener>
      <Name></Name>
      <Ipv4Address></Ipv4Address>
      <Ipv4PortNumber></Ipv4PortNumber>
      <ServiceEnable></ServiceEnable>
      <Fallback></Fallback>
    </GlobalDNSListener>
  </GlobalDNSListeners>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSListeners
Table type	Multi-instance table
Row name	GlobalDNSListener
Restrictions	Only global listener can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the global DNS listener.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1. Loopback addresses, multicast addresses, and broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either.
Ipv4PortNumber	IPv4 port number.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
ServiceEnable	Enable the global DNS listener.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Disable</li><li>1—Enable.</li></ul>	N/A
Fallback	Fallback action.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—No response.</li><li>1—Reject.</li></ul>	N/A

## GLB/GlobalDNSListenerStats

This table contains statistics about a global DNS listener.

### XML structure

```
<GLB>
  <GlobalDNSListenerStats>
    <GlobalDNSListenerStat>
      <Name></Name>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
      <CPUID></CPUID>
      <ReceivedRequests></ReceivedRequests>
      <ReceivedValidRequests></ReceivedValidRequests>
      <UnrespondedRequests></UnrespondedRequests>
      <RejectedRequests></RejectedRequests>
    </GlobalDNSListenerStat>
  </GlobalDNSListenerStats>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSListenerStats
Table type	Multi-instance table
Row name	GlobalDNSListenerStat
Restrictions	Only stats of global listener can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the global DNS listener.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Slot ID of the card on the device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
ReceivedRequests	Number of requests that the global DNS listener received from the device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
ReceivedValidRequests	Number of valid requests that the global DNS listener received from the device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
UnrespondedRequests	Number of unresponded requests that the global DNS listener received from the device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
RejectedRequests	Number of rejected requests that the global DNS listener received from	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	the device.			

## GLB/GlobalDNSListenerTypeStats

This table contains different types of statistics about a global DNS listener.

### XML structure

```

<GLB>
  <GlobalDNSListenerTypeStats>
    <GlobalDNSListenerTypeStat>
      <Name></Name>
      <Type></Type>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
      <CPUID></CPUID>
      <ReceivedRequests></ReceivedRequests>
      <ReceivedValidRequests></ReceivedValidRequests>
      <UnrespondedRequests></UnrespondedRequests>
      <RejectedRequests></RejectedRequests>
    </GlobalDNSListenerTypeStat>
  </GlobalDNSListenerTypeStats>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSListenerTypeStats
Table type	Multi-instance table
Row name	GlobalDNSListenerTypeStat
Restrictions	Only stats of global listener can be gotten by this table.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the global DNS listener.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Type of the	Index	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	global DNS listener statistics.		<ul style="list-style-type: none"> <li>0—A.</li> <li>1—AAAA.</li> <li>2—CNAME.</li> <li>3—MX.</li> <li>4—NS.</li> <li>5—PTR.</li> <li>6—SOA.</li> </ul>	
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Slot ID of the card on the device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
ReceivedRequests	Number of requests that the global DNS listener received from the device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
ReceivedValidRequests	Number of valid requests that the global DNS listener received from the device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
UnrespondedRequests	Number of unresponded requests that the global DNS listener received from the device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
RejectedRequests	Number of rejected requests that the global DNS listener received from the device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A

## GLB/GlobalDNSMaps

This table contains information about a global DNS map.

### XML structure

```

<GLB>
  <GlobalDNSMaps>
    <GlobalDNSMap>

```

```

<Name></Name>
<TTL></TTL>
<PredictorAlternate></PredictorAlternate>
<PredictorFallback></PredictorFallback>
<PredictorPreferred></PredictorPreferred>
<ServiceEnable></ServiceEnable>
</GlobalDNSMap>
</GlobalDNSMaps>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSMaps
Table type	Multi-instance table
Row name	GlobalDNSMap
Restrictions	Only global dns map can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the global DNS map.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
TTL	TTL time of the DNS recorder.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second.	N/A
PredictorAlternate	Alternative predictor algorithm for GLB to select a virtual server pool to service a DNS request.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None.</li> <li>1—Round-robin.</li> <li>2—Random.</li> <li>3—Topology.</li> <li>4—Proximity.</li> </ul>	N/A
PredictorFallback	Backup predictor algorithm for GLB to select a virtual server pool to service a DNS request.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None.</li> <li>1—Round-robin.</li> <li>2—Random.</li> <li>3—Topology.</li> <li>4—Proximity.</li> </ul>	N/A
PredictorPreferred	Preferred predictor	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	algorithm for GLB to select a virtual server pool to service a DNS request.		<ul style="list-style-type: none"> <li>1—Round-robin</li> <li>2—Random.</li> <li>3—Topology.</li> <li>4—Proximity.</li> </ul>	
ServiceEnable	Enable the global DNS map.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A

## GLB/GlobalDNSMapDomains

This table contains information about the domains of a global DNS map.

### XML structure

```

<GLB>
  <GlobalDNSMapDomains>
    <GlobalDNSMapDomain>
      <GlobalDNSMap></GlobalDNSMap>
      <Domain></Domain>
    </GlobalDNSMapDomain>
  </GlobalDNSMapDomains>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSMapDomains
Table type	Multi-instance table
Row name	GlobalDNSMapDomain
Restrictions	Only domain of global dns map can be gotten by this table.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalDNS Map	Name of the global DNS map.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Domain	Domain for the	Index	String,	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	global DNS map.		case-insensitive. Length: 1 to 253 characters.	

## GLB/GlobalDNSMapVirtualServerPools

This table contains information about the virtual server pool of a global DNS map.

### XML structure

```

<GLB>
  <GlobalDNSMapVirtualServerPools>
    <GlobalDNSMapVirtualServerPool>
      <GlobalDNSMap></GlobalDNSMap>

  </GlobalVirtualServerPools>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	GlobalVirtualServerPools
Table type	Multi-instance table
Row name	GlobalVirtualServerPool
Restrictions	Only global virtual server pool can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ProbeSuccessCriteria	Probe success criteria for virtual server pool.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
PredictorAlternate	Alternative predictor algorithm for GLB to select a virtual server to be the DNS recorder for client response.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None.</li> <li>1—Round-robin.</li> <li>2—Random.</li> <li>3—Least-connection(not supported)</li> <li>4—Topology.</li> <li>5—Proximity.</li> <li>15—First-available.</li> </ul>	N/A
PredictorFallback	Backup predictor algorithm for GLB to select a virtual server to be the DNS recorder for client response.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None.</li> <li>1—Round-robin.</li> <li>2—Random.</li> <li>3—Least-connection(not supported)</li> <li>4—Topology.</li> <li>5—Proximity.</li> <li>15—First-available.</li> </ul>	N/A
PredictorPreferred	Preferred predictor algorithm for GLB to select a virtual server to be the DNS recorder for client response.	<ul style="list-style-type: none"> <li>N/A</li> </ul>	<ul style="list-style-type: none"> <li>Enumeration:</li> <li>1—Round-robin.</li> <li>2—Random.</li> <li>3—Least-connection(not supported)</li> <li>4—Topology.</li> <li>5—Proximity.</li> <li>15—First-available.</li> </ul>	N/A
BusyProtectEnable	Enable link protection.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
TotalVirtualServers	Total number of virtual servers in the global virtual server pool.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ActiveVirtual Servers	Active number of virtual servers in the global virtual server pool.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A

## GLB/GVSPVirtualServers

This table contains information about a virtual server of the global virtual server pool.

### XML structure

```

<GLB>
  <GVSPVirtualServers>
    <GVSPVirtualServer>
      <GlobalVirtualServerPool></GlobalVirtualServerPool>
      <DataCenter></DataCenter>
      <Server></Server>
      <VirtualServer></VirtualServer>
      <ProbeSuccessCriteria></ProbeSuccessCriteria>
      <Link></Link>
      <Weight></Weight>
      <Ipv4Address>
      <PortNumber>
      <State></State>
    </GVSPVirtualServer>
  </GVSPVirtualServers>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	GVSPVirtualServers
Table type	Multi-instance table
Row name	GVSPVirtualServer
Restrictions	Only virtual server can be gotten by this table.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalVirtua	Name of the	Index	String,	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IServerPool	global virtual server pool.		case-insensitive. Length: 1 to 63 characters.	
DataCenter	Name of the virtual server's data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Server	Name of the virtual server's server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VirtualServer	Virtual server of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ProbeSuccessCriteria	Probe success criteria for virtual server pool.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
Link	Link of the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Weight	Weight of the virtual server.	N/A	Unsigned integer. Value range: 1 to 255.	A larger number means a higher weight.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
PortNumber	Port number.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
State	State of the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Unavailable.</li> <li>1—Available.</li> <li>2—Busy.</li> </ul>	N/A

## GLB/GVSPVirtualIPs

This table contains information about the virtual IP address of a global virtual server pool.

### XML structure

```

<GLB>
  <GVSPVirtualIPs>
    <GVSPVirtualIP>
      <GlobalVirtualServerPool></GlobalVirtualServerPool>
      <DataCenter></DataCenter>
    
```

```

    <Server></Server>
    <VirtualIP></VirtualIP>
    <ProbeSuccessCriteria></ProbeSuccessCriteria>
    <Link></Link>
    <Weight></Weight>
    <State></State>
  </GVSPVirtualIP>
</GVSPVirtualIPs>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	GVSPVirtualIPs
Table type	Multi-instance table
Row name	GVSPVirtualIP
Restrictions	Only virtual ip can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalVirtualServerPool	Name of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
DataCenter	Name of the virtual IP's data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Server	Name of the virtual IP's server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VirtualIP	Virtual IP address of the global virtual server pool.	Index	String. Dotted decimal notation.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
ProbeSuccessCriteria	Probe success criteria for virtual IP.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
Link	Link of the virtual IP.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Weight	Weight of the virtual IP.	N/A	Unsigned integer. Value range: 1 to 255.	A larger number means a higher weight.
State	State of the virtual IP.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Unavailable.</li> <li>1—Available.</li> <li>2—Busy.</li> </ul>	N/A

## GLB/GVSPProbes

This table contains information the probe method of a global virtual server pool.

### XML structure

```

<GLB>
  <GVSPProbes>
    <GVSPProbe>
      <GlobalVirtualServerPool></GlobalVirtualServerPool>
      <Probe></Probe>
    </GVSPProbe>
  </GVSPProbes>
</GLB>

```

### Table description

Item	Description

      <State></State>
    </GVSPVIPProbe>
  </GVSPVIPProbes>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	GVSPVIPProbes
Table type	Multi-instance table
Row name	GVSPVIPProbe
Restrictions	Only global virtual ip probe can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalVirtualServerPool	Name of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
DataCenter	Name of the virtual IP's data center.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Server	Name of the virtual IP's server.	Index	String, case-insensitive. Length: 1 to 63 characters.	Must be "localhost"
VirtualIP	Virtual IP address of the virtual IP.	Index	String. Dotted decimal notation.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
GlobalVirtualServerPool	Name of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Probe	Probe method for the virtual IP.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
State	Probe state of the virtual IP.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0— Invalid.</li> <li>• 1— Succeeded.</li> <li>• 2—Failed.</li> <li>• 3---In progress</li> </ul>	N/A

## GLB/GTopoRegionVSPs

This table contains information about the mapping between a global region and a global virtual server pool.

## XML structure

```

<GLB>
  <GTopoRegionVSPs>
    <GTopoRegionVSP>
      <GlobalRegion></GlobalRegion>
      <GlobalVirtualServerPool></GlobalVirtualServerPool>
      <Priority></Priority>
    </GTopoRegionVSP>
  </GTopoRegionVSPs>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	GTopoRegionVSPs
Table type	Multi-instance table
Row name	GTopoRegionVSP
Restrictions	Only Topology Region VSP can be configured by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalRegion	Name of the global region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
GlobalVirtualServerPool	Name of the global virtual server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Priority	Priority of the global region.	N/A	Unsigned integer. Value range: 1 to 255.	A larger number means a higher priority.

## GLB/GTopoRegionIPv4s

This table contains information about the mapping between a global region and an IP address.

## XML structure

```
<GLB>
  <GTopoRegionIPv4s>
    <GTopoRegionIPv4>
      <GlobalRegion></GlobalRegion>
      <IPv4Address></IPv4Address>
      <IPv4MaskLength></IPv4MaskLength>
      <Priority></Priority>
    </GTopoRegionIPv4>
  </GTopoRegionIPv4s>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	GTopoRegionIPv4s
Table type	Multi-instance table
Row name	GTopoRegionIPv4
Restrictions	Only Topology Region IP can be configured by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalRegion	Name of the global topology region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPv4Addresses	IPv4 address.	Index	String. Dotted decimal notation.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
IPv4MaskLength	IPv4 mask length.	Index	Unsigned integer. Value range: 0 to 32.	The column cannot be configured if no IPv4 address is configured.
Priority	Priority of the global topology region.	N/A	Unsigned integer. Value range: 1 to 255.	A larger number means a higher priority.

## GLB/GlobalRegions

This table contains information about a global region.

## XML structure

```
<GLB>
  <GlobalRegions>
    <GlobalRegion>
      <Name></Name>
    </GlobalRegion>
  </GlobalRegions>
</GLB>
```

## Table description

Item	Description
Feature name	GLB

Table type	Multi-instance table
Row name	GlobalIpv4ISPAddressGroup
Restrictions	Only IPv4 ISP can be configured by this table.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalISP	Name of the global ISP.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	IPv4 address.	Index	String. Dotted decimal notation.	The value must be equal to the summation of the address and the mask.

Column name	Column description	Column type	Data type and restrictions	Remarks
				Example: 1.1.1.0/24.
Ipv4PrefixLength	IPv4 mask length.	Index	Unsigned integer. Value range: 1 to 32.	N/A
Origin	Origin of the IPv4 address.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Import.</li> <li>2—Manual.</li> <li>3—Import and manual.</li> </ul>	N/A

## GLB/GlobalISPFile

This table contains information about a global ISP file.

### XML structure

```

<GLB>
  <GlobalISPFile>
    <FileName></FileName>
  </GlobalISPFile>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	GlobalISPFile
Table type	Single-instance table
Row name	N/A
Restrictions	Only ISP file can be configured by this table.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Name of the global ISP file.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A

## GLB/GlobalVRFProximityParameters

This table contains information about global proximity parameters.

## XML structure

```
<GLB>
  <GlobalVRFPproximityParameters>
    <GlobalVRFPproximityParameter>
      <VRF></VRF>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <Timeout></Timeout>
      <RTTWeight></RTTWeight>
      <TTLWeight></TTLWeight>
      <InBandwidthWeight></InBandwidthWeight>
      <OutBandwidthWeight></OutBandwidthWeight>
      <CostWeight></CostWeight>
      <MaxNumber></MaxNumber>
      <DefaultProbe></DefaultProbe>
    </GlobalVRFPproximityParameter>
  </GlobalVRFPproximityParameters>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalVRFPproximityParameters
Table type	Multi-instance table
Row name	GlobalVRFPproximityParameter
Restrictions	Only proximity parameter can be configured by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	The null string indicates the public network.
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32.	Zero means a natural mask.
Timeout	The lifetime of global proximity entries.	N/A	Unsigned integer. Value range: 60 to 3600.	N/A
RTTWeight	The weight of RTT.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
TTLWeight	The weight of	N/A	Unsigned integer.	N/A

	TTL.		Value range: 0 to 255.	
InBandwidthWeight	The weight of inbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
OutBandwidthWeight	The weight of outbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
CostWeight	The weight of link cost.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
MaxNumber	Upper limit for global proximity entries.	N/A	Unsigned integer. Value range: 0 to 10000000.	N/A
DefaultProbe	Default probe method for the global proximity.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A

## GLB/GlobalIpv4ProximityTables

This table contains information about global IPv4 proximity items.

### XML structure

```

<GLB>
  <GlobalIpv4ProximityTables>
    <GlobalIpv4ProximityTable>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
      <CPUID></CPUID>
      <VRF></VRF>
      <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <Lifetime></Lifetime>
      <BestLink></BestLink>
    </GlobalIpv4ProximityTable>
  </GlobalIpv4ProximityTables>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	GlobalIpv4ProximityTables
Table type	Multi-instance table
Row name	GlobalIpv4ProximityTable

Restrictions	Only IPv4 proximity items can be configured by this table.
--------------	--

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Slot ID of the card on the device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	The null string indicates the public network.
Ipv4Address	IPv4 address.	Index	String. Dotted decimal notation.	N/A
Ipv4PrefixLength	IPv4 mask length.	Index	Unsigned integer. Value range: 0 to 32.	N/A
Lifetime	Lifetime of global proximity items.	N/A	Unsigned integer. Value range: 0 to 3600.	N/A
BestLink	The best link name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

## GLB/GlobalIpv4ProximityNodes

This table contains information about the real servers of global IPv4 proximity items.

### XML structure

```

<GLB>
  <GlobalIpv4ProximityNodes>
    <GlobalIpv4ProximityNode>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
      <CPUID></CPUID>
      <VRF></VRF>
      <Ipv4Address></Ipv4Address>

```

```

    <Ipv4PrefixLength></Ipv4PrefixLength>
    <Priority></Priority>
    <Link></Link>
  </GlobalIpv4ProximityNode>
</GlobalIpv4ProximityNodes>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	Globallpv4ProximityNodes
Table type	Multi-instance table
Row name	Globallpv4ProximityNode
Restrictions	Only IPv4 proximity node can be configured by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Slot ID of the card on the device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	The null string indicates the public network.
Ipv4Address	IPv4 address.	Index	String. Dotted decimal notation.	N/A
Ipv4PrefixLength	IPv4 mask length.	Index	Unsigned integer. Value range: 0 to 32.	N/A
Priority	Priority.	Index	Unsigned integer. Value range: 1 to $2^{32}-1$ .	N/A
Link	Link name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

# GLB/GlobalProximityStats

This table contains information about global proximity entries.

## XML structure

```
<GLB>
  <GlobalProximityStats>
    <GlobalProximityStat>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
      <CPUID></CPUID>
      <VRF></VRF>
      <TotalCount></TotalCount>
      <Ipv4Count></Ipv4Count>
    </GlobalProximityStat>
  </GlobalProximityStats>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalProximityStats
Table type	Multi-instance table
Row name	GlobalProximityStat
Restrictions	Only proximity can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Slot ID of the card on the device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	The null string indicates the public network.
TotalCount	Total number of global	N/A	Unsigned integer. Value range: 0 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	proximity entries.		$2^{32}-1$ .	
Ipv4Count	The number of global IPv4 proximity entries.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A

## GLB/GlobalDNSZones

This table contains information about a global DNS zone.

### XML structure

```
<GLB>
  <GlobalDNSZones>
    <GlobalDNSZone>
      <DomainName></DomainName>
      <TTL></TTL>
    </GlobalDNSZone>
  </GlobalDNSZones>
</GLB>
```

### Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSZones
Table type	Multi-instance table
Row name	GlobalDNSZone
Restrictions	Only global DNS zone can be gotten by this table.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain Name	Domain name of the global DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
TTL	TTL time of the global DNS zone.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second.	N/A

# GLB/GlobalDNSZoneSOAs

This table contains information about an SOA resource record for a global DNS zone.

## XML structure

```
<GLB>
  <GlobalDNSZoneSOAs>
    <GlobalDNSZoneSOA>
      <Zone></Zone>
      <PrimaryNS></PrimaryNS>
      <ResponsibleMail></ResponsibleMail>
      <Serial></Serial>
      <Refresh></Refresh>
      <Retry></Retry>
      <Expire></Expire>
      <MinTTL></MinTTL>
    </GlobalDNSZoneSOA>
  </GlobalDNSZoneSOAs>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSZoneSOAs
Table type	Multi-instance table
Row name	GlobalDNSZoneSOA
Restrictions	Only SOA record of global DNS zone can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the global DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
PrimaryNS	Name of the primary name server.	N/A	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Responsible Mail	Responsible mail address.	N/A	String, case-insensitive. Length: 1 to 253	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters.	
Serial	Serial number	N/A	Unsigned integer. Value range: 1 to $2^{32}-1$ .	N/A
Refresh	Refresh interval	N/A	Unsigned integer. Value range: 300 to 2419200. Unit: second.	N/A
Retry	Retry interval	N/A	Unsigned integer. Value range: 500 to $2^{32}-1$ . Unit: second.	N/A
Expire	Expiration time	N/A	Unsigned integer. Value range: 500 to $2^{32}-1$ . Unit: second.	N/A
MinTTL	Minimum TTL	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second.	N/A

## GLB/GlobalDNSZoneMXRRs

This table contains information about MX resource records for a global DNS zone.

### XML structure

```

<GLB>
  <GlobalDNSZoneMXRRs>
    <GlobalDNSZoneMXRR>
      <Zone></Zone>
      <Host></Host>
      <MailServer></MailServer>
      <Preference></Preference>
    </GlobalDNSZoneMXRR>
  </GlobalDNSZoneMXRRs>
</GLB>

```

### Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSZoneMXRRs

Table type	Multi-instance table
Row name	GlobalDNSZoneMXRR
Restrictions	Only MX records of global DNS zone can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the global DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Host	Host name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
MailServer	Mail exchange name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Preference	Preference value	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

## GLB/GlobalDNSZoneCNAMERRs

This table contains information about CNAME resource records for a global DNS zone.

## XML structure

```

<GLB>
  <GlobalDNSZoneCNAMERRs>
    <GlobalDNSZoneCNAMERR>
      <Zone></Zone>
      <Alias></Alias>
      <Canonical></Canonical>
    </GlobalDNSZoneCNAMERR>
  </GlobalDNSZoneCNAMERRs>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSZoneCNAMERRs

Table type	Multi-instance table
Row name	GlobalDNSZoneCNAMERR
Restrictions	Only CNAME records of global DNS zone can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the global DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Alias	Alias name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
Canonical	Canonical name	N/A	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).

## GLB/GlobalDNSZoneNSRRs

This table contains information about NS resource records for a global DNS zone.

## XML structure

```

<GLB>
  <GlobalDNSZoneNSRRs>
    <GlobalDNSZoneNSRR>
      <Zone></Zone>
      <SubName></SubName>
      <NameServerName></NameServerName>
    </GlobalDNSZoneNSRR>
  </GlobalDNSZoneNSRRs>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSZoneNSRRs
Table type	Multi-instance table
Row name	GlobalDNSZoneNSRR

Restrictions	Only NS records of global DNS zone can be gotten by this table.
--------------	---

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Zone	Name of the global DNS zone.	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
SubName	Sub domain name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).
NameServer Name	Authoritative name server name	Index	String, case-insensitive. Length: 1 to 254 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).

## GLB/GlobalDNSRevZones

This table contains information about a global DNS reverse zone.

## XML structure

```

<GLB>
  <GlobalDNSRevZones>
    <GlobalDNSRevZone>
      <IPv4Address></IPv4Address>
      <IPv4PrefixLength></IPv4PrefixLength>
      <TTL></TTL>
    </GlobalDNSRevZone>
  </GlobalDNSRevZones>
</GLB>

```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSRevZones
Table type	Multi-instance table
Row name	GlobalDNSRevZone
Restrictions	Only global DNS reverse zone can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4Addresses	IPv4 address of the global reverse zone.	Index	String. Dotted decimal notation.	Example: 1.1.1.1.
IPv4PrefixLength	IPv4 mask length of the global reverse zone.	Index	Unsigned integer. Value range: 0 to 32.	N/A
TTL	TTL time of the global reverse zone.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: second.	N/A

## GLB/GlobalDNSRevZoneRRs

This table contains information about a resource record for a global DNS reverse zone.

## XML structure

```
<GLB>
  <GlobalDNSRevZoneRRs>
    <GlobalDNSRevZoneRR>
      <ReverseZoneIP></ReverseZoneIP>
      <ReverseZoneMask></ReverseZoneMask>
      <IPv4Address></IPv4Address>
      <DomainName></DomainName>
    </GlobalDNSRevZoneRR>
  </GlobalDNSRevZoneRRs>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalDNSRevZoneRRs
Table type	Multi-instance table
Row name	GlobalDNSRevZoneRR
Restrictions	Only records of global DNS reverse zone can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ReverseZoneIP	IPv4 address of the global reverse zone.	Index	String. Dotted decimal notation.	Example: 1.1.1.1.
ReverseZoneMask	IPv4 mask length of the global reverse zone.	Index	Unsigned integer. Value range: 0 to 32.	N/A
IPv4Addresses	IPv4 address of the PTR resource record.	Index	String. Dotted decimal notation.	N/A
DomainName	Domain name	Index	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.).

## GLB/GlobalIpv4ISPLists

This table contains information about a global IPv4 ISP address group.

## XML structure

```
<GLB>
  <GlobalIpv4ISPLists>
    <GlobalIpv4ISPList>
      <GlobalISP></GlobalISP>
      <AllCount></AllCount>
      <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <Origin></Origin>
    </GlobalIpv4ISPList>
  </GlobalIpv4ISPLists>
</GLB>
```

## Table description

Item	Description
Feature name	GLB
Table name	GlobalIpv4ISPLists
Table type	Multi-instance table
Row name	GlobalIpv4ISPList
Restrictions	Only IPv4 ISP can be configured by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalISP	Name of the global ISP.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
AllCount	The number of all IPv4 address.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
Ipv4Address	IPv4 address.	Index	String. Dotted decimal notation.	The value must be equal to the summation of the address and the mask. Example: 1.1.1.0/24.
Ipv4PrefixLength	IPv4 mask length.	Index	Unsigned integer. Value range: 1 to 32.	N/A
Origin	Origin of the IPv4 address.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Import.</li> <li>2—Manual.</li> <li>3—Import and manual.</li> </ul>	N/A

## GLB/GlobalIpv4ProximityTableLists

This table contains information about global IPv4 proximity items.

### XML structure

```

<GLB>
  <GlobalIpv4ProximityTableLists>
    <GlobalIpv4ProximityTableList>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
      <CPUID></CPUID>
      <VRF></VRF>

## GLB/SyncGroupMemberIPAddresses

Message	Explanation
The IPv4 address has been configured for another synchronization group member. 该地址已被其他类型同步组成员使用。	The IPv4 address has been configured for another synchronization group member. 该地址已被其他类型同步组成员使用。

## GLB/DataCenters

Message	Explanation
Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。	Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。

## GLB/DataCenterLinks

Message	Explanation
Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync</b>	Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default

Message	Explanation
<b>config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。	synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。

## GLB/Servers

Message	Explanation
Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。	Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。

## GLB/ServerIPAddresses

Message	Explanation
Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。	Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。

## GLB/LocalVirtualServers

Message	Explanation
The member has been referenced by the local SLB device of another data center. 该成员已经被其他数据中心的本地负载均衡设备引用。	The member has been referenced by the local SLB device of another data center. 该成员已经被其他数据中心的本地负载均衡设备引用。
Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。	Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。

## GLB/GlobalDNSListeners

Message	Explanation
The IP address and port number have been configured. IP地址和端口已配置。	The IP address and port number have been configured. IP 地址和端口已配置。

## GLB/GlobalDNSMaps

Message	Explanation
Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。	Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。

## GLB/GlobalDNSMapDomains

Message	Explanation
Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。	Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。

## GLB/GlobalDNSMapVirtualServerPools

Message	Explanation
Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。	Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。

# GLB/GlobalVirtualServerPools

Message	Explanation
Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。	Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。

# GLB/GVSPVirtualServers

Message	Explanation
Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。	Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。

# GLB/GVSPVirtualIPs

Message	Explanation
Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。	Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。

# GLB/GTopoRegionIPv4s

Message	Explanation
Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。	Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。

## GLB/GlobalRegions

Message	Explanation
Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。	Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。

## GLB/GlobalRegionISPs

Message	Explanation
Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。	Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。

## GLB/GlobalISPs

Message	Explanation
Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置， 请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。	Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置， 请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。

## GLB/Globalpv4ISPAddressGroups

Message	Explanation
Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance</b>	Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。

Message	Explanation
default-syncgroup sync config命令。	

## GLB/GlobalISPFile

Message	Explanation
The ISP name is invalid. ISP名称不合法。	The ISP name is invalid. ISP 名称不合法。

## GLB/GlobalVRFProximityParameters

Message	Explanation
Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。	Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。

## GLB/GlobalDNSRevZoneRRs

Message	Explanation
Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。	Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置， 请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。

## GLB/GlobalDNSZones

Message	Explanation
Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance</b>	Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。

Message	Explanation
default-syncgroup sync config命令。	

## GLB/GlobalDNSZoneSOAs

Message	Explanation
Configuration conflicts exist. Please execute the <b>loadbalance default-syncgroup sync config</b> command on a default synchronization group member. 存在配置冲突，不允许下发配置，请选择一个缺省同步组成员设备执行 <b>loadbalance default-syncgroup sync config</b> 命令。	Configuration conflicts exist. # GRPC

## GRPC/Configuration

This table contains gRPC configuration information.

### XML structure

```
<GRPC>
  <Configuration>
    <State></State>
    <Port></Port>
    <IdleTime></IdleTime>
  </Configuration>
</GRPC>
```

### Table description

Item	Description
Feature name	GRPC
Table name	Configuration
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
State	Status of the gRPC service	N/A	Enumeration: <ul style="list-style-type: none"><li><b>enable</b>—The gRPC service is enabled.</li><li><b>disable</b>—The gRPC service is disabled.</li></ul>	When State is to be disabled all gRPC configuration will be deleted.
Port	Port number of the gRPC service	N/A	Unsigned integer. Value range: 1 to 65535.	Configuring Port is not allowed when State is or is to be disabled.
IdleTime	Idle timeout time for gRPC sessions in minutes	N/A	Unsigned integer. Value range: 0 to 30.	N/A

批注 [(1): 问题单 201811010077, 除显示命令外, grpc 所有命令都在 grpc enable 之后配置, undo grpc enable 将输出所有 grpc 配置

# GRPC/SensorGroups

This table contains gRPC sensor group information.

## XML structure

```
<GRPC>
  <SensorGroups>
    <SensorGroup>
      <GroupName></GroupName>
      <SensorPaths>
        <SensorPath>
          <Path></Path>
        </SensorPath>
      </SensorPaths>
    </SensorGroup>
  </SensorGroups>
</GRPC>
```

## Table description

Item	Description
Feature name	GRPC
Table name	SensorGroups
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SensorGroup	SensorGroup table	Multi-instance table	N/A	For more information, see the SensorGroup table.

# GRPC/SensorGroups/SensorGroup

This table contains gRPC sensor group information.

## XML structure

Please refer to the XML structure of GRPC/SensorGroups.

## Table description

Item	Description
Feature name	GRPC
Table name	SensorGroup
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Sensor group name	index	String. Length: 1 to 31 characters.	N/A
SensorPaths	Sensor path information	Sublist	N/A	For more information, see the SensorPaths table.

## GRPC/SensorGroups/SensorGroup/SensorPaths

This table contains gRPC sensor path information.

## XML structure

Please refer to the XML structure of GRPC/SensorGroups.

## Table description

Item	Description
Feature name	GRPC
Table name	SensorPaths
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SensorPath	SensorPath table	Multi-instance table	N/A	For more information, see the SensorPath table.

## GRPC/SensorGroups/SensorGroup/SensorPaths/SensorPath

This table contains gRPC sensor path information.

### XML structure

Please refer to the XML structure of GRPC/SensorGroups.

### Table description

Item	Description
Feature name	GRPC
Table name	SensorPath
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Sensor group name	Index	Index of the parent table.	This column cannot be present.
Path	Path of the node to be monitored	Index	String. Case insensitive. Length: 1 to 127 characters.	Whether the path is supported or not depends on specific device.

批注 [1(2): 问题单 201809170278, 配置 sensor path 时根据设备是否支持提示成功或失败

## GRPC/DestinationGroups

This table contains gRPC destination group information.

### XML structure

<GRPC>

```

<DestinationGroups>
  <DestinationGroup>
    <GroupName></GroupName>
    <Destinations>
      <Destination>
        <IpAddress></IpAddress>
        <VRF></VRF>
        <Port></Port>
      </Destination>
    </Destinations>
  </DestinationGroup>
</DestinationGroups>
</GRPC>

```

## Table description

Item	Description
Feature name	GRPC
Table name	DestinationGroups
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DestinationGroup	DestinationGroup table	Multi-instance table	N/A	For more information, see the DestinationGroup table.

## GRPC/DestinationGroups/DestinationGroup

This table contains gRPC destination group information.

## XML structure

Please refer to the XML structure of GRPC/DestinationGroups.

## Table description

Item	Description
Feature name	GRPC

Item	Description
Table name	DestinationGroup
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Destination group name	index	String. Length: 1 to 31 characters.	N/A
Destinations	Destination info	Sublist	N/A	For more information, see the Destinations table.

## GRPC/DestinationGroups/DestinationGroup/Destinations

This table contains gRPC destination information.

## XML structure

Please refer to the XML structure of GRPC/DestinationGroups.

## Table description

Item	Description
Feature name	GRPC
Table name	Destinations
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Destination	Destination table	Multi-instance table	N/A	For more information, see the Destination table.

## GRPC/DestinationGroups/DestinationGroup/Destinations/Destination

This table contains gRPC destination information.

## XML structure

Please refer to the XML structure of GRPC/DestinationGroups.

## Table description

Item	Description
Feature name	GRPC
Table name	Destination
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Destination group name	Index	Index of the parent table.	This column cannot be present.
IpAddress	Address of the destination group	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
VRF	VRF instance name	Index	String. Length: 0 to 31 characters.	If the address is a public network address, leave this column empty.
Port	Port number of the destination group	Index	Unsigned integer. Value range: 1 to 65535.	N/A

## GRPC/Subscriptions

This table contains gRPC subscription information.

### XML structure

```
<GRPC>
  <Subscriptions>
    <Subscription>
      <SubscriptionName></SubscriptionName>
      <SourceAddress></SourceAddress>
      <SensorProfiles>
        <SensorProfile>
          <GroupName></GroupName>
          <SampleInterval></SampleInterval>
        </SensorProfile>
      </SensorProfiles>
      <DestinationProfiles>
        <DestinationProfile>
          <GroupName></GroupName>
        </DestinationProfile>
      </DestinationProfiles>
    </Subscription>
  </Subscriptions>
</GRPC>
```

### Table description

Item	Description
Feature name	GRPC
Table name	Subscriptions
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Subscription	Subscription table	Multi-instance table	N/A	For more information, see the Subscription table.

## GRPC/Subscriptions/Subscription

This table contains gRPC subscription information.

### XML structure

Please refer to the XML structure of GRPC/Subscriptions.

### Table description

Item	Description
Feature name	GRPC
Table name	Subscription
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SubscriptionName	Subscription name	Index	String. Length: 1 to 31 characters.	N/A
SourceAddress	Source address packets	IP for N/A	IPv4: String, in dotted decimal notation. IPv6: Hexadecimal string, colon-separated. Interface: String, interface type and number	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. Interface example: LoopBack2 In the current software version, it must be a loopback interface.
SensorProfiles	Sensor profile information	Sublist	N/A	For more information, see the SensorProfiles table.
DestinationProfiles	Destination profile information	Sublist	N/A	For more information, see the DestinationProfiles table.

## GRPC/Subscriptions/Subscription/SensorProfiles

This table contains gRPC sensor profile information.

## XML structure

Please refer to the XML structure of GRPC/Subscriptions.

## Table description

Item	Description
Feature name	GRPC
Table name	SensorProfiles
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SensorProfile	SensorProfile table	Multi-instance table	N/A	For more information, see the SensorProfile table.

## GRPC/Subscriptions/Subscription/SensorProfiles/SensorProfile

This table contains gRPC sensor profile information.

## XML structure

Please refer to the XML structure of GRPC/Subscriptions.

## Table description

Item	Description
Feature name	GRPC
Table name	SensorProfile
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SubscriptionName	Subscription name	Index	Index of the parent table.	This column cannot be present.
GroupName	Sensor group name	Index	String. Length: 1 to 31 characters.	N/A
SampleInterval	Sampling interval in seconds	N/A	Unsigned integer. Value range: 1 to 86400.	<p>Specify this column for periodic sensor paths and only for periodic sensor paths.</p> <ul style="list-style-type: none"> <li>If you specify this column for event-triggered sensor paths, the sensor paths do not take effect.</li> <li>If you do not specify this column for periodic sensor paths, the device does not sample or push data.</li> </ul>

## GRPC/Subscriptions/Subscription/DestinationProfiles

This table contains gRPC destination profile information.

## XML structure

Please refer to the XML structure of GRPC/Subscriptions.

## Table description

Item	Description
Feature name	GRPC
Table name	DestinationProfiles
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DestinationProfile	DestinationProfile table	Multi-instance table	N/A	For more information, see the DestinationProfile table.

## GRPC/Subscriptions/Subscription/DestinationProfiles/DestinationProfile

This table contains gRPC destination profile information.

## XML structure

Please refer to the XML structure of GRPC/Subscriptions.

## Table description

Item	Description
Feature name	GRPC
Table name	DestinationProfile
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SubscriptionName	Subscription name	Index	Index of the parent table.	This column cannot be present.
GroupName	Destination group name	Index	String. Length: 1 to 31 characters.	N/A

### Columns

Column name	Column description	Column type	Data type and restrictions
State	Status of the gRPC service	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>enable</b>—The gRPC service is enabled.</li><li>• <b>disable</b>—The gRPC service is disabled.</li></ul>
Port	Port number of the gRPC service	N/A	Unsigned integer. Value range: 1 to 65535.
IdleTime	Idle timeout time for gRPC sessions in minutes	N/A	Unsigned integer. Value range: 0 to 30.

# GRPC/SensorGroups

This table contains gRPC sensor group information.

## XML structure

```
<GRPC>
  <SensorGroups>
    <SensorGroup>
      <GroupName></GroupName>
      <SensorPaths>
        <SensorPath>
          <Path></Path>
        </SensorPath>
      </SensorPaths>
    </SensorGroup>
  </SensorGroups>
</GRPC>
```

## Table description

Item	Description
Feature name	GRPC
Table name	SensorGroups
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SensorGroup	SensorGroup table	Multi-instance table	N/A	For more information, see the SensorGroup table.

# GRPC/SensorGroups/SensorGroup

This table contains gRPC sensor group information.

## XML structure

Please refer to the XML structure of GRPC/SensorGroups.

## Table description

Item	Description
Feature name	GRPC
Table name	SensorGroup
Table type	Multi-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Sensor group name	index	String. Length: 1 to 31 characters.	N/A
SensorPaths	Sensor path information	Sublist	N/A	For more information, see the SensorPaths table.

## GRPC/SensorGroups/SensorGroup/SensorPaths

This table contains gRPC sensor path information.

## XML structure

Please refer to the XML structure of GRPC/SensorGroups.

## Table description

Item	Description
Feature name	GRPC
Table name	SensorPaths
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SensorPath	SensorPath table	Multi-instance table	N/A	For more information, see the SensorPath table.

## GRPC/SensorGroups/SensorGroup/SensorPaths/SensorPath

This table contains gRPC sensor path information.

### XML structure

Please refer to the XML structure of GRPC/SensorGroups.

### Table description

Item	Description
Feature name	GRPC
Table name	SensorPath
Table type	Multi-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Sensor group name	Index	Index of the parent table.	This column cannot be present.
Path	Path of the node to be monitored	Index	String. Case insensitive. Length: 1 to 127 characters.	N/A

**批注 [(1):** 参考 sensor path 命令行帮助信息  
[H3C-telemetry-sensor-group-1] sensor pat? path Specify the path of the node to be monitored

**批注 [(2):** 早期设计，未实现过，现在所有分支都不支持

## GRPC/DestinationGroups

This table contains gRPC destination group information.

### XML structure

```
<GRPC>
  <DestinationGroups>
```

```

<DestinationGroup>
  <GroupName></GroupName>
  <Destinations>
    <Destination>
      <IpAddress></IpAddress>
      <VRF></VRF>
      <Port></Port>
    </Destination>
  </Destinations>
</DestinationGroup>
</DestinationGroups>
</GRPC>

```

## Table description

Item	Description

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DestinationGroup	DestinationGroup table	Multi-instance table	N/A	For more information, see the DestinationGroup table.

## GRPC/DestinationGroups/DestinationGroup

This table contains gRPC destination group information.

## XML structure

Please refer to the XML structure of GRPC/DestinationGroups.

## Table description

Item	Description
Feature name	GRPC
Table name	DestinationGroup

Item	Description
Table type	Multi-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Destination group name	index	String. Length: 1 to 31 characters.	N/A
Destinations	Destination info	Sublist	N/A	For more information, see the Destinations table.

## GRPC/DestinationGroups/DestinationGroup/Destinations

This table contains gRPC destination information.

## XML structure

Please refer to the XML structure of GRPC/DestinationGroups.

## Table description

Item	Description
Feature name	GRPC
Table name	Destinations
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Destination	Destination table	Multi-instance table	N/A	For more information, see the Destination table.

## GRPC/DestinationGroups/DestinationGroup/Destinations/Destination

This table contains gRPC destination information.

### XML structure

Please refer to the XML structure of GRPC/DestinationGroups.

### Table description

Item	Description
Feature name	GRPC
Table name	Destination
Table type	Multi-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Destination group name	Index	Index of the parent table.	This column cannot be present.
IpAddress	Address of the destination group	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
VRF	VRF instance name	Index	String. Length: 0 to 31 characters.	If the address is a public network address, leave this column empty.
Port	Port number of the destination group	Index	Unsigned integer. Value range: 1 to 65535.	N/A

## GRPC/Subscriptions

This table contains gRPC subscription information.

### XML structure

```
<GRPC>
  <Subscriptions>
```

```

<Subscription>
  <SubscriptionName></SubscriptionName>
  <SourceAddress></SourceAddress>
  <SensorProfiles>
    <SensorProfile>
      <GroupName></GroupName>
      <SampleInterval></SampleInterval>
    </SensorProfile>
  </SensorProfiles>
  <DestinationProfiles>
    <DestinationProfile>
      <GroupName></GroupName>
    </DestinationProfile>
  </DestinationProfiles>
</Subscription>
</Subscriptions>
</GRPC>

```

## Table description

Item	Description
Feature name	GRPC
Table name	Subscriptions
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Subscription	Subscription table	Multi-instance table	N/A	For more information, see the Subscription table.

## GRPC/Subscriptions/Subscription

This table contains gRPC subscription information.

## XML structure

Please refer to the XML structure of GRPC/Subscriptions.

## Table description

Item	Description
Feature name	GRPC
Table name	Subscription
Table type	Multi-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SubscriptionName	Subscription name	Index	String. Length: 1 to 31 characters.	N/A
SourceAddress	Source address packets	IP for N/A	IPv4: String, in dotted decimal notation. IPv6: Hexadecimal string, colon-separated. Interface: String, interface type and number	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8. Interface example: LoopBack2 In the current software version, it must be a loopback interface.
SensorProfiles	Sensor profile information	Sublist	N/A	For more information, see the SensorProfiles table.
DestinationProfiles	Destination profile information	Sublist	N/A	For more information, see the DestinationProfiles table.

## GRPC/Subscriptions/Subscription/SensorProfiles

This table contains gRPC sensor profile information.

## XML structure

Please refer to the XML structure of GRPC/Subscriptions.

## Table description

Item	Description
Feature name	GRPC
Table name	SensorProfiles

Item	Description
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SensorProfile	SensorProfile table	Multi-instance table	N/A	For more information, see the SensorProfile table.

## GRPC/Subscriptions/Subscription/SensorProfiles/SensorProfile

This table contains gRPC sensor profile information.

## XML structure

Please refer to the XML structure of GRPC/Subscriptions.

## Table description

Item	Description
Feature name	GRPC
Table name	SensorProfile
Table type	Multi-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SubscriptionName	Subscription name	Index	Index of the parent table.	This column cannot be present.
GroupName	Sensor group name	Index	String. Length: 1 to 31 characters.	N/A
SampleInterval	Sampling interval in seconds	N/A	Unsigned integer. Value range: 1 to 86400.	This column is intended for periodic sensor paths and only for

批注 [13]: 根据资料意见修改

Column name	Column description	Column type	Data type and restrictions	Remarks
				<p>periodic sensor paths.</p> <ul style="list-style-type: none"> <li>If this column is present for event-triggered sensor paths, the sensor paths do not take effect.</li> <li>If this column is absent for periodic sensor paths, the device does not sample or push data.</li> </ul>

**批注 [(4)]:** 当传感器组中的采样路径为事件触发类型时, 请不要配置 `sample-interval` 参数, 否则该采样路径不生效; 当采样路径为周期采样类型时, 必须配置 `sample-interval` 参数才会采样和推送数据  
根据资料意见修改

## GRPC/Configuration

Message	Explanation
Please enable the gRPC service first. 请先启动gRPC服务。	Enable GRPC first. 需要先启动GRPC服务，再提供相关服务。
Please stop gRPC server first. 请先去使能gRPC服务。	Disable GRPC first. 请先去使能gRPC服务。

批注 [(1): 问题单 201811010077, grpc 命令解耦, 除显示命令外的所有 grpc 命令都必须在 grpc enable 之后配置: grpc port 也是, 因此删除去使能相关提示

## GRPC/SensorGroups

Message	Explanation
Incomplete parameter. 参数输入不完整。	Specified sampling data filter parameters are incomplete. 必须制定过滤列的值。
Please enable the gRPC service first. 请先启动gRPC服务。	Enable grpc first. 需要先启动GRPC服务，再提供相关服务。
The path doesn't exist, or it is invalid. path不存在或者格式错误。	Invalid sampling path. path不存在或者格式错误。
The sensor group has been used by subscriptions. Please remove the sensor group from the subscriptions first. 当前sensor group正在被订阅使用, 请先从相关订阅下移除。	A user failed to delete a sensor group, failed to assign a sensor path to a sensor group, or failed to remove a sensor path from a sensor group. 用户删除sensor group失败, 或者在当前sensor group下配置或移除sensor path失败。
Path path is not supported. 不支持指定path。	Unsupported sampling path. 不支持指定path。

批注 [(2): 问题单 201811010077, grpc 命令解耦, 除显示命令外的所有 grpc 命令都必须在 grpc enable 之后配置

批注 [(3): 问题单 201809170278, 在配置 sensor-path 时检查是否支持, 不支持需提示

## GRPC/DestinationGroups

Message	Explanation
Please enable the gRPC service first. 请先启动gRPC服务。	Enable grpc first. 需要先启动GRPC服务，再提供相关服务。
The destination group has been used by subscriptions. Please remove the destination group from the subscriptions first. 当前destination group正在被订阅使用, 请先从相关订阅下移除。	A user failed to delete a destination group, failed to assign a collector to a destination group, or failed to remove a collector from a destination group. 用户删除destination group失败, 或者在当前destination group下配置或移除采集器失败。

批注 [(4): 问题单 201811010077, grpc 命令解耦, 除显示命令外的所有 grpc 命令都必须在 grpc enable 之后配置

# GRPC/Subscriptions

Message	Explanation
Please enable the gRPC service first. 请先启动gRPC服务。	Enable grpc first. 需要先启动GRPC服务，再提供相关服务。
The sensor group is subscribing, do not support modify sample-interval. 当前sensor group正在被订阅，不支持修改sample-interval。	Can't delete sample interval in delete or remove request. 当前sensor group正在被订阅，不支持修改sample-interval，请先去使能相关订阅。
The sensor group doesn't exist. 指定的sensor group不存在。	A user specified a non-existent sensor group. 用户指定了一个不存在的sensor group。
The destination group doesn't exist. 指定的destination group不存在。	A user specified a non-existent destination group. 用户指定了一个不存在的destination group。

批注 [I(5)]: 问题单 201811010077, grpc 命令解耦, 除显示命令外的所有 grpc 命令都必须在 grpc enable 之后配置

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>• l2vpnad.</li> <li>• mvpn.</li> <li>• evpn.</li> <li>• ls.</li> <li>• mdt.</li> <li>• vpnv4flow.</li> <li>•</li> </ul>	
preferenceExternal	Set the protocol priority of EBGp routes.	N/A	uint8. Value range: 1 to 255	N/A
preferenceInternal	Set the protocol priority of IBGP routes.	N/A	uint8. Value range: 1 to 255	N/A
preferenceLocal	Set the protocol priority of a local BGP route.	N/A	uint8. Value range: 1 to 255.	N/A
loadBalancingEibgp	Configure EBGp and IBGP route load balancing. By default, load balancing cannot be implemented among IBGP and EBGp routes.	N/A	Uint32. Value range: 1 to 16.	N/A
loadBalancingAsPathIgnore	Configure BGP to ignore the AS_Path of each BGP route to the next hop when selecting routes for load balancing. By default, only the routes with the same AS_Path can participate in load balancing.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—false.</li> <li>• 1—true.</li> </ul>	N/A
loadBalancingAsPathRelax	Configure BGP to ignore comparison of AS_Path attributes with the same length. By default, only the routes with the same AS_Path can participate in load balancing.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—false.</li> <li>• 1—true.</li> </ul>	N/A
nextHopDelayTime	Configure the delay-time of next hop.	N/A	Uint32. Value range: 1 to 100.	N/A
tunnelSelectorName	Configure a tunnel selector and apply it to the	N/A	String, case-sensitive. Length: 1 to 40 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	BGP IPv4 unicast, BGP VPNv4, and BGP VPNv6 address families so that IPv4, VPNv4, and VPNv6 labeled routes can recurse to tunnels based on the tunnel selector. By default, no tunnel selector is configured.			
tunnelSelectorAll	Tunnel selector for labeled, imported, and network segment routes.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—false.</li> <li>1—true.</li> </ul>	N/A
peerAFs	Peers in a specified address family.	Subtable	N/A	For more information, see the gsta-bgp/bgp/bgpcomm/bgpVrfs/bgpVrf/bgpVrfAFs/bgpVrfAF/peerAFs table.
importRoutes	List of imported routes.	Subtable	N/A	For more information, see the gsta-bgp/bgp/bgpcomm/bgpVrfs/bgpVrf/bgpVrfAFs/bgpVrfAF/importRoutes table.

## gsta-bgp/bgp/bgpcomm/bgpVrfs/bgpVrf/bgpVrfAFs/bgpVrfAF/peerAFs

This table contains BGP peer address family information.

### XML structure

Please refer to the XML structure of gsta-bgp/bgp.

### Table description

Item	Description
Feature name	gsta-bgp
Table name	bgpVrfAFs
Table type	Single-instance table

Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
peerAF	Peer in a specified address family.	Subtable	N/A	For more information, see the gsta-bgp/bgp/bgpcomm/bgpVrfs/bgpVrf/bgpVrfAFs/bgpVrfAF/peerAFs/peerAF table.

## gsta-bgp/bgp/bgpcomm/bgpVrfs/bgpVrf/bgpVrfAFs/bgpVrfAF/peerAFs/peerAF

This table contains address family information for a BGP peer.

## XML structure

Please refer to the XML structure of gsta-bgp/bgp

## Table description

Item	Description
Feature name	gsta-bgp
Table name	peerAF
Table type	Multi-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
remoteAddress	IPv4 or IPv6 peer address.	Index	IPv4: String, dotted decimal notation. IPv6: String.	IPv4 example: 1.1.1.1 IPv6 example: 2001::1

Column name	Column description	Column type	Data type and restrictions	Remarks
advertiseCommunity	Advertise the community attribute to a peer or peer group. By default, the community attribute is not advertised to any peer or peer group.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—false.</li> <li>• 1—true.</li> </ul>	N/A
advertiseExtCommunity	Advertise the extended community attribute to a peer or peer group. By default, the extended community attribute is not advertised to any peer or peer group.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—false.</li> <li>• 1—true.</li> </ul>	N/A

## gsta-bgp/bgp/bgpcomm/bgpVrfs/bgpVrf/bgpVrfAFs/bgpVrfAF/importRoutes

This table contains route redistribution information.

### XML structure

Please refer to the XML structure of gsta-bgp/bgp.

### Table description

Item	Description
Feature name	gsta-bgp
Table name	importRoutes
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
importRoute	Route redistribution. Routes of other protocol types can be redistributed by BGP. By default, BGP does not redistribute routes of other protocol types.	Subtable	N/A	For more information, see the <a href="#">gsta-bgp/bgp/bgpcomm/bgpVrfs/bgpVrf/bgpVrfAFs/bgpVrfAF/importRoutes/importRoute</a> table.

## gsta-bgp/bgp/bgpcomm/bgpVrfs/bgpVrf/bgpVrfAFs/bgpVrfAF/importRoutes/importRoute

This table contains information of redistributed routes.

## XML structure

Please refer to the XML structure of [gsta-bgp/bgp](#)

## Table description

Item	Description
Feature name	gsta-bgp
Table name	importRoute
Table type	Multi-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
importProtocol	Routing protocol from which routes can be redistributed. The routing	Index	Enumeration: <ul style="list-style-type: none"> <li>1—direct.</li> <li>2—ospf.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	protocol can be IS-IS, OSPF, static, direct, or RIP for an IPv4 unicast address family or an IPv4 multicast address family. The routing protocol can be IS-IS, OSPFv3, static, direct, or RIPng for an IPv6 unicast address family.		<ul style="list-style-type: none"> <li>• 3—isis</li> <li>• 4—static</li> <li>• 5—rip</li> <li>• 6—ospfv3</li> <li>• 7—ripng</li> </ul>	
importProcessId	Process ID of the routing protocol. The process ID must be specified if the routing protocol is RIP, OSPF, RIPng, or OSPFv3.	Index	Uint32. Value range: 0 to 65535	N/A
importRoutePolicy	When routes are redistributed from other routing protocols, the route-policy filter can be used to filter the routes and change route attributes.	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
medNew	Specify the MED of imported routes.	N/A	uint64 Value range: 0 to 4294967295	N/A

## ethernet/eth/ethSubIfs

This table contains the subinterface attribute list.

### XML structure

```
<ethernet xmlns="http://www.gsta.com/netconf/gsta-ethernet">
  <ethSubIfs>
    <ethSubIf>
      <ifName></ifName>
      <flowType></flowType>
      <arpBroadcastEnable></arpBroadcastEnable>
      <vlanTypeVid></vlanTypeVid>
      <flowDot1qs>
        <flowDot1q>
          <segIndex></segIndex>
          <vlanIdBgn></vlanIdBgn>
          <vlanIdEnd></vlanIdEnd>
          <groupId></groupId>
        </flowDot1q>
      </flowDot1qs>
    </ethSubIf>
  </ethSubIfs>
</ethernet>
```

### Table description

Item	Description
Feature name	ethernet
Table name	ethSubIfs
Table type	Multi-instance table
Row name	ethSubIf
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ifName	Name of a subinterface. For example, Ethernet 0/1/0.1.	index	String Value range: 1 to 47.	Name of a subinterface.

Column name	Column description	Column type	Data type and restrictions	Remarks
flowType	Subinterface type, including VLAN subinterfaces, subinterfaces for Dot1q VLAN tag termination, subinterfaces for QinQ VLAN tag termination, and stacking subinterfaces.	N/A	Members include: <ul style="list-style-type: none"> <li>VlanType</li> <li>Dot1qTerm</li> <li>Stacking</li> <li>QinQTerm</li> <li>Mapping1to1</li> </ul>	Not used.
arpBroadcast Enable	Enable ARP broadcast.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Not used.
vlanTypeVid	VLAN ID of the VLAN subinterface.	N/A	Unsigned Short. Value range: 1 to 4094.	Not used.
flowDot1qs	Dot1q VLAN tag termination list.	N/A	Include: <ul style="list-style-type: none"> <li>Value</li> <li>Unit</li> </ul>	Dot1q VLAN tag termination list.
flowDot1q	Dot1q VLAN tag termination.	N/A	Include: <ul style="list-style-type: none"> <li>Value</li> <li>Unit</li> </ul>	Dot1q VLAN tag termination.
segIndex	QinQ segment.	index	Unsigned integer	Dot1q segment.
vlanIdBgn	Start VLAN ID in the user packet.	N/A	Unsigned integer. Value range: 1 to 4094.	Start VLAN ID.
vlanIdEnd	End VLAN ID in the user packet.	N/A	Unsigned short. Value range: 1 to 4094.	End VLAN ID.
groupId	VLAN group ID.	N/A	Unsigned char. Value range: 1 to 16.	Not used.

## ifm/interfaces

This table contains basic interface information for GSTA.

### XML structure

```
<ifm>
  <interfaces>
    <interface>
      <ifName></ifName>
      <ifDescr></ifDescr>
      <ifAdminStatus></ifAdminStatus>
      <ifTrapEnable></ifTrapEnable>
      <ifStatiEnable></ifStatiEnable>
      <statMode></statMode>
      <ifMtu></ifMtu>
      <spreadMtuFlag></spreadMtuFlag>
      <ifBandwidth></ifBandwidth>
      <ifStatItvl></ifStatItvl>
      <downDelayTime></downDelayTime>
      <ifCfgMac></ifCfgMac>
    </interface>
  </interfaces>
</ifm>
```

### Table description

Item	Description
Feature name	ifm
Table name	interfaces
Table type	Multi-instance table
Row name	interface
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ifName	Information about an	Index	String. Length: 2 to 47 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	interface		Example: GigabitEthernet2/0/2	
ifDescr	Description of an interface	N/A	String. Length: 1 to 255 characters. Default: Interface name.	N/A
IfAdminStatus	Administrative status of an interface	N/A	String enumeration: <ul style="list-style-type: none"> <li>up.</li> <li>down.</li> </ul>	N/A
ifTrapEnable	Enable the trap function on an interface	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	N/A
ifStatiEnable	Enable the statistics function on an interface	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	N/A
statMode	Mode of statistics collection. statistics by interface or vlangroup	N/A	String enumeration: <ul style="list-style-type: none"> <li>baseInterface.</li> <li>baseVlanGroup.</li> </ul>	The baseVlanGroup value is not supported.
ifMtu	IPV4 Maximum transmission unit of an interface	N/A	Unsigned integer. Value range: 0-64000	Applicable to only Layer 3 interfaces.
spreadMtuFlag	Spread the MTU of main interface to subinterface(optional)	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	Applicable to only Layer 3 main interfaces.
ifBandwidth	Specify MIB-referenced bandwidth of an interface	N/A	Unsigned integer. Value range: 1 to 400000000.	N/A
ifStatIntvl	Interval at which flow statistics are collected on an interface	N/A	Unsigned integer. Value range: 5 to 300	Configured at multiples of 5.
downDelayTime	Specify down-delay-time value in milliseconds	N/A	Unsigned integer. Value range: 1 to 1000 Unit: Milliseconds.	Configured at multiples of 10 when the interface type is eth-trunk.
ifCfgMac	Config MAC Address	N/A	String: Length: 0 to 255 characters.	Config MAC Address, in the format of HH-HH-HH

### Table description

Item	Description
Feature name	ifm
Table name	interfaces
Table type	Multi-instance table
Row name	interface
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ifName	Information about an interface	Index	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
ifClass	Identify a main interface or a sub-interface	N/A	String enumeration: <ul style="list-style-type: none"> <li>mainInterface.</li> <li>subInterface.</li> </ul>	N/A
ifPhyType	Type of an interface	N/A	String enumeration. For more information, see <a href="#">Table 1</a> .	N/A
ifParentIfName	Name of the main interface	N/A	String. Length: 2 to 47 characters.	Available when the ifClass is subInterface. Example: GigabitEthernet2/0/2
ifNumber	Number of an interface	N/A	String. Length: 1 to 47 characters.	For example: 1, 0/1/0, or 2:1.
ifDescr	Description of an interface	N/A	String. Length: 1 to 255 characters. Default: Interface name.	N/A
ifAdminStatus	Administrative status of an interface	N/A	String enumeration: <ul style="list-style-type: none"> <li>up.</li> <li>down.</li> </ul>	N/A
ifTrapEnable	Enable the trap function on an interface	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	N/A
ifStatEnable	Enable the statistics function on an interface	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	N/A
statMode	Mode of statistics collection	N/A	String enumeration: <ul style="list-style-type: none"> <li>baseInterface.</li> <li>baseVlanGroup.</li> </ul>	The baseVlanGroup value is not supported.
ifMtu	IPV4 Maximum transmission unit of an interface	N/A	Unsigned integer. Value range: 0-64000	Applicable to only Layer 3 interfaces.
spreadMtuFlag	Spread the MTU of main interface to subinterface(optional)	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	Applicable to only Layer 3 main interfaces.
ifBandwidth	Specify MIB-referenced bandwidth of an interface	N/A	Unsigned integer. Value range: 1 to 400000000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ifStatItvl	Interval at which flow statistics are collected on an interface	N/A	Unsigned integer. Value range: 5 to 300.	The value must be a multiple of 5 in seconds.
downDelayTime	Specify the down-delay-time value in milliseconds	N/A	Unsigned integer. Value range: 0 to 1000. Unit: Milliseconds.	Configured at multiples of 10, when ifPhyType is Eth-Trunk.
ifCfgMac	Config MAC Address	N/A	String. Length: 0 to 255 characters.	Config MAC Address, in the format of HH-HH-HH.

**Table 1 Interface extension types**

String enum	Interface type	Description
ATM	IF_ATM_TYPE	ATM interface.
Cpos	IF_CPOS_TYPE	CPOS interface.
E1	IF_E1_TYPE	E1 interface.
InLoopBack	IF_INLOOPBACK_TYPE	Internal loopback interface.
LoopBack	IF_LOOPBACK_TYPE	Loopback interface.
Ethernet	IF_L2ETHERNET_TYPE	Layer 2 FE interface.
GigabitEthernet	IF_L2GE_TYPE	Layer 2 GE interface.
VEB	IF_L2VE_TYPE	Layer 2 VE interface.
XGigabitEthernet	IF_L2XGE_TYPE	Layer 2 10-GE interface.
Ethernet	IF_L3ETHERNET_TYPE	Layer 3 FE interface.
GigabitEthernet	IF_L3GE_TYPE	Layer 3 GE interface.
XGigabitEthernet	IF_L3XGE_TYPE	Layer 3 10-GE interface.
MEth	IF_ME_TYPE	Management Ethernet interface.
MGE	IF_MGE_TYPE	Management GE interface.
Mp-group	IF_MPGROUP_TYPE	MP-group interface.
NULL	IF_NULL_TYPE	Null interface.
Pos	IF_POS_TYPE	POS interface.
Serial	IF_SERIAL_TYPE	Serial interface.
T1	IF_T1_TYPE	T1 interface.
Tunnel	IF_TUNNEL_TYPE	Tunnel interface.
Vlanif	IF_VLAN_TYPE	VLAN interface.
Virtual-Template	IF_VT_TYPE	VT interface.
MTunnel	IF_MTUNNEL_TYPE	M-Tunnel interface.
InAsy	IF_INASY_TYPE	Internal asynchronous serial interface.
Eth-trunk	IF_BAGG_TYPE	Layer 2 aggregate interface.

String enum	Interface type	Description
Register-Tunnel	IF_REGISTER_TUNNEL_TYPE	Register-Tunnel interface.
Ethernet	IF_LOOPFE_TYPE	Loopback FE interface.
GigabitEthernet	IF_LOOPGE_TYPE	Loopback GE interface.
XGigabitEthernet	IF_LOOPXGE_TYPE	Loopback 10-GE interface.
Ethernet	IF_MIRRORFE_TYPE	Mirroring FE interface.
GigabitEthernet	IF_MIRRORGE_TYPE	Mirroring GE interface.
XGigabitEthernet	IF_MIRRORXGE_TYPE	Mirroring 10-GE interface.
Ethernet	IF_IDSFE_TYPE	IDS FE interface.
GigabitEthernet	IF_IDSGE_TYPE	IDS GE interface.
XGigabitEthernet	IF_IDSXGE_TYPE	IDS 10-GE interface.
Eth-trunk	IF_RAGG_TYPE	Layer 3 aggregate interface.
40GE	IF_L2FGE_TYPE	Layer 2 40-GE interface.
100GE	IF_L2HGE_TYPE	Layer 2 100-GE interface.
40GE	IF_L3FGE_TYPE	Layer 3 40-GE interface.
100GE	IF_L3HGE_TYPE	Layer 3 100-GE interface.
40GE	IF_LOOPFGE_TYPE	Loopback 40-GE interface.
100GE	IF_LOOPHGE_TYPE	Loopback 100-GE interface.
40GE	IF_MIRRORFGE_TYPE	Mirroring 40-GE interface.
100GE	IF_MIRRORHGE_TYPE	Mirroring 100-GE interface.
40GE	IF_IDSFGGE_TYPE	IDS 40-GE interface.
100GE	IF_IDSHGE_TYPE	IDS 100-GE interface.
VPPP	IF_VPPP_TYPE	Virtual PPP interface.
HDLC-B	IF_HDLCBUNDLE_TYPE	HDLC bundle interface.
Virtual-Ethernet	IF_VE_L2VPN_TYPE	L2VPN virtual Ethernet interface
Virtual-Ethernet	IF_VE_L3VPN_TYPE	L3VPN virtual Ethernet interface
VSI	IF_VSI_TYPE	VSI interface
BAS	IF_LOCAL_BAS_IF_TYPE	Local BAS interface
BAS	IF_GLOBAL_BAS_IF_TYPE	Global BAS interface

Item	Description
Feature name	ipv6Config
Table name	am6CfgAddr
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ifIp6Addr	IPv6 address	index	String, dotted decimal.	IPv6 example: 1:2:3:4:5:6:7:8.
addrPrefixLen	Length of the IPv6 address prefix	N/A	Unsigned integer. Value range: 1 to 128.	"addrType6" must not be "linkLocal" but "addrPrefixLen" is 10.
addrType6	IPv6 address type	N/A	Enumeration: <ul style="list-style-type: none"><li>• 1—global.</li><li>• 2—linkLocal.</li><li>• 3—ndPrefix.</li><li>• 4—eui64.</li><li>• 5—anycast.</li></ul>	"addrType6" must be "global" or "linkLocal" or "anycast"
ifIDGenType	Address algorithm	N/A	Enumeration: <ul style="list-style-type: none"><li>• 1—none.</li><li>• 2—cga.</li><li>• 3—eui64.</li></ul>	When "addrType6" is "global", then "ifIDGenType" must be "none" or "cga" or "eui64", when "addrType6" is "linklocal", "ifIDGenType" must be "none" or "cga", and When "addrType6" is "anycast", then "ifIDGenType" must be "none".

</gsta-l3vpn>
```

## Table description

Item	Description
Feature name	gsta-l3vpn
Table name	l3vpn
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
l3vpncomm	Container of L3VPN common information	Subtable	N/A	For more information, see the gsta-l3vpn/l3vpncomm table.

## gsta-l3vpn/l3vpn/l3vpncomm

This table contains L3VPN common information.

## XML structure

Please refer to the XML structure of gsta-l3vpn/l3vpn.

## Table description

Item	Description
Feature name	gsta-l3vpn
Table name	l3vpncomm
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
l3vpnInstances	List of VPN	Subtable	N/A	For more

Column name	Column description	Column type	Data type and restrictions	Remarks
	instances			information, see the gsta-l3vpn/l3vpn/l3vpncomm/l3vpninstances table.

## gsta-l3vpn/l3vpn/l3vpncomm/l3vpnInstances

This table contains Layer 3 VPN instance information.

### XML structure

Please refer to the XML structure of gsta-l3vpn/l3vpn.

### Table description

Item	Description
Feature name	gsta-l3vpn
Table name	l3vpnInstances
Table type	Multi-instance table
Row name	l3vpnInstance
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
vrfName	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters. The name cannot be "_public_".	N/A
vpnInstAFs	List of VPN address families	Subtable	N/A	For more information, see the gsta-l3vpn/l3vpn/l3vpncomm/l3vpninstances/vpnInstAFs table.

# gsta-l3vpn/l3vpn/l3vpncomm/l3vpnInstances/vpnInstAFs

This table contains VPN instance address family information.

## XML structure

Please refer to the XML structure of gsta-l3vpn/l3vpn.

## Table description

Item	Description
Feature name	gsta-l3vpn
Table name	vpnInstAFs
Table type	Multi-instance table
Row name	vpnInstAF
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
vrfName	VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters. The name cannot be "_public_".	N/A
afType	Address families of the VPN instance	Index	Enumeration: <ul style="list-style-type: none"><li>ipv4uni</li><li>ipv6uni</li></ul>	N/A
imPolicyName	Name of the import routing policy for the VPN instance	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
exPolicyName	Name of the export routing policy for the VPN instance	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
vrfLabelMode	The Mode of L3vpncommonLabel	N/A	Enumeration: <ul style="list-style-type: none"><li>perInstance</li><li>perRoute</li><li>perNexthop</li></ul>	N/A
tnlPolicyName	Name of the tunnel policy for the VPN	N/A	String, case-sensitive. Length: 1 to 19 characters.	N/A

Column name	Column description instance	Column type	Data type and restrictions	Remarks
vpnTargets	A group of RTs	Subtable	N/A	The number of RTs in the group ranges from 1 to 8. For more information, see the gsta-l3vpn/l3vpn/l3vpncomm/l3vpnInstances/ vpnInstAFs/ vpnTargets table.
exVpnTargets	A group of extended RTs	Subtable	N/A	The number of RTs in the group ranges from 1 to 8. For more information, see the gsta-l3vpn/l3vpn/l3vpncomm/l3vpnInstances/ vpnInstAFs/ exVpnTargets table.

## gsta-l3vpn/l3vpn/l3vpncomm/l3vpnInstances/ vpnInstAFs/ vpnTargets

This table contains route target (RT) information of VPN instances.

### XML structure

Please refer to the XML structure of gsta-l3vpn/l3vpn.

### Table description

Item	Description
Feature name	gsta-l3vpn
Table name	vpnTargets
Table type	Multi-instance table
Row name	vpnTarget
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
vrfName	VPN instance name	index	String, case-sensitive. Length: 1 to 31 characters. The name cannot be "_public_".	N/A
afType	Address families of the VPN instance	index	Enumeration: <ul style="list-style-type: none"> <li>1—ipv4uni</li> <li>2—ipv6uni</li> </ul>	N/A
vrfRTValue	Route targets of the VPN instance	index	String. Length: 3 to 21 characters. An RT can be in one of the following formats: <ul style="list-style-type: none"> <li>16-bit AS number:32-bit user-defined number</li> <li>32-bit IP address:16-bit user-defined number</li> <li>32-bit AS number:16-bit user-defined number</li> </ul>	N/A
vrfRTType	Route target types	index	Enumeration: <ul style="list-style-type: none"> <li>1—export_extcommunity</li> <li>2—import_extcommunity</li> </ul>	N/A

## gsta-l3vpn/l3vpn/l3vpncomm/l3vpnInstances/vpnInstAFs/ exVpnTargets

This table contains route target information for VPN instances in extended address families.

## XML structure

Please refer to the XML structure of gsta-l3vpn/l3vpn.

## Table description

Item	Description
Feature name	gsta-l3vpn
Table name	vpnTargets
Table type	Multi-instance table
Row name	exVpnTarget
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
vrfName	VPN instance name	index	String, case-sensitive. Length: 1 to 31 characters. The name cannot be "_public_".	N/A
afType	Address family of the VPN instance	index	Enumeration: <ul style="list-style-type: none"> <li>1—ipv4uni</li> </ul>	N/A
vrfRTValue	Route targets of the VPN instance	index	String. Length: 3 to 21 characters. An RT can be in one of the following formats: <ul style="list-style-type: none"> <li>16-bit AS number:32-bit user-defined number</li> <li>32-bit IP address:16-bit user-defined number</li> <li>32-bit AS number:16-bit user-defined number</li> </ul>	N/A

Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
monitorGroup	A set of monitor group.	Sublist	N/A

## monitorgroup/monitorGroups/monitorGroup

This table contains information about monitorGroup.

## XML structure

See the XML structure of monitorgroup/monitorGroups

## Table description

Item	Description
Feature name	monitorgroup
Table name	monitorGroups
Table type	Multi-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
groupName	The name of an interface monitoring group.	Index	String. <ul style="list-style-type: none"><li>Length: 1 to 31 characters.</li></ul>
triggerUpDelay	Delay for a track interface to go up.	N/A	Unsigned integer32. The value is an integer ranging from 0 to 4294967295, in seconds. Default: 0.
enableStatus	The enable status of monitorgroup.	N/A	string: <ul style="list-style-type: none"><li>Inactive (default).</li><li>Active.</li></ul>
bindInterfaces	Monitor group binding interfaces.	Sublist	N/A
trackedInterfaces	A set of track interfaces.	Sublist	N/A

## monitorgroup/monitorGroups/bindInterfaces

This table contains information about bindings Interfaces.

## XML structure

See the XML structure of `monitorgroup/monitorGroups`

## Table description

Item	Description
Feature name	monitorgroup
Table name	bindInterfaces
Table type	Multi-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
bindInterface	Monitor group binding interface.	Sublist	N/A

## monitorgroup/monitorGroups/bindInterfaces/ bindInterface

This table contains information about bindings Interface.

## XML structure

See the XML structure of `monitorgroup/monitorGroups`

## Table description

Item	Description
Feature name	monitorgroup
Table name	bindInterface
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
ifName	Name of monitor group binding interface.	Index	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/1
downWeight	Down weight of monitor group binding interface.	N/A	Unsigned integer32. Value range: 1 to 1000. Default: 10.

## monitorgroup/monitorGroups/trackedInterfaces

This table contains information about track Interfaces.

## XML structure

See the XML structure of monitorgroup/monitorGroups

## Table description

Item	Description
Feature name	monitorgroup
Table name	trackedInterfaces
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
ifName	Name of a track interface.	Index	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/1

## monitorgroup/monitorGroups/trackedInterfaces/ trackedInterface

This table contains information about track Interface.

# XML structure

See the XML structure of monitorgroup/monitorGroups

## Table description

Item	Description
Feature name	monitorgroup
Table name	trackedInterface
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
ifName	Name of a track interface.	Index	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/1
downWeight	Down weight of monitor group binding interface.	N/A	Unsigned integer32. Value range: 1 to 1000. Default value is the sum of all the uplink interface weight.

# HardwareQueue

## HardwareQueue/QueueMode

This table contains information about queue schedule mode on an interface.

### XML structure

```
<HardwareQueue>
  <QueueMode>
    <Queue>
      <IfIndex></IfIndex>
      <Mode></Mode>
    </Queue>
  </QueueMode>
</HardwareQueue>
```

### Table description

Item	Description
Feature name	HardwareQueue
Table name	QueueMode
Table type	Multi-instance table
Row name	Queue
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
Mode	Queue schedule mode on an interface.	N/A	Enumeration: <ul style="list-style-type: none"><li>• 1—SP.</li><li>• 2—Weight WRR.</li><li>• 3—Bytecount WRR.</li><li>• 4—Weight WFQ.</li><li>• 5—Bytecount WFQ.</li></ul>	The default priority trust mode on an interface varies by device.

# HardwareQueue/QueueParameter

This table contains information about schedule parameters for the queues on an interface.

## XML structure

```
<HardwareQueue>
  <QueueParameter>
    <Queue>
      <IfIndex></IfIndex>
      <QueueID></QueueID>
      <GroupID></GroupID>
      <Weight></Weight>
      <ByteCount></ByteCount>
      <MinBandwidthKbps></MinBandwidthKbps>
    </Queue>
  </QueueParameter>
</HardwareQueue>
```

## Table description

Item	Description
Feature name	HardwareQueue
Table name	QueueParameter
Table type	Multi-instance table
Row name	Queue
Restrictions	When queue schedule mode on an interface is SP, do not support this table.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product.
QueueID	Queue ID	Index	Unsigned integer Value range: 0 to 15.	N/A
GroupID	Group ID	N/A	Unsigned integer	Value 0 indicates the queue is in group SP.
Weight	Queue weight	N/A	Unsigned integer	The value is valid only when the scheduling unit

Column name	Column description	Column type	Data type and restrictions	Remarks
				is weight.
ByteCount	Queue byte-count	N/A	Unsigned integer	The value is valid only when the scheduling unit is byte-count.
MinBandwidth Kbps	Value of minimum bandwidth	N/A	Unsigned integer	The value is valid only when the queue is a WFQ queue.

## HardwareQueue/QMProfiles

This table contains information about queue scheduling profile.

### XML structure

```

<HardwareQueue>
  <QMProfiles>
    <Qmprofile>
      <Name></Name>
      <Mode></Mode>
      <Type></Type>
    </Qmprofile>
  </QMProfiles>
</HardwareQueue>

```

### Table description

Item	Description
Feature name	HardwareQueue
Table name	QMProfiles
Table type	Multi-instance table
Row name	Qmprofile
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Queue scheduling profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
Mode	Queue scheduling	N/A	Enumeration: • 0—Advanced.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	profile mode		<ul style="list-style-type: none"> <li>1—Basic.</li> </ul>	
Type	Queue scheduling profile type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Eight-queue.</li> <li>1—Four-queue.</li> </ul>	N/A

## HardwareQueue/QMProfileQueue

This table contains information about schedule parameters for the queues on a QMProfile.

### XML structure

```

<HardwareQueue>
  <QMProfileQueue>
    <Queue>
      <Name></Name>
      <QueueID></QueueID>
      <Mode></Mode>
      <GroupID></GroupID>
      <Unit></Unit>
      <Value></Value>
      <MinBandwidthKbps></MinBandwidthKbps>
      <MaxBandwidthKbps></MaxBandwidthKbps>
      <ServiceType></ServiceType>
    </Queue>
  </QMProfileQueue>
</HardwareQueue>

```

### Table description

Item	Description
Feature name	HardwareQueue
Table name	QMProfileQueue
Table type	Multi-instance table
Row name	Queue
Restrictions	When queue scheduling profile is not created, this table is not supported.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Queue scheduling profile name	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
QueueID	Queue ID	Index	Unsigned integer Value range: 0 to 15.	N/A
Mode	Queue mode type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—SP.</li> <li>2—WRR.</li> <li>3—WFQ.</li> </ul>	When the operation is remove or delete want to set default value. If the item of <i>Mode</i> is change. The other column items will be default value.
GroupID	Group ID	N/A	Unsigned integer	When the Queue mode type is SP. The <i>GroupID</i> can't be set. When the operation is remove or delete want to set default value. the item of <i>Mode</i> must to be set.
Unit	Scheduling unit	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Weight.</li> <li>2—Bytecount.</li> </ul>	When the Queue mode type is SP. The <i>Scheduling Uint</i> can't be set. When the operation is remove or delete want to set default value. the item of <i>Mode</i> must to be set.
Value	Scheduling value	N/A	Unsigned integer	When the Queue mode type is SP. The <i>Scheduling Value</i> can't be set. When the operation is remove or delete want to set default value. the item of <i>Mode</i> must to be set.
MinBandwidth Kbps	Minimum bandwidth in kbps	N/A	Unsigned integer	The value of this column depends on the device model.
MaxBandwidth hKbps	Maximum bandwidth in kbps	N/A	Unsigned integer	The value of this column depends on the device model.
ServiceType	ServiceType	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—HSI.</li> <li>1—STB.</li> <li>2—VOIP</li> </ul>	N/A

      <BasicMode></BasicMode>
      <MaxBandWidth1></MaxBandWidth1>
      <MaxBandWidth2></MaxBandWidth2>
      <MaxBandWidth3></MaxBandWidth3>
      <MaxBandWidth4></MaxBandWidth4>
    </Queue>
  </DefaultQueueMode>
</HardwareQueue>

```

## Table description

Item	Description
Feature name	HardwareQueue
Table name	DefaultQueueMode
Table type	Multi-instance table
Row name	Queue
Restrictions	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfType	Interface type	index	Unsigned integer Value range: 0 to 255.	N/A
ScheduleMode	Schedule Mode	N/A	Unsigned integer	N/A
ScheduleUnit	Schedule Unit	N/A	Unsigned integer	N/A
QueueNum	Queue Number	N/A	Unsigned integer	Value is 0 when queue is sp.
BasicMode	Basic Mode	N/A	Unsigned interger	N/A
MaxBandWidth1	Gourp Max BandWidth	N/A	Unsigned interger	N/A
MaxBandWidth2	Gourp Max BandWidth	N/A	Unsigned interger	N/A
MaxBandWidth3	Gourp Max BandWidth	N/A	Unsigned interger	N/A
MaxBandWidth4	Gourp Max BandWidth	N/A	Unsigned interger	N/A

## HardwareQueue/DefaultQueueParameter

This table contains information about default queue parameter for an interface.

## XML structure

```
<HardwareQueue>
  <DefaultQueueParameter>
    <Queue>
      <IfType></IfType>
      <QueueID></QueueID>
      <SetMask></SetMask>
      <MinBandWidth></MinBandWidth>
```

```

    <QueueLength></QueueLength>
    <Group></Group>
    <ScheduleValue></ScheduleValue>
    <MaxBandWidth></MaxBandWidth>
    <ServiceType></ServiceType>
    <MinBandWidthPct></MinBandWidthPct>
  </Queue>
</DefaultQueueParameter>
</HardwareQueue>

```

## Table description

Item	Description
Feature name	HardwareQueue
Table name	DefaultQueueParameter
Table type	Multi-instance table
Row name	Queue
Restrictions	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfType	Interface type	Index	Unsigned integer Value range: 0 to 255.	N/A
QueueID	Queue ID	Index	Unsigned integer	N/A
SetMask	Set Mask	N/A	Unsigned integer	N/A

Message	Explanation
Please enable WFQ queuing first. 请先使能WFQ队列调度模式。	Configure or modify WFQ should enable WFQ queuing first. 配置WFQ队列或修改WFQ队列参数需要在端口队列为WFQ调度模式下使用。
This queue scheduler mode is not enabled. 队列调度模式未使能。	When delete queue scheduler mode, the interface should already configure the scheduler mode. 删除队列调度模式时需要与当前接口的队列调度模式匹配。
Queue is not supported. 不支持该队列。	Queue is not supported. 不支持该队列。
The scheduling units must be the same. 队列调度权重的单位必须相同。	The scheduling units must be the same. 队列调度权重的单位必须相同。
Failed to apply the queue management profile. The minimum bandwidth can't exceed the interface bandwidth. 应用队列调度策略失败。最小保证带宽值不能超过接口带宽值。	Failed to apply the queue management profile. The minimum bandwidth can't exceed the interface bandwidth. 应用队列调度策略失败。最小保证带宽值不能超过接口带宽值。
The number of queue management profiles has reached the upper limit. 队列调度策略数量已达上限。	When create, the number of queue management profiles has reached the upper limit. 创建队列调度策略时队列调度策略数量已达上限。
The queue management profile doesn't exist. 队列调度策略不存在。	When apply, the queue management profile doesn't exist. 应用队列调度策略时策略不存在。
Another queue management profile has been applied. 已应用另一个队列调度策略。	Another queue management profile has been applied. 应用队列调度策略时该对象已应用其他策略。
The profile doesn't support WFQ and WRR queue types at the same time. 不支持WRR+WFQ的队列组合。	The profile doesn't support WFQ and WRR queue types at the same time. 队列调度策略存在非SP队列时需要检测WRR模式和WFQ模式冲突。
A queue schedule value in this queue management profile is out of range on the interface. 队列调度权重的值超出合法范围。	A queue schedule value in this queue management profile is out of range on the interface. 队列调度权重的值超出合法范围。
Maximum bandwidth can't be smaller than the minimum bandwidth. 最大限制带宽的值不能小于最小保证带宽的值。	Maximum bandwidth can't be smaller than the minimum bandwidth. 最大限制带宽的值不能小于最小保证带宽的值。
The profile name has been used by another queue management profile. 队列调度策略名称已存在。	When create, the profile name has been used by another queue management profile. 创建队列调度策略时名称已被占用。
Type of queue management profile is incorrect. 队列调度策略的类型无效。	Type of queue management profile is incorrect. 队列调度策略的类型无效。

<p>The operation conflicts with some existing configurations.</p> <p>该操作与已经存在的配置发生冲突。</p>	<p>The operation conflicts with some existing configurations such as GTS.</p> <p>配置队列调度策略和GTS冲突。</p>
<p>Can't delete the queue scheduling profile, because it has been applied.</p> <p>该调度策略不能被删除，因为已经被应用。</p>	<p>Can't delete the queue scheduling profile, because it has been applied.</p> <p>不能删除已经被应用的调度策略。</p>

# Ifmgr

## Ifmgr/Interfaces

This table contains interface action information.

### XML structure

```
<Ifmgr>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Clear></Clear>
      <Default></Default>
      <Loopback></Loopback>
    </Interface>
  </Interfaces>
</Ifmgr>
```

### Table description

Item	Description
Feature name	Ifmgr
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.	Index	Unsigned integer.
Clear	Clears interface statistics.	N/A	This column must be empty.
Default	Restore default settings.	N/A	This column must be empty.

Column name	Column description	Column type	Data type and restrictions
Loopback	Interface loopback testing.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Internal</li> <li>2—External</li> </ul> Applicable to only Ethernet interfaces and AUX interfaces which loopback testing can be auto stopped.

## Ifmgr/ClearAllIfStatistics

This table is used to clear statistics on all interfaces.

### XML structure

```

<Ifmgr>
  <ClearAllIfStatistics>
    <Clear></Clear>
  </ClearAllIfStatistics>
</Ifmgr>

```

### Table description

Item	Description
Feature name	Ifmgr
Table name	ClearAllIfStatistics
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
Clear	Clears statistics on all interfaces.	N/A	This column must be empty.

## Ifmgr/SubInterfaces

This table is used to create or delete sub-interfaces.

## XML structure

```
<Ifmgr>
  <SubInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <SubNum></SubNum>
      <Remove></Remove>
    </Interface>
  </SubInterfaces>
</Ifmgr>
```

## Table description

Item	Description
Feature name	Ifmgr
Table name	SubInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer	<ul style="list-style-type: none"><li>• Create: Interface index of parent interface.</li><li>• Delete: Interface index of the sub-interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.</li></ul>
SubNum	Sub-interface number.	N/A	Unsigned integer	<ul style="list-style-type: none"><li>• Applicable to only create a sub-interface</li><li>• This column must be specified when create a sub-interface.</li><li>• The range of SubNum is reference in table</li></ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
				of InterfaceCapabilities which in Data API.
Remove	Delete specified sub-interface.	N/A	This column must be empty.	Applicable to only delete a sub-interface

## Ifmgr/LogicInterfaces

This table is used to create or delete logic interfaces.

### XML structure

```

<Ifmgr>
  <LogicInterfaces>
    <Interface>
      <IfTypeExt></IfTypeExt>
      <Number></Number>
      <Remove></Remove>
    </Interface>
  </LogicInterfaces>
</Ifmgr>

```

### Table description

Item	Description
Feature name	Ifmgr
Table name	LogicInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfTypeExt	The type of interface.	Index	Unsigned integer	<p>IfTypeExt is Reference in table of Ifmgr/Interfaces.which in Data API.</p> <p>The supported logic interface type as follow:</p> <ul style="list-style-type: none"> <li>16—IF_LOOPBACK_TYPE</li> <li>41—IF_VLAN_TYPE</li> </ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
				PE <ul style="list-style-type: none"> <li>• 56—IF_BAGG_T TYPE</li> <li>• 67—IF_RAGG_T TYPE</li> <li>• 110— IF_RETH_TYPE</li> <li>• 114— IF_SSLVPNAC_T TYPE</li> </ul>
Number	Number of the logic interface.	Index	Unsigned integer	The range of Number is Reference in table of InterfaceCapabilities which in Data API.
Remove	Delete specified logic interface.	N/A	This column must be empty.	Applicable to only delete a logic interface.

## Ifmgr/VirtualCableTest

This table is used to test the cable connection of Ethernet interfaces and get the test results.

### XML structure

```

<Ifmgr>
  <VirtualCableTest>
    <Interface>
      <IfIndex></IfIndex>
    </Interface>
  </VirtualCableTest>
</Ifmgr>

```

### Responded XML structure

```

<Ifmgr>
  <VirtualCableTest>
    <Interface>
      <IfIndex></IfIndex>
      <CableStatus></CableStatus>
      <CableLen></CableLen>
      <Mismatch></Mismatch>
      <PairSkew></PairSkew>
      <PairSwap></PairSwap>
      <PairPolarity></PairPolarity>
      <InsertionLoss></InsertionLoss>
      <ReturnLoss></ReturnLoss>
      <NearEndCrosstalk></NearEndCrosstalk>
    </Interface>
  </VirtualCableTest>
</Ifmgr>

```

```

    </Interface>
  </VirtualCableTest>
</Ifmgr>

```

## Table description

Item	Description
Feature name	Ifmgr
Table name	VirtualCableTest
Table type	Multi-instance table
Row name	Interface
Restrictions	Applicable to only Layer 2 interfaces of FastEthernet, GigabitEthernet and Ten-GigabitEthernet.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

## Responded Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	
<b>CableStatus</b>	Cable status of an interface	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0—The test failed.</b></li> <li><b>1—Normal, the cable is in good condition.</b></li> <li><b>2—Abnormal (open), an open circuit is detected.</b></li> <li><b>3—Abnormal (short), a short circuit is detected.</b></li> <li><b>4—Abnormal, the cable is abnormal.</b></li> </ul>	
<b>CableLen</b>	Cable length of an interface	N/A	Unsigned integer, in metres.	

Column name	Column description	Column type	Data type and restrictions	Remarks
<b>Mismatch</b>	Pair impedance mismatch information of an interface	N/A	Unsigned integer: <ul style="list-style-type: none"> <li>• <b>0xffffffff</b>—Not support</li> <li>• <b>0</b>—Mismatch</li> <li>• Others—Match</li> </ul>	
<b>PairSkew</b>	Pair skew information of an interface	N/A	Unsigned integer, in ns. The value is 0xffffffff if not support.	
<b>PairSwap</b>	Pair swap information of an interface	N/A	Unsigned integer: <ul style="list-style-type: none"> <li>• <b>0xffffffff</b>—Not support</li> <li>• <b>0</b>—Normal</li> <li>• Others—Swap</li> </ul>	
<b>PairPolarity</b>	Pair <b>polarity</b> information of an interface	N/A	Unsigned integer: <ul style="list-style-type: none"> <li>• <b>0xffffffff</b>—Not support</li> <li>• <b>0</b>—Normal</li> <li>• Others—Swap</li> </ul>	
<b>InsertionLoss</b>	Insertion loss information of an interface	N/A	Unsigned integer, in db. The value is 0xffffffff if not support.	
<b>ReturnLoss</b>	Return loss information of an interface	N/A	Unsigned integer, in db. The value is 0xffffffff if not support.	
<b>NearEndCrosstalk</b>	Near-end crosstalk of an interface	N/A	Unsigned integer, in db. The value is 0xffffffff if not support.

Description	Interface description	N/A	String. Length: 1 to 255 characters. Default: <i>interface-name</i> <b>Interface.</b>	N/A
AdminStatus	Interface administration status	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Up (default).</li> <li>2—Down.</li> </ul>	N/A
ConfigSpeed	Configured speed of an interface.	N/A	Each bit represents a speed. As follows: <ul style="list-style-type: none"> <li>1—Auto</li> <li>2—10Mbps</li> </ul>	Examples: <ul style="list-style-type: none"> <li>32—Speed is 1000Mbps.</li> <li>37—Auto-ne</li> </ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>• <b>4</b>—100Mbps</li> <li>• <b>8</b>—155Mbps</li> <li>• <b>16</b>—622Mbps</li> <li>• <b>32</b>—1Gbps</li> <li>• <b>64</b>—2Gbps</li> <li>• <b>128</b>—2.5Gbps</li> <li>• <b>256</b>—4Gbps</li> <li>• <b>512</b>—8Gbps</li> <li>• <b>1024</b>—10Gbps</li> <li>• <b>2048</b>—16Gbps</li> <li>• <b>4096</b>—20Gbps</li> <li>• <b>8192</b>—40Gbps</li> <li>• <b>16384</b>—100Gbps</li> <li>• <b>32768</b>—5Gbps</li> <li>• <b>65536</b>—25Gbps</li> <li>• <b>131072</b>—32Gbps</li> </ul>	gotiation mode, and negotiation values are 100Mbps and 1000Mbps.
ConfigDuplex	Configured duplex mode of an interface	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—Full.</li> <li>• <b>2</b>—Half.</li> <li>• <b>3</b>—Auto.</li> </ul>	Applicable to only Ethernet interfaces.
PortLayer	Port layer of an interface	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—Layer 2</li> <li>• <b>2</b>—Layer 3</li> </ul>	Applicable to Ethernet interfaces.
LinkType	VLAN type of an interface	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—Access (default).</li> <li>• <b>2</b>—Trunk.</li> <li>• <b>3</b>—Hybrid.</li> </ul>	Applicable to only Layer 2 interfaces.
PVID	Port VLAN ID (PVID) of an interface	N/A	Unsigned integer. Value range: 1 to 4094.	Applicable to only Layer 2 interfaces.
MAC	MAC address of an interface	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
Loopback	Loopback test	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—No loopback</li> <li>• <b>1</b>—Internal</li> <li>• <b>2</b>—External</li> </ul>	Applicable to only interfaces of Ethernet and AUX.
MDI	MDI mode of an interface	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—MDI-II (straight-through cable)</li> <li>• <b>2</b>—MDI-X (crossover cable)</li> <li>• <b>3</b>—MDI-AUTO (auto-sensing)</li> </ul>	Applicable to only Layer 2 Ethernet interfaces.
ConfigMTU	Configured MTU of an interface	N/A	Unsigned integer.	Applicable to only Layer 3 interfaces.
ConfigBandwidth	Configured expected bandwidth of an	N/A	Unsigned integer. Value range: 1 to 400000000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	interface			
Interval	Sampling interval of an interface	N/A	Unsigned integer. Value range: 5 to 300, in seconds, in step of 5	N/A
ForceUP	Forcibly bring up an interface.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	Applicable to only Ethernet and POS interfaces.
KeepAlive	KeepAlive value of an interface	N/A	Unsigned integer. Value range: 0 to 32767.	Applicable to interfaces that support only link layer protocols PPP, HDLC, and Frame Relay.
KeepAliveRetry	KeepAlive retry times of an interface	N/A	Unsigned integer. Value range: 1 to 255.	Applicable to interfaces that support only link layer protocols PPP, HDLC, and Frame Relay.
TrafficStatisticsEnable	Enable interface statistics collection.	N/A	Enumeration: <ul style="list-style-type: none"> <li>enable</li> <li>disable</li> </ul>	Applicable to only Layer 3 subinterfaces.
SubIfRateStatisticsEnable	Enable rate statistics collection for the subinterfaces of an interface	N/A	Enumeration: <ul style="list-style-type: none"> <li>enable</li> <li>disable</li> </ul>	Applicable to only main interface and POS channels.

## Ifmgr/TrafficStatistics/Interval

This table contains traffic sampling interval information of all interfaces.

### XML structure

```

<Ifmgr>
  <TrafficStatistics>
    <Interval>
      <Interval></Interval>
    </Interval>
  </TrafficStatistics>
</Ifmgr>

```

### Table description

Item	Description
Feature name	Ifmgr
Table name	TrafficStatistics

Item	Description
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
Interval	Sampling interval of all interfaces, in seconds, in step of 5.	N/A	Unsigned integer. Value range: 5 to 300. It can configured only when Configurable" (Reference in table of TrafficStatistics/Interval which in Data API) value is true.

## Ifmgr/EthInterfaces

This table contains Ethernet interfaces information.

## XML structure

```

<Ifmgr>
  <EthInterfaces>

## Ifmgr/StormConstrain/Interval

This table contains storm constrain traffic collection interval information.

### XML structure

```

<Ifmgr>
  <StormConstrain>
    <Interval>
      <Interval></Interval>
    </Interval>
  </StormConstrain>
</Ifmgr>

```

### Table description

Item	Description
Feature name	Ifmgr
Table name	Interval
Table type	Single-instance table
Row name	N/A
Restrictions	
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions
Interval	Traffic statistics collection interval for storm constrain, in seconds.	N/A	Unsigned integer. Value range: 1 to 300.

# Ifmgr/PortIsolation/Groups

This table contains port isolation groups information.

## XML structure

```
<Ifmgr>
  <PortIsolation>
    <Groups>
      <Group>
        <IsolatedGroupID></IsolatedGroupID>
      </Group>
    </Groups>
  </PortIsolation>
</Ifmgr>
```

## Table description

Item	Description
Feature name	Ifmgr
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	Applicable to only Layer 2 interfaces of Ethernet and aggregation. The maximum group ID are in the MaxGroupNum column in the Ifmgr/PortIsolation/Capabilities table. If the maximum is 1: <ul style="list-style-type: none"><li>Isolation group 1 is created automatically after device started.</li><li>Isolation group 1 cannot be created or deleted.</li></ul>
Support for row creation and deletion	Yes If the maximum is not 1. <ul style="list-style-type: none"><li><b>Yes</b>—If the maximum group ID value is not 1.</li><li><b>No</b>—If the maximum group ID value is 1.</li></ul>

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IsolatedGroupID	Isolation group ID.	Index	Unsigned integer.	

# Ifmgr/PortIsolation/Interfaces

This table contains interface isolation information.

## XML structure

```
<Ifmgr>
  <PortIsolation>
    <Interfaces>
      <Interface>
        <IfIndex></IfIndex>
        <IsolatedGroupID></IsolatedGroupID>
      </Interface>
    </Interfaces>
  </PortIsolation>
</Ifmgr>
```

## Table description

Item	Description
Feature name	Ifmgr
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	Applicable to only Layer 2 interfaces of Ethernet and Aggregation.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	For information about the string type, see "Ifmgr/ Shutdo

Column name	Column description	Column type	Data type and restrictions	Remarks
				<div><div>wnInterval</div><div>This table contains the shutdown recovery interval for ports.</div><div>XML structure</div><div>&lt;lfmgr&gt;  &lt;ShutdownInterval&gt;  &lt;Interval&gt;&lt;/Interval&gt;  &lt;/ShutdownInterval&gt; &lt;/lfmgr&gt;</div><div>Table description</div></div>

IsolatedGroup ID	Port isolation group ID of an interface	N/A	Unsigned integer.	

## Ifmgr/ReserveVlanInterface

This table contains the reservation of VLAN interface resources.

### XML structure

```

<Ifmgr>
  <ReserveVlanInterface>
    <VlanInterface>
      <Type></Type>
      <VlanList></VlanList>
    </VlanInterface>
  </ReserveVlanInterface>
</Ifmgr>

```

### Table description

Item	Description
Feature name	Ifmgr
Table name	ReserveVlanInterface
Table type	Multi-instance table
Row name	VlanInterface
Restrictions	N/A
Support for row creation and deletion	NO

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Whether the reservation of VLAN interface resources is global or local.	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Global.</li> <li>2—Local.</li> </ul>	The reservation of global VLAN interface resources or local VLAN interface resources.
VlanList	List of VLANs for the reservation of VLAN interface resources.	N/A	Number string.  It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range.  The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20  The item is permitted to be incrementally edited. You can set the flag like "<VlanList base:incremental='true'>". If the value is true, the VLAN list can be added or removed. Otherwise, it is the final result.

## Ifmgr/CellularChannel

This table contains sub channel creating information of cellular controller.

## XML structure

```

<Ifmgr>
  <CellularChannel>
    <Interface>
      <IfIndex></IfIndex>
      <CreateMode></CreateMode>
      <ChannelNum></ChannelNum>
    </Interface>
  </CellularChannel>
</Ifmgr>

```

## Table description

Item	Description
Feature name	Ifmgr
Table name	CellularChannel
Table type	Multi-instance table

Row name	Interface
Restrictions	N/A
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
-------------	--------------------	-------------	----------------------------	---------

IfIndex

Interface index.

Index

Unsigned integer

For information about the string type, see "Ifmgr/ShutdownInterval"

This table contains the shutdown recovery interval for ports.

XML structure

<Ifmgr>

# Ifmgr/ShutdownInterval

This table contains the shutdown recovery interval for ports.

## XML structure

```
<Ifmgr>
  <ShutdownInterval>
    <Interval></Interval>
  </ShutdownInterval>
</Ifmgr>
```

## Table description

Item	Description
Feature name	Ifmgr
Table name	ShutdownInterval
Table type	Single-instance table
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Interval	Shutdown recovery interval in seconds	N/A	Unsigned integer. Value range: 0 to 300.	N/A

## Appendix

A string can contain multiple items that are separated by commas (,). An item can be in one of the following formats:

- *interface name*
- *interface range-name*
- *interface name A to interface name B*

When you use an item in the *interface name* format, follow these restrictions and guidelines:

- Spaces are not allowed between the interface type and interface number.  
Example:  
Correct: GigabitEthernet1/3/0/1  
Incorrect: GigabitEthernet 1/3/0/1
- If the interface name is the same as an existing interface range name, the system sends the request to interfaces in the interface range rather than the interface.  
Example:

If you have configured the **interface range name** *Ten-Giga1/2/0/1 interface GigabitEthernet1/3/0/1 to GigabitEthernet1/3/0/20* command and then use **Ten-Giga1/2/0/1** as an item, the system sends the request to interfaces in the interface range named **Ten-Giga1/2/0/1**.

- If the interface range name is the same as an existing interface index, the system sends the request to the interface rather than interfaces in the interface range.

Example:

If you have configured the **interface range name** *111 interface GigabitEthernet1/3/0/1 to GigabitEthernet1/3/0/20* command and then use *111* as an item, the system sends the request to the interface *GigabitEthernet1/2/0/2*.

Note: the index of **interface** *GigabitEthernet1/2/0/2* is 111.

When you use an item in the *interface range name* format, follow these restrictions and guidelines:

- If the interface range name is in the *interface name A, interface name B* format, the system sends the request to interface A and interface B rather than interfaces in the interface range.

Example:

After you configure the **interface range name** *Ten-Giga1/2/0/1, Ten-Giga1/2/0/2 interface GigabitEthernet1/3/0/1 to GigabitEthernet1/3/0/20* command and then use **Ten-Giga1/2/0/1, Ten-Giga1/2/0/2** as an item, the system sends the request to interfaces *Ten-GigabitEthernet 1/2/0/1* and *Ten-GigabitEthernet 1/2/0/2* rather than interfaces *GigabitEthernet 1/3/0/1* through *GigabitEthernet 1/3/0/20*.

- If the interface range name is in the *interface name A to interface name B* format, the system sends the request to interfaces interface A through interface B rather than interfaces in the interface range.

Example:

After you configure the **interface range name** *Ten-Giga1/2/0/1 to Ten-Giga1/2/0/2 interface GigabitEthernet1/3/0/1 to GigabitEthernet1/3/0/20* command and then use **Ten-Giga1/2/0/1 to Ten-Giga1/2/0/2** as an item, the system sends the request to interfaces *Ten-GigabitEthernet 1/2/0/1* through *Ten-GigabitEthernet 1/2/0/2* rather than interfaces *GigabitEthernet 1/3/0/1* through *GigabitEthernet 1/3/0/20*.

When you use an item in the *interface name A to interface name B* format, follow these restrictions and guidelines:

- The interfaces before and after the word **to** must be of the same type and reside on the same card and sub-card.
- If the interfaces are subinterfaces, they must also belong to the same main interface.
- The end interface number must be larger than the start interface number.

Example:

Incorrect:

*Ten2/0/1 to Ten3/0/2* The start and end interfaces reside on different cards.

*Ten2/0/1 to Ten2/1/2* The start and end interfaces reside on different sub-cards.

*Ten2/0/1 to Ten2/0/1:3* The start and end interfaces are of different types.

*Giga2/0/1 to Ten2/0/25* The start and end interfaces are of different types.

*Ten2/0/3:1 to Ten2/0/4:2* The start and end subinterfaces belong to different main interfaces.

*Ten2/0/3:4 to Ten2/0/3:1* The start interface number is larger than the end interface number.

Correct:

*Ten2/0/1 to Ten2/0/5*

*Ten2/0/1:1 to Ten2/0/1:100*

## Table description

Item	Description
Feature name	Ifmgr
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Name	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A
AbbreviatedName	Abbreviated name of an interface	N/A	String. Length: 2 to 47 characters. Example: GE2/0/2	N/A
PortIndex	Port index	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
ifTypeExt	Interface extension type	N/A	Unsigned integer.	For more information, see <a href="#">Table 2</a> .
ifType	Interface type	N/A	Unsigned integer.	Additional values for ifType are assigned by the

Column name	Column description	Column type	Data type and restrictions	Remarks
				Internet Assigned Numbers Authority (IANA), through updating the syntax of the IANA ifType textual convention.
Description	Interface description	N/A	String. Length: 1 to 255 characters.	N/A
AdminStatus	Interface administration status	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Administratively up.</li> <li>2—Administratively down.</li> </ul>	N/A
OperStatus	Interface operation status	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—up.</li> <li>2—down.</li> <li>3—testing.</li> <li>4—unknown.</li> <li>5—dormant.</li> <li>6—notPresent.</li> <li>7—lowerLayerDown.</li> </ul>	For more information, see 0.
ConfigSpeed	Configured speed of an interface, in kbps	N/A	<ul style="list-style-type: none"> <li>Each bit represents a speed</li> <li>As follows:</li> <li>1—Auto</li> <li>2—10Mbps</li> <li>4—100Mbps</li> <li>8—155Mbps</li> <li>16—622Mbps</li> <li>32—1Gbps</li> <li>64—2Gbps</li> <li>128—2.5Gbps</li> <li>256—4Gbps</li> <li>512—8Gbps</li> <li>1024—10Gbps</li> <li>2048—16Gbps</li> <li>4096—20Gbps</li> <li>8192—40Gbps</li> <li>16384—100Gbps</li> <li>32768—5Gbps</li> <li>65536—25Gbps</li> <li>131072—32Gbps</li> </ul>	Examples: <ul style="list-style-type: none"> <li>32—Speed is 1000Mbps.</li> <li>37—Auto-negotiation mode, and negotiation values are 100Mbps and 1000Mbps.</li> </ul>
ActualSpeed	Actual speed of an interface, in kbps	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	Applicable to only Ethernet interfaces.
ConfigDuplex	Configured duplex mode of an interface	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Full.</li> <li>2—Half.</li> <li>3—Auto.</li> </ul>	Applicable to only Ethernet interfaces.
ActualDuplex	Actual duplex mode of an	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Full.</li> </ul>	Applicable to only Ethernet interfaces.

Column name	Column description	Column type	Data type and restrictions	Remarks
	interface		<ul style="list-style-type: none"> <li>• 2—Half.</li> <li>• 3—Auto.</li> </ul>	
PortLayer	Port layer of an interface	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—Layer 2</li> <li>• 2—Layer 3</li> </ul>	N/A
LinkType	VLAN type of an interface	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—Access.</li> <li>• 2—Trunk.</li> <li>• 3—Hybrid.</li> </ul>	Applicable to only Layer 2 interfaces.
PVID	Port VLAN ID (PVID) of an interface	N/A	Unsigned integer. Value range: 1 to 4094.	Applicable to only Layer 2 interfaces.
InetAddressIPv4	Primary IPv4 address of an interface	N/A	String, dotted decimal notation.	N/A
InetAddressIPv4Mask	Primary IPv4 address mask of an interface	N/A	String, dotted decimal notation.	N/A
PhysicalIndex	Entity index of an interface	N/A	Unsigned integer.	Applicable to only Physical interfaces.
MAC	MAC address of an interface	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A.
ForwardingAttributes	Forwarding attributes of an interface	N/A	Bit mask: <ul style="list-style-type: none"> <li>• 1: Broadcast</li> <li>• 2: Non-Broadcast Multi-Access</li> <li>• 4: Loopback</li> <li>• 8: P2P</li> <li>• 16: Multicast</li> <li>• 32: Network Management Interface</li> </ul>	Applicable to only Layer 3 interfaces.
Loopback	Loopback test	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—No loopback</li> <li>• 1—Internal</li> <li>• 2—External</li> </ul>	Applicable to only interfaces of Ethernet and AUX.
MDI	MDI mode of an interface	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—MDI-II (straight-through cable)</li> <li>• 2—MDI-X (crossover cable)</li> <li>• 3—MDI-AUTO (auto-sensing)</li> </ul>	Applicable to only Layer 2 Ethernet interfaces.
ConfigMTU	Configured MTU of an interface	N/A	Unsigned integer.	Applicable to only Layer 3 interfaces.
ActualMTU	Actual MTU of an interface	N/A	Unsigned integer.	Applicable to only Layer 3 interfaces.
ConfigBandwidth	Configured expected	N/A	Unsigned integer. Value range: 1 to 400000000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	bandwidth of an interface			
ActualBandwidth	Bandwidth of an interface	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	If the expected bandwidth has been configured, this field displays the configured expected bandwidth. Otherwise, this field displays the actual bandwidth.
SubPort	Whether the port is sub-interface.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
Interval	Sampling interval of an interface	N/A	Unsigned integer. Value range: 5 to 300, in seconds, in step of 5	N/A
ForceUP	Forcibly bring up an interface.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	Applicable to only Ethernet and POS interfaces.
Actual64Bandwidth	Bandwidth of an interface	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	If the expected bandwidth has been configured, this field displays the configured expected bandwidth. Otherwise, this field displays the actual bandwidth.
KeepAlive	KeepAlive value of an interface	N/A	Unsigned integer. Value range: 0 to 32767.	Applicable to interfaces that support only link layer protocols PPP, HDLC, and Frame Relay.
KeepAliveRetry	KeepAlive retry times of an interface	N/A	Unsigned integer. Value range: 1 to 255.	Applicable to interfaces that support only link layer protocols PPP, HDLC, and Frame Relay.
DefaultMac	Default MAC address of an interface	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
LastChange	From last state change time to now.	N/A	String.	N/A
PhyLastChange	From last physical state change time to now.	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TrafficStatisticsEnable	Enable interface statistics collection.	N/A	Enumeration: <ul style="list-style-type: none"> <li>enable</li> <li>disable</li> </ul>	Applicable to only Layer 3 subinterfaces.
SubInterfaceStatisticsEnable	Enable rate statistics collection for the subinterfaces of an interface	N/A	Enumeration: <ul style="list-style-type: none"> <li>enable</li> <li>disable</li> </ul>	Applicable to only main interface and POS channels.

**Table 1 Interface operation status**

Value	Operation status	Remarks
1	up	When the administration status of an interface changes to up, the operation status of the interface changes to up if the interface is ready to transmit and receive network traffic.
2	down	<ul style="list-style-type: none"> <li>When the administration status of an interface changes to up, the operation status of the interface remains in the down status if a fault prevents it from going to the up status.</li> <li>When the administration status of an interface changes to down, the operation status of the interface changes to down.</li> </ul>
3	testing	No operation packets can be transmitted or received through the interface.
4	unknown	The operation status of the interface cannot be determined.
5	dormant	When the administration status of an interface changes to up, the operation status of the interface changes to dormant if the interface is waiting for external actions (such as a serial line waiting for an incoming connection).
6	notPresent	When the administration status of an interface changes to up, the operation status of an interface remains in the notPresent status if the interface has missing components (typically hardware).
7	lowerLayerDown	The lower-layer interfaces are down.

**Table 2 Interface extension types**

Value	Interface type	Description
0	IF_COMMON_TYPE	General interface.
1	IF_AM_TYPE	Analog modem interface.
2	IF_ASY_TYPE	Asynchronous serial port.
3	IF_IMA_TYPE	IMA interface.
4	IF_ATM_TYPE	ATM interface.
5	IF_AUX_TYPE	AUX interface.
6	IF_BRI_TYPE	ISDN BRI interface.
7	IF_BVI_TYPE	Bridge-group virtual interface.
8	IF_CONSOLE_TYPE	Console interface.
9	IF_CPOS_TYPE	CPOS interface.
10	IF_DIALER_TYPE	Dialer interface.

Value	Interface type	Description
11	IF_LOCAL_VA_TYPE	Local VA interface, bound to a physical interface.
12	IF_E1_TYPE	E1 interface.
13	IF_E3_TYPE	E3 interface.
14	IF_INETH_TYPE	Internal Ethernet interface.
15	IF_INLOOPBACK_TYPE	Internal loopback interface.
16	IF_LOOPBACK_TYPE	Loopback interface.
17	IF_ENCRYPT_TYPE	Encryption interface.
18	IF_L2ETHERNET_TYPE	Layer 2 FE interface.
19	IF_L2GE_TYPE	Layer 2 GE interface.
20	IF_L2VE_TYPE	Layer 2 VE interface.
21	IF_L2XGE_TYPE	Layer 2 10-GE interface.
22	IF_L3ETHERNET_TYPE	Layer 3 FE interface.
23	IF_L3GE_TYPE	Layer 3 GE interface.
24	IF_L3VE_TYPE	Layer 3 VE interface.
25	IF_L3XGE_TYPE	Layer 3 10-GE interface.
26	IF_ME_TYPE	Management Ethernet interface.
27	IF_MFR_TYPE	MFR interface.
28	IF_MGE_TYPE	Management GE interface.
29	IF_MPGROUP_TYPE	MP-group interface.
30	IF_NULL_TYPE	Null interface.
31	IF_POS_TYPE	POS interface.
32	IF_RPR_POS_TYPE	RPR POS physical interface.
33	IF_RPR_XGE_TYPE	RPR 10-GE physical interface.
34	IF_RPR_GE_TYPE	RPR GE physical interface.
35	IF_SERIAL_TYPE	Serial interface.
36	IF_SUBSCRIBER_LINE_TYPE	Subscriber line interface.
37	IF_T1_TYPE	T1 interface.
38	IF_T3_TYPE	T3 interface.
39	IF_TUNNEL_TYPE	Tunnel interface.
40	IF_GLOBAL_VA_TYPE	Global VA interface, bound to a global logical interface.
41	IF_VLAN_TYPE	VLAN interface.
42	IF_VT_TYPE	VT interface.
43	IF_RADIO_DOT11_TYPE	WLAN-Radio interface.
44	IF_WLAN_ESS_TYPE	WLAN ESS interface.
45	IF_WLAN_DBSS_TYPE	WLAN DBSS interface.
46	IF_WLAN_BSS_TYPE	WLAN BSS interface.

Value	Interface type	Description
47	IF_WLAN_ETH_TYPE	WLAN Ethernet interface.
48	IF_WLAN_TUN_TYPE	WLAN tunnel interface.
49	IF_OLT_TYPE	OLT interface.
50	IF_ONU_TYPE	ONU interface.
51	IF_MTUNNEL_TYPE	M-Tunnel interface.
52	IF_CELLULAR_TYPE	Cellular interface.
53	IF_INASY_TYPE	Internal asynchronous serial interface.
54	IF_L2RPR_TYPE	Layer 2 RPR logical interface.
55	IF_L3RPR_TYPE	Layer 3 RPR logical interface.
56	IF_BAGG_TYPE	Layer 2 aggregate interface.
57	IF_REGISTER_TUNNEL_TYPE	Register-Tunnel interface.
58	IF_LOOPFE_TYPE	Loopback FE interface.
59	IF_LOOPGE_TYPE	Loopback GE interface.
60	IF_LOOPXGE_TYPE	Loopback 10-GE interface.
61	IF_MIRRORFE_TYPE	Mirroring FE interface.
62	IF_MIRRORGE_TYPE	Mirroring GE interface.
63	IF_MIRRORXGE_TYPE	Mirroring 10-GE interface.
64	IF_IDSFE_TYPE	IDS FE interface.
65	IF_IDSGE_TYPE	IDS GE interface.
66	IF_IDSXGE_TYPE	IDS 10-GE interface.
67	IF_RAGG_TYPE	Layer 3 aggregate interface.
68	IF_L2FGE_TYPE	Layer 2 40-GE interface.
69	IF_L2HGE_TYPE	Layer 2 100-GE interface.
70	IF_L3FGE_TYPE	Layer 3 40-GE interface.
71	IF_L3HGE_TYPE	Layer 3 100-GE interface.
72	IF_LOOPFGE_TYPE	Loopback 40-GE interface.
73	IF_LOOPHGE_TYPE	Loopback 100-GE interface.
74	IF_MIRRORFGE_TYPE	Mirroring 40-GE interface.
75	IF_MIRRORHGE_TYPE	Mirroring 100-GE interface.
76	IF_IDSFGGE_TYPE	IDS 40-GE interface.
77	IF_IDSHGE_TYPE	IDS 100-GE interface.
78	IF_FC_TYPE	FC interface.
79	IF_VFC_TYPE	VFC interface.
80	IF_FCB_TYPE	FC bundle interface.
81	IF_EVI_LINK_TYPE	EVI-link interface.
82	IF_SCHANNEL_TYPE	S-channel interface.
83	IF_FCM_TYPE	FCM interface.

Value	Interface type	Description
84	IF_VPPP_TYPE	Virtual PPP interface.
85	IF_TRILL_REMOTE_TYPE	Remote TRILL interface.
86	IF_HDLCBUNDLE_TYPE	HDLC bundle interface.
87	IF_GSCHANNEL_TYPE	Aggregate S-channel interface.
88	IF_L2TGE_TYPE	Layer 2 20-GE interface.
89	IF_L3TGE_TYPE	Layer 3 20-GE interface.
90	IF_LOOPTGE_TYPE	Loopback 20-GE interface.
91	IF_MIRRORTGE_TYPE	Mirroring 20-GE interface.
92	IF_IDSTGE_TYPE	IDS 20-GE interface.
93	IF_AC_TYPE	AC interface.
94	IF_UPW_TYPE	U-PW interface.
95	IF_NPW_TYPE	N-PW interface.
96	IF_TUNNEL_BUNDLE_TYPE	Tunnel bundle interface.
97	IF_EFM_TYPE	EFM interface.
98	IF_MAPPED_TYPE	Mapped interface.
99	IF_CBGE_TYPE	CBGE interface.
100	IF_CBXGE_TYPE	CBXGE interface.
101	IF_CBFGE_TYPE	CBFGE interface.
102	IF_CBHGE_TYPE	CBHGE interface.
103	IF_PEX_TYPE	PEX interface.
104	IF_VE_L2VPN_TYPE	L2VPN virtual Ethernet interface
105	IF_VE_L3VPN_TYPE	L3VPN virtual Ethernet interface
106	IF_BLADE_TYPE	Blade interface
107	IF_BLAGG_TYPE	Blade aggregation interface
108	IF_ETHCHANNEL_TYPE	EtherChannel interface
109	IF_BETH_TYPE	Beth interface
110	IF_RETH_TYPE	Reth interface
111	IF_VSI_TYPE	VSI interface
112	IF_CEM_TYPE	CEM interface
113	IF_INCOMM_TYPE	INCOMM interface
114	IF_SVPNAC_TYPE	SVPN-AC interface
115	IF_LISP_TYPE	LISP interface
116	IF_L2RPRLOCAL_TYPE	Layer 2 RPR interface
117	IF_SCHANNEL_BUNDLE_TYPE	SCHANNEL BUNDLE interface
118	IF_WLAN_MESH_TYPE	WLAN Mesh interface
119	IF_WLAN_MESHLINK_TYPE	WLAN-MeshLink interface
120	IF_CMTUNNEL_TYPE	CMTunnel interface

Value	Interface type	Description
121	IF_L2SGE_TYPE	Layer 2 SGE interface
122	IF_L3SGE_TYPE	Layer 3 SGE interface
123	IF_L2WGE_TYPE	Layer 2 WGE interface
124	IF_L3WGE_TYPE	Layer 3 WGE interface
125	IF_LOOPWGE_TYPE	LOOP WGE interface
126	IF_MIRRORWGE_TYPE	MIRROR WGE interface
127	IF_IDSWGE_TYPE	IDS WGE interface
129	IF_LOOPSGE_TYPE	LOOP SGE interface
130	IF_MIRRORSGE_TYPE	MIRROR SGE interface
131	IF_WTU_ETH_TYPE	WTU ETH interface
132	IF_LOCAL_BAS_IF_TYPE	LOCAL BAS interface
133	IF_GLOBAL_BAS_IF_TYPE	GLOBAL BAS interface
134	IF_L2VGE_TYPE	Layer 2 VGE interface
135	IF_L3VGE_TYPE	Layer 3 VGE interface
136	IF_LOOPVGE_TYPE	LOOP VGE interface
137	IF_MIRRORVGE_TYPE	MIRROR VGE interface
138	IF_IDSVGE_TYPE	IDS VGE interface
139	IF_L2VMETH_TYPE	Layer 2 VMETH interface
140	IF_LORA_RADIO_TYPE	LORA RADIO interface
141	IF_DWDM_TYPE	DWDM interface
142	IF_IDSSGE_TYPE	IDS SGE interface
256	IF_MAX_TYPE	N/A

## Ifmgr/TrafficStatistics/Interfaces

This table contains interface traffic statistics during specific sampling periods.

### XML structure

```

<Ifmgr>

## Table description

Item	Description
Feature name	Ifmgr
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Name	Full name of an interface	N/A	String. Length: 2 to 47 characters.
Interval	Sampling interval of an interface, in seconds	N/A	Unsigned integer. Value range: 5 to 300.
InPkts	Number of inbound packets during a specific period	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutPkts	Number of outbound packets during a specific period	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InOctets	Number of inbound bytes during a specific period	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutOctets	Number of outbound bytes during a specific period	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InBits	Number of inbound bits during a specific period	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutBits	Number of outbound bits during a specific period	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .

# Ifmgr/TrafficStatistics/Interval

This table contains traffic sampling interval information of all interfaces.

## XML structure

```
<Ifmgr>
  <TrafficStatistics>
    <Interval>
      <Configurable></Configurable>
      <Interval></Interval>
    </Interval>
  </TrafficStatistics>
</Ifmgr>
```

## Table description

Item	Description
Feature name	Ifmgr
Table name	Interval
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Configurable	Whether the sampling interval for all interfaces can be configured.	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b></li><li><b>false</b></li></ul>
Interval	Sampling interval of all interfaces, in seconds.	N/A	Unsigned integer. Value range: 5 to 300. It is valid only when "Configurable" above is true.

# Ifmgr/Statistics

This table contains interface statistics.

## Table description

Item	Description
Feature name	Ifmgr
Table name	Statistics
Table type	Multi-instance table
Row name	Interface
Restrictions	The statistics can be cleared.

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Name	Full name of an interface.	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2
AbbreviatedNa	Abbreviated name of an	N/A	String.

Column name	Column description	Column type	Data type and restrictions
me	interface.		Length: 2 to 47 characters. Example: GE2/0/2
InOctets	Number of inbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InUcastPkts	Number of inbound unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InNUcastPkts	Number of inbound non-unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InDiscards	Number of discarded inbound packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InErrors	Number of errored inbound packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InUnknownProtos	Number of unsupported and unknown inbound packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InRate	Rate of inbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutOctets	Number of outbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutUcastPkts	Number of outbound unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutNUcastPkts	Number of outbound non-unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutDiscards	Number of discarded outbound packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutErrors	Number of errored outbound packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutRate	Rate of outbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
LastClear	Local time when the statistics on an interface were cleared most recently.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.
InPktRate	Rate of inbound packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutPktRate	Rate of outbound packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .

# Ifmgr/Ports

This table contains port information, such as all physical Ethernet interfaces, Layer 2 aggregate interface, Layer 2 VE interface, Layer 2 RPR logical interface, WLAN ESS interface, WLAN BSS interface, WLAN DBSS interface, WLAN tunnel interface, S-channel interface, Aggregate S-channel interface and other logical interfaces which are not Layer 2 Ethernet subinterfaces.

## XML structure

## Table description

Item	Description
Feature name	Ifmgr
Table name	InterfaceCapabilities
Table type	Multi-instance table
Row name	Interface
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Configurable	Whether the interface is configurable.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
Shutdown	Whether the interface can be shutdown manually.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
Speed	Mode of speed which can be configured.	N/A	<ul style="list-style-type: none"> <li>• Each bit represents a speed.</li> <li>• As follows: <ul style="list-style-type: none"> <li>• 1—Auto</li> <li>• 2—10Mbps</li> <li>• 4—100Mbps</li> <li>• 8—155Mbps</li> <li>• 16—622Mbps</li> <li>• 32—1Gbps</li> <li>• 64—2Gbps</li> <li>• 128—2.5Gbps</li> <li>• 256—4Gbps</li> <li>• 512—8Gbps</li> <li>• 1024—10Gbps</li> <li>• 2048—16Gbps</li> <li>• 4096—20Gbps</li> <li>• 8192—40Gbps</li> <li>• 16384—100Gbps</li> <li>• 32768—5Gbps</li> <li>• 65536—25Gbps</li> <li>• 131072—32Gbps</li> </ul> </li> </ul>	Example: 38 —Speed 10Mbps, 100Mbps, and 1Gbps are configurable.
AutoSpeed	Modes of auto-negotiation speed which can be configured.	N/A	Each bit represents a speed. As follows: <ul style="list-style-type: none"> <li>• 1—10Mbps</li> <li>• 2—100Mbps</li> <li>• 4—1Gbps</li> </ul>	Example: 6—auto-negotiation speed 100Mbps and 1Gbps are configurable.
Duplex	Modes of duplex which can be configured.	N/A	Each bit represents a kind of duplex mode. As follows:	Applicable to only Ethernet interfaces. Example:

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>1— Full</li> <li>2—Half</li> <li>4—Auto</li> </ul>	7—Duplex mode 'Full', 'Half' Auto 'Half' are configurable.
PortLayer	Whether the port layer can be changed.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	Applicable to only Ethernet interfaces.
Loopback	Whether the loopback test can be configured.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	Applicable to only Ethernet interfaces and AUX.
MDI	Types of MDI which can be configured.	N/A	Each bit represents a type of the line connected to the port. <ul style="list-style-type: none"> <li>1: <b>mdi</b> (straight-through cable)</li> <li>2: <b>mdix (crossover cable)</b></li> <li>4: <b>automdix (auto-sensing)</b></li> </ul>	Applicable to only Layer 2 Ethernet interfaces. Example: 7—'mdi', 'mdix' and 'automdix' are configurable.
Bandwidth	Whether the bandwidth can be configured.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
MinMTU	The minimum MTU which can be configured.	N/A	Unsigned integer.	Applicable to only Layer 3 interfaces.
MaxMTU	The maximum MTU which can be configured.	N/A	Unsigned integer.	Applicable to only Layer 3 interfaces.
MinSubNum	Minimum sub-interface number.	N/A	Unsigned integer.	N/A
MaxSubNum	Maximum sub-interface number.	N/A	Unsigned integer.	N/A
MaxCreateSubNum	The total numbers of sub-interface which can be created.	N/A	Unsigned integer.	N/A
ContextAllocType	The allocation type of an interface for CONTEXT.	N/A	Each bit represents an allocation type. As follows: <ul style="list-style-type: none"> <li>1—The allocation type is shared.</li> <li>2—The allocation type is exclusive.</li> </ul>	Example: 3—The allocation types can be both shared and exclusive.
Removable	Whether the interface can be deleted.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
Interval	Whether the	N/A	Boolean:	

Column name	Column description	Column type	Data type and restrictions	Remarks
	sampling interval can be configured.		<ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	
ForceUP	Whether port force up can be configured.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	Applicable to only Ethernet and POS interfaces.
LoopbackAutoStop	Whether the loopback detection can be auto stop.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	
MAC	Whether MAC can be configured.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	
TrafficStatisticsEnable	Whether interface statistics collection for interface can be configured.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	
SubInterfaceStatisticsEnable	Whether interface rate statistics collection for the subinterface of interface can be configured.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A

## Ifmgr/TypeCapabilities

This table contains interface type capability information.

### XML structure

```

## Table description

Item	Description
Feature name	Ifmgr
Table name	EthInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	Applicable to only Ethernet interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Combo	Combo mode of an interface	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—fiber mode</li> <li>2—copper mode</li> <li>3—auto mode</li> </ul>	Applicable to only Ethernet interfaces.
FlowControl	Flow control information of an interface	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Enable flow control</li> <li>2—Disable</li> <li>3—Only enable flow control packet receiving</li> </ul>	Applicable to only Physical interfaces.
AutoPowerDown	Port auto power down	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Applicable to only Physical interfaces.
Jumboframe	Jumbo frame information of an interface	N/A	Unsigned integer, the value is 0 if jumbo frame is disable on an interface.	
BroadcastSuppression	Broadcast suppression information of an interface	N/A	Include: <ul style="list-style-type: none"> <li>Value</li> <li>Unit</li> </ul>	
ConfigValue	Configured broadcast suppression value of an interface	N/A	Unsigned integer. Value range: <ul style="list-style-type: none"> <li>ratio: 0 to 100</li> <li>pps: 0 to 1.4881 * the maximum interface rate.</li> <li>kpps: 0 to the maximum interface rate</li> </ul>	
ActualValue	Actual broadcast suppression value of an interface	N/A	Unsigned integer. Value range: <ul style="list-style-type: none"> <li>ratio: 0 to 100</li> <li>pps: 0 to 1.4881 * the maximum interface rate.</li> <li>kpps: 0 to the maximum interface rate</li> </ul>	
Unit	Broadcast suppression unit	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—ratio</li> <li>2—pps</li> <li>3—kpps</li> </ul>	

Column name	Column description	Column type	Data type and restrictions	Remarks
MulticastSuppression	Multicast suppression information of an interface	N/A	Include: <ul style="list-style-type: none"> <li>Value</li> <li>Unit</li> </ul>	
ConfigValue	Configured multicast suppression value of an interface	N/A	Unsigned integer. Value range: <ul style="list-style-type: none"> <li><b>ratio: 0 to 100</b></li> <li>pps: 0 to 1.4881 * the maximum interface rate.</li> <li>kpbs: 0 to the maximum interface rate</li> </ul>	
ActualValue	Actual multicast suppression value of an interface	N/A	Unsigned integer. Value range: <ul style="list-style-type: none"> <li><b>ratio: 0 to 100</b></li> <li>pps: 0 to 1.4881 * the maximum interface rate.</li> <li>kpbs: 0 to the maximum interface rate</li> </ul>	
Unit	Multicast suppression unit	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1—ratio</b></li> <li>2—pps</li> <li><b>3—kpbs</b></li> </ul>	
Flag	Multicast suppression flag	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1—all</b></li> <li><b>2—unknown</b></li> </ul>	
UnknownUnicastSuppression	UnknownUnicast suppression information of an interface	N/A	Include: <ul style="list-style-type: none"> <li>Value</li> <li>Unit</li> </ul>	
ConfigValue	Configured unknownUnicast suppression value of an interface	N/A	Unsigned integer. Value range: <ul style="list-style-type: none"> <li><b>ratio: 0 to 100</b></li> <li>pps: 0 to 1.4881 * the maximum interface rate.</li> <li>kpbs: 0 to the maximum interface rate</li> </ul>	
ActualValue	Actual unknownUnicast suppression value of an interface	N/A	Unsigned integer. Value range: <ul style="list-style-type: none"> <li><b>ratio: 0 to 100</b></li> <li>pps: 0 to 1.4881 * the maximum interface rate.</li> <li>kpbs: 0 to the maximum interface rate</li> </ul>	
Unit	UnknownUnicast suppression unit	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1—ratio</b></li> <li>2—pps</li> <li><b>3—kpbs</b></li> </ul>	
BPDUDrop	Whether any type of IEEE BPDUs is drop on the port.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	Applicable to only Layer 2 Physical interfaces.

Column name	Column description	Column type	Data type and restrictions	Remarks
EEE	Whether energy efficient ethernet is enable on the port.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	Applicable to only Physical interfaces.
ConnectMode	Port connection mode of an interface.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1—Normal connection mode</b></li> <li><b>2—Extend connection mode</b></li> </ul>	Applicable to only Layer 2 10GE interfaces.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A

Lower	Known-unicast lower threshold value	N/A	Unsigned integer. Value range: <ul style="list-style-type: none"> <li>pps: 1 to 1.4881 * the maximum interface rate</li> <li>ratio: 1 to 100</li> <li>kbps: 1 to the maximum interface rate</li> </ul>	
Unit	Known-unicast unit	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—pps</li> <li>2—ratio</li> <li>3—kbps</li> </ul>	
Forward	Known-unicast traffic forwarding status	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Forwarding</li> <li>1—Block</li> <li>2—Shutdown</li> </ul>	
SwitchNum	Number of known-unicast traffic forwarding state changes	N/A	Unsigned integer.	
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A

## Ifmgr/StormConstrain/Interval

This table contains storm constrain traffic collection interval information.

### XML structure

```

<Ifmgr>
  <StormConstrain>
    <Interval>
      <Interval></Interval>
    </Interval>
  </StormConstrain>
</Ifmgr>

```

## Table description

Item	Description
Feature name	Ifmgr
Table name	Interval
Table type	Single-instance table
Row name	N/A
Restrictions	

## Columns

Column name	Column description	Column type	Data type and restrictions
Interval	Traffic statistics collection interval for storm constrain on all interfaces, in seconds	N/A	Unsigned integer. Value range: 1 to 300.

## Ifmgr/PortIsolation/Groups

This table contains port isolation groups information.

## XML structure

```
<Ifmgr>
  <PortIsolation>
    <Groups>
      <Group>
        <IsolatedGroupID></IsolatedGroupID>
        <InterfaceList></InterfaceList>
        <IfName></IfName>
      </Group>
    </Groups>
  </PortIsolation>
</Ifmgr>
```

## Table description

Item	Description
Feature name	Ifmgr
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	Applicable to only Layer 2 interfaces of Ethernet and aggregation.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IsolatedGroup ID	Isolation group ID.	Index	Unsigned integer.	
InterfaceList	Interface IfIndex list of an isolation group ID.	N/A	<p>Number string.</p> <p>It is a comma-separated list of IfIndex items. An item can be an individual IfIndex or an IfIndex range. Use a hyphen (-) to separate the start and end IfIndexes of a range.</p> <p>The string must not end with a comma or hyphen, or include any whitespace characters.</p>	<p>Examples: 1,2,3,5-8,10-20</p> <p>Example: 1,2,3,5-8,10-20.</p> <p>Available IfIndexes are in the IfIndex column in the Ifmgr/Interfaces table.</p>

## Ifmgr/PortIsolation/Interfaces

This table contains interface isolation information.

## XML structure

```

<Ifmgr>
  <PortIsolation>
    <Interfaces>
      <Interface>
        <IfIndex></IfIndex>
        <IsolatedGroupID></IsolatedGroupID>
      </Interface>
    </Interfaces>
  </PortIsolation>
</Ifmgr>

```

## Table description

Item	Description
Feature name	Ifmgr
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	Applicable to only Layer 2 interfaces of Ethernet and aggregation.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
IsolatedGroup ID	Port isolation group ID of an interface	N/A	Unsigned integer.	
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A

## Ifmgr/PortIsolation/Capabilities

This table contains port isolation groups capabilities on device.

## XML structure

```
<Ifmgr>
  <PortIsolation>
    <Capabilities>
      <MaxGroupNum></MaxGroupNum>
    </Capabilities>
  </PortIsolation>
</Ifmgr>
```

## Table description

Item	Description
Feature name	Ifmgr
Table name	Capabilities
Table type	Single-instance table
Row name	N/A

Item	Description
Restrictions	

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxGroupNum	The maximum port isolation group number.	N/A	Unsigned integer.	

## Ifmgr/DeviceCapabilities

This table contains the capabilities of the interfaces on device.

## XML structure

```

<Ifmgr>
  <DeviceCapabilities>
    <HistoryTrafficStatistic></HistoryTrafficStatistic>
    <ManualNoLoopBack></ManualNoLoopBack>
    <DefaultShutdown></DefaultShutdown>
  </DeviceCapabilities>
</Ifmgr>

```

## Table description

Item	Description
Feature name	Ifmgr
Table name	DeviceCapabilities
Table type	Single-instance table
Row name	N/A
Restrictions	

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HistoryTrafficStatistic	Whether you need to support the history traffic statistic	N/A	Boolean: <ul style="list-style-type: none"> <li>True</li> <li>false</li> </ul>	
ManualNoLoo	Whether you	N/A	Boolean:	

Column name	Column description	Column type	Data type and restrictions	Remarks
pBack	need to stop the loopback test on an interface manually		<ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	
DefaultShutDown	Whether an interface is shut down by default	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	

## Ifmgr/ReserveVlanInterface

This table contains the reservation of VLAN interface resources.

### XML structure

```

<Ifmgr>
  <ReserveVlanInterface>
    <VlanInterface>
      <Type></Type>
      <VlanList></VlanList>
    </VlanInterface>
  </ReserveVlanInterface>
</Ifmgr>

```

### Table description

Item	Description
Feature name	Ifmgr
Table name	ReserveVlanInterface
Table type	Multi-instance table
Row name	VlanInterface
Restrictions	N/A

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Whether the reservation of VLAN interface resources is global or local.	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Global.</li> <li>2—Local</li> </ul>	The reservation of global VLAN interface resources or local VLAN interface resources.
VlanList	List of VLANs for the reservation of	N/A	Number string. It is a comma-separated list of	Example: 1,2,3,5-8,10-20

Column name	Column description	Column type	Data type and restrictions	Remarks
	VLAN interface resources.		VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range.  The string cannot end with a comma or hyphen, or include any whitespace characters.	

## Ifmgr/SubChannel

This table contains the sub channel index information of interface.

## XML structure

```

<Ifmgr>
  <SubChannel>
    <Interface>
      <IfIndex></IfIndex>
      <CreateMode></CreateMode>
      <SubChannelIndex></SubChannelIndex>
    </Interface>
  </SubChannel>
</Ifmgr>

```

## Table description

Item	Description
Feature name	Ifmgr
Table name	SubChannel
Table type	Multi-instance table
Row name	Interface
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For

Column name	Column description	Column type	Data type and restrictions	Remarks
				information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
CreateMode	The mode of creating sub channel.	Index	Enumeration: <ul style="list-style-type: none"> <li>1—serial-set</li> <li>2—eth-channel</li> </ul>	N/A
SubChannelIndex	The interface index of each subchannel.	Index	Unsigned integer	N/A

## Ifmgr/CellularChannel

This table contains sub channel creating information of cellular controller.

### XML structure

```

<Ifmgr>
  <CellularChannel>
    <Interface>
      <IfIndex></IfIndex>
      <CreateMode></CreateMode>
      <ChannelNum></ChannelNum>
    </Interface>
  </CellularChannel>
</Ifmgr>

```

### Table description

Item	Description
Feature name	Ifmgr
Table name	CellularChannel
Table type	Multi-instance table
Row name	Interface
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
CreateMode	The mode of creating sub channel.	Index	Enumeration: <ul style="list-style-type: none"> <li>1—serial-set</li> <li>2—eth-channel</li> </ul>	N/A
ChannelNum	Sub channel number.	Index	Unsigned integer	N/A

## Ifmgr/NewSubInterfaces

This table contains creating information of sub-interfaces.

## XML structure

```

<Ifmgr>
  <NewSubInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <SubNum></SubNum>
      <IfName></IfName>
    </Interface>
  </NewSubInterfaces>
</Ifmgr>

```

## Table description

Item	Description
Feature name	Ifmgr
Table name	NewSubInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer	Interface index of the main interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
SubNum	Sub-interface number.	Index	Unsigned integer	The range for SubNum is shown in the InterfaceCapabilities table.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	N/A

## Ifmgr/EthPortStatistics

This table contains interface statistics.

## XML structure

```

<Ifmgr>
  <EthPortStatistics>
    <Interface>
      <IfIndex></IfIndex>

## Table description

Item	Description
Feature name	Ifmgr
Table name	EthPortStatistics
Table type	Multi-instance table
Row name	Interface
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
InBytes	Number of inbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InPkts	Number of inbound packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InUcastPkts	Number of inbound unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InBrdcastPkts	Number of inbound broadcast packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InMulticastPkts	Number of inbound multicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InPauses	Number of inbound pause frames on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InNormalBytes	Number of inbound normal bytes on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InNormalUnicastBytes	Number of inbound normal unicast bytes on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .

Column name	Column description	Column type	Data type and restrictions
InNormalBrdcastBytes	Number of inbound normal broadcast bytes on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InNormalMulticastBytes	Number of inbound normal multicast bytes on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InUnknownUnicastBytes	Number of inbound unknown unicast bytes on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InNormalPkts	Number of inbound normal packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InNormalUnicastPkts	Number of inbound normal unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InNormalBrdcastPkts	Number of inbound normal broadcast packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InNormalMulticastPkts	Number of inbound normal multicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InUnknownUnicastPkts	Number of inbound unknown unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InNormalPauses	The number of normal pauses received on the interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InErrorPkts	Number of error inbound packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InPktSpeed	Rate of inbound packages on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InByteSpeed	Rate of inbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InBrdcastPktSpeed	Rate of inbound broadcast packages on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InMulticastPktSpeed	Rate of inbound multicast packages on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InRuns	Number of inbound runs on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InGiants	Number of inbound giants on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InThrottles	Number of inbound frames that had a non-integer number of bytes.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InErrCRCFrames	Total number of inbound frames that had a normal	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
	length, but contained CRC errors.		Value range: 0 to $2^{64} - 1$ .
InErrFrames	Total number of inbound frames that contained CRC errors and a non-integer number of bytes.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InOverrunDropPkts	Number of packets dropped because the input rate of the port exceeded the queuing capability.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InAbortPkts	Total number of illegal inbound packets.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InIgnoreDropFrames	Number of inbound frames dropped because the receiving buffer of the port ran low.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InParityErrFrames	Total number of frames with parity errors.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InSpeedPeakBytes	Peak rate of inbound traffic in Bps, and the time when the peak inbound traffic rate occurred.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
InSpeedPeakTime	Speed peak time of inbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutBytes	Number of outbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutPkts	Number of outbound packages on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutUcastPkts	Number of outbound unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutBrdcastPkts	Number of outbound broadcast packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutMulticastPkts	Number of outbound multicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutPauses	Number of outbound pause frames on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutNormalBytes	Number of outbound normal bytes on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutNormalUnicastBytes	Number of outbound normal unicast bytes on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .

Column name	Column description	Column type	Data type and restrictions
OutNormalBrdcastBytes	Number of outbound normal broadcast bytes on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutNormalMulticastBytes	Number of outbound normal multicast bytes on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutUnknownUnicastBytes	Number of outbound unknown unicast bytes on an interface. unsupported protocol.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutNormalPkts	Number of outbound normal packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutNormalUnicastPkts	Number of outbound normal unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutNormalBrdcastPkts	Number of outbound normal broadcast packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutNormalMulticastPkts	Number of outbound normal multicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutUnknownUnicastPkts	Number of outbound unknown unicast packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutNormalPauses	Number of outbound normal pause frames on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutErrorPkts	Number of error outbound packets on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutPktSpeed	Rate of outbound packages on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutByteSpeed	Rate of outbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutBrdcastPktSpeed	Rate of outbound broadcast packages on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutMulticastPktSpeed	Rate of outbound multicast packages on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutUnderRunDropPkts	Number of packets dropped because the output rate of the interface exceeded the output queuing capability.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutBuffFailDropPkts	Number of packets dropped because the transmitting buffer of the interface ran low.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .

Column name	Column description	Column type	Data type and restrictions
OutAbortPkts	Number of packets that failed to be transmitted, for example, because of Ethernet collisions.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutDeferedFrames	Number of frames that the interface deferred to transmit because of detected collisions.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutCollisionFrames	Number of frames that the interface stopped transmitting because Ethernet collisions were detected during transmission.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutLateCollisionFrames	Number of frames that the interface deferred to transmit after transmitting their first 512 bits because of detected collisions.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutLostCarriers	Number of carrier losses during transmission.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutNoCarriers	Number of times that the port failed to detect the carrier when attempting to send frames.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutSpeedPeakBytes	Peak rate of outbound traffic in Bps, and the time when the peak outbound traffic rate occurred.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
OutSpeedPeakTime	Speed peak time of outbound bytes on an interface.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .

## Ifmgr/IfHistoryTrafficStatistics

This table contains history traffic statistics of the interface.

### XML structure

```

<Ifmgr>
  <IfHistoryTrafficStatistics>
    <TrafficStatistics>
      <IfIndex></IfIndex>
      <Interval></Interval>

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StartIfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmon NETCONF XML API Configuration Reference.
ReqCount	Requiring counts of interface	N/A	Unsigned integer.	This column contains count of interface every bulk we want to get. The default is 10. And the maximum is 46. If we specify the operation type is "get-bulk", it won't return anything when the reqcount is less than 10.
BufData	Data of rate statistics.	N/A	Binary	This column has three sections. The first is ifindex that the last one of previous bulk. The second is count of interface that every bulk we get really. The last is information of rate statistics, which containing the interface's

Column name	Column description	Column type	Data type and restrictions	Remarks
				<p>index, name, the package rate and the byte rate.</p> <p>StartIfIndex (UINT32) //Ifindex of the first interface in this bulk</p> <p>ActualCount (UINT32) //Counts that this bulk actually got</p> <p>BatchRate (N * 88) //Information of rate statistics, including N data blocks(BASE64 Coding)(N = ActualCount), and every data block includes</p> <p>//IfIndex (UINT32)</p> <p>//szIfName (48 UCHAR)</p> <p>//InSpeedPkt (UINT64)</p> <p>//InSpeedByte (UINT64)</p> <p>//OutSpeedPkt (UINT64)</p> <p>//OutSpeedByte (UINT64)</p>

# Ifmgr

## Ifmgr/Interfaces

Message	Explanation
The administrative state of management interface cannot be modified. 不能修改管理接口的接口管理状态。	暂未引用
Please set the link type of the port to access first. 请先把接口链路类型改成Access。	During merging operation for LinkType of interfaces table, set the link type of the port to access first. 在对接口信息表的 LinkType 字段进行 Merge 操作时, 需要先把接口链路类型改成 Access。
The VLAN doesn't support the operation. 该VLAN不支持当前操作。	During executing set operation for LinkType of interfaces table, the VLAN doesn't support the operation. 在对接口信息表的 LinkType 字段进行下发数据时, 该 VLAN 不支持当前操作。
Cannot change the link type of %s because this operation conflicts with the %s configuration. 不能更改%s的链路类型因为当前操作和%s配置冲突。	During executing set operation for LinkType of interfaces table, this operation cannot change the link type for the port because this operation conflicts with the port's configuration. 在对接口信息表的 LinkType 字段进行下发数据时, 不能更改该端口的链路类型因为当前操作和该端口配置冲突。
The VLAN does not exist. 该VLAN不存在。	During executing set operation for PVID of interfaces table, the VLAN doesn't exist. 在对接口信息表的 PVID 字段进行下发数据时, 该 VLAN 不存在。
This is not a hybrid port. 不是一个Hybrid端口。	During executing set operation for PVID of interfaces table, the link type of the port is not hybrid. 在对接口信息表的 PVID 字段进行下发数据时, 该端口类型不是一个 Hybrid 端口。
This is not a trunk port. 不是一个Trunk端口。	During executing set operation for PVID of interfaces table, the link type of the port is not trunk. 在对接口信息表的 PVID 字段进行下发数据时, 该端口类型不是一个 trunk 端口。
The specified duplex mode is not supported. 该接口不支持所指定的双工状态。	During executing set operation for cfgduplex of interfaces table, the specified duplex mode is not supported. 在对接口信息表的 cfgduplex 字段进行下发数据时, 该接

	口不支持所指定的双工状态。
<p>Duplex mode cannot be configured when loopback external or loopback internal command is configured.</p> <p>该接口正处于环回测试状态，不能修改双工模式。</p>	<p>During executing set operation for cfgduplex of interfaces table, the duplex mode cannot be configured when the loopback external or loopback internal command is configured.</p> <p>在对接口信息表的 <code>cfgduplex</code> 字段进行下发数据时，该接口正处于环回测试状态，不能修改双工模式。</p>
<p>You do not have the privilege to access %s.</p> <p>没有操作接口的权限。</p>	暂未引用
<p>The interface doesn't support the operation.</p> <p>该接口不支持此操作。</p>	<p>During executing set operation for cfgduplex of interfaces table, the interface doesn't support the operation.</p> <p>在对接口信息表某个字段进行下发数据时，该接口不支持此操作。</p>
<p>Configuration cannot be configured when loopback external or loopback internal command is configured.</p> <p>该接口正处于环回测试状态，不能修改配置。</p>	<p>During executing set operation for interfaces table, the configuration cannot be modified when the loopback external or loopback internal command is configured.</p> <p>在对接口信息表进行下发数据时，该接口因为正处于环回测试状态，导致不能修改配置。</p>
<p>Invalid speed value for port auto-negotiation.</p> <p>该接口不支持所指定的自协商速率。</p>	<p>During executing set operation for ConfigSpeed of interfaces table, the speed value for port auto-negotiation is invalid.</p> <p>在对接口信息表的 <code>ConfigSpeed</code> 字段进行下发数据时，该接口不支持所指定的自协商速率。</p>
<p>The MTU range is %u to %u.</p> <p>MTU取值范围为%u到%u。</p>	<p>During executing set operation for ConfigMTU of interfaces table, the MTU should be in the valid range.</p> <p>在对接口信息表的 <code>ConfigMTU</code> 字段进行下发数据时，MTU 应该被设置有效的取值范围。</p>
<p>The %s interface number range is %u to %u.</p> <p>%s接口的接口编号范围是%u到%u。</p>	<p>During executing set operation for IfIndex of interfaces table, the interface number should be in the valid range.</p> <p>在对接口信息表的 <code>IfIndex</code> 字段进行下发数据时，接口的接口编号应该被设置有效的取值范围。</p>
<p>Column SubNum cannot be included when you remove the interface.</p> <p>删除接口的时候不能带SubNum列。</p>	<p>During executing remove operation, the SubNum column cannot be included.</p> <p>在对执行删除接口时不能带 SubNum 列。</p>
<p>Allocated VLANs can not be set as port PVID.</p> <p>已经被分配的VLAN不能设置成端口PVID。</p>	<p>During executing set operation for PVID of interfaces, allocated VLANs can not be set as a PVID.</p> <p>在对接口信息表的 <code>PVID</code> 字段进行下发数据时，已经被分配的 VLAN 不能设置成端口 PVID。</p>
<p>The operation is not permitted because this port</p>	<p>During executing set operation for LinkType of</p>

<p>is shared with other contexts.</p> <p>操作不被允许，因为该端口已经被其它Context共享。</p>	<p>interfaces table, it is not permitted because this port is shared with other contexts.</p> <p>在对接口信息表的 LinkType 字段进行下发数据时，操作不被允许，因为该端口已经被其它 Context 共享。</p>
<p>Can't shut down the last active physical interface on a PEX for PEX links. Please shut down the PEX physical interface on the parent device that provides PEX connectivity for the PEX.</p> <p>不允许shutdown PEX设备上连接两个设备之间的最后一条active链路上的PEX口，如果需要改变链路topo，请shutdown父设备上的接口。</p>	<p>During executing set operation for ShutDown of interfaces table, it can't shut down the last active physical interface on a PEX for PEX links. Please shut down the PEX physical interface on the parent device that provides PEX connectivity for the PEX.</p> <p>在对接口信息表进行下发 shutdown 数据时，不允许 shutdown PEX 设备上连接两个设备之间的最后一条 active 链路上的 PEX 口，如果需要改变链路 topo，请 shutdown 父设备上的接口。</p>
<p>Operation not supported on the last active physical port bound to IRF port which connected to the master! Please shutdown the other end of the link.</p> <p>与连接到主设备的IRF端口绑定的最后一个有效物理端口不支持此操作！请shutdown对端接口。</p>	<p>During executing set operation for ShutDown of interfaces table, the operation is not supported on the last active physical port bound to the IRF port which connects to the master! Please shut down the other end of the link.</p> <p>在对接口信息表进行下发 shutdown 数据时，与连接到主设备的 IRF 端口绑定的最后一个有效物理端口不支持此操作！请 shutdown 对端接口。</p>
<p>Can not be configured with loopback external/internal command together.</p> <p>不能和loopback external/internal命令一起配置。</p>	<p>During executing set operation for ShutDown of interfaces table, it can not be configured with the loopback external/internal command together.</p> <p>在对接口信息表进行下发 shutdown 数据时,不能和 loopback external/internal 命令一起配置。</p>
<p>Can not be configured with port up-mode command together.</p> <p>不能和port up-mode命令一起配置。</p>	<p>During executing set operation for ShutDown of interfaces table, it can not be configured with the port up-mode command together.</p> <p>在对接口信息表进行下发 shutdown 数据时，不能和 port up-mode 命令一起配置。</p>
<p>Bind all interfaces in the same group to IRF ports or cancel the bindings on all of them.</p> <p>绑定或取消绑定同一个组的接口到IRF端口。</p>	<p>During executing set operation for ShutDown of interfaces table, all interfaces in the same group should be bound to IRF ports or the bindings on all of them should be cancelled.</p> <p>在对接口信息表进行下发 shutdown 数据时,同一个组的接口应该被绑定或取消绑定到 IRF 端口。</p>
<p>Bind all interfaces in the same group to PEX ports or cancel the bindings on all of them.</p> <p>绑定或取消绑定同一个组的接口到PEX端口。</p>	<p>During executing set operation for ShutDown of interfaces table, all interfaces in the same group should be bound to PEX ports or the bindings on all of them should be cancelled.</p> <p>在对接口信息表进行下发 shutdown 数据时,同一个组的接口应该被绑定或取消绑定到 PEX 端口。</p>

Bind all interfaces in the same group to IRF/PEX ports or cancel the bindings on all of them. 绑定或取消绑定同一个组的接口到IRF/PEX端口。	During executing set operation for ShutDown of interfaces table, all interfaces in the same group should be bound to IRF/PEX ports or the bindings on all of them should be cancelled. 在对接口信息表进行下发 shutdown 数据时,同一个组的接口应该被绑定或取消绑定到 IRF/PEX 端口。
The shutdown, port up-mode and loopback commands are exclusive with each other. Shutdown、loopback和up-mode命令相互互斥。	During executing merge operation for interfaces table, the shutdown, port up-mode and loopback commands are exclusive with each other. 在对接口信息表进行 Merge 操作时 Shutdown loopback 和 up-mode 命令不允许同时被设置。
LOOPBACK can not be specified when port is administratively down. 接口状态显示为Administratively DOWN时, 则不能进行内部和外部环回测试。	when the port is administratively down, LOOPBACK can not be specified. 当接口状态显示为 Administratively DOWN 时, 则不能进行内部和外部环回测试。
Port up-mode can not be specified when port is administratively down. 接口状态显示为Administratively DOWN时, 则不能配置port up-mode。	when the port is administratively down, port up-mode can not be specified. 当接口状态显示为 Administratively DOWN 时, 则不能配置 port up-mode。
The specified group doesn't exist. 指定的端口隔离组不存在。	During executing get operation for interfaces table, the specified group doesn't exist. 当对接口信息表进行获取数据时, 指定的端口隔离组不存在。
The arguments are incompletely configured. 配置的参数不完整。	During executing set operation for interfaces table, the arguments are incompletely configured. 当对接口进行设置参数时, 配置的参数不完整。
The interface has been allocated and can't change the link mode. 接口已经被分配, 不支持切换工作模式。	Due to the interface has been allocated, it can't change the link mode. 因为接口已经被分配, 不支持切换工作模式。
The value is out of the effective range. 参数值不在有效范围内。	During executing get operation for interfaces table, the value is out of the effective range. 当对接口信息表进行设置时, 参数的值不再有效范围内。
The value must be a multiple of 5. 配置值须是5的倍数。	During executing set operation for interfaces table, the value must be a multiple of 5. 当对接口信息表进行设置时, 参数的值须是 5 的倍数。
Invalid interface name. 接口名称格式错误。	During executing check operation for interfaces name, the interface name is invalid. 当在检查接口名称格式时出现了错误。
Insufficient system resources. 系统资源不足。	During adding or parsing operation, system resources are insufficient.

	当在进行添加或者解析操作时，出现系统资源不足。
%s is not a valid interface name. 包含无效的接口名称%s。	During executing set operation for interfaces name, the interface name is invalid. 当在设置接口名字时包含无效的格式。
The operation failed because the port is a member port of a Layer 2 aggregation group. 操作失败，该接口已经是二层聚合组成员端口。	During executing merge operation for Ethinterfaces table, the operation failed because the port is a member port of a Layer 2 aggregation group. 在对接口信息表进行 merge 操作时，操作失败，该接口已经是二层聚合组成员端口。
The operation failed because the port is joining or leaving a Layer 2 aggregation group. 操作失败，接口正在加入或退出聚合组。	During executing merge operation for Ethinterfaces table, the operation failed because the port is joining or leaving a Layer 2 aggregation group. 在对接口信息表进行 merge 操作时，操作失败，接口正在加入或退出聚合组。

## Ifmgr/NewSubInterfaces

Message	Explanation
The %s subinterface number range is %u to %u. %s接口可创建的子接口编号范围是%u到%u。	During executing get operation for SubNum of new subinterfaces table, the subinterface number should be in the valid range. 在对子接口信息表的 SubNum 进行获取操作时，接口可创建的子接口编号的有效范围。
Can not configure this parameter in async flow mode. 当接口工作在异步方式、流模式时不能配置本参数。	When the interface in async flow mode, can not configure this parameter. 当接口工作在异步方式、流模式时不能配置本参数。
Can not delete this interface. 该接口不能被删除。	During executing undo operation for new subinterfaces ,it can not be deleted. 在对子接口进行 undo 操作时，该接口不能被删除。
Failed to delete %s, for %s has member ports. 删除%s失败，因为%s有成员接口。	During executing undo operation for new subinterfaces, it will fail to be deleted because it has member ports. 在对子接口进行 undo 操作时，因为其有成员接口导致删除失败。
The virtual-template is being used and can't be deleted. 接口 virtual-template 正在使用，不能被删除。	During executing undo operation for new subinterfaces, the virtual-template can't be deleted because it is being used. 在对子接口进行 undo 操作时，因为接口 virtual-template 正在使用，不能被删除。
The interface in use cannot be deleted.	During executing undo operation for new

接口正在使用，不能被删除。	subinterfaces, the interface in use cannot be deleted. 在对子接口进行 undo 操作时，因为接口正在使用，不能被删除。
The interface cannot be created because the system is busy. 接口创建失败，因为系统忙。	During executing Create operation for new subinterfaces, it will fail to be created because the system is busy. 在对子接口进行创建操作时，因为系统忙，接口创建失败。
The start interface and the end interface must be of the same type. 'to'关键字前后的两个接口的类型必须一致。	During executing set operation for sub channel interface name, the start interface and the end interface must be of the same type. 在检查子通道接口名时，'to'关键字前后的两个接口的类型必须一致。
The start interface and the end interface must reside on the same card. 'to'关键字前后的两个接口的必须位于同一单板上。	During executing set operation for sub channel interface name, the start interface and the end interface must reside on the same card. 在检查子通道接口名时，'to'关键字前后的两个接口的必须位于同一单板上。
The interfaces beside 'to' must be two subinterfaces or two sub tunnel. 'to'关键字前后的两个接口必须同时为子接口或者为子通道接口。	During executing set operation for sub channel interface name, the interfaces beside 'to' must be two subinterfaces or two sub tunnels. 在检查子通道接口名时，'to'关键字前后的两个接口必须同时为子接口或者为子通道接口。
The start sub interface and the end sub interface must be on the same interface. 前后子接口必须在同一个接口上。	During executing set operation for sub interface, the start sub interface and the end sub interface must be on the same interface. 在对子接口进行设置操作时，前后两个子接口必须在同一个接口上。
The end interface number must be greater than the start interface number. 后面的接口编号必须大于前面的接口编号。	During executing set operation for sub interface, the end interface number must be greater than the start interface number. 在对子接口进行设置操作时，后面的接口编号必须大于前面的接口编号。
Can't create the sub interface because the main interface is in an aggregation group. 不能创建子接口因为主接口在一个聚合口成员。	During executing create operation for sub interface, it can't create the sub interface because the main interface is in an aggregation group. 在执行创建子接口操作时，不能创建子接口因为主接口在一个聚合口成员。
The interface already exists. 接口已存在。	During executing create operation for sub interface, the interface already exists. 在执行创建子接口操作时，接口已存在。
The interface is not a sub interface.	During executing create operation for sub interface,

该接口不是子接口。	the interface is not a sub interface. 在执行创建子接口操作时，该接口不是子接口。
The resource has been used. 资源已经在使用中。	暂未引用
The system does not support Reserve Vlan Interface. 系统不支持Reserve Vlan Interface。	暂未引用
Can not create this interface. 无法创建该接口。	During executing create operation for sub interface, this interface can not be created. 在执行创建子接口操作时，该接口无法被创建。

## Ifmgr/EthInterfaces

Message	Explanation
The link aggregation group doesn't exist. 指定的聚合组不存在。	During executing merge operation for Ethinterfaces table, The link aggregation group doesn't exist. 在对接口信息表进行 merge 操作时，指定的聚合组不存在。
%s has been assigned to another aggregation group. %s 已经加入其他聚合组。	During executing merge operation for Ethinterfaces table, the interfaces has been assigned to another aggregation group. 在对接口信息表进行 merge 操作时,该接口已经加入其他聚合组。
Can't assign %s to a link aggregation group because the interface has subinterfaces. %s 加入聚合组失败，因为该端口包含子接口。	During executing merge operation for Ethinterfaces table,can't assign it to a link aggregation group because the interface has subinterfaces. 在对接口信息表进行 merge 操作时，因为该端口包含子接口导致加入聚合组失败。
Can't assign the L2VPN-enabled interface %s to a link aggregation group. %s 加入聚合组失败，因为该端口使能了 L2VPN 业务。	During executing merge operation for Ethinterfaces table, can't assign the L2VPN-enabled interface to a link aggregation group. 在对接口信息表进行 merge 操作时，因为该端口使能了 L2VPN 业务导致加入聚合组失败。
Can't assign %s to a link aggregation group because the interface is enabled with port security, MAC authentication, or 802.1X authentication. %s 加入聚合组失败，因为该端口使能了端口安全、MAC 认证或者 802.1X 认证。	During executing merge operation for Ethinterfaces table, can't assign it to a link aggregation group because the interface is enabled with port security, MAC authentication, or 802.1X authentication. 在对接口信息表进行 merge 操作时，因为该端口使能了端口安全、MAC 认证或者 802.1X 认证导致加入聚合组失败。
Failed to create the link aggregation group.	During executing merge operation for Ethinterfaces

聚合组创建失败。	table, failed to create the link aggregation group. 在对接口信息表进行 merge 操作时, 聚合组创建失败。
Can't assign the sub interface %s to a link aggregation group. %s 加入聚合组失败, 因为该端口是子接口。	During executing merge operation for Ethinterfaces table, can't assign the sub interface to a link aggregation group. 在对接口信息表进行 merge 操作时, 因为该端口是子接口导致加入聚合组失败。
Failed to set the hash key mode, because the mode is not supported. 设置负载分担模式失败, 因为设备不支持指定的模式。	During executing merge operation for Ethinterfaces table, failed to set the hash key mode, because the mode is not supported. 在对接口信息表进行 merge 操作时, 因为设备不支持指定的模式导致设置负载分担模式失败。
The load-sharing mode of flexible can not be configured with others. 负载分担 flexible 模式不能和其他模式同时配置。	During executing merge operation for Ethinterfaces table, the load-sharing mode of flexible can not be configured with others. 在对接口信息表进行 merge 操作时, 负载分担 flexible 模式不能和其他模式同时配置。
The load-sharing mode of per-packet can not be configured with others. 负载分担 per-packet 模式不能和其他模式同时配置。	During executing merge operation for Ethinterfaces table, the load-sharing mode of per-packet can not be configured with others. 在对接口信息表进行 merge 操作时, 负载分担 per-packet 模式不能和其他模式同时配置。
Can't assign %s to a link aggregation group because the interface is shared by multiple contexts. %s 加入聚合组失败, 因为该端口已被多个 context 共享。	During executing merge operation for Ethinterfaces table, can't assign it to a link aggregation group because the interface is shared by multiple contexts. 在对接口信息表进行 merge 操作时, 端口加入聚合组失败, 因为该端口已被多个 context 共享。
Can't assign the port to the aggregation group because its attribute configurations are different than the aggregate interface. 接口上存在的属性类配置和聚合接口不同, 该接口不能加入聚合组。	During executing merge operation for Ethinterfaces table, can't assign the port to the aggregation group because its attribute configurations are different than the aggregate interface. 在对接口信息表进行 merge 操作时, 接口上存在的属性类配置和聚合接口不同, 该接口不能加入聚合组。
Please set the manual recovery mode for PFC deadlock detection first. 请先配置 PFC 死锁检测功能的恢复方式为手工恢复。	During executing merge operation for Ifrecover table, please set the manual recovery mode for PFC deadlock detection first. 在对接口信息表进行 merge 操作时, 请先配置 PFC 死锁检测功能的恢复方式为手工恢复。
Please specify the indexes and associated contents for the element 'LAGGMembers'. 对于 merge、create 操作, 不能对表 LAGGMembers 只下发索引列, 应同时指定索引列和非索引列。	During executing merge operation for Ethinterfaces table, please specify the indexes and associated contents for the element 'LAGGMembe'. 在对接口信息表进行 merge 操作时, 对于 merge、create 操作, 不能对表 LAGGMembers 只下发索引列, 应同时指定索引列和非索引列。

# Interface event

This event is used to report interface active/deactive or up/down information.

## XML structure for event subscription

```
<InterfaceEvent>
  <Interface>
    <Name></Name>
  </Interface>
</InterfaceEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Ifmgr</stream>
    <filter type="subtree">
      <InterfaceEvent xmlns="http://www.h3c.com/netconf/event:1.0/Ifmgr:1.0">
        <Interface>
          <Name>Serial2/0/1</Name>
        </Interface>
      </InterfaceEvent>
    </filter>
  </create-subscription>
</rpc>
```

### Table description

Item	Description
Event stream name	Ifmgr
Event name	InterfaceEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/Ifmgr:1.0
Support for extended query	No

### Columns

Column name	Column description	Data type and restrictions	Support for extended queries
Name	Interface name	String. Size: 1 to 47	No

## XML structure for event report

```
<InterfaceEvent>
  <Interface>
```

```

    <Name></Name>
    <Status></Status>
    <IfIndex></IfIndex>
    <Adminstatus></Adminstatus>
    <Operstatus></Operstatus>
    <Description></Description>
  </Interface>
</InterfaceEvent>

```

#### Example:

```

<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <InterfaceEvent xmlns="http://www.h3c.com/netconf/event:1.0/Ifmgr:1.0">
    <Interface>
      <Name>Serial2/0/1</Name>
      <Status>IF_ACTIVE</Status>
      <IfIndex></IfIndex>
      <Description>The Interface GigabitEthernet2/0/1 occurred IF_ACTIVE event,the
administration status is Admin Up, operation status is OPER_UP.</Description>
      <Adminstatus >ADMIN_UP</Adminstatus>
      <Operstatus>OPER_UP</Operstatus>
    </Interface>
  </InterfaceEvent>
</notification>

```

## Columns

Column name	Column description	Data type and restrictions	Support for extended queries
Name	Interface name	String. Size: 1 to 47	No
Status	Interface status	Enumeration: IF_ACTIVE IF_DEACTIVE IF_PHY_UP IF_PHY_DOWN IF_LINK_UP IF_LINK_DOWN	No
Description	Ifmgr event description	String. Size: 1 to 255	No
IfIndex	Interface index	Unsigned integer.	No
AdminStatus	Administration status of an interface	Unsigned integer. • ADMIN_UP. • ADMIN_DOWN.	No
OperStatus	Operation status of an interface	Unsigned short. • OPER_UP.	No

Column name	Column description	Data type and restrictions	Support for extended queries
		<ul style="list-style-type: none"> <li>• OPER_DOWN.</li> <li>• OPER_TESTING.</li> <li>• OPER_UNKNOW.</li> <li>• OPER_DORMANT.</li> <li>• OPER_NOTPERSENT.</li> <li>• OPER_LOWERLAYERDOWN.</li> </ul>	

## Bandwidth event

This event is used to report bandwidth change information.

## XML structure for event subscription

```
<InterfaceBandWidthEvent>
  <InterfaceBandWidth>
    <Name></Name>
  </InterfaceBandWidth>
</InterfaceBandWidthEvent>
```

**Example:**

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Ifmgr</stream>
    <filter type="subtree">
      <InterfaceBandWidthEvent xmlns="http://www.h3c.com/netconf/event:1.0/Ifmgr:1.0">
        <InterfaceBandWidth>
          <Name>Serial2/0/1</Name>
        </InterfaceBandWidth>
      </InterfaceBandWidthEvent>
    </filter>
  </create-subscription>
</rpc>
```

### Table description

Item	Description
Event stream name	Ifmgr
Event name	BandwidthEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/Ifmgr:1.0
Support for extended query	No

## Columns

Column name	Column description	Data type and restrictions	Support for extended queries
Name	Interface name	String. Size: 1 to 47	No

## XML structure for event report

```

<InterfaceBandWidthEvent>
  <InterfaceBandWidth>
    <IfIndex></IfIndex>
    <Name></Name>
    <CFGBandWidth></CFGBandWidth>
    <Description></Description>
  </InterfaceBandWidth>
</InterfaceBandWidthEvent>

```

### Example 1:

```

<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <InterfaceBandWidthEvent xmlns="http://www.h3c.com/netconf/event:1.0/Ifmgr:1.0">
    <InterfaceBandWidth>
      <IfIndex>274</IfIndex>
      <Name>GigabitEthernet2/0/1</Name>
      <CFGBandWidth>100000</CFGBandWidth>
      <Description> The interface GigabitEthernet2/2/7/2 's configured bandwidth is
        100000.</Description>
    </InterfaceBandWidth>
  </InterfaceBandWidthEvent>
</notification>

```

## Columns

Column name	Column description	Data type and restrictions	Support for extended queries
IfIndex	Interface index	Unsigned integer.	No
Name	Interface name	String. Size: 1 to 47	No
BandWidth	Effective bandwidth value	Unsigned integer.	No
CFGBandWidth	Configured bandwidth value	Unsigned integer.	No
Description	Ifmgr event description	String. Size: 1 to 255	No

# Speed event

This event is used to report baud-rate or speed-rate change information.

## XML structure for event subscription

```
<InterfaceSpeedEvent>
  <InterfaceSpeed>
    <Name></Name>
  </InterfaceSpeed>
</InterfaceSpeedEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Ifmgr</stream>
    <filter type="subtree">
      <InterfaceSpeedEvent xmlns="http://www.h3c.com/netconf/event:1.0/Ifmgr:1.0">
        <InterfaceSpeed>
          <Name>Serial2/0/1</Name>
        </InterfaceSpeed>
      </InterfaceSpeedEvent>
    </filter>
  </create-subscription>
</rpc>
```

### Table description

Type	Inspection type for the CRC error packets	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—absolute</li> <li>2—ratio</li> </ul>	N/A
HighThres	Upper threshold for the CRC error packets.	N/A	Unsigned integer. Value range: <ul style="list-style-type: none"> <li>absolute: 1–4294967295</li> <li>ratio: 1 to 100</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LowThres	Low threshold for the CRC error packets.	N/A	Unsigned integer. Value range: <ul style="list-style-type: none"> <li>absolute: 1–4294967295</li> <li>ratio: 1 to 100</li> </ul>	N/A
Interval	Inspection interval for the CRC error packets	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
EnableShutdown	When the number of CRC error packets exceeds the upper threshold, the physical interface goes down.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
RxPauseFrame	Threshold for the number of received pause frames.	N/A	Include: <ul style="list-style-type: none"> <li>HighThres</li> <li>LowThres</li> <li>Interval</li> </ul>	N/A
HighThres	Upper threshold for the number of received pause frames.	N/A	Unsigned integer.	N/A
LowThres	Lower threshold for the number of received pause frames.	N/A	Unsigned integer.	N/A
Interval	Inspection interval for the number of received pause frames.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
TxPauseFrame	Threshold for the number of transmitted pause frames.	N/A	Include: <ul style="list-style-type: none"> <li>HighThres</li> <li>LowThres</li> <li>Interval</li> </ul>	N/A
HighThres	Upper threshold for the number of transmitted pause frames.	N/A	Unsigned integer.	N/A
LowThres	Lower threshold for the number of transmitted pause frames.	N/A	Unsigned integer.	N/A
Interval	Inspection interval for the number of transmitted pause frames.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A

# Appendix

A string can contain multiple items that are separated by commas (.). An item can be in one of the following formats:

- *interface name*
- *interface range-name*
- *interface name A to interface name B*

When you use an item in the *interface name* format, follow these restrictions and guidelines:

- Spaces are not allowed between the interface type and interface number.  
Example:  
Correct: GigabitEthernet1/3/0/1  
Incorrect: GigabitEthernet 1/3/0/1
- If the interface name is the same as an existing interface range name, the system sends the request to interfaces in the interface range rather than the interface.  
Example:  
If you have configured the **interface range name** *Ten-Giga1/2/0/1* **interface** *GigabitEthernet1/3/0/1 to GigabitEthernet1/3/0/20* command and then use **Ten-Giga1/2/0/1** as an item, the system sends the request to interfaces in the interface range named **Ten-Giga1/2/0/1**.

When you use an item in the *interface range name* format, follow these restrictions and guidelines:

- If the interface range name is in the *interface name A,interface name B* format, the system sends the request to interface A and interface B rather than interfaces in the interface range.  
Example:  
After you configure the **interface range name** *Ten-Giga1/2/0/1,Ten-Giga1/2/0/2* **interface** *GigabitEthernet1/3/0/1 to GigabitEthernet1/3/0/20* command and then use **Ten-Giga1/2/0/1,Ten-Giga1/2/0/2** as an item, the system sends the request to interfaces Ten-GigabitEthernet 1/2/0/1 and Ten-GigabitEthernet 1/2/0/2 rather than interfaces GigabitEthernet 1/3/0/1 through GigabitEthernet 1/3/0/20.
- If the interface range name is in the *interface name A to interface name B* format, the system sends the request to interfaces interface A through interface B rather than interfaces in the interface range.  
Example:  
After you configure the **interface range name** *Ten-Giga1/2/0/1 to Ten-Giga1/2/0/2* **interface** *GigabitEthernet1/3/0/1 to GigabitEthernet1/3/0/20* command and then use **Ten-Giga1/2/0/1 to Ten-Giga1/2/0/2** as an item, the system sends the request to interfaces Ten-GigabitEthernet 1/2/0/1 through Ten-GigabitEthernet 1/2/0/2 rather than interfaces GigabitEthernet 1/3/0/1 through GigabitEthernet 1/3/0/20.

When you use an item in the *interface name A to interface name B* format, follow these restrictions and guidelines:

- The interfaces before and after the word **to** must be of the same type and reside on the same card and sub-card.
- If the interfaces are subinterfaces, they must also belong to the same main interface.
- The end interface number must be larger than the start interface number.

Example:

Incorrect:

Ten2/0/1 to Ten3/0/2    The start and end interfaces reside on different cards.

Ten2/0/1 to Ten2/1/2 The start and end interfaces reside on different sub-cards.

Ten2/0/1 to Ten2/0/1:3 The start and end interfaces are of different types.

Giga2/0/1 to Ten2/0/25 The start and end interfaces are of different types.

Ten2/0/3:1 to Ten2/0/4:2 The start and end subinterfaces belong to different main interfaces.

Ten2/0/3:4 to Ten2/0/3:1 The start interface number is larger than the end interface number.

Correct:

Ten2/0/1 to Ten2/0/5

Ten2/0/1:1 to Ten2/0/1:100

```

## Table description

Item	Description
Feature name	Ifmon
Table name	IfMonPmStatisticsInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmon NETCONF XML API Configuration Reference.
TaskName	Statistical task name of an interface	Index	String. Length: 1 to 31 characters.	N/A
DataIndex	Statistical data index	Index	Unsigned integer. Value range: 0 to 16.	0 means the real-time data in the current unexpired statistics interval. 1 means the data in the latest complete statistics interval, and so on. 16 means the data in the earliest complete statistics interval.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
Timestamp	Statistical timestamp	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
InSpeedBit	Rate of inbound bits on an interface	N/A	Include: <ul style="list-style-type: none"> <li>ValidFlag</li> <li>PeakValue</li> <li>PeakTimestamp</li> <li>ValleyValue</li> <li>ValleyTimestamp</li> <li>AverageValue</li> </ul>	N/A
ValidFlag	Valid identification of the statistical task of InSpeedBit	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—No statistics.</li> <li>1—Valid.</li> </ul>	N/A
PeakValue	Peak value of each sample interval in the	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	statistical interval of InSpeedBit			
PeakTimestamp	Peak time of each sample interval in the statistical interval of InSpeedBit	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
ValleyValue	Valley value of each sample interval in the statistical interval of InSpeedBit	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
ValleyTimestamp	Valley time of each sample interval in the statistical interval of InSpeedBit	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
AverageValue	Average value of each sample interval in the statistical interval of InSpeedBit	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
OutSpeedBit	Rate of outbound bits on an interface	N/A	Include: <ul style="list-style-type: none"> <li>ValidFlag</li> <li>PeakValue</li> <li>PeakTimestamp</li> <li>ValleyValue</li> <li>ValleyTimestamp</li> <li>AverageValue</li> </ul>	N/A
ValidFlag	Valid identification of the statistical task of OutSpeedBit	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—No statistics.</li> <li>1—Valid.</li> </ul>	N/A
PeakValue	Peak value of each sample interval in the statistical interval of OutSpeedBit	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
PeakTimestamp	Peak time of each sample interval in the statistical interval of OutSpeedBit	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
ValleyValue	Valley value of each sample interval in the statistical interval of OutSpeedBit	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
ValleyTimestamp	Valley time of each sample interval in the statistical interval	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	of OutSpeedBit			
AverageValue	Average value of each sample interval in the statistical interval of OutSpeedBit	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A

# IfmonStatisticsEvent event

This event is used to report interface statistics information.

## XML structure for event subscription

```
<IfmonStatisticsEvent>
  <Interface>
    <IfIndex></IfIndex>
    <TaskName></TaskName>
  </Interface>
</IfmonStatisticsEvent>
```

### Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Ifmon</stream>
    <filter type="subtree">
      <IfmonStatisticsEvent xmlns="http://www.h3c.com/netconf/event:1.0/Ifmon:1.0">
        <Interface>
          <IfIndex>271</IfIndex>
          <TaskName>task1</TaskName>
        </Interface>
      </IfmonStatisticsEvent>
    </filter>
  </create-subscription>
</rpc>
```

### Table description

Item	Description
Event stream name	Ifmon
Event name	IfmonStatisticsEvent

Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID.	Index	Unsigned integer. Value range: 1 to 4094.	N/A
Enabled	Set IGMP snooping state for specified VLAN.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>disable</b>(default)</li> <li><b>enable</b></li> </ul>	N/A
Version	Specify the IGMP snooping version for specified VLAN.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>2</b>(default)</li> <li><b>3</b></li> </ul>	N/A
DropUnknown	Set IGMP snooping dropping unknown for specified VLAN.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>disable</b>(default)</li> <li><b>enable</b></li> </ul>	N/A
Querier	Set IGMP snooping querier for specified	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>disable</b>(default)</li> <li><b>enable</b></li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	VLAN.			
QueryInterval	Specify IGMP snooping general query interval for specified VLAN.	N/A	Unsigned integer. Value range: 2 to 31744.	N/A
GeneralQuerySourceAddr	Specify the source IP address of IGMP general queries for specified VLAN.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
SpecialQuerySourceAddr	Specify the source IP address for IGMP group-specific queries for specified VLAN.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
ReportSourceAddr	Specify the source IP address of IGMP reports for the specified VLAN.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
LeaveSourceAddr	Specify the source IP address for IGMP leave messages for the specified VLAN.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Proxy	Enable IGMP snooping proxy for the specified VLAN.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>disable</b>(default)</li> <li>• <b>enable</b></li> </ul>	N/A
QuerierElection	Enable IGMP snooping querier election for the specified VLAN.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>disable</b>(default)</li> <li>• <b>enable</b></li> </ul>	N/A

## IGMPSnooping/VSI

This table contains the IGMP snooping information for VSIs.

### XML structure

```

<IGMPSnooping>
  <VSIs>

      <VsiName></VsiName>
      <Enabled></Enabled>
      <Version></Version>
      <DropUnknown></DropUnknown>
    </VSI>
  </VSIs>
</IGMPSnooping>

```

```

<Querier></Querier>
<QueryInterval></QueryInterval>
<GeneralQuerySourceAddr></GeneralQuerySourceAddr>
<SpecialQuerySourceAddr></SpecialQuerySourceAddr>
<ReportSourceAddr></ReportSourceAddr>
<LeaveSourceAddr></LeaveSourceAddr>
<Proxy></Proxy>
<QuerierElection></QuerierElection>
</VSI>
</VSIs>
</IGMPSnooping>

```

## Table description

Item	Description
Feature name	IGMPSnooping
Table name	VSIs
Table type	Multi-instance table
Row name	VSI
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name.	Index	String. Length: 1 to 31 characters.	N/A
Enabled	Enable IGMP snooping for the specified VSI.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>disable</b>(default)</li> <li><b>enable</b></li> </ul>	N/A
Version	Specify the IGMP snooping version for the specified VSI.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>2</b>(default)</li> <li><b>3</b></li> </ul>	N/A
DropUnknown	Enable IGMP snooping dropping unknown multicast data for the specified VSI.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>disable</b>(default)</li> <li><b>enable</b></li> </ul>	N/A
Querier	Enable the IGMP snooping querier for the specified VSI.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>disable</b>(default)</li> <li><b>enable</b></li> </ul>	N/A
QueryInterval	Set the IGMP	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	snooping general query interval for the specified VSI.		Value range: 2 to 31744.	
GeneralQuerySourceAddr	Specify the source IP address of IGMP general queries for the specified VSI.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
SpecialQuerySourceAddr	Specify the source IP address for IGMP group-specific queries for the specified VSI.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
ReportSourceAddr	Specify the source IP address of IGMP reports for the specified VSI.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
LeaveSourceAddr	Specify the source IP address for IGMP leave messages for the specified VSI.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
Proxy	Enable IGMP snooping proxy for the specified VSI.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>disable</b>(default)</li> <li>• <b>enable</b></li> </ul>	N/A
QuerierElection	Enable IGMP snooping querier election for the specified VSI.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>disable</b>(default)</li> <li>• <b>enable</b></li> </ul>	N/A

## IGMPSnooping/FastLeavePorts

This table contains the IGMP snooping fast leave information on ports.

### XML structure

```

<IGMPSnooping>
  <FastLeavePorts>
    <Interface>
      <IfIndex></IfIndex>
      <FastLeaveVlanList></FastLeaveVlanList>
    </Interface>
  </FastLeavePorts>
</IGMPSnooping>

```

## Table description

Item	Description
Feature name	IGMPSnooping
Table name	FastLeavePorts
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
FastLeaveVlanList	Set IGMP snooping fast leave for VLANs on a port.	N/A	VLAN list.	Example: 1,2,3,5-8,10-20.

## IGMPSnooping/GroupLimitPorts

This table contains the IGMP snooping group limit information on ports.

## XML structure

```
<IGMPSnooping>
  <GroupLimitPorts>
    <Interface>
      <IfIndex></IfIndex>
      <Limit></Limit>
      <GroupLimitVlanList ></GroupLimitVlanList>
    </Interface>
  </GroupLimitPorts>
</IGMPSnooping>
```

## Table description

Item	Description
Feature name	IGMPSnooping
Table name	GroupLimitPorts
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Limit	Sets the maximum number of multicast groups that a port can join.	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
GroupLimitVlanList	Set IGMP snooping group limit for VLANs on a port.	N/A	VLAN list.	You must specify VLANs when the operation is merge, create or replace. You can't specify VLANs when the operation is delete or remove.  Example: 1,2,3,5-8,10-20.

# IGMPSnooping

## IGMPSnooping/Configuration

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。
IGMP snooping is disabling globally. 全局IGMP snooping正在去使能。	During executing set operation to enable global IGMP snooping, IGMP snooping is disabling globally. 使能全局IGMP snooping时，全局IGMP snooping正在去使能。

## IGMPSnooping/VLANs

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。
IGMP snooping drop-unknown is enabled globally. 全局IGMP snooping已配置drop-unknown。	During executing set operation to enable drop-unknown for this VLAN, IGMP snooping drop-unknown is enabled globally. 使能VLAN内drop-unknown时，全局drop-unknown已经使能。
IGMP snooping is disabled on the VLAN. VLAN未使能IGMP snooping。	During executing set operation for this VLAN, IGMP snooping is disabled on the VLAN. 对该VLAN进行设置时，VLAN未使能IGMP snooping。
IGMP snooping is disabled globally. 全局IGMP snooping未使能。	During executing set operation for this VLAN, IGMP snooping is disabled globally. 对该VLAN进行设置时，全局IGMP snooping未使能。
Invalid source address of general queries. 通用查询报文源IP地址错误。	During executing set operation for GeneralQuerySourceAddr of this VLAN, the value of GeneralQuerySourceAddr is invalid. 对该VLAN内GeneralQuerySourceAddr进行设置时，GeneralQuerySourceAddr值错误。
Invalid source address of group-specific queries. 特定组查询报文源IP地址错误。	During executing set operation for SpecialQuerySourceAddr of this VLAN, the value of SpecialQuerySourceAddr is invalid. 对该VLAN内SpecialQuerySourceAddr进行设置时，SpecialQuerySourceAddr值错误。
Invalid source address of reports. Report报文源IP地址错误。	During executing set operation for ReportSourceAddr of this VLAN, the value of ReportSourceAddr is invalid. 对该VLAN内ReportSourceAddr进行设置时，ReportSourceAddr值错误。
Invalid source address of leave messages. Leave报文源IP地址错误。	During executing set operation for LeaveSourceAddr of this VLAN, the value of LeaveSourceAddr is invalid. 对该VLAN内LeaveSourceAddr进行设置时，LeaveSourceAddr值错误。

# IGMPSnooping/VSI

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation,daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。
IGMP snooping drop-unknown is enabled globally. 全局IGMP snooping已配置drop-unknown。	During executing set operation to enable drop-unknown for this VSI, IGMP snooping drop-unknown is enabled globally. 使能VSI内drop-unknown时，全局drop-unknown已经使能。
IGMP snooping is disabled on the VSI. VSI未使能IGMP snooping。	During executing set operation for thisVSI, IGMP snooping is disabled on theVSI. 对该VSI进行设置时，VSI未使能IGMP snooping。
IGMP snooping is disabled globally. 全局IGMP snooping未使能。	During executing set operation for thisVSI, IGMP snooping is disabled globally. 对该VSI进行设置时，全局IGMP snooping未使能。
Invalid source address of general queries. 通用查询报文源IP地址错误。	During executing set operation for GeneralQuerySourceAddr of this VSI, the value of GeneralQuerySourceAddr is invalid. 对该VSI内GeneralQuerySourceAddr进行设置时，GeneralQuerySourceAddr值错误。
Invalid source address of group-specific queries. 特定组查询报文源IP地址错误。	During executing set operation for SpecialQuerySourceAddr of this VSI, the value of SpecialQuerySourceAddr is invalid. 对该VSI内SpecialQuerySourceAddr进行设置时，SpecialQuerySourceAddr值错误。
Invalid source address of reports. Report报文源IP地址错误。	During executing set operation for ReportSourceAddr of this VSI, the value of ReportSourceAddr is invalid. 对该VSI内ReportSourceAddr进行设置时，ReportSourceAddr值错误。
Invalid source address of leave messages. Leave报文源IP地址错误。	During executing set operation for LeaveSourceAddr of this VSI, the value of LeaveSourceAddr is invalid. 对该VSI内LeaveSourceAddr进行设置时，LeaveSourceAddr值错误。

# IGMPSnooping/FastLeavePorts

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get或者set操作时，守护进程收到了错误的消息类型。
IGMP snooping is disabled globally. 全局IGMP snooping未使能。	During executing set operation, IGMP snooping is disabled globally. 对该表进行配置时，全局 IGMP snooping 未使能。

# IGMPSnooping/GroupLimitPorts

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。
IGMP snooping is disabled globally. 全局IGMP snooping未使能。	During executing set operation, IGMP snooping is disabled globally. 对该表进行配置时，全局 IGMP snooping 未使能。
The configuration doesn't meet the requirements. 当前配置不符合配置要求。	GroupLimitVLANList can't be removed alone, and should be removed together with Limit. GroupLimitVLANList不能单独删除，需要和Limit一起删除。

# IGMPSnooping/IPv4Layer2MulticastGroups

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。

# IGMPSnooping/ VSIIPv4Layer2MulticastGroups

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。

# Comware 7 IKE NETCONF XML API Error Message Reference

## IKEv1/GlobalConfiguration

Message	Explanation
This device not support the configuration. 该设备不支持该项配置。	This device doesn't support the configuration.. 设备不支持该配置项。

## IKEv1/Profiles

Message	Explanation
Domain name must not include /\   "" : * ? < > @, and must not be d, d, def, defa, defau, default, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknow, if-unknown. 域名不允许包含 /\   "" : * ? < > @, 也不允许为 d, de, def, defa, defau, default, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknow, if-unknown。	Specifies the ISP domain used for requesting authorization attributes. The domain name cannot contain a forward slash (/), backslash (\), vertical bar ( ), quotation mark ("), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).The name cannot be d, de, def, defa, defau, default, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknow, or if-unknown. 申请授权属性时使用的ISP域名, 域名不能包括 “/”、“\”、“ ”、“”、“.”、“*”、“?”、“<”、“>”以及“@”字符, 且不能为字符串“d”、“de”、“def”、“defa”、“defau”、“default”、“default”、“i”、“if”、“if-”、“if-u”、“if-un”、“if-unk”、“if-unkn”、“if-unkno”、“if-unknow”和“if-unknown”。
User name must not include \ / : * ? < > @, and must not be a, al, all. 用户名不允许包含 \,  , /, :, *, ?, <, >, @, 也不允许为a, al, all。	Specifies the username used for requesting authorization attributes. The username cannot contain a forward slash (/), backslash (\), vertical bar ( ), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).The username cannot be a, al, or all. 申请授权属性时使用的用户名, 用户名不允许包含 \,  , /, :, *, ?, <, >, @, 用户名也不允许为a, al, all。
The number of keychains in the profile exceeds the limit. 指定profile下的Keychain个数超出上限。	You can specify a maximum of six IKE keychains for an IKE profile. 一个IKE profile中最多可以指定六个IKE keychain。
The number of certificate domains in the profile exceeds the limit. 指定profile下的证书所属PKI域的个数超出上限。	You can specify a maximum of six PKI domains for an IKE profile. 一个IKE profile中最多可以引用六个PKI域。
Invalid username. 无效的用户名。	Specifies the username for client authentication. The username cannot contain a forward slash (/), backslash (\), vertical bar ( ), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).The username cannot be a, al, or all. 配置客户端认证的用户名, 用户名不允许包含 \,  , /, :, *, ?, <, >, @, 用户名也不允许为a, al, all。
Invalid password. 无效的密码。	Specifies the password for client authentication. Its plaintext form is a case-sensitive string of 1 to 63 characters. Its encrypted form

is a case-sensitive string of 1 to 110 characters.

配置客户端认证的密码，明文密码为1~63个字符的字符串；密文密码为1~110个字符的字符串。

## IKEv1/ Ipv4AddressPreSharedKeys

Message	Explanation
A pre-shared key is already configured for this address. 该地址的预共享密钥已存在。	The pre-shared key is already configured for this address and cannot be configured again. 该地址的预共享密钥已存在时，不能再次下发。
A pre-shared key is already configured for this host. 该主机的预共享密钥已存在。	The pre-shared key is already configured for this host and cannot be configured again. 该主机的预共享密钥已存在时，不能再次下发。

## IKEv1/ Ipv6AddressPreSharedKeys

Message	Explanation
A pre-shared key is already configured for this address. 该地址的预共享密钥已存在。	The pre-shared key is already configured for this address and cannot be configured again. 该地址的预共享密钥已存在时，不能再次下发。
A pre-shared key is already configured for this host. 该主机的预共享密钥已存在。	The pre-shared key is already configured for this host and cannot be configured again. 该主机的预共享密钥已存在时，不能再次下发。

## IKEv1/Ipv4AddressGroup

Message	Explanation
Start IP address can't be higher than end IP address. 起始IP地址不能大于结束IP地址。	End-ipv4-address of an IKE IPv4 address group can't be lower than start-ipv4-address. 配置IKE IPv4地址池时，起始IP地址不能大于结束IP地址。
Number of IP addresses in the group exceeded the limit. 该地址池的地址数目超过最大值。	An IKE IPv4 address pool can contain a maximum of 8192 IPv4 addresses. 每个地址池中包括的IPv4地址的最大数目为8192。
The address group overlaps with an existing address group. 该地址池与已存在地址池重叠。	Address groups cannot overlap with each other. 地址池的地址范围不能相互重叠。
Configuration items don't meet the requirements. 不符合配置要求。	The start-ipv4-address and end-ipv4-address must be specified together. 起始地址和结束地址必须同时下发。
Invalid IPv4 mask. 无效的IPv4掩码。	Must specify correct IPv4 address mask or correct length of IPv4 address mask. 必须下发正确的掩码或掩码长度。

## IKEv1/ ResetSAs

This table is used to reset IKE SAs.

### XML structure

```
<IKEv1>
  <ResetSAs>
    <Reset>
      <ID></ID>
    </Reset>
  </ResetSAs>
</IKEv1>
```

### Table description

Item	Description
Feature name	IKEv1
Table name	ResetSAs
Table type	Multi-instance table
Row name	Reset
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Connect-ID of IKE SA	Index	Integer When ID is zero it means reset all the IKE SA	N/A

## IKEv1/ClearGlobalStatistics

This table is used to clear Globalstatistics.

### XML structure

```
<IKEv1>
```

```

    <ClearGlobalStatistics>
      <Clear/>
    </ClearGlobalStatistics>
  </IKEv1>

```

## Table description

Item	Description
Feature name	IKEv1
Table name	ClearGlobalStatistics
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Clear IKE GlobalStatistics	N/A	Must be empty	N/A

## IKEv1/ClearTunnelsStatistics

This table is used to clear Tunnel Statistics.

## XML structure

```

<IKEv1>
  <ClearTunnelsStatistics>
    <Clear>
      <TunnelID></TunnelID>
    </Clear>
  </ClearTunnelsStatistics>
</IKEv1>

```

## Table description

Item	Description
Feature name	IKEv1
Table name	ClearTunnelsStatistics
Table type	Multi-instance table

Row name	Clear
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	IKE tunnel ID	Index	Unsigned integer. Value range: 0 to $2^{32}-1$	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of IKE profile	Index	String: Length:1 to 63 characters Case insensitive	N/A
Priority	The priority of IKE profile	N/A	Unsigned integer: Value range:1 to 65535 Default value is 100.	N/A
Mode	The phase 1 negotiation mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Main</li> <li>2—Aggressive</li> <li>3—GM-main</li> </ul> Default value is 1	N/A
ProposalList	Reference an IKE proposal for the IKE profile	Data structure	Members include: <ul style="list-style-type: none"> <li>ProposalItem</li> </ul>	N/A
ProposalItem	IKE proposal number	N/A	Unsigned integer: Value range:1 to 65535	Contains up to 6 in ProposalItem ProposalList.
KeychainList	Reference an IKE keychain for the IKE profile	Data structure	Members include: <ul style="list-style-type: none"> <li>KeychainItem</li> </ul>	N/A
KeychainItem	IKE keychain name	N/A	String: Length:1 to 63 characters	Case insensitive. Contains up to 6 in KeychainItem

Column name	Column description	Column type	Data type and restrictions	Remarks
				KeychainList.
CertificateDomainList	Reference a PKI domain for the IKE profile	Data structure	Members include: <ul style="list-style-type: none"> <li>DomainItem</li> </ul>	N/A
DomainItem	PKI domain name	N/A	String: Length:1 to 31 characters Case insensitive.	Contains up to 6 KeychainItem in KeychainList.
CertACPList	Reference a PKI certificate access control policy for the IKE profile	Data structure	Members include: <ul style="list-style-type: none"> <li>CertACPIItem</li> </ul>	N/A
CertACPIItem	The Name of PKI certificate access control policy	N/A	String: Length:1 to 31 characters Case insensitive.	Contains unrestricted CertACPIItem in CertACPList.
MatchRemoteFQDNList	Configure a rule of match the peer FQDN information for the IKE profile	Data structure	Members include: <ul style="list-style-type: none"> <li>FQDNItem</li> </ul>	N/A
FQDNItem	The peer FQDN name	N/A	String: Length:1 to 255 characters Case sensitive.	Contains unrestricted FQDNItem in MatchRemoteFQDNList.Incremental support
MatchRemoteUserFQDNList	Configure a rule of match the peer User FQDN information for the IKE profile	Data structure	Members include: <ul style="list-style-type: none"> <li>UserFQDNItem</li> </ul>	N/A
UserFQDNItem	The peer user FQDN name	N/A	String: Length:1 to 255 characters Case sensitive.	Contains unrestricted UserFQDNItem in MatchRemoteUserFQDNList.Incremental support
LocalID	The identity of the local end	Data structure	Members include: <ul style="list-style-type: none"> <li>Type</li> <li>IpAddress</li> <li>Value</li> </ul>	N/A
Type	The type of the identity	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Ipv4Address,</li> <li>2—Ipv6Address</li> <li>3—FQDN</li> <li>4—User-FQDN</li> <li>5—DN</li> </ul>	N/A
IpAddress	The value of address when the identity is	N/A	Ipv4Address or Ipv6 Address	The value is whether IPv4 address or IPv6 address lies on the

Column name	Column description	Column type	Data type and restrictions	Remarks
	IP address			type of the identity.
Value	The value when the identity isn't IP address	N/A	String: Length:0 to 255 characters Case sensitive.	If the type is FQDN, it's FQDN name; if the type is User-FQDN, it's User-FQDN name; if the type is DN, it's none.
MatchLocalAddr	Match the local address	Data structure	Members include: <ul style="list-style-type: none"> <li>• AddressType</li> <li>• IpAddress</li> <li>• VRF</li> <li>• Interface</li> </ul>	N/A
AddressType	The type of IP address	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—Ipv4Address,</li> <li>• 2—Ipv6Address</li> <li>• 3—Interface</li> </ul>	N/A
IpAddress	The value of address	N/A	Ipv4Address or Ipv6 Address	The value is whether IPv4 address or IPv6 address lies on the AddressType
VRF	The VPN instance	N/A	String: Length:1 to 31 characters Case sensitive.	VRF can only coexist with IpAddress.
Interface	The name of interface	N/A	String Case insensitive.	Interface can't coexist with IpAddress.
DPD	Dead Peer Detection(DPD) parameters	Data structure	Members include: <ul style="list-style-type: none"> <li>• Mode</li> <li>• Interval</li> <li>• Retry</li> </ul>	N/A
Mode	The mode of DPD	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—On-demand,</li> <li>• 2—Periodic</li> </ul>	N/A
Interval	Interval time of triggering DPD	N/A	Unsigned integer: Value range:1 to 300, in seconds.	N/A
Retry	The DPD retry interval	N/A	Unsigned integer: Value range:1 to 60, in seconds. Default value is 5.	N/A
InsideVRF	The inside VPN instance	N/A	String: Length:1 to 31 characters Case sensitive.	N/A
ClientXauth	Whether the client authentication is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true</li> <li>• false (default)</li> </ul>	N/A
AAAAuthorization	AAA authentication	N/A	Members include: <ul style="list-style-type: none"> <li>• Domain</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>UserName</li> </ul>	
Domain	ISP domain name	N/A	String: case-insensitive. Length:1 to 255 characters.	Domain name must not include / \   " : * ? < > @, and must not be d, de, def, defa, defau, default, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknown, if-unknown.  Domain must be configured when the instance does not exist.
UserName	Username	N/A	String: case-sensitive. Length:1 to 55 characters.	User name must not include \ / : * ? < > @, and must not be a, al, all.
SASoftDuration	IKEv1 SA life time	N/A	Unsigned integer. Value range: 10 to 36000.	N/A
ClientXauth User	Client authentication user information	N/A	Members include: <ul style="list-style-type: none"> <li>User.</li> <li>Password.</li> <li>PasswordType.</li> </ul>	N/A
User	Username	N/A	String: case-insensitive. Length: 1 to 55 characters.	The username cannot contain a forward slash (/), backslash (\), vertical bar ( ), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).  The username cannot be <b>a</b> , <b>al</b> , or <b>all</b> .
PasswordType	Type of the user password	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Simple.</li> <li>2—Cipher.</li> </ul>	N/A
Password	User password	N/A	Plaintext string: 1 to 63 characters. Ciphertext string: 1 to 110 characters.	N/A
MatchRemoteDomainList	Peer FQDN domain information for IKE profile matching	Data structure	Members include: DomainItem.	N/A
DomainItem	Peer FQDN domain	N/A	String: case sensitive. Length:1 to 255 characters.	.Incremental support

# IKEv1/MatchRemoteIpv4Address

This table is used to operate the rule about how to match remote identity when it's IPv4 address.

## XML structure

```
<IKEv1>
  <MatchRemoteIpv4Address>
    <RemoteID>
      <Profile></Profile>
      <Ipv4Address></Ipv4Address>
      <Ipv4Mask></Ipv4Mask>
      <VRF></VRF>
    </RemoteID>
  </MatchRemoteIpv4Address>
</IKEv1>
```

## Table description

Item	Description
Feature name	IKEv1
Table name	MatchRemoteIpv4Address
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None
Support for row creation and deletion	YES

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of IKE profile	Index	String: Length:1 to 63 characters Case insensitive	N/A
Ipv4Addresses	The value of IPv4 address	Index	Ipv4Address	N/A
Ipv4Mask	The mask of IPv4 address	Index	Ipv4Address mask	N/A
VRF	The vpn instance which the address is belonged to.	Index	String: Length:0 to 31 characters Case sensitive.	It's a public network when VRF is a null string.

# IKEv1/MatchRemoteIpv6Address

This table is used to operate the rule about how to match remote identity when it's IPv6 address.

## XML structure

```
<IKEv1>
  <MatchRemoteIpv6Address>
    <RemoteID>
      <Profile></Profile>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <VRF></VRF>
    </RemoteID>
  </MatchRemoteIpv6Address>
</IKEv1>
```

## Table description

Item	Description
Feature name	IKEv1
Table name	MatchRemoteIpv6Address
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None
Support for row creation and deletion	YES

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of IKE profile	Index	String: Length:1 to 63 characters Case insensitive	N/A
Ipv6Addresses	The value of IPv6 address	Index	Ipv6Address	N/A
Ipv6PrefixLength	The prefix length of IPv6 address	Index	Unsigned integer: Value range:0 to 128, in seconds.	N/A
VRF	The vpn instance which the address is belonged to.	Index	String: Length:0 to 31 characters Case sensitive.	It's a public network when VRF is a null string.

# IKEv1/ MatchRemoteIpv4Range

This table is used to operate the rule about how to match remote identity when it's IPv4 address range.

## XML structure

```
<IKEv1>
  <MatchRemoteIpv4Range>
    <RemoteID>
      <Profile></Profile>
      <BeginIpv4Address></BeginIpv4Address>
      <EndIpv4Address></EndIpv4Address>
      <VRF></VRF>
    </RemoteID>
  </MatchRemoteIpv4Range>
</IKEv1>
```

## Table description

Item	Description
Feature name	IKEv1
Table name	MatchRemoteIpv4Range
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of IKE profile	Index	String: Length:1 to 63 characters Case insensitive	N/A
BeginIpv4Address	Start IPv4 Address	Index	Ipv4Address	N/A
EndIpv4Address	End IPv4 Address	Index	Ipv4Address	N/A
VRF	The vpn instance which the address is belonged to.	Index	String: Length:0 to 31 characters Case sensitive.	It's a public network when VRF is a null string.

# IKEv1/ MatchRemoteIpv6Range

This table is used to operate the rule about how to match remote identity when it's IPv6 range.

## XML structure

```
<IKEv1>
  <MatchRemoteIpv6Range>
    <RemoteID>
      <Profile></Profile>
      <BeginIpv6Address></BeginIpv6Address>
      <EndIpv6Address></EndIpv6Address>
      <VRF></VRF>
    </RemoteID>
  </MatchRemoteIpv6Range>
</IKEv1>
```

## Table description

Item	Description
Feature name	IKEv1
Table name	MatchRemoteIpv6Range
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of IKE profile	Index	String: Length:1 to 63 characters Case insensitive	N/A
BeginIpv6Address	Start IPv6 Address	Index	Ipv6Address	N/A
EndIpv6Address	End IPv6 Address	Index	Ipv6Address	N/A
VRF	The vpn instance which the address is belonged to.	Index	String: Length:0 to 31 characters Case sensitive.	It's a public network when VRF is a null string.

# IKEv1/Proposals

This table is used to configure IKE proposals.

## XML structure

```
<IKEv1>
  <Proposals>
    <Proposal>
      <Priority></Priority>
      <AuthorityMethod></AuthorityMethod>
      <AuthorityAlg></AuthorityAlg>
      <EncryptionAlg></EncryptionAlg>
      <DHID></DHID>
      <SADuration></SADuration>
      <Description></Description>
    </Proposal>
  </Proposals>
</IKEv1>
```

## Table description

Item	Description
Feature name	IKEv1
Table name	Proposal
Table type	Multi-instance table
Row name	Proposal
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Priority	priority	Index	Unsigned integer. Value range: 1 to 65535.	N/A
AuthorityMethod	Authentication method Id	N/A	Enumeration: <ul style="list-style-type: none"><li>1—Pre-Shared-Key</li><li>2—RSA-Signature</li><li>3—DSA-Signature</li><li>4—RSA-DE-digital</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			envelope <ul style="list-style-type: none"> <li>5—SM2-DE-digital envelope</li> </ul> Default value is 1	
AuthorityAlg	Authentication algorithm Id	N/A	Unsigned integer	See table IKECapabilities for supported Authentication algorithm
EncryptionAlg	Encryption algorithm Id	N/A	Unsigned integer	See table IKECapabilities for supported Encryption algorithm
DHID	Diffie-Hellman group ID	N/A	Unsigned integer	See table IKECapabilities for supported Diffie-Hellman group
SADuration	IKEv1 SA life time	N/A	Unsigned integer. Value range: 60 to 604800. in seconds. Default value is 86400	N/A
Description	Description of proposal	N/A	String: Length:1 to 80 characters Case sensitive	

## IKEv1/Keychains

This table is used to configure IKE keychain.

### XML structure

```

<IKEv1>
  <Keychains>
    <Keychain>
      <Name></Name>
      <Priority></Priority>
      <KeychainVRF></KeychainVRF>
      <MatchLocalAddr>
        <AddressType></AddressType>
        <IpAddress></IpAddress>
        <VRF></VRF>
        <Interface></Interface>
      </MatchLocalAddr>
    </Keychain>
  </Keychains>
</IKEv1>

```

```

    </Keychains>
  </IKEv1>

```

## Table description

Item	Description
Feature name	IKEv1
Table name	Keychains
Table type	Multi-instance table
Row name	Keychain
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of IKE keychain	Index	String: Length:1 to 63 characters Case insensitive	N/A
Priority	The priority of IKE keychain	N/A	Unsigned integer: • Value range:1 to 65535. Default value is 100	N/A
KeychainVRF	The VPN instance of keychain belongs to	N/A	String: Length:1 to 31 characters Case sensitive	N/A
MatchLocalAddr	Match the local address	Data structure	Members include: • AddressType • IpAddress • VRF • Interface	N/A
AddressType	The type of IP address	N/A	Enumeration: • 1—Ipv4Address, • 2—Ipv6Address • 3—Interface	N/A
IpAddress	The value of address	N/A	Ipv4Address or Ipv6 Address	The value is whether IPv4 address or IPv6 address lies on the AddressType
VRF	The VPN instance	N/A	String: Length:1 to 31 characters Case sensitive.	VRF can only coexist with IpAddress.
Interface	The name of interface	N/A	String Case insensitive.	Interface can't coexist with IpAddress.

# IKEv1/HostPreSharedKeys

This table is used to configure the host pre-shared key for IKE keychain.

## XML structure

```
<IKEv1>
  <HostPreSharedKeys>
    <PreSharedKey>
      <Keychain></Keychain>
      <Host></Host>
      <KeyType></KeyType>
      <Key></Key>
    </PreSharedKey>
  </HostPreSharedKeys>
</IKEv1>
```

## Table description

Item	Description
Feature name	IKEv1
Table name	HostPreSharedKeys
Table type	Multi-instance table
Row name	PreSharedKey
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Keychain	Name of IKE keychain	Index	String: Length:1 to 63 characters Case insensitive	N/A
Host	Host name	Index	String: Length:1 to 255 characters Case sensitive	N/A
KeyType	The type of pre-shared key	N/A	Enumeration: <ul style="list-style-type: none"><li>1—Simple,</li><li>2—Cipher</li></ul>	N/A
Key	The value of pre-shared	N/A	According to the type of decision in length.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	key		Plaintext key string Length:1 to 128 characters Or Ciphertext key string Length:1 to 201 characters	

## IKEv1/ Ipv4AddressPreSharedKeys

This table is used to configure the IPv4 address pre-shared key for IKE keychain.

### XML structure

```

<IKEv1>
  <Ipv4AddressPreSharedKeys>
    <PreSharedKey>
      <Keychain></Keychain>
      <Ipv4Address></Ipv4Address>
      <Ipv4Mask></Ipv4Mask>
      <KeyType></KeyType>
      <Key></Key>
    </PreSharedKey>
  </Ipv4AddressPreSharedKeys>
</IKEv1>

```

### Table description

Item	Description
Feature name	IKEv1
Table name	Ipv4AddressPreSharedKeys
Table type	Multi-instance table
Row name	PreSharedKey
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Keychain	Name of IKE	Index	String:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	keychain		Length:1 to 63 characters Case insensitive	
Ipv4Addresses	The value of IPv4 address	Index	Ipv4Address	N/A
Ipv4Mask	The mask of IPv4 address	N/A	Ipv4Address Mask	N/A
KeyType	The type of pre-shared key	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Simple,</li> <li>2—Cipher</li> </ul>	N/A
Key	The value of pre-shared key	N/A	According to the type of decision in length. Plaintext key string Length:1 to 128 characters Or Ciphertext key string Length:1 to 201 characters	N/A

## IKEv1/ Ipv6AddressPreSharedKeys

This table is used to configure the IPv6 address pre-shared key for IKE keychain.

### XML structure

```

<IKEv1>
  <Ipv6AddressPreSharedKeys>
    <PreSharedKey>
      <Keychain></Keychain>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <KeyType></KeyType>
      <Key></Key>
    </PreSharedKey>
  </Ipv6AddressPreSharedKeys>
</IKEv1>

```

### Table description

Item	Description
Feature name	IKEv1
Table name	Ipv6AddressPreSharedKeys
Table type	Multi-instance table

Item	Description
Row name	PreSharedKey
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Keychain	Name of IKE keychain	Index	String: Length:1 to 63 characters Case insensitive	N/A
Ipv6Addresses	The value of IPv6 address	Index	Ipv6Address	N/A
Ipv6PrefixLength	The prefix length of IPv6 address	N/A	Unsigned integer: Value range:0 to 128, in seconds.	N/A
KeyType	The type of pre-shared key	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Simple,</li> <li>2—Cipher</li> </ul>	N/A
Key	The value of pre-shared key	N/A	According to the type of decision in length. Plaintext key string Length:1 to 128 characters Or Ciphertext key string Length:1 to 201 characters	N/A

## IKEv1/Ipv4AddressGroup

This table is used to configure an IKE IPv4 address pool for assigning IPv4 addresses to remote peers.

## XML structure

```

<IKEv1>
  <Ipv4AddressGroup>
    <AddressGroup>
      <GroupName></GroupName>
      <StartIPAddr></StartIPAddr>
      <EndIPAddr></EndIPAddr>
      <IPv4Mask></IPv4Mask>
    </AddressGroup>
  </Ipv4AddressGroup>

```

</IKEv1>

## Table description

Item	Description
Feature name	IKEv1
Table name	Ipv4AddressGroup
Table type	Multi-instance table
Row name	AddressGroup
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Name of the IPv4 address group	Index	String: case-insensitive. Length:1 to 63 characters.	N/A
StartIPAddr	Start IPv4 address of the group	N/A	IPv4: String, dotted decimal notation.	StartIPAddr can not be higher than EndIPAddr. StartIPAddr and EndIPAddr must be configured together when the instance does not exist.
EndIPAddr	End IPv4 address of the group	N/A	IPv4: String, dotted decimal notation.	N/A
IPv4Mask	Mask of the IPv4 address	N/A	IPv4: String, dotted decimal notation.	N/A

## Table description

Item	Description
Feature name	IKEv1
Table name	Profiles
Table type	Multi-instance table
Row name	Profile
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of IKE profile	Index	String: Length:1 to 63 characters Case insensitive	N/A
Priority	The priority of IKE profile	N/A	Unsigned integer: Value range:1 to 65535 Default value is 100.	N/A
Mode	The phase 1 negotiation mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Main</li> <li>2—Aggressive</li> <li>3—GM-main</li> </ul> Default value is 1	N/A
ProposalList	Reference an IKE proposal for the IKE profile	Data structure	Members include: <ul style="list-style-type: none"> <li>ProposalItem</li> </ul>	N/A
ProposalItem	IKE proposal number	N/A	Unsigned integer: Value range:1 to 65535	Contains up to 6 ProposalItem in ProposalList.
KeychainList	Reference an IKE keychain for the IKE profile	Data structure	Members include: <ul style="list-style-type: none"> <li>KeychainItem</li> </ul>	N/A
KeychainItem	IKE keychain name	N/A	String: Length:1 to 63 characters Case insensitive.	Contains up to 6 KeychainItem in KeychainList.
CertificateDomainList	Reference a PKI domain for the IKE profile	Data structure	Members include: <ul style="list-style-type: none"> <li>DomainItem</li> </ul>	N/A
DomainItem	PKI domain	N/A	String:	Contains up to 6

Column name	Column description	Column type	Data type and restrictions	Remarks
	name		Length:1 to 31 characters Case insensitive.	KeychainItem in KeychainList.
CertACPLis t	Reference a PKI certificate access control policy for the IKE profile	Data structure	Members include: • CertACPIItem	N/A
CertACPIte m	The Name of PKI certificate access control policy	N/A	String: Length:1 to 31 characters Case insensitive.	Contains unrestricted CertACPIItem in CertACPLis.
MatchRemo teFQDNList	Configure a rule of match the peer FQDN information for the IKE profile	Data structure	Members include: • FQDNItem	N/A
FQDNItem	The peer FQDN name	N/A	String: Length:1 to 255 characters Case sensitive.	Contains unrestricted FQDNItem in MatchRemoteFQDNList.
MatchRemo teUserFQD NList	Configure a rule of match the peer User FQDN information for the IKE profile	Data structure	Members include: • UserFQDNItem	N/A
UserFQDNI tem	The peer user FQDN name	N/A	String: Length:1 to 255 characters Case sensitive.	Contains unrestricted UserFQDNItem in MatchRemoteUserFQDNList.
LocalID	The identity of the local end	Data structure	Members include: • Type • IpAddress • Value	N/A
Type	The type of the identity	N/A	Enumeration: • 1—Ipv4Address, • 2—Ipv6Address • 3—FQDN • 4—User-FQDN • 5—DN	N/A
IpAddress	The value of address when the identity is IP address	N/A	Ipv4Address or Ipv6 Address	The value is whether IPv4 address or IPv6 address lies on the type of the identity.
Value	The value when the identity isn't IP address	N/A	String: Length:0 to 255 characters Case sensitive.	If the type is FQDN, it's FQDN name; if the type is User-FQDN, it's User-FQDN name; if the type is DN, it's none.

Column name	Column description	Column type	Data type and restrictions	Remarks
MatchLocal Addr	Match the local address	Data structure	Members include: <ul style="list-style-type: none"> <li>• AddressType</li> <li>• IpAddress</li> <li>• VRF</li> <li>• Interface</li> </ul>	N/A
AddressType	The type of IP address	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—Ipv4Address,</li> <li>• 2—Ipv6Address</li> <li>• 3—Interface</li> </ul>	N/A
IpAddress	The value of address	N/A	Ipv4Address or Ipv6 Address	The value is whether IPv4 address or IPv6 address lies on the AddressType
VRF	The VPN instance	N/A	String: Length:1 to 31 characters Case sensitive.	VRF can only coexist with IpAddress.
Interface	The name of interface	N/A	String Case insensitive.	Interface can't coexist with IpAddress.
DPD	Dead Peer Detection(DPD) parameters	Data structure	Members include: <ul style="list-style-type: none"> <li>• Mode</li> <li>• Interval</li> <li>• Retry</li> </ul>	N/A
Mode	The mode of DPD	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—On-demand,</li> <li>• 2—Periodic</li> </ul>	N/A
Interval	Interval time of triggering DPD	N/A	Unsigned integer: Value range:1 to 300, in seconds.	N/A
Retry	The DPD retry interval	N/A	Unsigned integer: Value range:1 to 60, in seconds. Default value is 5.	N/A
InsideVRF	The inside VPN instance	N/A	String: Length:1 to 31 characters Case sensitive.	N/A
ClientXauth	Whether the client authentication is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	N/A
AAAAAuthorization	AAA authentication	N/A	Members include: <ul style="list-style-type: none"> <li>• Domain</li> <li>• UserName</li> </ul>	N/A
Domain	ISP domain name	N/A	String: case-insensitive. Length:1 to 255 characters.	N/A
UserName	Username	N/A	String: case-sensitive. Length:1 to 55 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SASoftDuration	IKEv1 SA life time	N/A	Unsigned integer. Value range: 10 to 36000.	N/A
ClientXauth User	Client authentication user information	N/A	Members include: <ul style="list-style-type: none"> <li>User.</li> <li>Password.</li> <li>PasswrodType.</li> </ul>	N/A
User	Username	N/A	String: case-insensitive. Length: 1 to 55 characters.	N/A
PasswordType	Type of the user password	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Simple,</li> <li>2—Cipher</li> </ul>	N/A
Password	User password	N/A	Plaintext string: 1 to 63 characters. Ciphertext string: 1 to 110 characters.	N/A
MatchRemoteDomainList	Peer FQDN domain information for IKE profile matching	Data structure	Members include: DomainItem.	N/A
DomainItem	Peer FQDN domain	N/A	String: case sensitive. Length: 1 to 255 characters.	N/A

## IKEv1/MatchRemoteIpv4Address

This table displays match remote identity IPv4 address information

### XML structure

```

### Table description

Item	Description
Feature name	IKEv1

Item	Description
Table name	MatchRemotelpv4Address
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of IKE profile	Index	String: Length:1 to 63 characters Case insensitive	N/A
Ipv4Addresses	The value of IPv4 address	Index	Ipv4Address	N/A
Ipv4Mask	The mask of IPv4 address	Index	Ipv4Address mask	N/A
VRF	The vpn instance which the address is belonged to.	Index	String: Length:0 to 31 characters Case sensitive.	It's a public network when VRF is a null string.

## IKEv1/MatchRemoteIpv6Address

This table displays match remote identity IPv6 address information

## XML structure

```

<IKEv1>
  <MatchRemoteIpv6Address>
    <RemoteID>
      <Profile></Profile>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <VRF></VRF>
    </RemoteID>
  </MatchRemoteIpv6Address>
</IKEv1>

```

## Table description

Item	Description
Feature name	IKEv1
Table name	MatchRemotelpv6Address

Item	Description
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of IKE profile	Index	String: Length:1 to 63 characters Case insensitive	N/A
Ipv6Addresses	The value of IPv6 address	Index	Ipv6Address	N/A
Ipv6PrefixLength	The prefix length of IPv6 address	Index	Unsigned integer: Value range:0 to 128, in seconds.	N/A
VRF	The vpn instance which the address is belonged to.	Index	String: Length:0 to 31 characters Case sensitive.	It's a public network when VRF is a null string.

## IKEv1/ MatchRemoteIpv4Range

This table displays match remote identity IPv4 range information

## XML structure

```

<IKEv1>
  <MatchRemoteIpv4Range>
    <RemoteID>
      <Profile></Profile>
      <BeginIpv4Address></BeginIpv4Address>
      <EndIpv4Address></EndIpv4Address>
      <VRF></VRF>
    </RemoteID>
  </MatchRemoteIpv4Range>
</IKEv1>

```

## Table description

Item	Description

Item	Description
Row name	RemoteID
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of IKE profile	Index	String: Length:1 to 63 characters Case insensitive	N/A
BeginIpv6Address	Start IPv6 Address	Index	Ipv6Address	N/A
EndIpv6Address	End IPv6 Address	Index	Ipv6Address	N/A
VRF	The vpn instance which the address is belonged to.	Index	String: Length:0 to 31 characters Case sensitive.	It's a public network when VRF is a null string.

## IKEv1/Proposals

This table displays IKE proposals information

## XML structure

```

<IKEv1>
  <Proposals>
    <Proposal>
      <Priority></Priority>
      <AuthorityMethod></AuthorityMethod>
      <AuthorityAlg></AuthorityAlg>
      <EncryptionAlg></EncryptionAlg>
      <DHID></DHID>
      <SADuration></SADuration>
      <Description></Description>
    </Proposal>
  </Proposals>
</IKEv1>

```

## Table description

Item	Description
Feature name	IKEv1
Table name	Proposals
Table type	Multi-instance table
Row name	Proposal
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Priority	priority	Index	Unsigned integer. Value range: 1 to 65535.	N/A
AuthorityMethod	Authentication method Id	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Pre-Shared-Key</li> <li>2—RSA-Signature</li> <li>3—DSA-Signature</li> <li>4—RSA-DE-digital envelope</li> <li>5—SM2-DE-digital envelope</li> </ul> Default value is 1	N/A
AuthorityAlg	Authentication algorithm Id	N/A	Unsigned integer.	See table IKECapabilities for supported Authentication algorithm.
EncryptionAlg	Encryption algorithm Id	N/A	Unsigned integer.	See table IKECapabilities for supported Encryption algorithm
DHID	Diffie-Hellman group ID	N/A	Unsigned integer.	See table IKECapabilities for supported Diffie-Hellman group
SADuration	IKEv1 SA life time	N/A	Unsigned integer. Value range: 60 to 604800. in seconds. Default value is 86400	N/A
Description	Description of proposal	N/A	String: Length:1 to 80 characters Case sensitive	

# IKEv1/Keychains

This table displays IKE keychains information

## XML structure

```
<IKEv1>
  <Keychains>
    <Keychain>
      <Name></Name>
      <Priority></Priority>
      <KeychainVRF></KeychainVRF>
      <MatchLocalAddr>
        <AddressType></AddressType>
        <IpAddress></IpAddress>
        <VRF></VRF>
        <Interface></Interface>
      </MatchLocalAddr>
    </Keychain>
  </Keychains>
</IKEv1>
```

## Table description

Item	Description
Feature name	IKEv1
Table name	Keychains
Table type	Multi-instance table
Row name	Keychain
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of IKE keychain	Index	String: Length:1 to 63 characters Case insensitive	N/A
Priority	The priority of IKE keychain	N/A	Unsigned integer: Value range:1 to 65535. Default value is 100	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
KeychainVRF	The VPN instance of keychain belongs to	N/A	String: Length:1 to 31 characters Case sensitive	N/A
MatchLocalAddr	Match the local address	Data structure	Members include: <ul style="list-style-type: none"> <li>• AddressType</li> <li>• IpAddress</li> <li>• VRF</li> <li>• Interface</li> </ul>	N/A
AddressType	The type of IP address	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—Ipv4Address,</li> <li>• 2—Ipv6Address</li> <li>• 3—Interface</li> </ul>	N/A
IpAddress	The value of address	N/A	Ipv4Address or Ipv6 Address	The value is whether IPv4 address or IPv6 address lies on the AddressType
VRF	The VPN instance	N/A	String: Length:1 to 31 characters Case sensitive.	VRF can only coexist with IpAddress.
Interface	The name of interface	N/A	String Case insensitive.	Interface can't coexist with IpAddress.

## IKEv1/HostPreSharedKeys

This table displays host pre-shared-keys information for IKE keychain

### XML structure

```

<IKEv1>
  <HostPreSharedKeys>
    <PreSharedKey>
      <Keychain></Keychain>
      <Host></Host>
    </PreSharedKey>
  </HostPreSharedKeys>
</IKEv1>

```

### Table description

Item	Description
Feature name	IKEv1
Table name	HostPreSharedKeys

Item	Description
Table type	Multi-instance table
Row name	PreSharedKey
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Keychain	Name of IKE keychain	Index	String: Length:1 to 63 characters Case insensitive	N/A
Host	Host name	Index	String: Length:1 to 255 characters Case sensitive	N/A

## IKEv1/ Ipv4AddressPreSharedKeys

This table displays IPv4 address presharedkeys information for IKE keychain

## XML structure

```

<IKEv1>
  <Ipv4AddressPreSharedKeys>
    <PreSharedKey>
      <Keychain></Keychain>
      <Ipv4Address></Ipv4Address>
      <Ipv4Mask></Ipv4Mask>
    </PreSharedKey>
  </Ipv4AddressPreSharedKeys>
</IKEv1>

```

## Table description

Item	Description
Feature name	IKEv1
Table name	Ipv4AddressPreSharedKeys
Table type	Multi-instance table
Row name	PreSharedKey
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Keychain	Name of IKE keychain	Index	String: Length:1 to 63 characters Case insensitive	N/A
Ipv4Addresses	The value of IPv4 address	Index	Ipv4Address	N/A
Ipv4Mask	The mask of IPv4 address	N/A	Ipv4Address Mask	N/A

## IKEv1/ Ipv6AddressPreSharedKeys

This table displays IPv6 address presharedkeys information for IKE keychain

## XML structure

```
<IKEv1>
  <Ipv6AddressPreSharedKeys>
    <PreSharedKey>
      <Keychain></Keychain>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
    </PreSharedKey>
  </Ipv6AddressPreSharedKeys>
</IKEv1>
```

## Table description

Item	Description
Feature name	IKEv1
Table name	Ipv6AddressPreSharedKeys
Table type	Multi-instance table
Row name	PreSharedKey
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Keychain	Name of IKE keychain	Index	String: Length:1 to 63 characters Case insensitive	N/A
Ipv6Addresses	The value of Ipv6 address	Index	Ipv6Address	N/A
Ipv6PrefixLength	The prefix length of Ipv6 address	N/A	Unsigned integer: Value range:0 to 128, in seconds.	N/A

## IKEv1/DefaultProposal

This table displays default IKE proposal information.

## XML structure

```
<IKEv1>
  <DefaultProposal>
    <AuthorityMethod></AuthorityMethod>
    <AuthorityAlg></AuthorityAlg>
    <EncryptionAlg></EncryptionAlg>
    <DHID></DHID>
    <SADuration></SADuration>
  </DefaultProposal>
</IKEv1>
```

## Table description

Item	Description
Feature name	IKEv1
Table name	DefaultProposal
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AuthorityMethod	Authentication method Id for the IKE Proposal	N/A	Unsigned integer.	N/A
AuthorityAlg	Authentication algorithm Id for the IKE Proposal	N/A	Unsigned integer.	See table IKECapabilities for supported Authentication algorithm
EncryptionAlg	Encryption algorithm Id for the IKE Proposal	N/A	Unsigned integer.	See table IKECapabilities for supported Encryption algorithm
DHID	Diffie-Hellman group ID	N/A	Unsigned integer.	See table IKECapabilities for supported Diffie-Hellman group
SADuration	IKEv1 SA life time	N/A	Unsigned integer. Value range: 60 to 604800. in seconds.	N/A

## IKEv1/IKESAs

This table displays IKE SA information.

## Table description

Item	Description
Feature name	IKEv1
Table name	IKESAs
Table type	Multi-instance table
Row name	IKESA
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ConnectionID	ConnectionID of IKE SA	Index	Unsigned integer.	N/A
OutsideVRF	Outbound VRF	N/A	String: Length:1 to 31 characters Case sensitive	N/A
InsideVRF	Inbound VRF	N/A	String: Length:1 to 31 characters	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Case sensitive	
Profile	Name of IKE profile	N/A	String: Length:1 to 63 characters Case insensitive	N/A
Initiator	If Local gateway be the initiator	Data structure	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—initiator.</li> <li><b>false</b>—response.</li> </ul>	N/A
LocalID	The identity of the local end	Data structure	Members include: <ul style="list-style-type: none"> <li>Type</li> <li>IpAddress</li> <li>Value</li> </ul>	N/A
Type	The type of the local identity	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Ipv4Address,</li> <li>2—Ipv6Address</li> <li>3—FQDN</li> <li>4—User-FQDN</li> <li>5—DN</li> </ul>	N/A
IpAddress	The value of address when the local identity is IP address	N/A	Ipv4Address or Ipv6 Address	The value is whether IPv4 address or IPv6 address lies on the type of the identity.
Value	The value when the local identity isn't IP address	N/A	String: Length:0 to 255 characters Case sensitive.	If the type is FQDN, it's FQDN name; if the type is User-FQDN, it's User-FQDN name; if the type is DN, it's none.
RemoteID	The identity of the peer end	Data structure	Members include: <ul style="list-style-type: none"> <li>Type</li> <li>IpAddress</li> <li>Value</li> </ul>	N/A
Type	The type of the peer identity	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Ipv4Address,</li> <li>2—Ipv6Address</li> <li>3—FQDN</li> <li>4—User-FQDN</li> <li>5—DN</li> </ul>	N/A
IpAddress	The value of address when the peer identity is IP address	N/A	Ipv4Address or Ipv6 Address	The value is whether IPv4 address or IPv6 address lies on the type of the identity.
Value	The value when the peer identity isn't IP address	N/A	String: Length:0 to 255 characters Case sensitive.	If the type is FQDN, it's FQDN name; if the type is User-FQDN, it's User-FQDN name; if the type is DN, it's none.
RemoteIpA	IP address of	N/A	Ipv4Address or Ipv6 Address	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
address	peer gateway			
LocalIpAddress	IP address of local gateway	N/A	Ipv4Address or Ipv6 Address	N/A
AuthorityMethod	The value when the identity isn't IP address	N/A	String: Length:0 to 255 characters Case sensitive.	If the type is FQDN, it's FQDN name; if the type is User-FQDN, it's User-FQDN name; if the type is DN, it's none.
AuthorityAlg	Authentication algorithm Id	N/A	Unsigned integer. Authentication algorithm Id	See table IKECapabilities for supported Authentication algorithm
EncryptionAlg	Encryption algorithm Id	N/A	Unsigned integer. Encryption algorithm Id	See table IKECapabilities for supported Encryption algorithm
DHID	Diffie-Hellman group ID	N/A	Unsigned integer.. Diffie-Hellman group ID	See table IKECapabilities for supported Diffie-Hellman group
ExchangeMode	Negotiation mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Main.</li> <li>2—Aggressive</li> </ul>	N/A
IsNATTraversal	UDP encapsulation used for NAT traversal	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Need traversal.</li> <li>false—non-essential.</li> </ul>	N/A
SADuration	IKE SA lifetime	N/A	Unsigned integer. Value range: 60 to 604800. in seconds.	N/A
RemainingSADuration	Remaining IKE SA lifetime	N/A	Unsigned integer. Value range: 60 to 604800. in seconds.	N/A
Flag	Flag of SA	N/A	Unsigned integer.	0x00000001 RD (READY), which means the SA has been established 0x00000002 ST (STAYALIVE), which means this end is the initiator of the tunnel negotiation. 0x00000004 RL (REPLACED), which means the SA has been replaced by a new one and will be deleted later. 0x00000008 FD (FADING), which means the SA is in

Column name	Column description	Column type	Data type and restrictions	Remarks
				use, but it is about to expire and will be deleted soon. 0x80000000 <b>Unknown</b> , which means The SA status is Unknown.
DOI	Domain of interpretation which SA belong	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—IPsec.</li> <li>2—GDOI</li> </ul>	N/A

TunnelID	IKE tunnel ID	Index	Unsigned integer. Value range: 0 to $2^{32}-1$	N/A
InOctets	Number of the recived Bytes	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
OutOctets	Number of the sent Bytes	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$	N/A
InPkts	Number of received packets	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$	N/A
OutPkts	Number of sent packets	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$	N/A
InP2Exchanges	Number of received exchanges in the second stage	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$	N/A
OutP2Exchanges	Number of sent exchanges in the second stage	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$	N/A
InP2ExchangeRejects	Number of dropped received exchanges in the second stage	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$	N/A
OutP2ExchangeRejects	Number of dropped sent exchanges in the second stage	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$	N/A
InP2SADelRequests	Number of received request of SA in the second stage	Data structure	Unsigned integer. Value range: 0 to $2^{64}-1$	N/A
OutP2SADelRequests	Number of received request of SA in the second stage	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$	N/A
InP1SADelRequests	Number of received request of SA in the first stage	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$	N/A
OutP1SADelRequests	Number of sent request of SA in the first stage	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$	N/A
InNotifys	Number of received notify news	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$	N/A
OutNotifys	Number of sent notify news	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InDropPkts	Number of dropped received packets	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$	N/A
OutDropPkts	Number of dropped sent packets	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$	N/A

## IKEv1/IKECapabilities

This table displays all the algorithm capabilities that the IKE module support.

### XML structure

```

<IKEv1>
  <IKECapabilities>
    <IKECapability>
      <AlgID></AlgID>
      <AlgName></AlgName>
      <AlgType></AlgType>
    </IKECapability>
  </IKECapabilities>
</IKEv1>

```

### Table description

Item	Description
Feature name	IKEv1
Table name	IKECapabilities
Table type	Multi-instance table
Row name	IKECapability
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AlgID	IKEv1 supports	Index	Positive Integer	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	algorithm ID			
AlgName	IKEv1 supports algorithm name	N/A	String. Length: 1 to 255 characters. Case insensitive	N/A
AlgType	Type of algorithm	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Diffie-Hellman group</li> <li>2—Encryption algorithm</li> <li>3—Authentication algorithm</li> </ul>	N/A

## IKEv1/Ipv4AddressGroup

This table displays IKE IPv4 address pool information.

### XML structure

```

<IKEv1>
  <Ipv4AddressGroup>
    <AddressGroup>
      <GroupName></GroupName>
      <StartIPAddr></StartIPAddr>
      <EndIPAddr></EndIPAddr>
      <IPv4Mask></IPv4Mask>
    </AddressGroup>
  </Ipv4AddressGroup>
</IKEv1>

```

### Table description

Item	Description

# IKEv2

## IKEv2/GlobalConf

This table is used to configure IKEv2 global settings.

### XML structure

```
<IKEv2>
  <GlobalConf>
    <DPD>
      <Mode></Mode>
      <Interval></Interval>
      <Retry></Retry>
    </DPD>
    <CookieChallenge></CookieChallenge>
    <NatKeepaliveInterval></NatKeepaliveInterval>
  </GlobalConf>
</IKEv2>
```

### Table description

Item	Description
Feature name	IKEv2
Table name	GlobalConf
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DPD	Global Dead Peer Detection (DPD) settings	Data structure	Members include: <ul style="list-style-type: none"><li>Mode</li><li>Interval</li><li>Retry</li></ul>	N/A
Mode	Operating mode of DPD	N/A	Enumeration: <ul style="list-style-type: none"><li>1—On-demand</li><li>2—Periodic</li></ul>	N/A
Interval	Time interval for triggering	N/A	Unsigned integer: Value range: 10 to 3600, in	Interval should not be smaller than Retry in

Column name	Column description	Column type	Data type and restrictions	Remarks
	DPD		seconds.	on-demand mode.
Retry	DPD retry interval	N/A	Unsigned integer: Value range: 2 to 60, in seconds. Default value is 5.	N/A
CookieChallenge	Number of half-open IKE SAs that triggers cookie challenging	N/A	Unsigned integer: Value range: 0 to 1000, or 65535. Default value is 65535.	If the value is 65535, cookie challenging feature disabled.
NatKeepaliveInterval	NAT keepalive interval	N/A	Unsigned integer: Value range: 5 to 3600, in seconds. Default value is 10.	N/A

## IKEv2/Profiles

This table is used to configure IKEv2 profiles.

## XML structure

```

<IKEv2>
  <Profiles>
    <Profile>
      <Name></Name>

  </Profiles>
</IKEv2>

```

```

<AAAAuthorization>
  <Domain></Domain>
  <UserName></UserName>
</AAAAuthorization>
</Profile>
</Profiles>
</IKEv2>

```

## Table description

Item	Description
Feature name	IKEv2
Table name	Profiles
Table type	Multi-instance table
Row name	Profile
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
Priority	Priority of the IKEv2 profile	N/A	Unsigned integer. Value range: 1 to 65535 Default value is 100.	N/A
LocalAuthMethod	Local identity authentication method	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Preshared key</li> <li>2—DSA signature</li> <li>3—RSA signature</li> <li>4—ECDSA signature</li> </ul>	N/A
RemoteAuthMethodList	Remote identity authentication method list	Data structure	Members include: <ul style="list-style-type: none"> <li>RemoteAuthMethodItem</li> </ul>	N/A
RemoteAuthMethodItem	Remote identity authentication method	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Preshared key</li> <li>2—DSA signature</li> <li>3—RSA signature</li> <li>4—ECDSA signature</li> </ul>	N/A
ConfigExchangeList	Configuration exchange feature	Data structure	Members include: <ul style="list-style-type: none"> <li>ConfigExchangeItem</li> </ul>	N/A
ConfigExchangeItem	Configuration exchange	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Request</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	setting		<ul style="list-style-type: none"> <li>2—Set accept</li> <li>3—Set send</li> </ul>	
Keychain	IKE keychain used for the IKEv2 profile	N/A	String. Length: 1 to 63 characters.	N/A
SADuration	IKEv2 SA lifetime	N/A	Unsigned integer. Value range: 120 to 86400, in seconds. Default value is 86400.	N/A
NatKeepaliveInterval	NAT keepalive interval for the IKEv2 profile	N/A	Unsigned integer. Value range: 5 to 3600, in seconds.	N/A
InsideVRF	Inside VPN instance	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A
DPD	Dead Peer Detection (DPD) settings	Data structure	Members include: <ul style="list-style-type: none"> <li>Mode</li> <li>Interval</li> <li>Retry</li> </ul>	N/A
Mode	Operating mode of DPD	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—On-demand</li> <li>2—Periodic</li> </ul>	N/A
Interval	Time interval for triggering DPD	N/A	Unsigned integer. Value range: 10 to 3600, in seconds.	Interval should not be smaller than Retry in on-demand mode.
Retry	DPD retry interval	N/A	Unsigned integer. Value range: 2 to 60, in seconds. Default value is 5.	N/A
MatchVRF	VPN instance for the IKEv2 profile	Data structure	Members include: <ul style="list-style-type: none"> <li>MatchVrfType</li> <li>VRFName</li> </ul>	N/A
MatchVrfType	Network type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Any.</li> <li>2—Specific VPN instance.</li> </ul>	N/A
VRFName	VPN instance name	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A
AAAAuthorization	AAA authorization	N/A	Members include: <ul style="list-style-type: none"> <li>Domain</li> <li>UserName</li> </ul>	N/A
Domain	ISP domain used for requesting authorization attributes	N/A	String, case-insensitive. Length: 1 to 255 characters.	Domain name must not contain / \   " : * ? < > @, and must not be d, de, def, defa, defau, default, default, default, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknow,

Column name	Column description	Column type	Data type and restrictions	Remarks
				if-unknown.
UserName	Username used for requesting authorization attributes	N/A	String, case-sensitive. Length: 1 to 55 characters.	User name must not contain \   / : * ? < > @, and must not be a, al, all.

## IKEv2/MatchRemoteIpv4Address

This table is used to specify remote identity information (IPv4 address) for IKEv2 profile matching.

### XML structure

```

<IKEv2>
  <MatchRemoteIpv4Address>
    <RemoteID>
      <Profile></Profile>
      <Ipv4Address></Ipv4Address>
      <Ipv4Mask></Ipv4Mask>
    </RemoteID>
  </MatchRemoteIpv4Address>
</IKEv2>

```

### Table description

Item	Description
Feature name	IKEv2
Table name	MatchRemoteIpv4Address
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None
Support for row creation and deletion	YES

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive Length: 1 to 63 characters.	N/A
Ipv4Address	IPv4 address used as the remote identity	Index	String, dotted decimal notation.	Example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Mask	Mask of the IPv4 address	Index	Mask: String, dotted decimal notation.	Mask example: 255.255.0.0.

## IKEv2/MatchRemoteIpv6Address

This table is used to specify remote identity information (IPv6 address) for IKEv2 profile matching.

### XML structure

```

<IKEv2>
  <MatchRemoteIpv6Address>
    <RemoteID>
      <Profile></Profile>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
    </RemoteID>
  </MatchRemoteIpv6Address>
</IKEv2>

```

### Table description

Item	Description
Feature name	IKEv2
Table name	MatchRemoteIpv6Address
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None
Support for row creation and deletion	YES

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
Ipv6Address	IPv6 address used as the remote identity	Index	Hexadecimal string, colon-separated.	Example: 1:2:3:4:5:6:7:8.
Ipv6PrefixLength	The prefix length of IPv6 address	Index	Unsigned integer. Value range: 0 to 128.	N/A

# IKEv2/MatchRemoteIpv4Range

This table is used to specify remote identity information (IPv4 address range) for IKEv2 profile matching.

## XML structure

```
<IKEv2>
  <MatchRemoteIpv4Range>
    <RemoteID>
      <Profile></Profile>
      <BeginIpv4Address></BeginIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </RemoteID>
  </MatchRemoteIpv4Range>
</IKEv2>
```

## Table description

Item	Description
Feature name	IKEv2
Table name	MatchRemoteIpv4Range
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
BeginIpv4Address	Start IPv4 address	Index	String, dotted decimal notation.	Example: 1.1.1.1.
EndIpv4Address	End IPv4 address	Index	String, dotted decimal notation.	Example: 1.1.1.2. The end address must be higher than the start address.

# IKEv2/MatchRemoteIpv6Range

This table is used to specify remote identity information (IPv6 address range) for IKEv2 profile matching.

## XML structure

```
<IKEv2>
  <MatchRemoteIpv6Range>
    <RemoteID>
      <Profile></Profile>
      <BeginIpv6Address></BeginIpv6Address>
      <EndIpv6Address></EndIpv6Address>
    </RemoteID>
  </MatchRemoteIpv6Range>
</IKEv2>
```

## Table description

Item	Description
Feature name	IKEv2
Table name	MatchRemoteIpv6Range
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
BeginIpv6Address	Start IPv6 address	Index	Hexadecimal string, colon-separated.	Example: 1:2:3:4:5:6:7:8.
EndIpv6Address	End IPv6 address	Index	Hexadecimal string, colon-separated.	Example: 1:2:3:4:5:6:7:9. The end address must be higher than the start address.

## IKEv2/ProfileMatchRemotePeer

This table is used to specify remote identity information (FQDN, email address, or key ID of the peer) for IKEv2 profile matching.

## XML structure

```
<IKEv2>
  <ProfileMatchRemotePeer>
```

```

    <MatchRemotePeer>
      <Profile></Profile>
      <PeerType></PeerType>
      <PeerName></PeerName>
    </MatchRemotePeer>
  </ProfileMatchRemotePeer>
</IKEv2>

```

## Table description

Item	Description
Feature name	IKEv2
Table name	ProfileMatchRemotePeer
Table type	Multi-instance table
Row name	MatchRemotePeer
Restrictions	None
Support for row creation and deletion	YES

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of IKEv2 profile	Index	String, case insensitive. Length:1 to 63 characters.	N/A
PeerType	peer Type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—fqdn</li> <li>2—email</li> <li>3—key-id</li> </ul>	N/A
PeerName	peer ID for IKEv2 profile	Index	String: Length:1 to 255 characters.	N/A

## IKEv2/ProfileMatchLocalIpAddress

This table is used to specify a local IP address to which an IKEv2 profile can be applied.

## XML structure

```

<IKEv2>
  <ProfileMatchLocalIpAddress>
    <MatchLocalIpAddress>
      <Profile></Profile>
      <IPType></IPType>
      <Address></Address>
    </MatchLocalIpAddress>
  </ProfileMatchLocalIpAddress>

```

</IKEv2>

## Table description

Item	Description
Feature name	IKEv2
Table name	ProfileMatchLocalIpAddress
Table type	Multi-instance table
Row name	MatchLocalIpAddress
Restrictions	None
Support for row creation and deletion	YES

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IPType	IP address type	Index	Enumeration: <ul style="list-style-type: none"><li>• 1—IPv4 address</li><li>• 2—IPv6 address</li></ul>	N/A
Address	IP address of a local interface	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.

## IKEv2/ProfileMatchLocalInterfaces

This table is used to specify a local interface to which an IKEv2 profile can be applied.

## XML structure

```
<IKEv2>
  <ProfileMatchLocalInterfaces>
    <MatchLocalInterface>
      <Profile></Profile>
      <IfIndex></IfIndex>
    </MatchLocalInterface>
  </ProfileMatchLocalInterfaces>
</IKEv2>
```

## Table description

Item	Description
Feature name	IKEv2
Table name	ProfileMatchLocalInterfaces
Table type	Multi-instance table
Row name	MatchLocalInterface
Restrictions	None
Support for row creation and deletion	YES

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IfIndex	Interface index	Index	Unsigned integer.	N/A

## IKEv2/Policies

This table is used to configure IKEv2 policies.

## XML structure

```
<IKEv2>
  <Policies>
    <Policy>
      <Name></Name>
      <Priority></Priority>
      <ProposalList>
        <ProposalItem></ProposalItem>
      </ProposalList>
      <MatchVRF>
        <MatchVRFTYPE></MatchVRFTYPE>
        <VRFName></VRFName>
      </MatchVRF>
    </Policy>
  </Policies>
</IKEv2>
```

## Table description

Item	Description
Feature name	IKEv2
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	YES

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the IKEv2 policy	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
Priority	Priority for the IKEv2 policy	N/A	Unsigned integer. Value range: 1 to 65535 Default value is 100.	N/A
ProposalList	IKEv2 proposal list for the IKEv2 policy	Data structure	Members include: <ul style="list-style-type: none"><li>ProposalItem</li></ul>	N/A
ProposalItem	IKEv2 proposal	Data structure	String. Length: 1 to 63 characters.	N/A
MatchVRF	VPN instance for IKEv2 policy matching	Data structure	Members include: <ul style="list-style-type: none"><li>MatchVrfType</li><li>VRFName</li></ul>	N/A
MatchVrfType	Network type	N/A	Enumeration: <ul style="list-style-type: none"><li>1—Any.</li><li>2—Specific VPN instance.</li></ul>	N/A
VRFName	VPN instance name	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A

## IKEv2/PolicyMatchLocalIpAddress

This table is used to specify the local IPv4 or IPv6 address used for IKEv2 policy matching.

## XML structure

```
<IKEv2>
  <PolicyMatchLocalIpAddress>
    <MatchLocalIpAddress>
```

```

    <Policy></Policy>
    <IPType></IPType>
    <IpAddress></IpAddress>
  </MatchLocalIpAddress>
</PolicyMatchLocalIpAddress>
</IKEv2>

```

## Table description

Item	Description
Feature name	IKEv2
Table name	PolicyMatchLocalIpAddress
Table type	Multi-instance table
Row name	MatchLocalIpAddress
Restrictions	None
Support for row creation and deletion	YES

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Policy	Name of the IKEv2 Policy	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IPType	IP address type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4 address</li> <li>2—IPv6 address</li> </ul>	N/A
IpAddress	IP address of a local interface	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.

## IKEv2/PolicyMatchLocalInterfaces

This table is used to specify the local interface used for IKEv2 policy matching.

## XML structure

```

<IKEv2>
  <PolicyMatchLocalInterfaces>
    <MatchLocalInterface>
      <Policy></Policy>
      <IfIndex></IfIndex>
    </MatchLocalInterface>
  </PolicyMatchLocalInterfaces>

```

</IKEv2>

## Table description

Item	Description
Feature name	IKEv2
Table name	PolicyMatchLocalInterfaces
Table type	Multi-instance table
Row name	MatchLocalInterface
Restrictions	None
Support for row creation and deletion	YES

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Policy	Name of the IKEv2 policy	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IfIndex	Interface index	Index	Unsigned integer	N/A

## IKEv2/Proposals

This table is used to configure IKEv2 proposals.

## XML structure

```
<IKEv2>
  <Proposals>
    <Proposal>
      <Name></Name>
      <IntegrityList>
        <IntegrityItem></IntegrityItem>
      </IntegrityList>
      <EncryptionList>
        <EncryptionItem></EncryptionItem>
      </EncryptionList>
      <DhList>
        <DhItem></DhItem>
      </DhList>
      <PrfAlgList>
        <PrfAlgItem></PrfAlgItem>
      </PrfAlgList>
    </Proposal>
  </Proposals>
</IKEv2>
```

</IKEv2>

## Table description

Item	Description
Feature name	IKEv2
Table name	Proposal
Table type	Multi-instance table
Row name	Proposal
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Proposal name	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IntegrityList	Integrity protection algorithm list for the IKEv2 proposal.	Data structure	Members include: <ul style="list-style-type: none"><li>IntegrityItem</li></ul>	N/A
IntegrityItem	Integrity protection algorithms	N/A	Unsigned integer	See the IKEv2Capabilities table in Comware V7 IKEv2 NETCONF XML API Data Reference for supported authentication algorithms.
EncryptionList	Encryption algorithm list for the IKEv2 proposal	Data structure	Members include: <ul style="list-style-type: none"><li>EncryptionItem</li></ul>	N/A
EncryptionItem	Encryption algorithms	N/A	Unsigned integer	See the IKEv2Capabilities table in Comware V7 IKEv2 NETCONF XML API Data Reference for supported encryption algorithms.
DhList	DH groups list for the IKEv2 proposal	Data structure	Members include: <ul style="list-style-type: none"><li>DhItem</li></ul>	N/A
DhItem	DH groups	N/A	Unsigned integer	See the IKEv2Capabilities table in Comware

Column name	Column description	Column type	Data type and restrictions	Remarks
				V7 IKEv2 NETCONF XML API Data Reference for supported DH groups.
PrfAlgList	PRF algorithm list for the IKEv2 proposal	Data structure	Members include: <ul style="list-style-type: none"> <li>PrfAlgItem</li> </ul>	N/A
PrfAlgItem	PRF algorithms	N/A	Unsigned integer	See the IKEv2Capabilities table in Comware V7 IKEv2 NETCONF XML API Data Reference for supported PRF algorithms.

## IKEv2/Keychains

This table is used to configure IKEv2 keychains.

### XML structure

```

<IKEv2>
  <Keychains>
    <Keychain>
      <Name></Name>
      <Peer></Peer>
      <HostName></HostName>
      <Identity>
        <IdentityType></IdentityType>
        <StringValue></StringValue>
        <LocalIpAddress></LocalIpAddress>
      </Identity>
      <Address>
        <AddressType></AddressType>
        <IpAddress></IpAddress>
        <Ipv4Mask></Ipv4Mask>
        <Ipv6PrefixLength></Ipv6PrefixLength>
      </Address>
      <PreSharedKeyLocal>
        <KeyType></KeyType>
        <Key></Key>
      </PreSharedKeyLocal>
      <PreSharedKeyRemote>
        <KeyType></KeyType>
        <Key></Key>
      </PreSharedKeyRemote>
    </Keychain>
  </Keychains>
</IKEv2>

```

```

</PreSharedKeyRemote>
<PreSharedKeySymmetric>
  <KeyType></KeyType>
  <Key></Key>
</PreSharedKeySymmetric>
</Keychain>
</Keychains>
</IKEv2>

```

## Table description

Item	Description
Feature name	IKEv2
Table name	Keychains
Table type	Multi-instance table
Row name	Keychain
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the IKEv2 keychain	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
Peer	Name of an IKEv2 peer	Index	String. Length: 1 to 63 characters.	N/A
HostName	Host name for the IKEv2 peer	N/A	String. Length: 1 to 253 characters.	N/A
Identity	ID of the IKEv2 peer	Data structure	Members include: <ul style="list-style-type: none"> <li>• IdentityType</li> <li>• StringValue</li> <li>• LocalIpAddress</li> <li>• KeyId</li> </ul>	N/A
IdentityType	Identity type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—Ipv4Address</li> <li>• 2—Ipv6Address</li> <li>• 3—email</li> <li>• 4—fqdn</li> <li>• 5—key-id</li> </ul>	N/A
StringValue	Identity string	N/A	String. Length: 1 to 255 characters.	N/A
LocalIpAddress	IPv4 or IPv6 address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string,	IPv4 example: 1.1.1.1. IPv6 example:

Column name	Column description	Column type	Data type and restrictions	Remarks
			colon-separated.	1:2:3:4:5:6:7:8.
Address	IP address of the IKEv2 peer	Data structure	Members include: <ul style="list-style-type: none"> <li>AddressType</li> <li>IpAddress</li> <li>Ipv4Mask</li> <li>Ipv6PrefixLength</li> </ul>	N/A
AddressType	IP address type	Data structure	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4 address</li> <li>2—IPv6 address</li> </ul>	N/A
IpAddress	IPv4 or IPv6 address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
Ipv4Mask	Mask of the IPv4 address	N/A	Mask: String, dotted decimal notation.	Mask example: 255.255.0.0.
Ipv6PrefixLength	Prefix length of the IPv6 address	N/A	Unsigned integer. Value range: 0 to 128.	N/A
PreSharedKeyLocal	Preshared key for certificate signing	Data structure	Members include: <ul style="list-style-type: none"> <li>KeyType</li> <li>Key</li> </ul>	PreSharedKeyLocal and PreSharedKeySymmetric cannot both be configured.
KeyType	Type of the preshared key	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Plaintext</li> <li>2—Ciphertext</li> </ul>	N/A
Key	Value of the preshared key	N/A	String. Length: 1 to 128 characters in plain text or 1 to 201 characters in cipher text.	N/A
PreSharedKeyRemote	Preshared key for certificate authentication	Data structure	Members include: <ul style="list-style-type: none"> <li>KeyType</li> <li>Key</li> </ul>	PreSharedKeyRemote and PreSharedKeySymmetric cannot both be configured.
KeyType	Type of the preshared key	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Plaintext</li> <li>2—Ciphertext</li> </ul>	N/A
Key	Value of the preshared key	N/A	String. Length: 1 to 128 characters in plain text or 1 to 201 characters in cipher text.	N/A
PreSharedKeySymmetric	Symmetric preshared key for certificate signing	Data structure	Members include: <ul style="list-style-type: none"> <li>KeyType</li> <li>Key</li> </ul>	PreSharedKeySymmetric cannot be configured together with PreSharedKeyLocal or PreSharedKeyRemote.
KeyType	Type of the symmetric preshared key	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Plaintext</li> <li>2—Ciphertext</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Key	Value of the symmetric preshared key	N/A	String. Length: 1 to 128 characters in plain text or 1 to 201 characters in cipher text.	N/A

# IKEv2

## IKEv2/GlobalConf

This table contains IKEv2 global configuration information.

### XML structure

```
<IKEv2>
  <GlobalConf>
    <DPD>
      <Mode></Mode>
      <Interval></Interval>
      <Retry></Retry>
    </DPD>
    <CookieChallenge></CookieChallenge>
    <NatKeepaliveInterval></NatKeepaliveInterval>
  </GlobalConf>
</IKEv2>
```

### Table description

Item	Description
Feature name	IKEv2
Table name	GlobalConf
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DPD	Global Dead Peer Detection (DPD) settings	Data structure	Members include: <ul style="list-style-type: none"><li>• Mode</li><li>• Interval</li><li>• Retry</li></ul>	N/A
Mode	Operating mode of DPD	N/A	Enumeration: <ul style="list-style-type: none"><li>• 1—On-demand</li><li>• 2—Periodic</li></ul>	N/A
Interval	Time interval for triggering DPD	N/A	Unsigned integer: Value range: 10 to 3600, in seconds.	Interval should not be smaller than Retry in on-demand mode.

Column name	Column description	Column type	Data type and restrictions	Remarks
Retry	DPD retry interval	N/A	Unsigned integer: Value range: 2 to 60, in seconds.	N/A
CookieChallenge	Number of half-open IKE SAs that triggers cookie challenging	N/A	Unsigned integer: Value range: 0 to 1000, or 65535.	If the value is 65535, cookie challenging feature disabled.
NatKeepaliveInterval	NAT keepalive interval	N/A	Unsigned integer: Value range: 5 to 3600, in seconds.	N/A

## IKEv2/Profiles

This table contains IKEv2 profiles information.

### XML structure

```

<IKEv2>
  <Profiles>
    <Profile>
      <Name></Name>
      <Priority></Priority>
      <LocalAuthMethod></LocalAuthMethod>
      <RemoteAuthMethodList>
        <RemoteAuthMethodItem></RemoteAuthMethodItem>
      </RemoteAuthMethodList>
      <ConfigExchangeList>
        <ConfigExchangeItem></ConfigExchangeItem>
      </ConfigExchangeList>
      <Keychain></Keychain>
      <SADuration></SADuration>
      <NatKeepaliveInterval></NatKeepaliveInterval>
      <InsideVRF></InsideVRF>
      <DPD>
        <Mode></Mode>
        <Interval></Interval>
        <Retry></Retry>
      </DPD>
      <MatchVRF>
        <MatchVrfType></MatchVrfType>
        <VRFName></VRFName>
      </MatchVRF>
      <AAAAAuthorization>
        <Domain></Domain>
        <UserName></UserName>
    </Profile>
  </Profiles>
</IKEv2>

```

```

    </AAAAuthorization>
  </Profile>
</Profiles>
</IKEv2>

```

## Table description

Item	Description
Feature name	IKEv2
Table name	Profiles
Table type	Multi-instance table
Row name	Profile
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
Priority	Priority of the IKEv2 profile	N/A	Unsigned integer. Value range: 1 to 65535	N/A
LocalAuthMethod	Local identity authentication method	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Preshared key</li> <li>2—DSA signature</li> <li>3—RSA signature</li> <li>4—ECDSA signature</li> </ul>	N/A
RemoteAuthMethodList	Remote identity authentication method list	Data structure	Members include: <ul style="list-style-type: none"> <li>RemoteAuthMethodItem</li> </ul>	N/A
RemoteAuthMethodItem	Remote identity authentication method	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Preshared key</li> <li>2—DSA signature</li> <li>3—RSA signature</li> <li>4—ECDSA signature</li> </ul>	N/A
ConfigExchangeList	Configuration exchange feature	Data structure	Members include: <ul style="list-style-type: none"> <li>ConfigExchangeItem</li> </ul>	N/A
ConfigExchangeItem	Configuration exchange setting	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Request</li> <li>2—Set accept</li> <li>3—Set send</li> </ul>	N/A
Keychain	IKE keychain used for the IKEv2 profile	N/A	String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SADuration	IKEv2 SA lifetime	N/A	Unsigned integer. Value range: 120 to 86400, in seconds.	N/A
NatKeepaliveInterval	NAT keepalive interval for the IKEv2 profile	N/A	Unsigned integer. Value range: 5 to 3600, in seconds.	N/A
InsideVRF	Inside VPN instance	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A
DPD	Dead Peer Detection (DPD) settings	Data structure	Members include: <ul style="list-style-type: none"> <li>• Mode</li> <li>• Interval</li> <li>• Retry</li> </ul>	N/A
Mode	Operating mode of DPD	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—On-demand</li> <li>• 2—Periodic</li> </ul>	N/A
Interval	Time interval for triggering DPD	N/A	Unsigned integer. Value range: 10 to 3600, in seconds.	Interval should not be smaller than Retry in on-demand mode.
Retry	DPD retry interval	N/A	Unsigned integer. Value range: 2 to 60, in seconds.	N/A
MatchVRF	VPN instance for the IKEv2 profile	Data structure	Members include: <ul style="list-style-type: none"> <li>• MatchVrfType</li> <li>• VRFName</li> </ul>	N/A
MatchVrfType	Network type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—Any.</li> <li>• 2—Specific VPN instance.</li> </ul>	N/A
VRFName	VPN instance name	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A
AAAAAuthorization	AAA authorization	N/A	Members include: <ul style="list-style-type: none"> <li>• Domain</li> <li>• UserName</li> </ul>	N/A
Domain	ISP domain used for requesting authorization attributes	N/A	String, case-insensitive. Length: 1 to 255 characters.	Domain name must not contain / \   " : * ? < > @, and must not be d, de, def, defa, defau, default, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknown, if-unknown.
UserName	Username used for requesting authorization attributes	N/A	String, case-sensitive. Length: 1 to 55 characters.	User name must not contain \   / : * ? < > @, and must not be a, al, all.

# IKEv2/MatchRemoteIpv4Address

This table contains match remote identity information (IPv4 address) of IKEv2 profiles.

## XML structure

```
<IKEv2>
  <MatchRemoteIpv4Address>
    <RemoteID>
      <Profile></Profile>
      <Ipv4Address></Ipv4Address>
      <Ipv4Mask></Ipv4Mask>
    </RemoteID>
  </MatchRemoteIpv4Address>
</IKEv2>
```

## Table description

Item	Description
Feature name	IKEv2
Table name	MatchRemoteIpv4Address
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	IPv4 address used as the remote identity	Index	String, dotted decimal notation.	Example: 1.1.1.1.
Ipv4Mask	Mask of the IPv4 address	Index	Mask: String, dotted decimal notation.	Mask example: 255.255.0.0.

# IKEv2/MatchRemoteIpv6Address

This table contains match remote identity information (IPv6 address) of IKEv2 profiles.

## XML structure

```
<IKEv2>
```

```

<MatchRemoteIpv6Address>
  <RemoteID>
    <Profile></Profile>
    <Ipv6Address></Ipv6Address>
    <Ipv6PrefixLength></Ipv6PrefixLength>
  </RemoteID>
</MatchRemoteIpv6Address>
</IKEv2>

```

## Table description

Item	Description
Feature name	IKEv2
Table name	MatchRemoteIpv6Address
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
Ipv6Address	IPv6 address used as the remote identity	Index	Hexadecimal string, colon-separated.	Example: 1:2:3:4:5:6:7:8.
Ipv6PrefixLength	The prefix length of IPv6 address	Index	Unsigned integer. Value range: 0 to 128.	N/A

## IKEv2/MatchRemoteIpv4Range

This table contains match remote identity information (IPv4 address range) of IKEv2 profiles.

## XML structure

```

<IKEv2>
  <MatchRemoteIpv4Range>
    <RemoteID>
      <Profile></Profile>
      <BeginIpv4Address></BeginIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </RemoteID>
  </MatchRemoteIpv4Range>
</IKEv2>

```

## Table description

Item	Description
Feature name	IKEv2
Table name	MatchRemoteIpv4Range
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
BeginIpv4Address	Start IPv4 address	Index	String, dotted decimal notation.	Example: 1.1.1.1.
EndIpv4Address	End IPv4 address	Index	String, dotted decimal notation.	Example: 1.1.1.2. The end address must be higher than the start address.

## IKEv2/MatchRemoteIpv6Range

This table contains match remote identity information (IPv6 address range) of IKEv2 profiles.

## XML structure

```
<IKEv2>
  <MatchRemoteIpv6Range>
    <RemoteID>
      <Profile></Profile>
      <BeginIpv6Address></BeginIpv6Address>
      <EndIpv6Address></EndIpv6Address>
    </RemoteID>
  </MatchRemoteIpv6Range>
</IKEv2>
```

## Table description

Item	Description
Feature name	IKEv2
Table name	MatchRemoteIpv6Range

Item	Description
Table type	Multi-instance table
Row name	RemoteID
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
BeginIpv6Address	Start IPv6 address	Index	Hexadecimal string, colon-separated.	Example: 1:2:3:4:5:6:7:8.
EndIpv6Address	End IPv6 address	Index	Hexadecimal string, colon-separated.	Example: 1:2:3:4:5:6:7:9. The end address must be higher than the start address.

## IKEv2/ProfileMatchRemotePeer

This table contains match remote identity information (FQDN, email address, or key ID of the peer) of IKEv2 profiles.

## XML structure

```

<IKEv2>
  <ProfileMatchRemotePeer>
    <MatchRemotePeer>
      <Profile></Profile>
      <PeerType></PeerType>
      <PeerName></PeerName>
    </MatchRemotePeer>
  </ProfileMatchRemotePeer>
</IKEv2>

```

## Table description

Item	Description
Feature name	IKEv2
Table name	ProfileMatchRemotePeer
Table type	Multi-instance table
Row name	MatchRemotePeer
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of IKEv2 profile	Index	String, case insensitive. Length:1 to 63 characters.	N/A
PeerType	peer Type	Index	Enumeration: <ul style="list-style-type: none"><li>1—fqdn</li><li>2—email</li><li>3—key-id</li></ul>	N/A
PeerName	peer ID for IKEv2 profile	Index	String: Length:1 to 255 characters.	N/A

## IKEv2/ProfileMatchLocalIpAddress

This table contains match local IP address information of IKEv2 profiles.

## XML structure

```
<IKEv2>
  <ProfileMatchLocalIpAddress>
    <MatchLocalIpAddress>
      <Profile></Profile>
      <IPType></IPType>
      <Address></Address>
    </MatchLocalIpAddress>
  </ProfileMatchLocalIpAddress>
</IKEv2>
```

## Table description

Item	Description
Feature name	IKEv2
Table name	ProfileMatchLocalIpAddress
Table type	Multi-instance table
Row name	MatchLocalIpAddress
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IPType	IP address type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4 address</li> <li>2—IPv6 address</li> </ul>	N/A
Address	IP address of a local interface	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.

## IKEv2/ProfileMatchLocalInterfaces

This table displays match local interfaces information of IKEv2 profiles.

### XML structure

```

<IKEv2>
  <ProfileMatchLocalInterfaces>
    <MatchLocalInterface>
      <Profile></Profile>
      <IfIndex></IfIndex>
    </MatchLocalInterface>
  </ProfileMatchLocalInterfaces>
</IKEv2>

```

### Table description

Item	Description
Feature name	IKEv2
Table name	ProfileMatchLocalInterfaces
Table type	Multi-instance table
Row name	MatchLocalInterface
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Profile	Name of the IKEv2 profile	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IfIndex	Interface index	Index	Unsigned integer.	N/A

# IKEv2/Policies

This table contains IKEv2 policy information.

## XML structure

```
<IKEv2>
  <Policies>
    <Policy>
      <Name></Name>
      <Priority></Priority>
      <ProposalList>
        <ProposalItem></ProposalItem>
      </ProposalList>
      <MatchVRF>
        <MatchVRFTYPE></MatchVRFTYPE>
        <VRFName></VRFName>
      </MatchVRF>
    </Policy>
  </Policies>
</IKEv2>
```

## Table description

Item	Description
Feature name	IKEv2
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the IKEv2 policy	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
Priority	Priority for the IKEv2 policy	N/A	Unsigned integer. Value range: 1 to 65535	N/A
ProposalList	IKEv2 proposal list for the IKEv2 policy	Data structure	Members include: <ul style="list-style-type: none"><li>ProposalItem</li></ul>	N/A
ProposalItem	IKEv2 proposal	Data structure	String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MatchVRF	VPN instance for IKEv2 policy matching	Data structure	Members include: <ul style="list-style-type: none"> <li>MatchVrfType</li> <li>VRFName</li> </ul>	N/A
MatchVrfType	Network type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Public.</li> <li>1—Any.</li> <li>2—Specific VPN instance.</li> </ul>	N/A
VRFName	VPN instance name	N/A	String, case sensitive. Length: 1 to 31 characters.	N/A

## IKEv2/PolicyMatchLocalIpAddress

This table contains match local IP address information of IKEv2 policies.

### XML structure

```

<IKEv2>
  <PolicyMatchLocalIpAddress>
    <MatchLocalIpAddress>
      <Policy></Policy>
      <IPType></IPType>
      <IpAddress></IpAddress>
    </MatchLocalIpAddress>
  </PolicyMatchLocalIpAddress>
</IKEv2>

```

### Table description

Item	Description
Feature name	IKEv2
Table name	PolicyMatchLocalIpAddress
Table type	Multi-instance table
Row name	MatchLocalIpAddress
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Policy	Name of the IKEv2 Policy	Index	String, case insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IPType	IP address type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4 address</li> <li>2—IPv6 address</li> </ul>	N/A
IpAddress	IP address of a local interface	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.

## IKEv2/PolicyMatchLocalInterfaces

This table displays match local interface information of IKEv2 policies.

### XML structure

```

<IKEv2>
  <PolicyMatchLocalInterfaces>
    <MatchLocalInterface>
      <Policy></Policy>
      <IfIndex></IfIndex>
    </MatchLocalInterface>
  </PolicyMatchLocalInterfaces>
</IKEv2>

```

### Table description

Item	Description
Feature name	IKEv2
Table name	PolicyMatchLocalInterfaces
Table type	Multi-instance table
Row name	MatchLocalInterface
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Policy	Name of the IKEv2 policy	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IfIndex	Interface index	Index	Unsigned integer	N/A

# IKEv2/Proposals

This table contains IKEv2 proposals information.

## XML structure

```
<IKEv2>
  <Proposals>
    <Proposal>
      <Name></Name>
      <IntegrityList>
        <IntegrityItem></IntegrityItem>
      </IntegrityList>
      <EncryptionList>
        <EncryptionItem></EncryptionItem>
      </EncryptionList>
      <DhList>
        <DhItem></DhItem>
      </DhList>
      <PrfAlgList>
        <PrfAlgItem></PrfAlgItem>
      </PrfAlgList>
    </Proposal>
  </Proposals>
</IKEv2>
```

## Table description

Item	Description
Feature name	IKEv2
Table name	Proposal
Table type	Multi-instance table
Row name	Proposal
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Proposal name	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IntegrityList	Integrity protection algorithm list for the IKEv2 proposal.	Data structure	Members include: <ul style="list-style-type: none"><li>IntegrityItem</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IntegrityItem	Integrity protection algorithms	N/A	Unsigned integer	See IKEv2Capabilities table for supported authentication algorithms.
EncryptionList	Encryption algorithm list for the IKEv2 proposal	Data structure	Members include: <ul style="list-style-type: none"> <li>EncryptionItem</li> </ul>	N/A
EncryptionItem	Encryption algorithms	N/A	Unsigned integer	See IKEv2Capabilities table for supported encryption algorithms.
DhList	DH groups list for the IKEv2 proposal	Data structure	Members include: <ul style="list-style-type: none"> <li>DhItem</li> </ul>	N/A
DhItem	DH groups	N/A	Unsigned integer	See IKEv2Capabilities table for supported DH groups.
PrfAlgList	PRF algorithm list for the IKEv2 proposal	Data structure	Members include: <ul style="list-style-type: none"> <li>PrfAlgItem</li> </ul>	N/A
PrfAlgItem	PRF algorithms	N/A	Unsigned integer	See IKEv2Capabilities table for supported PRF algorithms.

## IKEv2/Keychains

This table contains IKE keychains information.

### XML structure

```

<IKEv2>
  <Keychains>
    <Keychain>
      <Name></Name>
      <Peer></Peer>
      <HostName></HostName>
      <Identity>
        <IdentityType></IdentityType>
        <StringValue></StringValue>
        <LocalIpAddress></LocalIpAddress>
      </Identity>
      <Address>
        <AddressType></AddressType>

```

```

    <IpAddress></IpAddress>
    <Ipv4Mask></Ipv4Mask>
    <Ipv6PrefixLength></Ipv6PrefixLength>
  </Address>
  <PreSharedKeyLocal>
    <KeyType></KeyType>
    <Key></Key>
  </PreSharedKeyLocal>
  <PreSharedKeyRemote>
    <KeyType></KeyType>
    <Key></Key>
  </PreSharedKeyRemote>
  <PreSharedKeySymmetric>
    <KeyType></KeyType>
    <Key></Key>
  </PreSharedKeySymmetric>
</Keychain>
</Keychains>
</IKEv2>

```

## Table description

Item	Description
Feature name	IKEv2
Table name	Keychains
Table type	Multi-instance table
Row name	Keychain
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the IKEv2 keychain	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
Peer	Name of an IKEv2 peer	Index	String. Length: 1 to 63 characters.	N/A
HostName	Host name for the IKEv2 peer	N/A	String. Length: 1 to 253 characters.	N/A
Identity	ID of the IKEv2 peer	Data structure	Members include: <ul style="list-style-type: none"> <li>IdentityType</li> <li>StringValue</li> <li>LocalIpAddress</li> <li>KeyId</li> </ul>	N/A
IdentityTyp	Identity type	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
e			<ul style="list-style-type: none"> <li>1—Ipv4Address</li> <li>2—Ipv6Address</li> <li>3—email</li> <li>4—fqdn</li> <li>5—key-id</li> </ul>	
StringValue	Identity string	N/A	String. Length: 1 to 255 characters.	N/A
LocalIpAddress	IPv4 or IPv6 address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
Address	IP address of the IKEv2 peer	Data structure	Members include: <ul style="list-style-type: none"> <li>AddressType</li> <li>IpAddress</li> <li>Ipv4Mask</li> <li>Ipv6PrefixLength</li> </ul>	N/A
AddressType	IP address type	Data structure	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4 address</li> <li>2—IPv6 address</li> </ul>	N/A
IpAddress	IPv4 or IPv6 address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
Ipv4Mask	Mask of the IPv4 address	N/A	Mask: String, dotted decimal notation.	Mask example: 255.255.0.0.
Ipv6PrefixLength	Prefix length of the IPv6 address	N/A	Unsigned integer. Value range: 0 to 128.	N/A
PreSharedKeyLocal	Preshared key for certificate signing	Data structure	Members include: <ul style="list-style-type: none"> <li>KeyType</li> <li>Key</li> </ul>	PreSharedKeyLocal and PreSharedKeySymmetric cannot both be configured.
KeyType	Type of the preshared key	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Plaintext</li> <li>2—Ciphertext</li> </ul>	N/A
Key	Value of the preshared key	N/A	String. Length: 1 to 128 characters in plain text or 1 to 201 characters in cipher text.	N/A
PreSharedKeyRemote	Preshared key for certificate authentication	Data structure	Members include: <ul style="list-style-type: none"> <li>KeyType</li> <li>Key</li> </ul>	PreSharedKeyRemote and PreSharedKeySymmetric cannot both be configured.
KeyType	Type of the preshared key	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Plaintext</li> <li>2—Ciphertext</li> </ul>	N/A
Key	Value of the	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	preshared key		Length: 1 to 128 characters in plain text or 1 to 201 characters in cipher text.	
PreSharedKeySymmetric	Symmetric preshared key for certificate signing	Data structure	Members include: <ul style="list-style-type: none"> <li>KeyType</li> <li>Key</li> </ul>	PreSharedKeySymmetric cannot be configured together with PreSharedKeyLocal or PreSharedKeyRemote.
KeyType	Type of the symmetric preshared key	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Plaintext</li> <li>2—Ciphertext</li> </ul>	N/A
Key	Value of the symmetric preshared key	N/A	String. Length: 1 to 128 characters in plain text or 1 to 201 characters in cipher text.	N/A

## IKEv2/IKEv2Capabilities

This table contains information about the algorithms supported by IKEv2.

### XML structure

```

<IKEv2>
  <IKEv2Capabilities>
    <IKEv2Capability>
      <AlgID></AlgID>
      <AlgName></AlgName>
      <AlgType></AlgType>
    </IKEv2Capability>
  </IKEv2Capabilities>
</IKEv2>

```

### Table description

## Table description

Item	Description
Feature name	IPFW
Table name	IPFWLoadSharing
Table type	Multi-instance table
Row name	LoadSharing
Restrictions	None
Support for row creation and deletion	No

## Columns for B64

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Chassis ID	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID	N/A	Unsigned integer. Value range: 0 to 7.	N/A
Type	Method for obtaining the IPv4 address	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—PACKET.</li> <li>2—FLOW.</li> <li>3—ALGORITHM</li> </ul>	N/A
AlgorithmNum	Load sharing algorithm	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 0 to 7.	
DestIp	Load sharing based on destination IP address	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
SrcIp	Load sharing based on source IP address	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
IpPro	Load sharing based on IP protocol	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
DestPort	Load sharing based on destination port	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
SrcPort	Load sharing based on destination port	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
IngressPort	Load sharing based on ingress port	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A

## Columns for B70

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Chassis ID	Index	Unsigned integer. Value range: 0 to 65535.	Global configuration if equals to 65535
Slot	Slot ID	Index	Unsigned integer. Value range: 0 to 65535.	Global configuration if equals to 65535
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	Value range is 0 to 7
Type	Method for obtaining the	Index	Enumeration:	0:Restore default

Column name	Column description	Column type	Data type and restrictions	Remarks
	IPv4 address		<ul style="list-style-type: none"> <li>• <b>0</b>—DEFAULT.</li> <li>• <b>1</b>—PACKET.</li> <li>• <b>2</b>—FLOW.</li> <li>• <b>3</b>—ALGORITHM</li> <li>• <b>4</b>—TUNNEL</li> </ul>	configuration. 1: Configuration type only 2: Can only be configured DestIp , SrcIp , IpPro , DestPort, SrcPort, IngressPort ; 3: Can only be configured AlgorithmNum, Seed, Shift 4: Can only be configured Tunnelmode
AlgorithmNum	Load sharing algorithm	N/A	Unsigned integer. Value range: 0 to 7.	Default value 4294967295, Note: it shows default value If AlgorithmNum equals to 0,
Seed	The start hash value for the load-sharing algorithm	N/A	Unsigned integer.	Default value is set by user
Shift	The offset value for the load-sharing calculation result	N/A	Unsigned integer.	Default value is set by user
DestIp	Load sharing based on destination IP address	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
SrcIp	Load sharing based on source IP address	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
IpPro	Load sharing based on IP protocol	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	
DestPort	Load sharing based on destination port	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
SrcPort	Load sharing based on destination port	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
IngressPort	Load sharing based on ingress port	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
Tunnleouter	Load sharing based on Tunnel outer	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
TunnelInner	Load sharing based on Tunnel Inner	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
TunnelAll	Load sharing based on Tunnel All	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A

## IPFW/IPFWLastHopHold

This table contains last hop holding information.

## XML structure

```

<IPFW>
  <IPFWLastHopHold>
    <LastHopHold>
      <IfIndex></IfIndex>
      <Mode></Mode>
    </LastHopHold>
  </IPFWLastHopHold>
</IPFW>

```

## Table description

Item	Description
Feature name	IPFW
Table name	IPFWLastHopHold
Table type	Multi-instance table
Row name	LastHopHold
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Mode	Enabling status of the last hop holding feature	N/A	Unsigned integer: <ul style="list-style-type: none"><li>• 1—Enabled.</li><li>• 2—Disabled.</li></ul>	N/A

## IPFW/IPFWSetService

This table contains IP service information.

## XML structure

```
<IPFW>
  <IPFWSetService>
```

```

    <DscpEnable></DscpEnable>
    <VpnPeerIdEnable></VpnPeerIdEnable>
    <MplsExpEnable></MplsExpEnable>
  </IPFWSetService>
</IPFW>

```

## Table description

Item	Description
Feature name	IPFW
Table name	IPFWSetService
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DscpEnable	Enabling status of the DSCP service	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
VpnPeerIdEnable	Enabling status of the VPN peer ID service	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
MplsExpEnable	Enabling status of the MPLS EXP service	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A

## IPFW/IPFWLastHopBackupSwitch

This table contains IP last hop backup information.

## XML structure

```
<IPFW>
  <IPFWLastHopBackupSwitch>
    <BackupEnable></BackupEnable>
  </IPFWLastHopBackupSwitch>
</IPFW>
```

## Table description

Item	Description
Feature name	IPFW
Table name	IPFWLastHopBackupSwitch
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BackupEnable	Enable last-hop Backup	N/A	Enumeration: <ul style="list-style-type: none"><li>1—Enable.</li><li>2—Disable.</li></ul>	N/A

## IPFW/IPFWTcpMss

This table contains interface TCP MSS information.

## XML structure

```
<IPFW>
  <IPFWTcpMss>
    <TcpMss>
      <IfIndex></IfIndex>
      <Num></Num>
    </TcpMss>
  </IPFWTcpMss>
</IPFW>
```

```

    </TcpMss>
  </IPFWTcpMss>
</IPFW>

```

## Table description

Item	Description
Feature name	IPFW
Table name	IPFWTcpMss
Table type	Multi-instance table
Row name	TcpMss
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	interface index	Index	Unsigned integer.	In some versions, the interface name is supported. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Num	TCP max segment size	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

## IPFW/IPFWDFSet

This table contains packet DF bit information.

## XML structure

```
<IPFW>
  <IPFWDFSet>
    <IPDFBit></IPDFBit>
  </IPFWDFSet>
</IPFW>
```

## Table description

Item	Description
Feature name	IPFW
Table name	IPFWDFSet
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPDFBit	Setting of the DF bit	N/A	Enumeration: <ul style="list-style-type: none"><li>0—DISABLE.</li><li>1—SET.</li><li>2—CLEAR.</li></ul>	N/A

## IPFW/IPFWSymmetric

This table contains IP symmetric forwarding.

## XML structure

```
<IPFW>
  <IPFWSymmetric>
    <Symmetric>
      <SymmetricMode></SymmetricMode>
    </Symmetric>
  </IPFWSymmetric>
</IPFW>
```

```

    </Symmetric>
  </IPFWSymmetric>
</IPFW>

```

## Table description

Item	Description
Feature name	IPFW
Table name	IPFWSymmetric
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Symmetric	Enabling status of the symmetric forwarding	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A

## IPFW/IPFWFwdPolicy

This table contains the forwarding policy information.

## XML structure

```

<IPFW>
  <IPFWFwdPolicy>
    <FwdPolicy></FwdPolicy>
  </IPFWFwdPolicy>
</IPFW>

```

## Table description

Item	Description
Feature name	IPFW
Table name	IPFWFwdPolicy
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
FwdPolicy	Set the current forwarding policy	N/A	Unsigned integer Value range: 1 to 4. <ul style="list-style-type: none"><li>• <b>1</b>—Per-flow forwarding policy.</li><li>• <b>2</b>—Per-packet forwarding policy.</li><li>• <b>3</b>—Three-tuple-based per-flow forwarding policy.</li><li>• <b>4</b>—Enhanced per-flow forwarding policy.</li></ul>

## IPFW/IPFWSetStatistic

This table contains interface-specific IPv4 and IPv6 statistic collection configuration.

## XML structure

```
<IPFW>
  <IPFWSetStatistic>
    <SetStatistic>
      <IfIndex></IfIndex>
      <Enable></Enable>
      <Direct></Direct>
    </SetStatistic>
  </IPFWSetStatistic>
</IPFW>
```

```

    </IPFWSetStatistic>
</IPFW>

```

## Table description

Item	Description
Feature name	IPFW
Table name	IPFWSetStatistic
Table type	Multi-instance table
Row name	SetStatistic
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer	In some versions, the interface name is supported. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Enable	Enabling status of the statistics collection	N/A	Unsigned integer <ul style="list-style-type: none"> <li>1—Enabled</li> <li>2—Disabled</li> </ul>	N/A
Direct	Traffic direction	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Inbound</li> <li>1—Outbound</li> <li>2—Both</li> </ul>	N/A

    <LoadSharingSuportSrcPort></LoadSharingSuportSrcPort>
    <LoadSharingSuportIngressPort></LoadSharingSuportIngressPort>
    <SupportLastHop></SupportLastHop>
    <SupportLastHopBackup></SupportLastHopBackup>
  </IPFWSpecification>
</IPFW>

```

## Table description

Item	Description
Feature name	IPFW
Table name	IPFWSpecification
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LoadSharingSupportFlow	Support load sharing based on flow.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
LoadSharingSupportPacket	Support load sharing based on packet.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
LoadSharingSupportSwitch	Support load sharing based on switch.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
LoadSharingSupportDestIp	Support load sharing based on destination IP address.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
LoadSharingSupportSrcIp	Support load sharing based on source IP address.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
LoadSharingSupportIpPro	Support load sharing based on IP protocol.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
LoadSharingSupportDestPort	Support load sharing based on destination port.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LoadSharingSupportSrcPort	Support load sharing based on source port.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
LoadSharingSupportIngressPort	Support load sharing based on ingress port.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
SupportLastHop	Support last hop.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
SupportLastHopBackup	Support last hop backup.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A

## IPFW/IPFWLastHopHold

This table contains last hop holding information.

## XML structure

```

<IPFW>
  <IPFWLastHopHold>
    <LastHopHold>
      <IfIndex></IfIndex>
      <Mode></Mode>
    </LastHopHold>
  </IPFWLastHopHold>
</IPFW>

```

## Table description

Item	Description
Feature name	IPFW
Table name	IPFWLastHopHold
Table type	Multi-instance table
Row name	LastHopHold

Item	Description
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Mode	Enabling status of the last hop holding feature	N/A	Unsigned integer: <ul style="list-style-type: none"> <li>1—Enabled.</li> <li>2—Disabled.</li> </ul>	N/A

## IPFW/IPFWSetService

This table contains IP service information.

## XML structure

```

<IPFW>
  <IPFWSetService>

## IPoE/IPoEv4ResetAccessUser

This table contains resetting the IPoEv4 access user.

### XML structure

```
<IPoE>
  <IPoEv4ResetAccessUser>
    <ResetAccessUser>
      <Interface></Interface>
      <IPv4Address></IPv4Address>
    </ResetAccessUser>
  </IPoEv4ResetAccessUser>
</IPoE>
```

### Table description

Item	Description
Feature name	IPoE
Table name	IPoEv4ResetAccessUser
Table type	Multi-instance table
Row name	ResetAccessUser
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Interface	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
IPv4Address	IPv4 address.	Index	String, dotted decimal notation.	N/A

# IPoE/IPoEv6ResetAccessUser

This table contains resetting the IPoEv6 access user.

## XML structure

```
<IPoE>
  <IPoEv6ResetAccessUser>
    <ResetAccessUser>
      <Interface></Interface>
      <IPv6Address></IPv6Address>
    </ResetAccessUser>
  </IPoEv6ResetAccessUser>
</IPoE>
```

## Table description

Item	Description

# IPoE

## IPoE/IPoESessionTotalStatistics

This table contains IPoE total session statistics accessed by bind authentication method.

### XML structure

```
<IPoE>
  <IPoESessionTotalStatistics>
    <SessionTotalStatistics>
      <IpType></IpType>
      <TotalNum></TotalNum>
      <InitNum></InitNum>
      <AuthingNum></AuthingNum>
      <AuthfailNum></AuthfailNum>
      <AuthpassNum></AuthpassNum>
      <AssignIPNum></AssignIPNum>
      <OnlineNum></OnlineNum>
      <BackupNum></BackupNum>
    </SessionTotalStatistics>
  </IPoESessionTotalStatistics>
</IPoE>
```

### Table description

Item	Description
Feature name	IPoE
Table name	IPoESessionTotalStatistics
Table type	Multi-instance table
Row name	SessionTotalStatistics
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IpType	Protocol type.	Index	Enumeration: <ul style="list-style-type: none"><li>• 0—IPv4</li><li>• 1—IPv6</li></ul>	IPv4 or IPv6
TotalNum	Total number of users.	N/A	Unsigned integer.	N/A
InitNum	Number of users who initiated	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	sessions.			
AuthingNum	Number of users being authenticated.	N/A	Unsigned integer.	N/A
AuthfailNum	Number of users who failed authentication.	N/A	Unsigned integer.	N/A
AuthpassNum	Number of users who passed authentication.	N/A	Unsigned integer.	N/A
AssignIPNum	Number of users who have IP addresses.	N/A	Unsigned integer.	N/A
OnlineNum	Number of online users.	N/A	Unsigned integer.	N/A
BackupNum	Number of users whose information was backed up.	N/A	Unsigned integer.	N/A

## IPoE/IPoEWebSessionTotalStatistics

This table contains IPoE total session statistics accessed by web authentication method.

### XML structure

```

<IPoE>
  <IPoEWebSessionTotalStatistics>
    <WebSessionTotalStatistics>
      <IpType></IpType>
      <AuthPhase></AuthPhase>

	authentication.			
AssignIPNum	Number of users who have IP addresses.	N/A	Unsigned integer.	N/A
OnlineNum	Number of online users.	N/A	Unsigned integer.	N/A

## IPoE/IPoEv4ShowWhiteList

This table contains displaying the IPv4 IPoE whitelist.

### XML structure

```

<IPoE>
  <IPoEv4ShowWhiteList>
    <ShowWhiteList>
      <Interface></Interface>
      <IPv4Address></IPv4Address>
      <Mask></Mask>
      <MACAddress></MACAddress>
      <ServiceVLAN></ServiceVLAN>
      <CustomerVLAN></CustomerVLAN>
      <LoginTime></LoginTime>
      <OnlineTime></OnlineTime>
      <Description></Description>
    </ShowWhiteList>
  </IPoEv4ShowWhiteList>
</IPoE>

```

### Table description

Item	Description
Feature name	IPoE
Table name	IPoEv4ShowWhiteList
Table type	Multi-instance table
Row name	ShowWhiteList
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Interface	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
IPv4Address	IPv4 address.	Index	String, dotted decimal notation.	N/A
Mask	Mask.	Index	Unsigned integer 1 to 32	Currently fixed to value 32
MACAddress	MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
ServiceVLAN	Service provider VLAN.	N/A	Unsigned short.	N/A
CustomerVLAN	Customer VLAN.	N/A	Unsigned short.	N/A
LoginTime	User login time.	N/A	DateTime.	Example: YYYY-MM-DDT hh:mm:ss This function is not supported in data plane mode.
OnlineTime	User online duration.	N/A	String. Length: 1 to 8 characters.	Example: hh:mm:ss 00:00:06
Description	Description for the user.	N/A	String. Length: 1 to 31 characters.	This function is not supported in data plane mode.

## IPoE/IPoEv6ShowWhiteList

This table contains displaying the IPv6 IPoE whitelist.

## XML structure

```

<IPoE>
  <IPoEv6ShowWhiteList>
    <ShowWhiteList>
      <Interface></Interface>
    
```

```

    <IPv6Address></IPv6Address>
    <Mask></Mask>
    <MACAddress></MACAddress>
    <ServiceVLAN></ServiceVLAN>
    <CustomerVLAN></CustomerVLAN>
    <LoginTime></LoginTime>
    <OnlineTime></OnlineTime>
    <Description></Description>
  </ShowWhiteList>
</IPoEv6ShowWhiteList>
</IPoE>

```

## Table description

Item	Description
Feature name	IPoE
Table name	IPoEv6ShowWhiteList
Table type	Multi-instance table
Row name	ShowWhiteList
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Interface	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
IPv6Address	IPv6 address.	Index	Hexadecimal string, colon-separated.	N/A
Mask	Mask.	Index	Unsigned integer 1 to 128	Currently fixed to value 128
MACAddress	MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
ServiceVLAN	Service provider VLAN.	N/A	Unsigned short.	N/A
CustomerVLAN	Customer VLAN.	N/A	Unsigned short.	N/A
LoginTime	User online duration.	N/A	DateTime.	Example: YYYY-MM-DDT

Column name	Column description	Column type	Data type and restrictions	Remarks
				hh:mm:ss This function is not supported in data plane mode.
OnlineTime	User online time.	N/A	String. Length: 1 to 8 characters.	Example: hh:mm:ss 00:00:06
Description	Description for the user.	N/A	String. Length: 1 to 31 characters.	N/A

## IPoE/IFConfig

This table contains the information about using IPoE interface config.

### XML structure

```

<IPoE>
  <IFConfig>
    <Config>
      <IPType></IPType>
      <Interface></Interface>
      <IPoEMode></IPoEMode>
      <Unclassified></Unclassified>
      <WhiteList></WhiteList>
    </Config>
  </IFConfig>
</IPoE>

```

### Table description

Item	Description
Feature name	IPoE
Table name	IFConfig
Table type	Multi-instance table
Row name	Config
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPType	IP type.	Index	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4.</li> <li>2—IPv6.</li> </ul>	N/A
Interface	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
IPoEMode	IPoE mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—L2-Connected.</li> <li>2—Routed.</li> </ul>	N/A
Unclassified	Unknown source packet triggers the generation of an IPoE session..	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
WhiteList	Enable whitelist.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A

## IPoE/IPoEAccessLog

This table contains the information about using IPoE access log.

### XML structure

```

<IPoE>
  <IPoEAccessLog>
    <AccessLog>
      <IPType></IPType>
      <AbnormalLogout></AbnormalLogout>
      <NormalLogout></NormalLogout>
      <FailedLogin></FailedLogin>
      <SuccessfulLogin></SuccessfulLogin>
    </AccessLog>
  </IPoEAccessLog>
</IPoE>

```

### Table description

Item	Description
Feature name	IPoE

Table name	IPoEAccessLog
Table type	Multi-instance table
Row name	AccessLog
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPType	IP type.	Index	Enumeration: • 1—IPv4. • 2—IPv6.	N/A
AbnormalLogout	Abnormal logout.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
NormalLogout	Normal logout.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
FailedLogin	Failed login.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
SuccessfulLogin	Successful login.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A

## IPoE/IPoEv4WhiteList

This table contains the information about using IPoEv4 whitelist.

## XML structure

```

<IPoE>
  <IPoEv4WhiteList>
    <WhiteList>
      <Interface></Interface>
      <IPv4Address></IPv4Address>
      <IPv4Mask></IPv4Mask>
      <DomainName></DomainName>
      <Description></Description>
    </WhiteList>
  </IPoEv4WhiteList>
</IPoE>

```

## Table description

Item	Description
Feature name	IPoE
Table name	IPoEv4WhiteList

## IPS/ImportSnortSignatures

This table contains information about importing IPS rules in the snort format.

### XML structure

```
<IPS>
  <ImportSnortSignatures>
    <URL></URL>
    <Location></Location>
  </ImportSnortSignatures>
</IPS>
```

### Table description

Item	Description
Feature name	IPS
Table name	ImportSnortSignatures
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	URL of the imported signature file.	N/A	String, case-insensitive When the file is remote, Length: 1 to 255 characters. When the file is local, Length: 1 to 127 characters.	URL
Location	Location of the file.	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—Local</li><li>• 1—remote</li></ul>	If Location is set to 0, the device deletes the snort file after the snort file import is complete.

## IPS/SignatureManualUpgrade

This table contains information about IPS signature manual upgrade.

## XML structure

```
<IPS>
  <SignatureManualUpgrade>
    <URL></URL>
    <Location></Location>
  </SignatureManualUpgrade>
</IPS>
```

## Table description

Item	Description
Feature name	IPS
Table name	SignatureManualUpgrade
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	URL of the upgrade signature file.	N/A	String, case-insensitive For a remote file, Length: 1 to 255 characters. For a local file, Length: 1 to 127 characters.	URL
Location	Location of the file.	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—Local</li><li>• 1—remote</li></ul>	If Location is set to 0, the device deletes the signature file when the signature library update is completed.

## IPS/SignatureAutoUpgradeNow

This table contains information about immediate IPS signature auto upgrading.

## XML structure

```
<IPS>
  <SignatureAutoUpgradeNow>
    <AutoUpgradeNow></AutoUpgradeNow>
  </SignatureAutoUpgradeNow>
</IPS>
```

## Table description

Item	Description
Feature name	IPS
Table name	SignatureAutoUpgradeNow
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AutoUpgradeNow	Immediate auto upgrade	N/A	This column must be empty.	N/A

## IPS/SignatureRollback

This table contains information about IPS signatures rollback.

## XML structure

```
<IPS>
  <SignatureRollback>
    <Rollback></Rollback>
  </SignatureRollback>
</IPS>
```

## Table description

Item	Description
Feature name	IPS
Table name	SignatureRollback
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Rollback	Rollback to a specific version	N/A	Boolean: <ul style="list-style-type: none"><li>• true: Rollback to last version</li><li>• false: Rollback to the original version</li></ul>	N/A

## IPS/UnloadSnortSignatures

This table contains information about removing IPS user-defined rules.

### XML structure

```
<IPS>
  <UnloadSnortSignatures>
    <Unload></Unload>
  </UnloadSnortSignatures>
</IPS>
```

### Table description

Item	Description
Feature name	IPS
Table name	UnloadSnortSignatures
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Unload	Remove user-defined rule	N/A	This column must be empty	N/A

# IPS

## IPS/Policies

This table contains IPS policy information.

### XML structure

```
<IPS>
  <Policies>
    <Policy>
      <Name></Name>
      <FilterDirection></FilterDirection>
      <FilterSeverity></FilterSeverity>
      <FilterAction></FilterAction>
      <ProtectionList>
        <ProtectionId></ProtectionId>
        <SubProtectionId></SubProtectionId>
      </ProtectionList>
      <CategoryList>
        <CategoryId></CategoryId>
        <SubCategoryId></SubCategoryId>
      </CategoryList>
      <Action></Action>
      <Logging></Logging>
      <Capture></Capture>
    </Policy>
  </Policies>
</IPS>
```

### Table description

Item	Description
Feature name	IPS
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the IPS policy	Index	String, case-insensitive. Length: 1 to 63 characters.	The value cannot be <b>default</b>
FilterDirection	Traffic direction to which the IPS signature applies	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Client to server.</li> <li>1—Server to client.</li> <li>2—Both.</li> </ul>	N/A
FilterSeverity	Severity level of the IPS signature	N/A	Unsigned integer <ul style="list-style-type: none"> <li>1—Low.</li> <li>2—Medium.</li> <li>4—High.</li> <li>8—Critical.</li> </ul>	To specify multiple severity levels, set the value to the sum of the severity level IDs. For example, set the value to 3 to specify severity levels low (1) and medium (2.).
FilterAction	Default action of the IPS signature	N/A	Unsigned integer <ul style="list-style-type: none"> <li>1—Block.</li> <li>2—Drop.</li> <li>4—Permit.</li> <li>8—Reset.</li> </ul>	To specify multiple actions, set the value to the sum of the action IDs. For example, set the value to 3 to specify actions block (1) and drop (2).
ProtectionList	List of protected targets	Data structure	Members include: <ul style="list-style-type: none"> <li>ProtectionId.</li> <li>SubProtectionId.</li> </ul>	N/A
ProtectionId	ID of the protected target	N/A	Unsigned integer.	A protected target list can contain an unlimited number of protected targets obtained from the IPS signature file.
SubProtectionId	ID of the protected subtarget	N/A	Unsigned integer.	A protected target list can contain an unlimited number of subtargets.
CategoryList	List of attack categories	Data structure	Members include: <ul style="list-style-type: none"> <li>CategoryId.</li> <li>SubCategoryId.</li> </ul>	N/A
CategoryId	ID of the attack category	N/A	Unsigned integer.	An attack category list can contain an unlimited number of attack categories.
SubCategoryId	ID of the Subcategory	N/A	Unsigned integer.	An attack category can contain an unlimited number of subcategories obtained from the IPS signature file.
Action	Action applied to matching packets.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Block.</li> <li>1—Drop.</li> <li>2—Permit.</li> <li>3—Reset.</li> <li>4—Redirect.</li> <li>5—Default.</li> </ul>	N/A
Logging	Whether or not to	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	log the matching packets		<ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	
Capture	Whether or not to capture the matching packets	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	N/A

## IPS/PolicyOnProfile

This table contains information about the IPS policy applied to a DPI application profile.

### XML structure

```

<IPS>
  <PolicyOnProfile>
    <profile>
      <ProfileName></ProfileName>
      <PolicyName></PolicyName>
    </profile>
  </PolicyOnProfile>
</IPS>

```

### Table description

Item	Description
Feature name	IPS
Table name	PolicyOnProfile
Table type	Multi-instance table
Row name	profile
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Name of the DPI application profile	Index	String, case-insensitive. Length: 1 to 100 characters.	N/A
PolicyName	Name of the IPS policy applied to the DPI application profile	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

# IPS/PolicyExceptionSigs

This table contains information about exception signatures in an IPS policy..

## XML structure

```
<IPS>
  <PolicyExceptionSigs>
    <PolicyExceptionSig>
      <PolicyName></PolicyName>
      <Userdefined></Userdefined>
      <SigID></SigID>
      <Enabled></Enabled>
      <Action></Action>
      <Logging></Logging>
      <Capture></Capture>
    </PolicyExceptionSig>
  </PolicyExceptionSigs>
</IPS>
```

## Table description

Item	Description
Feature name	IPS
Table name	PolicyExceptionSigs
Table type	Multi-instance table
Row name	PolicyExceptionSig
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the IPS policy	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Userdefined	Whether or not the IPS signature is user defined	Index	Boolean: <ul style="list-style-type: none"><li>true.</li><li>false.</li></ul>	N/A
SigID	ID of the IPS signature	Index	Unsigned integer. Value range: 1 to 4294967295.	The value is obtained from the IPS signature file.
Enabled	Whether or not the IPS signature is enabled	N/A	Boolean: <ul style="list-style-type: none"><li>true.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>false.</li> </ul>	
Action	Action to take on packets matching the IPS signature	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Block.</li> <li>1—Drop.</li> <li>2—Permit.</li> <li>3—Reset.</li> <li>4—Redirect.</li> <li>5—Default.</li> </ul>	N/A
Logging	Whether or not to log the matching packets	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	N/A
Capture	Whether or not to capture the matching packets	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	N/A

## IPS/SignatureAutoUpgrade

This table contains IPS signature library auto update settings.

### XML structure

```

<IPS>
  <SignatureAutoUpgrade>
    <Enabled></Enabled>
    <StartTime></StartTime>
    <Type></Type>
    <Day></Day>
  </SignatureAutoUpgrade>
</IPS>

```

### Table description

Item	Description
Feature name	IPS
Table name	SignatureAutoUpgrade
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enabled	Whether or not IPS signature library auto update is enabled	N/A	Boolean: <ul style="list-style-type: none"><li>true.</li><li>false (default).</li></ul>	N/A
StartTime	Time when IPS signature library auto update starts	N/A	Time Format: HH:MM:SS	By default, IPS signature library auto update starts at 02:00:00 every day.
Type	Whether IPS signature library auto update occurs on a daily or a weekly basis	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Weekly.</li><li>1—Daily.</li></ul>	By default, IPS signature library auto update occurs on a daily basis.
Day	Days of the week on which IPS signature library auto update occurs	N/A	Unsigned integer. Value range: 0 to 6.	This column is displayed only <b>Type</b> is set to 0.

## IPS/ActionDefaultParameters

This table contains IPS action parameter settings.

## XML structure

```
<IPS>
  <ActionDefaultParameters>
    <ActionDefaultParameter>
      <Action></Action>
      <ParameterName></ParameterName>
    </ActionDefaultParameter>
  </ActionDefaultParameters>
</IPS>
```

## Table description

Item	Description
Feature name	IPS
Table name	ActionDefaultParameters
Table type	Multi-instance table
Row name	ActionDefaultParameter
Restrictions	None

Support for row creation and deletion	No
---------------------------------------	----

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Action	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Block.</li> <li>2—Capture.</li> <li>3—Logging.</li> <li>4—Redirect.</li> <li>5—Mail.</li> </ul>	N/A
ParameterName	Parameter name	N/A	String, case-insensitive. Length: 1 to 63 characters.	The IPS action parameters are defined in the DIM module.

## IPS/UpdateLoggingDaily

This table contains daily sending settings for IPS signature library update logging.

## XML structure

```

<IPS>
  <UpdateLoggingDaily>
    <StartTime></StartTime>
  </UpdateLoggingDaily>
</IPS>

```

## Table description

Item	Description
Feature name	IPS
Table name	UpdateLoggingDaily
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StartTime	Time to send IPS	N/A	Time	By default, IPS sends fastlog at 02:00:00

Column name	Column description	Column type	Data type and restrictions	Remarks
	fastlog every day		Format: HH:MM:SS	every day.

Column name	Column description	Column type	Data type and restrictions	Remarks
				signature file.
PublishTime	Time when the signature was published	N/A	String, case-insensitive. Length: 1 to 11 characters. Format: YYYY-MM-DD.	The value is obtained from the IPS signature file.
UpdateTime	Time when the signature was last updated	N/A	String: case-insensitive. Length: 1 to 11 characters. Format: YYYY-MM-DD.	The value is obtained from the IPS signature file.
Protection	Protected target of the signature	N/A	String, case-insensitive. Length: 1 to 63 characters.	The value is obtained from the IPS signature file.
SubProtection	Protected subtarget of the signature	N/A	String, case-insensitive. Length: 1 to 63 characters.	The value is obtained from the IPS signature file.
Severity	Severity level of the signature	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Critical.</li> <li>2—High.</li> <li>3—Medium.</li> <li>4—Low.</li> </ul>	The value is obtained from the IPS signature file.
Direction	Traffic direction to which the signature is applied	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Client to server.</li> <li>1—Server to client.</li> <li>2—Both.</li> </ul>	The value is obtained from the IPS signature file.
Category	Attack category of the signature	N/A	String, case-insensitive. Length: 1 to 63 characters.	The value is obtained from the IPS signature file.
CVEList	CVE list	Data structure	Members include: <ul style="list-style-type: none"> <li>CVE.</li> </ul>	N/A
CVE	CVE ID of the signature	N/A	String, case-insensitive. Length: 1 to 31 characters.	The value is obtained from the IPS signature file.
BIDList	BID list	Data structure	Members include: <ul style="list-style-type: none"> <li>BID.</li> </ul>	N/A
BID	BID of the signature	N/A	String, case-insensitive. Length: 1 to 31 characters.	The value is obtained from the IPS signature file.
MSList	MS list	Data structure	Members include: <ul style="list-style-type: none"> <li>MS.</li> </ul>	N/A
MS	MS of the signature	N/A	String, case-insensitive. Length: 1 to 31 characters.	The value is obtained from the IPS signature file.
Enabled	Whether or not the IPS signature is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	N/A
Action	Action to take on packets matching the IPS signature	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Block.</li> <li>1—Drop.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>2—Permit.</li> <li>3—Reset.</li> <li>4—Redirect.</li> </ul>	
Logging	Whether or not to log the matching packets	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	N/A
Capture	Whether or not to capture the matching packets	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	N/A
Solution	Solution to the attack	N/A	String, case-insensitive. Length: 1 to 511 characters.	The value is obtained from the IPS signature file.
AttackFunction	Subcategory of the signature	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A

## IPS/SignatureFileInfos

This table contains IPS signature file information.

### XML structure

```

<IPS>
  <SignatureFileInfos>
    <FileInfo>
      <FileStatus></FileStatus>
      <Version></Version>
      <PublishedTime></PublishedTime>
      <Description></Description>
    </FileInfo>
  </SignatureFileInfos>
</IPS>

```

### Table description

Item	Description
Feature name	IPS
Table name	SignatureFileInfos
Table type	MultiSingle-instance table
Row name	FileInfo
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileStatus	Status of the IPS signature file	Index	Enumeration: <ul style="list-style-type: none"><li>1—Current.</li><li>2—Last.</li><li>3—Factory (default).</li></ul>	N/A
Version	Version of the IPS signature file	N/A	String, case-insensitive. Length: 1 to 31 characters.	Example: 1.0.36.
PublishedTime	Time when the signature file was published	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	The local time zone is used.
Description	Description of the IPS signature file	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A

## IPS/SignatureAutoUpgrade

This table contains IPS signature library auto update settings.

## XML structure

```
<IPS>
  <SignatureAutoUpgrade>
    <Enabled></Enabled>
    <StartTime></StartTime>
    <Type></Type>
    <Day></Day>
  </SignatureAutoUpgrade>
</IPS>
```

## Table description

Item	Description
Feature name	IPS
Table name	SignatureAutoUpgrade
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enabled	Whether or not IPS signature library auto update is enabled	N/A	Boolean: <ul style="list-style-type: none"><li>true.</li><li>false (default).</li></ul>	N/A
StartTime	Time when IPS signature library auto update starts	N/A	Time. Format: HH:MM:SS.	By default, IPS signature library auto update starts at 02:00:00 every day.
Type	Whether IPS signature library auto update occurs on a daily or a weekly basis	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Weekly.</li><li>1—Daily.</li></ul>	By default, IPS signature library auto update occurs on a daily basis.
Day	Days of the week on which IPS signature library auto update occurs	N/A	Unsigned integer. Value range: 0 to 6.	This column is displayed only <b>Type</b> is set to <b>0</b> .

## IPS/SignatureUpgradePercentage

This table contains the IPS signature library update progress information.

## XML structure

```
<IPS>
  <SignatureUpgradePercentage>
    <Percentage></Percentage>
  </SignatureUpgradePercentage>
</IPS>
```

## Table description

Item	Description
Feature name	IPS
Table name	SignatureUpgradePercentage
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Percentage	Progress of the signature library update operation, in percentages.	N/A	Unsigned integer. Value range: 0 to 100.	Any value outside the valid range indicates that an error has occurred.

## IPS/ActionDefaultParameters

This table contains IPS action parameter settings.

## XML structure

```
<IPS>
  <ActionDefaultParameters>
    <ActionDefaultParameter>
      <Action></Action>
      <ParameterName></ParameterName>
    </ActionDefaultParameter>
  </ActionDefaultParameters>
</IPS>
```

## Table description

Item	Description
Feature name	IPS
Table name	ActionDefaultParameters
Table type	MultiSingle-instance table
Row name	ActionDefaultParameter
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Action	Index	Enumeration: <ul style="list-style-type: none"><li>• 1—Block.</li><li>• 2—Capture.</li><li>• 3—Logging.</li><li>• 4—Redirect.</li><li>• 5—Mail.</li></ul>	N/A
ParameterNa	Parameter name	N/A	String, case-insensitive.	The IPS action

Column name	Column description	Column type	Data type and restrictions	Remarks
me			Length: 1 to 63 characters.	parameters are defined in the DIM module.

## IPS/SignaturePages

This table contains information about IPS signatures displayed on paginated lists.

### XML structure

```

<IPS>
  <SignaturePages>
    <SignaturePage>
      <UserID></UserID>
      <Position></Position>
      <TotalCount></TotalCount>
      <SigID></SigID>
      <SigName></SigName>

      <Solution></Solution>
      <AttackFunction></AttackFunction>
    </SignaturePage>
  </SignaturePages>
</IPS>

```

## Table description

Item	Description
Feature name	IPS
Table name	SignaturePages
Table type	MultiSingle-instance table
Row name	SignaturePage
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserID	ID of the current user	Index	Unsigned integer.	N/A
Position	Position of the signature on the entire signature list.	Index	Unsigned integer.	N/A
TotalCount	Total number of signatures	N/A	Unsigned integer.	If the query function is used, the total number of signatures in the query results is displayed.
SigID	ID of the signature	Index	Unsigned integer. Value range: 1 to 536870910.	The value is obtained from the IPS signature file.
SigName	Name of the signature	N/A	String: case-insensitive. Length: 1 to 127 characters.	The value is obtained from the IPS signature file.
SigDescription	Description of the signature	N/A	String: case-insensitive. Length: 1 to 1023 characters.	The value is obtained from the IPS signature file.
PublishTime	Time when the signature was published	N/A	String: case-insensitive. Length: 1 to 11 characters. Format: YYYY-MM-DD.	The value is obtained from the IPS signature file.
UpdateTime	Time when the signature was last updated	N/A	String: case-insensitive. Length: 1 to 11 characters. Format: YYYY-MM-DD.	The value is obtained from the IPS signature file.
Protection	Protected target of the signature	N/A	String: case-insensitive. Length: 1 to 63 characters.	The value is obtained from the IPS signature file.
SubProtection	Protected subtarget	N/A	String: case-insensitive. Length: 1 to 63 characters.	The value is obtained from the IPS signature file.
Severity	Severity level of the signature	N/A	Enumeration: • 1—Critical.	The value is obtained from the IPS

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>• 2—High.</li> <li>• 3—Medium.</li> <li>• 4—Low.</li> </ul>	signature file.
Direction	Traffic direction to which the signature is applied	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—Client to server.</li> <li>• 1—Server to client.</li> <li>• 2—Both.</li> </ul>	The value is obtained from the IPS signature file.
Category	Attack category of the signature	N/A	String: case-insensitive. Length: 1 to 63 characters.	The value is obtained from the IPS signature file.
CVEList	CVE List	Data structure	Members include: <ul style="list-style-type: none"> <li>• CVE.</li> </ul>	N/A
CVE	CVE-ID of the signature	N/A	String: case-insensitive. Length: 1 to 31 characters.	The value is obtained from the IPS signature file.
BIDList	BID list	Data structure	Members include: <ul style="list-style-type: none"> <li>• BID.</li> </ul>	N/A
BID	BID of the signature	N/A	String: case-insensitive. Length: 1 to 31 characters.	The value is obtained from the IPS signature file.
MSList	MS list	Data structure	Members include: <ul style="list-style-type: none"> <li>• MS.</li> </ul>	N/A
MS	MS of the signature	N/A	String: case-insensitive. Length: 1 to 31 characters.	The value is obtained from the IPS signature file.
Enabled	Whether or not the signature is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>• true.</li> <li>• false.</li> </ul>	N/A

## IPS/SignatureManualUpgrade

Message	Explanation
Operation failed because no valid license could be found. 操作失败：没有找到有效的license。	When manual updating of the signature library fails because there is no license. 手动升级特征库时，没有license，升级失败。
The signature file is updating. Please try later. 特征库正在升级，请稍后再试。	The signature library is being updated. You can perform another update when this update is completed. 还有特征库正在升级，需等升级处理完才可以进行下一次升级。
Cannot perform this operation because of memory alert. 由于内存门限不能执行此操作。	The device is in the memory threshold state and cannot be upgraded. 设备此时处于内存门限状态，不能进行升级
Operation failed because not enough storage space was available. 操作失败：设备空间不足。	Upgrade failure due to insufficient storage space for devices. 由于设备的存储空间不足，导致升级失败。
Operation failed because not enough memory was available. 操作失败：设备内存不足。	The upgrade fails due to insufficient memory on the devices. 由于设备的内存不足，导致升级失败。

## IPS/SignatureAutoUpgradeNow

Message	Explanation
Operation failed because no valid license could be found. 操作失败：没有找到有效的license。	When manual updating of the signature library fails because there is no license. 手动升级特征库时，没有license，升级失败。
The signature file is updating. Please try later. 特征库正在升级，请稍后再试。	The signature library is being updated. You can perform another update when this update is completed. 还有特征库正在升级，需等升级处理完才可以进行下一次升级。
The signature version is up to date. No update is needed. 特征库已是最新版本，不需要进行升级。	Automatic upgrade is to upgrade the signature library to the latest version released on the official website. If it is the latest version, no upgrade is needed. 自动升级是将特征库升级到官网发布的最新版本，如果已经是最新版本就不需要再升级了。
Cannot do this operation because of memory alert. 由于内存门限不能执行此操作。	The device is in the memory threshold state and cannot be upgraded. 设备此时处于内存门限状态，不能进行升级
Operation failed because not enough storage space was available. 操作失败：设备空间不足。	Upgrade failure due to insufficient storage space for devices. 由于设备的存储空间不足，导致升级失败。
Operation failed because not enough memory was available.	The upgrade failed due to insufficient memory on the devices. 由于设备的内存不足，导致升级失败。

操作失败：设备内存不足。	
Operation failed because a connection to the signature library server could not be established. 操作失败：连接特征库服务器失败。	The connection to <a href="http://www.h3c.com/">http://www.h3c.com/</a> failed. For a successful upgrade, the device must connect to <a href="http://www.h3c.com/">http://www.h3c.com/</a> to get the signature library files. 需要连接 <a href="http://www.h3c.com/">http://www.h3c.com/</a> 网站获取特征库文件才能升级成功，连接 <a href="http://www.h3c.com/">http://www.h3c.com/</a> 失败。
Cannot update the signature library because the required service card cannot be found. 未检测到业务板，特征库升级失败。	M9K equipment cannot be upgraded without service card. M9k设备若没有业务板，不可以进行升级操作。

## IPS/SignatureRollback

Message	Explanation
Operation failed because no valid license could be found. 操作失败：没有找到有效的license。	When manual updating of the signature library fails because there is no license. 手动升级特征库时，没有license，升级失败。
The signature file is updating. Please try later. 特征库正在升级，请稍后再试。	The signature library is being updated. You can perform another update when this update is completed. 还有特征库正在升级，需等升级处理完才可以进行下一次升级。
Cannot execute this operation because of memory alert. 由于内存门限不能执行此操作。	The device is in the memory threshold state and cannot be upgraded. 设备此时处于内存门限状态，不能进行升级
Operation failed because not enough storage space was available. 操作失败：设备空间不足。	The upgrade fails due to insufficient storage space for devices. 由于设备的存储空间不足，导致升级失败。
Operation failed because not enough memory was available. 操作失败：设备内存不足。	The upgrade fails due to insufficient memory on the devices. 由于设备的内存不足，导致升级失败。

## IPS/ImportSnortSignatures

Message	Explanation
The signature file is updating. Please try later. 特征库正在升级，请稍后再试。	The signature library is being updated. You can perform another update when this update is completed. 还有特征库正在升级，需等升级处理完才可以进行下一次升级。
Failed to parse the snort file. Please examine the snort file. Snort文件解析错误。	When importing snort rules, snort files are illegal and parsing fails. 导入snort规则时，snort文件不合法，解析失败。

## IPS/SignatureAutoUpgrade

Message	Explanation
The signature file is updating. Please try later.	The signature library is being upgraded to fail to process

特征库正在升级，请稍后再试。	the message. 特征库正在升级，无法处理该消息。
----------------	----------------------------------

## IPS/PolicyOnProfile

Message	Explanation
The signature file is updating. Please try later. 特征库正在升级，请稍后再试。	The signature library is being upgraded and cannot process the message. 特征库正在升级，无法处理该消息。

## IPS/Policies

Message	Explanation
The signature file is updating. Please try later. 特征库正在升级，请稍后再试。	The signature library is being upgraded and cannot process the message. 特征库正在升级，无法处理该消息。

## IPS/PolicyExceptionSigs

Message	Explanation
The signature file is updating. Please try later. 特征库正在升级，请稍后再试。	The signature library is being upgraded and cannot process the message. 特征库正在升级，无法处理该消息。

## IPS/ActionDefaultParameters

Message	Explanation
The signature file is updating. Please try later. 特征库正在升级，请稍后再试。	The signature library is being upgraded and cannot process the message. 特征库正在升级，无法处理该消息。

## IPS/UpdateLoggingDaily

Message	Explanation
The signature file is updating. Please try later. 特征库正在升级，请稍后再试。	The signature library is being upgraded and cannot process the message. 特征库正在升级，无法处理该消息。

# IPS/UnloadSnortSignatures

Message	Explanation
The signature file is updating. Please try later. 特征库正在升级，请稍后再试。	The signature library is being upgraded and cannot process the message. 特征库正在升级，无法处理该消息。

# IPsec

## IPsec/ResetAllSA

This table is used to reset all IPsec SA.

### XML structure

```
<IPsec>
  <ResetAllSA>
    <Reset />
  </ResetAllSA>
</IPsec>
```

### Table description

Item	Description
Feature name	IPsec
Table name	ResetAllSA
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
Reset	Reset all IPsec SA	N/A	Must be empty

## IPsec/ResetSAPolicies

This table is used to reset IPsec SA by policy.

### XML structure

```
<IPsec>
  <ResetSAPolicies>
    <Reset>
      <PolicyName></PolicyName>
      <AddrType></AddrType>
      <SeqNum></SeqNum>
    </Reset>
  </ResetSAPolicies>
</IPsec>
```

```

    </ResetSAPolicies>
</IPsec>

```

## Table description

Item	Description
Feature name	IPsec
Table name	ResetSAPolicies
Table type	Multi-instance table
Row name	Reset
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	The policy name	Index	String. Length: 1 to 63 characters.	N/A
AddrType	IP protocol type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Ipv4Address.</li> <li>2—Ipv6Address.</li> </ul>	N/A
SeqNum	The sequence number for the IPsec policy	N/A	Unsigned integer. Value range: 1 to 65535.	If don't specify SeqNum, it will reset all the IPsec SAs belong to the policy group.

## IPsec/ResetSARemoteAddr

This table is used to reset IPsec SA by remote address.

## XML structure

```

<IPsec>
  <ResetSARemoteAddrs>
    <Reset>
      <AddrType></AddrType>
      <RemoteAddr></RemoteAddr>
    </Reset>
  </ResetSARemoteAddrs>
</IPsec>

```

## Table description

Item	Description
Feature name	IPsec
Table name	ResetSARemoteAddrs
Table type	Multi-instance table
Row name	Reset
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
AddrType	IP protocol type	Index	Enumeration: <ul style="list-style-type: none"><li>1—Ipv4Address.</li><li>2—Ipv6Address.</li></ul>
RemoteAddr	Remot IP address	Index	Ipv4 address or Ipv6 address

## IPsec/ResetSASPI

This table is used to reset IPsec SA by SPI, remote address and security protocol.

## XML structure

```
<IPsec>
  <ResetSASPIs>
    <Reset>
      <AddrType></AddrType>
      <RemoteAddr></RemoteAddr>
      <SecurityProto></SecurityProto>
      <SPI></SPI>
    </Reset>
  </ResetSASPIs>
</IPsec>
```

## Table description

Item	Description
Feature name	IPsec
Table name	ResetSASPI
Table type	Multi-instance table
Row name	Reset

Restrictions	None
--------------	------

## Columns

Column name	Column description	Column type	Data type and restrictions
AddrType	IP protocol type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Ipv4Address.</li> <li>2—Ipv6Address.</li> </ul>
RemoteAddr	Remote IP address	Index	Ipv4 address or Ipv6 address
SecurityProto	IPsec Security Protocol	Index	Enumeration: <ul style="list-style-type: none"> <li>1—AH.</li> <li>2—ESP.</li> </ul>
SPI	Security Parameter Index	Index	Unsigned integer. Value range: 0 to $2^{32}-1$ .

## IPsec/ClearGlobalStats

This table is used to clear IPsec global statistics.

## XML structure

```

<IPsec>
  <ClearGlobalStats>
    <Clear/>
  </ClearGlobalStats>
</IPsec>

```

## Table description

Item	Description
Feature name	IPsec
Table name	ClearGlobalStats
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Clear	Clear IPsec global statistics	N/A	Must be empty

## IPsec/ClearTunnelsStats

This table is used to clear IPsec tunnel statistics.

## XML structure

```
<IPsec>
  <ClearTunnelsStats>
    <Clear>
      <TunnelID></TunnelID>
    </Clear>
  </ClearTunnelsStats>
</IPsec>
```

## Table description

Item	Description
Feature name	IPsec
Table name	ClearTunnelsStats
Table type	Multi-instance table
Row name	Clear
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
TunnelID	IPsec tunnel ID	Index	Unsigned integer.

## IPsec/SmartVpnMoveLinks

This table is used to smart-vpn move link.

## XML structure

```
<IPsec>
```

```

<SmartVpnMoveLinks>
  <SmartVpnMoveLink>
    <Name></Name>
    <SrcID></SrcID>
    <DestID></DestID>
  </SmartVpnMoveLink>
</SmartVpnMoveLinks>
</IPsec>

```

## Table description

Item	Description
Feature name	IPsec
Table name	SmartVpnMoveLinks
Table type	Multi-instance table
Row name	SmartVpnMoveLink
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Profile name	Index	String Length: 1 to 63 characters.	N/A
SrcID	Source ID	N/A	Unsigned integer.	N/A
DestID	Destination ID.	N/A	Unsigned integer.	N/A

## IPsec/SmartVpnActiveLinks

This table is used to configure a smart-VPN active link.

## XML structure

```

<IPsec>
  <SmartVpnActiveLinks>
    <SmartVpnActiveLink>
      <Name></Name>
      <LinkID></LinkID>

# IPsec

## IPsec/IPv4ApplyPolicies

This table is used to apply an IPsec IPv4 policy to an interface.

### XML structure

```
<IPsec>
  <IPv4ApplyPolicies>
    <ApplyPolicy>
      <IfIndex></IfIndex>
      <Policy></Policy>
    </ApplyPolicy>
  </IPv4ApplyPolicies>
</IPsec>
```

### Table description

Item	Description
Feature name	IPsec
Table name	IPv4ApplyPolicies
Table type	Multi-instance table
Row name	ApplyPolicy
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer
Policy	IPsec policy name		String. Length: 1 to 63 characters.

## IPsec/IPv6ApplyPolicies

This table is used to apply an IPsec IPv6 policy to an interface.

## XML structure

```
<IPsec>
  <IPv6ApplyPolicies>
    <ApplyPolicy>
      <IfIndex></IfIndex>
      <Policy></Policy>
    </ApplyPolicy>
  </IPv6ApplyPolicies>
</IPsec>
```

## Table description

Item	Description
Feature name	IPsec
Table name	IPv6ApplyPolicies
Table type	Multi-instance table
Row name	ApplyPolicy
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer
Policy	IPsec policy name		String. Length: 1 to 63 characters.

## IPsec/IPv4SourceInterfaces

This table is used to bound an IPsec IPv4 policy to a source interface.

## XML structure

```
<IPsec>
  <IPv4SourceInterfaces>
    <IPv4SourceInterface>
      <PolicyName></PolicyName>
      <Interface></Interface>
    </IPv4SourceInterface>
  </IPv4SourceInterfaces>
</IPsec>
```

## Table description

Item	Description
Feature name	IPsec
Table name	IPv4SourceInterfaces
Table type	Multi-instance table
Row name	IPv4SourceInterface
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	IPsec policy name	Index	String. Length: 1 to 63 characters. Case insensitive.	N/A
Interface	The source interface name	N/A	String.	N/A

## IPsec/IPv6SourceInterfaces

This table is used to bound an IPsec IPv6 policy to a source interface.

## XML structure

```
<IPsec>
  <IPv6SourceInterfaces>
    <IPv6SourceInterface>
      <PolicyName></PolicyName>
      <Interface></Interface>
    </IPv6SourceInterface>
  </IPv6SourceInterfaces>
</IPsec>
```

## Table description

Item	Description
Feature name	IPsec
Table name	IPv6SourceInterfaces
Table type	Multi-instance table

Item	Description
Row name	IPv6SourceInterface
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	IPsec policy name	Index	String. Length: 1 to 63 characters. Case insensitive.	N/A
Interface	The source interface name	N/A	String.	N/A

## IPsec/InterfacesDFBit

This table is used to configure the DF bit on the interface.

## XML structure

```

<IPsec>
  <InterfacesDFBit>
    <InterfaceDFBit>
      <IfIndex></IfIndex>
      <DFBit></DFBit>
    </InterfaceDFBit>
  </InterfacesDFBit>
</IPsec>

```

## Table description

Item	Description
Feature name	IPsec
Table name	InterfacesDFBit
Table type	Multi-instance table
Row name	InterfaceDFBit
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer	N/A Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
DFBit	Set the DF bit for outer IP headers of encapsulated IPsec packets on an interface	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—clear.</li> <li>2—copy.</li> <li>3—set.</li> </ul>	N/A

## IPsec/GlobalConf

This table is used to configure IPsec global configuration.

## XML structure

```

<IPsec>
  <GlobalConf>
    <DecryptCheck></DecryptCheck>
    <LoggingPacket></LoggingPacket>
    <Redundancy></Redundancy>
    <DFBit></DFBit>
    <AntiReplay>
      <State></State>
      <CheckWindow></CheckWindow>
    </AntiReplay>
    <SADuration>
      <Seconds></Seconds>
      <KiloBytes></KiloBytes>
    </SADuration>
    <SAIdleTime ></SAIdleTime>
    <FlowRedirect></FlowRedirect>
    <EstablishTunnelLimit></EstablishTunnelLimit>
    <Fragmentation></Fragmentation>
    <LoggingNegotiation></LoggingNegotiation>
    <SASoftDuration>
      <Seconds></Seconds>

```

```

    <KiloBytes></KiloBytes>
  </SASoftDuration>
</GlobalConf>
</IPsec>

```

## Table description

Item	Description
Feature name	IPsec
Table name	GlobalConf
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
DecryptCheck	ACL checking for de-encapsulated IPsec packets.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable(default).</li> <li><b>false</b>—Disable.</li> </ul>
LoggingPacket	Logging for IPsec packets	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable(default).</li> </ul>
Redundancy	IPsec redundancy	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable(default).</li> </ul>
DFBit	Set the DF bit for outer IP headers of encapsulated IPsec packets on all interface	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—clear.</li> <li><b>2</b>—copy(default).</li> <li><b>3</b>—set.</li> </ul>
AntiReplay	Anti-replay configuration	Data structure	Members include: <ul style="list-style-type: none"> <li>State.</li> <li>CheckWindow.</li> </ul>
State	Anti-replay state	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable(default).</li> <li><b>false</b>—Disable.</li> </ul>
CheckWindow	Anti-replay window size	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Window size is 64(default).</li> <li><b>2</b>—Window size is 128.</li> <li><b>3</b>—Window size is 256.</li> <li><b>4</b>—Window size is 512.</li> </ul>

Column name	Column description	Column type	Data type and restrictions
			<ul style="list-style-type: none"> <li>5—Window size is 1024.</li> </ul>
SADuration	IPsec SA life time	Data structure	Members include: <ul style="list-style-type: none"> <li>Seconds.</li> <li>KiloBytes.</li> </ul>
Seconds	The time-based global lifetime of IPsec SA	N/A	Unsigned integer. Value range: 180 to 604800. The default is 3600.
KiloBytes	The traffic-based global lifetime of IPsec SA	N/A	Unsigned integer. Value range: 2560 to 4294967295. The default is 1843200.
SAIdleTime	SA idle timeout function	N/A	Unsigned integer. Value range: 60 to 86400.
FlowRedirect	OpenFlow entry deployment	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable(default).</li> </ul>
EstablishTunnelLimit	Limit the number of IPsec tunnels	N/A	Unsigned integer. Value range: 1 to 4294967295.
Fragmentation	Fragment MTU-exceeded packets	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Fragment packets before IPsec encapsulation (default).</li> <li><b>2</b>—Fragment packets after IPsec encapsulation.</li> </ul>
LoggingNegotiation	Logging for IPsec event negotiation	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable(default).</li> </ul>
SASoftDuration	Global IPsec SA soft lifetime buffer	Data structure	Members include: <ul style="list-style-type: none"> <li>Seconds.</li> <li>KiloBytes.</li> </ul>
Seconds	The time-based global soft lifetime buffer of IPsec SA	N/A	Unsigned integer. Value range: 20 to 201600.
KiloBytes	The traffic-based global soft lifetime buffer of IPsec SA	N/A	Unsigned integer. Value range: 1000 to 4294901760.

## IPsec/TransformSets

This table is used to configure IPsec transform set information.

## Table description

Item	Description
Feature name	IPsec

Item	Description
Table name	IPv4ISAKMPPolicies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	The ISAKMP policy name	Index	String. Length: 1 to 63 characters.	N/A
SeqNum	The sequence number for the IPsec policy	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Description	Description for an IPsec policy	N/A	String. Length: 1 to 80 characters.	N/A
ACL	Reference an ACL for an IPsec policy	Data structure	Members include: <ul style="list-style-type: none"> <li>Name.</li> <li>Number.</li> <li>Mode.</li> </ul>	You can only specify Name or Number, but not both. To delete an ACL, specify the name, number, or both the name and number of the ACL.
Name	ACL name	N/A	String. Length: 1 to 63 characters.	N/A
Number	ACL number	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
Mode	Protection modes	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—per-rule(default).</li> <li>2—per-host.</li> <li>3—aggregation.</li> </ul>	per-rule: One IPsec tunnel protects one data flow. The data flow permitted by an ACL rule is protected by one IPsec tunnel that is established solely for it. per-host: One IPsec tunnel protects one host-to-host data flow. One host-to-host data flow is identified by one ACL rule and protected by one IPsec tunnel established solely for it. This mode consumes more system resources when multiple data flows exist between two subnets to be

Column name	Column description	Column type	Data type and restrictions	Remarks
				protected. aggregation: One IPsec tunnel protects all data flows permitted by all the rules of an ACL. This mode is only used to communicate with old-version devices.
Remote	Remote IP address for the IPsec policy	Data structure	Members include: <ul style="list-style-type: none"> <li>• Addr.</li> <li>• HostName.</li> </ul>	You can only specify Addr or HostName, but not both.
Addr	Remote IP address	N/A	Ipv4 address	N/A
HostName	Remote host name	N/A	String. Length: 1 to 253 characters.	N/A
LocalAddr	Local IP address for the IPsec policy	N/A	Ipv4 address	N/A
IKEProfile	Specify an IKE profile for the IPsec policy	N/A	String. Length: 1 to 63 characters.	N/A
TransformsetList	Reference an IPsec transform set for the IPsec policy	Data structure	Members include: <ul style="list-style-type: none"> <li>• Transformset.</li> </ul>	N/A
Transformset	IPsec transform set name	N/A	String. Length: 1 to 63 characters.	Contains up to 6 Transformset in TransformsetList.
QosPreClassify	QoS pre-classify feature	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Enable.</li> <li>• <b>false</b>—Disable(default).</li> </ul>	N/A
RRI	The IPsec reverse route inject (RRI).	Data structure	Members include: <ul style="list-style-type: none"> <li>• RRISet.</li> <li>• Preference.</li> <li>• Tag</li> </ul>	N/A
RRISet	The IPsec reverse route inject (RRI) feature	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Enable.</li> <li>• <b>false</b>—Disable(default).</li> </ul>	N/A
Preference	The preference of the static routes	N/A	Unsigned integer. Value range: 1 to 255. Default value is 60.	N/A
Tag	The route tag for the static routes	N/A	Unsigned integer. Value range: 1 to 2 <sup>32</sup> -1. Default value is 0.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SADuration	IPsec SA life time	Data structure	Members include: <ul style="list-style-type: none"> <li>Seconds.</li> <li>KiloBytes.</li> </ul>	N/A
Seconds	The time-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 180 to 604800.	N/A
KiloBytes	The traffic-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 2560 to 4294967295.	N/A
SAIdleTime	SA idle timeout function	N/A	Unsigned integer. Value range: 60 to 86400.	N/A
Redundancy	IPsec redundancy function	Data structure	Members include: <ul style="list-style-type: none"> <li>InboundSyncInterval.</li> <li>OutboundSyncInterval.</li> </ul>	N/A
InboundSyncInterval	Inbound synchronization interval	N/A	Unsigned integer. Value range: 0 to 1000. The default is 1000.	N/A
OutboundSyncInterval	Outbound synchronization interval	N/A	Unsigned integer. Value range: 1000 to 100000. The default is 100000.	N/A
SATriggerMode	IPsec SA negotiation triggering mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—traffic-based(default).</li> <li>2—auto.</li> </ul>	N/A
SASoftDuration	IPsec SA soft lifetime buffer	Data structure	Members include: <ul style="list-style-type: none"> <li>Seconds.</li> <li>KiloBytes.</li> </ul>	N/A
Seconds	The time-based soft lifetime buffer of IPsec SA	N/A	Unsigned integer. Value range: 20 to 201600.	N/A
KiloBytes	The traffic-based soft lifetime buffer of IPsec SA	N/A	Unsigned integer. Value range: 1000 to 4294901760.	N/A
IKEv2Profile	Specify an IKEv2 profile for the IPsec policy	N/A	String. Length: 1 to 63 characters.	N/A
TfcEnable	ESP TFC padding	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable(default).</li> </ul>	N/A

SeqNum	The sequence number for the IPsec policy	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Description	Description for an IPsec policy	N/A	String. Length: 1 to 80 characters.	N/A
ACL	Reference an ACL for an IPsec policy	Data structure	Members include: <ul style="list-style-type: none"> <li>Name.</li> <li>Number.</li> <li>Mode.</li> </ul>	You can only specify Name or Number, but not both. To delete an ACL, specify the name, number, or both the name and number of the ACL.
Name	ACL name	N/A	String. Length: 1 to 63 characters.	N/A
Number	ACL number	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
Mode	Protection modes	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—per-rule(default).</li> <li>2—per-host.</li> <li>3—aggregation.</li> </ul>	per-rule: One IPsec tunnel protects one data flow. The data flow permitted by an ACL rule is protected by one IPsec tunnel that is established solely for it. per-host: One IPsec tunnel protects one host-to-host data flow. One host-to-host data

Column name	Column description	Column type	Data type and restrictions	Remarks
				<p>flow is identified by one ACL rule and protected by one IPsec tunnel established solely for it. This mode consumes more system resources when multiple data flows exist between two subnets to be protected.</p> <p>aggregation: One IPsec tunnel protects all data flows permitted by all the rules of an ACL. This mode is only used to communicate with old-version devices.</p>
Remote	Remote IP address for the IPsec policy	Data structure	Members include: <ul style="list-style-type: none"> <li>Addr.</li> <li>HostName.</li> </ul>	You can only specify Addr or HostName, but not both.
Addr	Remote IP address	N/A	Ipv6 address	N/A
HostName	Remote host name	N/A	String. Length: 1 to 253 characters.	N/A
LocalAddr	Local IP address for the IPsec policy	N/A	Ipv6 address	N/A
IKEProfile	Specify an IKE profile for the IPsec policy	N/A	String. Length: 1 to 63 characters.	N/A
TransformsetList	Reference an IPsec transform set for the IPsec policy	Data structure	Members include: <ul style="list-style-type: none"> <li>Transformset.</li> </ul>	N/A
Transformset	IPsec transform set name	N/A	String. Length: 1 to 63 characters.	Contains up to 6 Transformset in TransformsetList.
QosPreClassify	QoS pre-classify feature	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable(default).</li> </ul>	N/A
RRI	The IPsec reverse route inject (RRI).	Data structure	Members include: <ul style="list-style-type: none"> <li>RRIEnable.</li> <li>Preference.</li> <li>Tag</li> </ul>	N/A
RRIEnable	The IPsec reverse route inject (RRI)	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable(default).</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	feature			
Preference	The preference of the static routes	N/A	Unsigned integer. Value range: 1 to 255. Default value is 60.	N/A
Tag	The route tag for the static routes	N/A	Unsigned integer. Value range: 1 to $2^{32}-1$ . Default value is 0.	N/A
SADuration	IPsec SA life time	Data structure	Members include: <ul style="list-style-type: none"> <li>Seconds.</li> <li>KiloBytes.</li> </ul>	N/A
Seconds	The time-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 180 to 604800.	N/A
KiloBytes	The traffic-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 2560 to 4294967295.	N/A
SAIdleTime	SA idle timeout function	N/A	Unsigned integer. Value range: 60 to 86400.	N/A
Redundancy	IPsec redundancy function	Data structure	Members include: <ul style="list-style-type: none"> <li>InboundSyncInterval.</li> <li>OutboundSyncInterval.</li> </ul>	N/A
InboundSyncInterval	Inbound synchronization interval	N/A	Unsigned integer. Value range: 0 to 1000. The default is 1000.	N/A
OutboundSyncInterval	Outbound synchronization interval	N/A	Unsigned integer. Value range: 1000 to 100000. The default is 100000.	N/A
SATriggerMode	IPsec SA negotiation triggering mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—traffic-based(default).</li> <li>2—auto.</li> </ul>	N/A
SASoftDuration	IPsec SA soft lifetime buffer	Data structure	Members include: <ul style="list-style-type: none"> <li>Seconds.</li> <li>KiloBytes.</li> </ul>	N/A
Seconds	The time-based soft lifetime buffer of IPsec SA	N/A	Unsigned integer. Value range: 20 to 201600.	N/A
KiloBytes	The traffic-based soft lifetime buffer of IPsec SA	N/A	Unsigned integer. Value range: 1000 to 4294901760.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IKEv2Profile	Specify an IKEv2 profile for the IPsec policy	N/A	String. Length: 1 to 63 characters.	N/A
TfcEnable	ESP TFC padding	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable(default).</li> </ul>	N/A

## IPsec/IPv4ISAKMPTemplatePolicies

This table is used to configure IPv4 ISAKMP template policies information. ISAKMP template policy is a kind of IKE-based policy which is created by referencing an IPsec policy template.

### XML structure

```

<IPsec>
  <IPv4ISAKMPTemplatePolicies>
    <TemplatePolicy>
      <Name></Name>
      <SeqNum></SeqNum>
      <Template></Template>
    </TemplatePolicy>
  </IPv4ISAKMPTemplatePolicies>
</IPsec>

```

### Table description

Item	Description
Feature name	IPsec
Table name	IPv4ISAKMPTemplatePolicies
Table type	Multi-instance table
Row name	TemplatePolicy
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions
Name	The template policy name	Index	String. Length: 1 to 63 characters.
SeqNum	The sequence number for the	Index	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
	template policy		Value range: 1 to 65535.
Template	Specifies an IPsec policy template by its name	N/A	String. Length: 1 to 63 characters.

## IPsec/IPv6ISAKMPTemplatePolicies

This table is used to configure IPv6 ISAKMP template policies information. ISAKMP template policy is a kind of IKE-based policy which is created by referencing an IPsec policy template.

### XML structure

```

<IPsec>

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	The policy name.	Index	String. Length: 1 to 63 characters. Case insensitive.	N/A
SequenceNumber	The policy serial number	Index	Unsigned integer. Value range: 1 to $2^{16}-1$ .	N/A
Direction	SA's direction	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Inbound.</li> <li>2—Outbound.</li> </ul>	N/A
Protocol	Security protocol	Index	Enumeration: <ul style="list-style-type: none"> <li>1—ESP.</li> <li>2—AH.</li> </ul>	N/A
SPI	Security Parameter Index	N/A	Unsigned integer. Value range: $2^8$ to $2^{32}-1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AuthorityHexKey	The hexadecimal authentication key	Data structure	Members include: <ul style="list-style-type: none"> <li>Type</li> <li>Value</li> </ul>	N/A
Type	The key type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—simple.</li> <li>2—cipher.</li> </ul>	N/A
Value	The value of the key	N/A	String.	The plaintext authentication key is case insensitive and must be a 16-byte hexadecimal string for HMAC-MD5, and a 20-byte hexadecimal string for HMAC-SHA1. The ciphertext authentication key is a case-sensitive string of 1 to 85 characters.
EncryptionHexKey	The hexadecimal encryption key.	Data structure	Members include: <ul style="list-style-type: none"> <li>Type</li> <li>Value</li> </ul>	N/A
Type	The key type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—simple.</li> <li>2—cipher.</li> </ul>	N/A
Value	The value of the key	N/A	String.	The plaintext authentication key is case insensitive and must be must be an 8-byte hexadecimal string for DES-CBC, a 24-byte hexadecimal string for 3DES-CBC, a 16-byte hexadecimal string for AES128-CBC, a 24-byte hexadecimal string for AES192-CBC, and a 32-byte hexadecimal string for AES256-CBC. The ciphertext authentication key is a case-sensitive string of 1 to 117 characters.
StringKey	The string key	Data structure	Members include: <ul style="list-style-type: none"> <li>Type</li> <li>Value</li> </ul>	N/A
Type	The key type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—simple.</li> <li>2—cipher.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Value	The value of the key	N/A	String	The plaintext key is a case-sensitive string of 1 to 255 characters. The ciphertext key is a case-sensitive string of 1 to 373 characters.

## IPsec/IPv6ManualPolicyKeys

This table is used to configure the IPv6 manual IPsec policy key information.

### XML structure

```

<IPsec>
  <IPv6ManualPolicyKeys>

Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	The IPsec profile name	Index	String, case-insensitive	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 63 characters	
Description	The description of the used IPsec profile	N/A	String, case-sensitive Length: 1 to 80 characters	N/A
TransformsetList	The list of the IPsec transform sets		Members include: • Transformset	N/A
Transformset	The name of the IPsec transform set	N/A	String, case-insensitive Length: 1 to 63 characters	A maximum of six transform set names can be specified.
IkeProfileName	The IKE profile name	N/A	String, case-insensitive Length: 1 to 63 characters	N/A
SADuration	IPsec SA life time	Data structure	Members include: • Seconds. • KiloBytes.	N/A
Seconds	The time-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 180 to 604800.	N/A
KiloBytes	The traffic-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 2560 to 4294967295.	N/A
SAIdleTime	SA idle timeout function	N/A	Unsigned integer. Value range: 60 to 86400.	N/A
SASoftDuration	IPsec SA soft lifetime buffer	Data structure	Members include: • Seconds. • KiloBytes.	N/A
Seconds	The time-based soft lifetime buffer of IPsec SA	N/A	Unsigned integer. Value range: 20 to 201600.	N/A
KiloBytes	The traffic-based soft lifetime buffer of IPsec SA	N/A	Unsigned integer. Value range: 1000 to 4294901760.	N/A
IKEv2ProfileName	Specify an IKEv2 profile for the IPsec policy	N/A	String. Length: 1 to 63 characters.	N/A

## IPsec/TunnelApplyProfile

This table is used to apply the IPsec profile name to the tunnel interface.

## XML structure

```
<IPsec>
  <TunnelApplyProfile>
    <ApplyProfile>
      <TunnelID></TunnelID>
      <IPsecPrfName></IPsecPrfName>
    </ApplyProfile>
  </TunnelApplyProfile>
</IPsec>
```

## Table description

Item	Description
Feature name	IPsec
Table name	TunnelApplyProfile
Table type	Multi-instance table
Row name	ApplyProfile
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID	Index	Unsigned integer Value range: 0 to 1023	N/A
IPsecPrfName	IPsec profile name	N/A	String Length: 0 to 63 characters The default is empty	Case-insensitive and contains only letters, digits, and dots (.).

# IPsec

## IPsec/IPv4ApplyPolicies

This table displays IPv4 policies that have been applied to interface.

### XML structure

```
<IPsec>
  <IPv4ApplyPolicies>
    <ApplyPolicy>
      <IfIndex></IfIndex>
      <Policy></Policy>
    </ApplyPolicy>
  </IPv4ApplyPolicies>
</IPsec>
```

### Table description

Item	Description
Feature name	IPsec
Table name	IPv4ApplyPolicies
Table type	Multi-instance table
Row name	ApplyPolicy
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer
Policy	IPsec policy name	Index	String. Length: 1 to 63 characters.

## IPsec/IPv6ApplyPolicies

This table displays IPv6 policies that have been applied to interface.

### XML structure

```
<IPsec>
```

```

<IPv6ApplyPolicies>
  <ApplyPolicy>
    <IfIndex></IfIndex>
    <Policy></Policy>
  </ApplyPolicy>
</IPv6ApplyPolicies>
</IPsec>

```

## Table description

Item	Description
Feature name	IPsec
Table name	IPv6ApplyPolicies
Table type	Multi-instance table
Row name	ApplyPolicy
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer
Policy	IPsec policy name	Index	String. Length: 1 to 63 characters.

## IPsec/IPv4SourceInterfaces

This table displays IPv4 policies that have been bound to a source interface.

## XML structure

```

<IPsec>
  <IPv4SourceInterfaces>
    <IPv4SourceInterface>
      <PolicyName></PolicyName>
      <Interface></Interface>
    </IPv4SourceInterface>
  </IPv4SourceInterfaces>
</IPsec>

```

## Table description

Item	Description
Feature name	IPsec
Table name	IPv4SourceInterfaces
Table type	Multi-instance table
Row name	IPv4SourceInterface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	IPsec policy name	Index	String. Length: 1 to 63 characters. Case insensitive.	N/A
Interface	The source interface name	N/A	String.	N/A

## IPsec/IPv6SourceInterfaces

This table displays IPv6 policies that have been bound to a source interface.

## XML structure

```
<IPsec>
  <IPv6SourceInterfaces>
    <IPv6SourceInterface>
      <PolicyName></PolicyName>
      <Interface></Interface>
    </IPv6SourceInterface>
  </IPv6SourceInterfaces>
</IPsec>
```

## Table description

Item	Description
Feature name	IPsec
Table name	IPv6SourceInterfaces
Table type	Multi-instance table
Row name	IPv6SourceInterface

Item	Description
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	IPsec policy name	Index	String. Length: 1 to 63 characters. Case insensitive.	N/A
Interface	The source interface name	N/A	String.	N/A

## IPsec/InterfacesDFBit

This table displays the DF bit on the interface.

## XML structure

```

<IPsec>
  <InterfacesDFBit>
    <InterfaceDFBit>
      <IfIndex></IfIndex>
      <DFBit></DFBit>
    </InterfaceDFBit>
  </InterfacesDFBit>
</IPsec>

```

## Table description

Item	Description
Feature name	IPsec
Table name	InterfacesDFBit
Table type	Multi-instance table
Row name	InterfaceDFBit
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface	Index	Unsigned integer	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	index			Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
DFBit	Set the DF bit for outer IP headers of encapsulated IPsec packets on an interface	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—clear.</li> <li>2—copy.</li> <li>3—set.</li> </ul>	N/A

## IPsec/GlobalConf

This table displays IPsec global configuration information.

### XML structure

```

<IPsec>
  <GlobalConf>
    <DecryptCheck></DecryptCheck>
    <LoggingPacket></LoggingPacket>
    <Redundancy></Redundancy>
    <DFBit></DFBit>
    <AntiReplay>
      <State></State>
      <CheckWindow></CheckWindow>
    </AntiReplay>
    <SADuration>
      <Seconds></Seconds>
      <KiloBytes></KiloBytes>
    </SADuration>
    <SAIdleTime></SAIdleTime>

## Table description

Item	Description
Feature name	IPsec
Table name	IPv6PolicyTemplates
Table type	Multi-instance table
Row name	Template
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	The ISAKMP policy name	Index	String. Length: 1 to 63 characters.	N/A
SeqNum	The sequence number for the IPsec policy	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Description	Description for an IPsec policy	N/A	String. Length: 1 to 80 characters.	N/A
ACL	Reference an ACL for an IPsec policy	Data structure	Members include: <ul style="list-style-type: none"> <li>Name.</li> </ul>	You can only specify Name or Number, but not both.

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>Number.</li> <li>Mode.</li> </ul>	
Name	ACL name	N/A	String. Length: 1 to 63 characters.	N/A
Number	ACL number	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A
Mode	Protection modes	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—per-rule.</li> <li>2—per-host.</li> <li>3—aggregation.</li> </ul>	<p>per-rule: One IPsec tunnel protects one data flow. The data flow permitted by an ACL rule is protected by one IPsec tunnel that is established solely for it.</p> <p>per-host: One IPsec tunnel protects one host-to-host data flow. One host-to-host data flow is identified by one ACL rule and protected by one IPsec tunnel established solely for it. This mode consumes more system resources when multiple data flows exist between two subnets to be protected.</p> <p>aggregation: One IPsec tunnel protects all data flows permitted by all the rules of an ACL. This mode is only used to communicate with old-version devices.</p>
Remote	Remote IP address for the IPsec policy	Data structure	Members include: <ul style="list-style-type: none"> <li>Addr.</li> <li>HostName.</li> </ul>	You can only specify Addr or HostName, but not both.
Addr	Remote IP address	N/A	Ipv6 address	N/A
HostName	Remote host name	N/A	String. Length: 1 to 253 characters.	N/A
LocalAddr	Local IP address for the IPsec policy	N/A	Ipv6 address	N/A
IKEProfile	Specify an IKE profile for the IPsec policy	N/A	String. Length: 1 to 63 characters.	N/A
Transforms	Reference an	Data	Members include:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TransformsetList	IPsec transform set for the IPsec policy	structure	<ul style="list-style-type: none"> <li>Transformset.</li> </ul>	
Transformset	IPsec transform set name	N/A	String. Length: 1 to 63 characters.	Contains up to 6 in TransformsetList.
QosPreClassify	QoS pre-classify feature	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable.</li> </ul>	N/A
RRI	The IPsec reverse route inject (RRI).	Data structure	Members include: <ul style="list-style-type: none"> <li>RRIEnable.</li> <li>Preference.</li> <li>Tag</li> </ul>	N/A
RRIEnable	The IPsec reverse route inject (RRI) feature	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable.</li> </ul>	N/A
Preference	The preference of the static routes	N/A	Unsigned integer. Value range: 1 to 255. Default value is 60.	N/A
Tag	The route tag for the static routes	N/A	Unsigned integer. Value range: 1 to $2^{32}-1$ . Default value is 0.	N/A
SADuration	IPsec SA life time	Data structure	Members include: <ul style="list-style-type: none"> <li>Seconds.</li> <li>KiloBytes.</li> </ul>	N/A
Seconds	The time-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 180 to 604800.	N/A
KiloBytes	The traffic-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 2560 to 4294967295.	N/A
SAIdleTime	SA idle timeout function	N/A	Unsigned integer. Value range: 60 to 86400.	N/A
Redundancy	IPsec redundancy function	Data structure	Members include: <ul style="list-style-type: none"> <li>InboundSyncInterval.</li> <li>OutboundSyncInterval.</li> </ul>	N/A
InboundSyncInterval	Inbound synchronization interval	N/A	Unsigned integer. Value range: 0 to 1000. The default is 1000.	N/A
OutboundSyncInterval	Outbound synchronization interval	N/A	Unsigned integer. Value range: 1000 to 100000. The default is 100000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IKEv2Profile	Specify an IKEv2 profile for the IPsec policy	N/A	String. Length: 1 to 63 characters.	N/A
TfcEnable	ESP TFC padding	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable.</li> </ul>	N/A

## IPsec/IPv4ManualPolicies

SAIndex	SA index	Index	Unsigned integer.
Direction	SA's direction	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Inbound.</li> <li>2—Outbound.</li> </ul>
Proto	Security protocol	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—AH.</li> <li>2—ESP.</li> </ul>
SPI	Security Parameter Index	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .
SAMode	SA negotiation mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Manual.</li> <li>2—ISAKMP.</li> <li>3—Template.</li> </ul>
EncapMode	Encapsulation mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—transport.</li> <li>2—tunnel.</li> </ul>
PFS	Perfect Forward Secrecy	N/A	The Diffie-Hellman group ID is defined by IPsecCapabilities table.
AuthAlg	Authentication algorithm	N/A	The algorithm number is defined by IPsecCapabilities table.
EncrAlg	Encryption algorithm	N/A	The algorithm number is defined by IPsecCapabilities table.
SADuration	IPsec SA life time	Data structure	Members include: <ul style="list-style-type: none"> <li>Seconds.</li> <li>KiloBytes.</li> </ul>
Seconds	The time-based global lifetime of IPsec SA	N/A	Unsigned integer. Value range: 180 to 604800.
KiloBytes	The traffic-based global lifetime of IPsec SA	N/A	Unsigned integer. Value range: 2560 to 4294967295.
SARemainin	Remaining	Data	Members include:

Column name	Column description	Column type	Data type and restrictions
gDuration	IPsec SA lifetime	structure	<ul style="list-style-type: none"> <li>Seconds.</li> <li>KiloBytes.</li> </ul>
Seconds	Remaining IPsec SA lifetime in seconds	N/A	Unsigned integer. Value range: 180 to 604800.
KiloBytes	Remaining IPsec SA lifetime in kilobytes	N/A	Unsigned integer. Value range: 2560 to 4294967295.
RemainingIdleTime	Remaining IPsec SA idle time	N/A	Unsigned integer. Value range: 0 to 86400.
NatTraversal	UDP encapsulation used for NAT traversal	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable.</li> </ul>
AntiReplay	Anti-replay configuration	Data structure	Members include: <ul style="list-style-type: none"> <li>State.</li> <li>CheckWindow.</li> </ul>
State	Anti-replay state	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable.</li> </ul>
CheckWindow	Anti-replay window size	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Window size is 64.</li> <li><b>2</b>—Window size is 128.</li> <li><b>3</b>—Window size is 256.</li> <li><b>4</b>—Window size is 512.</li> <li><b>5</b>—Window size is 1024.</li> </ul>
PathMTU	Path MTU of the IPsec SA	N/A	Unsigned integer.
MaxRcvSN	Max sequence number in the received packets	N/A	Unsigned integer.
MaxSendSN	Max sequence number in the sent packets	N/A	Unsigned integer.
Status	Stateful failover status of the IPsec SA	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—active.</li> <li><b>2</b>—standby.</li> </ul>
IfIndex	Interface index	N/A	Unsigned integer.
PolicyName	Name of the used IPsec policy	N/A	String. Length: 1 to 63 characters.
PolicySeqNum	Sequence number of the IPsec policy	N/A	Unsigned integer. Value range: 1 to 65535.

Column name	Column description entry	Column type	Data type and restrictions

## IPsec/GlobalSAs

This table displays information about IPsec SAs.

### XML structure

```

<IPsec>
  <GlobalSAs>
    <GlobalSA>
      <TunnelID></TunnelID>
      <SAIndex></SAIndex>
      <Direction></Direction>
      <Protocol></Protocol>
      <SPI></SPI>
      <PFS></PFS>
      <AuthorityAlg></AuthorityAlg>
      <EncryptionAlg></EncryptionAlg>
      <Status></Status>
      <ProfileName></ProfileName>
    </GlobalSA>
  </GlobalSAs>
</IPsec>

```

### Table description

Item	Description
Feature name	IPsec
Table name	GlobalSAs
Table type	Multi-instance table
Row name	GlobalSA
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	IPsec tunnel ID	Index	Unsigned integer.	N/A
SAIndex	SA index	Index	Unsigned integer.	N/A
Direction	SA's direction	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>1—Inbound.</li> <li>2—Outbound</li> </ul>	
Protocol	Security protocol	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—AH.</li> <li>2—ESP.</li> </ul>	N/A
SPI	Security Parameter Index	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
PFS	Perfect Forward Secrecy	N/A	Unsigned integer.	The algorithm number is defined by IPsecCapabilities table.
AuthorityAlg	Authentication algorithm	N/A	Unsigned integer.	The algorithm number is defined by IPsecCapabilities table.
EncryptionAlg	Encryption algorithm	N/A	Unsigned integer.	The algorithm number is defined by IPsecCapabilities table.
Status	Stateful failover status of the IPsec SA	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—active.</li> <li>2—standby.</li> </ul>	N/A
ProfileName	The IPsec profile name.	N/A	String. Length: 1 to 63 characters.	N/A

## IPsec/Count

This table displays IPsec SA and Tunnel count information.

## XML structure

```

<IPsec>
  <Count>
    <SACount></SACount>
    <TunnelCount></TunnelCount>
  </Count>
</IPsec>

```

## Table description

Item	Description
Feature name	IPsec
Table name	Count
Table type	Single-instance table

Item	Description
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
SACount	The number of IPsec SAs	N/A	Unsigned integer.
TunnelCount	The number of IPsec tunnels	N/A	Unsigned integer.

## IPsec/GlobalStats

This table displays IPsec global statistics information.

## XML structure

```

<IPsec>
  <GlobalStats>

ACLCheckFailure	Number of dropped packets due to ACL check failure	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .
MTUCheckFailure	Number of dropped packets due to MTU check failure	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .
LoopbackLimitExceeded	Number of dropped packets due to loopback limit exceeded	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .
CryptospeedLimitExceeded	Number of dropped packets due to Cryptospeed exceeded	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .

## IPsec/IPsecCapabilities

This table displays all the algorithm capabilities that the IPsec module support.

## XML structure

```
<IPsec>
  <IPsecCapabilities>
    <IPsecCapability>
      <AlgID></AlgID>
      <AlgName></AlgName>
    </IPsecCapability>
  </IPsecCapabilities>
</IPsec>
```

## Table description

Item	Description
Feature name	IPsec
Table name	IPsecCapabilities
Table type	Multi-instance table
Row name	IPsecCapability
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
AlgID	IPsec supports algorithm ID	Index	Unsigned .
AlgName	IPsec supports algorithm name	N/A	String. Length: 1 to 255 characters.

## IPsec/DeviceCapabilities

This table displays the capabilities of device.

## XML structure

```
<IPsec>
  <DeviceCapabilities>
    <SupportRedundancy></SupportRedundancy>
    <SupportFlowRedirect></SupportFlowRedirect>
  </DeviceCapabilities>
</IPsec>
```

## Table description

Item	Description
Feature name	IPsec
Table name	DeviceCapabilities
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
SupportRedundancy	Support for redundancy	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—The device supports redundancy.</li><li><b>false</b>—The device does not support redundancy.</li></ul>
SupportFlowRedirect	Support for OpenFlow entry deployment	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—The device supports OpenFlow entry deployment.</li><li><b>false</b>—The device does not support OpenFlow entry deployment.</li></ul>

## IPsec/IsakmpProfiles

This table displays ISAKMP IPsec profile information.

## XML structure

```
<IPsec>
  <IsakmpProfiles>
    <IsakmpProfile>
      <Name></Name>
      <Description></Description>
      <TransformSetList>
        <TransformSet></TransformSet>
      </TransformSetList>
      <IkeProfileName></IkeProfileName>
      <SADuration>
        <Seconds></Seconds>
        <KiloBytes></KiloBytes>
      </SADuration>
      <SAIdleTime ></SAIdleTime>
      <SASoftDuration>
        <Seconds></Seconds>
        <KiloBytes></KiloBytes>
      </SASoftDuration>
    </IsakmpProfile>
  </IsakmpProfiles>
</IPsec>
```

```

    <IKEv2ProfileName></IKEv2ProfileName>
  </IsakmpProfile>
</IsakmpProfiles>
</IPsec>

```

## Table description

Item	Description
Feature name	IPsec
Table name	IsakmpProfiles
Table type	Multi-instance table
Row name	IsakmpProfile
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	The IPsec profile name	Index	String, case-insensitive Length: 1 to 63 characters	N/A
Description	The description of the used IPsec profile	N/A	String, case-sensitive Length: 0 to 80 characters	N/A
Transform set	The name of the IPsec transform set	N/A	String, case-insensitive Length: 0 to 63 characters	N/A
IkeProfileName	The ike profile name	N/A	String, case-insensitive Length: 0 to 63 characters	N/A
SADuration	IPsec SA life time	Data structure	Members include: <ul style="list-style-type: none"> <li>Seconds.</li> <li>KiloBytes.</li> </ul>	N/A
Seconds	The time-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 180 to 604800.	N/A
KiloBytes	The traffic-based lifetime of IPsec SA	N/A	Unsigned integer. Value range: 2560 to 4294967295.	N/A
SAIdleTime	SA idle timeout function	N/A	Unsigned integer. Value range: 60 to 86400.	N/A
SASoftDuration	IPsec SA soft lifetime buffer	Data structure	Members include: <ul style="list-style-type: none"> <li>Seconds.</li> <li>KiloBytes.</li> </ul>	N/A
Seconds	The	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	time-based soft lifetime buffer of IPsec SA		Value range: 20 to 201600.	
KiloBytes	The traffic-based soft lifetime buffer of IPsec SA	N/A	Unsigned integer. Value range: 1000 to 4294901760.	N/A
IKEv2ProfileName	Specify an IKEv2 profile for the IPsec policy	N/A	String. Length: 1 to 63 characters.	N/A

## IPsec/TunnelApplyProfile

This table displays the IPsec profile name in the ADVPN configuration for the specified tunnels.

### XML structure

```

<IPsec>
  <TunnelApplyProfile>
    <ApplyProfile>
      <TunnelID></TunnelID>
      <IPsecPrfName></IPsecPrfName>
      <ACL>
        <Name></Name>
        <Number></Number>
      </ACL>
    </ApplyProfile>
  </TunnelApplyProfile>
</IPsec>

```

### Table description

Item	Description
Feature name	IPsec
Table name	TunnelApplyProfile
Table type	Multi-instance table
Row name	ApplyProfile
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	The tunnel ID	Index	String, case-insensitive Length: 1 to 63 characters	N/A
IPsecPrfName	IPsec profile name	N/A	String, case-sensitive Length: 0 to 63 characters	N/A
ACL	Reference an ACL	Data structure	Members include: <ul style="list-style-type: none"> <li>Name.</li> <li>Number.</li> </ul>	N/A
Name	ACL name	N/A	String, case insensitive. Length: 1 to 63 characters.	N/A
Number	ACL number	N/A	Unsigned integer. Value range: 3000 to 3999.	N/A

## IPsec/SmartVpnProfiles

This table contains smart link policy information.

### XML structure

```

<IPsec>
  <SmartVpnProfiles>
    <SmartVpnProfile>
      <Name></Name>
      <ActiveLinkID></ActiveLinkID>
      <AutoSwitchCycles></AutoSwitchCycles>
      <DetectionInterval>
        <IntervalNum></IntervalNum>
        <PacketNum></PacketNum>
        <ThresholdLoss></ThresholdLoss>
        <ThresholdDelay></ThresholdDelay>
        <SrcAddr></SrcAddr>
        <DestAddr></DestAddr>
      </DetectionInterval>
      <Enable></Enable>

    </SmartVpnProfile>
  </SmartVpnProfiles>
</IPsec>

```

## Table description

Item	Description
Featurename	IPsec
Table name	SmartVpnProfiles
Table type	Multi-instance table
Row name	SmartVpnProfile
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Smart link policy name	Index	String. Length: 1 to 63 characters.	N/A
ActiveLinkID	ID of the active link	N/A	Unsigned integer. Value range: 1 to 30.	N/A
AutoSwitchCycles	Maximum number of link switchover cycles	N/A	Unsigned integer. Value range: 0 to 5.	N/A
DetectionInterval	Link quality probe configuration	Data structure	Members include: <ul style="list-style-type: none"> <li>IntervalNum</li> <li>ThresholdType</li> <li>ThresholdVal</li> <li>SrcAddr</li> <li>DestAddr</li> </ul>	N/A
IntervalNum	Probe packet sending interval	N/A	Unsigned integer. Value range: 1 to 3, in seconds.	N/A
PacketNum	Number of probe packets sent in each probe cycle	N/A	Unsigned integer. Value range: 1 to 30.	N/A
ThresholdLoss	Packet loss ratio threshold	N/A	Unsigned integer. Value range: 1 to 100, in percentages.	N/A
ThresholdDelay	Delay threshold	N/A	Unsigned integer. Value range: 1 to 3000, in milliseconds.	N/A
SrcAddr	Source IP address for link quality probe packets	N/A	String, dotted decimal notation.	N/A
DestAddr	Destination IP address for link quality probe packets	N/A	String, dotted decimal notation.	N/A
Enable	Whether the smart link policy is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyAlias	Policy alias	N/A	String. Length: 1 to 63 characters.	N/A

## IPsec/SmartVpnGateways

This table contains gateway information for local interfaces of the links.

### XML structure

```

<IPsec>
  <SmartVpnGateways>
    <SmartVpnGateway>
      <IfIndex></IfIndex>
      <GatewayAddr></GatewayAddr>
      <NoRouteEnable></NoRouteEnable>
    </SmartVpnGateway>
  </SmartVpnGateways>
</IPsec>

```

### Table description

Item	Description
Feature name	IPsec
Table name	SmartVpnGateways
Table type	Multi-instance table
Row name	SmartVpnGateway
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
GatewayAddr	Gateway address	N/A	String, dotted decimal notation.	Example: 2.2.2.2.
NoRouteEnable	Whether no route is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A

# IPsec/SmartVpnLinkLists

This table contains basic link list information of a smart link policy.

## XML structure

```
<IPsec>
  <SmartVpnLinkLists>
    <SmartVpnLinkList>
      <ProfileName></ProfileName>
      <LinkID></LinkID>
      <IfIndex></IfIndex>
      <LinkLocalAddr></LinkLocalAddr>
      <LinkNextHop></LinkNextHop>
      <LinkRemote></LinkRemote>
      <Loss></Loss>
      <Delay></Delay>
    </SmartVpnLinkList>
  </SmartVpnLinkLists>
</IPsec>
```

## Table description

Item	Description
Feature name	IPsec
Table name	SmartVpnLinkLists
Table type	Multi-instance table
Row name	SmartVpnLinkList
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Smart link policy name	Index	String Length: 1 to 63 characters.	N/A
LinkID	Link ID	Index	Unsigned integer. Value range: 1 to 10.	N/A
IfIndex	Interface index	N/A	Unsigned integer.	N/A
LinkLocalAddr	Local IPv4 address of the link	N/A	String, dotted decimal notation.	Example: 2.2.2.2.
LinkNextHop	Next hop IPv4 address of the link	N/A	String, dotted decimal notation.	Example: 2.2.2.2.

Column name	Column description	Column type	Data type and restrictions	Remarks
LinkRemote	Remote IPv4 address of the link	N/A	String, dotted decimal notation.	Example: 2.2.2.2.
Loss	Packet loss ratio threshold	N/A	Unsigned integer. Value range: 1 to 100, in percentages.	N/A
Delay	Delay threshold	N/A	Unsigned integer. Value range: 1 to 3000, in milliseconds.	N/A

## IPsec/InterfacesNoNat

This table contains the IPsec no NAT feature status information.

### XML structure

```

<IPsec>
  <InterfacesNoNat>
    <InterfaceNoNat>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </InterfaceNoNat>
  </InterfacesNoNat>
</IPsec>

```

### Table description

Item	Description
Feature name	IPsec
Table name	InterfacesNoNat
Table type	Multi-instance table
Row name	InterfaceNoNat
Restrictions	None.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface names. For more information, see the XSD document of your product. For information about IfIndex, see "Appendix"

Column name	Column description	Column type	Data type and restrictions	Remarks
				in Ifmgr NETCONF XML API Configuration Reference.
Enable	Enabling status of no-NAT processing	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A

## IPsec/DiagnoseItem

This table displays the diagnostic data for IPsec.

### XML structure

```

<IPsec>
  <DiagnoseItems>
    <DiagnoseItems>
      <ItemID></ItemID>
      <Result></Result>
      <ItemName></ItemName>
      <Reason></Reason>
    </DiagnoseItems>
  </DiagnoseItems>
</IPsec>

```

### Table description

Item	Description
Feature name	IPsec
Table name	DiagnoseItems
Table type	Multi-instance table
Row name	DiagnoseItem
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
ItemID	Diagnostic item ID	Index	Unsigned integer.
Result	Result of the diagnostic	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Succeeded.</li> <li><b>1</b>—Failed.</li> </ul>
ItemName	Diagnostic item	N/A	String.

Column name	Column description	Column type	Data type and restrictions
	name		Length: 1 to 63 characters.
Reason	Reason for failure	N/A	String. Length: 1 to 1023 characters.

## IPsec/DiagnoseState

This table displays IPsec diagnostic state.

### XML structure

```
<IPsec>
  <DiagnoseState>
    <State></State>
  </DiagnoseState>
</IPsec>
```

### Table description

Item	Description
Feature name	IPsec
Table name	DiagnoseState
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
State	Diagnostic state	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Diagnosing.</li> <li><b>false</b>—Finished.</li> </ul>

## IPsec/P2MPTunnels

This table displays IPsec P2MP tunnels information.

### XML structure

```
<IPsec>
  <P2MPTunnels>
```

```

<P2MPTunnel>
  <TunnelID></TunnelID>
  <AddrType></AddrType>
  <PrivateDestAddr></PrivateDestAddr>
  <PublicDestAddr></PublicDestAddr>
  <PublicDestPort></PublicDestPort>
  <CreateTime></CreateTime>
</P2MPTunnel>
</P2MPTunnels>
</IPsec>

```

## Table description

Item	Description
Feature name	IPsec
Table name	P2MPTunnels
Table type	Multi-instance table
Row name	P2MPTunnel
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID	Index	Unsigned integer.	N/A
AddrType	IP protocol type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4 address</li> <li>2—IPv6 address.</li> </ul>	N/A
PrivateDest Addr	Private destination IP address of the IPsec P2MP tunnel	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
PublicDest Addr	Public destination IP address of the IPsec P2MP tunnel	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
PublicDest Port	Public destination port number of the IPsec P2MP tunnel	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
CreateTime	Existing time (in seconds) of the IPsec P2MP tunnel	N/A	Unsigned integer.	N/A

# IPsec/P2MPTunnelCounts

This table displays IPsec P2MP tunnel count information.

## XML structure

```
<IPsec>
  <P2MPTunnelCounts>
    <P2MPTunnelCount>
      <TunnelID></TunnelID>
      <AddrType></AddrType>
      <SpokeCount></SpokeCount>
    </P2MPTunnelCount>
  </P2MPTunnelCounts>
</IPsec>
```

## Table description

Item	Description
Feature name	IPsec
Table name	P2MPTunnelCounts
Table type	Multi-instance table
Row name	P2MPTunnelCount
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID	Index	Unsigned integer.	N/A
AddrType	IP protocol type	Index	Enumeration: <ul style="list-style-type: none"><li>1—IPv4 address</li><li>2—IPv6 address.</li></ul>	N/A
SopkeCount	Number of IPsec P2MP tunnels	N/A	Unsigned integer.	N/A

# Comware 7 IPsec NETCONF XML API Error Message Reference

## IPsec/ IPv4ISAKMPPolicies

Message	Explanation
Operation failed. The smart link policy is already assigned to another IPsec policy. 操作失败，该智能选路策略已经被另一个IPsec安全策略引用。	An IPsec smart link policy can only be assigned to one IPsec policy. 一个智能选路策略只能被一个IPsec策略引用。
The specified smart link policy doesn't exist. 指定的智能选路策略不存在。	You must specify an existing IPsec smart link policy by its name. 指定的IPsec智能选路策略必须已存在。

## IPsec/SmartVpnProfile

Message	Explanation
Maximum number of smart link policies already reached. 已达到智能选路策略个数的最大值。	The device supports a maximum of three IPsec smart link policies. 一台设备中最多支持配置3个IPsec智能选路策略。
The policy have bound a smart-link policy,please undo it firstly. 该策略已绑定智能选路策略，请先解除绑定。	An IPsec policy can use only one IPsec smart link policy. 一个IPsec安全策略只能引用一个IPsec智能选路策略。
IP address is not match,please try again. IP地址不匹配，请再次尝试。	When you remove the source and destination IP addresses configured for link quality probe packets, you must specify correct IP addresses . 删除IPsec智能选路链路探测的源IP地址和目的IP地址时，需要指定正确的IP地址。

## IPsec/SmartVpnLinkLists

Message	Explanation
Link is active, can not modify. 链路处于激活状态，不能修改。	Link can't be modified when it's active. 链路处在激活状态时不支持修改配置。
The same link has exist. 智能选路策略中已经存在相同的链路。	The link is already configured, can't be configured again. 该链路已经存在，不能再次配置。
Failed to configure the link. The maximum number of interfaces used by the links in the policy was already reached. 策略中链路使用的接口数达到最大值，链路创建失败。	A maximum of 10 links can be configured in an IPsec smart link policy. 一个IPsec智能选路策略下最多可配置10条链路。
Failed to configure the link. The maximum number	A maximum of 3 remote IP addresses can be configured in an

<p>of remote IP addresses used by the links in the policy was already reached.</p> <p>策略中链路使用的目的地址数达到最大值，链路创建失败。</p>	<p>IPsec smart link policy.</p> <p>一个IPsec智能选路策略下最多可配置3个目的IP地址。</p>
<p>Failed to configure the link. The specified remote address is already used by another enabled smart link policy.</p> <p>指定的目的地址已经被另一个智能选路策略使用，链路创建失败。</p>	<p>A remote IP address can be used by only one IPsec smart link policy.</p> <p>一个目的IP地址只能使用在一个IPsec智能选路策略中。</p>

## IPsec/ SmartVpnMoveLinks

Message	Explanation
<p>The specified link doesn't exist.</p> <p>指定的链路不存在。</p>	<p>A link must be configured before you move it.</p> <p>指定链路不存在，无法移动。</p>
<p>Can't move the link because it is in active state.</p> <p>链路处于激活状态，不能移动。</p>	<p>An active link can't be moved.</p> <p>链路处在激活状态时不支持移动。</p>

## IPsec/ SmartVpnActiveLinks

Message	Explanation
<p>The specified link doesn't exist.</p> <p>指定的链路不存在。</p>	<p>The link must be configured before you activate it.</p> <p>指定链路不存在，无法激活。</p>
<p>Operation failed. The link is currently in active state.</p> <p>操作失败，该链路已经激活。</p>	<p>An active link does not to be activated again.</p> <p>链路处在激活状态时不需要再次激活。</p>

# IPV4ADDRESS

## IPV4ADDRESS/Ipv4Addresses

This table contains information about IPv4 addresses.

### XML structure

```
<IPV4ADDRESS>
  <Ipv4Addresses>
    <Ipv4Address>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
      <Ipv4Mask></Ipv4Mask>
      <AddressOrigin></AddressOrigin>
    </Ipv4Address>
  </Ipv4Addresses>
</IPV4ADDRESS>
```

### Table description

Item	Description
Feature name	IPV4ADDRESS
Table name	Ipv4Addresses
Table type	Multi-instance table
Row name	Ipv4Address
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Address	IPv4 address.	Index	String, dotted decimal notation.	N/A
Ipv4Mask	IPv4 address mask.	N/A	String, dotted decimal notation.	N/A
AddressOrigin	The way how the IPv4 address is obtained.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Manual.</li> <li>2—Manual-sub.</li> </ul>	N/A

## IPV4ADDRESS/IPv4AddressPPPNegotiate

This table achieves IPv4 address allocation through PPP negotiation.

### XML Structure

```

<IPV4ADDRESS>
  <IPv4AddressPPPNegotiate>
    <AddressPPPNegotiate>
      <IfIndex></IfIndex>
      <ConfigOption></ConfigOption>
    </AddressPPPNegotiate>
  </IPv4AddressPPPNegotiate>
</IPV4ADDRESS>

```

### Table description

Item	Description
Feature name	IPV4ADDRESS
Table name	AddressPPPNegotiate
Table type	Multi-instance table
Row name	AddressPPPNegotiate
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For

Column name	Column description	Column type	Data type and restrictions	Remarks
				relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
ConfigOption	Whether the PPP Negotiate function is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false (default)</b></li> </ul>	After PPP negotiation is enabled on the interface, the IP address assigned to the interface will be deleted.

## IPV4ADDRESS/ IPv4AddressCellular

This table achieves IPv4 address allocation through cellular.

### XML Structure

```

<IPV4ADDRESS>
  <IPv4AddressCellular>
    <AddressCellular>
      <IfIndex></IfIndex>
      <ConfigOption></ConfigOption>
    </AddressCellular>
  </IPv4AddressCellular>
</IPV4ADDRESS>

```

### Table description

Item	Description
Feature name	IPV4ADDRESS
Table name	IPv4AddressCellular
Table type	Multi-instance table
Row name	AddressCellular
Restrictions	This table supports only ethernet channel interfaces.
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	NameAndIndexUnion.	Only ethernet channel interfaces are

Column name	Column description	Column type	Data type and restrictions	Remarks
				supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
ConfigOption	Whether the Cellular function is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false (default)</b></li> </ul>	After Cellular is enabled on the interface, the IP address assigned to the interface will be deleted.

## IPV4ADDRESS/IPv4AddressUnnumbered

This table achieves IPv4 address which is shared with another interface.

### XML Structure

```

<IPV4ADDRESS>
  <IPv4AddressUnnumbered>
    <AddressUnnumbered>
      <IfIndex></IfIndex>
      <UnnumberedIfIndex></UnnumberedIfIndex>
    </AddressUnnumbered>
  </IPv4AddressUnnumbered>
</IPV4ADDRESS>

```

### Table description

Item	Description

# IPV4ADDRESS

## IPV4ADDRESS/IPv4Addresses

Message	Explanation
Invalid IP address or subnet mask. 无效IP地址或掩码长度。	Invalid IP address or subnet mask. 无效IP地址或掩码长度。
Maximum number of IP addresses already reached. 接口下已配置的IP地址个数达到上限。	Maximum number of IP addresses already reached. 接口下已配置的IP地址个数达到上限。
Address types don't match. IP地址类型不匹配。	Address types don't match. 删除地址时，类型不匹配。
The IP address doesn't exist. 该IP地址不存在。	The IP address doesn't exist, when getting or deleting it. 删除或获取地址时，该地址不存在。
Can't change the primary IP address to a secondary IP address. 不能直接将主IP地址转换成从IP地址。	Can't change the primary IP address to a secondary IP address. 不能直接将主IP地址转换成从IP地址。
The subnet overlaps with another interface. 与其他接口IP地址冲突。	The subnet overlaps with another interface. 与其他接口IP地址冲突。
Operation failed. 操作失败。	Failed to send the message. 发消息失败。
This IP address has been assigned to the management Ethernet interface on another MDC. 该IP地址已经被其它MDC的管理以太网接口占用。	This IP address has been assigned to the management Ethernet interface on another MDC. 该IP地址已经被其它MDC的管理以太网接口占用。
The configuration doesn't meet the requirements. 不符合配置要求。	The specified configuration must be empty, when deleting or removing. Or column incomplete when creating or replacing. 删除表项时，地址管理表项特殊，不支持单独恢复属性为默认值或者Create操作和Replace操作，普通列参数不齐全。

## IPV4ADDRESS/IPv4AddressUnnumbered

Message	Explanation
Operation failed. 操作失败。	Failed to send message. 发消息失败。
Invalid lend interface! 被借用接口无效！	Invalid configuration, please modify configuration under the guidance. 配置无效，请在指导下修改配置。
Can't borrow an IP address from an IP unnumbered interface. 被借用的接口已经配置了地址借用。	Can't borrow an IP address from an IP unnumbered interface. 被借用IP地址的接口已经配置了地址借用功能。
Can't configure IP unnumbered on the interface	Can't configure IP unnumbered on the interface that has lent its IP

that has lent its IP address to another interface. 本接口已经被其它接口配置借用，不能配置地址借用。	address to another interface. 本接口的地址已经被其它接口借用，不能配置地址借用功能。
Can't borrow an IP address from itself. 不能借用本接口的IP地址。	Can't borrow an IP address from itself. 不能借用本接口的IP地址。

## IPV6ADDRESS/Ipv6AddressesConfig

This table contains configuration information about IPv6 addresses.

### XML structure

```
<IPV6ADDRESS>
  <Ipv6AddressesConfig>
    <AddressEntry>
      <IfIndex></IfIndex>
      <Ipv6Address></Ipv6Address>
      <AddressOrigin></AddressOrigin>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <AnycastFlag></AnycastFlag>
    </AddressEntry>
  </Ipv6AddressesConfig>
</IPV6ADDRESS>
```

### Table description

Item	Description
Feature name	IPV6ADDRESS
Table name	Ipv6AddressesConfig
Table type	Multi-instance table
Row name	AddressEntry
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration

Column name	Column description	Column type	Data type and restrictions	Remarks
				Reference.
Ipv6Address	IPv6 address.	Index	Hexadecimal string, colon-separated.	It must be configured as valid IPv6 prefix when the AddressOrigin column is 2.
AddressOrigin	The way how the IPv6 address is obtained.	Index	Enumeration: <ul style="list-style-type: none"> <li>1—AssignedIP.</li> <li>2—AssignedEUI64IP.</li> <li>3—LinklocalIP.</li> </ul>	N/A
Ipv6PrefixLength	Length of the IPv6 prefix.	N/A	Unsigned integer. Value range: 1 to 128.	<p>Required when the AddressOrigin column is 1 or 2.</p> <p>Optional when the AddressOrigin column is 3.</p> <p>Value range is 1 to 64 when the AddressOrigin column is 2.</p> <p>Value range is 10 to 128 when the AddressOrigin column is 3.</p> <p>The delete and remove operations do not support this column except that the AddressOrigin column is 3.</p> <p>The merge, create, and replace operations must include this column except that the AddressOrigin column is 3.</p>
AnycastFlag	Whether the IPv6 address is an anycast address.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false (default)</li> </ul>	<p>It can not be configured when the AddressOrigin column is 2 or 3.</p> <p>Can not be modified.</p> <p>The delete and remove operations do not support this column.</p> <p>The merge, create, and replace operations must include this column.</p>

## IPV6ADDRESS/Ipv6AddressesAuto

This table contains the information about IPv6 addresses autoconfiguration.

### XML structure

<IPV6ADDRESS>

```

<Ipv6AddressesAuto>
  <AutoAddress>
    <IfIndex></IfIndex>
    <Auto></Auto>
    <AutoLinkLocal></AutoLinkLocal>
  </AutoAddress>
</Ipv6AddressesAuto>
</IPV6ADDRESS>

```

## Table description

Item	Description
Feature name	IPV6ADDRESS
Table name	Ipv6AddressesAuto
Table type	Multi-instance table
Row name	AutoAddress
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
Auto	Whether the stateless address autoconfiguration function is enabled on an interface.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default)</li> </ul>	N/A
AutoLinkLocal	Whether or not generate a link-local address on an interface automatically.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default)</li> </ul>	N/A

# IPV6ADDRESS

## IPV6ADDRESS/Ipv6AddressesConfig

Message	Explanation
The IPv6 address conflicts with the IPv6 address of another interface. 该IPv6地址与其它接口IPv6地址冲突。	The IPv6 address conflicts with the IPv6 address of another interface. 该 IPv6 地址与其它接口下已经配置的 IPv6 地址冲突。
The prefix length can't be greater than 64. 前缀长度不应该超过64位。	The prefix length can't be greater than 64. 为接口配置EUI-64格式的 global 单播地址时，前缀长度取值不能大于64。
Can't assign the IPv6 unspecified address. 不能配置一个IPv6未指定地址。	Can't assign the IPv6 unspecified address. 不能将未指定地址配置为接口的 global 单播地址。
Can't assign the IPv6 loopback address. 不能配置一个IPv6环回地址。	Can't assign the IPv6 loopback address. 不能将环回地址配置为接口的 global 单播地址。
Can't assign an IPv6 multicast address. 不能配置一个IPv6组播地址。	Can't assign an IPv6 multicast address. 不能将组播地址配置为接口的 global 单播地址。
Can't assign a reserved IPv6 subnet anycast address. 不能配置一个子网路由任播地址。	Can't assign a reserved IPv6 subnet anycast address. 不能将子网路由任播地址配置为接口的 global 单播地址。
Can't assign an IPv6 link-local address. 不能配置一个链路本地地址。	Can't assign an IPv6 link-local address. 不能将链路本地地址配置为接口的 global 单播地址。
Invalid IPv6 link-local address. 非法的链路本地地址。	Invalid IPv6 link-local address. 配置的链路本地地址无效，链路本地地址的前缀是 FE80::/10。
Maximum number of IPv6 addresses on the interface already reached. 该接口下配置的IPv6地址总个数超过上限。	Maximum number of IPv6 addresses on the interface already reached. 该接口下配置的单播地址总数超过上限。缺省情况下，接口下可配置的单播地址总数为32，具体取值产品可定制。
The IPv6 global unicast address conflicts with the anycast address on the interface. 接口上的IPv6 global 单播地址和任播地址冲突。	The IPv6 global unicast address conflicts with the anycast address on the interface. 接口上的IPv6 global 单播地址和任播地址冲突。
The configuration doesn't meet the requirements. 当前配置不符合配置要求。	The specified configuration must be empty, when deleting or removing. Or column incomplete when creating or replacing. 创建地址时，下发的请求中要包含索引列和非索引列。 删除地址时，下发的请求中只能包含索引列，不能包含非索引列。
Invalid IPv6 prefix. 非法的IPv6前缀。	Invalid configuration, please modify configuration under the guidance. 为接口配置EUI-64格式的 global 单播地址时，IPv6地址和IPv6地址前缀做与操作，结果和IPv6地址不同。
The prefix length of a link-local address must	The prefix length of a link-local address must not be less

Message	Explanation
not be less than 10. 链路本地地址的前缀长度必须不小于10。	than 10. 链路本地地址的前缀长度必须大于或等于10。

# IPv6Address event

This event is used to report IPv6 address information when the IPv6 address of an interface is changed.

## XML structure for event subscription

```
<IPv6AddressEvent>
  <IPv6Address>
    <Name></Name>
  </IPv6Address>
</IPv6AddressEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>IPv6Address</stream>
    <filter type="subtree">
      <IPv6AddressEvent xmlns="http://www.h3c.com/netconf/event:1.0/IPv6Address:1.0">
        <IPv6Address>
          <Name>GigabitEthernet2/0/1</Name>
        </IPv6Address>
      </IPv6AddressEvent>
    </filter>
  </create-subscription>
</rpc>
```

## Table description

Item	Description
Event stream name	IPv6Address
Event name	IPv6AddressEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/IPv6Address:1.0
Support for extended query	No

## Columns

Column name	Column description	Data type and restrictions	Support for extended queries
Name	Interface name	String. Length: 1 to 47 characters.	No

# XML structure for event report

```
<IPv6AddressEvent>
  <IPv6Address>
    <Name></Name>
    <Ipv6Address></Ipv6Address>
    <Ipv6PrefixLength></Ipv6PrefixLength>
    <AddressOrigin></AddressOrigin>
    <AddressStatus></AddressStatus>
    <AddressEvent></AddressEvent>
  </IPv6Address>
</IPv6AddressEvent>
```

## Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <IPv6AddressEvent xmlns="http://www.h3c.com/netconf/event:1.0/IPv6Address:1.0">
    <IPv6Address>
      <Name>GigabitEthernet2/0/1</Name>
      <Ipv6Address>1::1</Ipv6Address>
      <Ipv6PrefixLength>64</Ipv6PrefixLength>
      <AddressOrigin>1</AddressOrigin>
      <AddressStatus>1</AddressStatus>
      <AddressEvent>1</AddressEvent>
    </IPv6Address>
  </IPv6AddressEvent>
</notification>
```

## Columns

Column name	Column description	Data type and restrictions	Support for extended queries
Name	Interface name	String. Length: 1 to 47 characters.	No
Ipv6Address	IPv6 address	Hexadecimal string, colon-separated.	No
Ipv6PrefixLength	Length of the IPv6 prefix	Unsigned integer. Value range: 1 to 128.	No
AddressOrigin	The way how the IPv6 address is obtained	Enumeration: <ul style="list-style-type: none"><li>• 1—AssignedIP</li><li>• 2—AssignedEUI64IP</li><li>• 3—LinklocalIP</li><li>• 4—AssignedAutoIP</li><li>• 5—DHCPv6</li></ul>	No

Column name	Column description	Data type and restrictions	Support for extended queries
AddressStatus	IPv6 address status	Enumeration: <ul style="list-style-type: none"> <li>• 1—Preferred</li> <li>• 2—Deprecated</li> <li>• 3—Invalid</li> <li>• 4—Tentative</li> <li>• 5—Duplicate</li> </ul>	No

## IRF/Configuration

This table contains IRF global configuration information.

### XML structure

```
<IRF>
  <Configuration>
    <AutoMerge></AutoMerge>
    <AutoUpgrade></AutoUpgrade>
    <Domain></Domain>
    <LinkDelay></LinkDelay>
    <MacPersist></MacPersist>
  </Configuration>
</IRF>
```

### Table description

Item	Description
Feature name	IRF
Table name	Configuration
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AutoMerge	State of the auto merge function	N/A	EnableState. Default: variant between products.	enable: The IRF fabric automatically reboots its member devices when it fails in the master election during an IRF fabric merge. disable: Manual reboot is required to complete an IRF fabric merge.

Column name	Column description	Column type	Data type and restrictions	Remarks
AutoUpgrade	Status of the software auto-update function	N/A	EnableState. Default: variant between products.	enable: The master device automatically pushes its software images to the device you are adding to the IRF fabric.  disable: You must manually make sure the joining device uses the same software images as the master device. If not, the new device cannot join the IRF fabric.
Domain	Domain ID for the IRF fabric	N/A	Unsigned integer. Value range: 0 to 4294967295 Default: 0	N/A
LinkDelay	IRF link down report delay	N/A	Unsigned integer. Value range: 0 to 10000. Unit: milliseconds Default: variant between products.	If the interval is set to 0, link down events are reported without any delay.
MacPersist	IRF bridge MAC persistence setting	N/A	Enumeration. <ul style="list-style-type: none"> <li>1—Timer (default)</li> <li>2—Always</li> <li>3—No</li> </ul>	Timer: A 6 minutes timer, bridge MAC address of the IRF fabric persists for 6 minutes after the master leaves.  Always: Bridge MAC address of the IRF fabric does not change after the master leaves.  No: Bridge MAC address of the new master replaces the original one as soon as the old master leaves.

## IRF/Members

This table contains configuration of the IRF members.

## XML structure

```

<IRF>
  <Members>
    <Member>
      <MemberID></MemberID>
      <NewMemberID></NewMemberID>
      <Description></Description>
    </Member>
  </Members>
</IRF>

```

```

    <Priority></Priority>
  </Member>
</Members>
</IRF>

```

## Table description

Item	Description
Feature name	IRF
Table name	Members
Table type	Multi-instance table
Row name	Member
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MemberID	Member ID.	Index	Unsigned integer. Value range: 0 to 32. Stack mode: 1 to 32. <b>Stand-alone mode: 0.</b>	The current member ID of the device. The maximum member ID is variant between products. Also available in stand-alone mode.
NewMemberID	Member ID assigned to the device.	N/A	Unsigned integer. Value range: 1 to 32. Default: Stack mode: MemberID. Stand-alone mode: 1	This member ID takes effect at reboot. The maximum member ID is variant between products. Also available in stand-alone mode.
Description	Description for the member device.	N/A	String. Max length: 1 to 127 characters.	A string of 1 to 127 ASCII characters.
Priority	Member priority.	N/A	Unsigned integer. Value range: 1 to 32. Default: 1.	Also available in stand-alone mode.

## IRF/IRFPorts

This table contains configuration of the IRF ports.

## XML structure

```
<IRF>
  <IRFPorts>
    <IRFPort>
      <MemberID></MemberID>
      <Port></Port>
      <Interface>
        <IfName></IfName>
        <MDCName></MDCName>
        <Mode></Mode>
      </Interface>
    </IRFPort>
  </IRFPorts>
</IRF>
```

## Table description

Item	Description
Feature name	IRF
Table name	IRFPorts
Table type	Multi-instance table
Row name	IRFPort
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MemberID	Member ID	Index	Unsigned integer. Value range: Stack mode: 1 to 32. Default: 1. <b>Stand-alone mode: 0.</b>	The current member ID of the device. Also available in stand-alone mode.
Port	IRF port number	Index	Unsigned integer. Value range: 1 to 2	1: IRF port 1 2: IRF port 2 Also available in stand-alone mode.
Interface	Physical port of an IRF port	Data structure	Members: <ul style="list-style-type: none"><li>IfName</li><li>MDCName</li><li>Mode</li></ul>	Multi-instance. Maximum occurrence is MaxIfNumPerIRFPort. Also available in stand-alone mode.

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	Physical port of an IRF port
MDCName	MDC name	N/A	Case-sensitive string. Length: 1 to 15 characters Optional	If MDCName is specified, it binds physical ports on the MDC to an IRF port.  If no MDCName is specified, it binds physical ports on the default MDC to an IRF port.
Mode	Physical IRF port mode	N/A	Enumeration. <ul style="list-style-type: none"> <li>1—Normal</li> <li>2—Enhanced</li> <li>3—Extended</li> </ul> Default: variant between products.	Normal: Sets the binding mode to normal.  Enhanced: Sets the binding mode to enhanced.  Extended: Sets the binding mode to extended.

MaxMemberCount	The maximum number of members in a stack.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxPriority	The highest priority that can be configured for a member in a stack	N/A	Unsigned integer.	N/A
MaxIfNumPerIRFPort	The maximum number of physical ports in an IRF port.	N/A	Unsigned integer.	N/A
SupportedIfTypes	Indicates which physical interface type can be added to IRF port.	Data structure	Members: <ul style="list-style-type: none"> <li>ifTypeExt</li> </ul>	Multi-instance.
ifTypeExt	The physical interface type.	N/A	Unsigned integer.	ifTypeExt is referenced from Interfaces table in Ifmgr NETCONF XML API, XPath is Ifmgr/Interfaces/Interface/ifTypeExt.  Please reference to <i>Comware V7 Ifmgr NETCONF XML API Data Reference</i> .
SupportNormalPortMode	Indicates whether support normal port mode.	N/A	Boolean <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
SupportEnhancedPortMode	Indicates whether support enhanced port mode.	N/A	Boolean <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
SupportExtendedPortMode	Indicates whether support extended port mode.	N/A	Boolean <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
SupportLightIRFMode	Indicates whether support light IRF mode.	N/A	Boolean <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
SupportNormalIRFMode	Indicates whether support normal IRF mode.	N/A	Boolean <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
SupportEnhancedIRFMode	Indicates whether support enhanced IRF mode.	N/A	Boolean <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
SupportIRFModeConvert	Indicates whether support mode convert between IRF and stand-alone mode.	N/A	Boolean <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A

# IRF/Configuration

This table contains IRF global configuration information.

## XML structure

```
<IRF>
  <Configuration>
    <AutoMerge></AutoMerge>
    <AutoUpgrade></AutoUpgrade>
    <Domain></Domain>
    <LinkDelay></LinkDelay>
    <MacPersist></MacPersist>
    <MacPersistTime></MacPersistTime>
    <BridgeMac></BridgeMac>
    <TopoType></TopoType>
    <StackMode></StackMode>
    <MemberCount></MemberCount>
  </Configuration>
</IRF>
```

## Table description

Item	Description
Feature name	IRF
Table name	Configuration
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AutoMerge	State of the auto merge function	N/A	EnableState.	enable: The IRF fabric automatically reboots its member devices when it fails in the master election during an IRF fabric merge.  disable: Manual reboot is required to complete an IRF fabric merge.

Column name	Column description	Column type	Data type and restrictions	Remarks
AutoUpgrade	Status of the software auto-update function	N/A	EnableState.	enable: The master device automatically pushes its software images to the device you are adding to the IRF fabric.  disable: You must manually make sure the joining device uses the same software images as the master device. If not, the new device cannot join the IRF fabric.
Domain	Domain ID for the IRF fabric	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
LinkDelay	IRF link down report delay	N/A	Unsigned integer. Value range: 0 to 10000. Unit: milliseconds.	If the interval is set to 0, link down events are reported without any delay.
MacPersist	IRF bridge MAC persistence setting	N/A	Enumeration. <ul style="list-style-type: none"> <li>1—Timer</li> <li>2—Always</li> <li>3—No</li> </ul>	Timer: Enables the IRF bridge MAC address to remain unchanged for n minutes after the address owner leaves.  Always: Bridge MAC address of the IRF fabric does not change after the master leaves.  No: Bridge MAC address of the new master replaces the original one as soon as the old master leaves.
MacPersistTime	IRF bridge MAC persistence time	N/A	Unsigned integer.	n: Bridge MAC address of the IRF fabric persists for n minutes after the master leaves.
BridgeMac	IRF bridge MAC address	N/A	Specifies a MAC address in the format of xx-xx-xx-xx-xx-xx. The MAC address cannot be the all-zero or all-F MAC address, or a multicast MAC address.	N/A
TopoType	Stack topology	N/A	Enumeration. <ul style="list-style-type: none"> <li>1—Chain</li> <li>2—Ring</li> <li>3—Unconverged</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
StackMode	Current stack mode of the device	N/A	Boolean <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	true: Stack mode false: Stand-alone mode Also available in stand-alone mode.
MemberCount	The number of members currently in a stack	N/A	Unsigned integer.	N/A

## IRF/Members

This table contains configuration of the IRF members.

### XML structure

```

<IRF>
  <Members>
    <Member>
      <MemberID></MemberID>
      <NewMemberID></NewMemberID>
      <Description></Description>
      <Priority></Priority>
      <CPUMac></CPUMac>
      <Board>
        <Chassis></Chassis>
        <Slot></Slot>
        <Role></Role>
      </Board>
    </Member>
  </Members>
</IRF>

```

### Table description

Item	Description
Feature name	IRF
Table name	Members
Table type	Multi-instance table
Row name	Member
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MemberID	Member ID	index	Unsigned integer. Value range: 0 to 32. Stack mode: 1 to 32. <b>Stand-alone mode: 0.</b>	The current member ID of the device. The maximum member ID is variant between products. Also available in stand-alone mode.
NewMemberID	Member ID assigned to the device	N/A	Unsigned integer. Value range: 1 to 32.	This member ID takes effect at reboot. The maximum member ID is variant between products. Also available in stand-alone mode.
Description	Description for the member device.	N/A	String. Max length: 127	A string of 1 to 127 ASCII characters.
Priority	Member priority	N/A	Unsigned integer. Value range: 1 to 32.	Also available in stand-alone mode.
CPUMac	Member's CPU MAC address	N/A	MacAddress.	N/A
Board	Board information of the member	Data structure	Members: <ul style="list-style-type: none"> <li>Chassis</li> <li>Slot</li> <li>Role</li> </ul>	Multi-instance
Chassis	Chassis ID of the board	N/A	Unsigned integer. Value range: 0 to 65535.	IRF(Distributed): this value is large than zero. IRF: this value is zero.
Slot	Slot ID of the board	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Role	Board role	N/A	Enumeration. <ul style="list-style-type: none"> <li>1—Master</li> <li>2—Standby</li> <li>3—Loading</li> <li>4—Other</li> </ul>	N/A

## IRF/IRFPorts

This table contains configuration of the IRF ports.

## XML structure

```
<IRF>
  <IRFPorts>
```

```

<IRFPort>
  <MemberID></MemberID>
  <Port></Port>
  <Neighbor></Neighbor>
  <State></State>
  <Interface>
    <IfName></IfName>
    <MDCName></MDCName>
    <Mode></Mode>
    <LinkState></LinkState>
  </Interface>
  <LinkStateInMDC>
    <MDCName></MDCName>
    <State></State>
  </LinkStateInMDC>
</IRFPort>
</IRFPorts>
</IRF>

```

## Table description

Item	Description
Feature name	IRF
Table name	IRFPorts
Table type	Multi-instance table
Row name	IRFPort
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MemberID	Member ID	index	Unsigned integer. Value range: Stack mode: 1 to 32. <b>Stand-alone mode: 0.</b>	The current member ID of the device. Also available in stand-alone mode.
Port	IRF port number	index	Unsigned integer. Value range: 1 to 2	1: IRF port 1 2: IRF port 2 Also available in stand-alone mode.
Neighbor	Neighbor member ID of this device.	N/A	Unsigned integer. Value range: 1 to 32.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
State	State of the IRF port.	N/A	Enumeration. <ul style="list-style-type: none"> <li>1—Disabled</li> <li>2—Up</li> <li>3—Down</li> <li>4—Isolated</li> <li>5—Timeout</li> </ul>	N/A
Interface	Physical port of an IRF port	Data structure	Members: <ul style="list-style-type: none"> <li>IfName</li> <li>MDCName</li> <li>Mode</li> <li>LinkState</li> </ul>	Multi-instance. Maximum occurrence is MaxIfNumPerIRFPort. Also available in stand-alone mode.
IfName	Interface name	N/A	String. Length: 2 to 47 characters.	Physical port of an IRF port
MDCName	MDC name	N/A	Case-sensitive string. Length: 1 to 15 Optional	If MDCName is specified, it binds physical ports on the MDC to an IRF port. If MDCName is not specified, it binds physical ports on the default MDC to an IRF port.
Mode	Physical IRF port mode	N/A	Enumeration. <ul style="list-style-type: none"> <li>1—Normal</li> <li>2—Enhanced</li> <li>3—Extended</li> </ul>	Normal: Sets the binding mode to normal. Enhanced: Sets the binding mode to enhanced. Extended: Sets the binding mode to extended.
LinkState	Link state of the interface.	N/A	Enumeration. <ul style="list-style-type: none"> <li>1—Up</li> <li>2—Down</li> <li>3—ADM</li> <li>4—Absent</li> </ul>	Up: Link is up. Down: Link is down. ADM: The port has been manually shut down with the shutdown command. Absent: Interface module that hosts the port is not present.
LinkStateInMDC	IRF link state on MDC of the specified IRF port.	Data structure	Members: <ul style="list-style-type: none"> <li>MDCName</li> <li>State</li> </ul>	Multi-instance. Also available in stand-alone mode.
MDCName	MDC name	N/A	Case-sensitive string. Length: 1 to 15 Optional	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
State	State of the IRF port in a MDC.	N/A	Enumeration. <ul style="list-style-type: none"> <li>• 1—Up</li> <li>• 2—Down</li> <li>• 3—Timeout</li> </ul>	N/A

# IRF

## IRF/ConvertMode

Message	Explanation
The device is already in stand-alone mode. 设备正是独立运行模式。	Mode convert failed. 模式设置失败。
The device is already in IRF mode. 设备正是堆叠模式运行。	Mode convert failed. 模式设置失败。
Please disconnect the IRF connection first. 请先断开堆叠连接。	Mode convert failed. 模式设置失败。
Please try again later. 请稍后再试。	Cannot convert mode right now. 暂时无法设置。
Some files are open, please try again later. 部分文件处于打开状态，请稍后再试。	Failed to reboot. 重启失败。
Flash is in write mode, please try again later. Flash处于写模式，请稍后再试。	Failed to reboot. 重启失败。
The specified boot file does not exist. 下次启动文件不存在。	Failed to reboot. 重启失败。
System is saving configuration file, please try again later. 系统正在保存配置文件，请稍后再试。	Failed to reboot. 重启失败。
System is updating, please try again later. 系统正在升级，请稍后再试。	Failed to reboot. 重启失败。
System is busy now, please try again later. 系统忙，请稍后再试。	Failed to reboot. 重启失败。
The MDC is busy. Please try again later. MDC忙，请稍后再试。	Failed to reboot. 重启失败。
The Context is busy. Please try again later. Context忙，请稍后再试。	Failed to reboot. 重启失败。
Failed to reboot. 重启失败。	Failed to reboot. 重启失败。

## IRF/Configuration

Message	Explanation
Configuration is not support in stand-alone mode. 独立运行模式不支持该配置。	Set to irf mode first 请先切换成堆叠模式

# IRF/PortConfiguration

Message	Explanation
Configuration is not support in stand-alone mode. 独立运行模式不支持该配置。	Set to irf mode first 请先切换成堆叠模式

## IRF/IRFPorts

Message	Explanation
The IRF port and the bound physical port must be on the same device. 堆叠口及其绑定的物理接口必须在同一个设备上。	The IRF port and the bound physical port are on different devices. 堆叠口及其绑定的物理接口不在同一个设备上。
Physical port %s has been bound to another IRF port. 接口已经被绑定到另一个堆叠口中。	Bounding physical port failed. 接口绑定失败。
Please shut down interface first. 请先禁用接口。	Bounding physical port failed. 接口绑定失败。
Number of physical ports exceeded the limit. 超过了堆叠口可配置的最大物理接口数量。	Failed to add physical port. 物理口数已到最大值。
Exceed the max member ID. 超过最大的成员编号。	Exceed the max member ID. 成员编号已到最大值
This mode is not support on the IRF port. 堆叠口不支持该模式。	Failed to set mode. 设置堆叠口模式失败。
Interface is not exist. 接口不存在。	Invalid interface. 接口无效。
Interface can't be bound to an IRF port. 接口不能配置为堆叠口。	Failed to bound to an IRF port. 接口配置为堆叠口失败。
Interface doesn't belong to the specified MDC. 接口不在指定的MDC中。	Failed to bound to an IRF port. 接口配置为堆叠口失败。
Configuration failed. The interface has been configured to combine with other breakout interfaces. 配置失败因为接口下配置了using命令。	Configuration failed. 配置失败。
Configuration failed. The interface has been configured to split. 配置失败因为接口下配置了using命令。	Configuration failed. 配置失败。

## Table description

Item	Description
Feature name	ISIS
Table name	VRFs
Table type	Multi-instance table
Row name	VRF
Restrictions	None
Support for row creation and deletion	No

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	It must be an unsigned integer in the range of 1 to 65535.
CostStyle	Cost style.	Data structure	Members include: <ul style="list-style-type: none"> <li>Style.</li> <li>RelaxSpfLimit.</li> </ul>	N/A
Style	Style ID.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—narrow (default).</li> <li>2—wide.</li> <li>3—compatible.</li> <li>4—narrow-compatible.</li> <li>5—wide-compatible.</li> </ul>	N/A
RelaxSpfLimit	Whether to accept routes with cost greater than 1023.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Accept routes with cost greater than 1023.</li> <li><b>false</b>—Does not accept routes with cost greater than 1023 (default).</li> </ul>	N/A
NetworkEntity	Configure the network entity title (NET) for an IS-IS process.	N/A	String. Length: 1 to 82 characters A NET comprises the following parts: <ul style="list-style-type: none"> <li>Area ID—With a length of 1 to 13 bytes.</li> <li>System ID—A system ID uniquely identifies a host or router in the area and has a fixed 6-byte length.</li> <li>SEL—It has a value of 0 and a fixed 1-byte length.</li> </ul>	Specifies a NET as a dotted hexadecimal string in the X....X.XXXX....XX XX.00 format. The X....X segment represents the area address, the XXXX....XXXX segment represents the system ID, and the 00 segment is the SEL. Repeat supported for 3 times.
LevelId	Router working level.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Level 1.</li> <li>2—Level 2.</li> <li>3—Level-1-2 (default).</li> </ul>	N/A
DistributeBgp Ls	Allow the device to send the link state information to bgp	Data structure	Members include: <ul style="list-style-type: none"> <li>InstanceId.</li> <li>LevelType.</li> </ul>	N/A
InstanceId	Instance Id	N/A	Unsigned integer. Value range 0 to 65535	N/A
LevelType	Level type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Level 1.</li> </ul>	N/A.

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>2—Level 2.</li> <li>3—Level-1-2 (default).</li> </ul>	
NSR	Open the ISIS protocol NSR function	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Open the ISIS protocol NSR function.</li> <li><b>false</b>—Close the ISIS protocol NSR function (default).</li> </ul>	N/A .
SRGB	Specifies range of SRGB.	Data structure	Members include: <ul style="list-style-type: none"> <li><b>Lowerbound.</b></li> <li><b>Upperbound.</b></li> </ul>	The members of Lowerbound and Upperbound must be specified.
Lowerbound	Min value of SRGB.	N/A	Unsigned integer. Value range: 16000 to 23999. Default: 16000.	N/A
Upperbound	Max value of SRGB.	N/A	Unsigned integer. Value range: 16001 to 24000. Default: 24000.	N/A
MplsTe	MPLS traffic engineering information for IS-IS.	Data structure	Members include: <ul style="list-style-type: none"> <li>Enable.</li> <li>LevelType.</li> </ul>	The member of Enable must be specified.
Enable	Enable MPLS traffic engineering for IS-IS.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable MPLS traffic engineering for IS-IS.</li> <li><b>false</b>—Disable MPLS traffic engineering for IS-IS (default).</li> </ul>	N/A
LevelType	Level type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Level 1.</li> <li>2—Level 2.</li> <li>3—Level-1-2 (default).</li> </ul>	N/A

## ISIS/Familys

This table contains address family identifier information of IS-IS.

### XML structure

```

<ISIS>
  <Familys>
    <Family>
      <Name></Name>
      <Type></Type>
      <SrMpls></SrMpls>
      <SrAdjEnable></SrAdjEnable>
    </Family>
  </Familys>
</ISIS>

```

```

    </Famillys>
</ISIS>

```

## Table description

Item	Description
Feature name	ISIS
Table name	Famillys
Table type	Multi-instance table
Row name	Family
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	You must create an instance before merge or create type .It must be an unsigned integer in the range of 1 to 65535.
Type	Address Family Identifier	Index	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4 unicast.</li> <li>2—IPv6 unicast.</li> </ul>	N/A
SrMpls	Enable SR function based on MPLS.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable SR function based on MPLS.</li> <li><b>false</b>—Disable SR function based on MPLS(default).</li> </ul>	This command only supports the ipv4 address family.
SrAdjEnable	Enable the neighbor label allocation function.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable the neighbor label allocation function.</li> <li><b>false</b>—Disable the neighbor label allocation function(default).</li> </ul>	This command only supports the ipv4 address family.

## ISIS/Interfaces

This table contains IS-IS interface information.

  </L2tpVaPool>
</L2TPV2>
```

## Table description

Item	Description
Feature name	L2TPV2
Table name	L2tpVaPool
Table type	Multi-instance table
Row name	VaPool
Restrictions	VT interface must be exist
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
L2tpVTNum	Template-number	Index	Unsigned integer. Value range: 1 to 2047	Specifies an existing VT interface by its number to use the VA pool.  The value range for this argument varies by device model.
L2tpVANum	Va-volume	N/A	Unsigned integer. Value range: 1 to 65534	Specifies the maximum number of VA interfaces contained in the VA pool.

## L2TPV2/L2tpGlobal

This table contains the information about global configuration of l2tp.

### XML structure

```

<L2TPV2>
  <L2tpGlobal>
    <L2tpEnable></L2tpEnable>
    <IcrqLimit></IcrqLimit>
    <ScrqLimit></ScrqLimit>
  </L2tpGlobal>
</L2TPV2>

```

### Table description

Item	Description
Feature name	L2TPV2
Table name	L2tpGlobal
Table type	Single instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
L2tpEnable	Whether the function of L2TP is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false(default)</b></li> </ul>	N/A
IcrqLimit	Maximum number of ICRQ packets processed per second	N/A	Unsigned integer. Value range: 1 to 60000. Default: 0	N/A
SccrqLimit	Maximum number of SCCRQ packets processed per second	N/A	Unsigned integer. Value range: 1 to 10000. Default: 0	N/A

## L2TPV2/L2tpv2Group

This table contains L2TP group configuration information.

### XML structure

```

<L2TPV2>
  <L2tpv2Group>
    <Group>
      <GroupNum></GroupNum>
      <Mode></Mode>
      <AllowVTNum></AllowVTNum>
      <AllowRtmName></AllowRtmName>
      <LnsIP></LnsIP>
      <UserType></UserType>
      <UserName></UserName>
      <TunnelName></TunnelName>
      <Password></Password>
      <AuthEnable></AuthEnable>
      <MChapEnable></MChapEnable>
      <MLcpEnable></MLcpEnable>
      <AvpHiddenEnable></AvpHiddenEnable>
      <FlowControlEnable></FlowControlEnable>
      <HelloTime></HelloTime>
    </Group>
  </L2tpv2Group>
</L2TPV2>

```

### Table description

Item	Description
Feature name	L2TPV2

Table name	L2tpv2Group
Table type	Multi-instance table
Row name	Group
Restrictions	N/A
Support for row creation and deletion	YES

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNum	Group number.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Mode	Group mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—lac.</li> <li>1—Ins</li> </ul>	N/A
AllowVTNum	Specifies a VT interface by its number.	N/A	Unsigned integer.	It can only be configured when Mode is Ins. The value range depended on device.
AllowRtmName	Specifies the name of the tunnel peer (LAC) initiating tunneling requests	N/A	String, case-sensitive. Length: 1 to 31 characters.	It can only be configured when Mode is Ins.
InsIP	Specifies LNS IP addresses.	N/A	String, case-sensitive. Length: 1 to 79 characters.	It can only be configured when Mode is lac. Separated by space if there are multiple addresses. Specifies a space-separated list of up to five addresses Example: 1.1.1.1 2.2.2.2 3.3.3.3.
UserType	To configure the condition for the LAC to initiate tunneling requests	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—domain name</li> <li>1—full user name</li> </ul>	It can only be configured when Mode is lac.
UserName	user name.	N/A	String, case-sensitive. Length: 1 to 255 characters.	It can only be configured when Mode is lac.
TunnelName	Local tunnel name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
PassWord	password.	N/A	String, case-sensitive. Length: 1 to 16 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AuthEnable	L2TP tunnel authentication.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true(default)</b></li> <li>• <b>false</b></li> </ul>	N/A
MChapEnable	To force the LNS to perform CHAP authentication for users.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false(default)</b></li> </ul>	It can only be configured when Mode is Ins.
MLcpEnable	To force an LNS to perform LCP negotiation with users.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false(default)</b></li> </ul>	It can only be configured when Mode is Ins.
AvpHiddenEnable	To enable transferring AVP data in hidden mode.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false(default)</b></li> </ul>	N/A
FlowControlEnable	To enable L2TP session flow control.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false(default)</b></li> </ul>	N/A
HelloTime	Hello interval.	N/A	Unsigned integer. Value range: 60 to 1000. Default: 60	N/A

# L2TPV2

## L2TPV2/L2tpAutoClient

This table contains the information about auto client.

### XML structure

```
<L2TPV2>
  <L2tpAutoClient>
    <AutoClient>
      <IfIndex></IfIndex>
      <GroupID></GroupID>
    </AutoClient>
  </L2tpAutoClient>
</L2TPV2>
```

### Table description

Item	Description
Feature name	L2TPV2
Table name	L2tpAutoClient
Table type	Multi-instance table
Row name	AutoClient
Restrictions	This table supports interface types: virtual-ppp interface

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	The LAC uses tunnel parameters of the L2TP group to establish the tunnel.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A

## L2TPV2/L2tpv2LacSrcIP

This table contains the information about L2TP tunnel source IP addresses.

### XML structure

```
<L2TPV2>
  <L2tpv2LacSrcIP>
    <LacSrcIP>
      <IfIndex></IfIndex>
      <IPAddress></IPAddress>
    </LacSrcIP>
  </L2tpv2LacSrcIP>
</L2TPV2>
```

### Table description

Item	Description
Feature name	L2TPV2
Table name	L2tpv2LacSrcIP
Table type	Multi-instance table
Row name	LacSrcIP
Restrictions	This table supports interface types: vsi interface

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
IPAddress	Tunnel local IP address.	N/A	String, dotted decimal notation.	N/A

## L2TPV2/L2tpVaPool

This table contains the information about L2TPV2 va-pool.

### XML structure

```

<L2TPV2>
  <L2tpVaPool>
    <VaPool>
      <L2tpVTNum></L2tpVTNum>
      <L2tpVANum></L2tpVANum>
    </VaPool>
  </L2tpVaPool>
</L2TPV2>

```

### Table description

Item	Description
Feature name	L2TPV2
Table name	PPPUsePap
Table type	Multi-instance table
Row name	VaPool
Restrictions	VT interface must be exist

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
L2tpVTNum	Template-number	Index	Unsigned integer. Value range: 1 to 2047	Specifies an existing VT interface by its number to use the VA pool. The value range for this argument varies by device model.
L2tpVANum	<i>Va-volume</i>	N/A	Unsigned integer. Value range: 1 to 65534	N/A

# L2TPV2/L2tpGlobal

This table contains the information about global configuration of l2tp.

## XML structure

```
<L2TPV2>
  <L2tpGlobal>
    <L2tpEnable></L2tpEnable>
    <IcrqLimit></IcrqLimit>
    <ScqrqLimit></ScqrqLimit>
  </L2tpGlobal>
</L2TPV2>
```

## Table description

Item	Description
Feature name	L2TPV2
Table name	L2tpGlobal
Table type	Single instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
L2tpEnable	Whether the function of L2TP is enabled.	N/A	Boolean: <ul style="list-style-type: none"><li>• true</li><li>• false</li></ul>	N/A
IcrqLimit	Maximum number of ICRQ packets processed per second	N/A	Unsigned integer. Value range: 1 to 60000.	N/A
ScqrqLimit	Maximum number of SCCRQ packets processed per second	N/A	Unsigned integer. Value range: 1 to 10000.	N/A

# L2TPV2/L2TPV2TunnelInfo

This table contains the information about using display l2tp tunnel to display information about L2TP tunnels.

## XML structure

```
<L2TPV2>
  <L2TPV2TunnelInfo>
    <TunnelInfo>
      <LocalTIDIndex></LocalTIDIndex>
      <RemoteTID></RemoteTID>
      <State></State>
      <Sessions></Sessions>
      <RemoteAddr></RemoteAddr>
      <RemotePort></RemotePort>
      <RemoteName></RemoteName>
      <ModeType></ModeType>
    </TunnelInfo>
  </L2TPV2TunnelInfo>
</L2TPV2>
```

## Table description

Item	Description
Feature name	L2TPV2
Table name	L2TPV2TunnelInfo
Table type	Multi-instance table
Row name	TunnelInfo
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalTIDIndex	Local tunnel ID.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
RemoteTID	Remote tunnel ID.	N/A	Unsigned integer. • Value range: 1 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
State	Tunnel state.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0—Idle (default)</b></li> <li>• <b>1—Wait-reply</b></li> <li>• <b>2—Wait-connect</b></li> <li>• <b>3—Established</b></li> <li>• <b>4—Stopping</b></li> </ul>	Session state: Idle. Wait-tunnel—Waits for the tunnel to be established. Wait-reply—Waits for an ICRP message indicating the call is accepted. Wait-connect—Waits for an ICCN message. Established—Establishes the tunnel successfully. Stopping—Is being offline.
Sessions	Number of sessions within the tunnel.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
RemoteAddr	IP address of the peer.	N/A	String, dotted decimal notation.	N/A
RemotePort	UDP port number of the peer.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
RemoteName	Name of the tunnel peer.	N/A	String, case insensitive. Length: 1 to 31 characters.	N/A
ModeType	TunnelModeType.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0—LAC</b></li> <li>• <b>1—LNS</b></li> </ul>	N/A

## L2TPV2/L2TPV2TunnelExtendInfo

This table contains the information about using display l2tp tunnel to display information about L2TP tunnels for extension.

### XML structure

```

<L2TPV2>
  <L2TPV2TunnelExtendInfo>
    <TunnelExtendInfo>
      <LocalAddrIndex></LocalAddrIndex>
      <LocalTIDIndex></LocalTIDIndex>
      <RemoteTID></RemoteTID>
      <State></State>
      <Sessions></Sessions>
  
```

```

    <RemoteAddr></RemoteAddr>
    <RemotePort></RemotePort>
    <RemoteName></RemoteName>
    <ModeType></ModeType>
  </TunnelExtendInfo>
</L2TPV2TunnelExtendInfo>
</L2TPV2>

```

## Table description

Item	Description
Feature name	L2TPV2
Table name	L2TPV2TunnelExtendInfo
Table type	Multi-instance table
Row name	TunnelExtendInfo
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalAddrIndex	Local tunnel IP address.	Index	String, dotted decimal notation.	N/A
LocalTIDIndex	Local tunnel ID.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
RemoteTID	Remote tunnel ID.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
State	Tunnel state.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>• <b>0</b>—Idle (default)</li> <li>• <b>1</b>—Wait-reply</li> <li>• <b>2</b>—Wait-connect</li> <li>• <b>3</b>—Established</li> <li>• <b>4</b>—Stopping</li> </ul>	<p>Session state:</p> <ul style="list-style-type: none"> <li>• <b>Idle.</b></li> <li>• <b>Wait-tunnel</b>—Waits for the tunnel to be established.</li> <li>• <b>Wait-reply</b>—Waits for an ICRP message indicating the call is accepted.</li> <li>• <b>Wait-connect</b>—Waits for an ICCN message.</li> <li>• <b>Established</b>—Establishes the tunnel successfully.</li> <li>• <b>Stopping</b>—Is being offline.</li> </ul>
Sessions	Number of sessions within the tunnel.	N/A	<p>Unsigned integer.</p> <p>Value range: 1 to 65535.</p>	N/A
Remote Addr	IP address of the peer.	N/A	String, dotted decimal notation.	N/A
Remote Port	UDP port number of the peer.	N/A	<p>Unsigned integer.</p> <p>Value range: 0 to 65535.</p>	N/A
Remote Name	Name of the tunnel peer.	N/A	<p>String, case insensitive.</p> <p>Length: 1 to 31 characters.</p>	N/A
ModeType	Tunnel mode.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>• <b>0</b>—LAC</li> <li>• <b>1</b>—LNS</li> </ul>	N/A

## L2TPV2/L2tpv2Group

This table contains L2TP group configuration information.

### XML structure

```

<L2TPV2>
  <L2tpv2Group>
    <Group>
      <GroupNum></GroupNum>

```

```

    <Mode></Mode>
    <AllowVTNum></AllowVTNum>
    <AllowRtmName></AllowRtmName>
    <LnsIP></LnsIP>
    <UserType></UserType>
    <UserName></UserName>
    <TunnelName></TunnelName>
    <Password></Password>
    <AuthEnable></AuthEnable>
    <MChapEnable></MChapEnable>
    <MLcpEnable></MLcpEnable>
    <AvpHiddenEnable></AvpHiddenEnable>
    <FlowControlEnable></FlowControlEnable>
    <HelloTime></HelloTime>
  </Group>
</L2tpv2Group>
</L2TPV2>

```

## Table description

Item	Description
Feature name	L2TPV2
Table name	L2tpv2Group
Table type	Multi-instance table
Row name	Group
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNum	Group number.	Index	Unsigned integer. <ul style="list-style-type: none"> <li>Value range: 1 to 65535.</li> </ul>	N/A
Mode	Group mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0—lac</b></li> <li><b>1—lms</b></li> </ul>	N/A
AllowVTNum	Specifies a VT interface by its number.	N/A	Unsigned integer.	It can only be visible when Mode is lms. The value range depended on device.

Column name	Column description	Column type	Data type and restrictions	Remarks
AllowRtmName	Specifies the name of the tunnel peer (LAC) initiating tunneling requests	N/A	String, case-sensitive. Length: 1 to 31 characters.	It can only be visible when Mode is Ins.
InsIP	Specifies LNS IP addresses.	N/A	String, case-sensitive. Length: 1 to 79 characters.	It can only be visible when Mode is lac. Separated by space if there are multiple addresses. Specifies a space-separated list of up to five addresses Example: 1.1.1.1 2.2.2.2 3.3.3.3.
UserType	To configure the condition for the LAC to initiate tunneling requests	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0—domain name</b></li> <li>• <b>1—full user name</b></li> </ul>	It can only be visible when Mode is lac.
UserName	user name.	N/A	String, case-sensitive. Length: 1 to 255 characters.	It can only be visible when Mode is lac.
TunnelName	Local tunnel name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
PassWord	password.	N/A	String, case-sensitive. Length: 1 to 16 characters.	N/A
AuthEnable	L2TP tunnel authentication.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
MChapEnable	To force the LNS to perform CHAP authentication for users.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	It can only be visible when Mode is Ins.
MLcpEnable	To force an LNS to perform LCP negotiation with users.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	It can only be visible when Mode is Ins.
AvpHiddenEnable	To enable transferring AVP data in hidden mode.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
FlowControlEnable	To enable L2TP session flow control.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
HelloTime	Hello interval.	N/A	Unsigned integer. Value range: 60 to 1000.	N/A

# L2VPN

## L2VPN/ClearVSIStatistics

This table is used to clear traffic statistics of the VSI.

### XML structure

```
<L2VPN>
  <ClearVSIStatistics>
    <VSIStatistics>
      <VsiName></VsiName>
      <Clear></Clear>
    </VSIStatistics>
  </ClearVSIStatistics>
</L2VPN>
```

### Table description

Item	Description
Feature name	L2VPN
Table name	ClearVSIStatistics
Table type	Multi-instance table
Row name	VSIStatistics
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
Clear	Clear VSI traffic statistics.	N/A	This column must be empty.	Clear

## L2VPN/ClearAllVSIStatistics

This table is used to clear traffic statistics of all VSI.

## XML structure

```
<L2VPN>
  <ClearAllVSIStatistics>
    <Clear></Clear>
  </ClearAllVSIStatistics>
</L2VPN>
```

## Table description

Item	Description
Feature name	L2VPN
Table name	ClearAllVSIStatistics
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Clear	Clears statistics on all VSIs.	N/A	This column must be empty.

## L2VPN/ClearACStatistics

This table is used to clear traffic statistics of an AC. [Currently, the AC can only be an Ethernet service instance.](#)

## XML structure

```
<L2VPN>
  <ClearACStatistics>
    <ACStatistics>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <Clear></Clear>
    </ACStatistics>
  </ClearACStatistics>
</L2VPN>
```

## Table description

Item	Description
Feature name	L2VPN
Table name	ClearACStatistics
Table type	Multi-instance table
Row name	ACStatistics
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
SrvID	Service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A
Clear	Clear traffic statistics.	N/A	This column must be empty.	Clear

## L2VPN/ClearAllACStatistics

This table is used to clear traffic statistics of all ACs. [Currently, an AC can only be an Ethernet service instance.](#)

## XML structure

```
<L2VPN>
  <ClearAllACStatistics>
    <Clear></Clear>
  </ClearAllACStatistics>
</L2VPN>
```

## Table description

Item	Description
Feature name	L2VPN
Table name	ClearAllACStatistics
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Clear	Clears statistics on all ACs.	N/A	This column must be empty.

## L2VPN/SwitchoverPW

This table is used to switch traffic from the specified PW to its backup PW.

## XML structure

```
<L2VPN>
  <SwitchoverPW>
    <PeerAddr></PeerAddr>
    <PWID></PWID>
    <Switch></Switch>
  </SwitchoverPW>
</L2VPN>
```

## Table description

Item	Description
Feature name	L2VPN
Table name	SwitchoverPW
Table type	Single-instance table
Row name	N/A
Restrictions	Support for this table depends on the device model.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerAddr	LSR ID of the peer PE	N/A	String, dotted decimal notation.	N/A
PWID	PW ID of the PW	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
Switch	Switch to backup PW	N/A	This column must be empty.	N/A

## L2VPN/ClearVSIMAC

This table is used to reset learned MAC address for the specified VSI.

## XML structure

```
<L2VPN>
  <ClearVSIMAC>
    <VSI>
      <VsiName></VsiName>
      <Clear></Clear>
    </VSI>
  </ClearVSIMAC>
</L2VPN>
```

## Table description

Item	Description
Feature name	L2VPN
Table name	ClearVSIMAC
Table type	Multi-instance table
Row name	VSI
Restrictions	Support for this table depends on the device model.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
Clear	Clear learned MAC address for the VSI.	N/A	This column must be empty.	N/A

# L2VPN/ClearAllMAC

This table is used to reset all learned MAC address.

## XML structure

```
<L2VPN>
  <ClearAllMAC>
    <Clear></Clear>
  </ClearAllMAC>
</L2VPN>
```

## Table description

Item	Description
Feature name	L2VPN
Table name	ClearAllMAC
Table type	Single-instance table
Row name	N/A
Restrictions	Support for this table depends on the device model.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Clear all learned MAC address	N/A	This column must be empty.	N/A

# L2VPN/ClearAllPWStatistics

This table is used to clear all PW statistics.

## XML structure

```
<L2VPN>
  <ClearAllPWStatistics>
    <Clear></Clear>
  </ClearAllPWStatistics>
</L2VPN>
```

## Table description

Item	Description
Feature name	L2VPN

Table name	ClearAllPWStatistics
Table type	Single-instance table
Row name	N/A
Restrictions	Support for this table depends on the device model.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Clear all PW statistics	N/A	This column must be empty.	N/A

## L2VPN/ClearVSIPWStatistics

This table is used to clear specific PW related to the specific VSI.

## XML structure

```

<L2VPN>
  <ClearVSIPWStatistics>
    <ClearVSIPWStatistic>
      <VsiName></VsiName>
      <PeerAddr></PeerAddr>
      <PWID></PWID>
      <Clear></Clear>
    </ClearVSIPWStatistic>
  </ClearVSIPWStatistics>
</L2VPN>

```

## Table description

Item	Description
Feature name	L2VPN
Table name	ClearVSIPWStatistics
Table type	Multi-instance table
Row name	ClearVSIPWStatistic
Restrictions	Support for this table depends on the device model.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 31 characters.	
PeerAddr	LSR ID of the peer PE	N/A	String, dotted decimal notation.	This column must be specified together with PWID.
PWID	PW ID of the PW	N/A	Unsigned integer. Value range: 1 to 4294967295.	This column must be specified together with PeerAddr.
Clear	Clear specific PW statistics	N/A	This column must be empty.	N/A

## L2VPN/ClearXCGPWStatistics

This table is used to clear PW statistics related to the specific XCG.

### XML structure

```

<L2VPN>
  <ClearXCGPWStatistics>
    <ClearXCGPWStatistic>
      <XCGName></XCGName>
      <ConnectionName></ConnectionName>
      <Clear></Clear>
    </ClearXCGPWStatistic>
  </ClearXCGPWStatistics>
</L2VPN>

```

### Table description

Item	Description
Feature name	L2VPN
Table name	ClearXCGPWStatistics
Table type	Single-instance table
Row name	N/A
Restrictions	Support for this table depends on the device model.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
XCGName	XCG Name	Index	String. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ConnectionName	Connection Name	N/A	String. Length: 1 to 20 characters.	N/A
Clear	Clear specific PW statistics	N/A	This column must be empty.	N/A

# L2VPN

## L2VPN/Base

This table contains global L2VPN information.

### XML structure

```
<L2VPN>
  <Base>
    <Enable></Enable>
    <StatisticsInterval></StatisticsInterval>
  </Base>
</L2VPN>
```

### Table description

Item	Description
Feature name	L2VPN
Table name	Base
Table type	Single-instance table
Row name	N/A
Restrictions	This table supports only global configurations.
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether L2VPN feature is enabled globally	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled.</li><li><b>false</b>—Disabled(default).</li></ul>	N/A
StatisticsInterval	Interval for collecting packets statistics	N/A	Unsigned integer Value range: 30 to 65535. Unit: seconds.	N/A

## L2VPN/VSI

This table contains information about VSIs.

## XML structure

```
<L2VPN>
  <VSIs>
    <VSI>
      <VsiName></VsiName>
      <HubSpoke></HubSpoke>
      <ArpSuppression></ArpSuppression>
      <NdSuppression></NdSuppression>
      <MacLearning></MacLearning>
      <MacLimit></MacLimit>
      <Flooding></Flooding>
      <FloodType></FloodType>
      <VsiInterfaceID></VsiInterfaceID>
      <Statistics></Statistics>
      <StatisticsOverlayTunnel></StatisticsOverlayTunnel>
      <Description></Description>
      <Bandwidth></Bandwidth>

      <UnknownUnicastRestrain></UnknownUnicastRestrain>
      <AdminStatus></AdminStatus>
      <Dscp></Dscp>
      <ServiceClass></ServiceClass>
    </VSI>
  </VSIs>
</L2VPN>
```

## Table description

Item	Description
Feature name	L2VPN
Table name	VSIs
Table type	Multi-instance table
Row name	VSI
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A

HubSpoke	Support for hub spoke capability.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true—Supported.</li> <li>• false—Not supported(default).</li> </ul>	Support for this column depends on the device model. No modification.
ArpSuppression	ARP flooding suppression	N/A	Boolean: <ul style="list-style-type: none"> <li>• true—Enabled.</li> <li>• false—Disabled(default).</li> </ul>	Need confirm by products .
NdSuppression	ND flooding suppression	N/A	Boolean: <ul style="list-style-type: none"> <li>• true—Enabled.</li> <li>• false—Disabled(default).</li> </ul>	Need confirm by products .
MacLearning	MAC address learning	N/A	Boolean: <ul style="list-style-type: none"> <li>• true—Enabled(default).</li> <li>• false—Disabled.</li> </ul>	Support for this column depends on the device model.
MacLimit	MAC table limit	N/A	Unsigned integer. Value range: The value range varies by device model.	Support for this column depends on the device model.
Flooding	Flooding for all destination-unknown frames	N/A	Boolean: <ul style="list-style-type: none"> <li>• true—Enabled(default).</li> <li>• false—Disabled.</li> </ul>	N/A
FloodType	Flood type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—Broadcast</li> <li>• 2—Unknown unicast</li> <li>• 4—Multicast</li> <li>• 3—Broadcast and unknown unicast.</li> <li>• 5—Broadcast and multicast.</li> <li>• 6—Unknown unicast and multicast.</li> <li>• 7—Broadcast, unknown unicast, and multicast.</li> <li>• 9—Broadcast DCI</li> <li>• 10—Unknown unicast DCI</li> <li>• 11—Broadcast and unknown unicast on DCI tunnels.</li> <li>• 12—Multicast DCI</li> <li>• 13—Broadcast and multicast on DCI tunnels.</li> <li>• 14—Unknown unicast and multicast on DCI tunnels.</li> <li>• 15—Broadcast, unknown unicast, and multicast on DCI tunnels.</li> <li>• 17—Broadcast all-direction</li> <li>• 18—Unknown unicast all-direction</li> </ul>	The value is always 7 when Flooding is enabled.  The value must be set when flooding set to disabled.

			<ul style="list-style-type: none"> <li>• 20—Multicast all-direction</li> <li>• 19—Broadcast and unknown unicast in all directions.</li> <li>• 21—Broadcast and multicast in all directions.</li> <li>• 22—Unknown unicast and multicast in all directions.</li> <li>• 23—Broadcast, unknown unicast, and multicast in all directions. Default: 7</li> </ul>	
VsiInterfaceID	VSI interface ID	N/A	Unsigned integer	The range of VsiInterfaceID is reference in table of Base which in Data API.
Statistics	VSI statistics	N/A	Boolean: <ul style="list-style-type: none"> <li>• true—Enabled.</li> <li>• false—Disabled(default).</li> </ul>	N/A
StatisticsOverlayTunnel	Overlay Tunnel statistics	N/A	Boolean: <ul style="list-style-type: none"> <li>• true—Enabled.</li> <li>• false—Disabled(default).</li> </ul>	N/A
Description	description for the VSI	N/A	String. Length: 1 to 80 characters.	N/A
Bandwidth	VSI bandwidth	N/A	Unsigned integer Value range: The minimum value is 64 kbps. The maximum value (in kbps) varies by device model.	Support for this column depends on the device model.
BroadcastRestrain	Broadcast suppression bandwidth threshold	N/A	Unsigned integer. Value range: 0, 64 to the maximum, in kbps. The default value and maximum value vary by device model.	Support for this column depends on the device model. The default value of BroadcastRestrain is the value of VSIBroadcastRestrainDefault in the Base table of Data API.
MulticastRestrain	Multicast suppression bandwidth threshold	N/A	Unsigned integer. Value range: 0, 64 to the maximum, in kbps. The default value and maximum value vary by device model.	Support for this column depends on the device model. The default value of MulticastRestrain is the value of VSIMulticastRestrainDefault in the Base table of Data API.
UnknownUnicastRestrain	Unknown-unicast	N/A	Unsigned integer.	Support for this column depends

	suppression bandwidth threshold		Value range: 0, 64 to the maximum, in kbps. The default value and maximum value vary by device model.	on the device model. The default value of UnknownUnicast Restrained is the value of VSIUnicastRestrainedDefault in the Base table of Data API.
AdminStatus	Administratively status	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Administratively up(default).</li> <li>2—Administratively down.</li> </ul>	N/A
Dscp	DSCP value	N/A	Unsigned integer Value range: 0 to 63.	Support for this column depends on the device model.
ServiceClass	Service class value	N/A	Unsigned integer Value range: The value range varies by device model.	Support for this column depends on the device model. The maximum value for this column is defined in the Base table of Data API.

## L2VPN/PWClasses

This table contains PW class information.

### XML structure

```

<L2VPN>
  <PWClasses>
    <PWClass>
      <PWClassName></PWClassName>
      <ControlWord></ControlWord>
      <PWType></PWType>
      <SequencingBoth></SequencingBoth>
    </PWClass>
  </PWClasses>
</L2VPN>

```

### Table description

Item	Description
Feature name	L2VPN
Table name	PWClasses

Table type	Multi-instance table
Row name	PWClass
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PWClassName	PW class name	Index	String. Length: 1 to 19 characters.	N/A
ControlWord	control word for ACs	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled(default).</li> </ul>	N/A
PWType	PW type for PWs	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—VLAN(default).</li> <li>2—Ethernet.</li> </ul>	N/A
SequencingBoth	Sequencing for both incoming and outgoing packets	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled(default).</li> </ul>	Support for this column depends on the device model.

## L2VPN/SRVs

This table contains information about service instances of layer 2 ethernet interfaces.

## XML structure

```

<L2VPN>
  <SRVs>
    <SRV>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <Encap></Encap>
      <SVlanRange></SVlanRange>
      <CVlanRange></CVlanRange>
    </SRV>
  </SRVs>
</L2VPN>

```

## Table description

Item	Description
Feature name	L2VPN
Table name	SRVs

Table type	Multi-instance table
Row name	SRV
Restrictions	<p>This table supports only layer 2 Ethernet interfaces.</p> <p>You must follow these restrictions:</p> <ul style="list-style-type: none"> <li>Specify SVlanRange and not CVlanRange when the value of Encap is SvlanId or SvlanIdOnlyTagged or SvlanList or SvlanListOnlyTagged;</li> <li>Specify both SVlanRange and CVlanRange when the value of Encap is SvlanIdCvlanId or SvlanIdCvlanList or SvlanIdCvlanAll; the value of CVlanRange must be 1-4094 when the value of Encap is SvlanIdCvlanAll.</li> <li>Specify CVlanRange and not SVlanRange when the value of Encap is CvlanId or CvlanList;</li> <li>Don't specify SVlanRange and CVlanRange when the value of Encap is Default or Untagged or Tagged.</li> </ul>
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
SrvID	Service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A
Encap	Encapsulation type	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>1—Default.</li> <li>2—Untagged.</li> <li>3—Tagged</li> <li>4—SvlanId</li> <li>5—SvlanIdOnlyTagged</li> <li>6—SvlanIdCvlanId</li> <li>7—CvlanId</li> <li>8—CvlanList</li> <li>9—SvlanIdCvlanList</li> <li>10—SvlanIdCvlanAll</li> <li>11—SvlanList</li> <li>12—SvlanListOnlyTagged</li> <li>13—SvlanListCvlanList</li> </ul>	<p>Can not be modified after creation.</p> <p>You must and only need specify this column when you remove or delete the encapsulation, and the <b>SVlanRange</b> column or <b>CVlanRange</b> column is ignored.</p>

SVlanRange	A outer VLAN ID or a list of outer VLAN IDs	N/A	<p>Number string.</p> <p>It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range, and the end VLAN ID must be larger than the start VLAN ID.</p> <p>The string must not end with a comma or hyphen, or include any whitespace characters.</p>	<p>Example: 1,2,3,5-8,10-20.</p> <p>The value must be different in different VLAN ID ranges.</p> <p>If this column is required, you must also specify the <b>Encap</b> column.</p>
CVlanRange	A inner VLAN ID or a list of inner VLAN IDs	N/A	<p>Number string.</p> <p>It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range, and the end VLAN ID must be larger than the start VLAN ID.</p> <p>The string must not end with a comma or hyphen, or include any whitespace characters.</p>	<p>Example: 1,2,3,5-8,10-20.</p> <p>The value must be different in different VLAN ID ranges.</p> <p>If this column is required, you must also specify the <b>Encap</b> column.</p>

## L2VPN/ACs

This table contains information about ACs.

### XML structure

```

<L2VPN>
  <ACs>
    <AC>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <VsiName></VsiName>
      <AccessMode></AccessMode>
      <Hub></Hub>
      <Statistics></Statistics>
      <Bandwidth></Bandwidth>
      <LearningMode></LearningMode>
      <Flooding></Flooding>
      <FloodType></FloodType>
      <ForwardingMode></ForwardingMode>
      <TrackEntryNumber></TrackEntryNumber>
    </AC>
  </ACs>
</L2VPN>

```

## Table description

Item	Description
Feature name	L2VPN
Table name	ACs
Table type	Multi-instance table
Row name	AC
Restrictions	This table supports only layer 2 Ethernet interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
SrvID	Service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	You must create a service instance first before you merge, replace or create ACs.
VsiName	VSI name	N/A	String. Length: 1 to 31 characters.	You must create a VSI first before you merge, replace or create ACs.  You must specify this column when the operation is create, merge or replace.  Can not be modified after creation.
AccessMode	The access mode of this AC	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Vlan.</li> <li>2—Ethernet.</li> </ul>	Can not be modified after creation.  By default, the value is 1.

Hub	Hub spoke attribute for the Link.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Hub.</li> <li>false—Spoke(default).</li> </ul>	You must first create the VSI with the hub-spoke capability. Can not be modified after creation.
Statistics	Whether statistics function is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false (default).</li> </ul>	N/A
Bandwidth	AC bandwidth	N/A	Unsigned integer Value range: The minimum value is 64 kbps. The maximum value (in kbps) varies by device model.	Support for this column depends on the device model.
LearningMode	MAC learning mode of this AC	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—MAC mode.</li> <li>1—SVID only.</li> <li>2—Double VIDs.</li> <li>3—Learning disabled</li> </ul>	By Default,the value is 0 (MAC mode). Support for this column depends on the device.
Flooding	Enabling status of flooding	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled(default).</li> <li>false—Disabled.</li> </ul>	N/A
FloodType	Flooding type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—All ports.</li> <li>2—Source port.</li> </ul>	The value must be set when flooding set to disabled.
ForwardingMode	Forwarding mode of this AC	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—MAC mode (default).</li> <li>1—SVID only.</li> <li>2—Double VIDs.</li> </ul>	Support for this column depends on the device model.
TrackEntryNumber	Track entry number list	N/A	Number string: It is a comma-separated list of up to three Track entry numbers. The string must end with a number.	Example: 1,2,3 A Track entry number list cannot contain duplicate Track entry numbers.

## L2VPN/L3Interfaces

This table contains information about ACs for Layer 3 Ethernet interfaces.

### XML structure

```

<L2VPN>
  <L3Interfaces>
    <L3Interface>
      <IfIndex></IfIndex>

```

```

    <VsiName></VsiName>
    <AccessMode></AccessMode>
    <Hub></Hub>
    <TrackEntryNumber></TrackEntryNumber>
  </L3Interface>
</L3Interfaces>
</L2VPN>

```

## Table description

Item	Description
Feature name	L2VPN
Table name	L3Interfaces
Table type	Multi-instance table
Row name	L3Interface
Restrictions	This table supports only layer 3 Ethernet interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
VsiName	VSI name	N/A	String. Length: 1 to 31 characters.	You must create a VSI first before you merge, replace or create ACs.  You must specify this column when the operation is create, merge or replace.  Can not be modified after creation.
AccessMode	Access mode of	N/A	Enumeration:	Cannot be

	the AC		<ul style="list-style-type: none"> <li>1—VLAN.</li> <li>2—Ethernet.</li> </ul>	modified after creation. By default, the value is 1.
Hub	Hub spoke attribute for the Link.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Hub.</li> <li>false—Spoke(default).</li> </ul>	You must first create the VSI with the hub-spoke capability. Can not be modified after creation.
TrackEntryNumber	Track entry number	N/A	Number string: It is a comma-separated list of up to three Track entry numbers. The string must end with a number.	Example: 1,2,3 A Track entry number list cannot contain duplicate Track entry numbers.

## L2VPN/FloodingMACs

This table contains information about MAC address which can be selectively flooded.

### XML structure

```

<L2VPN>
  <FloodingMACs>
    <MAC>
      <VsiName></VsiName>
      <MacAddr></MacAddr>
    </MAC>
  </FloodingMACs>
</L2VPN>

```

### Table description

Item	Description
Feature name	L2VPN
Table name	FloodingMACs
Table type	Multi-instance table
Row name	MAC
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
MacAddr	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated. The value can't be broadcast address.	Example: 00-0c-af-e3-5d-c0. Some versions only support unicast address or all 0s.

## L2VPN/LocalMACs

This table contains information about setting static local MAC addresses for each VSI.

## XML structure

```
<L2VPN>
  <LocalMACs>
    <MAC>
      <VsiName></VsiName>
      <MacAddr></MacAddr>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
    </MAC>
  </LocalMACs>
</L2VPN>
```

## Table description

Item	Description
Feature name	L2VPN
Table name	LocalMACs
Table type	Multi-instance table
Row name	MAC
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	You must create a VSI first.
MacAddr	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
IfIndex	Interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference. IfIndex cannot be modified after creation.
SrvID	Service instance ID	N/A	Unsigned integer. Value range: 1 to 4096.	SrvID cannot be modified after creation.

## L2VPN/VSIInterfaces

This table is used to create or delete VSI interfaces

## XML structure

```

<L2VPN>
  <VSIInterfaces>
    <Interface>
      <ID></ID>
      <LocalEnable></LocalEnable>
      <L3VNI></L3VNI>
      <ArpSendRate></ArpSendRate>
      <PrefixRouteGenerate></PrefixRouteGenerate>
    </Interface>
  </VSIInterfaces>
</L2VPN>

```

## Table description

Item	Description
Feature name	L2VPN
Table name	VSIInterfaces
Table type	Multi-instance table
Row name	Interface

Restrictions	You must enable global L2VPN feature at first.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	VSI interface ID	Index	Unsigned integer	The range of VsiInterfaceID is reference in table of Base which in Data API.
LocalEnable	Local distributed gateway	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled (default).</li> </ul>	N/A
L3VNI	L3 VNI for the tenant	N/A	Unsigned integer	N/A
ArpSendRate	ARP packet sending rate limit	N/A	Unsigned integer Value range: 0 to 500.	By default, the value is 0 for no limit.
PrefixRouteGenerate	Whether EVPN route advertisement is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled (default).</li> <li><b>false</b>—Disabled.</li> </ul>	N/A

## L2VPN/VSIIPv4Subnets

This table contains information about IPv4 subnet configurations.

## XML structure

```

<L2VPN>
  <VSIIPv4Subnets>
    <Ipv4Subnet>
      <VsiName></VsiName>
      <SubnetAddress></SubnetAddress>
      <WildcardMask></WildcardMask>
    </Ipv4Subnet>
  </VSIIPv4Subnets>
</L2VPN>

```

## Table description

Item	Description
Feature name	L2VPN
Table name	VSIIPv4Subnets

Table type	Multi-instance table
Row name	Ipv4Subnet
Restrictions	You must specify a gateway interface for the VSI at first.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
SubnetAddress	IPv4 address	Index	String, dotted decimal notation.	N/A
WildcardMask	Wildcard mask	Index	String, dotted decimal notation.	N/A

## L2VPN/VSIIPv6Subnets

This table contains information about IPv6 subnet configurations.

## XML structure

```

<L2VPN>
  <VSIIPv6Subnets>
    <Ipv6Subnet>
      <VsiName></VsiName>
      <SubnetAddress></SubnetAddress>
      <PrefixLength></PrefixLength>
    </Ipv6Subnet>
  </VSIIPv6Subnets>
</L2VPN>

```

## Table description

Item	Description
Feature name	L2VPN
Table name	VSIIPv6Subnets
Table type	Multi-instance table
Row name	Ipv6Subnet
Restrictions	You must specify a gateway interface for the VSI at first.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
SubnetAddress	IPv6 address	Index	Hexadecimal string, colon-separated.	Example: ABCD:EF01::1
PrefixLength	Prefix length of the IPv6 address	Index	Unsigned integer. <ul style="list-style-type: none"><li>Value range: 1- 128.</li></ul>	N/A

## L2VPN/InterfaceConfigs

This table contains information about configurations of interfaces.

### XML structure

```
<L2VPN>
  <InterfaceConfigs>
    <InterfaceConfig>
      <IfIndex></IfIndex>
      <SoftwareLearning></SoftwareLearning>
      <Dci></Dci>
      <VxlanOverVxlan></VxlanOverVxlan>
      <MacBasedAc></MacBasedAc>
      <LearningMode></LearningMode>
      <ForwardingMode></ForwardingMode>
    </InterfaceConfig>
  </InterfaceConfigs>
</L2VPN>
```

### Table description

Item	Description
Feature name	L2VPN
Table name	InterfaceConfigs
Table type	Multi-instance table
Row name	InterfaceConfig
Restrictions	You must first enable the L2VPN feature globally.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
SoftwareLearning	Whether learning MAC addresses through software function is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false (default)</li> </ul>	N/A
Dci	Whether Dci is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false (default)</li> </ul>	Support for this column depends on the device model.
VxlanOverVxlan	Whether VXLAN over VXLAN is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false (default)</li> </ul>	Support for this column depends on the device model.
MacBasedAc	Whether mac based ac is enable	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false (default)</li> </ul>	Support for this column depends on the device model.
LearningMode	MAC learning mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—MAC mode (default).</li> <li>1—SVID only.</li> <li>2—Double VIDs.</li> <li>3—Learning disabled.</li> </ul>	Support for this column depends on the device model.
ForwardingMode	Forwarding mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—MAC mode (default).</li> <li>1—SVID only.</li> <li>2—Double VIDs.</li> </ul>	Support for this column depends on the device model.

## L2VPN/SrvRewrites

This table contains information about VLAN tag rewrite capability of service instances.

## XML structure

```
<L2VPN>
  <SrvRewrites>
    <SrvRewrite>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <Inbound>
        <RewriteType></RewriteType>
        <SVlanID></SVlanID>
        <CVlanID></CVlanID>
        <Symmetric></Symmetric>
      </Inbound>
      <Outbound>
        <RewriteType></RewriteType>
        <SVlanID></SVlanID>
        <CVlanID></CVlanID>
      </Outbound>
    </SrvRewrite>
  </SrvRewrites>
</L2VPN>
```

## Table description

Item	Description
Feature name	L2VPN
Table name	SrvRewrites
Table type	Multi-instance table
Row name	SrvRewrite
Restrictions	You must first enable the L2VPN feature globally.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF

				XML API Configuration Reference.
SrvID	Service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	You must create a service instance before you merge, replace or create SrvRewrites.
Inbound	Inbound direction of packets	N/A	Members include: <ul style="list-style-type: none"> <li>RewriteType</li> <li>SvlanID</li> <li>CvlanID</li> <li>Symmetric</li> </ul>	RewriteType must be specified.
Outbound	Outbound direction of packets	N/A	Members include: <ul style="list-style-type: none"> <li>RewriteType</li> <li>SvlanID</li> <li>CvlanID</li> </ul>	The members of RewriteType must be specified.
RewriteType	Rewrite type	N/A	Unsigned integer. Value: <ul style="list-style-type: none"> <li>1: NEST</li> <li>2: REMARK_ONE</li> <li>3: REMARK_TWO</li> <li>4: STRIP_SVLAN</li> <li>5: STRIP_CVLAN</li> <li>6: STRIP_BOTH</li> </ul>	N/A
SVlanID	Outer VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
CVlanID	Inner VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
Symmetric	Applies the opposite VLAN tag processing rule to outgoing traffic	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	By default, the value is false.

## L2VPN/L3Rewrites

This table contains information about rewrite capability of ac interface.

### XML structure

```

<L2VPN>
  <L3Rewrites>
    <L3Rewrite>
      <IfIndex></IfIndex>
      <RewriteType></RewriteType>
      <SVlanID></SVlanID>
      <CVlanID></CVlanID>
      <Symmetric></Symmetric>
    </L3Rewrite>
  </L3Rewrites>
</L2VPN>

```

```

    </L3Rewrites>
  </L2VPN>

```

## Table description

Item	Description
Feature name	L2VPN
Table name	L3Rewrites
Table type	Multi-instance table
Row name	L3Rewrite
Restrictions	You must enable L2VPN feature globally at first.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
RewriteType	RewriteType	N/A	Unsigned integer. Value: <ul style="list-style-type: none"> <li>1: NEST_S</li> <li>2: NEST_C</li> <li>3: NEST_SC</li> <li>8: REMARK_1TO2</li> </ul>	
SVlanID	Outer VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
CVlanID	Inner VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
Symmetric	Symmetric	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	By default, the value is false.

### Table description

Item	Description
Feature name	L2VPN
Table name	Base

Table type	Single-instance table
Row name	N/A
Restrictions	This table supports only global configurations.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether L2VPN feature is enabled globally	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
SupportVsiInterface	Whether VSI interface feature is supported	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Supported.</li> <li><b>false</b>—Not supported.</li> </ul>	N/A
VsiInterfaceMinID	Minimum VSI interface ID.	N/A	Unsigned integer.	N/A
VsiInterfaceMaxID	Maximum VSI interface ID.	N/A	Unsigned integer.	N/A
SupportSRV	Whether SRV feature is supported	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Supported.</li> <li><b>false</b>—Not supported.</li> </ul>	N/A
SupportControlWord	Whether control word feature is supported	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Supported.</li> <li><b>false</b>—Not supported.</li> </ul>	N/A
SupportVPLSHubSpoke	Whether VPLS hub-spoke feature is supported	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Supported.</li> <li><b>false</b>—Not supported.</li> </ul>	N/A
SupportVPLSMACLimit	Whether VPLS MAC limit feature is supported	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Supported.</li> <li><b>false</b>—Not supported.</li> </ul>	N/A
MACLimitMax	Maximum VPLS MAC limit	N/A	Unsigned integer	N/A
SupportVPWSInterworking	Whether VPWS interworking feature is supported	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Supported.</li> <li><b>false</b>—Not supported.</li> </ul>	N/A
SupportVPWSDualReceive	Whether VPWS dualreceive feature is supported	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Supported.</li> <li><b>false</b>—Not supported.</li> </ul>	N/A
SupportVSIStatistics	Whether VSI statistics feature is	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Supported.</li> <li><b>false</b>—Not supported.</li> </ul>	N/A

	supported			
SupportPWStatistics	Whether PW statistics feature is supported	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Supported.</li> <li><b>false</b>—Not supported.</li> </ul>	N/A
SupportVSIBandwidth	Whether VSI bandwidth feature is supported	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Supported.</li> <li><b>false</b>—Not supported.</li> </ul>	N/A
SupportVSIBroadcastRestrain	Whether VSI broadcast suppression feature is supported	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Supported.</li> <li><b>false</b>—Not supported.</li> </ul>	N/A
VSIBroadcastRestrainDefault	The default value of broadcast suppression bandwidth threshold.	N/A	Unsigned integer.	N/A
SupportVSIMulticastRestraining	Whether VSI multicast suppression feature is supported	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Supported.</li> <li><b>false</b>—Not supported.</li> </ul>	N/A
VSIMulticastRestrainingDefault	The default value of multicast suppression bandwidth threshold.	N/A	Unsigned integer.	N/A
SupportVSIUnknownUnicastRestraining	Whether VSI Unknown-unicast suppression feature is supported	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Supported.</li> <li><b>false</b>—Not supported.</li> </ul>	N/A
VSIUnknownUnicastRestrainingDefault	The default value of Unknown-unicast suppression bandwidth threshold.	N/A	Unsigned integer.	N/A
SupportACBandwidth	Whether AC bandwidth feature is supported	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Supported.</li> <li><b>false</b>—Not supported.</li> </ul>	N/A
SupportVxlanOverVxlan	Whether VXLAN over VXLAN is supported	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Supported.</li> <li><b>false</b>—Not supported.</li> </ul>	N/A
SupportDscp	Whether the DSCP feature is supported.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Supported.</li> <li><b>false</b>—Not supported.</li> </ul>	N/A
SupportServ	Whether the	N/A	Boolean:	N/A

ceClass	service class feature is supported.		<ul style="list-style-type: none"> <li><b>true</b>—Supported.</li> <li><b>false</b>—Not supported.</li> </ul>	
ServiceClass ValueMax	Maximum service class value.	N/A	Unsigned integer.	N/A
StatisticsInterval	Interval for collecting packets statistics	N/A	Unsigned integer Value range: 30 to 65535. Unit: seconds.	N/A
SupportOverlayTunnelStatistics	Whether the Overlay Tunnel statistics feature is supported	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Supported.</li> <li><b>false</b>—Not supported.</li> </ul>	N/A

## L2VPN/SrvEncapCapabilities

This table contains the encapsulation capabilities of service instance.

### XML structure

```

<L2VPN>
  <SrvEncapCapabilities>
    <Default></Default>
    <Untagged></Untagged>
    <Tagged></Tagged>
    <SvlanId></SvlanId>

    <CvlanId></CvlanId>
    <CvlanList></CvlanList>
    <SvlanIdCvlanList></SvlanIdCvlanList>
    <SvlanIdCvlanAll></SvlanIdCvlanAll>
    <SvlanList></SvlanList>
    <SvlanListOnlyTagged></SvlanListOnlyTagged>
    <SvlanListCvlanList></SvlanListCvlanList>
  </SrvEncapCapabilities>
</L2VPN>

```

### Table description

Item	Description
Feature name	L2VPN
Table name	SrvEncapCapabilities
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Default	Support for matching packets by the default criteria which matches packets that do not match any other service instance.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
Untagged	Support for matching untagged packets.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
Tagged	Support for matching all tagged packets.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
SvlanId	Support for matching packets by a SVLAN ID.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
SvlanIdOnlyTagged	Support for matching only tagged packets by a SVLAN ID.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
SvlanIdCvlanId	Support for matching packets by a SVLAN ID and a CVLAN ID.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
CvlanId	Support for matching packets by a CVLAN ID.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
CvlanList	Support for matching packets by CVLAN ID list.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
SvlanIdCvlanList	Support for matching packets by a SVLAN ID and CVLAN ID list.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
SvlanIdCvlanAll	Support for matching packets by a SVLAN ID and all CVLAN ID.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
SvlanList	Support for matching packets by SVLAN ID list	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
SvlanListOnlyTagged	Support for matching only tagged packets by SVLAN ID list.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
SvlanListCvlanList	Support for matching packets by SVLAN ID list and CVLAN ID list.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A

# L2VPN/VSIs

This table contains information about VSIs.

## XML structure

```
<L2VPN>
  <VSIs>

    </VSI>
  </VSIs>
</L2VPN>
```

## Table description

Item	Description
Feature name	L2VPN
Table name	VSIs
Table type	Multi-instance table
Row name	VSI
Restrictions	When the number of VSIs is large, it is recommended to use the <get-bulk> operation instead of the <get> operation

that may cost a lot of time and cause the UI to get stuck.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
HubSpoke	Support for hub spoke capability	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Supported.</li> <li>false—Not supported.</li> </ul>	No modification. Support for this column depends on the device model.
VsiIndex	VSI index	N/A	Unsigned integer.	N/A
VxlanID	VXLAN ID	N/A	Unsigned integer, Value range: 0-16777215.	N/A
NvgreID	NVGRE ID	N/A	Unsigned integer, Value range: 4096-16777214.	N/A
ArpSuppression	ARP flooding suppression	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
NdSuppression	ND flooding suppression	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
MacLearning	MAC address learning	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul>	N/A
MacLimit	MAC table limit	N/A	Unsigned integer. Value range: The value range varies by device model.	Support for this column depends on the device model.
Flooding	Flooding for all destination-unknown frames	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
FloodType	Flood type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Broadcast</li> <li>2—Unknown unicast</li> <li>4—Multicast</li> <li>3—Broadcast and unknown unicast.</li> <li>5—Broadcast and multicast.</li> <li>6—Unknown unicast and multicast.</li> <li>7—Broadcast, unknown unicast, and multicast.</li> <li>9—Broadcast DCI</li> </ul>	N/A

			<ul style="list-style-type: none"> <li>• 10—Unknown unicast DCI</li> <li>• 12—Multicast DCI</li> <li>• 11—Broadcast and unknown unicast on DCI tunnels.</li> <li>• 13—Broadcast and multicast on DCI tunnels.</li> <li>• 14—Unknown unicast and multicast on DCI tunnels.</li> <li>• 15—Broadcast, unknown unicast, and multicast on DCI tunnels.</li> <li>• 17—Broadcast all-direction</li> <li>• 18—Unknown unicast all-direction</li> <li>• 20—Multicast all-direction</li> <li>• 19—Broadcast and unknown unicast in all directions.</li> <li>• 21—Broadcast and multicast in all directions.</li> <li>• 22—Unknown unicast and multicast in all directions.</li> <li>• 23—Broadcast, unknown unicast, and multicast in all directions.</li> </ul>	
VsiInterfacelD	VSI interface ID	N/A	Unsigned integer.	N/A
Statistics	VSI statistics	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Enabled.</li> <li>• <b>false</b>—Disabled</li> </ul>	N/A
StatisticsOverlayTunnel	Overlay Tunnel statistics	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Enabled.</li> <li>• <b>false</b>—Disabled</li> </ul>	N/A
Description	Description for the VSI	N/A	String. Length: 1 to 80 characters.	N/A
Bandwidth	VSI bandwidth	N/A	Unsigned integer Value range: The minimum value is 64 kbps. The maximum value (in kbps) varies by device model.	N/A
BroadcastRestrain	Broadcast suppression bandwidth threshold	N/A	Unsigned integer. Value range: 0, 64 to the maximum, in kbps. The maximum value varies by device model.	N/A
MulticastRestrain	Multicast suppression bandwidth threshold	N/A	Unsigned integer. Value range: 0, 64 to the maximum, in kbps. The maximum value varies by device model.	N/A
UnknownUnicastRestrain	Unknown-unicast suppression	N/A	Unsigned integer. Value range: 0, 64 to the	N/A

	bandwidth threshold		maximum, in kbps. The maximum value varies by device model.	
AdminStatus	Administratively status	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Administratively up.</li> <li>2—Administratively down.</li> </ul>	N/A
Status	VSI status	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Up.</li> <li>2—Down.</li> </ul>	N/A
LocMacCnt	The count of local MAC addresses	N/A	Unsigned integer.	The value is always zero when the mode of VSI is not VXLAN. The value may be not zero when the mode of VSI is VXLAN.
Dscp	DSCP value	N/A	Unsigned integer. Value range: 0-63.	Support for this column depends on the device
ServiceClass	Service class value	N/A	Unsigned integer. Value range: The value range varies by device model.	Support for this column depends on the device

## L2VPN/PWClasses

This table contains PW class information.

### XML structure

```

<L2VPN>
  <PWClasses>
    <PWClass>
      <PWClassName></PWClassName>
      <ControlWord></ControlWord>
      <PWType></PWType>
      <SequencingBoth></SequencingBoth>
    </PWClass>
  </PWClasses>
</L2VPN>

```

### Table description

Item	Description
Feature name	L2VPN
Table name	PWClasses
Table type	Multi-instance table

Row name	PWClass
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PWClassName	PW class name	Index	String. Length: 1 to 19 characters.	N/A
ControlWord	Control word for ACs	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul>	N/A
PWType	PW type for ACs	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—VLAN.</li> <li>2—Ethernet.</li> </ul>	N/A
SequencingBoth	Sequencing for both incoming and outgoing packets	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul>	Support for this column depends on the device model.

## L2VPN/SRVs

This table contains information about service instances of layer 2 ethernet interfaces.

## XML structure

```

<L2VPN>
  <SRVs>
    <SRV>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <Encap></Encap>
      <SVlanRange></SVlanRange>
      <CVlanRange></CVlanRange>
    </SRV>
  </SRVs>
</L2VPN>

```

## Table description

Item	Description
Feature name	L2VPN
Table name	SRVs
Table type	Multi-instance table

Row name	SRV
Restrictions	This table supports only layer 2 Ethernet interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
SrvID	Service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A
Encap	Encapsulation type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Default.</li> <li>2—Untagged.</li> <li>3—Tagged</li> <li>4—SvlanId</li> <li>5—SvlanIdOnlyTagged</li> <li>6—SvlanIdCvlanId</li> <li>7—CvlanId</li> <li>8—CvlanList</li> <li>9—SvlanIdCvlanList</li> <li>10—SvlanIdCvlanAll</li> <li>11—SvlanList</li> <li>12—SvlanListOnlyTagged</li> <li>13—SvlanListCvlanList</li> </ul>	N/A
SVlanRange	A outer VLAN ID or a list of outer VLAN IDs	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range, and the end VLAN ID must be larger than the start VLAN ID. The string must not end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. The column is available when the value of Encap is SvlanId or SvlanIdOnlyTagged or SvlanList or SvlanListOnlyTagged or SvlanIdCvlanId or SvlanIdCvlanList or SvlanIdCvlanAll.
CVlanRange	A inner VLAN ID	N/A	Number string.	Example:

	or a list of inner VLAN IDs		It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range, and the end VLAN ID must be larger than the start VLAN ID.  The string must not end with a comma or hyphen, or include any whitespace characters.	1,2,3,5-8,10-20.  The column is available when the value of Encap is CvlanId or CvlanList or SvlanIdCvlanId or SvlanIdCvlanList or SvlanIdCvlanAll.
--	-----------------------------	--	---	---

## L2VPN/ACs

This table contains information about ACs.

### XML structure

```

<L2VPN>
  <ACs>
    <AC>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <VsiName></VsiName>
      <AccessMode></AccessMode>
      <Hub></Hub>
      <Statistics></Statistics>
      <Bandwidth></Bandwidth>
      <LearningMode></LearningMode>
      <InPkts></InPkts>
      <InOctets></InOctets>
      <OutPkts></OutPkts>
      <OutOctets></OutOctets>
      <Flooding></Flooding>
      <FloodType></FloodType>
      <ForwardingMode></ForwardingMode>
      <TrackEntryNumber></TrackEntryNumber>
    </AC>
  </ACs>
</L2VPN>

```

### Table description

Item	Description
Feature name	L2VPN
Table name	ACs
Table type	Multi-instance table
Row name	AC

## Restrictions

This table supports only layer 2 Ethernet interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
SrvID	Service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A
VsiName	VSI name	N/A	String. Length: 1 to 31 characters.	N/A
AccessMode	The access mode of this AC	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Vlan.</li> <li>2—Ethernet.</li> </ul>	N/A
Hub	Hub spoke attribute for the Link.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Hub.</li> <li>false—Spoke.</li> </ul>	Only exists when the VSI supports hub-spoke capability.
Statistics	Whether statistics function is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	N/A
Bandwidth	AC bandwidth	N/A	Unsigned integer Value range: The minimum value is 64 kbps. The maximum value (in kbps) varies by device model.	N/A
LearningMode	MAC learning mode of the AC	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—MAC mode.</li> <li>1—SVID only.</li> <li>2—Double VIDs.</li> <li>3—Learning disabled</li> </ul>	By Default, the value is 0 (MAC mode). Support for this column depends on the device.
InPkts	Number of inbound packets	N/A	Unsigned integer64. Value range: 0 to $2^{64} - 1$ .	N/A
InOctets	Number of inbound bytes	N/A	Unsigned integer64. Value range: 0 to $2^{64} - 1$ .	N/A
OutPkts	Number of	N/A	Unsigned integer64.	N/A

	Outbound packets		Value range: 0 to $2^{64} - 1$ .	
OutOctets	Number of Outbound bytes	N/A	Unsigned integer64. Value range: 0 to $2^{64} - 1$ .	N/A
Flooding	Enabling status of flooding	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul>	N/A
FloodType	Flooding type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—All ports.</li> <li>2—Source port.</li> </ul>	N/A
ForwardingMode	Forwarding mode of this AC	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—MAC mode.</li> <li>1—SVID only.</li> <li>2—Double VIDs.</li> </ul>	Support for this column depends on the device.
TrackEntryNumber	Track entry number list	N/A	Number string: It is a comma-separated list of up to three Track entry numbers. The string must end with a number.	Example: 1,2,3

## L2VPN/L3Interfaces

This table contains information about ACs for Layer 3 Ethernet interfaces.

### XML structure

```

<L2VPN>
  <L3Interfaces>
    <L3Interface>
      <IfIndex></IfIndex>
      <VsiName></VsiName>
      <AccessMode></AccessMode>
      <Hub></Hub>
      <TrackEntryNumber></TrackEntryNumber>
    </L3Interface>
  </L3Interfaces>
</L2VPN>

```

### Table description

Item	Description
Feature name	L2VPN
Table name	L3Interfaces
Table type	Multi-instance table
Row name	L3Interface

Restrictions	This table supports only layer 3 Ethernet interfaces.
Support for row creation and deletion	This table supports only layer 3 Ethernet interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
VsiName	VSI name	N/A	String. Length: 1 to 31 characters.	You must create a VSI first before you merge, replace or create ACs.
AccessMode	Access mode of the AC	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—VLAN.</li> <li>2—Ethernet.</li> </ul>	N/A
Hub	Hub spoke attribute for the Link.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Hub.</li> <li>false—Spoke.</li> </ul>	Only exists when the VSI supports hub-spoke capability.
TrackEntryNumber	Track entry number list	N/A	Number string: It is a comma-separated list of up to three Track entry numbers. The string must end with a number.	Example: 1,2,3

## L2VPN/FloodingMACs

This table contains information about MAC addresses which can be selectively flooded.

### XML structure

```
<L2VPN>
  <FloodingMACs>
```

```

    <MAC>
      <VsiName></VsiName>
      <MacAddr></MacAddr>
    </MAC>
  </FloodingMACs>
</L2VPN>

```

## Table description

Item	Description
Feature name	L2VPN
Table name	FloodingMACs
Table type	Multi-instance table
Row name	MAC
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
MacAddr	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

## L2VPN/LocalMACs

This table contains information about local MAC addresses of each VSI.

## XML structure

```

<L2VPN>
  <LocalMACs>
    <MAC>
      <VsiName></VsiName>
      <MacAddr></MacAddr>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <Type></Type>
    </MAC>
  </LocalMACs>
</L2VPN>

```

## Table description

Item	Description
Feature name	L2VPN
Table name	LocalMACs
Table type	Multi-instance table
Row name	MAC
Restrictions	Only supported when the mode of VSI is VXLAN.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
MacAddr	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
IfIndex	Interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
SrvID	Service instance ID	N/A	Unsigned integer. Value range: 1 to 4096.	N/A
Type	Type of local MAC address	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Dynamic</li><li>1—Static</li></ul>	N/A

## L2VPN/VSIStatistics

This table contains VSI traffic statistics.

## XML structure

```
<L2VPN>
  <VSIStatistics>
    <Statistics>
```

```

    <VsiName></VsiName>
    <InPkts></InPkts>
    <InOctets></InOctets>
    <InErrors></InErrors>
    <InDiscards></InDiscards>
    <OutPkts></OutPkts>
    <OutOctets></OutOctets>
    <OutErrors></OutErrors>
    <OutDiscards></OutDiscards>
  </Statistics>
</VSISStatistics>
</L2VPN>

```

## Table description

Item	Description
Feature name	L2VPN
Table name	VSISStatistics
Table type	Multi-instance table
Row name	Statistics
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
InPkts	Number of inbound packets	N/A	Unsigned integer64. Value range: 0 to $2^{64} - 1$ .	N/A
InOctets	Number of inbound bytes	N/A	Unsigned integer64. Value range: 0 to $2^{64} - 1$ .	N/A
InErrors	Number of inbound error packets	N/A	Unsigned integer64. Value range: 0 to $2^{64} - 1$ .	N/A
InDiscards	Number of inbound discard packets	N/A	Unsigned integer64. Value range: 0 to $2^{64} - 1$ .	N/A
OutPkts	Number of Outbound packets	N/A	Unsigned integer64. Value range: 0 to $2^{64} - 1$ .	N/A
OutOctets	Number of Outbound bytes	N/A	Unsigned integer64. Value range: 0 to $2^{64} - 1$ .	N/A
OutErrors	Number of Outbound error packets	N/A	Unsigned integer64. Value range: 0 to $2^{64} - 1$ .	N/A

OutDiscards	Number of Outbound discard packets	N/A	Unsigned integer64. Value range: 0 to $2^{64} - 1$ .	N/A
-------------	------------------------------------	-----	---	-----

## L2VPN/AvailableVSIInterfaceID

This table contains the available VSI interface ID.

### XML structure

```
<L2VPN>
  <AvailableVSIInterfaceID>
    <ID></ID>
  </AvailableVSIInterfaceID>
</L2VPN>
```

### Table description

Item	Description
Feature name	L2VPN
Table name	AvailableVSIInterfaceID
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Available VSI interface ID	N/A	Unsigned integer.	The range of VsiInterfaceID is reference in table of Base which in Data API.

## L2VPN/VSIInterfaces

This table contains information about VSI interfaces.

### XML structure

```
<L2VPN>
  <VSIInterfaces>
    <Interface>
```

```

<ID></ID>
<IfIndex></IfIndex>
<Name></Name>
<LocalEnable></LocalEnable>
<L3VNI></L3VNI>
<ArpSendRate></ArpSendRate>
<PrefixRouteGenerate></PrefixRouteGenerate>
</Interface>
</VSIInterfaces>
</L2VPN>

```

## Table description

Item	Description
Feature name	L2VPN
Table name	VSIInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	You must enable global L2VPN feature at first.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	VSI interface ID	Index	Unsigned integer.	N/A
IfIndex	Interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Name	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
LocalEnable	Local distributed gateway	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
L3VNI	L3 VNI for the tenant	N/A	Unsigned integer	N/A
ArpSendRate	ARP packet	N/A	Unsigned integer.	0 for no limit.

	sending rate limit			
PrefixRouteGenerate	Whether EVPN route advertisement is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A

## L2VPN/VSIIPv4Subnets

This table contains information about IPv4 subnet configurations.

### XML structure

```
<L2VPN>
  <VSIIPv4Subnets>
    <Ipv4Subnet>
      <VsiName></VsiName>
      <SubnetAddress></SubnetAddress>
      <WildcardMask></WildcardMask>
      <VsiInterfaceID></VsiInterfaceID>
    </Ipv4Subnet>
  </VSIIPv4Subnets>
</L2VPN>
```

### Table description

Item	Description
Feature name	L2VPN
Table name	VSIIPv4Subnets
Table type	Multi-instance table
Row name	Ipv4Subnet
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
SubnetAddress	IPv4 address	Index	String, dotted decimal notation.	N/A
WildcardMask	Wildcard mask	Index	String, dotted decimal notation.	N/A
VsiInterfaceID	VSI interface ID	N/A	Unsigned integer	N/A

# L2VPN/VSIIPv6Subnets

This table contains information about IPv6 subnet configurations.

## XML structure

```
<L2VPN>
  <VSIIPv6Subnets>
    <Ipv6Subnet>
      <VsiName></VsiName>
      <SubnetAddress></SubnetAddress>
      <PrefixLength></PrefixLength>
      <VsiInterfaceID></VsiInterfaceID>
    </Ipv6Subnet>
  </VSIIPv6Subnets>
</L2VPN>
```

## Table description

Item	Description
Feature name	L2VPN
Table name	VSIIPv6Subnets
Table type	Multi-instance table
Row name	Ipv6Subnet
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
SubnetAddress	IPv6 address	Index	Hexadecimal string, colon-separated.	Example: ABCD:EF01::1
PrefixLength	Prefix length of the IPv6 address	N/A	Unsigned integer. Value range: 1- 128.	N/A
VsiInterfaceID	VSI interface ID	N/A	Unsigned integer	N/A

# L2VPN/InterfaceConfigs

This table contains information about configurations of interfaces.

# XML structure

```
<L2VPN>
  <InterfaceConfigs>
    <InterfaceConfig>
      <IfIndex></IfIndex>
      <SoftwareLearning></SoftwareLearning>
      <Dci></Dci>
      <VxlanOverVxlan></VxlanOverVxlan>
      <MacBasedAc></MacBasedAc>
      <LearningMode></LearningMode>
      <ForwardingMode></ForwardingMode>
    </InterfaceConfig>
  </InterfaceConfigs>
</L2VPN>
```

## Table description

Item	Description
Feature name	L2VPN
Table name	InterfaceConfigs
Table type	Multi-instance table
Row name	InterfaceConfig
Restrictions	You must first enable the L2VPN feature globally.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
SoftwareLearning	Whether learning MAC addresses through software function is enabled	N/A	Boolean: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>	N/A
Dci	Whether Dci is	N/A	Boolean:	N/A

	enabled		<ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	
VxlanOverVxlan	Whether VXLAN over VXLAN is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	N/A
MacBasedAc	Whether mac based ac is enable	N/A	Boolean: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	Support for this column depends on the device model.
LearningMode	MAC learning mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—MAC mode (default).</li> <li>• 1—SVID only.</li> <li>• 2—Double VIDs.</li> <li>• 3—Learning disabled.</li> </ul>	Support for this column depends on the device model.
ForwardingMode	Forwarding mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—MAC mode (default).</li> <li>• 1—SVID only.</li> <li>• 2—Double VIDs.</li> </ul>	Support for this column depends on the device model.

## L2VPN/SrvRewrites

This table contains information about VLAN tag rewrite capability of service instances.

### XML structure

```

<L2VPN>
  <SrvRewrites>
    <SrvRewrite>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <Inbound>
        <RewriteType></RewriteType>
        <SVlanID></SVlanID>
        <CVlanID></CVlanID>
        <Symmetric></Symmetric>
      </Inbound>
      <Outbound>
        <RewriteType></RewriteType>
        <SVlanID></SVlanID>
        <CVlanID></CVlanID>
      </Outbound>
    </SrvRewrite>
  </SrvRewrites>
</L2VPN>

```

## Table description

Item	Description
Feature name	L2VPN
Table name	SrvRewrites
Table type	Multi-instance table
Row name	SrvRewrite
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
SrvID	Service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A
Inbound	Inbound direction of packets	N/A	Members include: <ul style="list-style-type: none"> <li>RewriteType</li> <li>SvlanID</li> <li>CvlanID</li> <li>Symmetric</li> </ul>	NA
Outbound	Outbound direction of packets	N/A	Members include: <ul style="list-style-type: none"> <li>RewriteType</li> <li>SvlanID</li> <li>CvlanID</li> </ul>	N/A
RewriteType	Rewrite type	N/A	Unsigned integer. Value: <ul style="list-style-type: none"> <li>1: NEST</li> <li>2: REMARK_ONE</li> <li>3: REMARK_TWO</li> <li>4: STRIP_SVLAN</li> <li>5: STRIP_CVLAN</li> <li>6: STRIP_BOTH</li> </ul>	N/A
SVlanID	Outer VLAN ID	N/A	Unsigned integer.	N/A

			Value range: 1 to 4094.	
CVlanID	Inner VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
Symmetric	Whether opposite VLAN tag processing is enabled for outgoing traffic	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	By default, the value is false.

## L2VPN/L3Rewrites

This table contains information about rewrite capability of ac interface.

### XML structure

```

<L2VPN>
  <L3Rewrites>
    <L3Rewrite>
      <IfIndex></IfIndex>
      <RewriteType></RewriteType>
      <SVlanID></SVlanID>
      <CVlanID></CVlanID>
      <Symmetric></Symmetric>
    </L3Rewrite>
  </L3Rewrites>
</L2VPN>

```

### Table description

Item	Description
Feature name	L2VPN
Table name	L3Rewrites
Table type	Multi-instance table
Row name	L3Rewrite
Restrictions	You must enable L2VPN feature globally at first.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD

				document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
RewriteType	RewriteType	N/A	Unsigned integer. Value: <ul style="list-style-type: none"> <li>• 1: NEST_S</li> <li>• 2: NEST_C</li> <li>• 3: NEST_SC</li> <li>• 8: REMARK_1TO2</li> </ul>	
SVlanID	Outer VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
CVlanID	Inner VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
Symmetric	Symmetric	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Enabled.</li> <li>• <b>false</b>—Disabled.</li> </ul>	N/A.

## L2VPN/L3INTERFACES

Message	Explanation
Invalid configuration messages. Generally speaking, the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invalid configuration messages. Generally speaking, the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Access a no-access node, communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1. Access a no-access node. 2. Send/receive data timeout. 3. A failure to initiate a connect to a server. 1. 访问一个no-access节点。 2. 发送、接收数据超。 3. 向服务器发起连接失败。
No operation permissions. 无操作权限。	No RBAC permissions. 无RBAC权限。
Executed the set command, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	1. Interface does not support L3AC. 2. Hub-spoke function is not supported. 3. The user has the attribute column label, but there is no Vsiname tag at the same time. 1. 接口不支持 L3AC。 2. 不支持 hub-spoke 功能。 3. 用户具有属性列标签，同时没有 Vsiname 标签。
Executes the set command, and the variable exists, but the assignment fails because the condition is not satisfied in the current environment. 执行SET命令，变量存在，但因当前环境下条件不满足而导致赋值失败。	Executes the set command, and the variable exists, but the assignment fails because the condition is not satisfied in the current environment. For example, set MTU=1 in the Ethernet SNAO format. 执行SET命令，变量存在，但因当前环境下条件不满足而导致赋值失败。例如在以太网SNAO格式中设置MTU=1。
Parameters don't exist. 参数不存在。	Delete failure due to unconfigured AC. 由于未配置AC删除失败。

## L2VPN/AC

Message	Explanation
Invalid configuration messages. Generally speaking, the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invalid configuration messages. Generally speaking, the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Access a no-access node, communication failure. 访问一个no-access节点，发送、接收数据超时，向	1. Access a no-access node. 2. Send/receive data timeout.

服务器发起连接失败。	<p>3.A failure to initiate a connect to a server.</p> <p>1.访问一个no-access节点。</p> <p>2.发送、接收数据超。</p> <p>3.向服务器发起连接失败。</p>
<p>No operation permissions.</p> <p>无操作权限。</p>	<p>No RBAC permissions.</p> <p>无RBAC权限。</p>
<p>Executed the set commamd, the variable exists but can not be modified.</p> <p>执行SET命令，变量存在但不能被修改。</p>	<p>1.Non-two-layer interface has no AC data.</p> <p>2.The current interface is not a Ethernet interface and aggregate interface.</p> <p>3.Interface does not support AC statistics.</p> <p>4.Interface does not support AC bandwidth.</p> <p>5.Hub-spoke function is not supported.</p> <p>1.非二层接口无AC数据。</p> <p>2.当前接口不是以太网接口和聚合接口。</p> <p>3.接口不支持AC统计。</p> <p>4.接口不支持AC带宽。</p> <p>5.不支持Encap。</p>
<p>When you delete the operation,you bring the AC mode or hub tag,but there is no VSI name tag.</p> <p>删除操作时，若带了ACmode或Hub标签，但是没有带VsiName标签，报错，不允许修改。</p>	<p>When you delete the operation,you bring the AC mode or hub tag,but there is no VSI name tag.</p> <p>删除操作时，若带了ACmode或Hub标签，但是没有带VsiName标签，报错，不允许修改。</p>

## L2VPN/FLOODINGMAC

Message	Explanation
<p>Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation.</p> <p>无效的配置消息，一般是消息的长度和实际不相符的情况。</p>	<p>Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation.</p> <p>无效的配置消息，一般是消息的长度和实际不相符的情况。</p>
<p>Access a no-access node,communication failure.</p> <p>访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。</p>	<p>1.Access a no-access node.</p> <p>2.Send/receive data timeout.</p> <p>3.A failure to initiate a connect to a server.</p> <p>1.访问一个no-access节点。</p> <p>2.发送、接收数据超。</p> <p>3.向服务器发起连接失败。</p>

## L2VPN/LOCALMAC

Message	Explanation
<p>Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation.</p> <p>无效的配置消息，一般是消息的长度和实际不相符</p>	<p>Invaild configuration messages.Generally speaking,the length of the message is not consistent with the actual situation.</p> <p>无效的配置消息，一般是消息的长度和实际不相符的情况。</p>

的情况。	
Access a no-access node,communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1.Access a no-access node. 2.Send/receive data timeout. 3.A failure to initiate a connect to a server. 1.访问一个no-access节点。 2.发送、接收数据超。 3.向服务器发起连接失败。
Parameters don't exist. 参数不存在。	VSI index doesn't exist.. VSI索引不存在。

## L2VPN/CLEARVSI STATISTICS

Message	Explanation
Invalid configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invalid configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Access a no-access node,communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1.Access a no-access node. 2.Send/receive data timeout. 3.A failure to initiate a connect to a server. 1.访问一个no-access节点。 2.发送、接收数据超。 3.向服务器发起连接失败。
Executed the set command, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	Interface does not support VSI statistics. 接口不支持 VSI 统计。

## L2VPN/CLEARALLVSI STATISTICS

Message	Explanation
Invalid configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invalid configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Executed the set command, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	Interface does not support VSI statistics. 接口不支持 VSI 统计。

# L2VPN/VSI STATISTICS

Message	Explanation
Access a no-access node, communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1. Access a no-access node. 2. Send/receive data timeout. 3. A failure to initiate a connect to a server.
Executed the set command, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	Invalid configuration messages. 无效的配置信息。

# L2VPN/AVAILABLE INTERFACE ID

Message	Explanation
Access a no-access node, communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1. Access a no-access node. 2. Send/receive data timeout. 3. A failure to initiate a connect to a server. 1. 访问一个no-access节点。 2. 发送、接收数据超。 3. 向服务器发起连接失败。

# L2VPN/INTERFACE ID

Message	Explanation
Invalid configuration messages. Generally speaking, the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invalid configuration messages. Generally speaking, the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Access a no-access node, communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1. Access a no-access node. 2. Send/receive data timeout. 3. A failure to initiate a connect to a server. 1. 访问一个no-access节点。 2. 发送、接收数据超。 3. 向服务器发起连接失败。
No operation permissions. 无操作权限。	No RBAC permissions. 无 RBAC 权限。
When set is operated, the set value does not meet the requirements of the module. SET操作时，所设的值不符合模块要求。	Unauthorized VSIIFID. 未经授权的 VSIIFID。
Parameters don't exist. 参数不存在。	1. VSIIFID doesn't exist. 2. Invalid VXLAN-ID. 1. VSIIFID 不存在。

2.无效的 VXLAN-ID。

## L2VPN/VSIIPV4SUBNETS

Message	Explanation
<p>Invalid configuration messages.Generally speaking,the length of the message is not consistent with the actual situation.</p> <p>无效的配置消息，一般是消息的长度和实际不相符的情况。</p>	<p>Invalid configuration messages.Generally speaking,the length of the message is not consistent with the actual situation.</p> <p>无效的配置消息，一般是消息的长度和实际不相符的情况。</p>
<p>Access a no-access node,communication failure.</p> <p>访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。</p>	<p>1.Access a no-access node.</p> <p>2.Send/receive data timeout.</p> <p>3.A failure to initiate a connect to a server.</p> <p>1.访问一个no-access节点。</p> <p>2.发送、接收数据超。</p> <p>3.向服务器发起连接失败。</p>

## L2VPN/CLEARALLPWSTATISTICS

Message	Explanation
Executed the set command, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	PW statistics are not supported. 不支持 PW 统计。

## L2VPN/CLEARVSIPWSTATISTICS

Message	Explanation
Access a no-access node, communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1. Access a no-access node. 2. Send/receive data timeout. 3. A failure to initiate a connect to a server. 1. 访问一个no-access节点。 2. 发送、接收数据超。 3. 向服务器发起连接失败。
Executed the set command, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	PW statistics are not supported. 不支持 PW 统计。

## L2VPN/CLEARVSIXCGSTATISTICS

Message	Explanation
Invalid configuration messages. Generally speaking, the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invalid configuration messages. Generally speaking, the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Executed the set command, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	PW statistics are not supported. 不支持 PW 统计。

## L2VPN/CLEARVSIMACTAB

Message	Explanation
Access a no-access node, communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1. Access a no-access node. 2. Send/receive data timeout. 3. A failure to initiate a connect to a server. 1. 访问一个no-access节点。 2. 发送、接收数据超。 3. 向服务器发起连接失败。

## L2VPN/IFCFG

Message	Explanation
Invalid configuration messages. Generally speaking, the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invalid configuration messages. Generally speaking, the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Access a no-access node, communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1. Access a no-access node. 2. Send/receive data timeout. 3. A failure to initiate a connect to a server. 1. 访问一个no-access节点。 2. 发送、接收数据超。 3. 向服务器发起连接失败。
No operation permissions. 无操作权限。	No RBAC permissions. 无RBAC权限。
Executed the set command, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	1. Do not support Mac software learning. 2. The sub interface cannot configure the DCI. 1. 不支持Mac软件学习。 2. 子接口未配置DCI。
Parameters don't exist. 参数不存在。	The configuration of delete has a default value and doesn't allow delete. Delete配置有默认值且不允许删除。

## L2VPN/CLEAR AC STATISTICS

Message	Explanation
Invalid configuration messages. Generally speaking, the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invalid configuration messages. Generally speaking, the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Access a no-access node, communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1. Access a no-access node. 2. Send/receive data timeout. 3. A failure to initiate a connect to a server. 1. 访问一个no-access节点。 2. 发送、接收数据超。 3. 向服务器发起连接失败。
No operation permissions. 无操作权限。	No RBAC permissions. 无RBAC权限。
Executed the set command, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	1. Non-two-layer interface has no AC data. 2. The current interface is not a Ethernet interface and aggregate interface. 3. Interface does not support AC statistics.

	1.非二层接口无AC数据。 2.当前接口不是以太网接口和聚合接口。 3.接口不支持AC统计。
Parameters don't exist. 参数不存在。	The instance number of the configured message does not exist. 配置消息的实例编号不存在。

## L2VPN/CLEAR ALL AC STATISTICS

Message	Explanation
Invalid configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invalid configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Executed the set commamd, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	Interface does not support AC statistics. 接口不支持AC统计。

## L2VPN/REWRITE

Message	Explanation
Invalid configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invalid configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
Executed the set commamd, the variable exists but can not be modified. 执行SET命令，变量存在但不能被修改。	1.Non-two-layer interfaces have no SRV data. 2.The current interface is not a stack interface. 3.SRV rewrite is not supported. 4.When there is a symmetric attribute,inbound can only be configured. 5.The property does not configure inbound or outbound. 6.The rewriting direction is not consistent with the configuration information. 7.Illegal labels. 8.Delete rows are not supported. 1.非二层接口无 SRV 数据。 2.当前接口无栈接口。 3.不支持 SRV 重写。 4.当有对称属性是，只能配置 inbound。 5.未配置 inbound 或 outbound 属性。 6.重写方向与配置信息不一致。 7.非法的标签。 8.不支持删除行。

Access a no-access node,communication failure. 访问一个no-access节点，发送、接收数据超时，向服务器发起连接失败。	1.Access a no-access node. 2.Send/receive data timeout. 3.A failure to initiate a connect to a server. 1.访问一个no-access节点。 2.发送、接收数据超。 3.向服务器发起连接失败。
No operation permissions. 无操作权限。	No RBAC permissions. 无 RBAC 权限。
Parameters don't exist. 参数不存在。	The rewrite information of the specified object does not exist. 指定对象的重写信息不存在。
When <i>set</i> is operated, the set value does not meet the requirements of the module. SET操作时，所设的值不符合模块要求。	When <i>set</i> is operated, the set value does not meet the requirements of the module. SET操作时，所设的值不符合模块要求。

## L2VPN/VBRECIDS

Message	Explanation
Invailld configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。	Invailld configuration messages.Generally speaking,the length of the message is not consistent with the actual situation. 无效的配置消息，一般是消息的长度和实际不相符的情况。
When <i>set</i> is operated, the set value does not meet the requirements of the module. SET操作时，所设的值不符合模块要求。	When <i>set</i> is operated, the set value does not meet the requirements of the module. SET操作时，所设的值不符合模块要求。

# ietf-network-instance

The namespace of flexbng-device-info is "urn:ietf:params:xml:ns:yang:ietf-network-instance".

The Example on the end of the module sets an instance that the module can't be under top node.

## ietf-network-instance/network-instances

This table contains network-instances information.

### XML structure

```
<ietf-network-instance>
  <network-instances>
    <network-instance>
      <name></name>
      <vrf-root>
      </vrf-root>
    </network-instance>
  </network-instances>
</ietf-network-instance>
```

### Table description

Item	Description
Feature name	ietf-network-instance
Table name	network-instances
Table type	Multi-instance table
Row name	network-instance
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	VRF name.	Index	String. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
vrf-root	Information of the vrf-root.	Sublist	The details of the sublist refer to vrf-root table.	N/A

## ietf-network-instance/network-instances/vrf-root

This table contains vrf-root information.

## XML structure

Please refer to the XML Structure of `ietf-network-instance/network-instances`.

## Table description

Item	Description
Feature name	L3vpn
Table name	L3vpnVRF
Table type	Multi-instance table
Row name	VRF
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name.	Index	String, case-sensitive. Length: 1 to 31 characters.	A null string indicates the public instance.
Description	VPN instance description.	N/A	String, case-sensitive. Length: 1 to 79 characters.	Public instance doesn't support the column.
RD	Route distinguisher.	Data structure	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn	The VRF RD must be the same as the RD of address family.
IPv4RD	IPv4 address family route distinguisher.	N/A	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn.	Public instance doesn't support the column.
IPv6RD	IPv6 address family route distinguisher.	N/A	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn.	Public instance doesn't support the column.
FlowSpecRD	IPv4 FlowSpec address family route distinguisher.	N/A	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn.	Public instance doesn't support the column.
CreationTime	Creation time	N/A	String. Format:	N/A

			YYYY-MM-DDTHH:MM:SS.	
AssociatedInterfaceCount	Number of interfaces bound with the VPN instance	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
Ipv4RoutingLimit	The maximum number of active routes limit of ipv4 address family view.	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv4MaxRoutes</li> <li>Ipv4RouteThreshold</li> <li>Ipv4SimplyAlert.</li> </ul>	Public instance doesn't support the column.
Ipv4MaxRoutes	The maximum number of active routes of ipv4 address family view.	N/A	Unsigned integer.	Public instance doesn't support the column.
Ipv4RouteThreshold	Threshold value.	N/A	Unsigned integer. Value range: 1 to 100.	Mutex with Ipv4SimplyAlert. Public instance doesn't support the column.
Ipv4SimplyAlert	Whether to print syslog.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Print syslog.</li> <li>false—Does not print syslog (default).</li> </ul>	Mutex with Ipv4RouteThreshold. Public instance doesn't support the column.
Ipv6RoutingLimit	The maximum number of active routes limit of ipv6 address family view.	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv6MaxRoutes</li> <li>Ipv6RouteThreshold</li> <li>Ipv6SimplyAlert.</li> </ul>	Public instance doesn't support the column.
Ipv6MaxRoutes	The maximum number of active routes of ipv6 address family view.	N/A	Unsigned integer.	Public instance doesn't support the column.
Ipv6RouteThreshold	Threshold value.	N/A	Unsigned integer. Value range: 1 to 100.	Mutex with Ipv6SimplyAlert. Public instance doesn't support the column.
Ipv6SimplyAlert	Whether to print syslog.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Print syslog.</li> <li>false—Does not print syslog (default).</li> </ul>	Mutex with Ipv6RouteThreshold. Public instance doesn't support the column.
ExportRoutePolicy	The export route policy in VPN view.	N/A	String. Length: 1 to 63 characters.	N/A
EVPNExportRoutePolicy	The export route policy in EVPN address family view.	N/A	String. Length: 1 to 63 characters.	Public instance doesn't support the column.
Ipv4ExportRoutePolicy	The export route policy in IPv4 address family	N/A	String. Length: 1 to 63 characters.	N/A

	view.			
Ipv6ExportRoutePolicy	The export route policy in IPv6 address family view.	N/A	String. Length: 1 to 63 characters.	N/A
ImportRoutePolicy	The import route policy in VPN view.	N/A	String. Length: 1 to 63 characters.	N/A
EVPNImportRoutePolicy	The import route policy in EVPN address family view.	N/A	String. Length: 1 to 63 characters.	Public instance doesn't support the column.
Ipv4ImportRoutePolicy	The import route policy in IPv4 address family view.	N/A	String. Length: 1 to 63 characters.	N/A
Ipv6ImportRoutePolicy	The import route policy in IPv6 address family view.	N/A	String. Length: 1 to 63 characters.	N/A
TunnelPolicy	The tunnel policy in VPN instance view.	N/A	String. Length: 1 to 19 characters.	Public instance doesn't support the column.
Ipv4TunnelPolicy	The tunnel policy in IPv4 address family view.	N/A	String. Length: 1 to 19 characters.	Public instance doesn't support the column.
Ipv6TunnelPolicy	The tunnel policy in IPv6 address family view.	N/A	String. Length: 1 to 19 characters.	Public instance doesn't support the column.
Ipv4VrfLabel	Method of distributing labels to VPN instance routes.	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv4VrfLabelMode.</li> <li>Ipv4VrfLabelValue.</li> </ul>	Public instance doesn't support the column.
Ipv4VrfLabelMode	Label allocation mode for the VPN instance routes.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—PerInstance.</li> <li>2—PerRoute.</li> <li>3—PerNextHop (default).</li> </ul>	N/A
Ipv4VrfLabelValue	Static label value for the VPN instance routes.	N/A	Unsigned integer. Value range: 16 to the device-specific upper limit.	Only the PerInstance mode supports the column.
Ipv6VrfLabel	Method of distributing labels to VPN instance routes.	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv6VrfLabelMode.</li> <li>Ipv6VrfLabelValue.</li> </ul>	Public instance doesn't support the column.
Ipv6VrfLabelMode	Label allocation mode for the VPN instance routes.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—PerInstance.</li> <li>2—PerRoute.</li> <li>3—PerNextHop (default).</li> </ul>	N/A
Ipv6VrfLabelValue	Static label value for the VPN	N/A	Unsigned integer. Value range: 16 to the	Only the PerInstance mode supports

	instance routes.		device-specific upper limit.	the column.
--	------------------	--	------------------------------	-------------

## L3vpn/L3vpnIf

This table contains information about VPN instance-to-interface bindings.

## XML structure

```

<L3vpn>
  <L3vpnIf>
    <Bind>
      <VRF></VRF>
      <IfIndex></IfIndex>
    </Bind>
  </L3vpnIf>
</L3vpn>

```

## Table description

Item	Description
Feature name	L3vpn
Table name	L3vpnIf
Table type	Multi-instance table
Row name	Bind
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name.	Index	String, case-sensitive. Length: 1 to 31 characters.	Public instance doesn't support the column.
IfIndex	Interface index.	Index	Unsigned integer. Length: 32 bits.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference. Public instance doesn't support the column.

# L3vpn/L3vpnRT

This table contains L3VPN route target information.

## XML structure

```
<L3vpn>
  <L3vpnRT>
    <RT>
      <VRF></VRF>
      <AddressFamily></AddressFamily>
      <RTType></RTType>
      <RTEntry></RTEntry>
    </RT>
  </L3vpnRT>
</L3vpn>
```

## Table description

Item	Description
Feature name	L3vpn
Table name	L3vpnRT
Table type	Multi-instance table
Row name	RT
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
AddressFamily	Address family.	Index	Enumeration. <ul style="list-style-type: none"><li>1—IPv4 unicast</li><li>2—IPv6 unicast</li><li>3—VPN</li><li>4—EVPN</li></ul>	N/A
RTType	RT type.	Index	Enumeration. <ul style="list-style-type: none"><li>1—Import</li><li>2—Export</li></ul>	N/A
RTEntry	Route target.	Index	String. Length: 3 to 21 characters. <ul style="list-style-type: none"><li>The format is ASN:nn or</li></ul>	Example: 100:1 or 192.168.1.1: 1.

Column name	Column description	Column type	Data type and restrictions	Remarks
			IP_address:nn	

## L3vpn/L3vpnPeer

This table contains L3VPN peer information.

### XML structure

```

<L3vpn>
  <L3vpnPeer>
    <Peer>
      <PeerName></PeerName>
      <PeerId></PeerId>
      <UserProfile></UserProfile>
    </Peer>
  </L3vpnPeer>
</L3vpn>

```

### Table description

Item	Description
Feature name	L3vpn
Table name	L3vpnPeer
Table type	Multi-instance table
Row name	Peer
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerName	VPN peer name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
PeerId	Peer ID	N/A	Unsigned integer. Value range: 1 to 134217727	N/A
UserProfile	User profile name	N/A	String, case-sensitive. Length: 1 to 31 characters.	A user profile name can contain alphabets, digits, and underlines, and it must begin with an alphabet.

# L3vpn/L3vpnRep

This table contains L3VPN route replication configuration.

## XML structure

```
<L3vpn>
  <L3vpnRep>
    <Replicate>
      <VRF></VRF>
      <AddressFamily></AddressFamily>
      <RepVRF></RepVRF>
      <Protocol></Protocol>
      <ProtocolID></ProtocolID>
      <Advertise></Advertise>
      <RoutePolicyName></RoutePolicyName>
    </Replicate>
  </L3vpnRep>
</L3vpn>
```

## Table description

Item	Description
Feature name	L3vpn
Table name	L3vpnRep
Table type	Multi-instance table
Row name	Rep
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	Destination VPN instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	A null string indicates the public instance.
AddressFamily	Address family	Index	Enumeration. <ul style="list-style-type: none"><li>1—IPv4 unicast.</li><li>2—IPv6 unicast.</li><li>3—VPN (currently not supported).</li><li>4—EVPN (currently not supported).</li></ul>	N/A
RepVRF	Source VPN	Index	String, case-sensitive.	A null string indicates the

	instance name		Length: 1 to 31 characters.	public instance.
Protocol	Protocol name	Index	Enumeration. <ul style="list-style-type: none"> <li>• 1—Direct.</li> <li>• 2—Static.</li> <li>• 3—RIP.</li> <li>• 4—OSPF.</li> <li>• 5—IS-IS.</li> <li>• 6—EIGRP (IPv6 currently not supported).</li> <li>• 7—BGP.</li> </ul>	N/A
Protocol ID	Process ID or autonomous System number	Index	Unsigned integer. Value range: <ul style="list-style-type: none"> <li>• 1 to 65535 for IGP protocol and EIGRP process ID.</li> <li>• 1 to 4294967295 for BGP AS number.</li> <li>• 0 for direct and static routes.</li> </ul>	N/A
Advertise	Advertise the replicated routes to routing protocols	N/A	Enumeration. <ul style="list-style-type: none"> <li>• 0—Not advertise.</li> <li>• 1—Advertise.</li> </ul>	This column can only be set to 0 when the Protocol column is set to BGP.
RoutePolicyName	Name of the routing policy applied to replicated routes	N/A	String. Length: 1 to 63 characters.	A null string indicates no routing policy is applied to replicated routes.

## Table description

Item	Description
Feature name	L3vpn
Table name	L3vpnVRF
Table type	Multi-instance table
Row name	VRF
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name.	Index	String, case-sensitive. Length: 1 to 31 characters.	A null string indicates the public instance.
VrfIndex	VPN instance index.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
Description	VPN instance description.	N/A	String, case-sensitive. Length: 1 to 79 characters.	Public instance doesn't support the column.
RD	Route distinguisher.	Data structure	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn.	The VRF RD must be the same as the RD of address family.
IPv4RD	IPv4 address family route distinguisher.	N/A	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn.	Public instance doesn't support the column.
IPv6RD	IPv6 address family route distinguisher.	N/A	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn.	Public instance doesn't support the column.
FlowSpecRD	IPv4 FlowSpec address family route distinguisher.	N/A	String. Length: 3 to 21 characters. The format is ASN:nn or IP_address:nn.	Public instance doesn't support the column.

Column name	Column description	Column type	Data type and restrictions	Remarks
CreationTime	Creation time.	N/A	String. The format is YYYY-MM-DDTHH:MM:SS.	N/A
AssociatedInterfaceCount	The number of interfaces that are binded with this VRF.	N/A	Unsigned integer.	N/A
Ipv4RoutingLimit	The maximum number of active routes limit of ipv4 address family view.	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv4MaxRoutes</li> <li>Ipv4RouteThreshold</li> <li>Ipv4SimplyAlert.</li> </ul>	N/A
Ipv4MaxRoutes	The maximum number of active routes of ipv4 address family view.	N/A	Unsigned integer.	N/A
Ipv4RouteThreshold	Threshold value.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
Ipv4SimplyAlert	Whether to print syslog.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Print syslog.</li> <li>false—Does not print syslog (default).</li> </ul>	Public instance doesn't support the column.
Ipv6RoutingLimit	The maximum number of active routes limit of ipv6 address family view.	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv6MaxRoutes</li> <li>Ipv6RouteThreshold</li> <li>Ipv6SimplyAlert.</li> </ul>	N/A
Ipv6MaxRoutes	The maximum number of active routes of ipv6 address family view.	N/A	Unsigned integer.	N/A
Ipv6RouteThreshold	Threshold value.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
Ipv6SimplyAlert	Whether to print syslog.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Print syslog.</li> <li>false—Does not print syslog (default).</li> </ul>	Public instance doesn't support the column.
ExportRoutePolicy	The export route policy in VPN view.	N/A	String. Length: 1 to 63 characters.	N/A
EVPNExportRoutePolicy	The export route policy in EVPN address family view.	N/A	String. Length: 1 to 63 characters.	Public instance doesn't support the column.
Ipv4ExportRoutePolicy	The export route policy in IPv4 address family view.	N/A	String. Length: 1 to 63 characters.	N/A
Ipv6ExportRoutePolicy	The export route policy in IPv6 address family view.	N/A	String. Length: 1 to 63 characters.	N/A
ImportRoutePolicy	The import route	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
cy	policy in VPN view.		Length: 1 to 63 characters.	
EVPNImportRoutePolicy	The import route policy in EVPN address family view.	N/A	String. Length: 1 to 63 characters.	Public instance doesn't support the column.
Ipv4ImportRoutePolicy	The import route policy in IPv4 address family view.	N/A	String. Length: 1 to 63 characters.	N/A
Ipv6ImportRoutePolicy	The import route policy in IPv6 address family view.	N/A	String. Length: 1 to 63 characters.	N/A
TunnelPolicy	The tunnel policy in VPN instance view.	N/A	String. Length: 1 to 19 characters.	Public instance doesn't support the column.
Ipv4TunnelPolicy	The tunnel policy in IPv4 address family view.	N/A	String. Length: 1 to 19 characters.	Public instance doesn't support the column.
Ipv6TunnelPolicy	The tunnel policy in IPv6 address family view.	N/A	String. Length: 1 to 19 characters.	Public instance doesn't support the column.
Ipv4VrfLabel	Method of distributing labels to VPN instance routes.	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv4VrfLabelMode</li> <li>Ipv4VrfLabelValue</li> </ul>	Public instance doesn't support the column.
Ipv4VrfLabelMode	Label allocation mode for the VPN instance routes.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—PerInstance.</li> <li>2—PerRoute.</li> <li>3—PerNextHop.</li> </ul>	N/A
Ipv4VrfLabelValue	Static label value for the VPN instance routes.	N/A	Unsigned integer. Value range: 16 to the device-specific upper limit.	Only the PerInstance mode supports the column.
Ipv6VrfLabel	Method of distributing labels to VPN instance routes.	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv6VrfLabelMode</li> <li>Ipv6VrfLabelValue</li> </ul>	Public instance doesn't support the column.
Ipv6VrfLabelMode	Label allocation mode for the VPN instance routes.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—PerInstance.</li> <li>2—PerRoute.</li> <li>3—PerNextHop.</li> </ul>	N/A
Ipv6VrfLabelValue	Static label value for the VPN instance routes.	N/A	Unsigned integer. Value range: 16 to the device-specific upper limit.	Only the PerInstance mode supports the column.

## L3vpn/L3vpnIf

This table contains information about VPN instance-to-interface bindings.

## XML structure

```
<L3vpn>
  <L3vpnIf>
    <Bind>
      <VRF></VRF>
      <IfIndex></IfIndex>
    </Bind>
  </L3vpnIf>
</L3vpn>
```

## Table description

Item	Description
Feature name	L3vpn
Table name	L3vpnIf
Table type	Multi-instance table
Row name	Bind
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VPN instance name.	Index	String, case-sensitive. Length: 1 to 31 characters.	Public instance doesn't support the column.
IfIndex	Interface index.	Index	Unsigned integer. Length: 32 bits.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference. Public instance doesn't support the column.

## L3vpn/L3vpnRT

This table contains L3VPN Route target information.

## XML structure

```
<L3vpn>
  <L3vpnRT>
```

```

<RT>
  <VRF></VRF>
  <AddressFamily></AddressFamily>
  <RTType></RTType>
  <RTEntry></RTEntry>
</RT>
</L3vpnRT>
</L3vpn>

```

## Table description

Item	Description
Feature name	L3vpn
Table name	L3vpnRT
Table type	Multi-instance table
Row name	RT
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
AddressFamily	Address family.	Index	Enumeration. <ul style="list-style-type: none"> <li>1—IPv4 unicast</li> <li>2—IPv6 unicast</li> <li>3—VPN</li> <li>4—EVPN</li> </ul>	N/A
RTType	RT type.	Index	Enumeration. <ul style="list-style-type: none"> <li>1—Import</li> <li>2—Export</li> </ul>	N/A
RTEntry	Route target.	Index	String. Length: 3 to 21 characters. <ul style="list-style-type: none"> <li>The format is ASN:nn or IP_address:nn</li> </ul>	Example: 100:1 or 192.168.1.1: 1.

## L3vpn/L3vpnPeer

This table contains L3VPN peer information.

## XML structure

```

<L3vpn>
  <L3vpnPeer>

```

```

    <Peer>
      <PeerName></PeerName>
      <PeerId></PeerId>
      <UserProfile></UserProfile>
    </Peer>
  </L3vpnPeer>
</L3vpn>

```

## Table description

Item	Description
Feature name	L3vpn
Table name	L3vpnPeer
Table type	Multi-instance table
Row name	Peer
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerName	VPN peer name	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
PeerId	Peer ID	N/A	Unsigned integer. Value range: 1 to 134217727	N/A
UserProfile	User profile name	N/A	String, case-sensitive. Length: 1 to 31 characters.	A user profile name can contain alphabets, digits, and underlines, and it must begin with an alphabet.

## L3vpn/L3vpnRep

This table contains L3VPN route replication information.

## XML structure

```

<L3vpn>
  <L3vpnRep>
    <Replicate>
      <VRF></VRF>
      <AddressFamily></AddressFamily>
      <RepVRF></RepVRF>
      <Protocol></Protocol>
      <ProtocolID></ProtocolID>
    </Replicate>
  </L3vpnRep>
</L3vpn>

```

```

    <Advertise></Advertise>
    <RoutePolicyName></RoutePolicyName>
  </Replicate>
</L3vpnRep>
</L3vpn>

```

## Table description

Item	Description
Feature name	L3vpn
Table name	L3vpnRep
Table type	Multi-instance table
Row name	Rep
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	Destination VRF name.	Index	String, case-sensitive. Length: 1 to 31 characters.	A null string indicates the public instance.
AddressFamily	Address family.	Index	Enumeration. <ul style="list-style-type: none"> <li>1—IPv4 unicast</li> <li>2—IPv6 unicast</li> <li>3—VPN (currently not supported)</li> <li>4—EVPN(currently not supported)</li> </ul>	N/A
RepVRF	Source VRF name.	Index	String, case-sensitive. Length: 1 to 31 characters.	A null string indicates the public instance.
Protocol	Protocol.	Index	Enumeration. <ul style="list-style-type: none"> <li>1—Direct</li> <li>2—Static</li> <li>3—Rip</li> <li>4—OSPF</li> <li>5—ISIS</li> <li>6—EIGRP (ipv6 currently not supported)</li> <li>7—BGP</li> </ul>	N/A
Protocol ID	Process ID/ Autonomous System number	Index	Unsigned integer. Value range: 1 to 65535, or 1 to 4294967295, or 0	For IGP Protocol and EIGRP Protocol, This is 1 to 65535. For BGP Protocol, This is 1 to

				4294967295. For Direct Protocol and Static Protocol, This is 0.
Advertise	The routes can be advertised to routing protocols	N/A	<b>Enumeration.</b> <ul style="list-style-type: none"> <li>• 0—Not advertise</li> <li>• 1—Advertise</li> </ul>	This column can only be set to 0 when the Protocol column is set to BGP.
RoutePolicyName	Specify a routing policy	N/A	String. Length: 1 to 63 characters.	A null string indicates without specify a routing policy

## Appendix

- A string contains only one VRF name.  
Example: vpn1,vpn2 (name with comma)  
It is going to find the information of the VRF whose name is "vpn1,vpn2", rather than "vpn1" and "vpn2".  
Example: vpn1 vpn2 (name with space)  
It is going to find the information of the VRF whose name is "vpn1 vpn2", rather than "vpn1" and "vpn2".
- When a VRF's name is the same as another VRF's index, name is used prior to index.  
Example: VRF-1's name is vpn and index is 1; VRF-2's name is 1 and index is 2;  
When the VrfIndex is assigned to 1, it is considered as VRF-2's name rather than VRF-1's index.

# L3vpn

## L3vpn/L3vpnVRF

Message	Explanation
The VRF instance is being deleted. 该VRF正在删除中。	The specified VRF is being deleted, when replacing or deleting it.
The VRF instance already has an RD. 该VRF已经配置RD。	Configuration already exists, when set new configuration.
RouteThreshold and SimplyAlert can't both be null. 请输入RouteThreshold或者SimplyAlert选项。	Invalid configuration.
Can't connect to an L3VPN process. 连接不上L3VPN进程。	Operation failed when L3VPN process has not been started.
IPv4 route limit is exceeded. IPv4路由门限超过最大值。	Invalid configuration, please modify configuration under the guidance.
IPv6 route limit is exceeded. IPv6路由门限超过最大值。	Invalid configuration, please modify configuration under the guidance.
The IPv4 route limit cannot be 0. IPv4路由门限不能为0。	Invalid configuration, please modify configuration under the guidance.
The IPv6 route limit cannot be 0. IPv6路由门限不能为0。	Invalid configuration, please modify configuration under the guidance.
Route distinguisher format error. 路由标识格式错误。	Invalid configuration, please modify configuration under the guidance.
The IPv4 route distinguisher format error. IPv4路由标识格式错误。	Invalid configuration, please modify configuration under the guidance.
The IPv6 route distinguisher format error. IPv6路由标识格式错误。	Invalid configuration, please modify configuration under the guidance.
The FlowSpec route distinguisher format error. FlowSpec路由标识格式错误。	Invalid configuration, please modify configuration under the guidance.
The VRF RD is inconsistent with IPv4 RD. 全局RD与IPv4的RD不一致。	Invalid configuration.
The VRF RD is inconsistent with IPv6 RD. 全局RD与IPv6的RD不一致。	Invalid configuration.
The VRF RD is inconsistent with FlowSpec RD. 全局RD与FlowSpec的RD不一致。	Invalid configuration.
The label allocation mode must be 'PerInstance'. 这个标签值的申请模式必须是每实例。	Invalid configuration. Please modify configuration under the guidance.
The static label is already allocated to another VPN instance. Please specify another label.	Invalid configuration. Please modify configuration under the guidance.

这个静态标签值已经被其他VRF占用，请重新指定标签值。	
Not enough resources to allocate the static label. 系统资源不足导致标签申请未成功。	No enough resource. Please check your device.
The static label is already allocated to the current VPN instance. Please specify another label. 这个静态标签值已经被当前VRF占用，请重新指定标签值。	Invalid configuration. Please modify configuration under the guidance.
The static label is already used by another module. Please specify another label. 这个静态标签值已经被其他模块占用，请重新指定标签值。	Invalid configuration. Please modify configuration under the guidance.

## L3vpn/L3vpnIf

Message	Explanation
The interface is already bound to another VRF instance. 该接口已经和其他VRF绑定。	The specified configuration is already existed, when creating a new configuration.
The interface doesn't exist. 接口不存在。	The specified interface is not existed.
Failed to allocate memory. 内存不足。	No enough resource, please check your device.
Configurations on the interface ware already removed. 接口下配置已删除。	When configurations take effect, some other configurations on the interface will be removed.
The interface is not supported. 接口不支持。	The specified interface is not supported.

## L3vpn/L3vpnRT

Message	Explanation
NULL	NULL

## L3vpn/L3vpnPeer

Message	Explanation
The VPN peer does not exist. VPN peer不存在。	The specified VPN peer does not exist, when deleting or removing.
The VPN peer ID cannot be modified. VPN peer ID不能被修改。	The specified VPN peer ID cannot be modified.

The VPN peer ID has been used. VPN peer ID已经被使用。	The specified VPN peer ID has been used.
VPN peer ID and profile-name do not have default value, must be empty. VPN peer ID和profile-name无默认值，必须下刷空列。	The specified configuration must be empty, when deleting or removing.

## L3vpn/L3vpnRep

Message	Explanation
The IPv6 address family doesn't support the EIGRP protocol. IPv6地址族下不支持配置EIGRP。	The IPv6 address family doesn't support the EIGRP protocol.
ProtocolID must be a number between 1 to 65535 if Protocol is IGP or EIGRP. 对于IGP和EIGRP，ProtocolID字段取值范围为1-65535。	The value of ProtocolID must be a number between 1 to 65535 if the protocol is IGP or EIGRP.
ProtocolID must be 0 if Protocol is direct or static. 对于Direct和Static，ProtocolID字段必须为0。	ProtocolID must be 0 if the protocol is direct or static.
Advertise must be 0 if Protocol is BGP. BGP协议中Advertise字段必须为0	The value of Advertise must be 0 if the protocol is BGP.

## LAGG/Base

This table contains global LAGG information.

### XML structure

```
<LAGG>
  <Base>
    <SystemPriority></SystemPriority>
    <LoadSharingMode></LoadSharingMode>
    <AutoAggregationEnable></AutoAggregationEnable>
    <Capability>
      <MaxGroupNum></MaxGroupNum>
      <MaxSelectPortNum></MaxSelectPortNum>
    </Capability>
  </Base>
</LAGG>
```

### Table description

Item	Description
Feature name	LAGG
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global configurations.
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions
SystemPriority	Priority assigned to the local system	N/A	Unsigned integer Value range: 0 to 65535. Default: 32768. The smaller the value, the higher the system LACP priority.
LoadSharingMode	Global link-aggregation load sharing mode.	N/A	Unsigned integer64. Default: 0. Ingress Port <b>is encoded in bit 1</b> .

			Destination MAC <b>is encoded in bit 2.</b> Source MAC <b>is encoded in bit 3.</b> Destination IP <b>is encoded in bit 4.</b> Source IP <b>is encoded in bit 5.</b> VLAN ID <b>is encoded in bit 6.</b> Layer 4 destination-port <b>is encoded in bit 7.</b> Layer 4 source-port <b>is encoded in bit 8.</b> IP Protocol <b>is encoded in bit 9.</b> MPLS Label1 <b>is encoded in bit 10.</b> MPLS Label2 <b>is encoded in bit 11.</b> MPLS Label3 <b>is encoded in bit 12.</b> Packet type-based sharing <b>is encoded in bit 13.</b> Per-packet <b>is encoded in bit 14.</b>
AutoAggregationEnable	Automatic aggregation.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable(default).</li> </ul>
Capability	System capability of link aggregation	Data structure	Members include: <ul style="list-style-type: none"> <li>MaxGroupNum.</li> <li>MaxSelectPortNum.</li> </ul>
MaxGroupNum	The maximum number of aggregation groups that the system can create.	N/A	Unsigned integer. Length:32bits.
MaxSelectPortNum	The maximum number of Selected ports per aggregation group.	N/A	Unsigned integer. Length:32bits.

## LAGG/Groups

This table contains information about link aggregation groups.

## XML structure

```

<LAGG>
  <LAGGGroups>
    <LAGGGroup>
      <GroupId></GroupId>
      <LinkMode></LinkMode>
      <LacpEdgeEnable></LacpEdgeEnable>
      <LoadSharingMode></LoadSharingMode>
      <IrfSelectMode></IrfSelectMode>
      <DynamicLoadSharing>
        <Mode></Mode>
        <FlowletGapTime></FlowletGapTime>
      </DynamicLoadSharing>
    </LAGGGroup>
  </LAGGGroups>

```

</LAGG>

## Table description

Item	Description
Feature name	LAGG
Table name	LAGGGroups
Table type	Multi-instance table
Row name	LAGGGroup
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
GroupId	Aggregation group ID	Index	Unsigned integer. Value range: <ul style="list-style-type: none"><li>Layer 2 aggregation group: 1 to 16384.</li><li>Layer 3 aggregation group: 16385 to 32768.</li><li>Blade aggregation group: 32769 to 36864.</li><li>S-channel bundle group: 36865 to 40960.</li></ul>
LinkMode	Link aggregation mode	N/A	Enumeration: <ul style="list-style-type: none"><li><b>1</b>—Static (default).</li><li><b>2</b>—Dynamic.</li></ul> Not configured for blade aggregation group.
LacpEdgeEnable	Edge aggregate interface feature	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled.</li><li><b>false</b>—<b>Disabled</b>(default).</li></ul> Not configured for blade aggregation group.
LoadSharingMode	Link-aggregation load sharing mode	N/A	Unsigned integer64. Default: 0. Ingress Port <b>is encoded in bit 1</b> . Destination MAC <b>is encoded in bit 2</b> . Source MAC <b>is encoded in bit 3</b> . Destination IP <b>is encoded in bit 4</b> . Source IP <b>is encoded in bit 5</b> . VLAN ID <b>is encoded in bit 6</b> . Layer 4 destination-port <b>is encoded in bit 7</b> .

			Layer 4 source-port <b>is encoded in bit 8.</b> IP Protocol <b>is encoded in bit 9.</b> MPLS Label1 <b>is encoded in bit 10.</b> MPLS Label2 <b>is encoded in bit 11.</b> MPLS Label3 <b>is encoded in bit 12.</b> Packet type-based sharing <b>is encoded in bit 13.</b> Per-packet <b>is encoded in bit 14.</b> Not configured for S-channel bundle group.
IrfSelectMode	Irf device select mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—None (default).</li> <li>• <b>1</b>—Master-first.</li> <li>• <b>2</b>—Bandwidth-first.</li> </ul>
Mode	Dynamic load sharing mode of link aggregation	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—None (default).</li> <li>• <b>1</b>—Spray.</li> <li>• <b>2</b>—Fixed.</li> <li>• <b>4</b>—Eligible.</li> </ul>
FlowletGapTime	Flowlet gap time of dynamic load sharing	N/A	Unsigned integer Value range: 16 to 65535 Default: 1000.

## LAGG/Members

This table contains information about link aggregation members.

## XML structure

```

<LAGG>
  <LAGGMembers>
    <LAGGMember>
      <IfIndex></IfIndex>
      <GroupId></GroupId>
      <BindMode></BindMode>
      <LacpMode></LacpMode>
      <LacpShortPeriodEnable></LacpShortPeriodEnable>
      <ActorPortPriority></ActorPortPriority>
    </LAGGMember>
  </LAGGMembers>
</LAGG>

```

## Table description

Item	Description
Feature name	LAGG

Table name	LAGGMembers
Table type	Multi-instance table
Row name	LAGGMember
Restrictions	This table supports only Ethernet interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Member port index	Index	Unsigned integer.
GroupId	Aggregation group ID	N/A	Unsigned integer. Value range: <ul style="list-style-type: none"> <li>Layer 2 aggregation group: 1 to 16384.</li> <li>Layer 3 aggregation group: 16385 to 32768.</li> <li>S-channel bundle group: 36865 to 40960.</li> <li>Default: 0. Not assigned to any link aggregation group.</li> </ul>
BindMode	Binding mode	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Normal. Not check aggregation group configuration</li> <li><b>2</b>—Force. Synchronize aggregation group configuration (Layer 3 Ethernet interfaces do not support Force to join aggregation groups)</li> <li><b>3</b>—check. Check aggregation group configuration</li> </ul>
LacpMode	LACP mode of a member port	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Active (default).</li> <li><b>2</b>—Passive.</li> </ul>
LacpShortPeriodEnable	LACP short period function	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled (default).</li> </ul>
ActorPortPriority	Priority assigned to this local port	N/A	Unsigned integer Value range: 0 to 65535 Default: 32768. The smaller the value, the higher the system LACP priority.

## Table description

Item	Description
Feature name	LAGG
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global configurations.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SystemID	The Actor's System ID	N/A	A 6-octet MAC address value.	N/A
SystemPriority	The priority assigned to the Actor System	N/A	Unsigned integer: 0 to 65535. The smaller the value, the higher the system LACP priority.	N/A
LoadSharingMode	Global link-aggregation load sharing mode.	N/A	Unsigned integer64. Ingress Port <b>is encoded in bit 1.</b> Destination MAC <b>is encoded in bit 2.</b> Source MAC <b>is encoded in bit 3.</b> Destination IP <b>is encoded in bit 4.</b> Source IP <b>is encoded in bit 5.</b> VLAN ID <b>is encoded in bit 6.</b>	N/A

			Layer 4 destination-port is encoded in bit 7. Layer 4 source-port is encoded in bit 8. IP Protocol is encoded in bit 9. MPLS Label1 is encoded in bit 10. MPLS Label2 is encoded in bit 11. MPLS Label3 is encoded in bit 12. Packet type-based sharing is encoded in bit 13. Per-packet is encoded in bit 14.	
AutoAggregationEnable	Automatic aggregation	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Capability	System capability of link aggregation	Data structure	Members include: <ul style="list-style-type: none"> <li>MaxGroupNum.</li> <li>MaxSelectPortNum.</li> </ul>	N/A
MaxGroupNum	The maximum number of aggregation groups that the system can create.	N/A	Unsigned integer. Length:32bits.	This value will take effect at the next reboot when you first configured. 0 represent for nothing configured.
MaxSelectPortNum	The maximum number of Selected ports per aggregation group.	N/A	Unsigned integer. Length:32bits.	This value will take effect at the next reboot when you first configured. 0 represent for nothing configured.

## LAGG/Groups

This table contains link aggregation group information.

## XML structure

```

<LAGG>

```

## Table description

Item	Description
Feature name	LAGG
Table name	LAGGGroups
Table type	Multi-instance table
Row name	LAGGGroup
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
GroupId	Aggregation group ID	Index	Unsigned integer. <ul style="list-style-type: none"> <li>Layer 2 aggregation group: 1 to 16384.</li> <li>Layer 3 aggregation group: 16385 to 32768.</li> <li>Blade aggregation group: 32769 to 36864.</li> <li>S-channel bundle group: 36865 to 40960.</li> </ul>
LinkMode	Link aggregation mode	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Static.</li> <li><b>2</b>—Dynamic.</li> </ul>
IfIndex	Aggregate interface index	N/A	Unsigned integer.
MemberList	Member list	N/A	Bitmap. No length restrictions. Each octet within this value specifies a set of eight ports, with the first octet specifying ports 1 through 8, the second octet specifying ports 9 through 16, etc. Within each octet, the most significant bit represents the lowest numbered port, and the least significant bit represents the highest numbered port. Thus, each port of the bridge is represented by a single bit within the value of this object. If that bit has a value of '1' then that port is included in the set of ports; the port is not included if

			its bit has a value of '0'.
SelectedMemberList	Selected member list	N/A	Bitmap. No length restrictions. Same <b>restriction with</b> MemberList.
LacpEdgeEnable	Edge aggregate interface feature	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Enabled.</li> <li>• <b>false</b>—Disabled.</li> </ul>
LoadSharingMode	Link-aggregation load sharing mode	N/A	Unsigned integer64. Ingress Port <b>is encoded in bit 1.</b> Destination MAC <b>is encoded in bit 2.</b> Source MAC <b>is encoded in bit 3.</b> Destination IP <b>is encoded in bit 4.</b> Source IP <b>is encoded in bit 5.</b> VLAN ID <b>is encoded in bit 6.</b> Layer 4 destination-port <b>is encoded in bit 7.</b> Layer 4 source-port <b>is encoded in bit 8.</b> IP Protocol <b>is encoded in bit 9.</b> MPLS Label1 <b>is encoded in bit 10.</b> MPLS Label2 <b>is encoded in bit 11.</b> MPLS Label3 <b>is encoded in bit 12.</b> Packet type-based sharing <b>is encoded in bit 13.</b> Per-packet <b>is encoded in bit 14.</b>
PartnerSystemID	The Partner's System ID	N/A	A 6-octet MAC address value. A value of zero indicates that there is no known Partner or the aggregation is static mode.
PartnerSystemPriority	The priority assigned to the Partner System	N/A	Unsigned integer: 0 to 65535 Default value is 32768. The smaller the value, the higher the system LACP priority.
LrfSelectMode	Lrf device select mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—None.</li> <li>• <b>1</b>—Master-first.</li> <li>• <b>2</b>—Bandwidth-first.</li> </ul>
Mode	Dynamic load sharing mode of link aggregation	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—None (default).</li> <li>• <b>1</b>—Spray.</li> <li>• <b>2</b>—Fixed.</li> <li>• <b>4</b>—Eligible.</li> </ul>
FlowletGapTime	Flowlet gap time of dynamic load sharing	N/A	Unsigned integer Value range: 16 to 65535 Default: 1000.

## LAGG/Members

## Table description

Item	Description
Feature name	LAGG
Table name	LAGGMembers
Table type	Multi-instance table
Row name	LAGGMember
Restrictions	This table supports only Ethernet interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Member port index	Index	Unsigned integer.
GroupId	Aggregation group ID	N/A	Unsigned integer. <ul style="list-style-type: none"><li>0: Not assigned to any link aggregation group.</li><li>Layer 2 aggregation group: 1 to 16384.</li><li>Layer 3 aggregation group: 16385</li></ul>

			to 32768. <ul style="list-style-type: none"> <li>Blade aggregation group: 32769 to 36864.</li> <li>S-channel bundle group: 36865 to 40960.</li> </ul>
SelectedStatus	Selected status of a member port	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Selected.</li> <li><b>2</b>—Unselected.</li> <li><b>3</b>—Individual.</li> </ul>
UnSelectedReason	Unselected reason of a member port	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—The port is attached to this aggregator. Indicate that selected status of a member port is Selected or Individual.</li> <li><b>1</b>—The current number of active ports has reached the upper limit.</li> <li><b>2</b>—All aggregation resources are already in-use.</li> <li><b>3</b>—The port's configuration is improper for being attached.</li> <li><b>4</b>—The port's partner is improper for being attached.</li> <li><b>5</b>—The number of current active ports has not reached the lower limit.</li> <li><b>6</b>—The port's physical state (down) is improper for being attached.</li> <li><b>7</b>—The port is not selected for an aggregator.</li> <li><b>8</b>—The port's hardware restriction is improper for being attached.</li> <li><b>9</b>—The port's speed is improper for being attached.</li> <li><b>10</b>—The port's duplex mode is improper for being attached.</li> </ul>
LacpEnable	LACP enable flag of a member port	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
LacpMode	LACP mode of a member port	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Active.</li> <li><b>2</b>—Passive.</li> </ul>
LacpShortPeriodEnable	LACP short period function	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
ActorPortPriority	The priority assigned to this port by the Actor	N/A	Unsigned integer Value eange: 0 to 65535 The smaller the value, the higher the system LACP priority.
ActorState	The Actor's state variables for the port	N/A	Encoded as individual bits within a single octet <ul style="list-style-type: none"> <li><b>LACP_Activity is encoded in bit 0. This flag indicates the</b></li> </ul>

			<p>Activity control value with regard to this link. Active LACP is encoded as a 1; Passive LACP is encoded as a 0.</p> <ul style="list-style-type: none"> <li>• LACP_Timeout is encoded in bit 1. This flag indicates the Timeout control value with regard to this link. Short Timeout is encoded as a 1; Long Timeout is encoded as a 0.</li> <li>• Aggregation is encoded in bit 2. If TRUE (encoded as a 1), this flag indicates that the System considers this link to be Aggregatable. If FALSE (encoded as a 0), the link is considered to be Individual.</li> <li>• Synchronization is encoded in bit 3. If TRUE (encoded as a 1), the System considers this link to be IN_SYNC. If FALSE (encoded as a 0), then this link is currently OUT_OF_SYNC.</li> <li>• Collecting is encoded in bit 4. TRUE (encoded as a 1) means collection of incoming frames on this link is definitely enabled. Its value is otherwise FALSE (encoded as a 0).</li> <li>• Distributing is encoded in bit 5. FALSE (encoded as a 0) means distribution of outgoing frames on this link is definitely disabled. Its value is otherwise TRUE (encoded as a 1).</li> <li>• Defaulted is encoded in bit 6. If TRUE (encoded as a 1), this flag indicates that the Actor's Receive machine is using Defaulted operational Partner information, administratively configured for the Partner. If FALSE (encoded as a 0), the operational Partner information in use has been received in a LACPDU;</li> <li>• Expired is encoded in bit 7. If TRUE (encoded as a 1), this flag indicates that the Actor's Receive machine is in the EXPIRED state; if FALSE (encoded as a 0), this flag indicates that the Actor's Receive machine is not in the EXPIRED state.</li> </ul>
ActorOperKey	The operational Key value assigned to the port by the Actor	N/A	Unsigned integer
ActorPort	The port number assigned to the port by the Actor	N/A	Unsigned integer

PartnerSystemID	The Partner's System ID	N/A	A 6-octet MAC address value. A value of zero indicates that there is no known Partner or the aggregation is static mode.
PartnerSystemPriority	The priority assigned to the Partner System	N/A	Unsigned integer Value eange: 0 to 65535 The smaller the value, the higher the system LACP priority.
PartnerPortPriority	The priority assigned to this port by the Partner	N/A	Unsigned integer Value eange: 0 to 65535 The smaller the value, the higher the system LACP priority.
PartnerState	The Partner's state variables for the port	N/A	Encoded as individual bits within a single octet. <b>Encoded meaning in every bits relate to ActorState.</b>
PartnerOperKey	The operational Key value assigned to the port by the Partner	N/A	Unsigned integer.
PartnerPort	The port number assigned to the port by the Partner	N/A	Unsigned integer.

# LB

## LB/ClearVirtualServerStats

This table is used to clear the statistics of the virtual server.

### XML structure

```
<LB>
  <ClearVirtualServerStats>
    <ClearVirtualServerStat>
      <Name></Name>
      <Clear></Clear>
    </ClearVirtualServerStat>
  </ClearVirtualServerStats>
</LB>
```

### Table description

Item	Description
Feature name	LB
Table name	ClearVirtualServerStats
Table type	Multi-instance table
Row name	ClearVirtualServerStat
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. <ul style="list-style-type: none"><li>Length: 1 to 63 characters.</li></ul>	N/A
Clear	Action of clearing the specified virtual server.	N/A	This column must be empty.	<ul style="list-style-type: none"><li>N/A</li></ul>

## LB/ClearAllVirtualServerStats

This table is used to clear all virtual servers' statistics.

## XML structure

```
<LB>
  <ClearAllVirtualServerStats>
    <Clear></Clear>
  </ClearAllVirtualServerStats>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	ClearAllVirtualServerStats
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Clear all virtual servers' statistics.	N/A	This column must be empty.	<ul style="list-style-type: none"><li>N/A</li></ul>

## LB/ClearRealServerStats

This table is used to clear the statistics of the real server.

## XML structure

```
<LB>
  <ClearRealServerStats>
    <ClearRealServerStat>
      <Name></Name>
      <Clear></Clear>
    </ClearRealServerStat>
  </ClearRealServerStats>

## Table description

Item	Description
Feature name	LB
Table name	HTTPVirtualServers
Table type	Multi-instance table
Row name	HTTPVirtualServer
Restrictions	Only HTTP and FASTHTTP virtual servers can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Type of the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—HTTP.</li> <li>1—FASTHTTP</li> </ul>	When a virtual server is created, the column must be specified. Once created, this column cannot be changed.
Description	Description for the virtual server.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates public network.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2. Loopback addresses, multicast

Column name	Column description	Column type	Data type and restrictions	Remarks
			By default, no IPv6 address is specified.	addresses, and link local addresses are not supported.
PortNumber	Port number.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 80.	N/A
DefaultServerFarm	Name of the default server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BackupServerFarm	Name of the backup server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm is not configured.
StickyGroup	Name of the sticky group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm is not configured.
Policy	Name of the policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPParameter	Parameter profile whose type is IP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TCPParameter	Parameter profile whose type is TCP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
HTTPParameter	Parameter profile whose type is HTTP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column is conflicted with TCPParameterClientSide/TCPParameterServerSide column, they cannot be configured both
TCPParameterClientSide	Client-side tcp parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column is conflicted with TCPParameter column, they cannot be configured both.
TCPParameterServerSide	Server-side tcp parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column is conflicted with TCPParameter column, they cannot be configured both.
HTTPStatsParameter	Parameter whose type is HTTP statistics for	N/A	String, case-insensitive. Length: 1 to 63	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	the virtual server.		characters.	
OneConnectParameter	Parameter profile whose type is OneConnect for the virtual server	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
MaxConnectionLimit	Maximum connection limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 0, which indicates no limit.	N/A
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps. By default, the value is 0, which indicates no limit.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s. By default, the value is 0 KB/s, which indicates no limit.	N/A
SSLServerPolicy	Name of the SSL server policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	This column can be configured only when the type is HTTP (0).
SSLClientPolicy	Name of the SSL client policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	This column can only be configured when the type is HTTP (0).
RedirectRelocation	Redirection URL.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column can only be configured when the type is HTTP (0). The column which has two special usages, analyses host and URL from requests. Only three symbols such as 'p', 'h' and '%' can be put behind '%'. Two '%' are regarded as one '%', process can handle, so the number of '%' must be even. They input below, except '%%p' and '%%h'. '%p' and '%h' only have one occurrence in the messages.
RedirectReturnCode	Redirection condition code.	N/A	Enumeration: <ul style="list-style-type: none"> <li>301—The requested</li> </ul>	This column can only be configured when the type of the virtual server is HTTP (0).

Column name	Column description	Column type	Data type and restrictions	Remarks
			<p>resource has been permanently moved.</p> <ul style="list-style-type: none"> <li>302—The requested resource has been temporarily moved (default).</li> </ul>	
ServiceEnable	Enable the virtual server.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit number.	N/A	<p>Unsigned integer.</p> <p>Value range: 0 to <math>2^{32}-1</math>.</p> <p>Unit: KB/s.</p> <p>By default, the value is 0 KB/s, which indicates no inbound limit.</p>	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit number.	N/A	<p>Unsigned integer.</p> <p>Value range: 0 to <math>2^{32}-1</math>.</p> <p>Unit: KB/s.</p> <p>By default, the value is 0 KB/s, which indicates no outbound limit.</p>	N/A
BusyProtectEnable	Enable link protection.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
RSBandwidthProtectOrigin	Origin of real server bandwidth statistics that are used for bandwidth protection.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>0—Using LB bandwidth statistics (default).</li> <li>1—Using interface bandwidth statistics.</li> </ul>	N/A
ConnSyncEnable	Enable connection synchronization.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	This column can only be configured when the Type is FASTHTTP (1).
StickySyncEnable	Enable sticky synchronization.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
StickySyncT	Sticky	N/A	Enumeration:	This column can only be configured

Column name	Column description	Column type	Data type and restrictions	Remarks
type	synchronization type.		<ul style="list-style-type: none"> <li>0—Synchronize in failover group (default).</li> <li>1—Synchronize global.</li> </ul>	when the StickySynEnable is Enable (1).
Redundancy Group	Name of redundancy group for virtual server flow-redirect.	N/A	String, case-insensitive. Length: 1 to 15 characters.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
VrrpIfIndex	Interface index of VRRP.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference. VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
HTTPCompressionParameter	Parameter profile whose type is HTTP compression for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column can only be configured when the Type is HTTP (0)
LimitPolicy	Name of the limit policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RouteAdvertisementEnable	Enable route advertisement.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
CachePolicy	Name of the cache policy	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

## LB/GenericVirtualServers

This table contains information about IP, TCP and UDP virtual servers.

## Table description

Item	Description
Feature name	LB
Table name	GenericVirtualServers
Table type	Multi-instance table

Row name	GenericVirtualServer
Restrictions	Only IP, TCP , UDP and LINK-IP virtual server can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Type of the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—IP.</li> <li>1—TCP.</li> <li>2—UDP.</li> <li>3—LINK-IP.</li> </ul>	When a virtual server is created, the column must be specified. Once created, this column cannot be changed.
Description	Description for the virtual server.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates a public network.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column cannot be configured if no IPv4 address is configured.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	The column cannot be configured if no IPv6 address is configured.
PortNumber	Port number.	N/A	Unsigned integer. Value range: 0 to 65535. By default, the value is 0.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumberList	List of port numbers	N/A	<p>Number string.</p> <p>It is a comma-separated list of ports. An item can be an individual port or a port range. Use a hyphen (-) to separate the start and end port of a range.</p> <p>The string cannot end with a comma or hyphen, or include any whitespace characters.</p> <p>Value range: 0 to 65535.</p> <p>By default, the value is 0.</p> <p>Items range: 1 to 8.</p>	<p>Example: 1,2,3,5-8,10-20.</p> <p>The item is permitted to incremental edit.</p>
DefaultServerFarm	Name of the default server farm.	N/A	<p>String, case-insensitive.</p> <p>Length: 1 to 63 characters.</p>	N/A
BackupServerFarm	Name of the backup server farm.	N/A	<p>String, case-insensitive.</p> <p>Length: 1 to 63 characters.</p>	This column cannot be configured if the default server farm is not configured.
DefaultLinkGroup	Name of the default link group.	N/A	<p>String, case-insensitive.</p> <p>Length: 1 to 63 characters.</p>	N/A
BackupLinkGroup	Name of the backup link group.	N/A	<p>String, case-insensitive.</p> <p>Length: 1 to 63 characters.</p>	This column cannot be configured if the default link group is not configured.
StickyGroup	Name of the sticky group.	N/A	<p>String, case-insensitive.</p> <p>Length: 1 to 63 characters.</p>	This column cannot be configured if the default server farm is not configured.
Policy	Name of the policy.	N/A	<p>String, case-insensitive.</p> <p>Length: 1 to 63 characters.</p>	N/A
IPParameter	Parameter profile whose type is IP for the virtual server.	N/A	<p>String, case-insensitive.</p> <p>Length: 1 to 63 characters.</p>	N/A
TCPParameter	Parameter profile whose type is TCP for the virtual	N/A	<p>String, case-insensitive.</p> <p>Length: 1 to 63</p>	This column can only be configured when the Type is TCP (1).

Column name	Column description	Column type	Data type and restrictions	Remarks
	server.		characters.	
TCPAppParameter	Parameter profile whose type is TCPApplication for the virtual server	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column can only be configured when the Type is TCP (1).
SSLServerPolicy	Name of the SSL server policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	This column can be configured only when the Type is TCP (1).
MaxConnectionLimit	Maximum connection limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 0, which indicates no limit.	N/A
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps. By default, the value is 0, which indicates no limit.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s. By default, the value is 0 KB/s, which indicates no limit.	N/A
UDPPerPacket	Enable UDP per-packet load balancing.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	This column can only be configured when the Type is UDP (2).
ServiceEnable	Enable the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps. By default, the value is 0, which indicates no inbound limit.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Unit: cps. By default, the value is 0, which indicates no outbound limit.	
BusyProtectEnable	Enable link protection.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
RSBandwidthProtectOrigin	Origin of real server bandwidth statistics that are used for bandwidth protection.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Using LB bandwidth statistics (default).</li> <li>1—Using interface bandwidth statistics.</li> </ul>	N/A
ConnSynEnable	Enable connection synchronization.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
StickySynEnable	Enable sticky synchronization.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
StickySyncType	Sticky synchronization type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Synchronize in failover group (default).</li> <li>1—Synchronize global.</li> </ul>	This column can only be configured when the StickySynEnable is Enable (1).
RedundancyGroup	Name of redundancy group for virtual server flow-redirect.	N/A	String, case-insensitive. Length: 1 to 15 characters.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
VrrpIfIndex	Interface index of VRRP.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.  VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
LimitPolicy	Name of the limit policy.	N/A	String, case-insensitive. Length: 1 to 63	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters.	
RouteAdvertisementEnable	Enable route advertisement.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A

## LB/RADIUSVirtualServers

This table contains information about RADIUS virtual servers.

## Table description

Item	Description
Feature name	LB
Table name	RADIUSVirtualServers
Table type	Multi-instance table
Row name	RADIUSVirtualServer
Restrictions	Only RADIUS virtual server can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description for the virtual server.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates a public network.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
PortNumber List	List of port numbers	N/A	Number string. It is a comma-separated list of ports. An item can be an individual port or a port range. Use a hyphen (-) to separate the start and end port of a range.  The string cannot end with a comma or hyphen, or include any whitespace	Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit.

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters. Value range: 0 to 65535. By default, the value is 0. Items range: 1 to 8.	
DefaultServerFarm	Name of the default server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BackupServerFarm	Name of the backup server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm is not configured.
StickyGroup	Name of the sticky group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm is not configured.
Policy	Name of the policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPParameter	Parameter profile whose type is IP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
MaxConnectionLimit	Maximum connection limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 0, which indicates no limit.	N/A
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps. By default, the value is 0, which indicates no limit.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s. By default, the value is 0 KB/s, which indicates no limit.	N/A
UDPPerPacket	Enable UDP per-packet load	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> </ul>	This column can only be configured when the Type is UDP (2).

Column name	Column description	Column type	Data type and restrictions	Remarks
	balancing.		<ul style="list-style-type: none"> <li>1—Enable.</li> </ul>	
ServiceEnable	Enable the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps. By default, the value is 0, which indicates no inbound limit.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps. By default, the value is 0, which indicates no outbound limit.	N/A
BusyProtectEnable	Enable link protection.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
RSBandwidthProtectOrigin	Origin of real server bandwidth statistics that are used for bandwidth protection.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Using LB bandwidth statistics (default).</li> <li>1—Using interface bandwidth statistics.</li> </ul>	N/A
ConnSyncEnable	Enable connection synchronization.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
StickySyncEnable	Enable sticky synchronization.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
VrrpIfIndex	Interface index of VRRP.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference. VrrpVrid and VrrpIfIndex are

Column name	Column description	Column type	Data type and restrictions	Remarks
				mutually dependent and both of them should be set in a single message.
LimitPolicy	Name of the limit policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RouteAdvertisementEnable	Enable route advertisement.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A

## Table description

Item	Description
Feature name	LB
Table name	SIPVirtualServers
Table type	Multi-instance table
Row name	SIPVirtualServer
Restrictions	Only SIP-UDP and SIP-TCP virtual server can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Type of the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—SIP-UDP</li> <li>1—SIP-TCP</li> </ul>	When a virtual server is created, the column must be specified. Once created, this column cannot be changed.
Description	Description for the virtual server.	N/A	String. Length: 1 to 127 characters.	The null string indicates the label is not configured.
VRF	VRF name.	N/A	String, Length: 1 to 31 characters. By default, no VRF is specified.	The null string indicates a public network.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number.	N/A	Unsigned integer. Value range: 0 to 65535. By default, the value is 5060.	N/A
DefaultServerFarm	Name of the default server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BackupServerFarm	Name of the backup server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm is not configured.
StickyGroup	Name of the sticky group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm is not configured.
Policy	Name of the policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPParameter	Parameter profile whose type is IP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
MaxConnectionLimit	Maximum connection limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 0, which indicates no limit.	N/A
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps. By default, the value is 0, which indicates no limit.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s. By default, the value is 0 KB/s, which indicates no limit.	N/A
UDPPerPacket	Enable the UDP per-packet load	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> </ul>	This column can only be configured when the Type is UDP (2).

Column name	Column description	Column type	Data type and restrictions	Remarks
	balancing.		<ul style="list-style-type: none"> <li>1—Enable.</li> </ul>	
ServiceEnable	Enable the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps. By default, the value is 0, which indicates no inbound limit.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps. By default, the value is 0, which indicates no outbound limit.	N/A
BusyProtectEnable	Enable link protection.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
RSBandwidthProtectOrigin	Origin of real server bandwidth statistics which is used for bandwidth protection.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Using LB bandwidth statistics (default).</li> <li>1—Using interface bandwidth statistics.</li> </ul>	N/A
ConnSynEnable	Enable the connection synchronization.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
StickySynEnable	Enable the sticky synchronization.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
StickySyncType	Sticky synchronization type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Synchronize in failover group (default).</li> <li>1—Synchronize global.</li> </ul>	This column can only be configured when the StickySynEnable is Enable (1).
RedundancyGroup	Name of redundancy group for virtual server	N/A	String, case-insensitive. Length: 1 to 15	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	flow-redirect.		characters.	
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	VrrpVrid and VrrplfIndex are mutually dependent and both of them should be set in a single message.
VrrplfIndex	Interface index of VRRP..	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.  VrrpVrid and VrrplfIndex are mutually dependent and both of them should be set in a single message.
LimitPolicy	Name of the limit policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RouteAdvertisementEnable	Enable route advertisement.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A

## Table description

Item	Description
Feature name	LB
Table name	MySQLVirtualServers
Table type	Multi-instance table
Row name	MySQLVirtualServer
Restrictions	Only MySQL virtual server can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description for the virtual	N/A	String. Length: 0 to 127	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
	server.		characters.	
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates a public network.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
PortNumber	Port number.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 3306.	N/A
DefaultServerFarm	Name of the default server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BackupServerFarm	Name of the backup server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm is not configured.
StickyGroup	Name of the sticky group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm is not configured.
Policy	Name of the policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPParameter	Parameter profile whose type is IP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TCPParameter	Parameter profile whose type is TCP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TCPParameterClientSide	Client-side tcp parameter	N/A	String, case-insensitive. Length: 1 to 63	This column is conflicted with TCPParameter column, they cannot be configured both.

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters.	
TCPPParameterServerSide	Server-side tcp parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column is conflicted with TCPPParameter column, they cannot be configured both.
MySQLParameter	Parameter profile whose type is MySQL for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
MaxConnectionLimit	Maximum connection limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 0, which indicates no limit.	N/A
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps. By default, the value is 0, which indicates no limit.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s. By default, the value is 0 KB/s, which indicates no limit.	N/A
ServiceEnable	Enable the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps. By default, the value is 0, which indicates no inbound limit.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps. By default, the value is 0, which indicates no outbound limit.	N/A
BusyProtect	Enable link	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	protection.		<ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	
RSBandwidthProtectOrigin	Origin of real server bandwidth statistics that are used for bandwidth protection.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Using LB bandwidth statistics (default).</li> <li>1—Using interface bandwidth statistics.</li> </ul>	N/A
StickySynEnable	Enable sticky entry synchronization.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
LimitPolicy	Name of the limit policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
StickySyncType	Sticky synchronization type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Synchronize in failover group (default).</li> <li>1—Synchronize global.</li> </ul>	This column can only be configured when the StickySynEnable is Enable (1).
RouteAdvertisementEnable	Enable route advertisement.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
Version	MySQL version info.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—5.0.</li> <li>1—5.1.</li> <li>2—5.5.</li> <li>3—5.6.</li> <li>4—5.7.</li> </ul> By default, 3 is configured.	N/A
Redundancy Group	Name of redundancy group for virtual server flow-redirect.	N/A	String, case-insensitive. Length: 1 to 15 characters.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
VrrpIfIndex	Interface index of VRRP.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML

Column name	Column description	Column type	Data type and restrictions	Remarks
				API Configuration Reference. VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
UserList	MySQL database user list.	Data structure	Members include: <ul style="list-style-type: none"> <li>UserName.</li> <li>Password.</li> </ul>	Max user count is 100.
UserName	MySQL database login username.	N/A	String, Length: 1 to 63 characters.	N/A
PassWord	MySQL database login password.	N/A	String, Length: 1 to 127 characters.	This column cannot be configured if the username is not configured or the password is obtained from the CLI.
Type	Password type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Simple.</li> <li>1—No password.</li> </ul>	This column cannot be configured if the password is obtained from the CLI.
ReadServer Farm	MySQL read server farm name for read/write separation	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ReadSticky Group	Name of the sticky group for read server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the read server farm is not configured.
WriteServer Farm	MySQL write server farm name for read/write separation	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
WriteSticky Group	Name of the sticky group for write server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the write server farm is not configured.

## LB/RealServers

This table contains information about real server.

## Table description

Item	Description
Feature name	LB
Table name	RealServers
Table type	Multi-instance table
Row name	RealServer
Restrictions	Only Real server can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the real server.	Index	String, case-insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 63 characters.	
Description	Description of the real server.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no Ipv4Address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and address such as 0.x.x.x are not supported either.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no Ipv6Address is specified.	Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported.
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 0 to 65535. By default, the value is 0.	N/A
Weight	Weight of the real server.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.
Priority	Priority of the real server.	N/A	Unsigned integer. Value range: 1 to 8. By default, the value is 4.	A larger value means a higher priority.
ServerFarm	Name of the server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters. By default, no server farm is specified.	N/A
Shutdown	Shutdown state for the real server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Not configured (default).</li> <li>1—Shutdown.</li> <li>2—Slow-shutdown.</li> </ul>	N/A
MaxConnectionLimit	Maximum connections limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 0 which indicates no preset limit.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RateLimitConnection	Maximum connections rate limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps. By default, the value is 0 which indicates no preset limit.	N/A
RateLimitHTTPRequest	Maximum HTTP request rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: qps. By default, the value is 0, which indicates the rate is not limit.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s. By default, the value is 0 KB/s which indicates no preset limit.	N/A
ProbeSuccessCriteria	Probe success criteria for the real server.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 0 which indicates that probe success criteria is all.	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s. By default, the value is 0 KB/s which indicate no preset inbound limit.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s. By default, the value is 0 KB/s which indicate no preset outbound limit.	N/A
InBandwidthBusyRatio	Inbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 70.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
OutBandwidthBusyRatio	Outbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 70.	N/A
BandwidthBusyRatio	Total bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 70.	N/A
InBandwidthBusyRecoverRatio	Inbound bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery rate.	N/A
OutBandwidthBusyRecoverRatio	Outbound bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery rate.	N/A
BandwidthBusyRecoverRatio	Total bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery rate.	N/A
Cost	The cost of link bandwidth.	NA	Unsigned integer. Value range: 0 to 10240. By default, the value is 0 which indicates that cost factor can be ignore when calculate proximities.	N/A
MaxBandwidth	Max bandwidth.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
InMaxBandwidth	Max inbound bandwidth.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
OutMaxBandwidth	Max outbound bandwidth.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
dwidth	bandwidth.		Value range: 0 to $2^{32}-1$ . Unit: KB/s.	
VRF	VRF name	N/A	String, case-insensitive. Length: 0 to 31 characters.	N/A
InheritVPN	Inherit the VPN of virtual server	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable inherit the VPN (default).</li> <li>1—Enable inherit the VPN.</li> </ul>	N/A

## LB/RealServerProbes

This table contains information about Real Server Probe that only uses NQA template.

### XML structure

```

<LB>
  <RealServerProbes>
    <RealServerProbe>
      <RealServer></RealServer>
      <Probe></Probe>
      <NQADefaultPortEnable></NQADefaultPortEnable>

</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	ServerFarms
Table type	Multi-instance table
Row name	ServerFarm
Restrictions	Only server farm can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the server farm.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the server farm.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Predictor	Predictor algorithm for LB to select a real server to serve a client request.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Round-robin (default).</li> <li>1—Random.</li> <li>2—Least-connection.</li> <li>3—Hash source address.</li> <li>4—Hash source port.</li> <li>5—Hash destination address.</li> <li>6—Bandwidth.</li> <li>7—Inbound bandwidth.</li> <li>8—Outbound bandwidth.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>9—Max bandwidth.</li> <li>10—Max inbound bandwidth.</li> <li>11—Max outbound bandwidth.</li> <li>12—Least time.</li> <li>13—Dynamic round-robin.</li> <li>14—Hash HTTP.</li> <li>15—CARP HTTP.</li> <li>16—CARP source address.</li> <li>17—CARP source port.</li> <li>18—CARP destination address.</li> <li>19—Least-connection member.</li> <li>20—Least time member.</li> </ul>	
HashIpv4PrefixLength	Length of IPv4 address mask for hash or CARP algorithm.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column can only be configured when the Predictor is hash or CARP source address (3/16), hash source port (4/17) and hash destination address (5/18).
HashIpv6PrefixLength	Length of IPv6 address prefix for hash or CARP algorithm.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	The column can only be configured when the Predictor hash or CARP source address (3/16), hash source port (4/17) and hash destination address (5/18).
SelectServerMinNumber	Minimum number of the active real server in the server farm.	N/A	Unsigned integer. Value range: 1 to 1000. By default, the column is not configured which indicates only the real server of highest priority can be dispatched.	If one of SelectServerMinNumber and SelectServerMaxNumber is not configured, the other cannot be configured. The value of SelectServerMaxNumber must be greater or equal than SelectServerMinNumber.
SelectServerMaxNumber	Maximum number of the active real server in the server farm.	N/A	Unsigned integer. Value range: 1 to 1000. By default, the column is not configured.	If one of SelectServerMinNumber and SelectServerMaxNumber is not configured, the other cannot be configured. The value of SelectServerMaxNumber must be greater or equal than SelectServerMinNumber.
SlowOnlineEnable	Enable the server farm slow online.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> </ul>	If the column is 0, SlowOnlineStandbyTime and SlowOnlineRampUpTime cannot be configured without default value.

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>1—Enable.</li> </ul>	
SlowOnlineStandbyTime	Standby time of the slow online.	N/A	Unsigned integer. Value range: 0 to 600. Unit: second. By default, the value is 5.	N/A
SlowOnlineRampUpTime	Ramp up time of the slow online.	N/A	Unsigned integer. Value range: 3 to 600. Unit: second. By default, the value is 5.	N/A
Transparent	Disable NAT for the server farm.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
ActivateLower	The status of main server farm will be changed from in use to backup when the ratio of the available real servers in main server farm becomes smaller than this value.	N/A	Unsigned integer. Value range: 1 to 99. By default, the column is not configured which indicates if one real server is active, the server farm is active.	If one of ActivateLower and ActivateUpper is not configured, the other cannot be configured. The value of ActivateUpper must be greater or equal than ActivateLower.
ActivateUpper	The status of main server farm will be changed from backup to in use when the ratio of the available real servers in main server farm reaches or over this value.		Unsigned integer. Value range: 1 to 99. By default, the column is not configured.	If one of ActivateLower and ActivateUpper is not configured, the other cannot be configured. The value of ActivateUpper must be greater or equal than ActivateLower.
SNATPool	SNAT pool for the server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
FailAction	Specify the action that the LB takes with respect to connections if any real server fails in a server farm.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Keep (default).</li> <li>1—Reset.</li> <li>2—Reschedule.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ProbeSuccessCriteria	The condition that real server is available through probes.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 0.	By default, indicates that when real server is available, all results of probes must be success.
ProximityEnable	Enable the proximity.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—disable (default).</li> <li>1—enable.</li> </ul>	N/A
Offset	Offset to the first byte of the payload.	N/A	Unsigned integer. Value range: 0 to 1000. By default, 0 is configured.	The column can only be configured when the Predictor hash source address (14/15).
Length	Length of the payload portion.	N/A	Unsigned integer. Value range: 0 to 1000. By default, 0 is configured.	The column can only be configured when the Predictor hash source address (14/15). If one of Length and End is not configured, the other cannot be configured.
Start	Beginning pattern for CARP.	N/A	String. Length: 0 to 127 characters.	The column can only be configured when the Predictor hash source address (14/15). The null string indicates the label is not configured.
End	Ending pattern for CARP.	N/A	String. Length: 0 to 127 characters.	The column can only be configured when the Predictor hash source address (14/15). The null string indicates the label is not configured.
BusyAction	Busy protection policies for server nodes	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Drop(default).</li> <li>1—Enqueue.</li> <li>2—Force.</li> </ul>	N/A
QueueLength	Queue length for aging	N/A	Unsigned integer. Value range: 1 to 100000. By default, the column is not configured.	The column can only be configured when the BusyAction enqueue (1).
QueueTimeout	Node aging time	N/A	Unsigned integer. Value range: 0 to 60. Unit: second. By default, the column is not configured.	The column can only be configured when the BusyAction enqueue (1).
RSTProbe	RST type probe template.	N/A	String, case-insensitive. Length: 1 to 32 characters.	Only one template can be configured for each type.
ZeroWindowProbe	Zero-Window type probe template.	N/A	String, case-insensitive. Length: 1 to 32	Only one template can be configured for each type.

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters.	
RecoverTimeInterval	Auto recover time interval	N/A	Unsigned integer. Value range: 0 to 15300. Unit:minute. By default, the value is 0.	N/A
HTTPPassiveProbe	HTTP passive probe template.	N/A	String, case-insensitive. Length: 1 to 32 characters.	Only one template can be configured for each probe type.

## LB/ServerFarmProbes

This table contains information about Server Farm Probe that only uses NQA template.

### XML structure

      <Ipv6AddressStart></Ipv6AddressStart>
      <Ipv6AddressEnd></Ipv6AddressEnd>
    </SNATPool>
  </SNATPools>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	SNATPools
Table type	Multi-instance table
Row name	SNATPool
Restrictions	Only SNAT pool can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the SNAT Pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the SNAT Pool.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Ipv4AddressStart	Start IPv4 address of the SNAT pool.	N/A	String. Dotted decimal notation. By default, no IPv4 addressStart is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either. If one of Ipv4AddressStart and Ipv4AddressEnd is not configured, the other cannot be configured.
Ipv4AddressEnd	End IPv4 address of the SNAT pool.	N/A	String. Dotted decimal notation. By default, no IPv4 addressEnd is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either. If one of Ipv4AddressStart and Ipv4AddressEnd is not configured, the other cannot be configured. Number of addresses in the SNAT pool cannot exceed the limit 255.
Ipv6AddressStart	Start IPv6 address of the SNAT pool.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 addressStart is specified.	Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported. If one of Ipv6AddressStart and Ipv6AddressEnd is not configured, the other cannot be configured.
Ipv6AddressEnd	End IPv6 address of the SNAT pool.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 addressEnd is specified.	Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported. If one of Ipv6AddressStart and Ipv6AddressEnd is not configured, the other cannot be configured. Number of addresses in the SNAT pool cannot exceed the limit 65535.

## LB/NewSNATPools

This table contains LB SNAT pool information.

## XML structure

### Table description

Item	Description
Feature name	LB
Table name	TCPParameters
Table type	Multi-instance table
Row name	TCPParameter
Restrictions	Only TCP parameter profile can be configured by this table.
Support for row creation and deletion	Yes

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter profile.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the parameter profile.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
ExceedMSS	Processing method when segments exceed the maximum segment size of TCP segment.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Permit (default).</li> <li>1—Drop.</li> </ul>	N/A
WindowSize	Starting value of the receive window size.	N/A	Unsigned integer. Value range: 8192 to 65535. By default, 65535 is configured.	N/A
TimeWaitTime	The time of TCP time-wait	N/A	Unsigned integer. Value range: 1 to 65535. Unit: second. By default, 2 is configured.	N/A
IdleTimeout	Timeout time of idle connections.	N/A	Unsigned integer. Value range: 10 to 86400. Unit: second.	The 0 indicates the label is not configured.
MSS	Maximum segment size of TCP segments.	N/A	Unsigned integer. Value range: 128 to 1460.	The 0 indicates the label is not configured.
SynRetransTime	Timeout time for syn retransmission	N/A	Unsigned integer. Value range: 1 to 75. Unit: second. By default, 10 is configured.	N/A
KeepAliveTime	Timeout time of keep-alive	N/A	Unsigned integer. Value range: 1 to 65535. Unit: second. By default, 1800 is configured.	N/A
KeepAliveInt	Interval time of	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
KeepAliveInterval	keep-alive retransmission		Value range: 1 to 65535. Unit: second. By default, 10 is configured.	
KeepAliveCount	Number of times of keep-alive retransmission	N/A	Unsigned integer. Value range: 1 to 65535. By default, 3 is configured.	N/A
FinWait1Time	Timeout time of FIN-WAIT1	N/A	Unsigned integer. Value range: 1 to 65535. Unit: second. By default, 5 is configured.	N/A
FinWait2Time	Timeout time of FIN-WAIT2	N/A	Unsigned integer. Value range: 1 to 65535. Unit: second. By default, 5 is configured.	N/A

## LB/TCPAppParameters

This table contains information about TCP Application parameter profile.

### XML structure

```

<LB>
  <TCPAppParameters>
    <TCPAppParameter>
      <Name></Name>
      <Description></Description>
      <MatchBufferSize></MatchBufferSize>
      <MatchBufferEnd></MatchBufferEnd>
      <MatchBufferTime></MatchBufferTime>
    </TCPAppParameter>
  </TCPAppParameters>
</LB>

```

### Table description

Item	Description
Feature name	LB

Table name	TCPAppParameters

### Table description

Item	Description
Feature name	LB
Table name	HTTPCookieStickyGroups
Table type	Multi-instance table
Row name	HTTPCookieStickyGroup
Restrictions	Only HTTP cookie sticky groups can be configured by this table.

Column name	Column description	Column type	Data type and restrictions	Remarks
CookieSecondary	Name of the secondary cookie.	N/A	String. Length: 0 to 63 characters.	Characters 0~31 and 127~255 in ASCII are not supported, such as characters of "(" ")" "<" ">" "@" ";", ":", "\", " /" "[", "]" "?", "=", "{", "}" SP HT are not supported either.
CheckAll	Enable the check option for an HTTP cookie type persistence group.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
OverrideLimit	Ignore the limits for sessions that match sticky entries.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable(default).</li> <li>1—Enable.</li> </ul>	N/A
PriorBusyEnable	Prior to busy action	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable(default).</li> <li>1—Enable.</li> </ul>	N/A

## LB/HTTPHeaderStickyGroups

This table contains information about HTTP header sticky groups.

### XML structure

```

<LB>
  <HTTPHeaderStickyGroups>
    <HTTPHeaderStickyGroup>
      <Name></Name>
      <Description></Description>
      <Timeout></Timeout>
      <Type></Type>
      <HeaderName></HeaderName>
      <Offset></Offset>
      <Length></Length>
      <Start></Start>
      <End></End>
      <OverrideLimit></OverrideLimit>
      <PriorBusyEnable></PriorBusyEnable>
    </HTTPHeaderStickyGroup>
  </HTTPHeaderStickyGroups>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	HTTPHeaderStickyGroups
Table type	Multi-instance table
Row name	HTTPHeaderStickyGroup
Restrictions	Only HTTP header sticky groups can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the sticky group.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description information for the sticky group.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Timeout	Timeout time of the sticky group.	N/A	Unsigned integer. Value range: 10 to 604800. Unit: second. By default, the value is 60s.	N/A
Type	Sticky method of HTTP header sticky group.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None (default).</li> <li>1—URL stickiness.</li> <li>2—Host stickiness</li> <li>3—Method stickiness</li> <li>4—Version stickiness</li> <li>5—Name stickiness</li> </ul>	Only when the type is URL stickiness (1) or host stickiness (2) or name stickiness (5) , configurations of offset, length, start, and end can be configured.
HeaderName	Header name.	N/A	String, case-insensitive. Length: 0 to 63 characters.	When Type is method stickiness (3), this column must be configured. Characters 0~31 and 127~255 in ASCII are not supported, such as characters of "(" ")" "<" ">" "@" " " ; " , " . " \ " " / " "[ " "]" "?" " = " "{" "}" SP HT are not supported either.
Offset	Offset to the first byte of the HTTP header value.	N/A	Unsigned integer. Value range: 0 to 1000. By default, the value is 0.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Length	Length of the HTTP header value.	N/A	Unsigned integer. Value range: 0 to 1000. By default, the value is 0.	If one of Length and End is not configured, the other cannot be configured.
Start	Beginning pattern for the HTTP header value.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
End	Ending pattern for the HTTP header value.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
OverrideLimit	Ignore the limits for sessions that match sticky entries.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable(default).</li> <li>1—Enable.</li> </ul>	N/A
PriorBusyEnable	Prior to busy action	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable(default).</li> <li>1—Enable.</li> </ul>	N/A

## LB/SSLStickyGroups

This table contains information about SSL sticky groups.

### XML structure

```

<LB>
  <SSLStickyGroups>
    <SSLStickyGroup>
      <Name></Name>
      <Description></Description>

</LB>

```

```
</SIPStickyGroups>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	SIPStickyGroups
Table type	Multi-instance table
Row name	SIPStickyGroup
Restrictions	Only SIP sticky groups can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the sticky group.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description information for the sticky group.	N/A	String. Length: 1 to 127 characters.	The null string indicates the label is not configured.
Timeout	Timeout time of the sticky group.	N/A	Unsigned integer. Value range: 10 to 604800. Unit: second. By default, the value is 60s.	N/A
Type	Sticky method of SIP sticky group.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None (default).</li> <li>1—SIP Call-ID stickiness.</li> </ul>	N/A
OverrideLimit	Ignore the limits for sessions that match sticky entries.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable(default).</li> <li>1—Enable.</li> </ul>	N/A
PriorBusyEnable	Prior to busy action	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable(default).</li> <li>1—Enable.</li> </ul>	N/A

## LB/Policies

This table contains information about policies.

## XML structure

```
<LB>
  <Policies>
    <Policy>
      <Name></Name>
      <Type></Type>
      <Description></Description>
      <DefaultClassAction></DefaultClassAction>
    </Policy>
  </Policies>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	Only policy can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the policy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Type for the policy.	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—Generic.</li><li>• 1—HTTP.</li><li>• 2—Link-generic.</li><li>• 3—DNS.</li><li>• 4—RADIUS.</li><li>• 5—MySQL.</li></ul>	When this column is configured, the value of this column cannot be modified.
Description	Description information for the policy.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
DefaultClassAction	Action for the default class of the policy.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.

# LB/ClassActions

This table contains information about policy rules.

## XML structure

```
<LB>
  <ClassActions>
    <ClassAction>
      <Policy></Policy>
      <Class></Class>
      <Action></Action>
      <BeforeClass></BeforeClass>
    </ClassAction>
  </ClassActions>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	ClassActions
Table type	Multi-instance table
Row name	ClassAction
Restrictions	Only policy rules can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Policy	Name of the policy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Class	Name of the class.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Action	Name of the action for the class.	N/A	String, case-insensitive. Length: 1 to 63 characters.	When a row is created, the column must be configured.
BeforeClass	Name of the class that the row will be inserted before.	N/A	String, case-insensitive. Length: 0 to 63 characters.	BeforeClass must be an existing class. By default, indicates the row will be inserted at last.

# LB/GenericActions

This table contains information about IP, TCP and UDP action.

## XML structure

```
<LB>
  <GenericActions>
    <GenericAction>
      <Name></Name>
      <Description></Description>
      <ForwardType></ForwardType>
      <ServerFarm></ServerFarm>
      <BackupServerFarm></BackupServerFarm>
      <StickyGroup></StickyGroup>
      <IPToS></IPToS>
      <Fallback></Fallback>
      <TCPPDropType></TCPPDropType>
    </GenericAction>
  </GenericActions>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	GenericActions
Table type	Multi-instance table
Row name	GenericAction
Restrictions	Only IP, TCP and UDP action can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the action.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the action.	N/A	String. Length: 1 to 127 characters.	N/A
ForwardType	Forward mode of the action.	N/A	Enumeration: <ul style="list-style-type: none"><li>1—Drop (default).</li></ul>	When ForwardType changes from server farm (3) to drop (1) or forward

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>2—Forward all.</li> <li>3—Server farm.</li> </ul>	all (2), ServerFarm and BackupServerFarm become default value.
ServerFarm	Name of the sever farm for the action.	N/A	String, case-insensitive. Length: 0 to 63 characters.	When the column is configured, ForwardType becomes server farm (3).
BackupServerFarm	Name of the backup sever farm for the action.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The column cannot be configured when ServerFarm is not configured.
StickyGroup	Name of the sticky group farm for the action.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The column cannot be configured when ServerFarm is not configured.
IPToS	ToS number of IP packet sent to server.	N/A	Unsigned integer. Value range: 0 to 255. By default, no IPToS is specified.	N/A
Fallback	Fallback action when real server select failed.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None (default).</li> <li>1—Match next class.</li> <li>3—Fin close.</li> <li>4—Rst close.</li> </ul>	N/A
TCPDropType	Type of closing TCP connection	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Fin close(default).</li> <li>1—Rst close</li> </ul>	N/A

## LB/RADIUSActions

This table contains information about RADIUS action.

### XML structure

```

<LB>
  <RADIUSActions>

    </HTTPAction>
  </HTTPActions>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	HTTPActions
Table type	Multi-instance table
Row name	HTTPAction
Restrictions	Only HTTP action can be configured by this table.
Support for row creation and deletion	Yes

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the action.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the action.	N/A	String. Length: 1 to 127 characters.	N/A
ForwardType	Forward mode of the action.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Drop (default).</li> <li>3—Server farm.</li> <li>8—Redirect</li> <li>9—Response.</li> </ul>	When ForwardType changes from server farm (3) to drop (1) or redirect (8) or response (9), ServerFarm and BackupServerFarm become default value.
ServerFarm	Name of the sever farm for the action.	N/A	String, case-insensitive. Length: 0 to 63 characters.	When the column is configured, ForwardType becomes server farm (3).
BackupServer Farm	Name of the backup sever farm for the action.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The column cannot be configured when ServerFarm is not configured.
StickyGroup	Name of the sticky group farm for the action.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The column cannot be configured when ServerFarm is not configured.
SSLClientPolicy	Name of the SSL client policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	N/A
IPToS	ToS number of IP packet sent to server.	N/A	Unsigned integer. Value range: 0 to 255. By default, no IPToS is specified.	N/A
Fallback	Fallback action when real server select failed.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None (default).</li> <li>1—Match next class.</li> <li>2—Response.</li> <li>3—Fin close.</li> <li>4—Rst close.</li> </ul>	N/A
RewriteValue	Content value need to be replaced in response.	N/A	String. Length: 1 to 127 characters.	This column and the column of ReplaceValue must be configured together.
ReplaceValue	New content value after replaced in response.	N/A	String. Length: 1 to 127 characters.	Some special applications and constraints as below: %is: insert source IPv4 address or source IPv6 address into header of the message. %ps: insert source port into header of the message.

Column name	Column description	Column type	Data type and restrictions	Remarks
				<p>%id: insert destination IPv4 address or IPv6 address into header of the message.</p> <p>%pd: insert destination port into header of the message.</p> <p>To the above-mentioned applications, some situations, like only %, ps, id, pd can behind %, must be constrained unless those serial % are not odd number.</p>
Redirect	Redirection URL.	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column has two special usages, analyzes host and URL from requests. Only three symbols such as 'p', 'h' and '%' can be put behind '%'. Two '%' are regarded as one '%'. Process can handle, so the number of '%' must be even. They input below, except '%%p' and '%%h'. '%p' and '%h' only have one occurrence in the messages.
ReturnCode	Status code in the returned redirection packets.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>301—The requested resource has been permanently deleted.</li> <li>302—The requested resource has been temporarily deleted (default).</li> </ul>	N/A
ZipFileWorkpath	Work path of the zip file for the response.	N/A	String. Length: 1 to 255 characters.	<p>If the column is not '/', it must start with /, and cannot end with /.</p> <p>The null string indicates the label is not configured.</p>
ResponseZipFile	<p>Full path and name of the zip file for the response.</p> <p>Example:</p> <ul style="list-style-type: none"> <li>flash:/lb/1.html</li> <li>chassis3#slot1#flash:/lb/1.html</li> </ul>	N/A	String, case-insensitive. Length: 1 to 255 characters.	<p>The column can be configured when ForwardType is Response (9) or there is no ForwardType column.</p> <p>When the column is configured, ForwardType becomes Resposne (9).</p> <p>The column cannot be configured when ZipFileWorkpath is not configured.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
FallbackResponseRawFile	Full path and name of the raw file for the fallback action response. Example: <ul style="list-style-type: none"> <li>flash:/lb/1.html</li> <li>chassis3#slot1#flash:/lb/1.html</li> </ul>	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column can be configured when Fallback is Response(2).
TCPDropType	Type of closing TCP connection	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Fin close(default).</li> <li>1—Rst close</li> </ul>	N/A

## LB/HTTPActionResponseFiles

This table contains information about HTTP action response file.

When this table is configured the ForwardType of http action becomes response(9).

## XML structure

  </HTTPActionResponseFiles>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	HTTPActionResponseFiles
Table type	Multi-instance table
Row name	HTTPActionHeader
Restrictions	Only HTTP action response file can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Name of the action.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
URL	URL of file for the action response.	Index	String. Length: 1 to 255 characters.	The column must start with /. When the column is configured, ForwardType becomes Resposne (9).
FileName	Full path and name of the file for the action response.	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column must start witch device name.

## LB/HTTPActionRewriteURLs

This table contains information about HTTP action rewrite URL.

## XML structure

```
<LB>
  <HTTPActionRewriteURLs>
    <HTTPActionRewriteURL>
      <LocationURL></LocationURL>
      <Replace></Replace>
      <Encode></Encode>
    </HTTPActionRewriteURL>
  </HTTPActionRewriteURLs>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	HTTPActionRewriteURLs
Table type	Multi-instance table
Row name	HTTPActionURL
Restrictions	Only HTTP action rewrite URL can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocationURL	URL of location value for the HTTP request line.	Index	String. Length: 0 to 127 characters.	N/A
Replace	Replaced string that method of URL rewrite process.	N/A	String. Length: 0 to 127 characters.	<p>This column only can be configured when LocationURL is configured. Some special applications and constraints as below:</p> <p>%is: source IPv4 address or source IPv6 address.</p> <p>%ps: source port.</p> <p>%id: destination IPv4 address or IPv6 address</p> <p>%pd: destination port.</p> <p>%sis: source IPv4 address or source IPv6 address of server.</p> <p>%sps: source port of server.</p> <p>%sid: destination IPv4 address or IPv6 address of server.</p> <p>%spd: destination port of server.</p> <p>%{x509v}: the version of certificate</p> <p>%{x509issuer}: the issuer of certificate</p> <p>%{x509before}: the vaild time of certificate(invaild before this time)</p> <p>%{x509after}: the vaild time of certificate(invaild after this time)</p> <p>%{x509hash}: the MD5 hash of certificate</p> <p>%{x509snum}: the serial number of certificate</p> <p>%{x509sigalgo}: the signature algorithm of certificate</p> <p>%{x509sub}: the subject of certificate</p> <p>%{x509spktype}: the subject public key type of certificate</p> <p>%{x509spk}: the subject public key of certificate</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
				%{x509spkRSA}: the number of subject public key bits of certificate %{dncn}: common name %{dne}: email %{dno}: company/organization %{dnou}: organization unit %{dnc}: country %{dns}: state/province %{dnl}: location To the above-mentioned applications, some situations, like only % and rewrite variate can behind %, must be constrained unless those serial % are not odd number.
Encode	Encode type of URL rewrite.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—None.</li> <li>• 1—URL.</li> <li>• 2—Base64</li> </ul>	

## LB/HTTPActionSSLURLs

This table contains information about HTTP action SSLURL.

### XML structure

```

<LB>
  <HTTPActionSSLURLs>
    <HTTPActionSSLURL>
      <Name></Name>
      <LocationURL></LocationURL>
      <ClearPort></ClearPort>
      <SSLPort></SSLPort>
    </HTTPActionSSLURL>
  </HTTPActionSSLURLs>
</LB>

```

### Table description

Item	Description
Feature name	LB
Table name	HTTPActionSSLURLs

Table type	Multi-instance table
Row name	HTTPActionSSLURL
Restrictions	Only HTTP action SSL URL can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the action.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
LocationURL	URL of location value for the HTTP header.	Index	String. Length: 1 to 63 characters.	N/A
ClearPort	HTTP port of Location for rewriting redirection message.	Index	Unsigned integer. Value range: 1 to 65535.	This column can only be configured when LocationURL is configured.
SSLPort	SSL port of the LB device.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 443.	This column can only be configured when LocationURL is configured.

## LB/HTTPActionHeaders

This table contains information about HTTP action header.

## XML structure

```

<LB>
  <HTTPActionHeaders>
    <HTTPActionHeader>
      <Action></Action>
      <Type></Type>
      <Direction></Direction>
      <HeaderName></HeaderName>
      <HeaderValue></HeaderValue>
      <HeaderExpress></HeaderExpress>
      <Replace></Replace>
      <Encode></Encode>
    </HTTPActionHeader>
  </HTTPActionHeaders>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	HTTPActionHeaders
Table type	Multi-instance table
Row name	HTTPActionHeader
Restrictions	Only HTTP action header can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Name of the action.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Type of the header process.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Header Delete.</li> <li>1—Header Insert.</li> <li>2—Header Rewrite.</li> </ul>	N/A
Direction	Process direction.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Request and Response.</li> <li>1—Request.</li> <li>2—Response.</li> </ul>	N/A
HeaderName	Name of the header.	Index	String, case-insensitive. Length: 1 to 63 characters.	HeaderName cannot contain any one of characters following: 0 to 31 and 127 to 255 in the ASCII table, character as "(" ")" "<" ">" "@" " " "," ";" ".:" "\" " " /" "[" "]" "?" "=" "{" "}" " SP HT.
HeaderValue	Header value that method of Header Insert process.	N/A	String. Length: 0 to 255 characters.	This column has validity in Header Insert process. You cannot configure this column if the type is not Header Insert. Some special applications and constraints as below: %is: source IPv4 address or source IPv6 address. %ps: source port. %id: destination IPv4 address or IPv6 address. %pd: destination port.

Column name	Column description	Column type	Data type and restrictions	Remarks
				<p>%sis: source IPv4 address or source IPv6 address of server.</p> <p>%sps: source port of server.</p> <p>%sid: destination IPv4 address or IPv6 address of server.</p> <p>%spd: destination port of server.</p> <p>%{x509v}: the version of certificate</p> <p>%{x509issuer}: the issuer of certificate</p> <p>%{x509before}: the vaild time of certificate(invaild before this time)</p> <p>%{x509after}: the vaild time of certificate(invaild after this time)</p> <p>%{x509hash}: the MD5 hash of certificate</p> <p>%{x509snum}: the serial number of certificate</p> <p>%{x509sigalgo}: the signature algorithm of certificate</p> <p>%{x509sub}: the subject of certificate</p> <p>%{x509spktype}: the subject public key type of certificate</p> <p>%{x509spk}: the subject public key of certificate</p> <p>%{x509spkRSA}: the number of subject public key bits of certificate</p> <p>%{dn cn}: common name</p> <p>%{dn e}: email</p> <p>%{dn o}: company/organization</p> <p>%{dn ou}: organization unit</p> <p>%{dn c}: country</p> <p>%{dn s}: state/province</p> <p>%{dn l}: location</p> <p>To the above-mentioned applications, some situations, like only % and rewrite variate can behind %, must be constrained unless those serial % are not odd number.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
HeaderExpress	Header value that method of Header Rewrite process.	N/A	String. Length: 0 to 127 characters.	This column can only be configured when the type is Header Rewrite (2).
Replace	Replaced string that method of Header Rewrite process.	N/A	String. Length: 0 to 127 characters.	<p>This column can only be configured when the type is Header Rewrite (2).</p> <p>Some special applications and constraints as below:</p> <p>%is: source IPv4 address or source IPv6 address.</p> <p>%ps: source port.</p> <p>%id: destination IPv4 address or IPv6 address</p> <p>%pd: destination port.</p> <p>%sis: source IPv4 address or source IPv6 address of server.</p> <p>%sps: source port of server.</p> <p>%sid: destination IPv4 address or IPv6 address of server.</p> <p>%spd: destination port of server.</p> <p>%{x509v}: the version of certificate</p> <p>%{x509issuer}: the issuer of certificate</p> <p>%{x509before}: the vaild time of certificate(invaild before this time)</p> <p>%{x509after}: the vaild time of certificate(invaild after this time)</p> <p>%{x509hash}: the MD5 hash of certificate</p> <p>%{x509snum}: the serial number of certificate</p> <p>%{x509sigalgo}: the signature algorithm of certificate</p> <p>%{x509sub}: the subject of certificate</p> <p>%{x509spktype}: the subject public key type of certificate</p> <p>%{x509spk}: the subject public key of certificate</p> <p>%{x509spkRSA}: the number of subject public key bits of certificate</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
				%{dncn}: common name %{dne}: email %{dno}: company/organization %{dnou}: organization unit %{dnc}: country %{dns}: state/province %{dnl}: location To the above-mentioned applications, some situations, like only % and rewrite variate can behind %, must be constrained unless those serial % are not odd number.
Encode	Encode type of URL rewrite.	N/A	Enumeration: • 0—None. • 1—URL. • 2—Base64	Encode

## LB/Classes

This table contains information about classes.

## XML structure

```

<LB>
  <Classes>
    <Class>
      <Name></Name>

Restrictions	Only generic match rule can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Class	Name of the class.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ID	ID of the match rule.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Type	Type of the match rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Source IPv4.</li> <li>1—Source IPv6.</li> <li>2—Class.</li> <li>3—IPv4 ACL.</li> <li>4—IPv6 ACL.</li> <li>5—ISP.</li> <li>6—User.</li> <li>7—User group.</li> <li>8—Interface.</li> <li>9—payload.</li> </ul>	N/A
SrcIpv4Address	Match rule of Source IPv4.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	This column can be configured only when the type is Source IPv4(0).

Column name	Column description	Column type	Data type and restrictions	Remarks
Srclpv4Prefix Length	Mask length of the source IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	This column can be configured only when IPv4 address is configured.
Srclpv6Address	Match rule of source IPv6.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	This column can be configured only when the type is Source IPv6 (1).
Srclpv6Prefix Length	Prefix length of the source IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	This column can be configured only when IPv6 address is configured.
ReferClass	Name of the referenced class.	N/A	String, case-insensitive. Length: 0 to 63 characters.	This column can be configured only when the type is <b>Class</b> (2).
AclNum	ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999. By default, no ACL number is specified.	AclNum and AclName are mutually exclusive and only one of them can be set in a single message. This column can only be configured when the type is IPv4 ACL (3) or IPv6 ACL (4).
AclName	Name of the ACL.	N/A	String, case-insensitive. Length: 1 to 63 characters. By default, no ACL name is specified.	AclNum and AclName are mutually exclusive and only one of them can be set in a single message. This column can be configured only when the type is IPv4 ACL (3) or IPv6 ACL (4).
ISP	Name of the ISP.	N/A	String, case-insensitive. Length: 1 to 63 characters. By default, no ISP name is specified.	This column can be configured only when the type is ISP (5).
User	Name of the user.	N/A	String, case-sensitive.. Length: 1 to 55 characters. By default, no username is specified.	This column can be configured only when the type is user (6).
UserGroup	Name of the user group.	N/A	String, case-insensitive.. Length: 1 to 32 characters. By default, no user group name is specified.	This column can be configured only when the type is user group (7).
IdentityDomain	The domain name of the user or user group.	N/A	String, case-insensitive.. Length: 1 to 255 characters. By default, no domain name is specified.	This column can be configured only when the type is user or user group (6 or 7). The name cannot contain question marks (?).
InterfaceName	Name of the interface.	N/A	String, case-insensitive.. Length: 1 to 47 characters.	This column can be configured only when the

Column name	Column description	Column type	Data type and restrictions	Remarks
			By default, no interface name is specified.	type is interface (8).
PayloadExpression	Regular expression matched the payload content.	N/A	String. Length: 0 to 255 characters	This column can be configured only when the type is payload (9).
CaseInsensitive	Whether the payload content expression is case insensitive	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Case sensitive (default)</li> <li>1—Case insensitive</li> </ul>	This column can be configured only when the type is payload(9).
Not	Whether the matching condition is opposite	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Matching condition is not opposite (default)</li> <li>1—Matching condition is opposite</li> </ul>	This column can be configured only when the type is payload(9).

SrcIpv6PrefixLength	Prefix length of the source IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	This column can be configured only when IPv6 address is configured.
DstIpv4Address	Match rule of destination IPv4.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	This column can be configured only when the type is destination IPv4(2).
DstIpv4PrefixLength	Mask length of the destination IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	This column can be configured only when destination IPv4 address is configured.
DstIpv6Address	Match rule of destination IPv6.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	This column can be configured only when the type is destination IPv6 (3).
DstIpv6PrefixLength	Prefix length of the destination IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	This column can be configured only when destination IPv6 address is configured.
ReferClass	Name of the	N/A	String, case-insensitive.	This column can be

Column name	Column description referenced class.	Column type	Data type and restrictions Length: 1 to 63 characters.	Remarks configured only when the type is Class (4).
AclNum	ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999. By default, no ACL number is specified.	AclNum and AclName are mutually exclusive and only one of them can be set in a single message. This column can be configured only when the type is IPv4 ACL (5) or IPv6 ACL (6).
AclName	Name of the ACL.	N/A	String, case-insensitive. Length: 1 to 63 characters. By default, no ACL name is specified.	AclNum and AclName are mutually exclusive and only one of them can be set in a single message. This column can be configured only when the type is IPv4 ACL (5) or IPv6 ACL (6).
Domain	Domain for the DNS match rule	N/A	String, case-insensitive. Length: 1 to 253 characters.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.). The domain name supports wildcards including question marks (?) and asterisks (*). The following rules apply when you use wildcards: Use a question mark (?) to replace one character, except the dot (.). Multiple question marks can appear in the domain name. Use an asterisk (*) to replace multiple characters, except the dot (.). Multiple asterisks can appear in the domain name. Question marks and asterisks can appear in the domain name at the same time.
User	Name of the user.	N/A	String, case-sensitive.. Length: 1 to 55 characters. By default, no user name is specified.	This column can be configured only when the type is user (8).
UserGroup	Name of the user group.	N/A	String, case-insensitive.. Length: 1 to 32 characters. By default, no user group name is specified.	This column can be configured only when the type is user group (9).

Column name	Column description	Column type	Data type and restrictions	Remarks
IdentityDomain	The domain name of the user or user group.	N/A	String, case-insensitive.. Length: 1 to 255 characters. By default, no domain name is specified.	This column can be configured only when the type is user or user group (8 or 9). The name cannot contain question marks (?).
InterfaceName	Name of the interface.	N/A	String, case-insensitive.. Length: 1 to 47 characters. By default, no interface name is specified.	This column can be configured only when the type is interface (10).

## LB/HTTPMatchRules

Row name	HTTPMatchRule
Restrictions	Only HTTP match rule can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Class	Name of the class.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ID	ID of the match rule.	Index	Unsigned integer. Value range:1 to 65535.	N/A
Type	Type of the match rule.	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—Source IPv4.</li><li>• 1—Source IPv6.</li><li>• 2—Class.</li><li>• 3—Cookie.</li><li>• 4—HTTP Header.</li><li>• 5—Method.</li><li>• 6—URL.</li><li>• 7—Content.</li><li>• 8—IPv4 ACL.</li><li>• 9—IPv6 ACL.</li><li>• 11—User.</li><li>• 12—User group.</li><li>• 13—Interface.</li></ul>	N/A
Srclpv4Address	Match rule of Source IPv4.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	This column can be configured only when the type is Source IPv4(0).
Srclpv4PrefixLength	Mask length of the source IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	This column can be configured only when IPv4 address is configured.
Srclpv6Address	Match rule of source IPv6.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address	This column can be configured only when the type is Source IPv6(1).

Column name	Column description	Column type	Data type and restrictions	Remarks
			is specified.	
SrcIpv6Prefix Length	Prefix length of the source IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	This column can be configured only when IPv6 address is configured.
ReferClass	Name of the referenced class.	N/A	String, case-insensitive. Length: 0 to 63 characters.	This column can be configured only when the type is <b>Class</b> (2).
CookieName	Cookie name of the http message.	N/A	String. Length: 0 to 63 characters.	This column can be configured only when the type is Cookie (3).
CookieValue	Regular expression matched the cookie range.	N/A	String. Length: 0 to 255 characters.	This column can be configured only when the type is Cookie (3) and the CookieName has been configured.
HeaderName	Header name of the HTTP message.	N/A	String, case-insensitive. Length: 0 to 63 characters.	This column can be configured only when the type is HTTP Header (4).
HeaderValue	Regular expression matched the header range.	N/A	String. Length: 0 to 255 characters.	This column can be configured only when the type is HTTP Header (4) and the HeaderName has been configured.
Method	Name of the http request method.	N/A	String. Length: 0 to 63 characters.	This column can be configured only when the type is Method (5). When the ExtType is Nonuser-defined (0), Method can only be configured one of these methods:  GET, CONNECT, DELETE, HEAD, OPTIONS, TRACE, PUT, AND POST.
ExtType	Identification of the type for user-defined.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Nonuser-defined (default).</li> <li>1—User-defined.</li> </ul>	N/A
URL	Regular expression matched the URL.	N/A	String. Length: 0 to 255 characters.	This column can be configured only when the type is URL (6).
ContentOffset	Absolute offset of the HTTP content.	N/A	Unsigned integer. Value range: 0 to 1000. By default, the value is zero.	This column can be configured only when the type is Content (7).
ContentExpression	Regular expression matched the content.	N/A	String. Length: 0 to 255 characters.	This column can be configured only when the type is Content (7).

Column name	Column description	Column type	Data type and restrictions	Remarks
AcINum	ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999. By default, no ACL number is specified.	AcINum and AcIName are mutually exclusive and only one of them can be set in a single message. This column can be configured only when the type is IPv4 ACL (8) or IPv6 ACL (9).
AcIName	Name of the ACL.	N/A	String, case-insensitive. Length: 1 to 63 characters. By default, no ACL name is specified.	AcINum and AcIName are mutually exclusive and only one of them can be set in a single message. This column can be configured only when the type is IPv4 ACL (8) or IPv6 ACL (9).
User	Name of the user.	N/A	String, case-sensitive.. Length: 1 to 55 characters. By default, no user name is specified.	This column can be configured only when the type is user (11).
UserGroup	Name of the user group.	N/A	String, case-insensitive.. Length: 1 to 32 characters. By default, no user group name is specified.	This column can be configured only when the type is user group (12).
IdentityDomain	The domain name of the user or user group.	N/A	String, case-insensitive.. Length: 1 to 255 characters. By default, no domain name is specified.	This column can be configured only when the type is user or user group (11 or 12). The name cannot contain question marks (?).
InterfaceName	Name of the interface.	N/A	String, case-insensitive.. Length: 1 to 47 characters. By default, no interface name is specified.	This column can be configured only when the type is interface (13).

## LB/RADIUSMatchRules

CostWeight	The weight of link cost.	N/A	Unsigned integer. Value range:0 to 255. By default, the value is 100.	N/A
MaxNumber	Proximity entries upper limit number.	N/A	Unsigned integer. Value range:0 to 10000000. By default, the value is 0 which indicates the number of proximity entries is unlimited.	N/A
DefaultProbeMode	Default probe mode for the proximity.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—NQA (default).</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>1—LB.</li> </ul>	
DefaultProbe	Default probe method for the proximity.	N/A	String, case-insensitive. Length: 1 to 32 characters. By default, no default probe is specified.	N/A

## LB/ProximityProbeRules

This table contains information about probe of the proximity.

### XML structure

```

<LB>
  <ProximityProbeRules>
    <ProximityProbeRule>
      <ID></ID>
      <Type></Type>
      <ProbeMode></ProbeMode>
      <Probe></Probe>
    </ProximityProbeRule>
  </ProximityProbeRules>
</LB>

```

### Table description

Item	Description
Feature name	LB
Table name	ProximityProbeRules
Table type	Multi-instance table
Row name	ProximityProbeRule
Restrictions	Only proximity probe can be configured by this table.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	ID of the probe rule.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Type	Type of the	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	rule.		<ul style="list-style-type: none"> <li>0—TCP.</li> </ul>	
ProbeMode	Mode of the match probe.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—NQA (default).</li> <li>1—LB.</li> </ul>	N/A
Probe	Name of the match probe.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A

## LB/VRFPproximityProbeRules

This table contains information about probe of the proximity.

### XML structure

```

<LB>
  <VRFPproximityProbeRules>
    <VRFPproximityProbeRule>
      <VRF></VRF>
      <ID></ID>
      <Type></Type>
      <ProbeMode></ProbeMode>
      <Probe></Probe>
    </VRFPproximityProbeRule>
  </VRFPproximityProbeRules>
</LB>

```

### Table description

Item	Description
Feature name	LB
Table name	VRFPproximityProbeRules
Table type	Multi-instance table
Row name	VRFPproximityProbeRule
Restrictions	Only proximity probe can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	The null string indicates public network.
ID	ID of the probe rule.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Type	Type of the rule.	N/A	Enumeration: • 0—TCP.	N/A
ProbeMode	Mode of the match probe.	N/A	Enumeration: • 0—NQA (default). • 1—LB.	N/A
Probe	Name of the match probe.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A

## LB/ALG

This table contains information about ALG.

## XML structure

```

<LB>
  <ALG>

      <ThresholdLow></ThresholdLow>
    </LimitRule>
  </LimitRules>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	LimitRules
Table type	Multi-instance table
Row name	LimitRule
Restrictions	Only limit policy rule can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the limit policy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ID	ID of the limit policy rule.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
AcIVersion	Version of ACL	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4.</li> <li>2—IPv6.</li> </ul>	N/A
AcINum	ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999. By default, no ACL number is specified.	AcINum and AcIName are mutually exclusive and only one of them can be set in a single message.
AcIName	Name of the ACL.	N/A	String, case-insensitive. Length: 1 to 63 characters. By default, no ACL name is specified.	AcINum and AcIName are mutually exclusive and only one of them can be set in a single message.
PerDestination	Enable the per-destination connection limit.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
PerSource	Enable the per-source connection limit.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
PerService	Enable the per-service connection limit.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
ThresholdHigh	High threshold of the connections.	N/A	Unsigned integer. Value range: 1 to $2^{32}-1$ . By default, the column is not configured.	ThresholdHigh must be greater or equal than ThresholdLow.

Column name	Column description	Column type	Data type and restrictions	Remarks
ThresholdLow	Low threshold of the connections.	N/A	Unsigned integer. Value range: 1 to $2^{32}-1$ . By default, the column is not configured.	ThresholdHigh must be greater or equal than ThresholdLow.

## LB/Links

This table contains information about link.

## XML structure

```

<LB>

```

## Table description

Item	Description
Feature name	LB
Table name	Links
Table type	Multi-instance table
Row name	Link
Restrictions	Only link can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the link.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the link.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
RouterType	The type of router.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Configure.</li> <li>1—Auto.</li> </ul>	N/A
RouterInterface	Name of the router interface.	N/A	String, case-insensitive. Length: 1 to 47 characters. By default, no interface name is specified.	This column can be configured only when the type is Auto (1).
RouterIPv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and address such as 0.x.x.x are not supported either. This column can be configured only when the type is Configure (0).
RouterIPv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported. This column can be configured only when the type is Configure (0).
Weight	Weight of the link.	N/A	Unsigned integer. Value range: 1 to 255.	A larger value means a higher weight.

Column name	Column description	Column type	Data type and restrictions	Remarks
			By default, the value is 100.	
Priority	Priority of the link.	N/A	Unsigned integer. Value range: 1 to 8. By default, the value is 4.	A larger value means a higher priority.
Cost	The cost of link bandwidth.	NA	Unsigned integer. Value range: 0 to 10240. By default, the value is 0 which indicates that cost factor can be ignore when calculate proximities.	N/A
LinkGroup	Name of the link group.	N/A	String, case-insensitive. Length: 1 to 63 characters. By default, no link group is specified.	N/A
Shutdown	Shutdown state for the link.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—Not configured (default).</li> <li>• 1—Shutdown.</li> <li>• 2—Slow-shutdown.</li> </ul>	N/A
ProbeSuccessCriteria	Probe success criteria for the link.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 0 which indicates that probe success criteria is all.	N/A
MaxConnectionLimit	Maximum connections limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 0 which indicates no preset limit.	N/A
RateLimitConnection	Maximum connections rate limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps. By default, the value is 0 which indicates no preset limit.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			By default, the value is 0 KB/s which indicates no preset limit.	
InRateLimitBandwidth	Inbound maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s. By default, the value is 0 KB/s which indicate no preset inbound limit.	N/A
OutRateLimitBandwidth	Outbound maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s. By default, the value is 0 KB/s which indicate no preset outbound limit.	N/A
BandwidthBusyRatio	Total bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 70.	N/A
InBandwidthBusyRatio	Inbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 70.	N/A
OutBandwidthBusyRatio	Outbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 70.	N/A
BandwidthBusyRecoverRatio	Total bound bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery rate.	N/A
InBandwidthBusyRecoverRatio	Inbound bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery rate.	N/A
OutBandwidthBusyRecoverRatio	Outbandwidth busy recovery	N/A	Unsigned integer. Value range: 1 to 100.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
verRatio	ratio.		By default, the value is 60.  The busy rate must be greater than or equal to the recovery rate.	
MaxBandwidth	Max bandwidth.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
InMaxBandwidth	Max inbound bandwidth.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
OutMaxBandwidth	Max outbound bandwidth.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates public network.
InheritVPN	Inherit the VPN.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable inherit the VPN.</li> <li>1—Enable inherit the VPN (default).</li> </ul>	N/A

## LB/LinkProbes

## Table description

Item	Description
Feature name	LB
Table name	LinkGroups
Table type	Multi-instance table
Row name	LinkGroup
Restrictions	Only link group can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the link group.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the link group.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Predictor	Predictor algorithm for LB to select a link to forward packet.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Round-robin (default).</li> <li>1—Random.</li> <li>2—Least-connection.</li> <li>3—Hash source address.</li> <li>4—Hash source port.</li> <li>5—Hash destination address.</li> <li>6—Bandwidth.</li> <li>7—Inbound bandwidth.</li> <li>8—Outbound bandwidth.</li> <li>9—Max bandwidth.</li> <li>10—Max inbound</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			bandwidth. <ul style="list-style-type: none"> <li>11—Max outbound bandwidth.</li> </ul>	
HashIpv4PrefixLength	Length of IPv4 address mask for hash algorithm.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column can only be configured when the Predictor is hash source address (3), hash source port (4) and hash destination address (5).
HashIpv6PrefixLength	Length of IPv6 address prefix for hash algorithm.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	The column can only be configured when the Predictor hash source address (3), hash source port (4) and hash destination address (5).
SelectLinkMinNumber	Minimum number of the active link in the link group.	N/A	Unsigned integer. Value range: 1 to 1000. By default, the column is not configured which indicates only the real server of highest priority can be dispatched.	If one of SelectLinkMinNumber and SelectLinkMaxNumber is not configured, the other cannot be configured. The value of SelectLinkMaxNumber must be greater or equal than SelectLinkMinNumber.
SelectLinkMaxNumber	Maximum number of the active link in the link group.	N/A	Unsigned integer. Value range: 1 to 1000. By default, the column is not configured.	If one of SelectLinkMinNumber and SelectLinkMaxNumber is not configured, the other cannot be configured. The value of SelectLinkMaxNumber must be greater or equal than SelectLinkMinNumber.
SlowOnlineEnable	Enable the link group slow online.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	If the column is 0, SlowOnlineStandbyTime and SlowOnlineRampUpTime cannot be configured without default value.
SlowOnlineStandbyTime	Standby time of the slow online.	N/A	Unsigned integer. Value range: 0 to 600. Unit: second. By default, the value is 5.	N/A
SlowOnlineRampUpTime	Ramp up time of the slow online.	N/A	Unsigned integer. Value range: 3 to 600. Unit: second. By default, the value is 5.	N/A
Transparent	Disable NAT for the server farm.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
ActivateLower	The status of main link group will be changed from	N/A	Unsigned integer. Value range: 1 to 99. By default, the column	If one of ActivateLower and ActivateUpper is not configured, the other cannot be configured. The value of ActivateUpper must be

Column name	Column description	Column type	Data type and restrictions	Remarks
	in use to backup when the ratio of the available links in main link group becomes smaller than this value.		is not configured which indicates if one real server is active, the server farm is active.	greater or equal than ActivateLower.
ActivateUpper	The status of main server farm will be changed from backup to in use when the ratio of the available links in main link group reaches or over this value.		Unsigned integer. Value range: 1 to 99. By default, the column is not configured.	If one of ActivateLower and ActivateUpper is not configured, the other cannot be configured. The value of ActivateUpper must be greater or equal than ActivateLower.
SNATPool	SNAT pool for the link group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
FailAction	Specify the action that the LB takes with respect to connections if any link fails in a link group.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Keep (default).</li> <li>1—Reset.</li> <li>2—Reschedule.</li> </ul>	N/A
ProbeSuccessCriteria	The condition that link is available through probes.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 0.	By default, indicates that when real server is available, all results of probes must be success.
ProximityEnable	Enable the proximity.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—disable (default).</li> <li>1—enable.</li> </ul>	N/A

## Table description

Item	Description
Feature name	LB
Table name	TopolgyRegions
Table type	Multi-instance table
Row name	TopolgyRegion
Restrictions	Only TopolgyRegion can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RegionName	Name of the topology region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv4MaskLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column cannot be configured if no IPv4 address is configured.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	The column cannot be configured if no IPv6 address is configured.
Weight	Weight of the topology region.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.

## LB/TopologyRegionIPv4s

This table contains information about an IPv4 topology region.

## XML structure

```

<LB>
  <TopologyRegionIPv4s>
    <TopologyRegionIPv4>
      <RegionName></RegionName>
      <IPv4Address></IPv4Address>
      <IPv4MaskLength></IPv4MaskLength>
      <Weight></Weight>
    </TopologyRegionIPv4>
  </TopologyRegionIPv4s>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	TopolgyRegionIPv4s
Table type	Multi-instance table
Row name	TopolgyRegionIPv4
Restrictions	Only TopolgyRegionIPv4 can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RegionName	Name of the topolgy region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPv4Addresses	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
IPv4MaskLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column cannot be configured if no IPv4 address is configured.
Weight	Weight of the topolgy region.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.

## LB/TopolgyRegionIPv6s

This table contains information about an IPv6 topolgy region.

## XML structure

```
<LB>
  <TopolgyRegionIPv6s>
    <TopolgyRegionIPv6>
      <RegionName></RegionName>
      <IPv6Address></IPv6Address>
      <IPv6PrefixLength></IPv6PrefixLength>
      <Weight></Weight>
```

```

    </TopolgyRegionIPv6>
  </TopolgyRegionIPv6s>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	TopolgyRegion IPv6s
Table type	Multi-instance table
Row name	TopolgyRegion IPv6
Restrictions	Only TopolgyRegion IPv6 can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RegionName	Name of the topolgy region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPv6Addresses	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses, and link local addresses are not supported.
IPv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	The column cannot be configured if no IPv6 address is configured.
Weight	Weight of the topolgy region.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.

## LB/DNSListeners

This table contains information about a DNS listener.

## XML structure

```

<LB>
  <DNSListeners>
    <DNSListener>
      <Name></Name>
    </DNSListener>
  </DNSListeners>
</LB>

```

```

    <VRF></VRF>
    <Ipv4Address></Ipv4Address>
    <Ipv6Address></Ipv6Address>
    <PortNumber></PortNumber>
    <IPv6PortNumber></IPv6PortNumber>
    <ServiceEnable></ServiceEnable>
    <Fallback></Fallback>
  </DNSListener>
</DNSListeners>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	DNSListeners
Table type	Multi-instance table
Row name	DNSListener
Restrictions	Only DNS Listener can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS listener.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates public network.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses and broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			is 53.	
IPv6PortNumber	Number of IPv6 port.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 53.	N/A
ServiceEnable	Enable the DNS listener.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
Fallback	Fallback action.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—No-response.</li> <li>1—Reject(default).</li> <li>2—Dns proxy.</li> </ul>	N/A

## LB/DNSProxies

This table contains information about DNS proxies.

### XML structure

```

<LB>
  <DNSProxies>
    <DNSProxy>
      <Name></Name>
      <Type></Type>
      <VRF></VRF>

      <ServiceEnable></ServiceEnable>
      <DefaultDNSServerPool></DefaultDNSServerPool>
      <Policy></Policy>
      <BusyProtectEnable></BusyProtectEnable>
      <ConnSynEnable></ConnSynEnable>
      <StickySynEnable></StickySynEnable>
      <StickySyncType></StickySyncType>
      <StickyGroup></StickyGroup>
      <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
    </DNSProxy>
  </DNSProxies>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	DNSProxies
Table type	Multi-instance table
Row name	DNSProxy
Restrictions	Only DNS proxy can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS proxy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates public network.
Type	Type of the DNS proxy	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—UDP</li> </ul>	When a DNS proxy is created, the column must be specified. Once created, this column cannot be changed.
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 53.	N/A
ServiceEnable	Enable the DNS proxy.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
DefaultDNS ServerPool	Name of the default DNS server pool.	N/A	String, case-insensitive. <ul style="list-style-type: none"> <li>Length: 1 to 63 characters.</li> </ul>	N/A
Policy	Name of the policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BusyProtect Enable	Enable link protection.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>1—Enable.</li> </ul>	
ConnSynEnable	Enable the connection synchronization.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
StickySynEnable	Enable the sticky synchronization.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
StickySyncType	Sticky synchronization type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Synchronize in failover group (default).</li> <li>1—Synchronize global.</li> </ul>	This column can only be configured when the StickySynEnable is Enable (1).
StickyGroup	Name of the sticky group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the DefaultDNSServerPool is not configured.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	The column cannot be configured if no IPv4 address is configured.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link-local addresses are not supported.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	The column cannot be configured if no IPv6 address is configured.

## LB/DNSServers

This table contains information about DNS server.

### XML structure

```

<LB>
  <DNSServers>
    <DNSServer>
      <Name></Name>
    
```

```

<Description></Description>
<AutoAllocAddress></AutoAllocAddress>
<Ipv4Address></Ipv4Address>
<Ipv6Address></Ipv6Address>
<PortNumber></PortNumber>

<Link></Link>
<Weight></Weight>
<Priority></Priority>
<ProbeSuccessCriteria></ProbeSuccessCriteria>
</DNSServer>
</DNSServers>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	DNSServers
Table type	Multi-instance table
Row name	DNSServer
Restrictions	Only DNS server can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the DNS server.	N/A	String. Length: 1 to 127 characters.	The null string indicates the label is not configured.
AutoAllocAddress	Automatic allocable address for DNS server. Include IPv4 address and IPv6 address.	N/A	enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	This column cannot be configured with Ipv4Address or Ipv6Address at the same time.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses are not supported, and address such as 0.x.x.x are not supported either. This column cannot be configured

Column name	Column description	Column type	Data type and restrictions	Remarks
				with AutoAllocAddress at the same time.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback address, multicast address, link local address and 0::0 address are not supported. This column cannot be configured with AutoAllocAddress at the same time.
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 0 to 65535. By default, the value is 0.	N/A
DNSServerPool	Name of the DNS server pool.	N/A	String, case-insensitive. Length: 1 to 63 characters. By default, no DNS server pool is specified.	N/A
Link	Name of the Link.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Weight	Weight of the DNS server.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.
Priority	Priority of the DNS server.	N/A	Unsigned integer. Value range: 1 to 8. By default, the value is 4.	A larger value means a higher priority.
ProbeSuccessCriteria	Probe success criteria for the real server.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 0 which indicates that probe success criteria is all.	N/A

## LB/DNSServerProbes

This table contains information about DNS server probe that only uses NQA template.

### XML structure

```
<LB>
  <DNSServerProbes>
```

```

    <DNSServerProbe>
      <DNSServer></DNSServer>
      <Probe></Probe>
    </DNSServerProbe>
  </DNSServerProbes>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	DNSServerProbes
Table type	Multi-instance table
Row name	DNSServerProbe
Restrictions	Only DNS server probe can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DNSServer	Name of the DNS server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Probe	Probe method for the DNS server.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

## LB/DNSServerPools

This table contains information about DNS server pool.

## XML structure

```

<LB>
  <DNSServerPools>
    <DNSServerPool>
      <Name></Name>
      <Description></Description>
      <Predictor></Predictor>
      <HashIpv4PrefixLength></HashIpv4PrefixLength>
      <HashIpv6PrefixLength></HashIpv6PrefixLength>
      <SelectServerMinNumber></SelectServerMinNumber>
      <SelectServerMaxNumber></SelectServerMaxNumber>
      <ProbeSuccessCriteria></ProbeSuccessCriteria>
    </DNSServerPool>
  </DNSServerPools>
</LB>

```

```

    </DNSServerPool>
  </DNSServerPools>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	DNSServerPools
Table type	Multi-instance table
Row name	DNSServerPool
Restrictions	Only DNS server pool can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the DNS server pool.	N/A	String. Length: 1 to 127 characters.	The null string indicates the label is not configured.
Predictor	Predictor algorithm for LB to select a DNS server to a DNS request.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Round-robin (default).</li> <li>1—Random.</li> <li>2—Bandwidth.</li> <li>3—Inbound bandwidth.</li> <li>4—Outbound bandwidth.</li> <li>5—Max bandwidth.</li> <li>6—Max inbound bandwidth.</li> <li>7—Max outbound bandwidth.</li> <li>8—Hash source address.</li> <li>9—Hash source port.</li> <li>10—Hash destination address.</li> </ul>	N/A
HashIpv4Pr	Length of IPv4 address mask	N/A	Unsigned integer.	The column can only be configured when the Predictor is hash source

Column name	Column description	Column type	Data type and restrictions	Remarks
efixLength	for hash algorithm.		Value range: 0 to 32. By default, the value is 32.	address (3), hash source port (4) and hash destination address (5).
HashIpv6PrefixLength	Length of IPv6 address prefix for hash algorithm.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	The column can only be configured when the Predictor hash source address (3), hash source port (4) and hash destination address (5).
SelectServerMinNumber	Minimum number of the active DNS server in the DNS server pool.	N/A	Unsigned integer. Value range: 1 to 1000. By default, the column is not configured which indicates only the real server of highest priority can be dispatched.	If one of SelectServerMinNumber and SelectServerMaxNumber is not configured, the other cannot be configured. The value of SelectServerMaxNumber must be greater or equal than SelectServerMinNumber.
SelectServerMaxNumber	Maximum number of the active DNS server in the DNS server pool.	N/A	Unsigned integer. Value range: 1 to 1000. By default, the column is not configured.	If one of SelectServerMinNumber and SelectServerMaxNumber is not configured, the other cannot be configured. The value of SelectServerMaxNumber must be greater or equal than SelectServerMinNumber.
ProbeSuccessCriteria	The condition that DNS server is available through probes.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 0.	By default, indicates that when DNS server is available, all results of probes must be success.

## LB/DNSServerPoolProbes

This table contains information about DNS server pool probe that only uses NQA template.

### XML structure

```

<LB>

Item	Description
Feature name	LB
Table name	ServerFarmMembers
Table type	Multi-instance table
Row name	ServerFarmMember
Restrictions	Only server farm member can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerFarm	Name of the server farm.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RealServer	Name of the server farm member.	Index	String, case-insensitive. Length: 1 to 63 characters.	The server farm member must also be created in real server view.
PortNumber	Number of port.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Description	Description of the server farm member.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Weight	Weight of the server farm member.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.
Priority	Priority of the server farm member.	N/A	Unsigned integer. Value range: 1 to 8. By default, the value is 4.	A larger value means a higher priority.
Shutdown	Shutdown state for the server farm member.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Not configured (default).</li> <li>1—Shutdown.</li> <li>2—Slow-shutdown.</li> </ul>	N/A
MaxConnectionLimit	Maximum connections limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			By default, the value is 0 which indicates no preset limit.	
RateLimitConnection	Maximum connections rate limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps. By default, the value is 0 which indicates no preset limit.	N/A
RateLimitHTTPRequest	Maximum HTTP request rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: qps. By default, the value is 0, which indicates the rate is not limit.	N/A
ProbeSuccessCriteria	Probe success criteria for the server farm member.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 0 which indicates that probe success criteria is all.	N/A
ProbeList	Probe method list for the server farm member.	Data structure	Members include: <ul style="list-style-type: none"> <li>Probe.</li> </ul>	N/A
Probe	Probe method for the server farm member.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
NQADefaultPortEnable	Enable detection using the default port of the NQA template.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A

## LB/LinkGroupMembers

RateLimitConnection	Maximum connections rate limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps. By default, the value is 0 which indicates no preset limit.	N/A
ProbeSuccessCriteria	Probe success criteria for the link group member.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 0 which indicates that probe success criteria is all.	N/A
ProbeList	Probe method list for the link group member.	Data structure	Members include: <ul style="list-style-type: none"> <li>Probe.</li> </ul>	N/A
Probe	Probe method for the link group member.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A

## LB/DNSServerPoolMembers

This table contains information about DNS server pool member.

### XML structure

```

<LB>
  <DNSServerPoolMembers>
    <DNSServerPoolMember>
      <DNSServerPool></DNSServerPool>

```

```

    <DNSServer></DNSServer>
    <PortNumber></PortNumber>
    <Description></Description>
    <Weight></Weight>
    <Priority></Priority>
    <ProbeSuccessCriteria></ProbeSuccessCriteria>
    <ProbeList>
      <Probe></Probe>
    </ProbeList>
  </DNSServerPoolMember>
</DNSServerPoolMembers>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	DNSServerPoolMembers
Table type	Multi-instance table
Row name	DNSServerPoolMember
Restrictions	Only DNS server pool member can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DNSServerPool	Name of the DNS server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
DNSServer	Name of the DNS server pool member.	Index	String, case-insensitive. Length: 1 to 63 characters.	The DNS server pool member must also be created in DNS server view.
PortNumber	Number of port.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Description	Description of the DNS server pool member.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Weight	Weight of the DNS server pool member.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.

Column name	Column description	Column type	Data type and restrictions	Remarks
Priority	Priority of the DNS server pool member.	N/A	Unsigned integer. Value range: 1 to 8. By default, the value is 4.	A larger value means a higher priority.
ProbeSuccessCriteria	Probe success criteria for the DNS server pool member.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 0 which indicates that probe success criteria is all.	N/A
ProbeList	Probe method list for the DNS server pool member.	Data structure	Members include: <ul style="list-style-type: none"> <li>Probe.</li> </ul>	N/A
Probe	Probe method for the DNS server pool member.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A

## LB/SnatArpInterfaces

This table contains information about SNAT interfaces.

### XML structure

```

<LB>
  <SnatArpInterfaces>
    <SnatArpInterface>
      <SnatName></SnatName>
      <IfList>
        <IfIndex></IfIndex>
      </IfList>
    </SnatArpInterface>
  </SnatArpInterfaces>
</LB>

```

### Table description

Item	Description
Feature name	LB
Table name	SnatArpInterfaces
Table type	Multi-instance table
Row name	SnatArpInterface
Restrictions	Only SNAT interfaces can be configured by this table.

Support for row creation and deletion	Yes
---------------------------------------	-----

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SnatName	Name of the SNAT pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IfList	Interface index list	Data structure	Members include: <ul style="list-style-type: none"> <li>IfIndex.</li> </ul>	N/A
IfIndex	Interface index	N/A	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

## LB/VServerArpInterfaces

This table contains information about virtual server interfaces.

## XML structure

```

<LB>
  <VServerArpInterfaces>
    <VServerArpInterface>
      <VServerName></VServerName>
      <IfList>
        <IfIndex></IfIndex>
      </IfList>
    </VServerArpInterface>
  </VServerArpInterfaces>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	VServerArpInterfaces
Table type	Multi-instance table
Row name	VServerArpInterface
Restrictions	Only virtual server interfaces can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VServerName	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IfList	Interface index list	Data structure	Members include: <ul style="list-style-type: none"><li>IfIndex.</li></ul>	N/A
IfIndex	Interface index	N/A	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

## LB/ProbeTemplate

This table contains information about probe template that is used for proximity.

## XML structure

```
<LB>
  <ProbeTemplates>
    <ProbeTemplate>
      <Name></Name>
      <Description></Description>
      <Type></Type>
      <Frequency></Frequency>
      <Timeout></Timeout>
    </ProbeTemplate>
  </ProbeTemplates>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	ProbeTemplate
Table type	Multi-instance table
Row name	N/A
Restrictions	Only probe template can be gotten by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the probe template.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Description	Description information for the probe template.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Type	Type of the probe template.	N/A	Enumeration: • 0—ICMP.	When a probe template is created, the column must be specified.
Frequency	Frequency of the probe template.	N/A	Unsigned integer. Value range: 5 to 604800. Unit: second. By default, the value is 300s.	N/A
Timeout	Timeout time of the probe template.	N/A	Unsigned integer. Value range: 1 to 60. Unit: second. By default, the value is 3s.	N/A

## LB/ISPWhoisMntners

This table contains information about ISP whois-mntnr.

## XML structure

```

<LB>
  <ISPWhoisMntners>
    <ISPWhoisMntner>
      <ISPName></ISPName>
      <WhoisMntner></WhoisMntner>
    </ISPWhoisMntner>
  </ISPWhoisMntners>
</LB>

```

## Table description

Item	Description
Feature name	LB

Table name	ISPWhoisMntner
Table type	Multi-instance table
Row name	ISPWhoisMntner
Restrictions	Only ISP whois-mntner can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ISPName	Name of the ISP.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
WhoisMntner	Name of the whois-mntner.	Index	String, case-sensitive. Length: 1 to 63 characters.	Number of mntner objects in the ISP cannot exceed the limit 10. A whois-mntner object only can be configured by one ISP.

## LB/ISPUpdate

This table contains information about ISP update.

## XML structure

```

<LB>
  <ISPUpdate>
    <Enable></Enable>
    <Frequency></Frequency>
    <Type></Type>
    <Domain></Domain>
    <Ipv4Address></Ipv4Address>
  </ISPUpdate>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	ISPUpdate
Table type	Single-instance table
Row name	N/A

Restrictions	Only ISP update can be configured by this table.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable the ISP update.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
Frequency	Frequency of ISP update.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Per-day.</li> <li>1—Per-week (default).</li> <li>2—Per-month.</li> </ul>	N/A
Type	Type of the whois server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Domain.</li> <li>1—IPv4 address.</li> </ul>	N/A
Domain	Domain of the maintainer.	N/A	String, case-insensitive. Length: 1 to 253 characters. By default, no domain is specified.	The string can contain letters, numbers, hyphens (-), underscores (_), and dots (.). This column can be configured only when the type is Domain(0).
Ipv4Address	Address of the maintainer.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x are not supported. This column can be configured only when the type is IPv4 address(1).

## LB/DNSCachesGlobalCfg

This table contains information about DNS global configuration.

## XML structure

```

<LB>
  <DNSCachesGlobalCfg>
    <Timeout></Timeout>
  </DNSCachesGlobalCfg>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	DNSCachesCfg
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Timeout	Aging time of DNS cache.	Index	Unsigned integer. Value range: 1 to 1440. Unit: minute	N/A

## LB/RSTProbeTemplate

This table contains information about RST probe template.

## XML structure

```
<LB>
  <RSTProbeTemplates>
    <RSTProbeTemplate>
      <Name></Name>
      <Description></Description>
      <TimeInterval></TimeInterval>
      <PacketLimit></PacketLimit>
      <ProtectAction></ProtectAction>
      <BusyTimeout></BusyTimeout>
      <RetryTimes></RetryTimes>
    </RSTProbeTemplate>
  </RSTProbeTemplates>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	RSTProbeTemplates
Table type	Multi-instance table

Row name	RSTProbeTemplate
Restrictions	Only RST probe template can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the RST probe template.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Description	Description information for the RST probe template.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
TimeInterval	Monitor time interval.	N/A	Unsigned integer. Value range: 5 to 255. By default, the value is 10. Unit: second.	N/A
PacketLimit	Packet limit of RST probe template.	N/A	Unsigned integer: Value range: 1 to 4294967295. By default, the value is 1000000.	N/A.
ProtectAction	Protection action of RST probe template.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Busy (default).</li> <li>1—Auto-shutdown.</li> </ul>	N/A
BusyTimeout	Busy time of real server.	N/A	Unsigned integer. Value range: 5 to 3600. By default, the value is 30. Unit: second.	The busy type protection action is valid.
RetryTimes	Busy protection times.	N/A	Unsigned integer. Value range: 0 to 255. By default, the value is 0.	The busy type protection action is valid and value 0 means keep retrying.

## LB/ZeroWindowProbeTemplate

This table contains information about Zero Window probe template.

## XML structure

```
<LB>
  <ZeroWindowProbeTemplates>
    <ZeroWindowProbeTemplate>
      <Name></Name>
      <Description></Description>
      <TimeInterval></TimeInterval>
      <RatioLimit></RatioLimit>
      <ProtectAction></ProtectAction>
      <BusyTimeout></BusyTimeout>
      <RetryTimes></RetryTimes>
    </ZeroWindowProbeTemplate>
  </ZeroWindowProbeTemplates>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	ZeroWindowProbeTemplates
Table type	Multi-instance table
Row name	ZeroWindowProbeTemplate
Restrictions	Only zero window probe template can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the zero window probe template.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Description	Description information for the zero window probe template.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
TimeInterval	Monitor time interval.	N/A	Unsigned integer. Value range: 5 to 255. By default, the value is 10. Unit: second.	N/A
RatioLimit	Ratio limit of zero window	N/A	Unsigned integer: Value range: 1 to 100.	N/A.

Column name	Column description	Column type	Data type and restrictions	Remarks
	probe template.		By default, the value is 40. Unit: %	
ProtectAction	Protection action of zero window probe.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Busy (default).</li> <li>1—Auto-shutdown.</li> </ul>	N/A.
BusyTimeout	Busy time of real server.	N/A	Unsigned integer. Value range: 5 to 3600. By default, the value is 30. Unit: second.	The busy type protection action is valid.
RetryTimes	Busy protection times.	N/A	Unsigned integer. Value range: 0 to 255. By default, the value is 0	The busy type protection action is valid and value 0 means keep retrying.

## LB/ProbeTemplate

This table contains information about probe template that is used for proximity.

## XML structure

```

<LB>
  <ProbeTemplates>
    <ProbeTemplate>
      <Name></Name>
      <Description></Description>
      <Type></Type>
      <Frequency></Frequency>
      <Timeout></Timeout>
    </ProbeTemplate>
  </ProbeTemplates>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	ProbeTemplate
Table type	Multi-instance table
Row name	N/A

Restrictions	Only probe template can be gotten by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the probe template.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Description	Description information for the probe template.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Type	Type of the probe template.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—ICMP.</li> </ul>	When a probe template is created, the column must be specified.
Frequency	Frequency of the probe template.	N/A	Unsigned integer. Value range: 1 to 604800. Unit: second. By default, the value is 300s.	N/A
Timeout	Timeout time of the probe template.	N/A	Unsigned integer. Value range: 1 to 60. Unit: second. By default, the value is 3s.	N/A

## LB/HTTPPassiveProbeTemplate

This table contains information about an HTTP passive probe template.

## XML structure

```

<LB>
  <HTTPPassiveProbeTemplates>
    <HTTPPassiveProbeTemplate>
      <Name></Name>
      <Description></Description>
      <MonitorInterval></MonitorInterval>
      <URLThreshold></URLThreshold>
      <Timeout></Timeout>
      <URLList>
        <CheckUrl></CheckUrl>
      </URLList>
    </HTTPPassiveProbeTemplate>
  </HTTPPassiveProbeTemplates>
</LB>

```

```

<StatusCodeList>
  <StatusCode></StatusCode>
</StatusCodeList>
</HTTPPassiveProbeTemplate>
</HTTPPassiveProbeTemplates>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	HTTPPassiveProbeTemplates
Table type	Multi-instance table
Row name	HTTPPassiveProbeTemplate
Restrictions	Only HTTP passive probe template can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the HTTP passive probe template.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Description	Description for the HTTP passive probe template.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
MonitorInterval	Monitor time interval.	N/A	Unsigned integer. Value range: 1 to 5. By default, the value is 1. Unit: second.	N/A
URLThreshold	URL threshold of the HTTP passive probe template.	N/A	Unsigned integer: Value range: 1 to 4294967295. By default, the value is 10000.	N/A.
Timeout	Response timeout of the HTTP passive probe template.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 5. Unit: second.	N/A
URLList	URL list for the HTTP passive	Data structure	Members include:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	probe template.		URL.	
CheckUrl	URL for the HTTP passive probe template.	N/A	String, Length: 1 to 255 characters.	A URL list can contain a maximum of 10 URLs.
StatusCodeList	Status code list for the HTTP passive probe template.	Data structure	Members include: StatusCode.	N/A
StatusCode	Status code for the HTTP passive probe template.	N/A	Unsigned integer.	A status code list can contain a maximum of 10 status codes.

## LB/HTTPStatsParameterObjectGroups

This table contains information about object group of HTTP statistics parameter.

### XML structure

```

<LB>
  <HTTPStatsParameterObjectGroups>
    <HTTPStatsParameterObjectGroup>
      <ParameterName></ParameterName>
      <ObjectGroupName></ObjectGroupName>
    </HTTPStatsParameterObjectGroup>
  </HTTPStatsParameterObjectGroups>
</LB>

```

### Table description

Item	Description
Feature name	LB
Table name	HTTPStatsParameterObjectGroups
Table type	Multi-instance table
Row name	HTTPStatsParameterObjectGroup
Restrictions	Only object group of HTTP statistics parameter can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Name of the parameter.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ObjectGroupName	Name of the object group.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A

## LB/HTTPStatsParameterNodes

This table contains information about HTTP statistics parameter node.

## XML structure

```
<LB>
  <HTTPStatsParameterNodes>
    <HTTPStatsParameterNode>
      <ParameterName></ParameterName>
      <NodeName></NodeName>
      <Description></Description>
    </HTTPStatsParameterNode>
  </HTTPStatsParameterNodes>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	HTTPStatsParameterNodes
Table type	Multi-instance table
Row name	HTTPStatsParameterNode
Restrictions	Only HTTP statistics parameter node can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Name of the parameter.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
NodeName	Name of the node.	Index	String. Length: 1 to 63 characters.	N/A
Description	Description of the node profile.	N/A	String. Length: 0 to 127 characters.	N/A

## LB/HTTPStatsParameterNodeRules

This table contains information about match rule of HTTP statistics parameter node.

### XML structure

```

<LB>
  <HTTPStatsParameterNodeRules>
    <HTTPStatsParameterNodeRule>
      <ParameterName></ParameterName>
      <NodeName></NodeName>
      <ID></ID>
      <Type></Type>
      <URL></URL>
    </HTTPStatsParameterNodeRule>
  </HTTPStatsParameterNodeRules>
</LB>

```

### Table description

Item	Description
Feature name	LB
Table name	HTTPStatsParameterNodeRules
Table type	Multi-instance table
Row name	HTTPStatsParameterNodeRule
Restrictions	Only rule of HTTP statistics parameter node can be configured by this table.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Name of the parameter.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
NodeName	Name of the node.	Index	String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	ID of the statistics match rule.	Index	Unsigned integer. Value range: 1 to 256.	N/A
Type	Type of the statistics match rule.	N/A	Enumeration: • 0—URL.	N/A
URL	Regular expression used to match URLs.	N/A	String. Length: 1 to 255 characters.	This column can only be configured when the Type is URL(0).

## LB/HTTPStatsParameterNodeRuleLists

This table contains batching information about match rules of HTTP statistics parameter node.

### XML structure

```

<LB>
  <HTTPStatsParameterNodeRuleLists>
    <HTTPStatsParameterNodeRuleList>
      <ParameterName></ParameterName>
      <NodeName></NodeName>
      <IsIncrement></IsIncrement>
      <RuleList>
        <ID></ID>
        <Type></Type>
        <URL></URL>
      </RuleList>
    </HTTPStatsParameterNodeRuleList>
  </HTTPStatsParameterNodeRuleLists>
</LB>

```

### Table description

Item	Description
Feature name	LB
Table name	HTTPStatsParameterNodeRuleLists
Table type	Multi-instance table
Row name	HTTPStatsParameterNodeRuleList
Restrictions	Only rule of HTTP statistics parameter node can be configured by this table.

Support for row creation and deletion	Yes
---------------------------------------	-----

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Name of the parameter.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
NodeName	Name of the node.	Index	String. Length: 1 to 63 characters.	N/A
IsIncrement	Whether to increment the data.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Yes.</li> <li>false—No (default).</li> </ul>	N/A
RuleList	List of rule.	Data structure	Members include: <ul style="list-style-type: none"> <li>ID</li> <li>Type</li> <li>URL</li> </ul>	N/A
ID	ID of the statistics match rule.	N/A	Unsigned integer. Value range: 1 to 256.	N/A
Type	Type of the statistics match rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—URL.</li> </ul>	N/A
URL	Regular expression used to match URLs.	N/A	String. Length: 1 to 255 characters.	This column can only be configured when the Type is URL(0).

## LB/TCPParameterOptions

This table contains information about TCP options.

## XML structure

```

<LB>
  <TCPParameterOptions>
    <TCPParameterOption>
      <Parameter></Parameter>
      <Number></Number>
      <Type></Type>
      <ValueType></ValueType>
    </TCPParameterOption>
  </TCPParameterOptions>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	TCPPParameterOptions
Table type	Multi-instance table
Row name	TCPPParameterOption
Restrictions	Only TCP parameter option can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Parameter	Name of the parameter.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Number	Number of the TCP option.	Index	Unsigned integer. Value range: 2 to 254.	Value range is 6、7、9-18、22-254,when the Type is Option Insert.
Type	Type of the option process.	Index	Enumeration: <ul style="list-style-type: none"><li>0—Option Remove.</li><li>1—Option Insert.</li></ul>	N/A
ValueType	Type of the insert value.	N/A	Enumeration: <ul style="list-style-type: none"><li>1—Src addr.</li></ul>	This column has validity in Option Insert process. You cannot configure this column if the type is not Option Insert.

## Table description

Item	Description
Feature name	LB
Table name	HTTPVirtualServers
Table type	Multi-instance table
Row name	HTTPVirtualServer
Restrictions	Only HTTP and FASTHTTP virtual servers can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Type	Type of the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—HTTP.</li> <li>1—FASTHTTP</li> </ul>	N/A
Description	Description for the virtual server.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
VRF	VRF name.	N/A	String. Length: 0 to 31 characters.	The null string indicates a public network.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
PortNumber	Number of the port.	N/A	Unsigned integer. Value range: 1 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			65535.	
DefaultServerFarm	Name of the default server farm.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
BackupServerFarm	Name of the backup server farm.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
StickyGroup	Name of the sticky group.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
Policy	Name of the policy.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
IPParameter	Parameter profile whose type is IP for the virtual server.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
TCPParameter	Parameter profile whose type is TCP for the virtual server.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
HTTPParameter	Parameter profile whose type is HTTP for the virtual server.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
TCPParameterClientSide	Client-side tcp parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
TCPParameterServerSide	Server-side tcp parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
HTTPStatsParameter	Parameter whose type is HTTP statistics for the virtual server.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
OneConnectParameter	Parameter profile whose type is OneConnect for the virtual	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
	server.			
MaxConnect ionLimit	Maximum connection limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
RateLimitCo nnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps.	N/A
RateLimitBa ndwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit : KB/s.	N/A
SSLServerP olicy	Name of the SSL server policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	The null string indicates the label is not configured.
SSLClientP olicy	Name of the SSL client policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	The null string indicates the label is not configured.
RedirectRel ocation	Redirection URL.	N/A	String. Length: 0 to 63 characters.	The null string indicates the label is not configured.
RedirectRet urnCode	Redirection condition code.	N/A	Enumeration: <ul style="list-style-type: none"> <li>301—The requested resource has been permanently moved.</li> <li>302—The requested resource has been temporarily moved.</li> </ul>	N/A
ServiceEna ble	Enable the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
RateLimitIn Bandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit : KB/s.	N/A
RateLimitOu tBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit : KB/s.	N/A
State	State of the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Unavailable.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>1—Available.</li> <li>2—Disable.</li> </ul>	
ServerFarmInUse	Name of the server farm in use.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Default sever farm.</li> <li>1—Backup server farm.</li> <li>2—No server farm.</li> </ul>	N/A
BusyProtectEnable	Enable link protection.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
RSBandwidthProtectOrigin	Origin of real server bandwidth statistics that are used for bandwidth protection.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Using LB bandwidth statistics.</li> <li>1—Using interface bandwidth statistics.</li> </ul>	N/A
ConnSynEnable	Enable connection synchronization.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
StickySynEnable	Enable sticky synchronization.	N/A	<ul style="list-style-type: none"> <li>Enumeration:</li> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
StickySyncType	Sticky synchronization type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Synchronize in failover group (default).</li> <li>1—Synchronize global.</li> </ul>	This column can only be configured when the StickySynEnable is Enable (1).
Redundancy Group	Name of redundancy group for virtual server flow-redirect.	N/A	String, case-insensitive. Length: 1 to 15 characters.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
VrrpIfIndex	Interface index of VRRP.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.  VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
HTTPCompr	Parameter	N/A	String,	This column can be configured only

Column name	Column description	Column type	Data type and restrictions	Remarks
SessionParameter	profile whose type is HTTP compression for the virtual server.		case-insensitive. Length: 1 to 63 characters.	when the Type is HTTP (0).
LimitPolicy	Name of the limit policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RouteAdvertisementEnable	Enable route advertisement.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
CachePolicy	Name of the cache policy	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

## LB/GenericVirtualServers

## Table description

Item	Description
Feature name	LB
Table name	GenericVirtualServers
Table type	Multi-instance table
Row name	GenericVirtualServer
Restrictions	Only IP, TCP , UDP and LINK-IP virtual servers can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Type	Type of the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—IP.</li> <li>1—TCP.</li> <li>2—UDP.</li> <li>3—LINK-IP.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Description	Description for the virtual server.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
VRF	VRF name.	N/A	String, Length: 0 to 31 characters.	The null string indicates a public network.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 0 to 128.	N/A
PortNumber	Number of the port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
PortNumber List	List of port numbers	N/A	Number string.  It is a comma-separated list of ports. An item can be an individual port or a port range. Use a hyphen (-) to separate the start and end port of a range.  The string cannot end with a comma or hyphen, or include any whitespace characters.	N/A
DefaultServerFarm	Name of the default server farm.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
BackupServerFarm	Name of the backup server farm.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
DefaultLink Group	Name of the default link group.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
BackupLink Group	Name of the backup link group.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
StickyGroup	Name of the sticky group.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
Policy	Name of the policy.	N/A	String, case-insensitive. Length: 0 to 63 characters	The null string indicates the label is not configured.
IPParameter	Parameter profile whose type is IP for the virtual server.	N/A	String, case-insensitive. Length: 0 to 63 characters	The null string indicates the label is not configured.
TCPParameter	Parameter profile whose type is TCP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
TCPAppParameter	Parameter profile whose type is TCP-Application for the virtual server	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
SSLServerPolicy	Name of the SSL server policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	The null string indicates the label is not configured.
MaxConnectionLimit	Maximum connection limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s	N/A
UDPPerPacket	Enable UDP per-packet load balancing.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
ServiceEnable	Enable the service of the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Unit: KB/s	
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s	N/A
State	State of the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Unavailable.</li> <li>1—Available.</li> <li>2—Disable.</li> </ul>	N/A
ServerFarmInUse	Name of the server farm in use.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Default sever farm.</li> <li>1—Backup server farm.</li> <li>2—No server farm.</li> </ul>	N/A
LinkGroupInUse	Name of the in use link group.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Default link group.</li> <li>1—Backup link group.</li> <li>2—No link group.</li> </ul>	N/A
BusyProtectEnable	Enable link protection.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
RSBandwidthProtectOrigin	Origin of real server bandwidth statistics that are used for bandwidth protection.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Using LB bandwidth statistics.</li> <li>1—Using interface bandwidth.</li> </ul>	N/A
ConnSynEnable	Enable connection synchronization.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
StickySynEnable	Enable sticky synchronization.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
StickySyncType	Sticky synchronization type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Synchronize in failover group (default).</li> <li>1—Synchronize global.</li> </ul>	This column can only be configured when the StickySynEnable is Enable (1).
RedundancyGroup	Name of redundancy group for	N/A	String, case-insensitive. Length: 1 to 15	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	virtual server flow-redirect.		characters.	
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	VrrpVrid and VrrplfIndex are mutually dependent and both of them should be set in a single message.
VrrplfIndex	Interface index of VRRP.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference. VrrpVrid and VrrplfIndex are mutually dependent and both of them should be set in a single message.
LimitPolicy	Name of the limit policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RouteAdvertisementEnable	Enable route advertisement.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
Application Mode	Enable TCP layer7 load balancing.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—TCP layer4 (default).</li> <li>1—TCP layer7.</li> </ul>	N/A

## Table description

Item	Description
Feature name	LB
Table name	RADIUSVirtualServers
Table type	Multi-instance table
Row name	RADIUSVirtualServer
Restrictions	Only RADIUS virtual servers can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Type	Type of the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—IP.</li> <li>1—TCP.</li> <li>2—UDP.</li> <li>3—LINK-IP.</li> </ul>	N/A
Description	Description for the virtual server.	N/A	String. Length: 0 to 127	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters.	
VRF	VRF name.	N/A	String, Length: 0 to 31 characters.	The null string indicates a public network.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
PortNumber List	List of port numbers	N/A	Number string. It is a comma-separated list of ports. An item can be an individual port or a port range. Use a hyphen (-) to separate the start and end port of a range.  The string cannot end with a comma or hyphen, or include any whitespace characters.	N/A
DefaultServerFarm	Name of the default server farm.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
BackupServerFarm	Name of the backup server farm.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
StickyGroup	Name of the sticky group.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
Policy	Name of the policy.	N/A	String, case-insensitive. Length: 0 to 63 characters	The null string indicates the label is not configured.
IPParameter	Parameter profile whose type is IP for the virtual server.	N/A	String, case-insensitive. Length: 0 to 63 characters	The null string indicates the label is not configured.
MaxConnectionLimit	Maximum connection limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Unit: cps.	
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s	N/A
UDPPerPacket	Enable UDP per-packet load balancing.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
ServiceEnable	Enable the service of the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s	N/A
State	State of the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Unavailable.</li> <li>1—Available.</li> <li>2—Disable.</li> </ul>	N/A
ServerFarmInUse	Name of the server farm in use.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Default sever farm.</li> <li>1—Backup server farm.</li> <li>2—No server farm.</li> </ul>	N/A
BusyProtectEnable	Enable link protection.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
RSBandwidthProtectOrigin	Origin of real server bandwidth statistics that are used for bandwidth protection.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Using LB bandwidth statistics.</li> <li>1—Using interface bandwidth.</li> </ul>	N/A
ConnSynEnable	Enable connection synchronization.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
StickySynEnable	Enable sticky synchronization.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	VrrpVrid and VrrplfIndex are mutually dependent and both of them should be set in a single message.
VrrplfIndex	Interface index of VRRP.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.  VrrpVrid and VrrplfIndex are mutually dependent and both of them should be set in a single message.
LimitPolicy	Name of the limit policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RouteAdvertisementEnable	Enable route advertisement.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A

## Table description

Item	Description
Feature name	LB
Table name	MySQLVirtualServers
Table type	Multi-instance table
Row name	MySQLVirtualServer
Restrictions	Only MySQL virtual server can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description for the virtual server.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
VRF	VRF name.	N/A	String,	The null string indicates a public

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 0 to 31 characters. By default, no VRF is specified.	network.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses, broadcast addresses, and addresses such as 0.x.x.x with mask length 32 are not supported.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
PortNumber	Port number.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 3306.	N/A
DefaultServerFarm	Name of the default server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BackupServerFarm	Name of the backup server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm is not configured.
StickyGroup	Name of the sticky group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the default server farm is not configured.
Policy	Name of the policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPParameter	Parameter profile whose type is IP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TCPParameter	Parameter profile whose type is TCP for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TCPParameterClientSide	Client-side tcp parameter	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
TCPParameter	Server-side	N/A	String,	The null string indicates the label is

Column name	Column description	Column type	Data type and restrictions	Remarks
terServerSide	tcp parameter		case-insensitive. Length: 1 to 63 characters.	not configured.
MySQLParameter	Parameter profile whose type is MySQL for the virtual server.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
MaxConnectionLimit	Maximum connection limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 0, which indicates no limit.	N/A
RateLimitConnection	Maximum connection rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps. By default, the value is 0, which indicates no limit.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s. By default, the value is 0 KB/s, which indicates no limit.	N/A
ServiceEnable	Enable the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps. By default, the value is 0, which indicates no inbound limit.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps. By default, the value is 0, which indicates no outbound limit.	N/A
BusyProtectEnable	Enable link protection.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>1—Enable.</li> </ul>	
RSBandwidthProtectOrigin	Origin of real server bandwidth statistics that are used for bandwidth protection.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Using LB bandwidth statistics (default).</li> <li>1—Using interface bandwidth statistics.</li> </ul>	N/A
StickySynEnable	Enable sticky entry synchronization.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
LimitPolicy	Name of the limit policy.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
StickySyncType	Sticky synchronization type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Synchronize in failover group (default).</li> <li>1—Synchronize global.</li> </ul>	This column can only be configured when the StickySynEnable is Enable (1).
RouteAdvertisementEnable	Enable route advertisement.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
Version	MySQL version info.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—5.0.</li> <li>1—5.1.</li> <li>2—5.5.</li> <li>3—5.6.</li> <li>4—5.7.</li> <li>By default, 3 is configured.</li> </ul>	N/A
RedundancyGroup	Name of redundancy group for virtual server flow-redirect.	N/A	String, case-insensitive. Length: 1 to 15 characters.	N/A
VrrpVrid	Identifier of the virtual router.	N/A	Unsigned integer. Value range: 1 to 255.	VrrpVrid and VrrpIfIndex are mutually dependent and both of them should be set in a single message.
VrrpIfIndex	Interface index of VRRP.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
				VrrpVrid and VrrplfIndex are mutually dependent and both of them should be set in a single message.
State	State of the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Unavailable.</li> <li>1—Available.</li> <li>2—Disable.</li> </ul>	N/A
ServerFarmInUse	Name of the server farm in use.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Default sever farm.</li> <li>1—Backup server farm.</li> <li>2—Read/Write server farm.</li> <li>3—No server farm.</li> </ul>	N/A
UserList	MySQL database user list.	Data structure	Members include: <ul style="list-style-type: none"> <li>UserName.</li> <li>Password.</li> </ul>	Max user info count is 100.
UserName	MySQL database login username.	N/A	String, Length: 1 to 63 characters.	N/A
ReadServerFarm	MySQL read server farm name for read/write separation	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ReadStickyGroup	Name of the sticky group for read server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the read server farm is not configured.
WriteServerFarm	MySQL write server farm name for read/write separation	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
WriteStickyGroup	Name of the sticky group for write server farm.	N/A	String, case-insensitive. Length: 1 to 63 characters.	This column cannot be configured if the write server farm is not configured.

## LB/VirtualServerSummaries

This table contains summary information about virtual server.

### XML structure

<LB>

</VirtualServerSummaries>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	VirtualServerSummaries
Table type	Multi-instance table
Row name	VirtualServerSummary
Restrictions	Only summaries of virtual server can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Type	Type of the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—IP.</li> <li>1—TCP.</li> <li>2—UDP.</li> <li>3—HTTP.</li> <li>4—FASTHTTP.</li> <li>5—LINK-IP.</li> <li>8—SIP-UDP.</li> <li>9—SIP-TCP.</li> <li>10—MySQL.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	N/A	String. Length: 0 to 31 characters.	The null string indicates public network.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 0 to 128.	N/A
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
ServiceEnable	Enable the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
State	State of the virtual server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Unavailable.</li> <li>1—Available.</li> </ul>	N/A
BusyProtectEnable	State of the busy protect.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Unavailable.</li> <li>1—Available.</li> </ul>	N/A
RSBandwidthProtectOrigin	Source of the virtual server bandwidth	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—LB.</li> <li>0—interface.</li> </ul>	N/A

## Table description

Item	Description
Feature name	LB
Table name	VirtualServerStats
Table type	Multi-instance table
Row name	VirtualServerStat
Restrictions	Only stats of virtual server can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the virtual server.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CPUID	ID of the CPU on the card.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
TotalConnections	Total connections that the virtual server received.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
ActiveConnections	Active connections that the virtual server received.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
MaxConnections	Max connections that the virtual server received.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
ConnectionsPerSec	Connections per second that the virtual server received.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps.	N/A
MaxConnectionPerSec	Max connections per second that the virtual server received.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps.	N/A
ClientSidePKTsIn	Number of packets that the virtual server received from client.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
ClientSidePKTsOut	Number of packets that the virtual server sent to client.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
DroppedPackets	Number of packets that the virtual server dropped.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
ClientSideBytesIn	Number of bytes that the virtual server received from client.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ . Unit: Byte.	N/A
ClientSideBytesOut	Number of bytes that the virtual server sent to client.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ . Unit: Byte.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Bandwidth	Bandwidth of the virtual server.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
MaxBandwidth	Max bandwidth of the virtual server.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
ReceivedRequests	Number of requests that the virtual server received from client.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
DroppedRequests	Number of requests that the virtual server dropped.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
SentResponses	Number of responses that the virtual server sent to client.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
DroppedResponses	Number of responses that the virtual server dropped.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
InBandwidth	Inbound Bandwidth of the virtual server.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
OutBandwidth	Outbound Bandwidth of the virtual server.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
InMaxBandwidth	Inbound Max bandwidth of the virtual server.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
OutMaxBandwidth	Outbound Max bandwidth of the virtual server.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A

## Table description

Item	Description
Feature name	LB
Table name	RealServers
Table type	Multi-instance table
Row name	RealServer
Restrictions	Only Real server can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the real server.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description of the real server.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Weight	Weight of the real server.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
Priority	Priority of the real server.	N/A	Unsigned integer. Value range: 1 to 8.	N/A
ServerFarm	Name of the server farm.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
Shutdown	Shutdown state for the real server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Not configured.</li> <li>1—Shutdown.</li> <li>2—Slow-shutdown.</li> </ul>	N/A
MaxConnectionLimit	Maximum connections limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
RateLimitConnection	Maximum connections rate limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps.	N/A
RateLimitHTTPRequest	Maximum HTTP request rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: qps.	N/A
RateLimitBandwidth	Maximum bandwidth rate	N/A	Unsigned integer. Value range: 0 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	limit number.		$2^{32}-1$ . Unit: KB/s.	
ProbeSuccessCriteria	Probe success criteria for the real server.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
State	State of the real server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—Unavailable.</li> <li>• 1—Available.</li> <li>• 2—Slow-shutdown.</li> <li>• 3—Shutdown.</li> <li>• 4—Probe-failed.</li> <li>• 5—Standby.</li> <li>• 6—Ramp.</li> <li>• 8—Busy.</li> <li>• 9—Unknown.</li> </ul>	N/A
RateLimitInBandwidth	Inbound maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
RateLimitOutBandwidth	Outbound maximum bandwidth rate limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
InBandwidthBusyRatio	Inbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
OutBandwidthBusyRatio	Outbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
BandwidthBusyRatio	Total bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100.	N/A
InBandwidthBusyRecoveryRatio	Inbound bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery rate.	N/A
OutBandwidthBusyRecoveryRatio	Outbound bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			rate.	
BandwidthBusyRecoverRatio	Total bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery rate.	N/A
Cost	The cost of link bandwidth.	NA	Unsigned integer. Value range: 0 to 10240.	N/A
MaxBandwidth	Max bandwidth.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
InMaxBandwidth	Max inbound bandwidth.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
OutMaxBandwidth	Max outbound bandwidth.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
VRF	VRF name	N/A	String, case-insensitive. Length: 0 to 31 characters.	N/A
InheritVPN	Inherit the VPN of virtual server	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable inherit the VPN (default).</li> <li>1—Enable inherit the VPN.</li> </ul>	N/A

## LB/RealServerProbes

This table contains information about Real Server Probe that only uses NQA template.

### XML structure

Row name	ServerFarm
Restrictions	Only server farm can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the server farm.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description of the server farm.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Predictor	Predictor algorithm for LB to select a real server to serve a client request.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—Round-robin.</li> <li>• 1—Random.</li> <li>• 2—Least-connection.</li> <li>• 3—Hash source address.</li> <li>• 4—Hash source port.</li> <li>• 5—Hash destination address.</li> <li>• 6—Bandwidth.</li> <li>• 7—Inbound bandwidth.</li> <li>• 8—Outbound bandwidth.</li> <li>• 9—Max bandwidth.</li> <li>• 10—Max inbound bandwidth.</li> <li>• 11—Max Outbound bandwidth.</li> <li>• 12—Least time.</li> <li>• 13—Dynamic round-robin.</li> <li>• 14—Hash HTTP.</li> <li>• 15—CARP HTTP.</li> <li>• 16—CARP source address.</li> <li>• 17—CARP source port.</li> <li>• 18—CARP destination address.</li> <li>• 19—Least-connection.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			ction member. • 20—Least time member.	
HashIpv4PrefixLength	Length of IPv4 address mask for hash or CARP algorithm.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
HashIpv6PrefixLength	Length of IPv6 address prefix for hash or CARP algorithm.	N/A	Unsigned integer. Value range: 0 to 128.	N/A
SelectServerMinNumber	Minimum number of the active real server in the server farm.	N/A	Unsigned integer. Value range: 1 to 1000.	N/A
SelectServerMaxNumber	Maximum number of the active real server in the server farm.	N/A	Unsigned integer. Value range: 1 to 1000.	N/A
SlowOnlineEnable	Enable the server farm slow online.	N/A	Enumeration: • 0—Disable. • 1—Enable.	N/A
SlowOnlineStandbyTime	Standby time of the slow online.	N/A	Unsigned integer. Value range: 0 to 600. Unit: second.	N/A
SlowOnlineRampUpTime	Ramp up time of the slow online.	N/A	Unsigned integer. Value range: 3 to 600. Unit: second.	N/A
Transparent	Disable NAT for the server farm.	N/A	Enumeration: • 0—Disable. • 1—Enable	N/A
ActivateLower	The status of main server farm will be changed from in use to backup when the ratio of the available real servers in main server farm becomes smaller than this value.	N/A	Unsigned integer. Value range: 1 to 99.	N/A
ActivateUpper	The status of main server farm will be changed from		Unsigned integer. Value range: 1 to 99.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	backup to in use when the ratio of the available real servers in main server farm reaches or over this value.			
SNATPool	SNAT pool for the server farm.	N/A	String, case-insensitive. Length: 0 to 63 characters.	N/A
FailAction	Specify the action that the LB takes with respect to connections if any real server fails in a server farm.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Keep.</li> <li>1—Reset.</li> <li>2—Reschedule.</li> </ul>	N/A
ProbeSuccessCriteria	The condition that real server is available through probes.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
TotalRealServer	Total number of real servers in the server farm.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
ActiveRealServer	Active number of real servers in the server farm.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
State	State of the server farm.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Unavailable.</li> <li>1—Available.</li> </ul>	N/A
ProximityEnable	Enable the proximity.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
Offset	Offset to the first byte of the payload.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
Length	Length of the payload portion.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
Start	Beginning pattern for CARP.	N/A	String. Length: 0 to 127 characters.	N/A
End	Ending pattern for CARP.	N/A	String. Length: 0 to 127	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters.	
BusyAction	Busy protection policies for server nodes	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Drop(default).</li> <li>1—Enqueue.</li> <li>2—Force.</li> </ul>	N/A
QueueLength	Queue length for aging	N/A	Unsigned integer.  Value range: 1 to 100000.  By default, the column is not configured.	The column can only be configured when the BusyAction enqueue (1).
QueueTimeout	Node aging time	N/A	Unsigned integer.  Value range: 0 to 60.  Unit: second.  By default, the column is not configured.	The column can only be configured when the BusyAction enqueue (1).
RSTProbe	RST type probe template.	N/A	String, case-insensitive.  Length: 1 to 32 characters.	Only one template can be configured for each type.
ZeroWindowProbe	Zero-Window type probe template.	N/A	String, case-insensitive.  Length: 1 to 32 characters.	Only one template can be configured for each type.
RecoverTimeInterval	Auto recover time interval	N/A	Unsigned integer.  Value range: 0 to 15300.  Unit:minute.  By default, the value is 0.	N/A
HTTPPassiveProbe	HTTP passive probe template.	N/A	String, case-insensitive.  Length: 1 to 32 characters.	Only one template can be configured for each probe type.

# LB/ServerFarmProbes

This table contains information about Server Farm Probe that only uses NQA template.

## XML structure

```
<LB>
  <ServerFarmProbes>
    <ServerFarmProbe>
      <ServerFarm></ServerFarm>
      <Probe></Probe>
      <NQADefaultPortEnable></NQADefaultPortEnable>
    </ServerFarmProbe>
  </ServerFarmProbes>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	ServerFarmProbes
Table type	Multi-instance table
Row name	ServerFarmProbe
Restrictions	Only server farm probe can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerFarm	Name of the server farm.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Probe	Probe method for the server farm.	Index	String, case-insensitive. Length: 0 to 32 characters.	N/A
NQADefaultPortEnable	Enable detection using the default port of the NQA template.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Disable (default).</li><li>1—Enable.</li></ul>	N/A

# LB/ServerFarmStats

This table contains stat information about server farm.

## XML structure

```
<LB>
  <ServerFarmStats>
    <ServerFarmStat>
      <Name></Name>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
      <CPUID></CPUID>
      <TotalConnections></TotalConnections>
      <ActiveConnections></ActiveConnections>
      <ConnectionsPerSec></ConnectionsPerSec>
      <ServerSidePKTsIn></ServerSidePKTsIn>
      <ServerSidePKTsOut></ServerSidePKTsOut>
      <DroppedPackets></DroppedPackets>
      <ServerSideBytesIn></ServerSideBytesIn>
      <ServerSideBytesOut></ServerSideBytesOut>

      <SentResponses></SentResponses>
      <DroppedResponses></DroppedResponses>
    </ServerFarmStat>
  </ServerFarmStats>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	RealServerStats
Table type	Multi-instance table
Row name	RealServerStat
Restrictions	Only stats of real server can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the server farm.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
ChassisID	ID of the device that	Index	Unsigned integer. Value range: 0 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	holds the card.			
SlotID	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
TotalConnections	Total connections that the server farm received.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
ActiveConnections	Active connections that the server farm received.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
ConnectionsPerSec	Connections per second that the server farm received.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps.	N/A
ServerSidePKTsIn	Number of packets that the server farm received from device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
ServerSidePKTsOut	Number of packets that the server farm sent.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
DroppedPackets	Number of packets that the server farm dropped.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
ServerSideBytesIn	Number of bytes that the server farm received from device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ . Unit: Byte.	N/A
ServerSideBytesOut	Number of bytes that the server farm sent.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ . Unit: Byte.	N/A
Bandwidth	Bandwidth of the server farm.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
ReceivedRequests	Number of requests that the server farm received from device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
DroppedRe	Number of	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
quests	requests that the server farm dropped.		Value range: 0 to $2^{64}-1$ .	
SentResponses	Number of responses that the server farm sent to device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
DroppedResponses	Number of responses that the server farm dropped.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A

## LB/SNAT Pools

This table contains information about SNAT pool.

### XML structure

```

<LB>
  <SNATPools>
    <SNATPool>
      <Name></Name>
      <Description></Description>
      <Ipv4AddressStart></Ipv4AddressStart>
      <Ipv4AddressEnd></Ipv4AddressEnd>
      <Ipv6AddressStart></Ipv6AddressStart>
      <Ipv6AddressEnd></Ipv6AddressEnd>
    </SNATPool>
  </SNATPools>
</LB>

```

### Table description

Item	Description
Feature name	LB
Table name	SNATPools
Table type	Multi-instance table
Row name	SNATPool
Restrictions	Only SNAT pool can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the SNAT Pool.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description of the SNAT Pool.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Ipv4Address Start	Start IPv4 address of the SNAT pool.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv4Address End	End IPv4 address of the SNAT pool.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address Start	Start IPv6 address of the SNAT pool.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
Ipv6Address End	End IPv6 address of the SNAT pool.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.

## LB/NewSNATPools

This table contains LB SNAT pool information.

## XML structure

```
<LB>
  <NewSNATPools>

## Table description

Item	Description
Feature name	LB
Table name	MySQLParameters
Table type	Multi-instance table
Row name	MySQLParameter
Restrictions	Only MySQL parameter profile can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter profile.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the parameter profile.	N/A	String. Length: 0 to 127 characters.	N/A
PoolSize	Max cache connection count.	N/A	Unsigned integer. Value range: 1 to 64000. By default, the count is 1024.	N/A
ServerConnectionReuse	Enable connections to persist and be reused by multiple client connections.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable (default).</li> <li>1—Enable.</li> </ul>	N/A
MaxReuse	Maximum reuse number	N/A	Unsigned integer. Value range: 1 to 4294967295. By default, the number is 1000.	N/A
IdleTime	Idle connection expiration time	N/A	Unsigned integer. Value range: 1 to 4294967295. By default, the time length is 86400.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4SourceMask	IPv4 source mask to determine its eligibility for reuse.	N/A	Unsigned integer. Value range: 0 to 32. <ul style="list-style-type: none"> <li>By default, the value is 0.</li> </ul>	N/A
IPv6SourceMask	IPv6 source mask to determine its eligibility for reuse.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 0.	N/A

## LB/ HTTPCompressionParameterRules

This table contains information about HTTP compression parameter rule.

### XML structure

```

<LB>
  <HTTPCompressionParameterRules>
    <HTTPCompressionParameterRule>
      <Name></Name>
      <ID></ID>
      <Type></Type>
      <FilterType></FilterType>
      <Expression></Expression>
    </HTTPCompressionParameterRule>
  </HTTPCompressionParameterRules>
</LB>

```

### Table description

Item	Description
Feature name	LB
Table name	HTTPCompressionParameterRules
Table type	Multi-instance table
Row name	HTTPCompressionParameterRule
Restrictions	Only HTTP compression parameter rule can be configured by this table.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ID	ID of the match rule.	Index	Unsigned integer. Value range:1 to 65535.	N/A
Type	Type of the rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Permit.</li> <li>1—Deny.</li> </ul>	N/A
FilterType	Filter type of the rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—URL.</li> <li>1—Content.</li> </ul>	N/A.
Expression	Regular expression matched the filter type.	N/A	String. Length: 0 to 255 characters.	N/A

## LB/ParameterSummaries

This table contains summary information about parameter profile.

### XML structure

```

<LB>
  <ParameterSummaries>
    <ParameterSummary>
      <Name></Name>
      <Type></Type>
      <Description></Description>
    </ParameterSummary>
  </ParameterSummaries>
</LB>

```

### Table description

Item	Description
Feature name	LB
Table name	ParameterSummaries
Table type	Multi-instance table
Row name	ParameterSummary
Restrictions	Only parameter profile summary information can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the parameter profile.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Type	Type of parameter profile.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—IP.</li> <li>1—TCP.</li> <li>2—HTTP.</li> <li>3—HTTP Compression Parameter.</li> </ul>	N/A
Description	Description of the parameter profile.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.

## LB/AddressPortStickyGroups

This table contains information about address-port sticky groups.

## XML structure

```

<LB>
  <AddressPortStickyGroups>
    <AddressPortStickyGroup>
      <Name></Name>
      <Description></Description>
      <Timeout></Timeout>
      <Ipv4MethodType></Ipv4MethodType>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <Ipv6MethodType></Ipv6MethodType>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <OverrideLimit></OverrideLimit>
      <PriorBusyEnable></PriorBusyEnable>
    </AddressPortStickyGroup>
  </AddressPortStickyGroups>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	AddressPortStickyGroups

Table type	Multi-instance table
Row name	AddressPortStickyGroup
Restrictions	Only address-port sticky groups information can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the sticky group.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description of the sticky group.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Timeout	Timeout time of the sticky group.	N/A	Unsigned integer. Value range: 10 to 604800. Unit: second	N/A
Ipv4MethodType	IPv4 sticky method of the address-port sticky group.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None.</li> <li>1—Source IP stickiness.</li> <li>2—Source IP port stickiness.</li> <li>3—Destination IP stickiness.</li> <li>4—Destination IP port stickiness.</li> <li>5—Source IP and destination IP stickiness.</li> <li>6—Source IP port and destination IP port stickiness.</li> </ul>	N/A
Ipv4PrefixLength	IPv4 mask for IPv4 sticky method.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
Ipv6MethodType	IPv6 sticky method of the address-port sticky group.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None.</li> <li>1—Source IPv6 stickiness.</li> <li>2—Source IPv6 port stickiness.</li> <li>3—Destination IPv6 stickiness.</li> <li>4—Destination IPv6 port stickiness.</li> <li>5—Source IPv6 and destination IPv6 stickiness.</li> <li>6—Source IPv6 port and destination IPv6</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			port stickiness.	
Ipv6PrefixLength	IPv6 prefix for IPv6 sticky method.	N/A	Unsigned integer. Value range: 0 to 128.	N/A
OverrideLimit	Ignore the limits for sessions that match sticky entries.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
PriorBusyEnable	Prior to busy action	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A

## LB/RADIUSStickyGroups

This table contains information about RADIUS sticky groups.

### XML structure

```

<LB>
  <RADIUSStickyGroups>
    <RADIUSStickyGroup>
      <Name></Name>
      <Description></Description>
      <Timeout></Timeout>
      <AttributeCode></AttributeCode>
      <OverrideLimit></OverrideLimit>
    </RADIUSStickyGroup>
  </RADIUSStickyGroups>
</LB>

```

### Table description

Item	Description
Feature name	LB
Table name	RADIUSStickyGroups
Table type	Multi-instance table
Row name	RADIUSStickyGroup
Restrictions	Only RADIUS sticky groups can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the sticky group.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the sticky group.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Timeout	Timeout time of the sticky group.	N/A	Unsigned integer. Value range: 10 to 604800. Unit: second.	N/A
AttributeCode	code of attribute	N/A	Unsigned integer. Value range: 1 to 255.	N/A
OverrideLimit	Ignore the limits for sessions that match sticky entries.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Disable.</li><li>1—Enable.</li></ul>	N/A

## LB/PayloadStickyGroups

This table contains information about payload sticky groups.

## XML structure

```
<LB>
  <PayloadStickyGroups>
    <PayloadStickyGroup>
      <Name></Name>
      <Description></Description>
      <Type></Type>
      <Timeout></Timeout>
      <Offset></Offset>
      <Length></Length>
      <Start></Start>
      <End></End>
      <OverrideLimit></OverrideLimit>
      <PriorBusyEnable></PriorBusyEnable>
    </PayloadStickyGroup>
  </PayloadStickyGroups>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	PayloadStickyGroups
Table type	Multi-instance table
Row name	PayloadStickyGroup
Restrictions	Only HTTP payload sticky groups can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the sticky group.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description of the sticky group.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Type	Sticky method of the payload sticky group.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—None.</li><li>1—Payload stickiness.</li></ul>	N/A
Timeout	Timeout time of the sticky group.	N/A	Unsigned integer. Value range: 10 to 604800. Unit: second.	N/A
Offset	Offset to the first byte of the payload.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
Length	Length of the payload portion.	N/A	Unsigned integer. Value range: 0 to 1000.	N/A
Start	Beginning pattern for the payload stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
End	Ending pattern for the payload stickiness.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
OverrideLimit	Ignore the limits for sessions that match sticky entries.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Disable.</li><li>1—Enable.</li></ul>	N/A
PriorBusyEnable	Prior to busy action	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Disable.</li><li>1—Enable.</li></ul>	N/A

# LB/HTTPContentStickyGroups

This table contains information about HTTP content sticky groups.

## XML structure

```
<LB>
  <HTTPContentStickyGroups>
    <HTTPContentStickyGroup>
      <Name></Name>

Row name	ClassAction
Restrictions	Only policy rules can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Policy	Name of the policy.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Class	Name of the class.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Action	Name of the action for the class.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
BeforeClass	Name of the class that the row will be inserted before.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.

## LB/GenericActions

This table contains information about IP, TCP and UDP action.

## XML structure

```
<LB>
  <GenericActions>
    <GenericAction>
      <Name></Name>
      <Description></Description>
      <ForwardType></ForwardType>
      <ServerFarm></ServerFarm>
      <BackupServerFarm></BackupServerFarm>
      <StickyGroup></StickyGroup>
      <IPToS></IPToS>
      <ServerFarmInUse></ServerFarmInUse>
      <Fallback></Fallback>
      <TCPDropType></TCPDropType>
    </GenericAction>
  </GenericActions>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	GenericActions
Table type	Multi-instance table
Row name	GenericAction
Restrictions	Only IP, TCP and UDP action can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the action.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description of the action.	N/A	String. Length: 1 to 127 characters.	The null string indicates the label is not configured.
ForwardType	Forward mode of the action.	N/A	Enumeration: <ul style="list-style-type: none"><li>1—Drop.</li><li>2—Forward all.</li><li>3—Server farm.</li></ul>	N/A
ServerFarm	Name of the sever farm for the action.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
BackupServerFarm	Name of the backup sever farm for the action.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
StickyGroup	Name of the sticky group farm for the action.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
IPToS	ToS number of IP packet sent to server.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
ServerFarmInUse	Name of the in use sever farm for the action.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Default sever farm.</li> <li>1—Backup server farm.</li> <li>2—No server farm.</li> </ul>	N/A
Fallback	Fallback action when real server select failed.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None.</li> <li>1—Match next class.</li> <li>3—Fin close.</li> <li>4—Rst close.</li> </ul>	N/A
TCPDropType	Type of closing TCP connection	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Fin close(default).</li> <li>1—Rst close</li> </ul>	N/A

## LB/RADIUSActions

This table contains information about RADIUS action.

### XML structure

```

## Table description

Item	Description
Feature name	LB
Table name	HTTPActions
Table type	Multi-instance table
Row name	HTTPAction
Restrictions	Only action of HTTP type can be gotten by this table.

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the action.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description of the action.	N/A	String. Length: 1 to 127 characters.	The null string indicates the label is not configured.
ForwardType	Forward mode of the action.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Drop.</li> <li>3—Server farm.</li> <li>8—Redirect</li> <li>9—Response</li> </ul>	N/A
ServerFarm	Name of the sever farm for the action.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
BackupServer Farm	Name of the backup sever farm for the action.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
StickyGroup	Name of the sticky group farm for the action.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
SSLClientPolicy	Name of the SSL client policy.	N/A	String, case-insensitive. Length: 0 to 31 characters.	The null string indicates the label is not configured.
IPToS	ToS number of IP packet for the action sent to server.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
ServerFarmIn Use	Name of the in use sever farm for the action.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Default sever farm.</li> <li>1—Backup server farm.</li> <li>2—No server farm.</li> </ul>	N/A
Fallback	Fallback action when real server select failed.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None.</li> <li>1—Match next class.</li> <li>2—Response.</li> <li>3—Fin close.</li> <li>4—Rst close.</li> </ul>	N/A
RewriteValue	Content value need to be replaced in response.	N/A	String. Length: 1 to 127 characters.	This column and the column of ReplaceValue must be configured together.
ReplaceValue	New content value after replaced in response.	N/A	String. Length: 1 to 127 characters.	Some special applications and constraints as below: %i: insert source IPv4 address or source IPv6 address into header of the

Column name	Column description	Column type	Data type and restrictions	Remarks
				<p>message.</p> <p>%ps: insert source port into header of the message.</p> <p>%id: insert destination IPv4 address or IPv6 address into header of the message.</p> <p>%pd: insert destination port into header of the message.</p> <p>To the above-mentioned applications, some situations, like only %, ps, id, pd can behind %, must be constrained unless those serial % are not odd number.</p>
Redirect	Redirection URL.	N/A	String. Length: 0 to 255 characters.	A null string indicates the label is not configured.
ReturnCode	Status code in the returned redirection packets.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>301—The requested resource has been permanently deleted.</li> <li>302—The requested resource has been temporarily deleted.</li> </ul>	N/A
ZipFileWorkpath	Work path of zip file for the response	N/A	String. Length: 1 to 255 characters.	<p>If the column is not '/', it must start with /, and cannot end with /.</p> <p>The null string indicates the label is not configured.</p>
ResponseZipFile	<p>Full path and name of the zip file for the response.</p> <p>Example:</p> <ul style="list-style-type: none"> <li>flash:/lb/1.html</li> <li>chassis3#slot1#flash:/lb/1.html</li> </ul>	N/A	String, case-insensitive. Length: 1 to 255 characters.	<p>The column can be configured when ForwardType is Response (9) or there is no ForwardType column.</p> <p>When the column is configured, ForwardType becomes Resposne (9).</p> <p>The column cannot be configured when ZipFileWorkpath is not configured.</p>
FallbackResponseRawFile	<p>Full path and name of the raw file for the fallback action response.</p> <p>Example:</p> <ul style="list-style-type: none"> <li>flash:/lb/1.html</li> </ul>	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column can be configured when Fallback is Response(2).

Column name	Column description	Column type	Data type and restrictions	Remarks
	<ul style="list-style-type: none"> <li>chassis3#s lot1#flash:/l b/1.html</li> </ul>			
TCPDropType	Type of closing TCP connection	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Fin close(default).</li> <li>1—Rst close</li> </ul>	N/A

## LB/HTTPActionResponseFiles

This table contains information about HTTP action response file.

### XML structure

```

<LB>

      <URL></URL>
      <FileName></FileName>
    </HTTPActionResponseFile>
  </HTTPActionResponseFiles>
</LB>

```

### Table description

Item	Description
Feature name	LB
Table name	HTTPActionResponseFiles
Table type	Multi-instance table
Row name	HTTPActionResponseFile
Restrictions	Only HTTP action response file can be gotten by this table.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Name of the action.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
URL	URL of file for the action response.	Index	String. Length: 1 to 255 characters.	The column must start with /. When the column is

Column name	Column description	Column type	Data type and restrictions	Remarks
				configured, ForwardType becomes Resposne (9).
FileName	Full path and name of the file for the action response. Example: <ul style="list-style-type: none"> <li>flash:/lb/1.html</li> <li>chassis3#slot1#flash:/lb/1.html</li> </ul>	N/A	String, case-insensitive. Length: 1 to 255 characters.	The column must start witch device name.

## LB/HTTPActionRewriteURLs

This table contains information about HTTP action rewrite URL.

### XML structure

```

<LB>
  <HTTPActionRewriteURLs>
    <HTTPActionRewriteURL>
      <LocationURL></LocationURL>
      <Replace></Replace>
      <Encode></Encode>
    </HTTPActionRewriteURL>
  </HTTPActionRewriteURLs>
</LB>

```

### Table description

Item	Description
Feature name	LB
Table name	HTTPActionRewriteURLs
Table type	Multi-instance table
Row name	HTTPActionURL
Restrictions	Only HTTP action rewrite URL can be configured by this table.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocationURL	URL of location value for the HTTP request line.	Index	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Replace	Replaced string that method of URL rewrite process.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Encode	Encode type of URL rewrite.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None.</li> <li>1—URL.</li> <li>2—Base64</li> </ul>	

## LB/HTTPActionSSLURLs

This table contains information about HTTP action SSLURL.

### XML structure

```

<LB>
  <HTTPActionSSLURLs>
    <HTTPActionSSLURL>
      <Name></Name>
      <LocationURL></LocationURL>
      <ClearPort></ClearPort>
      <SSLPort></SSLPort>
    </HTTPActionSSLURL>
  </HTTPActionSSLURLs>
</LB>

```

### Table description

Item	Description
Feature name	LB
Table name	HTTPActionSSLURLs
Table type	Multi-instance table
Row name	HTTPActionSSLURL
Restrictions	Only HTTP action SSL URL can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the action.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
LocationURL	URL of location value for the HTTP header.	Index	String. Length: 0 to 63 characters.	N/A
ClearPort	HTTP port of Location for rewriting redirection message.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
SSLPort	SSL port of the LB device.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A

## LB/HTTPActionHeaders

This table contains information about HTTP action header.

## XML structure

```

<LB>
  <HTTPActionHeaders>
    <HTTPActionHeader>
      <Action></Action>
      <Type></Type>
      <Direction></Direction>
      <HeaderName></HeaderName>
      <HeaderValue></HeaderValue>

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Class	Name of the class.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
ID	ID of the match rule.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Type	Type of the match rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Source IPv4.</li> <li>1—Source IPv6.</li> <li>2—Class.</li> <li>3—IPv4 ACL.</li> <li>4—IPv6 ACL.</li> <li>5—ISP.</li> <li>6—User.</li> <li>7—User group.</li> <li>8—Interface.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcIpv4Address	Match rule of Source IPv4.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
SrcIpv4PrefixLength	Mask length of the source IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
SrcIpv6Address	Match rule of source IPv6.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
SrcIpv6PrefixLength	Prefix length of the source IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128.	N/A
ReferClass	Name of the referenced class.	N/A	String, case-insensitive. Length: 0 to 63 characters.	N/A
AclNum	ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999.	N/A
AclName	Name of the ACL.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
ISP	Name of the ISP.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
User	Name of the user.	N/A	String, case-sensitive. Length: 1 to 55 characters.	N/A
UserGroup	Name of the user group.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
IdentityDomain	The domain name of the user or user group.	N/A	String, case-insensitive. Length: 1 to 255 characters.	The null string indicates the label is not configured.
InterfaceName	Name of the interface.	N/A	String, case-insensitive. Length: 1 to 47 characters.	N/A
PayloadExpression	Regular expression matched the payload content.	N/A	String. Length: 0 to 255 characters	This column can be configured only when the type is payload (9).
CaseInsensitive	Whether the payload content expression is case insensitive	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Case sensitive (default)</li> <li>1—Case insensitive</li> </ul>	This column can be configured only when the type is payload(9).
Not	Whether the matching condition is opposite	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Matching condition is not opposite (default)</li> <li>1—Matching condition is opposite</li> </ul>	This column can be configured only when the type is payload(9).
MatchedTime	Number of	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
s	times the rule was matched.		Value range: 0 to $2^{64}-1$ .	

## LB/LinkGenericMatchRules

### Table description

Item	Description
Feature name	LB
Table name	LinkGenericMatchRules
Table type	Multi-instance table

Row name	LinkGenericMatchRule
Restrictions	Only link generic match rule can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Class	Name of the class.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ID	ID of the match rule.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Type	Type of the match rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Source IPv4.</li> <li>1—Source IPv6.</li> <li>2—Class.</li> <li>3—IPv4 ACL.</li> <li>4—IPv6 ACL.</li> <li>5—ISP.</li> <li>6—Application group.</li> <li>7—Destination IPv4.</li> <li>8—Destination IPv6.</li> <li>9—Destination domain.</li> <li>10—User.</li> <li>11—User group.</li> <li>12—Interface.</li> </ul>	N/A
SrcIpv4Address	Match rule of Source IPv4.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
SrcIpv4PrefixLength	Mask length of the source IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
SrcIpv6Address	Match rule of source IPv6.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
SrcIpv6PrefixLength	Prefix length of the source IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128.	N/A
ReferClass	Name of the referenced class.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
AclNum	ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999.	N/A
AclName	Name of the ACL.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
ISP	Name of the ISP.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
AppGroup	Name of the application group.	N/A	String. Length: 1 to 63 characters.	The null string indicates the label is not configured.
DstIpv4Address	Match rule of destination IPv4.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
DstIpv4PrefixLength	Mask length of the destination IPv4 address.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
DstIpv6Address	Match rule of destination IPv6.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
DstIpv6PrefixLength	Prefix length of the destination IPv6 address.	N/A	Unsigned integer. Value range: 0 to 128.	N/A
DstDomain	Match rule of destination domain	N/A	String, case-insensitive. Length: 1 to 253 characters.	The null string indicates the label is not configured.
User	Name of the user.	N/A	String, case-sensitive. Length: 1 to 55 characters.	N/A
UserGroup	Name of the user group.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
IdentityDomain	The domain name of the user or user group.	N/A	String, case-insensitive. Length: 1 to 255 characters.	The null string indicates the label is not configured.
InterfaceName	Name of the interface.	N/A	String, case-insensitive. Length: 1 to 47 characters.	N/A
MatchedTimes	Number of times the rule was matched.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A

Restrictions	Only IPv4 ISP can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the ISP.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	IPv4 address.	Index	String, Dotted decimal notation.	The value must be equal to the summation of the address and the mask. Example:1.1.1.0/24.
Ipv4PrefixLength	IPv4 mask length	Index	Unsigned integer. Value range: 1 to 32.	N/A
Origin	Origin of IPv4 address.	N/A	Each bit represents a origin. Values: <ul style="list-style-type: none"> <li>1—Import.</li> <li>2—Manual.</li> <li>4—Update.</li> </ul>	N/A

## LB/Ipv6ISPAddressGroups

This table contains information about IPv6 ISP address groups.

## XML structure

```

<LB>
  <Ipv6ISPAddressGroups>
    <Ipv6ISPAddressGroup>

```

```

<Name></Name>
<Ipv6Address></Ipv6Address>
<Ipv6PrefixLength></Ipv6PrefixLength>
<Origin></Origin>
</Ipv6ISPAddressGroup>
</Ipv6ISPAddressGroups>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	Ipv6ISPAddressGroups
Table type	Multi-instance table
Row name	Ipv6ISPAddressGroup
Restrictions	Only IPv6 ISP can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the ISP.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv6Address	IPv6 address.	Index	Hexadecimal string, colon-separated.	The value must be equal to the summation of the address and the prefix. Example:195::/64.
Ipv6PrefixLength	IPv6 prefix length	Index	Unsigned integer. Value range: 1 to 128.	N/A
Origin	Origin of IPv6 address.	N/A	Each bit represents a origin. Values: <ul style="list-style-type: none"> <li>1—Import.</li> <li>2—Manual.</li> <li></li> <li>4—Update.</li> </ul>	N/A

## LB/ProximityParameters

This table contains information about proximity parameter.

## XML structure

```
<LB>
  <ProximityParameters>
    <Ipv4PrefixLength></Ipv4PrefixLength>
    <Ipv6PrefixLength></Ipv6PrefixLength>
    <Timeout></Timeout>
    <RTTWeight></RTTWeight>
    <TTLWeight></TTLWeight>
    <InBandwidthWeight></InBandwidthWeight>
    <OutBandwidthWeight></OutBandwidthWeight>
    <CostWeight></CostWeight>
    <MaxNumber></MaxNumber>
    <DefaultProbeMode></DefaultProbeMode>
    <DefaultProbe></DefaultProbe>
  </ProximityParameters>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	ProximityParameters
Table type	Single-instance table
Row name	N/A
Restrictions	Only proximity parameter can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32.	Zero means nature mask.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 1 to 128.	N/A
Timeout	The life time of proximity.	N/A	Unsigned integer. Value range: 60 to 3600.	N/A
RTTWeight	The weight of RTT.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
TTLWeight	The weight of TTL.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
InBandwidthWeight	The weight of inbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
OutBandwidthWeight	The weight of outbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
CostWeight	The weight of link cost.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
MaxNumber	Proximity entries upper limit number.	N/A	Unsigned integer. Value range: 0 to 10000000.	N/A
DefaultProbeMode	Default probe mode for the proximity.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—NQA.</li> <li>1—LB.</li> </ul>	N/A
DefaultProbe	Default probe method for the proximity.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A

## LB/VRFProximityParameters

This table contains information about proximity parameter.

### XML structure

```

<LB>
  <VRFProximityParameters>
    <VRFProximityParameter>
      <VRF></VRF>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <Timeout></Timeout>
      <RTTWeight></RTTWeight>
      <TTLWeight></TTLWeight>
      <InBandwidthWeight></InBandwidthWeight>
      <OutBandwidthWeight></OutBandwidthWeight>
      <CostWeight></CostWeight>
      <MaxNumber></MaxNumber>
      <DefaultProbeMode></DefaultProbeMode>
      <DefaultProbe></DefaultProbe>
    </VRFProximityParameter>
  </VRFProximityParameters>
</LB>

```

### Table description

Item	Description
Feature name	LB

Table name	VRFPximityParameters
Table type	Multi-instance table
Row name	VRFPximityParameter
Restrictions	Only proximity parameter can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	The null string indicates public network.
Ipv4PrefixLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32.	Zero means nature mask.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 1 to 128.	N/A
Timeout	The life time of proximity.	N/A	Unsigned integer. Value range: 60 to 3600.	N/A
RTTWeight	The weight of RTT.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
TTLWeight	The weight of TTL.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
InBandwidthWeight	The weight of inbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
OutBandwidthWeight	The weight of outbound bandwidth.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
CostWeight	The weight of link cost.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
MaxNumber	Proximity entries upper limit number.	N/A	Unsigned integer. Value range: 0 to 10000000.	N/A
DefaultProbeMode	Default probe mode for the proximity.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—NQA.</li> <li>1—LB.</li> </ul>	N/A
DefaultProbe	Default probe method for the proximity.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A

## LB/ProximityProbeRules

This table contains information about probe of the proximity.

## XML structure

```
<LB>
  <ProximityProbeRules>
    <ProximityProbeRule>
      <ID></ID>
      <Type></Type>
      <ProbeMode></ProbeMode>
      <Probe></Probe>
    </ProximityProbeRule>
  </ProximityProbeRules>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	ProximityProbeRules
Table type	Multi-instance table
Row name	ProximityProbeRule
Restrictions	Only proximity probe can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	ID of the probe rule.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Type	Type of the rule.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—TCP.</li></ul>	N/A
ProbeMode	Mode of the match probe.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—NQA.</li><li>1—LB.</li></ul>	N/A
Probe	Name of the match probe.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A

## LB/VRFProximityProbeRules

This table contains information about probe of the proximity.

## XML structure

```
<LB>
  <VRFProximityProbeRules>
    <VRFProximityProbeRule>
      <VRF></VRF>
      <ID></ID>
      <Type></Type>
      <ProbeMode></ProbeMode>
      <Probe></Probe>
    </VRFProximityProbeRule>
  </VRFProximityProbeRules>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	VRFProximityProbeRules
Table type	Multi-instance table
Row name	VRFProximityProbeRule
Restrictions	Only proximity probe can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	The null string indicates public network.
ID	ID of the probe rule.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Type	Type of the rule.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—TCP.</li></ul>	N/A
ProbeMode	Mode of the match probe.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—NQA.</li><li>1—LB.</li></ul>	N/A
Probe	Name of the match probe.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A

# LB/Ipv4ProximityTables

This table contains information about ipv4 proximity item.

## XML structure

```
<LB>
  <Ipv4ProximityTables>
    <Ipv4ProximityTable>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
      <CPUID></CPUID>
      <VRF></VRF>
      <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <Lifetime></Lifetime>
      <BestLinkType></BestLinkType>
      <BestRealServer></BestRealServer>
      <BestLink></BestLink>
      <TimesUsed></TimesUsed>
    </Ipv4ProximityTable>
  </Ipv4ProximityTables>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	Ipv4ProximityTables
Table type	Multi-instance table
Row name	Ipv4ProximityTable
Restrictions	Only IPv4 proximity items can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	The null string indicates public network.
Ipv4Address	IPv4 address.	Index	String. Dotted decimal notation.	N/A
Ipv4PrefixLength	IPv4 mask length.	Index	Unsigned integer. Value range: 0 to 32.	N/A
Lifetime	Lifetime of proximity items.	N/A	Unsigned integer. Value range: 0 to 3600.	N/A
BestLinkType	Type of the best link.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None.</li> <li>1—Real server.</li> <li>2—Link.</li> </ul>	N/A
BestRealServer	The best real server name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
BestLink	The best link name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
TimesUsed	Number of times the proximity entry was used.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A

## LB/Ipv6ProximityTables

This table contains information about ipv6 proximity item.

### XML structure

```

<LB>
  <Ipv6ProximityTables>
    <Ipv6ProximityTable>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
