# ACL

## ACL/Groups

This table contains ACL information.

## XML structure

```
<ACL>
  <Groups>
    <Group>
      <GroupType></GroupType>
      <GroupID></GroupID>
      <CountClear></CountClear>
    </Group>
  </Groups>
</ACL>
```

## Table description

Item	Description
Feature name	ACL
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupType	ACL type.	Index	Enumeration: <ul style="list-style-type: none"><li>1—IPv4.</li><li>2—IPv6.</li><li>3—MAC.</li><li>4—User-defined.</li></ul>	N/A
GroupID	ACL number.	Index	Unsigned integer. Value range: 2000 to 5999.	The value range depends on the GroupType column. <ul style="list-style-type: none"><li>2000 to 5999 if GroupType is 1.</li><li>2000 to 3999 if GroupType is 2.</li></ul>
CountClear	Resets counters.	N/A	This column must be empty.	N/A

# ACL/NamedGroups

This table contains named ACL information.

## XML structure

```
<ACL>
  <NamedGroups>
    <Group>
      <GroupType></GroupType>
      <GroupIndex></GroupIndex>
      <CountClear></CountClear>
    </Group>
  </NamedGroups>
</ACL>
```

## Table description

Item	Description
Feature name	ACL
Table name	NamedGroups
Table type	Multi-instance table
Row name	Group
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupType	ACL type.	Index	Enumeration: <ul style="list-style-type: none"><li>• 1—IPv4.</li><li>• 2—IPv6.</li><li>• 3—MAC.</li><li>• 4—User-defined.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupIndex	ACL name or number.	Index	String. Length: 1 to 63 characters. <ul style="list-style-type: none"> <li><b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li> <li><b>ACL number:</b> String of digits in the range of 2000 to 5999.</li> </ul>	An ACL name must start with an English letter and cannot be <b>all</b> .  The value range depends on the GroupType column. <ul style="list-style-type: none"> <li>2000 to 3999 if GroupType is <b>1</b>.</li> <li>2000 to 3999 if GroupType is <b>2</b>.</li> <li>4000 to 4999 if GroupType is <b>3</b>.</li> <li>5000 to 5999 if GroupType is <b>4</b>.</li> </ul>
CountClear	Resets counters.	N/A	This column must be empty.	N/A

## ACL/PfilterApply

This table contains packet filter application information.

### XML structure

```

<ACL>
  <PfilterApply>
    <Pfilter>
      <AppObjType></AppObjType>
      <AppObjIndex></AppObjIndex>
      <AppDirection></AppDirection>
      <AppAclType></AppAclType>
      <AppAclGroup></AppAclGroup>
      <CountClear></CountClear>
    </Pfilter>
  </PfilterApply>
</ACL>

```

### Table description

Item	Description
Feature name	ACL
Table name	PfilterApply
Table type	Multi-instance table
Row name	Pfilter
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppObjType	Type of the application object.	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Interface.</li> <li>2—VLAN.</li> <li>3—Global.</li> </ul>	N/A
AppObjIndex	Index of the application object.	Index	Unsigned integer. Value range: 0 to 4294967295.	The value depends on the AppObjType column. <ul style="list-style-type: none"> <li>Interface index if AppObjType is 1.</li> <li>VLAN ID in the range of 1 to 4094 if AppObjType is 2.</li> <li>The value is 0 if AppObjType is 3.</li> </ul>
AppDirection	Application direction.	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Inbound.</li> <li>2—Outbound.</li> </ul>	N/A
AppAcIType	ACL type.	Index	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4.</li> <li>2—IPv6.</li> <li>3—Ethernet frame header ACL.</li> <li>4—User-defined ACL.</li> <li>5—ACL with the default action.</li> </ul>	<ul style="list-style-type: none"> <li>Type 5 is a special ACL.</li> </ul>
AppAcIGroup	ACL name or number.	Index	String. Length: 1 to 63 characters. <ul style="list-style-type: none"> <li><b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li> <li><b>ACL number:</b> String of digits valued 0 or in the range of 2000 to 5999.</li> </ul>	An ACL name must start with an English letter and cannot be <b>all</b> . The value range depends on the AppAcIType column. <ul style="list-style-type: none"> <li>2000 to 3999 if AppAcIType is 1.</li> <li>2000 to 3999 if AppAcIType is 2.</li> <li>4000 to 4999 if AppAcIType is 3.</li> <li>5000 to 5999 if AppAcIType is 4.</li> <li>0 if AppAcIType is 5.</li> </ul>
CountClear	Resets counters.	N/A	This column must be empty.	N/A

## ACL/ZonePairPfilterApply

This table contains packet filter application information for zone-pair.

## XML structure

```
<ACL>
  <ZonePairPfilterApply>
    <Pfilter>
      <SrcZone></SrcZone>
      <DestZone></DestZone>
      <AclType></AclType>
      <AclGroup></AclGroup>
      <Clear></Clear>
    </Pfilter>
  </ZonePairPfilterApply>
</ACL>
```

## Table description

Item	Description
Feature name	ACL
Table name	ZonePairPfilterApply
Table type	Multi-instance table
Row name	Pfilter
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcZone	Name of the source zone.	Index	String, case insensitive. <ul style="list-style-type: none"><li>Length: 1 to 31 characters.</li></ul>	Cannot contain midline( - ).
DestZone	Name of the destination zone.	Index	String, case insensitive. <ul style="list-style-type: none"><li>Length: 1 to 31 characters.</li></ul>	Cannot contain midline( - ).
AclType	ACL type.	Index	Enumeration: <ul style="list-style-type: none"><li><b>1</b>—IPv4 ACL.</li><li><b>2</b>—IPv6 ACL.</li><li><b>3</b>—Ethernet frame header ACL.</li></ul>	Type 3 is not supported in the current software version, and is reserved for future support.
AclGroup	ACL name or number.	Index	<ul style="list-style-type: none"><li><b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li><li><b>ACL number:</b> An unsigned integer in the range of 2000 to 5999.</li></ul>	An ACL name must start with an English letter and cannot be all. The value range depends on the AppAclType column. <ul style="list-style-type: none"><li>2000 to 5999 if AppAclType is <b>1</b>.</li><li>2000 to 3999 if AppAclType is <b>2</b>.</li></ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
Clear	Resets counters.	N/A	This column must be empty.	N/A

# ACL

## ACL/Groups

This table contains ACL information.

## XML structure

```
<ACL>
  <Groups>
    <Group>
      <GroupType></GroupType>
      <GroupID></GroupID>
      <MatchOrder></MatchOrder>
      <Step></Step>
      <Name></Name>
      <Description></Description>
    </Group>
  </Groups>
</ACL>
```

## Table description

Item	Description
Feature name	ACL
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupType	ACL type	Index	Enumeration: <ul style="list-style-type: none"><li>• 1—IPv4.</li><li>• 2—IPv6.</li><li>• 3—MAC.</li><li>• 4—User-defined.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number	Index	Unsigned integer. Value range: 2000 to 5999.	The value range depends on the GroupType column. <ul style="list-style-type: none"> <li>2000 to 5999 if GroupType is <b>1</b>. <ul style="list-style-type: none"> <li>IPv4 basic ACL: 2000 to 2999.</li> <li>IPv4 advanced ACL: 3000 to 3999.</li> <li>Ethernet frame header ACL: 4000 to 4999.</li> <li>User-defined ACL: 5000 to 5999.</li> </ul> </li> <li>2000 to 3999 if GroupType is <b>2</b>. <ul style="list-style-type: none"> <li>IPv6 basic ACL: 2000 to 2999.</li> <li>IPv6 advanced ACL: 3000 to 3999.</li> </ul> </li> </ul>
MatchOrder	Order in which the rules are sorted	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Config (default). In this order, rules are sorted in ascending order of rule ID.</li> <li><b>2</b>—Auto. In this order, rules are sorted in depth-first order.</li> </ul>	The match order can only be modified for ACLs that do not contain any rules. The match order can only be <b>config</b> for user-defined ACLs.
Step	ACL rule numbering step	N/A	Unsigned integer. Value range: 1 to 20. Default: 5.	The rule numbering step for user-defined ACLs can only be 5.
Name	ACL name	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.	This column cannot be modified.
Description	ACL description	N/A	String, case-sensitive. Length: 1 to 127 characters.	By default, an ACL has no description.

## ACL/NamedGroups

This table contains named ACL information.

### XML structure

```

<ACL>
  <NamedGroups>
    <Group>
      <GroupType></GroupType>

```

```

    <GroupCategory></GroupCategory>
    <GroupIndex></GroupIndex>
    <MatchOrder></MatchOrder>
    <Step></Step>
    <Name></Name>
    <Description></Description>
  </Group>
</NamedGroups>
</ACL>

```

## Table description

Item	Description
Feature name	ACL
Table name	NamedGroups
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupType	ACL type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4.</li> <li>2—IPv6.</li> <li>3—MAC.</li> <li>4—User-defined.</li> </ul>	N/A
GroupCategory	ACL Category	Index	Enumeration: <ul style="list-style-type: none"> <li>0—invalid.</li> <li>1—basic.</li> <li>2—advanced.</li> </ul>	The value range depends on the GroupType column. <ul style="list-style-type: none"> <li>1 to 2 if GroupType is <b>1 or 2</b>. <ul style="list-style-type: none"> <li>basic ACL: 1.</li> <li>advanced ACL: 2.</li> </ul> </li> <li>0 if GroupType is 3 or 4.</li> </ul>
GroupIndex	ACL name or number	Index	String. Length: 1 to 63 characters. <ul style="list-style-type: none"> <li><b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li> <li><b>ACL number:</b> String of digits in the range of 2000 to 5999.</li> </ul>	An ACL name must start with an English letter and cannot be <b>all</b> . The GroupIndex cannot be specified as an ACL name in GET operations for an ACL created by specifying both a number and a name. The value range depends on the GroupType column. <ul style="list-style-type: none"> <li>2000 to 3999 if GroupType is <b>1</b>. <ul style="list-style-type: none"> <li>IPv4 basic ACL: 2000 to 2999.</li> <li>IPv4 advanced ACL: 3000 to 3999.</li> </ul> </li> </ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
				<ul style="list-style-type: none"> <li>2000 to 3999 if GroupType is <b>2</b>. <ul style="list-style-type: none"> <li>IPv6 basic ACL: 2000 to 2999.</li> <li>IPv6 advanced ACL: 3000 to 3999.</li> </ul> </li> <li>4000 to 4999 if GroupType is <b>3</b>. <ul style="list-style-type: none"> <li>Ethernet frame header ACL: 4000 to 4999.</li> </ul> </li> <li>5000 to 5999 if GroupType is <b>4</b>. User-defined ACL: 5000 to 5999.</li> </ul>
MatchOrder	Order in which the rules are sorted	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Config (default). In this order, rules are sorted in ascending order of rule ID.</li> <li><b>2</b>—Auto. In this order, rules are sorted in depth-first order.</li> </ul>	The match order can only be modified for ACLs that do not contain any rules. The match order can only be <b>config</b> for user-defined ACLs.
Step	ACL rule numbering step	N/A	Unsigned integer. Value range: 1 to 20. Default: 5.	The rule numbering step for user-defined ACLs can only be 5.
Name	ACL name	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must start with an English letter.	This column cannot be modified.
Description	ACL description	N/A	String, case-sensitive. Length: 1 to 127 characters.	By default, an ACL has no description.

## ACL/Intervals

This table contains ACL interval information.

## XML structure

```

<ACL>
  <Intervals>
    <Interval>
      <IntervalType></IntervalType>
      <IntervalValue></IntervalValue>
    </Interval>
  </Intervals>
</ACL>

```

## Table description

Item	Description
Feature name	ACL
Table name	Intervals
Table type	Multi-instance table
Row name	Interval
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IntervalType	The type of the interval	Index	Enumeration: <ul style="list-style-type: none"><li>1—logging.</li><li>2—trap.</li></ul>	The type of the interval specified for generating packet filtering logs or traps. You cannot create, merge, or replace an interval when there is an effective interval of a different type.
IntervalValue	The value of the interval	N/A	Unsigned integer. Value range: 5 to 1440.	It must be a multiple of 5.

## ACL/IPv4BasicRules

This table contains information about IPv4 basic ACL rules.

## XML structure

```
<ACL>
  <IPv4BasicRules>
    <Rule>
      <GroupID></GroupID>
      <RuleID></RuleID>
      <Action></Action>
      <SrcAny></SrcAny>
      <SrcIPv4>
        <SrcIPv4Addr></SrcIPv4Addr>
        <SrcIPv4Wildcard></SrcIPv4Wildcard>
      </SrcIPv4>
      <SrcObjectGroup></SrcObjectGroup>
      <Fragment></Fragment>
      <TimeRange></TimeRange>
```

```

    <VRF></VRF>
    <Counting></Counting>
    <Logging></Logging>
    <Comment></Comment>
  </Rule>
</IPv4BasicRules>
</ACL>

```

## Table description

Item	Description
Feature name	ACL
Table name	IPv4BasicRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 2000 to 2999.	You must create an ACL first before you create, merge, or replace rules for it.
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	If you set this column to 65535, the system automatically assigns a new rule ID. This rule ID is the nearest higher multiple of the numbering step to the current highest rule ID, starting from 0.
Action	Action on packets matching the rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Deny.</li> <li>2—Permit.</li> </ul>	You cannot specify an action when you remove or delete a rule.  You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any source IP addresses (default).</li> <li><b>false</b>—Matches the specified source IP address.</li> </ul>	This column must be configured together with the <b>SrcIPv4</b> column.

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcIPv4	Source IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>• SrcIPv4Addr.</li> <li>• SrcIPv4Wildcard.</li> </ul>	This column must be configured together with the <b>SrcAny</b> column. The two members must both be specified.
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the <b>SrcAny</b> column is <b>false</b> . It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the <b>SrcAny</b> column is <b>false</b> . It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	This column and the SrcAny column cannot both be configured.
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Matches only non-first fragments.</li> <li>• <b>false</b>—Matches both fragments and non-fragments (default).</li> </ul>	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 32 characters. The string must start with an English letter.	It cannot be the word <b>all</b> .
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Counts the rule matches.</li> <li>• <b>false</b>—Does not count the rule matches (default).</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Logging	Whether to log rule match events.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Logs rule match events.</li> <li><b>false</b>—Does not log rule match events (default).</li> </ul>	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule.  When the <b>MatchOrder</b> column is <b>2</b> , you can modify only the comment for a rule.

## ACL/IPv4NamedBasicRules

This table contains information about namd IPv4 basic ACL rules.

### XML structure

```

<ACL>
  <IPv4NamedBasicRules>
    <Rule>
      <GroupIndex></GroupIndex>
      <RuleID></RuleID>
      <Action></Action>
      <SrcAny></SrcAny>
      <SrcIPv4>
        <SrcIPv4Addr></SrcIPv4Addr>
        <SrcIPv4Wildcard></SrcIPv4Wildcard>
      </SrcIPv4>
      <SrcObjectGroup></SrcObjectGroup>
      <Fragment></Fragment>
      <TimeRange></TimeRange>
      <VRF></VRF>
      <Counting></Counting>
      <Logging></Logging>
      <Comment></Comment>
    </Rule>
  </IPv4NamedBasicRules>
</ACL>

```

## Table description

Item	Description
Feature name	ACL
Table name	IPv4NamedBasicRules

</ACL>
```

## Table description

Item	Description
Feature name	ACL
Table name	IPv6BasicRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 2000 to 2999.	You must create an ACL first before you create, merge, or replace rules for it.

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	If you set this column to 65535, the system automatically assigns a new rule ID. This rule ID is the nearest higher multiple of the numbering step to the current highest rule ID, starting from 0.
Action	Action on packets matching the rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Deny.</li> <li>2—Permit.</li> </ul>	You cannot specify an action when you remove or delete a rule.  You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any source IPv6 addresses (default).</li> <li><b>false</b>—Matches the specified source IPv6 address.</li> </ul>	This column must be configured together with the <b>SrcIPv6</b> column.
SrcIPv6	Source IPv6 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcIPv6Addr.</li> <li>SrcIPv6Prefix.</li> </ul>	This column must be configured together with the <b>SrcAny</b> column.  The two members must both be specified.
SrcIPv6Addr	Source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.  This column is available when the <b>SrcAny</b> column is <b>false</b> .  It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcIPv6Prefix	Length of the source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the <b>SrcAny</b> column is <b>false</b> .  It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcObject Group	Source object group name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	This column and the <b>SrcAny</b> column cannot both be configured.
RoutingTypeAny	Whether a rule matches any types of routing header.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any types of routing header.</li> <li><b>false</b>—Matches the specified type of routing header (default).</li> </ul>	This column and the <b>RoutingTypeValue</b> column cannot both be configured.
RoutingTypeValue	Routing header type.	N/A	Unsigned integer. Value range: 0 to 255.	This column and the <b>RoutingTypeAny</b> column cannot both be configured.
Fragment	Whether a rule matches only	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches only non-first</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	non-first fragments.		fragments. <ul style="list-style-type: none"> <li><b>false</b>—Matches both fragments and non-fragments (default).</li> </ul>	
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 32 characters. The string must start with an English letter.	It cannot be the word <b>all</b> .
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Counts the rule matches.</li> <li><b>false</b>—Does not count the rule matches (default).</li> </ul>	N/A
Logging	Whether to log rule match events.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Logs rule match events.</li> <li><b>false</b>—Does not log rule match events (default).</li> </ul>	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule.  When the <b>MatchOrder</b> column is <b>2</b> , you can modify only the comment for a rule.

## ACL/IPv6NamedBasicRules

This table contains information about named IPv6 basic ACL rules.

### XML structure

```

<ACL>

    <Comment></Comment>
  </Rule>
</IPv6NamedBasicRules>
</ACL>

```

## Table description

Item	Description
Feature name	ACL
Table name	IPv6NamedBasicRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupIndex	ACL name or number.	Index	String. Length: 1 to 63 characters. <ul style="list-style-type: none"> <li><b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li> <li><b>ACL number:</b> String of digits in the range of 2000 to 2999.</li> </ul>	You must create an ACL first before you create, merge, or replace rules for it.
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	If you set this column to 65535, the system automatically assigns a new rule ID. This rule ID is the nearest higher multiple of the numbering step to the current highest rule ID, starting from 0.
Action	Action on packets matching the rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Deny.</li> <li><b>2</b>—Permit.</li> </ul>	You cannot specify an action when you remove or delete a rule.  You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any source IPv6 addresses (default).</li> <li><b>false</b>—Matches the specified source IPv6 address.</li> </ul>	This column must be configured together with the <b>SrcIPv6</b> column.
SrcIPv6	Source IPv6 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcIPv6Addr.</li> <li>SrcIPv6Prefix.</li> </ul>	This column must be configured together with the <b>SrcAny</b> column. The two members must both be specified.
SrcIPv6Addr	Source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the <b>SrcAny</b> column is <b>false</b> . It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcIPv6Prefix	Length of the source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the <b>SrcAny</b> column is <b>false</b> . It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcObject Group	Source object group name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	This column and the SrcAny column cannot both be configured.
RoutingTypeAny	Whether a rule matches any types of routing header.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any types of routing header.</li> <li><b>false</b>—Matches the specified type of routing header (default).</li> </ul>	This column and the <b>RoutingTypeValue</b> column cannot both be configured.
RoutingTypeValue	Routing header type.	N/A	Unsigned integer. Value range: 0 to 255.	This column and the <b>RoutingTypeAny</b> column cannot both be configured.
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches only non-first fragments.</li> <li><b>false</b>—Matches both fragments and non-fragments (default).</li> </ul>	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 32 characters. The string must start with an English letter.	It cannot be the word <b>all</b> .
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Counts the rule matches.</li> <li><b>false</b>—Does not count the</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			rule matches (default).	
Logging	Whether to log rule match events.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Logs rule match events.</li> <li><b>false</b>—Does not log rule match events (default).</li> </ul>	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule.  When the <b>MatchOrder</b> column is <b>2</b> , you can modify only the comment for a rule.

## ACL/IPv4AdvanceRules

This table contains information about IPv4 advanced ACL rules.

### XML structure

```

<ACL>

## Table description

Item	Description
Feature name	ACL
Table name	IPv4AdvanceRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 3000 to 3999.	You must create an ACL first before you create, merge, or replace rules for it.
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	If you set this column to 65535, the system automatically assigns a new rule ID. This rule ID is the nearest higher multiple of the numbering

Column name	Column description	Column type	Data type and restrictions	Remarks
				step to the current highest rule ID, starting from 0.
Action	Action on packets matching the rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Deny.</li> <li>2—Permit.</li> </ul>	You cannot specify an action when you remove or delete a rule.  You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv4 protocols.	You cannot specify a protocol type when you remove or delete a rule.  You must specify a protocol type or an encapsulation type when you replace a rule, or when you merge or create a rule that does not exist.
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any source IP addresses (default).</li> <li><b>false</b>—Matches the specified source IP address.</li> </ul>	The VXLAN encapsulation supports this column.  This column must be configured together with the <b>SrcIPv4</b> column.
SrcIPv4	Source IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcIPv4Addr.</li> <li>SrcIPv4Wildcard.</li> </ul>	This column must be configured together with the <b>SrcAny</b> column. The two members must both be specified.
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.  This column is available when the <b>SrcAny</b> column is <b>false</b> .  It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0.  This column is available when the <b>SrcAny</b> column is <b>false</b> .  It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	This column and the <b>SrcAny</b> column cannot both be configured.
DstAny	Whether a rule matches any destination IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any destination IP addresses (default).</li> <li><b>false</b>—Matches the specified destination IP address.</li> </ul>	The VXLAN encapsulation supports this column.  This column must be configured together with the <b>DstIPv4</b> column.

Column name	Column description	Column type	Data type and restrictions	Remarks
DstIPv4	Destination IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstIPv4Addr.</li> <li>DstIPv4Wildcard.</li> </ul>	This column must be configured together with the <b>DstAny</b> column. The two members must both be specified.
DstIPv4Addr	Destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstIPv4Wildcard	Wildcard mask for the destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstObject Group	Destination object group name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	This column and the DstAny column cannot both be configured.
ECN	ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	ECN and TOS cannot be specified together.
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
DSCPRange	DSCP priority range.	Data structure	Members include: <ul style="list-style-type: none"> <li>StartDSCP</li> <li>EndDSCP</li> </ul>	DSCP and DSCPRange cannot be specified together.
StartDSCP	Start DSCP priority of a DSCP priority range.	N/A	Unsigned integer. Value range: 0 to 63.	The end DSCP must be greater than start DSCP.
EndDSCP	End DSCP priority of a DSCP priority range.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
Precedence	IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	The DSCP priority and the IP precedence cannot both be specified.
TOS	ToS preference.	N/A	Unsigned integer. Value range: 0 to 15.	The DSCP priority and the ToS precedence cannot both be specified.
SrcPort	Source port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcPortOp.</li> <li>SrcPortValue1.</li> <li>SrcPortValue2.</li> </ul>	Only the TCP and UDP protocols and the VXLAN encapsulation support this column. The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	
SrcPortValue1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SrcPortValue2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When SrcPortOp is 5, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
DstPort	Destination port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstPortOp.</li> <li>DstPortValue1.</li> <li>DstPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column.  The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
DstPortValue1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPortValue2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When DstPortOp is 5, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
TcpFlag	TCP flags.	Data structure.	Members include: <ul style="list-style-type: none"> <li>ACK.</li> <li>FIN.</li> <li>PSH.</li> <li>RST.</li> <li>SYN.</li> <li>URG.</li> </ul>	N/A
ACK	ACK flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>0—ACK flag is not set.</li> <li>1—ACK flag is set.</li> </ul>	Only the TCP protocol supports this column.
FIN	FIN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>0—FIN flag is not set.</li> <li>1—FIN flag is set.</li> </ul>	Only the TCP protocol supports this column.
PSH	PSH flag in a TCP	N/A	Unsigned integer.	Only the TCP protocol

Column name	Column description	Column type	Data type and restrictions	Remarks
	packet.		Value range: 0 or 1. <ul style="list-style-type: none"> <li>0—PSH flag is not set.</li> <li>1—PSH flag is set.</li> </ul>	supports this column.
RST	RST flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>0—RST flag is not set.</li> <li>1—RST flag is set.</li> </ul>	Only the TCP protocol supports this column.
SYN	SYN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>0—SYN flag is not set.</li> <li>1—SYN flag is set.</li> </ul>	Only the TCP protocol supports this column.
URG	URG flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>0—URG flag is not set.</li> <li>1—URG flag is set.</li> </ul>	Only the TCP protocol supports this column.
Established	Whether a rule matches flags indicating the established status of a TCP connection.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Matches the flags.</li> <li>false—Ignores the flags.</li> </ul>	Only the TCP protocol supports this column.  On a router, the rule matches TCP connection packets with the ACK or RST flag set. On a switch, the availability and usage of this column depend on the device model.  This column and the <b>TcpFlag</b> column cannot both be configured.
ICMP	ICMP messages.	N/A	Members include: <ul style="list-style-type: none"> <li>ICMPType.</li> <li>ICMPCode.</li> </ul>	The members must both be specified.
ICMPType	Type of ICMP messages.	N/A	Unsigned integer. Value range: 0 to 255.	Only the ICMP protocol supports this column.
ICMPCode	Code of ICMP messages.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 indicates that no ICMP message code is specified.	Only the ICMP protocol supports this column.
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Matches only non-first fragments.</li> <li>false—Matches both fragments and non-fragments (default).</li> </ul>	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 32 characters. The string must start with an English letter.	It cannot be the word <b>all</b> .
VRF	VRF.	N/A	String, case-sensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 31 characters.	
QoSLocalID	Local QoS ID.	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
EncapType	Encapsulation type.	N/A	Members include: <ul style="list-style-type: none"> <li>VXLAN encapsulation.</li> <li>GRE encapsulation.</li> <li>IPINIP encapsulation.</li> </ul>	<p>You cannot specify an encapsulation type when you remove or delete a rule.</p> <p>If you specify an encapsulation type you must specify an inner protocol when you replace a rule, or when you merge or create a rule that does not exist.</p>
InProtocolType	Inner protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv4 protocols.	<p>You cannot specify an inner protocol type when you remove or delete a rule.</p> <p>If you specify an inner protocol type, you must specify an encapsulation type when you replace a rule, or when you merge or create a rule that does not exist.</p>
VxlanID	VXLAN ID.	N/A	Unsigned integer Value range: 0 to 16777215	Only the VXLAN encapsulation supports this column.
InSrcAny	Whether a rule matches any inner source IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any inner source IP addresses (default).</li> <li><b>false</b>—Matches the specified inner source IP address.</li> </ul>	This column must be configured together with the <b>InSrcIPv4</b> column.
InSrcIPv4	Inner source IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>InSrcIPv4Addr.</li> <li>InSrcIPv4Wildcard.</li> </ul>	<p>Only the VXLAN encapsulation supports this column.</p> <p>This column must be configured together with the <b>InSrcAny</b> column.</p> <p>The two members must both be specified.</p>
InSrcIPv4Addr	Inner source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
				<p>This column is available when the <b>InSrcAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>InSrcAny</b> column is <b>true</b>.</p>
InSrcIPv4 Wildcard	Wildcard mask for the inner source IPv4 address.	N/A	String, dotted decimal notation.	<p>Example: 255.255.255.0.</p> <p>This column is available when the <b>InSrcAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>InSrcAny</b> column is <b>true</b>.</p>
InDstAny	Whether a rule matches any inner destination IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any inner destination IP addresses (default).</li> <li><b>false</b>—Matches the specified inner destination IP address.</li> </ul>	This column must be configured together with the <b>InDstIPv4</b> column.
InDstIPv4	Inner destination IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>InDstIPv4Addr.</li> <li>InDstIPv4Wildcard.</li> </ul>	<p>Only the VXLAN encapsulation supports this column.</p> <p>This column must be configured together with the <b>InDstAny</b> column.</p> <p>The two members must both be specified.</p>
InDstIPv4 Addr	Inner destination IPv4 address.	N/A	String, dotted decimal notation.	<p>Example: 1.1.1.1.</p> <p>This column is available when the <b>InDstAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>InDstAny</b> column is <b>true</b>.</p>
InDstIPv4 Wildcard	Wildcard mask for the inner destination IPv4 address.	N/A	String, dotted decimal notation.	<p>Example: 255.255.255.0.</p> <p>This column is available when the <b>InDstAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>InDstAny</b> column is <b>true</b>.</p>
InSrcPort	Inner source port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>InSrcPortOp.</li> <li>InSrcPortValue1.</li> </ul>	Only the TCP and UDP inner protocols support this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>InSrcPortValue2.</li> </ul>	The members must be all specified.
InSrcPortOp	Inner source port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
InSrcPortValue1	Start inner source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InSrcPortValue2	End inner source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When InSrcPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end inner source port is not available.
InDstPort	Inner destination port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>InDstPortOp.</li> <li>InDstPortValue1.</li> <li>InDstPortValue2.</li> </ul>	Only the TCP and UDP inner protocols support this column.  The members must be all specified.
InDstPortOp	Inner destination port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
InDstPortValue1	Start inner destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InDstPortValue2	End inner destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When InDstPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end inner destination port is not available.
InEstablished	Whether a rule matches flags indicating the inner established	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches the flags.</li> <li><b>false</b>—Ignores the</li> </ul>	Only the TCP inner protocol supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
	status of a TCP connection.		flags.	
Counting	Whether to count the rule matches.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Counts the rule matches.</li> <li><b>false</b>—Does not count the rule matches (default).</li> </ul>	N/A
Logging	Whether to log rule match events.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Logs rule match events.</li> <li><b>false</b>—Does not log rule match events (default).</li> </ul>	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule.  When the <b>MatchOrder</b> column is <b>2</b> , you can modify only the comment for a rule.
GreValue	Config a gre value.	N/A	Hexadecimal string. Length: 1 to 8 characters. Value range: 0 to FFFFFFFF.	Only the GRE protocol supports this column.
Options	IP options.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Options.</li> <li><b>false</b>—Not options, default.</li> </ul>	Only when the ProtocolType value is 256, and then the table can support this column.
Fragment Type	Check fragment packet type.	N/A	Unsigned integer. Value range: 0 to 3. <ul style="list-style-type: none"> <li><b>0</b>—First-fragment.</li> <li><b>1</b>—Non-fragment.</li> <li><b>2</b>—Non-or-first-fragment.</li> <li><b>3</b>—Any-fragment.</li> </ul>	N/A
Ttl	Whether a rule matches TTL.	Data structure	Members include: <ul style="list-style-type: none"> <li>TtlOp.</li> <li>TtlValue1.</li> <li>TtlValue2.</li> </ul>	N/A
TtlOp	TTL operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—lt (lower than).</li> <li><b>2</b>—eq (equal to).</li> <li><b>3</b>—gt (greater than).</li> <li><b>4</b>—neq (not equal to).</li> <li><b>5</b>—range (inclusive range).</li> </ul>	N/A
TtlValue1	Start TTL value.	N/A	Unsigned integer. Value range: 1 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TtlValue2	End TTL value.	N/A	Unsigned integer. Value range: 1 to 256.	When the TtlOp is 5, the value range is 1 to 255. Otherwise, it can only be 256. The value 256 indicates that the end TTL value is not available.
PktLength	Whether a rule matches packet length.	Data structure	Members include: <ul style="list-style-type: none"> <li>PktLengthOp.</li> <li>PktLengthValue1.</li> <li>PktLengthValue2.</li> </ul>	N/A
PktLengthOp	Packet length operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
PktLengthValue1	Start packet length value.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
PktLengthValue2	End packet length value.	N/A	Unsigned integer. Value range: 0 to 65536.	When the PktLengthOp is 5, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the packet length value is not available.

## ACL/IPv4NamedAdvanceRules

This table contains information about named IPv4 advanced ACL rules.

## Table description

Item	Description
Feature name	ACL
Table name	IPv4NamedAdvanceRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupIndex	ACL name or number.	Index	String. Length: 1 to 63 characters. <ul style="list-style-type: none"> <li><b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li> <li><b>ACL number:</b> String of digits in the range of 3000 to 3999.</li> </ul>	You must create an ACL first before you create, merge, or replace rules for it.
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	If you set this column to 65535, the system automatically assigns a new rule ID. This rule ID is the nearest higher multiple of the numbering step to the current highest rule ID, starting from 0.
Action	Action on packets matching the rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Deny.</li> <li><b>2</b>—Permit.</li> </ul>	You cannot specify an action when you remove or delete a rule.  You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv4 protocols.	You cannot specify a protocol type when you remove or delete a rule.  You must specify a protocol type or an encapsulation type when you replace a rule, or when you merge or create a rule that does not exist.
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any source IP addresses (default).</li> <li><b>false</b>—Matches the specified source IP address.</li> </ul>	The VXLAN encapsulation supports this column.  This column must be configured together with the <b>SrcIPv4</b> column.
SrcIPv4	Source IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcIPv4Addr.</li> <li>SrcIPv4Wildcard.</li> </ul>	This column must be configured together with the <b>SrcAny</b> column.  The two members must both be specified.
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.  This column is available when the <b>SrcAny</b> column is <b>false</b> .  It must be empty when the <b>SrcAny</b> column is <b>true</b> .

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the <b>SrcAny</b> column is <b>false</b> . It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcObject Group	Source object group name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	This column and the SrcAny column cannot both be configured.
DstAny	Whether a rule matches any destination IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any destination IP addresses (default).</li> <li><b>false</b>—Matches the specified destination IP address.</li> </ul>	The VXLAN encapsulation supports this column. This column must be configured together with the <b>DstIPv4</b> column.
DstIPv4	Destination IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstIPv4Addr.</li> <li>DstIPv4Wildcard.</li> </ul>	This column must be configured together with the <b>DstAny</b> column. The two members must both be specified.
DstIPv4Addr	Destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstIPv4Wildcard	Wildcard mask for the destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstObject Group	Destination object group name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	This column and the DstAny column cannot both be configured.
ECN	ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	ECN and TOS cannot be specified together.
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
DSCPRange	DSCP priority range.	Data structure	Members include: <ul style="list-style-type: none"> <li>StartDSCP</li> <li>EndDSCP</li> </ul>	DSCP and DSCPRange cannot be specified together.
StartDSCP	Start DSCP priority of a DSCP priority range.	N/A	Unsigned integer. Value range: 0 to 63.	The end DSCP must be greater than start DSCP.
EndDSCP	End DSCP priority of a DSCP priority range.	N/A	Unsigned integer. Value range: 0 to 63.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Precedence	IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	The DSCP priority and the IP precedence cannot both be specified.
TOS	ToS preference.	N/A	Unsigned integer. Value range: 0 to 15.	The DSCP priority and the ToS precedence cannot both be specified.
SrcPort	Source port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcPortOp.</li> <li>SrcPortValue1.</li> <li>SrcPortValue2.</li> </ul>	Only the TCP and UDP protocols and the VXLAN encapsulation support this column. The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
SrcPortValue1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SrcPortValue2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When SrcPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
DstPort	Destination port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstPortOp.</li> <li>DstPortValue1.</li> <li>DstPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column. The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
DstPortValue1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPortValue2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When DstPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
TcpFlag	TCP flags.	Data	Members include:	N/A

Column name	Column description	Column type structure.	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>• ACK.</li> <li>• FIN.</li> <li>• PSH.</li> <li>• RST.</li> <li>• SYN.</li> <li>• URG.</li> </ul>	
ACK	ACK flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—ACK flag is not set.</li> <li>• <b>1</b>—ACK flag is set.</li> </ul>	Only the TCP protocol supports this column.
FIN	FIN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—FIN flag is not set.</li> <li>• <b>1</b>—FIN flag is set.</li> </ul>	Only the TCP protocol supports this column.
PSH	PSH flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—PSH flag is not set.</li> <li>• <b>1</b>—PSH flag is set.</li> </ul>	Only the TCP protocol supports this column.
RST	RST flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—RST flag is not set.</li> <li>• <b>1</b>—RST flag is set.</li> </ul>	Only the TCP protocol supports this column.
SYN	SYN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—SYN flag is not set.</li> <li>• <b>1</b>—SYN flag is set.</li> </ul>	Only the TCP protocol supports this column.
URG	URG flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—URG flag is not set.</li> <li>• <b>1</b>—URG flag is set.</li> </ul>	Only the TCP protocol supports this column.
Established	Whether a rule matches flags indicating the established status of a TCP connection.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Matches the flags.</li> <li>• <b>false</b>—Ignores the flags.</li> </ul>	Only the TCP protocol supports this column.  On a router, the rule matches TCP connection packets with the ACK or RST flag set. On a switch, the availability and usage of this column depend on the device model.  This column and the <b>TcpFlag</b> column cannot both be configured.
ICMP	ICMP messages.	N/A	Members include: <ul style="list-style-type: none"> <li>• ICMPType.</li> <li>• ICMPCode.</li> </ul>	The members must both be specified.
ICMPType	Type of ICMP messages.	N/A	Unsigned integer. Value range: 0 to 255.	Only the ICMP protocol supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
ICMPCode	Code of ICMP messages.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 indicates that no ICMP message code is specified.	Only the ICMP protocol supports this column.
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches only non-first fragments.</li> <li><b>false</b>—Matches both fragments and non-fragments (default).</li> </ul>	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 32 characters. The string must start with an English letter.	It cannot be the word <b>all</b> .
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
QoSLocalID	Local QoS ID.	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
EncapType	Encapsulation type.	N/A	Members include: <ul style="list-style-type: none"> <li>VXLAN encapsulation.</li> <li>GRE encapsulation.</li> <li>IPINIP encapsulation.</li> </ul>	You cannot specify an encapsulation type when you remove or delete a rule.  If you specify an encapsulation type, you must specify an inner protocol when you replace a rule, or when you merge or create a rule that does not exist.
InProtocolType	Inner protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv4 protocols.	You cannot specify an inner protocol type when you remove or delete a rule.  If you specify an inner protocol type, you must specify an encapsulation type when you replace a rule, or when you merge or create a rule that does not exist.
VxlanID	VXLAN ID.	N/A	Unsigned integer Value range: 0 to 16777215	Only the VXLAN encapsulation supports this column.
InSrcAny	Whether a rule matches any inner	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any</li> </ul>	This column must be configured together with

Column name	Column description	Column type	Data type and restrictions	Remarks
	source IP addresses.		inner source IP addresses (default). <ul style="list-style-type: none"> <li><b>false</b>—Matches the specified inner source IP address.</li> </ul>	the <b>InSrcIPv4</b> column.
InSrcIPv4	Inner source IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>InSrcIPv4Addr.</li> <li>InSrcIPv4Wildcard.</li> </ul>	Only the VXLAN encapsulation supports this column.  This column must be configured together with the <b>InSrcAny</b> column.  The two members must both be specified.
InSrcIPv4 Addr	Inner source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.  This column is available when the <b>InSrcAny</b> column is <b>false</b> .  It must be empty when the <b>InSrcAny</b> column is <b>true</b> .
InSrcIPv4 Wildcard	Wildcard mask for the inner source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0.  This column is available when the <b>InSrcAny</b> column is <b>false</b> .  It must be empty when the <b>InSrcAny</b> column is <b>true</b> .
InDstAny	Whether a rule matches any inner destination IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any inner destination IP addresses (default).</li> <li><b>false</b>—Matches the specified inner destination IP address.</li> </ul>	This column must be configured together with the <b>InDstIPv4</b> column.
InDstIPv4	Inner destination IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>InDstIPv4Addr.</li> <li>InDstIPv4Wildcard.</li> </ul>	Only the VXLAN encapsulation supports this column.  This column must be configured together with the <b>InDstAny</b> column.  The two members must both be specified.
InDstIPv4 Addr	Inner destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.  This column is available

Column name	Column description	Column type	Data type and restrictions	Remarks
				<p>when the <b>InDstAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>InDstAny</b> column is <b>true</b>.</p>
InDstIPv4 Wildcard	Wildcard mask for the inner destination IPv4 address.	N/A	String, dotted decimal notation.	<p>Example: 255.255.255.0.</p> <p>This column is available when the <b>InDstAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>InDstAny</b> column is <b>true</b>.</p>
InSrcPort	Inner source port information.	Data structure	<p>Members include:</p> <ul style="list-style-type: none"> <li>InSrcPortOp.</li> <li>InSrcPortValue1.</li> <li>InSrcPortValue2.</li> </ul>	<p>Only the TCP and UDP inner protocols support this column.</p> <p>The members must be all specified.</p>
InSrcPort Op	Inner source port operator.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
InSrcPortValue1	Start inner source port.	N/A	<p>Unsigned integer.</p> <p>Value range: 0 to 65535.</p>	N/A
InSrcPortValue2	End inner source port.	N/A	<p>Unsigned integer.</p> <p>Value range: 0 to 65536.</p>	<p>When InSrcPortOp is <b>5</b>, the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end inner source port is not available.</p>
InDstPort	Inner destination port information.	Data structure	<p>Members include:</p> <ul style="list-style-type: none"> <li>InDstPortOp.</li> <li>InDstPortValue1.</li> <li>InDstPortValue2.</li> </ul>	<p>Only the TCP and UDP inner protocols support this column.</p> <p>The members must be all specified.</p>
InDstPort Op	Inner destination port operator.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			range).	
InDstPortValue1	Start inner destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InDstPortValue2	End inner destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When InDstPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end inner destination port is not available.
InEstablished	Whether a rule matches flags indicating the inner established status of a TCP connection.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches the flags.</li> <li><b>false</b>—Ignores the flags.</li> </ul>	Only the TCP inner protocol supports this column.
Counting	Whether to count the rule matches.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Counts the rule matches.</li> <li><b>false</b>—Does not count the rule matches (default).</li> </ul>	N/A
Logging	Whether to log rule match events.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Logs rule match events.</li> <li><b>false</b>—Does not log rule match events (default).</li> </ul>	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule.  When the <b>MatchOrder</b> column is <b>2</b> , you can modify only the comment for a rule.
GreValue	Config a gre value.	N/A	Hexadecimal string. Length: 1 to 8 characters. Value range: 0 to FFFFFFFF.	Only the GRE protocol supports this column.
Options	IP options.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Options.</li> <li><b>false</b>—Not options, default.</li> </ul>	Only when the ProtocolType value is 256, and then the table can support this column.
Fragment Type	Check fragment packet type.	N/A	Unsigned integer. Value range: 0 to 3. <ul style="list-style-type: none"> <li><b>0</b>—First-fragment.</li> <li><b>1</b>—Non-fragment.</li> <li><b>2</b>—Non-or-first-fragment.</li> <li><b>3</b>—Any-fragment.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Ttl	Whether a rule matches TTL.	Data structure	Members include: <ul style="list-style-type: none"> <li>TtlOp.</li> <li>TtlValue1.</li> <li>TtlValue2.</li> </ul>	N/A
TtlOp	TTL operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
TtlValue1	Start TTL value.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
TtlValue2	End TTL value.	N/A	Unsigned integer. Value range: 1 to 256.	When the TtlOp is 5, the value range is 1 to 255. Otherwise, it can only be 256. <b>The value 256 indicates that the end TTL value is not available.</b>
PktLength	Whether a rule matches packet length.	Data structure	Members include: <ul style="list-style-type: none"> <li>PktLengthOp.</li> <li>PktLengthValue1.</li> <li>PktLengthValue2.</li> </ul>	N/A
PktLength Op	Packet length operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
PktLength Value1	Start packet length value.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
PktLength Value2	End packet length value.	N/A	Unsigned integer. Value range: 0 to 65536.	When the PktLengthOp is 5, the value range is 0 to 65535. Otherwise, it can only be 65536. <b>The value 65536 indicates that the packet length value is not available.</b>

## ACL/IPv6AdvanceRules

This table contains information about IPv6 advanced ACL rules.

## Table description

Item	Description
Feature name	ACL
Table name	IPv6AdvanceRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 3000 to 3999.	You must create an ACL first before you create, merge, or replace rules for it.
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	If you set this column to 65535, the system automatically assigns a new rule ID. This rule ID is the nearest higher

Column name	Column description	Column type	Data type and restrictions	Remarks
				multiple of the numbering step to the current highest rule ID, starting from 0.
Action	Action on packets matching the rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Deny.</li> <li>2—Permit.</li> </ul>	You cannot specify an action when you remove or delete a rule. You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv6 protocols.	You cannot specify a protocol type when you remove or delete a rule. You must specify a protocol type when you replace a rule, or when you merge or create a rule that does not exist.
SrcAny	Whether a rule matches any source IPv6 addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any source IPv6 addresses (default).</li> <li><b>false</b>—Matches the specified source IPv6 address.</li> </ul>	This column must be configured together with the <b>SrcIPv6</b> column.
SrcIPv6	Source IPv6 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcIPv6Addr.</li> <li>SrcIPv6Prefix.</li> </ul>	This column must be configured together with the <b>SrcAny</b> column. The two members must both be specified.
SrcIPv6Addr	Source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the <b>SrcAny</b> column is <b>false</b> . It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcIPv6Prefix	Length of the source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the <b>SrcAny</b> column is <b>false</b> . It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	This column and the <b>SrcAny</b> column cannot both be configured.
DstAny	Whether a rule matches any destination IPv6 addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any destination IPv6 addresses (default).</li> <li><b>false</b>—Matches the specified destination IPv6 address.</li> </ul>	This column must be configured together with the <b>DstIPv6</b> column.

Column name	Column description	Column type	Data type and restrictions	Remarks
DstIPv6	Destination IPv6 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstIPv6Addr.</li> <li>DstIPv6Prefix.</li> </ul>	This column must be configured together with the <b>DstAny</b> column. The two members must both be specified.
DstIPv6Addr	Destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstIPv6Prefix	Length of the destination IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstObjectGroup	Destination object group name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	This column and the DstAny column cannot both be configured.
ECN	ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	N/A
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
FlowLabel	Flow label value in an IPv6 packet header.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
RoutingTypeAny	Whether a rule matches any types of routing header.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any types of routing header.</li> <li><b>false</b>—Matches the specified type of routing header (default).</li> </ul>	This column and the <b>RoutingTypeValue</b> column cannot both be configured.
RoutingTypeValue	Routing header type.	N/A	Unsigned integer. Value range: 0 to 255.	This column and the <b>RoutingTypeAny</b> column cannot both be configured.
SrcPort	Source port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcPortOp.</li> <li>SrcPortValue1.</li> <li>SrcPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column. The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—lt (lower than).</li> <li><b>2</b>—eq (equal to).</li> <li><b>3</b>—gt (greater than).</li> <li><b>4</b>—neq (not equal to).</li> <li><b>5</b>—range (inclusive range).</li> </ul>	N/A
SrcPortValue	Start source port.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
1			Value range: 0 to 65535.	
SrcPortValue 2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When SrcPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
DstPort	Destination port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>• DstPortOp.</li> <li>• DstPortValue1.</li> <li>• DstPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column.  The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—lt (lower than).</li> <li>• <b>2</b>—eq (equal to).</li> <li>• <b>3</b>—gt (greater than).</li> <li>• <b>4</b>—neq (not equal to).</li> <li>• <b>5</b>—range (inclusive range).</li> </ul>	N/A
DstPortValue 1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPortValue 2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When DstPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
TcpFlag	TCP flags.	Data structure.	Members include: <ul style="list-style-type: none"> <li>• ACK.</li> <li>• FIN.</li> <li>• PSH.</li> <li>• RST.</li> <li>• SYN.</li> <li>• URG.</li> </ul>	N/A
ACK	ACK flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—ACK flag is not set.</li> <li>• <b>1</b>—ACK flag is set.</li> </ul>	Only the TCP protocol supports this column.
FIN	FIN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—FIN flag is not set.</li> <li>• <b>1</b>—FIN flag is set.</li> </ul>	Only the TCP protocol supports this column.
PSH	PSH flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—PSH flag is not set.</li> <li>• <b>1</b>—PSH flag is set.</li> </ul>	Only the TCP protocol supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
RST	RST flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>0—RST flag is not set.</li> <li>1—RST flag is set.</li> </ul>	Only the TCP protocol supports this column.
SYN	SYN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>0—SYN flag is not set.</li> <li>1—SYN flag is set.</li> </ul>	Only the TCP protocol supports this column.
URG	URG flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>0—URG flag is not set.</li> <li>1—URG flag is set.</li> </ul>	Only the TCP protocol supports this column.
Established	Whether a rule matches flags indicating the established status of a TCP connection.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Matches the flags.</li> <li>false—Ignores the flags.</li> </ul>	Only the TCP protocol supports this column. On a router, the rule matches TCP connection packets with the ACK or RST flag set. On a switch, the availability and usage of this column depend on the device model. This column and the <b>TcpFlag</b> column cannot both be configured.
ICMP6	ICMPv6 messages.	N/A	Members include: <ul style="list-style-type: none"> <li>ICMP6Type.</li> <li>ICMP6Code.</li> </ul>	The members must both be specified.
ICMP6Type	Type of ICMPv6 messages.	N/A	Unsigned integer. Value range: 0 to 255.	Only the ICMPv6 protocol supports this column.
ICMP6Code	Code of ICMPv6 messages.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 indicates that no ICMPv6 message code is specified.	Only the ICMPv6 protocol supports this column.
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Matches only non-first fragments.</li> <li>false—Matches both fragments and non-fragments (default).</li> </ul>	N/A
HopTypeAny	Whether a rule matched any types of Hop-by-Hop Options header.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Matches any types of Hop-by-Hop Options header.</li> <li>false—Matches the specified type of Hop-by-Hop Options header (default).</li> </ul>	This column and the <b>HopTypeValue</b> column cannot both be configured.
HopTypeValu	Type of	N/A	Unsigned integer.	This column and the

Column name	Column description	Column type	Data type and restrictions	Remarks
e	Hop-by-Hop Options header.		Value range: 0 to 255.	<b>HopTypeAny</b> column cannot both be configured.
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 32 characters. The string must start with an English letter.	It cannot be the word <b>all</b> .
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
QoSLocalID	Local QoS ID.	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Counts the rule matches.</li> <li><b>false</b>—Does not count the rule matches (default).</li> </ul>	N/A
Logging	Whether to log rule match events.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Logs rule match events.</li> <li><b>false</b>—Does not log rule match events (default).</li> </ul>	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule.  When the <b>MatchOrder</b> column is <b>2</b> , you can modify only the comment for a rule.
GreValue	Config a gre value.	N/A	Hexadecimal string. Length: 1 to 8 characters. Value range: 0 to FFFFFFFF.	Only the GRE protocol supports this column.
Options	IP options.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Options.</li> <li><b>false</b>—Not options, default.</li> </ul>	Only when the ProtocolType value is 256, and then the table can supports this column.
FragmentType	Check fragment packet type.	N/A	Unsigned integer. Value range: 0 to 3. <ul style="list-style-type: none"> <li><b>0</b>—First-fragment.</li> <li><b>1</b>—Non-fragment.</li> <li><b>2</b>—Non-or-first-fragment.</li> <li><b>3</b>—Any-fragment.</li> </ul>	N/A
Ttl	Whether a rule matches TTL.	Data structure	Members include: <ul style="list-style-type: none"> <li>TtlOp.</li> <li>TtlValue1.</li> <li>TtlValue2.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TtlOp	TTL operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
TtlValue1	Start TTL value.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
TtlValue2	End TTL value.	N/A	Unsigned integer. Value range: 1 to 256.	When the TtlOp is 5, the value range is 1 to 255. Otherwise, it can only be 256. <b>The value 256 indicates that the end TTL value is not available.</b>
PktLength	Whether a rule matches packet length.	Data structure	Members include: <ul style="list-style-type: none"> <li>PktLengthOp.</li> <li>PktLengthValue1.</li> <li>PktLengthValue2.</li> </ul>	N/A
PktLengthOp	Packet length operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
PktLengthValue1	Start packet length value.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
PktLengthValue2	End packet length value.	N/A	Unsigned integer. Value range: 0 to 65536.	When the PktLengthOp is 5, the value range is 0 to 65535. Otherwise, it can only be 65536. <b>The value 65536 indicates that the packet length value is not available.</b>

## Table description

Item	Description
Feature name	ACL
Table name	IPv6NamedAdvanceRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupIndex	ACL name or number.	Index	String. Length: 1 to 63 characters. <ul style="list-style-type: none"> <li><b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li> <li><b>ACL number:</b> String of digits in the range of 3000 to 3999.</li> </ul>	You must create an ACL first before you create, merge, or replace rules for it.
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	If you set this column to 65535, the system automatically assigns a new rule ID. This rule ID is the nearest higher multiple of the numbering step to the current highest

Column name	Column description	Column type	Data type and restrictions	Remarks
				rule ID, starting from 0.
Action	Action on packets matching the rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Deny.</li> <li>2—Permit.</li> </ul>	You cannot specify an action when you remove or delete a rule.  You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv6 protocols.	You cannot specify a protocol type when you remove or delete a rule.  You must specify a protocol type when you replace a rule, or when you merge or create a rule that does not exist.
SrcAny	Whether a rule matches any source IPv6 addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any source IPv6 addresses (default).</li> <li><b>false</b>—Matches the specified source IPv6 address.</li> </ul>	This column must be configured together with the <b>SrcIPv6</b> column.
SrcIPv6	Source IPv6 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcIPv6Addr.</li> <li>SrcIPv6Prefix.</li> </ul>	This column must be configured together with the <b>SrcAny</b> column.  The two members must both be specified.
SrcIPv6Addr	Source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.  This column is available when the <b>SrcAny</b> column is <b>false</b> .  It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcIPv6Prefix	Length of the source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the <b>SrcAny</b> column is <b>false</b> .  It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	This column and the <b>SrcAny</b> column cannot both be configured.
DstAny	Whether a rule matches any destination IPv6 addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any destination IPv6 addresses (default).</li> <li><b>false</b>—Matches the specified destination IPv6 address.</li> </ul>	This column must be configured together with the <b>DstIPv6</b> column.

Column name	Column description	Column type	Data type and restrictions	Remarks
DstIPv6	Destination IPv6 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstIPv6Addr.</li> <li>DstIPv6Prefix.</li> </ul>	This column must be configured together with the <b>DstAny</b> column. The two members must both be specified.
DstIPv6Addr	Destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstIPv6Prefix	Length of the destination IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstObjectGroup	Destination object group name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	This column and the DstAny column cannot both be configured.
ECN	ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	N/A
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
FlowLabel	Flow label value in an IPv6 packet header.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
RoutingTypeAny	Whether a rule matches any types of routing header.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any types of routing header.</li> <li><b>false</b>—Matches the specified type of routing header (default).</li> </ul>	This column and the <b>RoutingTypeValue</b> column cannot both be configured.
RoutingTypeValue	Routing header type.	N/A	Unsigned integer. Value range: 0 to 255.	This column and the <b>RoutingTypeAny</b> column cannot both be configured.
SrcPort	Source port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcPortOp.</li> <li>SrcPortValue1.</li> <li>SrcPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column. The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—lt (lower than).</li> <li><b>2</b>—eq (equal to).</li> <li><b>3</b>—gt (greater than).</li> <li><b>4</b>—neq (not equal to).</li> <li><b>5</b>—range (inclusive range).</li> </ul>	N/A
SrcPortValue	Start source port.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
1			Value range: 0 to 65535.	
SrcPortValue 2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When SrcPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
DstPort	Destination port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstPortOp.</li> <li>DstPortValue1.</li> <li>DstPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column.  The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—lt (lower than).</li> <li><b>2</b>—eq (equal to).</li> <li><b>3</b>—gt (greater than).</li> <li><b>4</b>—neq (not equal to).</li> <li><b>5</b>—range (inclusive range).</li> </ul>	N/A
DstPortValue 1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPortValue 2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When DstPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
TcpFlag	TCP flags.	Data structure.	Members include: <ul style="list-style-type: none"> <li>ACK.</li> <li>FIN.</li> <li>PSH.</li> <li>RST.</li> <li>SYN.</li> <li>URG.</li> </ul>	N/A
ACK	ACK flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li><b>0</b>—ACK flag is not set.</li> <li><b>1</b>—ACK flag is set.</li> </ul>	Only the TCP protocol supports this column.
FIN	FIN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li><b>0</b>—FIN flag is not set.</li> <li><b>1</b>—FIN flag is set.</li> </ul>	Only the TCP protocol supports this column.
PSH	PSH flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li><b>0</b>—PSH flag is not set.</li> <li><b>1</b>—PSH flag is set.</li> </ul>	Only the TCP protocol supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
RST	RST flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li><b>0</b>—RST flag is not set.</li> <li><b>1</b>—RST flag is set.</li> </ul>	Only the TCP protocol supports this column.
SYN	SYN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li><b>0</b>—SYN flag is not set.</li> <li><b>1</b>—SYN flag is set.</li> </ul>	Only the TCP protocol supports this column.
URG	URG flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li><b>0</b>—URG flag is not set.</li> <li><b>1</b>—URG flag is set.</li> </ul>	Only the TCP protocol supports this column.
Established	Whether a rule matches flags indicating the established status of a TCP connection.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches the flags.</li> <li><b>false</b>—Ignores the flags.</li> </ul>	Only the TCP protocol supports this column.  On a router, the rule matches TCP connection packets with the ACK or RST flag set. On a switch, the availability and usage of this column depend on the device model.  This column and the <b>TcpFlag</b> column cannot both be configured.
ICMP6	ICMPv6 messages.	N/A	Members include: <ul style="list-style-type: none"> <li>ICMP6Type.</li> <li>ICMP6Code.</li> </ul>	The members must both be specified.
ICMP6Type	Type of ICMPv6 messages.	N/A	Unsigned integer. Value range: 0 to 255.	Only the ICMPv6 protocol supports this column.
ICMP6Code	Code of ICMPv6 messages.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 indicates that no ICMPv6 message code is specified.	Only the ICMPv6 protocol supports this column.
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches only non-first fragments.</li> <li><b>false</b>—Matches both fragments and non-fragments (default).</li> </ul>	N/A
HopTypeAny	Whether a rule matched any types of Hop-by-Hop Options header.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any types of Hop-by-Hop Options header.</li> <li><b>false</b>—Matches the specified type of Hop-by-Hop Options header (default).</li> </ul>	This column and the <b>HopTypeValue</b> column cannot both be configured.
HopTypeValu	Type of	N/A	Unsigned integer.	This column and the

Column name	Column description	Column type	Data type and restrictions	Remarks
e	Hop-by-Hop Options header.		Value range: 0 to 255.	<b>HopTypeAny</b> column cannot both be configured.
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 32 characters. The string must start with an English letter.	It cannot be the word <b>all</b> .
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
QoSLocalID	Local QoS ID.	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Counts the rule matches.</li> <li><b>false</b>—Does not count the rule matches (default).</li> </ul>	N/A
Logging	Whether to log rule match events.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Logs rule match events.</li> <li><b>false</b>—Does not log rule match events (default).</li> </ul>	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule.  When the <b>MatchOrder</b> column is <b>2</b> , you can modify only the comment for a rule.
GreValue	Config a gre value.	N/A	Hexadecimal string. Length: 1 to 8 characters. Value range: 0 to FFFFFFFF.	Only the GRE protocol supports this column.
Options	IP options.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Options.</li> <li><b>false</b>—Not options, default.</li> </ul>	Only when the ProtocolType value is 256, and then the table can supports this column.
FragmentType	Check fragment packet type.	N/A	Unsigned integer. Value range: 0 to 3. <ul style="list-style-type: none"> <li><b>0</b>—First-fragment.</li> <li><b>1</b>—Non-fragment.</li> <li><b>2</b>—Non-or-first-fragment.</li> <li><b>3</b>—Any-fragment.</li> </ul>	N/A
Ttl	Whether a rule matches TTL.	Data structure	Members include: <ul style="list-style-type: none"> <li>TtlOp.</li> <li>TtlValue1.</li> <li>TtlValue2.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TtlOp	TTL operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
TtlValue1	Start TTL value.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
TtlValue2	End TTL value.	N/A	Unsigned integer. Value range: 1 to 256.	When the TtlOp is 5, the value range is 1 to 255. Otherwise, it can only be 256. <b>The value 256 indicates that the end TTL value is not available.</b>
PktLength	Whether a rule matches packet length.	Data structure	Members include: <ul style="list-style-type: none"> <li>PktLengthOp.</li> <li>PktLengthValue1.</li> <li>PktLengthValue2.</li> </ul>	N/A
PktLengthOp	Packet length operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
PktLengthValue1	Start packet length value.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
PktLengthValue2	End packet length value.	N/A	Unsigned integer. Value range: 0 to 65536.	When the PktLengthOp is 5, the value range is 0 to 65535. Otherwise, it can only be 65536. <b>The value 65536 indicates that the packet length value is not available.</b>

## ACL/MACRules

This table contains information about Ethernet frame header ACL rules.

## Table description

Item	Description
Feature name	ACL
Table name	MACRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

Support for row creation and deletion	Yes
---------------------------------------	-----

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 4000 to 4999.	You must create an ACL first before you create, merge, or replace rules for it.
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	If you set this column to 65535, the system automatically assigns a new rule ID. This rule ID is the nearest higher multiple of the numbering step to the current highest rule ID, starting from 0.
Action	Action on packets matching the rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Deny.</li> <li>2—Permit.</li> </ul>	You cannot specify an action when you remove or delete a rule.  You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
SrcMACAddr	Information about the source MAC address.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcMACAddress.</li> <li>SrcMACMask.</li> </ul>	The VXLAN encapsulation supports this column.  The members must both be specified.
SrcMACAddress	Source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
SrcMACMask	Mask of the source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff-ff.
DstMACAddr	Information about the destination MAC address.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstMACAddress.</li> <li>DstMACMask.</li> </ul>	The VXLAN encapsulation supports this column.  The members must both be specified.
DstMACAddress	Destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
DstMACMask	Mask of the destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff-ff.
COS	802.1p priority.	N/A	Unsigned integer. Value range: 0 to 7.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Protocol	Link layer protocol.	Data structure	Members include: <ul style="list-style-type: none"> <li>ProtocolType.</li> <li>ProtocolTypeMask.</li> </ul>	The VXLAN encapsulation supports this column. The members must both be specified. This column and the <b>LSAP</b> column cannot both be configured.
ProtocolType	Type of the link layer protocol.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	Values of link layer protocol types are assigned by IANA.
ProtocolTypeMask	Mask of the link layer protocol type.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
LSAP	LSAP.	Data structure	Members include: <ul style="list-style-type: none"> <li>LSAPType.</li> <li>LSAPTypeMask.</li> </ul>	The members must both be specified. This column and the <b>Protocol</b> column cannot both be configured.
LSAPType	Type of LSAP.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
LSAPTypeMask	Mask of the LSAP type.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
EncapType	Encapsulation type.	N/A	Members include: <ul style="list-style-type: none"> <li>VXLAN encapsulation.</li> <li>GRE encapsulation.</li> <li>IPINIP encapsulation.</li> </ul>	N/A
VxlanID	VXLAN ID.	N/A	Unsigned integer Value range: 0 to 16777215	Only the VXLAN encapsulation supports this column.
InSrcMACAddress	Information about the inner source MAC address.	Data structure	Members include: <ul style="list-style-type: none"> <li>InSrcMACAddress.</li> <li>InSrcMACMask.</li> </ul>	Only the VXLAN encapsulation supports this column. The members must both be specified.
InSrcMACAddress	Inner source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
InSrcMACMask	Mask of the inner source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff-ff.

Column name	Column description	Column type	Data type and restrictions	Remarks
InDstMACAddr	Information about the inner destination MAC address.	Data structure	Members include: <ul style="list-style-type: none"> <li>InDstMACAddress.</li> <li>InDstMACMask.</li> </ul>	Only the VXLAN encapsulation supports this column.  The members must both be specified.
InDstMACAddress	Inner destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
InDstMACMask	Mask of the inner destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff-ff.
InProtocol	Inner link layer protocol.	Data structure	Members include: <ul style="list-style-type: none"> <li>ProtocolType.</li> <li>ProtocolTypeMask.</li> </ul>	Only the VXLAN encapsulation supports this column.  The members must both be specified.
InProtocolType	Type of the inner link layer protocol.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	Values of inner link layer protocol types are assigned by IANA.
InProtocolTypeMask	Mask of the inner link layer protocol type.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 32 characters. The string must start with an English letter.	It cannot be the word <b>all</b> .
Counting	Whether to count the rule matches.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Counts the rule matches.</li> <li><b>false</b>—Does not count the rule matches (default).</li> </ul>	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule.  When the <b>MatchOrder</b> column is <b>2</b> , you can modify only the comment for a rule.

LSAPTypeMask	Mask of the LSAP type.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
EncapType	Encapsulation type.	N/A	Members include: <ul style="list-style-type: none"> <li>VXLAN encapsulation.</li> <li>GRE encapsulation.</li> <li>IPINIP encapsulation.</li> </ul>	N/A
VxlanID	VXLAN ID.	N/A	Unsigned integer	Only the VXLAN encapsulation supports

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 0 to 16777215	this column.
InSrcMACAddr	Information about the inner source MAC address.	Data structure	Members include: <ul style="list-style-type: none"> <li>InSrcMACAddress.</li> <li>InSrcMACMask.</li> </ul>	Only the VXLAN encapsulation supports this column.  The members must both be specified.
InSrcMACAddress	Inner source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
InSrcMACMask	Mask of the inner source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff-ff.
InDstMACAddr	Information about the inner destination MAC address.	Data structure	Members include: <ul style="list-style-type: none"> <li>InDstMACAddress.</li> <li>InDstMACMask.</li> </ul>	Only the VXLAN encapsulation supports this column.  The members must both be specified.
InDstMACAddress	Inner destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
InDstMACMask	Mask of the inner destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff-ff.
InProtocol	Inner link layer protocol.	Data structure	Members include: <ul style="list-style-type: none"> <li>ProtocolType.</li> <li>ProtocolTypeMask.</li> </ul>	Only the VXLAN encapsulation supports this column.  The members must both be specified.
InProtocolType	Type of the inner link layer protocol.	N/A	Hexadecimal string.  Length: 1 to 4 characters.  Value range: 0 to FFFF.	Values of inner link layer protocol types are assigned by IANA.
InProtocolTypeMask	Mask of the inner link layer protocol type.	N/A	Hexadecimal string.  Length: 1 to 4 characters.  Value range: 0 to FFFF.	N/A
TimeRange	Time range.	N/A	String, case-insensitive.	It cannot be the word <b>all</b> .

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 32 characters. The string must start with an English letter.	
Counting	Whether to count the rule matches.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Counts the rule matches.</li> <li><b>false</b>—Does not count the rule matches (default).</li> </ul>	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule.  When the <b>MatchOrder</b> column is <b>2</b> , you can modify only the comment for a rule.

## ACL/PfilterIgnoreAction

This table contains information about the ignoring packet filter permit action.

### XML structure

```

<ACL>
  <PfilterIgnoreAction>
    <IgnoreAction></IgnoreAction>
  </PfilterIgnoreAction>
</ACL>

```

### Table description

Item	Description
Feature name	ACL
Table name	PfilterIgnoreAction
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IgnoreAction	Whether to	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	ignore the packet filter permit action.		<ul style="list-style-type: none"> <li>• <b>true</b>—Ignore the packet filter permit action.</li> <li>• <b>false</b>—Not ignore the packet filter permit action (default).</li> </ul>	

## ACL/PfilterDefAction

This table contains information about the default global packet filter actions.

### XML structure

```

<ACL>
  <PfilterDefAction>
    <DefaultAction></DefaultAction>
  </PfilterDefAction>
</ACL>

```

### Table description

Item	Description

Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 5000 to 5999.	You must create an ACL first before you create, merge, or replace rules for it.
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65535. The value 65535 is an invalid rule ID.	If you set this column to 65535, the system automatically assigns a new rule ID. This rule ID is the nearest higher multiple of the numbering step to the current highest rule ID, starting from 0.
Action	Action on packets matching the	N/A	Enumeration: • 1—Deny.	You cannot specify an action when you remove or delete a rule.

Column name	Column description	Column type	Data type and restrictions	Remarks
	rule.		<ul style="list-style-type: none"> <li>2—Permit.</li> </ul>	You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
L2Rule	Specifies that the offset is relative to the beginning of the Layer 2 frame header.	Data structure	Members include: <ul style="list-style-type: none"> <li>L2RuleString.</li> <li>L2RuleMask.</li> <li>L2Offset.</li> </ul>	The members must all be specified.
L2RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number.
L2RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number, and equal to that of the match pattern string.
L2Offset	Offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
IPv4Rule	Specifies that the offset is relative to the beginning of the IPv4 header.	Data structure	Members include: <ul style="list-style-type: none"> <li>IPv4RuleString.</li> <li>IPv4RuleMask.</li> <li>IPv4Offset.</li> </ul>	The members must all be specified.
IPv4RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number.
IPv4RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number, and equal to that of the match pattern string.
IPv4Offset	Offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
IPv6Rule	Specifies that the offset is relative to the beginning of the IPv6 header.	Data structure	Members include: <ul style="list-style-type: none"> <li>IPv6RuleString.</li> <li>IPv6RuleMask.</li> <li>IPv6Offset.</li> </ul>	The members must all be specified.
IPv6RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number.
IPv6RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number, and equal to that of the match pattern string.
IPv6Offset	Specifies an offset in bytes after which the	N/A	Unsigned integer. Value range: 0 to the	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	match operation begins.		device-specific upper limit.	
L4Rule	Specifies that the offset is relative to the beginning of the Layer 4 header.	Data structure	Members include: <ul style="list-style-type: none"> <li>L4RuleString.</li> <li>L4RuleMask.</li> <li>L4Offset.</li> </ul>	The members must all be specified.
L4RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number.
L4RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number, and equal to that of the match pattern string.
L4Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
L5Rule	Specifies that the offset is relative to the beginning of the payload.	Data structure	Members include: <ul style="list-style-type: none"> <li>L5RuleString.</li> <li>L5RuleMask.</li> <li>L5Offset.</li> </ul>	This column is available when the ProtocolType is specified. The members must all be specified.
L5RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number.
L5RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number, and equal to that of the match pattern string.
L5Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
UdfFormat	User-defined packet format.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—IFA packet.</li> <li>2—Raw ip packet.</li> <li>3—VXLAN packet.</li> </ul>	This column is available when the ProtocolType is specified.
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv4 protocols.	You cannot specify a protocol type when you remove or delete a rule.
IPv6ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv6 protocols.	You cannot specify a protocol type when you remove or delete a rule.
SrcAny	Whether a rule matches any	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Matches any</li> </ul>	This column is available when the ProtocolType is

Column name	Column description	Column type	Data type and restrictions	Remarks
	source IP addresses.		source IP addresses (default). <ul style="list-style-type: none"> <li><b>false</b>—Matches the specified source IP address.</li> </ul>	specified. This column must be configured together with the <b>SrcIPv4</b> or <b>SrcIPv6</b> column.
SrcIPv4	Source IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcIPv4Addr.</li> <li>SrcIPv4Wildcard.</li> </ul>	This column must be configured together with the <b>SrcAny</b> column. The two members must both be specified.
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the <b>SrcAny</b> column is <b>false</b> . It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the <b>SrcAny</b> column is <b>false</b> . It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcIPv6	Source IPv6 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcIPv6Addr.</li> <li>SrcIPv6Prefix.</li> </ul>	This column must be configured together with the <b>SrcAny</b> column. The two members must both be specified.
SrcIPv6Addr	Source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the <b>SrcAny</b> column is <b>false</b> . It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcIPv6Prefix	Length of the source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the <b>SrcAny</b> column is <b>false</b> . It must be empty when the <b>SrcAny</b> column is <b>true</b> .
DstAny	Whether a rule matches any destination IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any destination IP addresses (default).</li> <li><b>false</b>—Matches the specified destination IP address.</li> </ul>	This column is available when the ProtocolType is specified. This column must be configured together with the <b>DstIPv4</b> or <b>DstIPv6</b> column.
DstIPv4	Destination IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstIPv4Addr.</li> <li>DstIPv4Wildcard.</li> </ul>	This column must be configured together with the <b>DstAny</b> column. The two members must both be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
DstIPv4Addr	Destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstIPv4Wildcard	Wildcard mask for the destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstIPv6	Destination IPv6 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstIPv6Addr.</li> <li>DstIPv6Prefix.</li> </ul>	This column must be configured together with the <b>DstAny</b> column. The two members must both be specified.
DstIPv6Addr	Destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstIPv6Prefix	Length of the destination IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
SrcPort	Source port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcPortOp.</li> <li>SrcPortValue1.</li> <li>SrcPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column. The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
SrcPortValue 1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SrcPortValue 2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When SrcPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.

Column name	Column description	Column type	Data type and restrictions	Remarks
DstPort	Destination port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstPortOp.</li> <li>DstPortValue1.</li> <li>DstPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column. The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
DstPortValue 1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPortValue 2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When DstPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	This column is available when the ProtocolType is specified.
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 32 characters. The string must start with an English letter.	It cannot be the word <b>all</b> .
Counting	Whether to count the rule matches.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Counts the rule matches.</li> <li><b>false</b>—Does not count the rule matches (default).</li> </ul>	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule.

You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
L2Rule	Specifies that the offset is relative to the beginning of the Layer 2 frame header.	Data structure	Members include: <ul style="list-style-type: none"> <li>L2RuleString.</li> <li>L2RuleMask.</li> <li>L2Offset.</li> </ul>	The members must all be specified.
L2RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number.
L2RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number, and equal to that of the match pattern string.
L2Offset	Offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
IPv4Rule	Specifies that the offset is relative to the beginning of the IPv4 header.	Data structure	Members include: <ul style="list-style-type: none"> <li>IPv4RuleString.</li> <li>IPv4RuleMask.</li> <li>IPv4Offset.</li> </ul>	The members must all be specified.
IPv4RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number.
IPv4RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number, and equal to that of the match pattern string.
IPv4Offset	Offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
IPv6Rule	Specifies that the offset is relative to the beginning of the IPv6 header.	Data structure	Members include: <ul style="list-style-type: none"> <li>IPv6RuleString.</li> <li>IPv6RuleMask.</li> <li>IPv6Offset.</li> </ul>	The members must all be specified.
IPv6RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number.
IPv6RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number, and equal to that of the match pattern string.

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
L4Rule	Specifies that the offset is relative to the beginning of the Layer 4 header.	Data structure	Members include: <ul style="list-style-type: none"> <li>L4RuleString.</li> <li>L4RuleMask.</li> <li>L4Offset.</li> </ul>	The members must all be specified.
L4RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number.
L4RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number, and equal to that of the match pattern string.
L4Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
L5Rule	Specifies that the offset is relative to the beginning of the payload.	Data structure	Members include: <ul style="list-style-type: none"> <li>L5RuleString.</li> <li>L5RuleMask.</li> <li>L5Offset.</li> </ul>	This column is available when the ProtocolType is specified.  The members must all be specified.
L5RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number.
L5RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	The length must be an even number, and equal to that of the match pattern string.
L5Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
UdfFormat	User-defined packet format.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—IFA packet.</li> <li>2—Raw ip packet.</li> <li>3—VXLAN packet.</li> </ul>	This column is available when the ProtocolType is specified.
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256.	You cannot specify a protocol type when you remove or delete a rule.

Column name	Column description	Column type	Data type and restrictions	Remarks
			The value 256 represents all IPv4 protocols.	
IPv6ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256.  The value 256 represents all IPv6 protocols.	You cannot specify a protocol type when you remove or delete a rule.
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any source IP addresses (default).</li> <li><b>false</b>—Matches the specified source IP address.</li> </ul>	This column is available when the ProtocolType is specified.  This column must be configured together with the <b>SrcIPv4</b> or <b>SrcIPv6</b> column.
SrcIPv4	Source IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcIPv4Addr.</li> <li>SrcIPv4Wildcard.</li> </ul>	This column must be configured together with the <b>SrcAny</b> column.  The two members must both be specified.
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.  This column is available when the <b>SrcAny</b> column is <b>false</b> .  It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0.  This column is available when the <b>SrcAny</b> column is <b>false</b> .  It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcIPv6	Source IPv6 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcIPv6Addr.</li> </ul> SrcIPv6Prefix.	This column must be configured together with the <b>SrcAny</b> column.  The two members must both be specified.
SrcIPv6Addr	Source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.  This column is available when the <b>SrcAny</b> column is <b>false</b> .  It must be empty when the

Column name	Column description	Column type	Data type and restrictions	Remarks
				<b>SrcAny</b> column is <b>true</b> .
SrcIPv6Prefix	Length of the source IPv6 address prefix.	N/A	Unsigned integer.  Value range: 1 to 128.	This column is available when the <b>SrcAny</b> column is <b>false</b> .  It must be empty when the <b>SrcAny</b> column is <b>true</b> .
DstAny	Whether a rule matches any destination IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any destination IP addresses (default).</li> <li><b>false</b>—Matches the specified destination IP address.</li> </ul>	This column is available when the ProtocolType is specified.  This column must be configured together with the <b>DstIPv4</b> or <b>DstIPv6</b> column.
DstIPv4	Destination IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstIPv4Addr.</li> <li>DstIPv4Wildcard.</li> </ul>	This column must be configured together with the <b>DstAny</b> column.  The two members must both be specified.
DstIPv4Addr	Destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.  This column is available when the <b>DstAny</b> column is <b>false</b> .  It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstIPv4Wildcard	Wildcard mask for the destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0.  This column is available when the <b>DstAny</b> column is <b>false</b> .  It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstIPv6	Destination IPv6 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstIPv6Addr.</li> </ul> DstIPv6Prefix.	This column must be configured together with the <b>DstAny</b> column.  The two members must both be specified.
DstIPv6Addr	Destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.  This column is available when the <b>DstAny</b> column is <b>false</b> .  It must be empty when the

Column name	Column description	Column type	Data type and restrictions	Remarks
				<b>DstAny</b> column is <b>true</b> .
DstIPv6Prefix	Length of the destination IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the <b>DstAny</b> column is <b>false</b> .  It must be empty when the <b>DstAny</b> column is <b>true</b> .
SrcPort	Source port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcPortOp.</li> <li>SrcPortValue1.</li> <li>SrcPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column.  The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
SrcPortValue 1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SrcPortValue 2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When SrcPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
DstPort	Destination port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstPortOp.</li> <li>DstPortValue1.</li> <li>DstPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column.  The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
DstPortValue 1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DstPortValue 2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When DstPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	This column is available when the ProtocolType is specified.
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 32 characters. The string must start with an English letter.	It cannot be the word <b>all</b> .
Counting	Whether to count the rule matches.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Counts the rule matches.</li> <li><b>false</b>—Does not count the rule matches (default).</li> </ul>	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	A comment can only be configured for an existing rule.

## ACL/ZonePairPfilterApply

This table contains information about packet filter application for zone-pair.

### XML structure

```

<ACL>
  <ZonePairPfilterApply>
    <Pfilter>
      <SrcZone></SrcZone>
      <DestZone></DestZone>
      <AclType></AclType>
      <AclGroup></AclGroup>
    </Pfilter>
  </ZonePairPfilterApply>
</ACL>

```

### Table description

Item	Description
Feature name	ACL

Table name	ZonePairPfilterApply
Table type	Multi-instance table
Row name	Pfilter
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcZone	Name of the source zone.	Index	String, case insensitive. Length: 1 to 31 characters.	Cannot contain midline( - ).
DestZone	Name of the destination zone.	Index	String, case insensitive. Length: 1 to 31 characters.	Cannot contain midline( - ).
AcIType	ACL type.	Index	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4 ACL.</li> <li>2—IPv6 ACL.</li> <li>3—Ethernet frame header ACL.</li> </ul>	Type 3 is not supported in the current software version, and is reserved for future support.
AcIGroup	ACL name or number.	Index	<ul style="list-style-type: none"> <li><b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li> <li><b>ACL number:</b> An unsigned integer in the range of 2000 to 5999.</li> </ul>	<p>An ACL name must start with an English letter and cannot be all.</p> <p>The value range depends on the AppAcIType column.</p> <ul style="list-style-type: none"> <li>2000 to 5999 if AppAcIType is 1.</li> <li>2000 to 3999 if AppAcIType is 2.</li> </ul>

# ACL

## ACL/Base

This table contains ACL base table.

### XML structure

```
<ACL>
  <Base>
    <ProcessingStatus></ProcessingStatus>
  </Base>
</ACL>
```

### Table description

Item	Description
Feature name	ACL
Table name	Base
Table type	Single-instance table
Row name	N/A
Restrictions	None.

### Columns

Column name	Column description	Column type	Data type and restrictions
ProcessingStatus	ACL processing status	N/A	Enumeration: <ul style="list-style-type: none"><li>1—Processing.</li><li>2—Idle.</li></ul>

## ACL/Capability

This table contains ACL capability information, and it is used to obtain custom ACL parameters.

### XML structure

```
<ACL>
  <Capability>
    <UserAclL2>
      <L2MaxOffset></L2MaxOffset>
      <L2MaxLen></L2MaxLen>
    </UserAclL2>
  </Capability>
</ACL>
```

```

<UserAclL4>
  <L4MaxOffset></L4MaxOffset>
  <L4MaxLen></L4MaxLen>
</UserAclL4>
<UserAclIPv4>
  <IPv4MaxOffset></IPv4MaxOffset>
  <IPv4MaxLen></IPv4MaxLen>
</UserAclIPv4>
<UserAclIPv6>
  <IPv6MaxOffset></IPv6MaxOffset>
  <IPv6MaxLen></IPv6MaxLen>
</UserAclIPv6>
</Capability>
</ACL>

```

## Table description

Item	Description
Feature name	ACL
Table name	Capability
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
UserAclL2	Custom Layer 2 frame header parameters for user-defined ACL rules	Data structure	Members include: <ul style="list-style-type: none"> <li>L2MaxOffset.</li> <li>L2MaxLen.</li> </ul>
L2MaxOffset	Maximum offset relative to the beginning of the Layer 2 frame header	N/A	Unsigned integer. Value range: 0 to 254.
L2MaxLen	Maximum length of the match pattern string	N/A	Unsigned integer. Value range: 0 to 254.
UserAclL4	Custom Layer 4 header parameters for user-defined ACL rules	Data structure	Members include: <ul style="list-style-type: none"> <li>L4MaxOffset.</li> <li>L4MaxLen.</li> </ul>
L4MaxOffset	Maximum offset relative to the beginning of the Layer 4 header	N/A	Unsigned integer. Value range: 0 to 254.
L4MaxLen	Maximum length of the match pattern string	N/A	Unsigned integer. Value range: 0 to 254.

Column name	Column description	Column type	Data type and restrictions
UserAclIPv4	Custom IPv4 header parameters for user-defined ACL rules	Data structure	Members include: <ul style="list-style-type: none"> <li>IPv4MaxOffset.</li> <li>IPv4MaxLen.</li> </ul>
IPv4MaxOffset	Maximum offset relative to the beginning of the IPv4 header	N/A	Unsigned integer. Value range: 0 to 254.
IPv4MaxLen	Maximum length of the match pattern string	N/A	Unsigned integer. Value range: 0 to 254.
UserAclIPv6	Custom IPv6 header parameters for user-defined ACL rules	Data structure	Members include: <ul style="list-style-type: none"> <li>IPv6MaxOffset.</li> <li>IPv6MaxLen.</li> </ul>
IPv6MaxOffset	Maximum offset relative to the beginning of the IPv6 header	N/A	Unsigned integer. Value range: 0 to 254.
IPv6MaxLen	Maximum length of the match pattern string	N/A	Unsigned integer. Value range: 0 to 254.

## ACL/Groups

This table displays ACL information.

## XML structure

```

<ACL>
  <Groups>
    <Group>
      <GroupType></GroupType>
      <GroupID></GroupID>
      <MatchOrder></MatchOrder>
      <Step></Step>
      <Name></Name>
      <Description></Description>
      <RuleNum></RuleNum>
    </Group>
  </Groups>
</ACL>

```

## Table description

Item	Description
Feature name	ACL
Table name	Groups
Table type	Multi-instance table
Row name	Group

Restrictions	None
--------------	------

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupType	ACL type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4.</li> <li>2—IPv6. 3—MAC.</li> <li>4—User-defined.</li> </ul>	N/A
GroupID	ACL number	Index	Unsigned integer. Value range: 2000 to 5999.	The value range depends on the GroupType column. <ul style="list-style-type: none"> <li>2000 to 5999 if GroupType is 1. <ul style="list-style-type: none"> <li>IPv4 basic ACL: 2000 to 2999.</li> <li>IPv4 advanced ACL: 3000 to 3999.</li> <li>Ethernet frame header ACL: 4000 to 4999.</li> <li>User-defined ACL: 5000 to 5999.</li> </ul> </li> <li>2000 to 3999 if GroupType is 2. <ul style="list-style-type: none"> <li>IPv6 basic ACL: 2000 to 2999.</li> <li>IPv6 advanced ACL: 3000 to 3999.</li> </ul> </li> </ul>
MatchOrder	Order in which the rules are sorted	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Config. In this order, rules are sorted in ascending order of rule ID.</li> <li>2—Auto. In this order, rules are sorted in depth-first order.</li> </ul>	N/A
Step	ACL rule numbering step	N/A	Unsigned integer. Value range: 1 to 20.	N/A
Name	ACL name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	ACL description	N/A	String, case-sensitive. Length: 1 to 127 characters.	By default, an ACL has no description.
RuleNum	Number of rules in the ACL	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

# ACL/NamedGroups

This table displays named ACL information.

## XML structure

```
<ACL>
  <NamedGroups>
    <Group>
      <GroupType></GroupType>
      <GroupCategory></GroupCategory>
      <GroupIndex></GroupIndex>
      <MatchOrder></MatchOrder>
      <Step></Step>
      <Name></Name>
      <Description></Description>
      <RuleNum></RuleNum>
      <GroupNum></GroupNum>
    </Group>
  </NamedGroups>
</ACL>
```

## Table description

Item	Description
Feature name	ACL
Table name	NamedGroups
Table type	Multi-instance table
Row name	Group
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupType	ACL type	Index	Enumeration: <ul style="list-style-type: none"><li>• 1—IPv4.</li><li>• 2—IPv6.</li><li>• 3—MAC.</li><li>• 4—User-defined.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupCategory	ACL Category	Index	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—invalid.</li> <li>• <b>1</b>—basic.</li> <li>• <b>2</b>—advanced.</li> </ul>	The value range depends on the GroupType column. <ul style="list-style-type: none"> <li>• 1 to 2 if GroupType is <b>1 or 2</b>. <ul style="list-style-type: none"> <li>◦ basic ACL: 1.</li> <li>◦ advanced ACL: 2.</li> </ul> </li> <li>• 0 if GroupType is 3 or 4.</li> </ul>
GroupIndex	ACL name or number	Index	String. Length: 1 to 63 characters. <ul style="list-style-type: none"> <li>• <b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li> <li>• <b>ACL number:</b> String of digits in the range of 2000 to 5999.</li> </ul>	The GroupIndex cannot be specified as an ACL name in GET operations for an ACL created by specifying both a number and a name. The value range depends on the GroupType column. <ul style="list-style-type: none"> <li>• 2000 to 3999 if GroupType is <b>1</b>. <ul style="list-style-type: none"> <li>◦ IPv4 basic ACL: 2000 to 2999.</li> <li>◦ IPv4 advanced ACL: 3000 to 3999.</li> </ul> </li> <li>• 2000 to 3999 if GroupType is <b>2</b>. <ul style="list-style-type: none"> <li>◦ IPv6 basic ACL: 2000 to 2999.</li> <li>◦ IPv6 advanced ACL: 3000 to 3999.</li> </ul> </li> <li>• 4000 to 4999 if GroupType is <b>3</b>. <ul style="list-style-type: none"> <li>◦ Ethernet frame header ACL: 4000 to 4999.</li> </ul> </li> <li>• 5000 to 5999 if GroupType is <b>4</b>.</li> </ul> User-defined ACL: 5000 to 5999.
MatchOrder	Order in which the rules are sorted	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—Config. In this order, rules are sorted in ascending order of rule ID.</li> <li>• <b>2</b>—Auto. In this order, rules are sorted in depth-first order.</li> </ul>	N/A
Step	ACL rule numbering step	N/A	Unsigned integer. Value range: 1 to 20.	N/A
Name	ACL name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Description	ACL description	N/A	String, case-sensitive. Length: 1 to 127 characters.	By default, an ACL has no description.
RuleNum	Number of rules in the ACL	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
GroupNum	Number of ACLs.	N/A	Unsigned integer.	N/A

## ACL/Intervals

This table contains ACL interval information.

## XML structure

```

<ACL>
  <Intervals>
    <Interval>
      <IntervalType></IntervalType>
      <IntervalValue></IntervalValue>
    </Interval>
  </Intervals>
</ACL>

```

## Table description

Item	Description
Feature name	ACL
Table name	Intervals
Table type	Multi-instance table
Row name	Interval
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IntervalType	The type of the interval	Index	Enumeration: <ul style="list-style-type: none"> <li>1—logging.</li> <li>2—trap.</li> </ul>	The type of the interval specified for generating packet filtering logs or traps.
IntervalValue	The value of the interval	N/A	Unsigned integer. Value range: 5 to 1440.	It must be a multiple of 5.

# ACL/IPv4BasicRules

This table contains IPv4 basic ACL rule information.

## XML structure

```
<ACL>
  <IPv4BasicRules>
    <Rule>
      <GroupID></GroupID>
      <RuleID></RuleID>
      <Action></Action>
      <SrcAny></SrcAny>
      <SrcIPv4>
        <SrcIPv4Addr></SrcIPv4Addr>

## Table description

Item	Description
Feature name	ACL
Table name	IPv4BasicRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 2000 to 2999.	N/A
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Action	Action on packets matching the rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Deny.</li> <li>2—Permit.</li> </ul>	N/A
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any source IP addresses.</li> <li><b>false</b>—Matches the specified source IP address.</li> </ul>	N/A
SrcIPv4	Source IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcIPv4Addr.</li> <li>SrcIPv4Wildcard.</li> </ul>	The two members must both be specified.
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the <b>SrcAny</b> column is <b>false</b> . It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the <b>SrcAny</b> column is <b>false</b> . It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches only non-first fragments.</li> <li><b>false</b>—Matches both fragments and non-fragments.</li> </ul>	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Counting	Whether to count the rule matches.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Counts the rule matches.</li> <li><b>false</b>—Does not count the rule matches.</li> </ul>	N/A
Logging	Whether to log rule match events.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Logs rule match events.</li> <li><b>false</b>—Does not log rule match events.</li> </ul>	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	N/A
Status	Rule status.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Active.</li> <li><b>2</b>—Inactive.</li> </ul>	N/A
Count	Number of packets that match a rule.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
MatchIndex	Index of the rule after sorting.	N/A	Unsigned integer. Value range: 0 to 65534.	N/A

## Table description

Item	Description
Feature name	ACL
Table name	IPv4AdvanceRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 3000 to 3999.	N/A
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Action	Action on packets matching the rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Deny.</li> <li>2—Permit.</li> </ul>	N/A
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv4 protocols.	N/A
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any source IP addresses.</li> <li><b>false</b>—Matches the specified source IP address.</li> </ul>	N/A
SrcIPv4	Source IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcIPv4Addr.</li> <li>SrcIPv4Wildcard.</li> </ul>	The members must both be specified.
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the <b>SrcAny</b> column is <b>false</b> . It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the <b>SrcAny</b> column is <b>false</b> . It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
DstAny	Whether a rule matches any destination IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any destination IP addresses (default).</li> <li><b>false</b>—Matches the specified destination IP address.</li> </ul>	The VXLAN encapsulation supports this column. This column must be configured together with the <b>DstIPv4</b> column.

Column name	Column description	Column type	Data type and restrictions	Remarks
DstIPv4	Destination IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstIPv4Addr.</li> <li>DstIPv4Wildcard.</li> </ul>	The members must both be specified.
DstIPv4Addr	Destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstIPv4Wildcard	Wildcard mask for the destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstObjectGroup	Destination object group name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
ECN	ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	ECN and TOS cannot be specified together.
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
DSCPRange	DSCP priority range.	Data structure	Members include: <ul style="list-style-type: none"> <li>StartDSCP</li> <li>EndDSCP</li> </ul>	DSCP and DSCPRange cannot be specified together.
StartDSCP	Start DSCP priority of a DSCP priority range.	N/A	Unsigned integer. Value range: 0 to 63.	The end DSCP must be greater than start DSCP.
EndDSCP	End DSCP priority of a DSCP priority range.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
Precedence	IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
TOS	ToS preference.	N/A	Unsigned integer. Value range: 0 to 15.	N/A
SrcPort	Source port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcPortOp.</li> <li>SrcPortValue1.</li> <li>SrcPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column. The members must be all specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcPortOp	Source port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
SrcPortValue 1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SrcPortValue 2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the SrcPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
DstPort	Destination port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstPortOp.</li> <li>DstPortValue1.</li> <li>DstPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column.  The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
DstPortValue 1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPortValue 2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the DstPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
TcpFlag	TCP flags.	Data structure	Members include: <ul style="list-style-type: none"> <li>ACK.</li> <li>FIN.</li> <li>PSH.</li> <li>RST.</li> <li>SYN.</li> <li>URG.</li> </ul>	N/A
ACK	ACK flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>0—ACK flag is not set.</li> <li>1—ACK flag is set.</li> </ul>	Only the TCP protocol supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
FIN	FIN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>0—FIN flag is not set.</li> <li>1—FIN flag is set.</li> </ul>	Only the TCP protocol supports this column.
PSH	PSH flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>0—PSH flag is not set.</li> <li>1—PSH flag is set.</li> </ul>	Only the TCP protocol supports this column.
RST	RST flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>0—RST flag is not set.</li> <li>1—RST flag is set.</li> </ul>	Only the TCP protocol supports this column.
SYN	SYN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>0—SYN flag is not set.</li> <li>1—SYN flag is set.</li> </ul>	Only the TCP protocol supports this column.
URG	URG flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>0—URG flag is not set.</li> <li>1—URG flag is set.</li> </ul>	Only the TCP protocol supports this column.
Established	Whether a rule matches flags indicating the established status of a TCP connection.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Matches the flags.</li> <li>false—Ignores the flags.</li> </ul>	Only the TCP protocol supports this column.  On a router, the rule matches TCP connection packets with the ACK or RST flag set. On a switch, the availability and usage of this column depend on the device model.
ICMP	ICMP messages.	Data structure	Members include: <ul style="list-style-type: none"> <li>ICMPType.</li> <li>ICMPCode.</li> </ul>	The members must both be specified.
ICMPType	Type of ICMP messages.	N/A	Unsigned integer. Value range: 0 to 255.	Only the ICMP protocol supports this column.
ICMPCode	Code of ICMP messages.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 indicates that no ICMP message code is specified.	Only the ICMP protocol supports this column.
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Matches only non-first fragments.</li> <li>false—Matches both fragments and non-fragments.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TimeRange	Time range.	N/A	String, case-insensitive. Length: 0 to 32 characters.	N/A
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
QoSLocalID	Local QoS ID.	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
EncapType	Encapsulation type.	N/A	Members include: <ul style="list-style-type: none"> <li>VXLAN encapsulation.</li> <li>GRE encapsulation.</li> <li>IPINIP encapsulation.</li> </ul>	N/A
InProtocolType	Inner protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv4 protocols.	Only the VXLAN encapsulation supports this column.
VxlanID	VXLAN ID	N/A	Unsigned integer Value range: 0 to 16777215	Only the VXLAN encapsulation supports this column.
InSrcAny	Whether a rule matches any inner source IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any inner source IP addresses.</li> <li><b>false</b>—Matches the specified inner source IP address.</li> </ul>	N/A
InSrcIPv4	Inner source IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>InSrcIPv4Addr.</li> <li>InSrcIPv4Wildcard.</li> </ul>	Only the VXLAN encapsulation supports this column.  The two members must both be specified.
InSrcIPv4Addr	Inner source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.  This column is available when the <b>InSrcAny</b> column is <b>false</b> .  It must be empty when the <b>InSrcAny</b> column is <b>true</b> .

Column name	Column description	Column type	Data type and restrictions	Remarks
InSrcIPv4Wildcard	Wildcard mask for the inner source IPv4 address.	N/A	String, dotted decimal notation.	<p>Example: 255.255.255.0.</p> <p>This column is available when the <b>InSrcAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>InSrcAny</b> column is <b>true</b>.</p>
InDstAny	Whether a rule matches any inner destination IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any inner destination IP addresses.</li> <li><b>false</b>—Matches the specified inner destination IP address.</li> </ul>	N/A
InDstIPv4	Inner destination IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>InDstIPv4Addr.</li> <li>InDstIPv4Wildcard.</li> </ul>	<p>Only the VXLAN encapsulation supports this column.</p> <p>The two members must both be specified.</p>
InDstIPv4Addr	Inner destination IPv4 address.	N/A	String, dotted decimal notation.	<p>Example: 1.1.1.1.</p> <p>This column is available when the <b>InDstAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>InDstAny</b> column is <b>true</b>.</p>
InDstIPv4Wildcard	Wildcard mask for the inner destination IPv4 address.	N/A	String, dotted decimal notation.	<p>Example: 255.255.255.0.</p> <p>This column is available when the <b>InDstAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>InDstAny</b> column is <b>true</b>.</p>
InSrcPort	Inner source port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>InSrcPortOp.</li> <li>InSrcPortValue1.</li> <li>InSrcPortValue2.</li> </ul>	<p>Only the TCP and UDP inner protocols support this column.</p> <p>The members must be all specified.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
InSrcPortOp	Inner source port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
InSrcPortValue1	Start inner source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InSrcPortValue2	End inner source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When InSrcPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end inner source port is not available.
InDstPort	Inner destination port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>InDstPortOp.</li> <li>InDstPortValue1.</li> <li>InDstPortValue2.</li> </ul>	Only the TCP and UDP inner protocols support this column.  The members must be all specified.
InDstPortOp	Inner destination port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
InDstPortValue1	Start inner destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InDstPortValue2	End inner destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When InDstPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end inner destination port is not available.
InEstablished	Whether a rule matches flags indicating the inner established status of a TCP connection.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches the flags.</li> <li><b>false</b>—Ignores the flags.</li> </ul>	Only the TCP inner protocol supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
Counting	Whether to count the rule matches.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Counts the rule matches.</li> <li><b>false</b>—Does not count the rule matches.</li> </ul>	N/A
Logging	Whether to log rule match events.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Logs rule match events.</li> <li><b>false</b>—Does not log rule match events.</li> </ul>	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	N/A
GreValue	Config a gre value.	N/A	Hexadecimal string. Length: 1 to 8 characters. Value range: 0 to FFFFFFFF.	Only the GRE protocol supports this column.
Options	IP options.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Options.</li> <li><b>false</b>—Not options, default.</li> </ul>	Only when the ProtocolType value is 256, and then the table can support this column.
FragmentType	Check fragment packet type.	N/A	Unsigned integer. Value range: 0 to 3. <ul style="list-style-type: none"> <li><b>0</b>—First-fragment.</li> <li><b>1</b>—Non-fragment.</li> <li><b>2</b>—Non-or-first-fragment.</li> <li><b>3</b>—Any-fragment.</li> </ul>	N/A
Status	Rule status.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Active.</li> <li><b>2</b>—Inactive.</li> </ul>	N/A
Count	Number of packets that match a rule.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
MatchIndex	Index of the rule after sorting.	N/A	Unsigned integer. Value range: 0 to 65534.	N/A
Ttl	Whether a rule matches TTL.	Data structure	Members include: <ul style="list-style-type: none"> <li>TtlOp.</li> <li>TtlValue1.</li> <li>TtlValue2.</li> </ul>	N/A
TtlOp	TTL operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—lt (lower than).</li> <li><b>2</b>—eq (equal to).</li> <li><b>3</b>—gt (greater than).</li> <li><b>4</b>—neq (not equal to).</li> <li><b>5</b>—range (inclusive range).</li> </ul>	N/A
TtlValue1	Start TTL value.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 1 to 255.	
TtlValue2	End TTL value.	N/A	Unsigned integer. Value range: 1 to 256.	When the TtlOp is 5, the value range is 1 to 255. Otherwise, it can only be 256. <b>The value 256 indicates that the end TTL value is not available.</b>
PktLength	Whether a rule matches packet length.	Data structure	Members include: <ul style="list-style-type: none"> <li>PktLengthOp.</li> <li>PktLengthValue1.</li> <li>PktLengthValue2.</li> </ul>	N/A
PktLengthOp	Packet length operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
PktLengthValue1	Start packet length value.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
PktLengthValue2	End packet length value.	N/A	Unsigned integer. Value range: 0 to 65536.	When the PktLengthOp is 5, the value range is 0 to 65535. Otherwise, it can only be 65536. <b>The value 65536 indicates that the packet length value is not available.</b>

## ACL/IPv4NamedAdvanceRules

This table contains named IPv4 advanced ACL rule information.

## Table description

Item	Description
Feature name	ACL
Table name	IPv4NamedAdvanceRules
Table type	Multi-instance table

Item	Description
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupIndex	ACL name or number.	Index	String. Length: 1 to 63 characters. <ul style="list-style-type: none"> <li><b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li> <li><b>ACL number:</b> String of digits in the range of 3000 to 3999.</li> </ul>	N/A
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Action	Action on packets matching the rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Deny.</li> <li><b>2</b>—Permit.</li> </ul>	N/A
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv4 protocols.	N/A
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any source IP addresses.</li> <li><b>false</b>—Matches the specified source IP address.</li> </ul>	N/A
SrcIPv4	Source IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcIPv4Addr.</li> <li>SrcIPv4Wildcard.</li> </ul>	The members must both be specified.
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the <b>SrcAny</b> column is <b>false</b> . It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the <b>SrcAny</b> column is <b>false</b> . It must be empty when the <b>SrcAny</b> column is <b>true</b> .

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
DstAny	Whether a rule matches any destination IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any destination IP addresses.</li> <li><b>false</b>—Matches the specified destination IP address.</li> </ul>	N/A
DstIPv4	Destination IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstIPv4Addr.</li> <li>DstIPv4Wildcard.</li> </ul>	The members must both be specified.
DstIPv4Addr	Destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstIPv4Wildcard	Wildcard mask for the destination IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0. This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstObjectGroup	Destination object group name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
ECN	ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	ECN and TOS cannot be specified together.
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
DSCPRange	DSCP priority range.	Data structure	Members include: <ul style="list-style-type: none"> <li>StartDSCP</li> <li>EndDSCP</li> </ul>	DSCP and DSCPRange cannot be specified together.
StartDSCP	Start DSCP priority of a DSCP priority range.	N/A	Unsigned integer. Value range: 0 to 63.	The end DSCP must be greater than start DSCP.
EndDSCP	End DSCP priority of a DSCP priority range.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
Precedence	IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TOS	ToS preference.	N/A	Unsigned integer. Value range: 0 to 15.	N/A
SrcPort	Source port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>• SrcPortOp.</li> <li>• SrcPortValue1.</li> <li>• SrcPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column. The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—lt (lower than).</li> <li>• 2—eq (equal to).</li> <li>• 3—gt (greater than).</li> <li>• 4—neq (not equal to).</li> <li>• 5—range (inclusive range).</li> </ul>	N/A
SrcPortValue 1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SrcPortValue 2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the SrcPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
DstPort	Destination port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>• DstPortOp.</li> <li>• DstPortValue1.</li> <li>• DstPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column. The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—lt (lower than).</li> <li>• 2—eq (equal to).</li> <li>• 3—gt (greater than).</li> <li>• 4—neq (not equal to).</li> <li>• 5—range (inclusive range).</li> </ul>	N/A
DstPortValue 1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPortValue 2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the DstPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.

Column name	Column description	Column type	Data type and restrictions	Remarks
TcpFlag	TCP flags.	Data structure	Members include: <ul style="list-style-type: none"> <li>• ACK.</li> <li>• FIN.</li> <li>• PSH.</li> <li>• RST.</li> <li>• SYN.</li> <li>• URG.</li> </ul>	N/A
ACK	ACK flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—ACK flag is not set.</li> <li>• <b>1</b>—ACK flag is set.</li> </ul>	Only the TCP protocol supports this column.
FIN	FIN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—FIN flag is not set.</li> <li>• <b>1</b>—FIN flag is set.</li> </ul>	Only the TCP protocol supports this column.
PSH	PSH flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—PSH flag is not set.</li> <li>• <b>1</b>—PSH flag is set.</li> </ul>	Only the TCP protocol supports this column.
RST	RST flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—RST flag is not set.</li> <li>• <b>1</b>—RST flag is set.</li> </ul>	Only the TCP protocol supports this column.
SYN	SYN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—SYN flag is not set.</li> <li>• <b>1</b>—SYN flag is set.</li> </ul>	Only the TCP protocol supports this column.
URG	URG flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—URG flag is not set.</li> <li>• <b>1</b>—URG flag is set.</li> </ul>	Only the TCP protocol supports this column.
Established	Whether a rule matches flags indicating the established status of a TCP connection.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Matches the flags.</li> <li>• <b>false</b>—Ignores the flags.</li> </ul>	Only the TCP protocol supports this column.  On a router, the rule matches TCP connection packets with the ACK or RST flag set. On a switch, the availability and usage of this column depend on the device model.
ICMP	ICMP messages.	Data structure	Members include: <ul style="list-style-type: none"> <li>• ICMPType.</li> <li>• ICMPCode.</li> </ul>	The members must both be specified.
ICMPType	Type of ICMP messages.	N/A	Unsigned integer. Value range: 0 to 255.	Only the ICMP protocol supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
ICMPCode	Code of ICMP messages.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 indicates that no ICMP message code is specified.	Only the ICMP protocol supports this column.
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches only non-first fragments.</li> <li><b>false</b>—Matches both fragments and non-fragments.</li> </ul>	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 0 to 32 characters.	N/A
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
QoSLocalID	Local QoS ID.	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
EncapType	Encapsulation type.	N/A	Members include: <ul style="list-style-type: none"> <li>VXLAN encapsulation.</li> <li>GRE encapsulation.</li> <li>IPINIP encapsulation.</li> </ul>	N/A
InProtocolType	Inner protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv4 protocols.	Only the VXLAN encapsulation supports this column.
VxlanID	VXLAN ID.	N/A	Unsigned integer Value range: 0 to 16777215	Only the VXLAN encapsulation supports this column.
InSrcAny	Whether a rule matches any inner source IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any inner source IP addresses.</li> <li><b>false</b>—Matches the specified inner source IP address.</li> </ul>	N/A
InSrcIPv4	Inner source IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>InSrcIPv4Addr.</li> <li>InSrcIPv4Wildcard.</li> </ul>	Only the VXLAN encapsulation supports this column.  The two members must both be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
InSrcIPv4Addr	Inner source IPv4 address.	N/A	String, dotted decimal notation.	<p>Example: 1.1.1.1.</p> <p>This column is available when the <b>InSrcAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>InSrcAny</b> column is <b>true</b>.</p>
InSrcIPv4Wildcard	Wildcard mask for the inner source IPv4 address.	N/A	String, dotted decimal notation.	<p>Example: 255.255.255.0.</p> <p>This column is available when the <b>InSrcAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>InSrcAny</b> column is <b>true</b>.</p>
InDstAny	Whether a rule matches any inner destination IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any inner destination IP addresses.</li> <li><b>false</b>—Matches the specified inner destination IP address.</li> </ul>	N/A
InDstIPv4	Inner destination IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>InDstIPv4Addr.</li> <li>InDstIPv4Wildcard.</li> </ul>	<p>Only the VXLAN encapsulation supports this column.</p> <p>The two members must both be specified.</p>
InDstIPv4Addr	Inner destination IPv4 address.	N/A	String, dotted decimal notation.	<p>Example: 1.1.1.1.</p> <p>This column is available when the <b>InDstAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>InDstAny</b> column is <b>true</b>.</p>
InDstIPv4Wildcard	Wildcard mask for the inner destination IPv4 address.	N/A	String, dotted decimal notation.	<p>Example: 255.255.255.0.</p> <p>This column is available when the <b>InDstAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>InDstAny</b> column is <b>true</b>.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
InSrcPort	Inner source port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>InSrcPortOp.</li> <li>InSrcPortValue1.</li> <li>InSrcPortValue2.</li> </ul>	Only the TCP and UDP inner protocols support this column.  The members must be all specified.
InSrcPortOp	Inner source port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
InSrcPortValue1	Start inner source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InSrcPortValue2	End inner source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When InSrcPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end inner source port is not available.
InDstPort	Inner destination port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>InDstPortOp.</li> <li>InDstPortValue1.</li> <li>InDstPortValue2.</li> </ul>	Only the TCP and UDP inner protocols support this column.  The members must be all specified.
InDstPortOp	Inner destination port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
InDstPortValue1	Start inner destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
InDstPortValue2	End inner destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When InDstPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end inner destination port is not available.

Column name	Column description	Column type	Data type and restrictions	Remarks
InEstablished	Whether a rule matches flags indicating the inner established status of a TCP connection.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches the flags.</li> <li><b>false</b>—Ignores the flags.</li> </ul>	Only the TCP inner protocol supports this column.
Counting	Whether to count the rule matches.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Counts the rule matches.</li> <li><b>false</b>—Does not count the rule matches.</li> </ul>	N/A
Logging	Whether to log rule match events.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Logs rule match events.</li> <li><b>false</b>—Does not log rule match events.</li> </ul>	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	N/A
GreValue	Config a gre value.	N/A	Hexadecimal string. Length: 1 to 8 characters. Value range: 0 to FFFFFFFF.	Only the GRE protocol supports this column.
Options	IP options.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Options.</li> <li><b>false</b>—Not options, default.</li> </ul>	Only when the ProtocolType value is 256, and then the table can support this column.
FragmentType	Check fragment packet type.	N/A	Unsigned integer. Value range: 0 to 3. <ul style="list-style-type: none"> <li><b>0</b>—First-fragment.</li> <li><b>1</b>—Non-fragment.</li> <li><b>2</b>—Non-or-first-fragment.</li> <li><b>3</b>—Any-fragment.</li> </ul>	N/A
Status	Rule status.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Active.</li> <li><b>2</b>—Inactive.</li> </ul>	N/A
Count	Number of packets that match a rule.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
MatchIndex	Index of the rule after sorting.	N/A	Unsigned integer. Value range: 0 to 65534.	N/A
RuleNum	Number of rules in the ACL.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Ttl	Whether a rule matches TTL.	Data structure	Members include: <ul style="list-style-type: none"> <li>TtlOp.</li> <li>TtlValue1.</li> <li>TtlValue2.</li> </ul>	N/A
TtlOp	TTL operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
TtlValue1	Start TTL value.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
TtlValue2	End TTL value.	N/A	Unsigned integer. Value range: 1 to 256.	When the TtlOp is 5, the value range is 1 to 255. Otherwise, it can only be 256. <b>The value 256 indicates that the end TTL value is not available.</b>
PktLength	Whether a rule matches packet length.	Data structure	Members include: <ul style="list-style-type: none"> <li>PktLengthOp.</li> <li>PktLengthValue1.</li> <li>PktLengthValue2.</li> </ul>	N/A
PktLengthOp	Packet length operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
PktLengthValue1	Start packet length value.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
PktLengthValue2	End packet length value.	N/A	Unsigned integer. Value range: 0 to 65536.	When the PktLengthOp is 5, the value range is 0 to 65535. Otherwise, it can only be 65536. <b>The value 65536 indicates that the packet length value is not available.</b>

## Table description

Item	Description
Feature name	ACL
Table name	IPv6AdvanceRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 3000 to 3999.	N/A
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65534.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Action on packets matching the rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Deny.</li> <li>2—Permit.</li> </ul>	N/A
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv6 protocols.	N/A
SrcAny	Whether a rule matches any source IPv6 addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any source IPv6 addresses.</li> <li><b>false</b>—Matches the specified source IPv6 address.</li> </ul>	N/A
SrcIPv6	Source IPv6 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcIPv6Addr.</li> <li>SrcIPv6Prefix.</li> </ul>	The two members must both be specified.
SrcIPv6Addr	Source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the <b>SrcAny</b> column is <b>false</b> . It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcIPv6Prefix	Length of the source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the <b>SrcAny</b> column is <b>false</b> . It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
DstAny	Whether a rule matches any destination IPv6 addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any destination IPv6 addresses.</li> <li><b>false</b>—Matches the specified destination IPv6 address.</li> </ul>	N/A
DstIPv6	Destination IPv6 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstIPv6Addr.</li> <li>DstIPv6Prefix.</li> </ul>	The two members must both be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
DstIPv6Addr	Destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstIPv6Prefix	Length of the destination IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstObjectGroup	Destination object group name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
ECN	ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	N/A
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
FlowLabel	Flow label value in an IPv6 packet header.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
RoutingTypeAny	Whether a rule matches any types of routing header.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any types of routing header.</li> <li><b>false</b>—Matches the specified type of routing header.</li> </ul>	N/A
RoutingTypeValue	Routing header type.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
SrcPort	Source port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcPortOp.</li> <li>SrcPortValue1.</li> <li>SrcPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column. The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—lt (lower than).</li> <li><b>2</b>—eq (equal to).</li> <li><b>3</b>—gt (greater than).</li> <li><b>4</b>—neq (not equal to).</li> <li><b>5</b>—range (inclusive range).</li> </ul>	N/A
SrcPortValue1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcPortValue2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the SrcPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
DstPort	Destination port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>• DstPortOp.</li> <li>• DstPortValue1.</li> <li>• DstPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column.  The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—lt (lower than).</li> <li>• <b>2</b>—eq (equal to).</li> <li>• <b>3</b>—gt (greater than).</li> <li>• <b>4</b>—neq (not equal to).</li> <li>• <b>5</b>—range (inclusive range).</li> </ul>	N/A
DstPortValue1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPortValue2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the DstPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
TcpFlag	TCP flags.	Data structure	Members include: <ul style="list-style-type: none"> <li>• ACK.</li> <li>• FIN.</li> <li>• PSH.</li> <li>• RST.</li> <li>• SYN.</li> <li>• URG.</li> </ul>	N/A
ACK	ACK flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—ACK flag is not set.</li> <li>• <b>1</b>—ACK flag is set.</li> </ul>	Only the TCP protocol supports this column.
FIN	FIN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—FIN flag is not set.</li> <li>• <b>1</b>—FIN flag is set.</li> </ul>	Only the TCP protocol supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
PSH	PSH flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li><b>0</b>—PSH flag is not set.</li> <li><b>1</b>—PSH flag is set.</li> </ul>	Only the TCP protocol supports this column.
RST	RST flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li><b>0</b>—RST flag is not set.</li> <li><b>1</b>—RST flag is set.</li> </ul>	Only the TCP protocol supports this column.
SYN	SYN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li><b>0</b>—SYN flag is not set.</li> <li><b>1</b>—SYN flag is set.</li> </ul>	Only the TCP protocol supports this column.
URG	URG flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li><b>0</b>—URG flag is not set.</li> <li><b>1</b>—URG flag is set.</li> </ul>	Only the TCP protocol supports this column.
Established	Whether a rule matches flags indicating the established status of a TCP connection.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches the flags.</li> <li><b>false</b>—Ignores the flags.</li> </ul>	Only the TCP protocol supports this column. On a router, the rule matches TCP connection packets with the ACK or RST flag set. On a switch, the availability and usage of this column depend on the device model.
ICMP6	ICMPv6 messages.	Data structure	Members include: <ul style="list-style-type: none"> <li>ICMP6Type.</li> <li>ICMP6Code.</li> </ul>	The members must both be specified.
ICMP6Type	Type of ICMPv6 messages.	N/A	Unsigned integer. Value range: 0 to 255.	Only the ICMPv6 protocol supports this column.
ICMP6Code	Code of ICMPv6 messages.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 indicates that no ICMPv6 message code is specified.	Only the ICMPv6 protocol supports this column.
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches only non-first fragments.</li> <li><b>false</b>—Matches both fragments and non-fragments.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
HopTypeAny	Whether a rule matched any types of Hop-by-Hop Options header.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any types of Hop-by-Hop Options header.</li> <li><b>false</b>—Matches the specified type of Hop-by-Hop Options header.</li> </ul>	N/A
HopTypeValue	Type of Hop-by-Hop Options header.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 0 to 32 characters.	N/A
VRF	VRF.	N/A	String, case-sensitive. Length: 0 to 31 characters.	N/A
QoSLocalID	Local QoS ID.	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Counts the rule matches.</li> <li><b>false</b>—Does not count the rule matches.</li> </ul>	N/A
Logging	Whether to log rule match events.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Logs rule match events.</li> <li><b>false</b>—Does not log rule match events.</li> </ul>	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	N/A
GreValue	Config a gre value.	N/A	Hexadecimal string. Length: 1 to 8 characters. Value range: 0 to FFFFFFFF.	Only the GRE protocol supports this column.
Options	IP options.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Options.</li> <li><b>false</b>—Not options.</li> </ul>	Only when the ProtocolType value is 256, and then the table can support this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
FragmentType	Check fragment packet type.	N/A	Unsigned integer. Value range: 0 to 3. <ul style="list-style-type: none"> <li>0—First-fragment.</li> <li>1—Non-fragment.</li> <li>2—Non-or-first-fragment.</li> <li>3—Any-fragment.</li> </ul>	N/A
Status	Rule status.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Active.</li> <li>2—Inactive.</li> </ul>	N/A
Count	Number of packets that match a rule.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
MatchIndex	Index of the rule after sorting.	N/A	Unsigned integer. Value range: 0 to 65534.	N/A
Ttl	Whether a rule matches TTL.	Data structure	Members include: <ul style="list-style-type: none"> <li>TtlOp.</li> <li>TtlValue1.</li> <li>TtlValue2.</li> </ul>	N/A
TtlOp	TTL operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
TtlValue1	Start TTL value.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
TtlValue2	End TTL value.	N/A	Unsigned integer. Value range: 1 to 256.	When the TtlOp is 5, the value range is 1 to 255. Otherwise, it can only be 256. The value 256 indicates that the end TTL value is not available.
PktLength	Whether a rule matches packet length.	Data structure	Members include: <ul style="list-style-type: none"> <li>PktLengthOp.</li> <li>PktLengthValue1.</li> <li>PktLengthValue2.</li> </ul>	N/A
PktLengthOp	Packet length operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			range).	
PktLengthValue 1	Start packet length value.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
PktLengthValue 2	End packet length value.	N/A	Unsigned integer. Value range: 0 to 65536.	When the PktLengthOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536 <b>The value 65536 indicates that the packet length value is not available.</b>

## ACL/IPv6NamedAdvanceRules

This table contains named IPv6 advanced ACL rule information.

## Table description

Item	Description
Feature name	ACL
Table name	IPv6NamedAdvanceRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupIndex	ACL name or number.	Index	String. Length: 1 to 63 characters. <ul style="list-style-type: none"> <li><b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li> <li><b>ACL number:</b> String of digits in the range of 3000 to 3999.</li> </ul>	N/A
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Action	Action on packets matching the rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Deny.</li> <li><b>2</b>—Permit.</li> </ul>	N/A
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 represents all IPv6 protocols.	N/A
SrcAny	Whether a rule matches any source IPv6 addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any source IPv6 addresses.</li> <li><b>false</b>—Matches the specified source IPv6 address.</li> </ul>	N/A
SrcIPv6	Source IPv6 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcIPv6Addr.</li> <li>SrcIPv6Prefix.</li> </ul>	The two members must both be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcIPv6Addr	Source IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the <b>SrcAny</b> column is <b>false</b> . It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcIPv6Prefix	Length of the source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the <b>SrcAny</b> column is <b>false</b> . It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcObjectGroup	Source object group name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
DstAny	Whether a rule matches any destination IPv6 addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any destination IPv6 addresses.</li> <li><b>false</b>—Matches the specified destination IPv6 address.</li> </ul>	N/A
DstIPv6	Destination IPv6 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstIPv6Addr.</li> <li>DstIPv6Prefix.</li> </ul>	The two members must both be specified.
DstIPv6Addr	Destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstIPv6Prefix	Length of the destination IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstObjectGroup	Destination object group name.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
ECN	ECN flag.	N/A	Unsigned integer. Value range: 0 to 3.	N/A
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
FlowLabel	Flow label value in an IPv6 packet header.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RoutingTypeAny	Whether a rule matches any types of routing header.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any types of routing header.</li> <li><b>false</b>—Matches the specified type of routing header.</li> </ul>	N/A
RoutingTypeValue	Routing header type.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
SrcPort	Source port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcPortOp.</li> <li>SrcPortValue1.</li> <li>SrcPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column. The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—lt (lower than).</li> <li><b>2</b>—eq (equal to).</li> <li><b>3</b>—gt (greater than).</li> <li><b>4</b>—neq (not equal to).</li> <li><b>5</b>—range (inclusive range).</li> </ul>	N/A
SrcPortValue1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SrcPortValue2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the SrcPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
DstPort	Destination port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstPortOp.</li> <li>DstPortValue1.</li> <li>DstPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column. The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—lt (lower than).</li> <li><b>2</b>—eq (equal to).</li> <li><b>3</b>—gt (greater than).</li> <li><b>4</b>—neq (not equal to).</li> <li><b>5</b>—range (inclusive range).</li> </ul>	N/A
DstPortValue1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DstPortValue2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the DstPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
TcpFlag	TCP flags.	Data structure	Members include: <ul style="list-style-type: none"> <li>• ACK.</li> <li>• FIN.</li> <li>• PSH.</li> <li>• RST.</li> <li>• SYN.</li> <li>• URG.</li> </ul>	N/A
ACK	ACK flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—ACK flag is not set.</li> <li>• <b>1</b>—ACK flag is set.</li> </ul>	Only the TCP protocol supports this column.
FIN	FIN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—FIN flag is not set.</li> <li>• <b>1</b>—FIN flag is set.</li> </ul>	Only the TCP protocol supports this column.
PSH	PSH flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—PSH flag is not set.</li> <li>• <b>1</b>—PSH flag is set.</li> </ul>	Only the TCP protocol supports this column.
RST	RST flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—RST flag is not set.</li> <li>• <b>1</b>—RST flag is set.</li> </ul>	Only the TCP protocol supports this column.
SYN	SYN flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—SYN flag is not set.</li> <li>• <b>1</b>—SYN flag is set.</li> </ul>	Only the TCP protocol supports this column.
URG	URG flag in a TCP packet.	N/A	Unsigned integer. Value range: 0 or 1. <ul style="list-style-type: none"> <li>• <b>0</b>—URG flag is not set.</li> <li>• <b>1</b>—URG flag is set.</li> </ul>	Only the TCP protocol supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
Established	Whether a rule matches flags indicating the established status of a TCP connection.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches the flags.</li> <li><b>false</b>—Ignores the flags.</li> </ul>	Only the TCP protocol supports this column. On a router, the rule matches TCP connection packets with the ACK or RST flag set. On a switch, the availability and usage of this column depend on the device model.
ICMP6	ICMPv6 messages.	Data structure	Members include: <ul style="list-style-type: none"> <li>ICMP6Type.</li> <li>ICMP6Code.</li> </ul>	The members must both be specified.
ICMP6Type	Type of ICMPv6 messages.	N/A	Unsigned integer. Value range: 0 to 255.	Only the ICMPv6 protocol supports this column.
ICMP6Code	Code of ICMPv6 messages.	N/A	Unsigned integer. Value range: 0 to 256. The value 256 indicates that no ICMPv6 message code is specified.	Only the ICMPv6 protocol supports this column.
Fragment	Whether a rule matches only non-first fragments.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches only non-first fragments.</li> <li><b>false</b>—Matches both fragments and non-fragments.</li> </ul>	N/A
HopTypeAny	Whether a rule matched any types of Hop-by-Hop Options header.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any types of Hop-by-Hop Options header.</li> <li><b>false</b>—Matches the specified type of Hop-by-Hop Options header.</li> </ul>	N/A
HopTypeValue	Type of Hop-by-Hop Options header.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 0 to 32 characters.	N/A
VRF	VRF.	N/A	String, case-sensitive. Length: 0 to 31 characters.	N/A
QoSLocalID	Local QoS ID.	N/A	Unsigned integer. Value range: 1 to 4095.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Counting	Whether to count the rule matches.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Counts the rule matches.</li> <li><b>false</b>—Does not count the rule matches.</li> </ul>	N/A
Logging	Whether to log rule match events.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Logs rule match events.</li> <li><b>false</b>—Does not log rule match events.</li> </ul>	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	N/A
GreValue	Config a gre value.	N/A	Hexadecimal string. Length: 1 to 8 characters. Value range: 0 to FFFFFFFF.	Only the GRE protocol supports this column.
Options	IP options.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Options.</li> <li><b>false</b>—Not options, default.</li> </ul>	Only when the ProtocolType value is 256, and then the table can support this column.
FragmentType	Check fragment packet type.	N/A	Unsigned integer. Value range: 0 to 3. <ul style="list-style-type: none"> <li><b>0</b>—First-fragment.</li> <li><b>1</b>—Non-fragment.</li> <li><b>2</b>—Non-or-first-fragment.</li> <li><b>3</b>—Any-fragment.</li> </ul>	N/A
Status	Rule status.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Active.</li> <li><b>2</b>—Inactive.</li> </ul>	N/A
Count	Number of packets that match a rule.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
MatchIndex	Index of the rule after sorting.	N/A	Unsigned integer. Value range: 0 to 65534.	N/A
RuleNum	Number of rules in the ACL.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Ttl	Whether a rule matches TTL.	Data structure	Members include: <ul style="list-style-type: none"> <li>TtlOp.</li> <li>TtlValue1.</li> <li>TtlValue2.</li> </ul>	N/A
TtlOp	TTL operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—lt (lower than).</li> <li><b>2</b>—eq (equal to).</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	
TtlValue1	Start TTL value.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
TtlValue2	End TTL value.	N/A	Unsigned integer. Value range: 1 to 256.	When the TtlOp is 5, the value range is 1 to 255. Otherwise, it can only be 256. <b>The value 256 indicates that the end TTL value is not available.</b>
PktLength	Whether a rule matches packet length.	Data structure	Members include: <ul style="list-style-type: none"> <li>PktLengthOp.</li> <li>PktLengthValue1.</li> <li>PktLengthValue2.</li> </ul>	N/A
PktLengthOp	Packet length operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
PktLengthValue 1	Start packet length value.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
PktLengthValue 2	End packet length value.	N/A	Unsigned integer. Value range: 0 to 65536.	When the PktLengthOp is 5, the value range is 0 to 65535. Otherwise, it can only be 65536. <b>The value 65536 indicates that the packet length value is not available.</b>

## ACL/MACRules

This table contains Ethernet frame header ACL rule information.

## Table description

Item	Description
Feature name	ACL
Table name	MACRules
Table type	Multi-instance table

Item	Description
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	ACL number.	Index	Unsigned integer. Value range: 4000 to 4999.	N/A
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Action	Action on packets matching the rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Deny.</li> <li>2—Permit.</li> </ul>	N/A
SrcMACAddr	Information about the source MAC address.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcMACAddress.</li> <li>SrcMACMask.</li> </ul>	The members must both be specified.
SrcMACAddresses	Source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
SrcMACMask	Mask of the source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff.
DstMACAddr	Information about the destination MAC address.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstMACAddress.</li> <li>DstMACMask.</li> </ul>	The members must both be specified.
DstMACAddresses	Destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
DstMACMask	Mask of the destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff.
COS	802.1p priority.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
Protocol	Link layer protocol.	Data structure	Members include: <ul style="list-style-type: none"> <li>ProtocolType.</li> <li>ProtocolTypeMask.</li> </ul>	The members must both be specified.
ProtocolType	Type of the link layer protocol.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
ProtocolTypeMask	Mask of the link layer protocol type.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
LSAP	LSAP.	Data structure	Members include: <ul style="list-style-type: none"> <li>LSAPType.</li> <li>LSAPTypeMask.</li> </ul>	The members must both be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
LSAPType	Type of LSAP.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
LSAPTypeMask	Mask of the LSAP type.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
EncapType	Encapsulation type.	N/A	Members include: <ul style="list-style-type: none"> <li>VXLAN encapsulation.</li> <li>GRE encapsulation.</li> <li>IPINIP encapsulation.</li> </ul>	N/A
VxlanID	VXLAN ID	N/A	Unsigned integer Value range: 0 to 16777215	Only the VXLAN encapsulation supports this column.
InSrcMACAddr	Information about the inner source MAC address.	Data structure	Members include: <ul style="list-style-type: none"> <li>InSrcMACAddress.</li> <li>InSrcMACMask.</li> </ul>	Only the VXLAN encapsulation supports this column.  The members must both be specified.
InSrcMACAddress	Inner source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
InSrcMACMask	Mask of the inner source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff-ff.
InDstMACAddr	Information about the inner destination MAC address.	Data structure	Members include: <ul style="list-style-type: none"> <li>InDstMACAddress.</li> <li>InDstMACMask.</li> </ul>	Only the VXLAN encapsulation supports this column.  The members must both be specified.
InDstMACAddress	Inner destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
InDstMACMask	Mask of the inner destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff-ff.
InProtocol	Inner link layer protocol.	Data structure	Members include: <ul style="list-style-type: none"> <li>ProtocolType.</li> <li>ProtocolTypeMask.</li> </ul>	Only the VXLAN encapsulation supports this column.  The members must both be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
InProtocolType	Type of the inner link layer protocol.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
InProtocolType Mask	Mask of the inner link layer protocol type.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Counts the rule matches.</li> <li><b>false</b>—Does not count the rule matches.</li> </ul>	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	N/A
Status	Rule status.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Active.</li> <li><b>2</b>—Inactive.</li> </ul>	N/A
Count	Number of packets that match a rule.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
MatchIndex	Index of the rule after sorting.	N/A	Unsigned integer. Value range: 0 to 65534.	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupIndex	ACL name or number.	Index	String. Length: 1 to 63 characters. <ul style="list-style-type: none"> <li><b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li> <li><b>ACL number:</b> String of digits in the range of 4000 to 4999.</li> </ul>	N/A
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Action	Action on packets matching the rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Deny.</li> <li><b>2</b>—Permit.</li> </ul>	N/A
SrcMACAddr	Information about the source MAC address.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcMACAddress.</li> <li>SrcMACMask.</li> </ul>	The members must both be specified.
SrcMACAddresses	Source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
SrcMACMask	Mask of the source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff.
DstMACAddr	Information about the destination MAC address.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstMACAddress.</li> <li>DstMACMask.</li> </ul>	The members must both be specified.
DstMACAddresses	Destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
DstMACMask	Mask of the destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff.
COS	802.1p priority.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
Protocol	Link layer protocol.	Data structure	Members include: <ul style="list-style-type: none"> <li>ProtocolType.</li> <li>ProtocolTypeMask.</li> </ul>	The members must both be specified.
ProtocolType	Type of the link layer protocol.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
ProtocolTypeMask	Mask of the link layer protocol type.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LSAP	LSAP.	Data structure	Members include: <ul style="list-style-type: none"> <li>LSAPType.</li> <li>LSAPTypeMask.</li> </ul>	The members must both be specified.
LSAPType	Type of LSAP.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
LSAPTypeMask	Mask of the LSAP type.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
EncapType	Encapsulation type.	N/A	Members include: <ul style="list-style-type: none"> <li>VXLAN encapsulation.</li> <li>GRE encapsulation.</li> <li>IPINIP encapsulation.</li> </ul>	N/A
VxlanID	VXLAN ID	N/A	Unsigned integer Value range: 0 to 16777215	Only the VXLAN encapsulation supports this column.
InSrcMACAddr	Information about the inner source MAC address.	Data structure	Members include: <ul style="list-style-type: none"> <li>InSrcMACAddress.</li> <li>InSrcMACMask.</li> </ul>	Only the VXLAN encapsulation supports this column.  The members must both be specified.
InSrcMACAddress	Inner source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
InSrcMACMask	Mask of the inner source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff.
InDstMACAddr	Information about the inner destination MAC address.	Data structure	Members include: <ul style="list-style-type: none"> <li>InDstMACAddress.</li> <li>InDstMACMask.</li> </ul>	Only the VXLAN encapsulation supports this column.  The members must both be specified.
InDstMACAddress	Inner destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
InDstMACMask	Mask of the inner destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: ff-ff-ff-ff-ff.
InProtocol	Inner link layer protocol.	Data structure	Members include: <ul style="list-style-type: none"> <li>ProtocolType.</li> <li>ProtocolTypeMask.</li> </ul>	Only the VXLAN encapsulation supports this

Column name	Column description	Column type	Data type and restrictions	Remarks
				column.  The members must both be specified.
InProtocolType	Type of the inner link layer protocol.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
InProtocolType Mask	Mask of the inner link layer protocol type.	N/A	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Counts the rule matches.</li> <li><b>false</b>—Does not count the rule matches.</li> </ul>	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	N/A
Status	Rule status.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Active.</li> <li><b>2</b>—Inactive.</li> </ul>	N/A
Count	Number of packets that match a rule.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
MatchIndex	Index of the rule after sorting.	N/A	Unsigned integer. Value range: 0 to 65534.	N/A
RuleNum	Number of rules in the ACL.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

## ACL/PfilterDefAction

This table contains information about the default global packet filter actions.

### XML structure

```
<ACL>
  <PfilterDefAction>
    <DefaultAction></DefaultAction>
  </PfilterDefAction>
```

</ACL>

## Table description

Item	Description
Feature name	ACL
Table name	PfilterDefAction
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
DefaultAction	Default packet filter action	N/A	Enumeration: <ul style="list-style-type: none"><li>• 1—Permit.</li><li>• 2—Deny.</li></ul>

## ACL/PfilterIgnoreAction

This table contains information about the ignoring the packet filter permit action.

## XML structure

```
<ACL>
  <PfilterIgnoreAction>
    <IgnoreAction></IgnoreAction>
  </PfilterIgnoreAction>
</ACL>
```

## Table description

Item	Description
Feature name	ACL
Table name	PfilterIgnoreAction

IPv6RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
IPv6RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
IPv6Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
L4Rule	Specifies that the offset is relative to the beginning of the Layer 4 header.	Data structure	Members include: <ul style="list-style-type: none"> <li>L4RuleString.</li> <li>L4RuleMask.</li> <li>L4Offset.</li> </ul>	The members must all be specified.
L4RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
L4RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
L4Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
L5Rule	Specifies that the offset is relative to the beginning of the payload.	Data structure	Members include: <ul style="list-style-type: none"> <li>L5RuleString.</li> <li>L5RuleMask.</li> <li>L5Offset.</li> </ul>	The members must all be specified.
L5RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
L5RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
L5Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
UdfFormat	User-defined packet format.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—IFA packet.</li> <li>2—Raw ip packet.</li> <li>3—VXLAN packet.</li> </ul>	N/A
ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256.  The value 256 represents all IPv4 protocols.	N/A
IPv6ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256.  The value 256 represents all IPv6 protocols.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Matches any source IP addresses (default).</li> <li><b>false</b>—Matches the specified source IP address.</li> </ul>	This column is available when the ProtocolType is specified.  This column must be configured together with the <b>SrcIPv4</b> or <b>SrcIPv6</b> column.
SrcIPv4	Source IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcIPv4Addr.</li> <li>SrcIPv4Wildcard.</li> </ul>	The members must both be specified.
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.  This column is available when the <b>SrcAny</b> column is <b>false</b> .  It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	Example: 255.255.255.0.  This column is available when the <b>SrcAny</b> column is <b>false</b> .  It must be empty when the <b>SrcAny</b> column is <b>true</b> .
SrcIPv6	Source IPv6 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcIPv6Addr.</li> <li>SrcIPv6Prefix.</li> </ul>	The two members must both be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcIPv6Addr	Source IPv6 address.	N/A	Hexadecimal string, colon-separated.	<p>Example: 1:1::1:1.</p> <p>This column is available when the <b>SrcAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>SrcAny</b> column is <b>true</b>.</p>
SrcIPv6Prefix	Length of the source IPv6 address prefix.	N/A	<p>Unsigned integer.</p> <p>Value range: 1 to 128.</p>	<p>This column is available when the <b>SrcAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>SrcAny</b> column is <b>true</b>.</p>
DstAny	Whether a rule matches any destination IP addresses.	N/A	<p>Boolean:</p> <ul style="list-style-type: none"> <li><b>true</b>—Matches any destination IP addresses.</li> <li><b>false</b>—Matches the specified destination IP address.</li> </ul>	N/A
DstIPv4	Destination IPv4 information.	Data structure	<p>Members include:</p> <ul style="list-style-type: none"> <li>DstIPv4Addr.</li> <li>DstIPv4Wildcard.</li> </ul>	The members must both be specified.
DstIPv4Addr	Destination IPv4 address.	N/A	String, dotted decimal notation.	<p>Example: 1.1.1.1.</p> <p>This column is available when the <b>DstAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>DstAny</b> column is <b>true</b>.</p>
DstIPv4Wildcard	Wildcard mask for the destination IPv4 address.	N/A	String, dotted decimal notation.	<p>Example: 255.255.255.0.</p> <p>This column is available when the <b>DstAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>DstAny</b> column is <b>true</b>.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
DstIPv6	Destination IPv6 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>DstIPv6Addr.</li> <li>DstIPv6Prefix.</li> </ul>	The two members must both be specified.
DstIPv6Addr	Destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
DstIPv6Prefix	Length of the destination IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	This column is available when the <b>DstAny</b> column is <b>false</b> . It must be empty when the <b>DstAny</b> column is <b>true</b> .
SrcPort	Source port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcPortOp.</li> <li>SrcPortValue1.</li> <li>SrcPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column. The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—lt (lower than).</li> <li>2—eq (equal to).</li> <li>3—gt (greater than).</li> <li>4—neq (not equal to).</li> <li>5—range (inclusive range).</li> </ul>	N/A
SrcPortValue1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcPortValue 2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the SrcPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
DstPort	Destination port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>• DstPortOp.</li> <li>• DstPortValue1.</li> <li>• DstPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column.  The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—lt (lower than).</li> <li>• <b>2</b>—eq (equal to).</li> <li>• <b>3</b>—gt (greater than).</li> <li>• <b>4</b>—neq (not equal to).</li> <li>• <b>5</b>—range (inclusive range).</li> </ul>	N/A
DstPortValue 1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPortValue 2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the DstPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Counting	Whether to count the rule matches.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Counts the rule matches.</li> <li><b>false</b>—Does not count the rule matches.</li> </ul>	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	N/A
Status	Rule status.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Active.</li> <li><b>2</b>—Inactive.</li> </ul>	N/A
Count	Number of packets that match a rule.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A

## ACL/UserNamedRules

This table contains information about named user-defined ACL rules.

## Table description

Item	Description
Feature name	ACL
Table name	UserNameedRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupIndex	ACL name or number.	Index	String. Length: 1 to 63 characters. <ul style="list-style-type: none"> <li><b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li> <li><b>ACL number:</b> String of digits in the range of 5000 to 5999.</li> </ul>	N/A
RuleID	Rule ID.	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Action	Action on packets matching the rule.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Deny.</li> <li><b>2</b>—Permit.</li> </ul>	N/A
L2Rule	Specifies that the offset is relative to the beginning of the Layer 2 frame header.	Data structure	Members include: <ul style="list-style-type: none"> <li>L2RuleString.</li> <li>L2RuleMask.</li> <li>L2Offset.</li> </ul>	The members must all be specified.
L2RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
L2RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
L2Offset	Offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
IPv4Rule	Specifies that the offset is relative to the beginning of the IPv4 header.	Data structure	Members include: <ul style="list-style-type: none"> <li>IPv4RuleString.</li> <li>IPv4RuleMask.</li> <li>IPv4Offset.</li> </ul>	The members must all be specified.
IPv4RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
IPv4Offset	Offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
IPv6Rule	Specifies that the offset is relative to the beginning of the IPv6 header.	Data structure	Members include: <ul style="list-style-type: none"> <li>IPv6RuleString.</li> <li>IPv6RuleMask.</li> <li>IPv6Offset.</li> </ul>	The members must all be specified.
IPv6RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
IPv6RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
IPv6Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
L4Rule	Specifies that the offset is relative to the beginning of the Layer 4 header.	Data structure	Members include: <ul style="list-style-type: none"> <li>L4RuleString.</li> <li>L4RuleMask.</li> <li>L4Offset.</li> </ul>	The members must all be specified.
L4RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
L4RuleMask	Match pattern mask.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A
L4Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer. Value range: 0 to the device-specific upper limit.	N/A
L5Rule	Specifies that the offset is relative to the beginning of the payload.	Data structure	Members include: <ul style="list-style-type: none"> <li>L5RuleString.</li> <li>L5RuleMask.</li> <li>L5Offset.</li> </ul>	The members must all be specified.
L5RuleString	String for the match pattern.	N/A	Hexadecimal string. Length: 2 to the device-specific upper limit.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
L5RuleMask	Match pattern mask.	N/A	Hexadecimal string.  Length: 2 to the device-specific upper limit.	N/A
L5Offset	Specifies an offset in bytes after which the match operation begins.	N/A	Unsigned integer.  Value range: 0 to the device-specific upper limit.	N/A
UdfFormat	User-defined packet format.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—IFA packet.</li> <li>• <b>2</b>—Raw ip packet.</li> <li>• <b>3</b>—VXLAN packet.</li> </ul>	N/A
ProtocolType	Protocol type.	N/A	Unsigned integer.  Value range: 0 to 256.  The value 256 represents all IPv4 protocols.	N/A
IPv6ProtocolType	Protocol type.	N/A	Unsigned integer. Value range: 0 to 256.  The value 256 represents all IPv6 protocols.	N/A
SrcAny	Whether a rule matches any source IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Matches any source IP addresses.</li> <li>• <b>false</b>—Matches the specified source IP address.</li> </ul>	N/A
SrcIPv4	Source IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>• SrcIPv4Addr.</li> <li>• SrcIPv4Wildcard.</li> </ul>	The members must both be specified.
SrcIPv4Addr	Source IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.  This column is available when the <b>SrcAny</b> column is <b>false</b> .  It must be empty when the <b>SrcAny</b> column is <b>true</b> .

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcIPv4Wildcard	Wildcard mask for the source IPv4 address.	N/A	String, dotted decimal notation.	<p>Example: 255.255.255.0.</p> <p>This column is available when the <b>SrcAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>SrcAny</b> column is <b>true</b>.</p>
SrcIPv6	Source IPv6 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>• SrcIPv6Addr.</li> <li>• SrcIPv6Prefix.</li> </ul>	The two members must both be specified.
SrcIPv6Addr	Source IPv6 address.	N/A	Hexadecimal string, colon-separated.	<p>Example: 1:1::1:1.</p> <p>This column is available when the <b>SrcAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>SrcAny</b> column is <b>true</b>.</p>
SrcIPv6Prefix	Length of the source IPv6 address prefix.	N/A	Unsigned integer. Value range: 1 to 128.	<p>This column is available when the <b>SrcAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>SrcAny</b> column is <b>true</b>.</p>
DstAny	Whether a rule matches any destination IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Matches any destination IP addresses.</li> <li>• <b>false</b>—Matches the specified destination IP address.</li> </ul>	N/A
DstIPv4	Destination IPv4 information.	Data structure	Members include: <ul style="list-style-type: none"> <li>• DstIPv4Addr.</li> <li>• DstIPv4Wildcard.</li> </ul>	The members must both be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
DstIPv4Addr	Destination IPv4 address.	N/A	String, dotted decimal notation.	<p>Example: 1.1.1.1.</p> <p>This column is available when the <b>DstAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>DstAny</b> column is <b>true</b>.</p>
DstIPv4Wildcard	Wildcard mask for the destination IPv4 address.	N/A	String, dotted decimal notation.	<p>Example: 255.255.255.0.</p> <p>This column is available when the <b>DstAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>DstAny</b> column is <b>true</b>.</p>
DstIPv6	Destination IPv6 information.	Data structure	<p>Members include:</p> <ul style="list-style-type: none"> <li>DstIPv6Addr.</li> <li>DstIPv6Prefix.</li> </ul>	The two members must both be specified.
DstIPv6Addr	Destination IPv6 address.	N/A	Hexadecimal string, colon-separated.	<p>Example: 1:1::1:1.</p> <p>This column is available when the <b>DstAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>DstAny</b> column is <b>true</b>.</p>
DstIPv6Prefix	Length of the destination IPv6 address prefix.	N/A	<p>Unsigned integer.</p> <p>Value range: 1 to 128.</p>	<p>This column is available when the <b>DstAny</b> column is <b>false</b>.</p> <p>It must be empty when the <b>DstAny</b> column is <b>true</b>.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcPort	Source port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>• SrcPortOp.</li> <li>• SrcPortValue1.</li> <li>• SrcPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column.  The members must be all specified.
SrcPortOp	Source port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—lt (lower than).</li> <li>• 2—eq (equal to).</li> <li>• 3—gt (greater than).</li> <li>• 4—neq (not equal to).</li> <li>• 5—range (inclusive range).</li> </ul>	N/A
SrcPortValue 1	Start source port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SrcPortValue 2	End source port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the SrcPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end source port is not available.
DstPort	Destination port information.	Data structure	Members include: <ul style="list-style-type: none"> <li>• DstPortOp.</li> <li>• DstPortValue1.</li> <li>• DstPortValue2.</li> </ul>	Only the TCP and UDP protocols support this column.  The members must be all specified.
DstPortOp	Destination port operator.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—lt (lower than).</li> <li>• 2—eq (equal to).</li> <li>• 3—gt (greater than).</li> <li>• 4—neq (not equal to).</li> <li>• 5—range (inclusive range).</li> </ul>	N/A
DstPortValue 1	Start destination port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DstPortValue 2	End destination port.	N/A	Unsigned integer. Value range: 0 to 65536.	When the DstPortOp is <b>5</b> , the value range is 0 to 65535. Otherwise, it can only be 65536. The value 65536 indicates that the end destination port is not available.
DSCP	DSCP priority.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
TimeRange	Time range.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
Counting	Whether to count the rule matches.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Counts the rule matches.</li> <li><b>false</b>—Does not count the rule matches.</li> </ul>	N/A
Comment	Rule comment.	N/A	String, case-sensitive. Length: 1 to 127 characters.	N/A
Status	Rule status.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Active.</li> <li><b>2</b>—Inactive.</li> </ul>	N/A
Count	Number of packets that match a rule.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A

## ACL/ZonePairPfilterApply

This table contains information about packet filter application for zone pair.

### XML structure

```

<ACL>
  <ZonePairPfilterApply>
    <Pfilter>
      <SrcZone></SrcZone>
      <DestZone></DestZone>
      <AclType></AclType>

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcZone	Name of the source zone.	Index	String, case insensitive. <ul style="list-style-type: none"> <li>Length: 1 to 31 characters.</li> </ul>	Cannot contain midline( - ).
DestZone	Name of the destination zone.	Index	String, case insensitive. <ul style="list-style-type: none"> <li>Length: 1 to 31 characters.</li> </ul>	Cannot contain midline( - ).
AclType	ACL type.	Index	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—IPv4 ACL.</li> <li><b>2</b>—IPv6 ACL.</li> <li><b>3</b>—Ethernet frame header ACL.</li> </ul>	Type 3 is not supported in the current software version, and is reserved for future support.
AclGroup	ACL name or number.	Index	<ul style="list-style-type: none"> <li>ACL name: Case-insensitive string of 1 to 63 characters.</li> <li>ACL number: An unsigned integer in the range of 2000 to 5999.</li> </ul>	<p>An ACL name must start with an English letter and cannot be <b>all</b>.</p> <p>The value range depends on the AppAclType column.</p> <ul style="list-style-type: none"> <li>2000 to 5999 if AppAclType is <b>1</b>.</li> <li>2000 to 3999 if AppAclType is <b>2</b>.</li> </ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
AclRuleID	Index of the ACL rules.	Index	Unsigned integer. Value range: 0 to 65534.	N/A
RuleMatchPkts	Number of matched packets.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	If the device does not support match counting for packet filter, 0xFFFFFFFFFFFFFFFF is returned.
RuleMatchBytes	Number of matched bytes.	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	If the device does not support match counting for packet filter, 0xFFFFFFFFFFFFFFFF is returned.

ACL .....1

# ACL

## ACL

Message	Explanation
Can't edit rules for an ACL when the match order is auto. 当规则匹配顺序为自动排序时，不能修改规则。	The ACL group created in auto mode cannot modify rules. 以 auto 形式创建的 ACL 组不能修改规则。
The rule doesn't exist. Please create the rule first. 规则不存在，请在添加描述信息前先添加规则。	Cannot add rule comment information when the rule does not exist. 规则不存在时不能添加规则评论信息。
Can't name or rename an existing ACL. 不能命名或重命名一个已存在的ACL。	Cannot modify the name as an existing ACL. 不能修改名字为已存在的ACL。
Can't change the match order for an ACL that contains rules. 不能修改一个包含规则的ACL的匹配顺序。	When an ACL is configured with rules, the matching order cannot be modified. 当ACL已经配置了规则，不能修改匹配顺序。
The rule already exists. 规则已存在。	The newly created rule content is the same as other existing rules. 新建的规则内容与其他已存在的规则内容相同。
The rule ID is out of range. 规则编号超出范围。	Automatically assigned rule number is out of range. 自动分配的规则编码超出了范围。
The step is too large to generate sufficient rule IDs. 步长过大，可分配的规则编号不足。	The modified step size is too large, and the number of rules that can be assigned is insufficient. 修改后的步长过大，可分配的规则编号不足。
The name is already used by another ACL. 该名字已被另一个ACL使用。	The newly created ACL name is occupied by other existing ACLs. 新建的ACL名称被其他已经存在的ACL占用。
Maximum number of rules in the ACL already is reached. 此ACL的规则数已达上限。	The number of rules has reached the upper limit when a new ACL rule is created. 新建ACL规则时规则个数已达到上限。
Resources are insufficient for processing the request. 系统资源不足，请求无法完成。	Insufficient memory. 设备内存不足。
The ACL doesn't exist. 指定的ACL不存在。	Add a rule to an ACL group that does not exist. 向不存在的ACL组下添加规则。
The source IPv4 address object group doesn't exist. 指定的源IPv4地址对象组不存在。	The object-group referenced by the source address of the IPv4 type ACL rule does not exist. IPv4类型ACL规则源地址引用的对象组不存在。
The source IPv6 address object group doesn't exist. 指定的源IPv6地址对象组不存在。	The object-group referenced by the source address of the IPv6 type ACL rule does not exist. IPv6类型ACL规则源地址引用的对象组不存在。
The destination IPv4 address object group doesn't exist. 指定的目的IPv4地址对象组不存在。	The object-group referenced by the destination address of the IPv4 type ACL rule does not exist. IPv4类型ACL规则目的地址引用的对象组不存在。

<p>The destination IPv6 address object group doesn't exist.</p> <p>指定的目的IPv6地址对象组不存在。</p>	<p>The object-group referenced by the destination address of the IPv6 type ACL rule does not exist.</p> <p>IPv6类型ACL规则目的地址引用的对象组不存在。</p>
<p>Illegal source IPv4 address object group type.</p> <p>指定的源IPv4地址对象组类型不正确。</p>	<p>The object-group type referenced by the source address of the IPv4 type ACL is not the IPv4 type.</p> <p>IPv4类型ACL规则源地址引用的对象组类型不是IPv4类型。</p>
<p>Illegal source IPv6 address object group type.</p> <p>指定的源IPv6地址对象组类型不正确。</p>	<p>The object-group type referenced by the source address of the IPv6 type ACL is not the IPv6 type.</p> <p>IPv6类型ACL规则源地址引用的对象组类型不是IPv6类型。</p>
<p>Illegal destination IPv4 address object group type.</p> <p>指定的目的IPv4地址对象组类型不正确。</p>	<p>The object-group type referenced by the destination address of the IPv4 type ACL is not the IPv4 type.</p> <p>IPv4类型ACL规则目的地址引用的对象组类型不是IPv4类型。</p>
<p>Illegal destination IPv6 address object group type.</p> <p>指定的目的IPv6地址对象组类型不正确。</p>	<p>The object-group type referenced by the destination address of the IPv6 type ACL is not the IPv6 type.</p> <p>IPv6类型ACL规则目的地址引用的对象组类型不是IPv6类型。</p>
<p>Can't delete the ACL because it is being used.</p> <p>该ACL正被引用，无法删除。</p>	<p>The ACL specified to be deleted is referenced by other modules and cannot be deleted.</p> <p>指定要删除的ACL被其他模块引用，不能被删除。</p>

# ADVPN

## ResetTunnelAdvpnSession

This table is used to clear ADVPN sessions in the specified tunnel.

### XML structure

```
<ADVPN>
  <ResetTunnelAdvpnSession>
    <Reset>
      <IPVersion></IPVersion>
      <TunnelID></TunnelID>
      <PrivateAddress></PrivateAddress>
    </Reset>
  </ResetTunnelAdvpnSession>
</ADVPN>
```

### Table description

Item	Description
Feature name	ADVPN
Table name	ResetTunnelAdvpnSession
Table type	Multi-instance table
Row name	Reset
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPVersion	Version of the IP protocol	Index	Enumeration <ul style="list-style-type: none"><li>4—IPv4</li><li>6—IPv6</li></ul>	This column must not be empty.
TunnelID	Tunnel ID	Index	Unsigned integer	N/A
PrivateAddress	Private address	N/A	String	IPv4 address or IPv6 address.

## ResetAllSessions

This table is used to clear all ADVPN sessions.

## XML structure

```
<ADVPN>
  <ResetAllSessions>
    <Reset>
      <IPVersion></IPVersion>
    </Reset>
  </ResetAllSessions>
</ADVPN>
```

## Table description

Item	Description
Feature name	ADVPN
Table name	ResetAllSessions
Table type	Single-instance table
Row name	Reset
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPVersion	Version of the IP protocol	Index	Enumeration <ul style="list-style-type: none"><li>4—IPv4</li><li>6—IPv6</li></ul>	This column must not be empty.

## ResetTunnelAdvpnSessionStat

This table is used to clear ADVPN session statistics for the specified tunnel.

## XML structure

```
<ADVPN>
  <ResetTunnelAdvpnSessionStat>
    <Reset>
      <IPVersion></IPVersion>
      <TunnelID></TunnelID>
      <PrivateAddress></PrivateAddress>
    </Reset>
  </ResetTunnelAdvpnSessionStat>
</ADVPN>
```

## Table description

Item	Description
Feature name	ADVPN
Table name	ResetSessionStatistics
Table type	Multi-instance table
Row name	Reset
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPVersion	Version of the IP protocol	Index	Enumeration <ul style="list-style-type: none"><li>4—IPv4</li><li>6—IPv6</li></ul>	This column must not be empty.
TunnelID	Tunnel ID	Index	Unsigned integer	N/A
PrivateAddress	Private address	N/A	String	IPv4 address or IPv6 address.

## ResetAllSessionStats

This table is used to clear all ADVPN session statistics.

## XML structure

```
<ADVPN>
  <ResetAllSessionStats>
    <Reset>
      <IPVersion></IPVersion>
    </Reset>
  </ResetAllSessionStats>
</ADVPN>
```

## Table description

Item	Description
Feature name	ADVPN
Table name	ResetAllSessionStatistics
Table type	Single-instance table
Row name	Reset
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPVersion	Version of the IP protocol	Index	Enumeration <ul style="list-style-type: none"><li>• 4—IPv4</li><li>• 6—IPv6</li></ul>	This column must not be empty.

# ADVPN

## TunnelAdvpnCfg

This table is used to configure ADVPN feature in the specified tunnel.

### XML structure

```
<ADVPN>
  <TunnelAdvpnCfg>
    <Tunnel>
      <TunnelID></TunnelID>
      <IPv4Client></IPv4Client>
      <Compatible></Compatible>
      <IPv6Client></IPv6Client>
      <DumbTime></DumbTime>
      <IdleTime></IdleTime>
      <SourcePort></SourcePort>
    </Tunnel>
  </TunnelAdvpnCfg>
</ADVPN>
```

### Table description

Item	Description
Feature name	ADVPN
Table name	TunnelAdvpnCfg
Table type	Multi-instance table
Row name	Tunnel
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID	Index	Unsigned integer	N/A
IPv4Client	Name of the VAM client bounded to an IPv4 ADVPN tunnel interface	N/A	String Length: 1 to 63 characters	Case-insensitive and contains only letters, digits, and dots (.).

Column name	Column description	Column type	Data type and restrictions	Remarks
Compatible	Compatibility configuration	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Incompatible</li> <li>1—Compatible</li> <li>2—Invalid</li> </ul>	The value of “2” means not specifying the IPv4 VAM client config.
IPv6Client	Name of the VAM client bounded to an IPv6 ADVPN tunnel interface	N/A	String Length: 1 to 63 characters	Case-insensitive and contains only letters, digits, and dots (.).
DumbTime	Dumb time for an ADVPN session	N/A	Unsigned integer Value range: 10 to 600 The default value is 120 seconds	N/A
IdleTime	Idle timeout time for a spoke-spoke ADVPN tunnel	N/A	Unsigned integer. Value range:60 to 65535. The default value is 600 seconds	N/A
SourcePort	Source UDP port number	N/A	Unsigned integer Value range: 1025 to 65535 The default value is 18001	Only supports tunnel in the following modes: <ul style="list-style-type: none"> <li>9—DVPN tunnel with the passenger protocol being UDP and the transport protocol being IPv4.</li> <li>11—DVPN tunnel with the passenger protocol being UDP and the transport protocol being IPv6.</li> </ul>

## IPv4Networks

This table is used to configure the IPv4 subnets under the specified tunnel which is ADVPN node.

## XML structure

```

<ADVPN>
  <IPv4Networks>
    <IPv4Network>
      <TunnelID></TunnelID>
      <Address></Address>
      <MaskLength></MaskLength>
      <Preference></Preference>
    </IPv4Network>
  </IPv4Networks>
</ADVPN>

```

```

    </IPv4Network>
  </IPv4Networks>
</ADVPN>

```

## Table description

Item	Description
Feature name	ADVPN
Table name	IPv4Networks
Table type	Multi-instance table
Row name	IPv4Network
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID	Index	Unsigned integer	N/A.
Address	Private IPv4 network address	Index	IPv4 address	N/A.
MaskLength	Mask of the private IPv4 network address	Index	Unsigned integer Value range: 0 to 32	Example: 24
Preference	Preference for the route to the private network	N/A	Unsigned integer Value range: 1 to 255 The default value is 8	N/A.

## IPv6Networks

This table is used to configure the IPv6 subnets under the specified tunnel which is ADVPN node.

## XML structure

```

<ADVPN>
  <IPv6Networks>
    <IPv6Network>
      <TunnelID></TunnelID>
      <Address></Address>
      <MaskLength></MaskLength>
      <Preference></Preference>
    </IPv6Network>
  </IPv6Networks>
</ADVPN>

```

## Table description

Item	Description
Feature name	ADVPN
Table name	IPv6Networks
Table type	Multi-instance table
Row name	IPv6Network
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID	Index	Unsigned integer	N/A.
Address	Private IPv6 network address	Index	IPv6 address	Example: 1001::
MaskLength	Prefix length of private IPv6 network address	Index	Unsigned integer Value range: 0 to 128	N/A.
Preference	Preference for the route to the private network	N/A	Unsigned integer Value range: 1 to 255 The default value is 8	N/A.

## Table description

Item	Description
Feature name	ADVPN
Table name	IPv4TunnelAdvpnSession
Table type	Multi-instance table
Row name	IPv4AdvpnSession
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID	Index	Unsigned integer	N/A
PrivateAddresses	Private address of the ADVPN tunnel peer	Index	Ipv4Address	IPv4 address
PublicAddress	Public address of the ADVPN tunnel peer	N/A	String	IPv4 address. IPv6 address.
AdvpnPort	UDP port number for the ADVPN tunnel	N/A	Unsigned integer Value range: 1025 to 65535	Only supported when the link layer protocol is UDP or IPsec-UDP.
SPI	SP index for the inbound and outbound SAs	Data structure	Members include: <ul style="list-style-type: none"> <li>AhInbound</li> <li>AhOutbound</li> <li>EspInbound</li> <li>EspOutbound</li> </ul>	Only supported when link layer protocol is IPsec-UDP or IPsec-GRE.
AhInbound	Inbound AH SP index	N/A	Unsigned integer Value range: 0 to $2^{32}-1$ .	N/A
AhOutbound	Outbound AH SP index	N/A	Unsigned integer Value range: 0 to $2^{32}-1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
EspInbound	Inbound ESP SP index	N/A	Unsigned integer Value range: 0 to $2^{32}-1$ .	N/A
EspOutbound	Outbound ESP SP index	N/A	Unsigned integer Value range: 0 to $2^{32}-1$ .	N/A
BehindNAT	Whether the NAT peer node is behind NAT	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>False</li> </ul>	N/A
SessionType	ADVPN tunnel type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Unknown</li> <li>1—Hub-Hub</li> <li>2—Hub-Spoke</li> <li>3—Spoke-Hub</li> <li>4—Spoke-Spoke</li> </ul>	N/A
TunnelState	ADVPN tunnel state	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Establishing</li> <li>1—Dumb</li> <li>2—Success</li> </ul>	N/A
HoldingTime	Duration that the tunnel has been in the current state	N/A	Unsigned integer	Unit: seconds
Input	Statistics for incoming packets	Data structure	Members include: <ul style="list-style-type: none"> <li>TotalPackets</li> <li>DataPackets</li> <li>ControlPackets</li> <li>Multicasts</li> <li>Errors</li> </ul>	N/A
TotalPackets	The number of all incoming packets	N/A	Unsigned Integer64	N/A
DataPackets	The number of incoming data packets	N/A	Unsigned Integer64	N/A
ControlPackets	The number of incoming control packets	N/A	Unsigned integer 64	N/A
Multicasts	The number of	N/A	Unsigned integer 64	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	incoming multicast packets			
Errors	The number of incoming erroneous packets	N/A	Unsigned integer 64	N/A
Output	Statistics for outgoing packets	Data structure	Members include: <ul style="list-style-type: none"> <li>TotalPackets</li> <li>DataPackets</li> <li>ControlPackets</li> <li>Multicasts</li> <li>Errors</li> </ul>	N/A
TotalPackets	The number of all outgoing packets	N/A	Unsigned integer	N/A
DataPackets	The number of outgoing data packets	N/A	Unsigned integer 64	N/A
ControlPackets	The number of outgoing control packets	N/A	Unsigned integer 64	N/A
Multicasts	The number of outgoing multicast packets	N/A	Unsigned integer 64.	N/A
Errors	The number of outgoing erroneous packets	N/A	Unsigned integer 64	N/A
IPsecTunnelID	IPsec tunnel index	N/A	Unsigned integer 32	N/A
SAIndex	IPsec SA index information	Data structure	Members include: <ul style="list-style-type: none"> <li>AhInbound</li> <li>AhOutbound</li> <li>EspInbound</li> <li>EspOutbound</li> </ul>	N/A
AhInbound	Inbound IPsec AH SA index	N/A	Unsigned integer 32	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AhOutbound	Outbound IPsec AH SA index	N/A	Unsigned integer 32	N/A
EspInbound	Inbound IPsec ESP SA index	N/A	Unsigned integer 32	N/A
EspOutbound	Outbound IPsec ESP SA index	N/A	Unsigned integer 32	N/A

## IPv6TunnelAdvpnSession

This table is used to display IPv6 ADVPN tunnel session information.

### XML structure

```

<ADVPN>

## Table description

Item	Description
Feature name	ADVPN
Table name	IPv6TunnelAdvpnSession
Table type	Multi-instance table
Row name	IPv6AdvpnSession
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID	Index	Unsigned integer	N/A
PrivateAddresses	Private address of the ADVPN tunnel peer	Index	Ipv6Address	IPv6 address
PublicAddress	Public address of the ADVPN tunnel peer	N/A	String	IPv4 address. IPv6 address.
AdvpnPort	UDP port number for the ADVPN tunnel	N/A	Unsigned integer Value range: 1025 to 65535	Only supported when the link layer protocol is UDP or IPsec-UDP.
SPI	SP index for the inbound and outbound SAs	Data structure	Members include: <ul style="list-style-type: none"> <li>AhInbound</li> <li>AhOutbound</li> </ul>	Only supported when the link layer protocol is

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>EspInbound</li> <li>EspOutbound</li> </ul>	IPsec-UDP or IPsec-GRE.
AhInbound	Inbound AH SP index	N/A	Unsigned integer Value range: 0 to $2^{32}-1$ .	N/A
AhOutbound	Outbound AH SP index	N/A	Unsigned integer Value range: 0 to $2^{32}-1$ .	N/A
EspInbound	Inbound ESP SP index	N/A	Unsigned integer Value range: 0 to $2^{32}-1$ .	N/A
EspOutbound	Outbound ESP SP index	N/A	Unsigned integer Value range: 0 to $2^{32}-1$ .	N/A
BehindNAT	Whether the NAT peer node is behind NAT	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>False</li> </ul>	N/A
SessionType	ADVPN tunnel type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Unknown</li> <li>1—Hub-Hub</li> <li>2—Hub-Spoke</li> <li>3—Spoke-Hub</li> <li>4—Spoke-Spoke</li> </ul>	N/A
TunnelState	ADVPN tunnel state	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Establishing</li> <li>1—Dumb</li> <li>2—Success</li> </ul>	N/A
HoldingTime	Duration that the tunnel has been in the current state	N/A	Unsigned integer	Unit: seconds
Input	Statistics for incoming packets	Data structure	Members include: <ul style="list-style-type: none"> <li>TotalPackets</li> <li>DataPackets</li> <li>ControlPackets</li> <li>Multicasts</li> <li>Errors</li> </ul>	N/A
TotalPackets	The number of all incoming packets	N/A	Unsigned integer 64	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DataPackets	The number of incoming data packets	N/A	Unsigned integer 64	N/A
ControlPackets	The number of incoming control packets	N/A	Unsigned integer 64	N/A
Multicasts	The number of incoming multicast packets	N/A	Unsigned integer 64	N/A
Errors	The number of incoming erroneous packets	N/A	Unsigned integer 64	N/A
Output	Statistics for outgoing packets	Data structure	Members include: <ul style="list-style-type: none"> <li>• TotalPackets</li> <li>• DataPackets</li> <li>• ControlPackets</li> <li>• Multicasts</li> <li>• Errors</li> </ul>	N/A
TotalPackets	The number of all outgoing packets	N/A	Unsigned integer 64	N/A
DataPackets	The number of outgoing data packets	N/A	Unsigned integer 64	N/A
ControlPackets	The number of outgoing control packets	N/A	Unsigned integer 64	N/A
Multicasts	The number of outgoing multicast packets	N/A	Unsigned integer 64.	N/A
Errors	The number of outgoing erroneous packets	N/A	Unsigned integer 64	N/A
IPsecTunnelID	IPsec tunnel index	N/A	Unsigned integer 32	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SAIndex	IPsec SA index information	Data structure	Members include: <ul style="list-style-type: none"> <li>AhInbound</li> <li>AhOutbound</li> <li>EspInbound</li> <li>EspOutbound</li> </ul>	N/A
AhInbound	Inbound IPsec AH SA index	N/A	Unsigned integer 32	N/A
AhOutbound	Outbound IPsec AH SA index	N/A	Unsigned integer 32	N/A
EspInbound	Inbound IPsec ESP SA index	N/A	Unsigned integer 32	N/A
EspOutbound	Outbound IPsec ESP SA index	N/A	Unsigned integer 32	N/A

## IPv4TunnelRunInfo

This table displays the IPv4 interface information.

## XML structure

```

<ADVPN>
  <IPv4TunnelRunInfo>
    <TunnelRunInfo>
      <TunnelID></TunnelID>
      <ClientName></ClientName>

# SessionDeleted event

This event is used to report ADVPN tunnel information when the ADVPN tunnel is deleted.

## XML structure for event subscription

```
<SessionDeletedEvent>
  <Tunnel>
    <TunnelID></TunnelID>
  </Tunnel>
</SessionDeletedEvent>
```

### Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>ADVPN</stream>
    <filter type="subtree">
      <SessionDeletedEvent xmlns="http://www.h3c.com/netconf/event:1.0/advpn:1.0">
        <Tunnel>
          <TunnelID>1</TunnelID>
        </Tunnel>
      </SessionDeletedEvent>
    </filter>
  </create-subscription>
</rpc>
```

### Table description

Item	Description
Event stream name	ADVPN
Event name	SessionDeletedEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/advpn:1.0
Support for extended query	No

### Columns

Column name	Column description	Data type and restrictions	Support for extended queries
TunnelID	Tunnel ID	Unsigned integer	No

# XML structure for event report

```
<SessionDeletedEvent>
  <Tunnel>
    <TunnelID></TunnelID>
    <PrivateAddress></PrivateAddress>
    <PublicAddress></PublicAddress>
    <PeerPrivateAddress></PeerPrivateAddress>
    <PeerPublicAddress></PeerPublicAddress>
    <Type></Type>
    <LastState></LastState>
    <LastStateDuration></LastStateDuration>
    <DomainName></DomainName>
    <GroupName></GroupName>
  </Tunnel>
</SessionDeletedEvent>
```

## Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <SessionDeletedEvent xmlns="http://www.h3c.com/netconf/event:1.0/advpn:1.0">
    <Tunnel>
      <TunnelID>1</TunnelID>
      <PrivateAddress>112.168.60.56</PrivateAddress>

# AFT

## AFT/AftEnable

This table contains informations about AFT enabling switch on the interface.

### XML structure

```
<AFT>
  <AftEnable>
    <Interface>
      <IfIndex></IfIndex>
      <EnableSwitch></EnableSwitch>
    </Interface>
  </AftEnable>
</AFT>
```

### Table description

Item	Description
Feature name	AFT
Table name	AftEnable
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index or interface name	Index	String. case-sensitive. Length: 1 to 99 characters.	Some versions support interface name. For relevant information, you can see the XSD document of your product. For more information about IfIndex, you can reference "Appendix" in Ifmgr NETCONF XML API Configuration document.
EnableSwitch	Whether enable AFT on the	N/A	Boolean:	N/A

	interface		<ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default).</li> </ul>	
--	-----------	--	--	--

## AFT/AftLogEnable

This table contains information about AFT logging switch

### XML structure

```
<AFT>
  <AftLogEnable>
    <EnableSwitch></EnableSwitch>
  </AftLogEnable>
</AFT>
```

### Table description

Item	Description
Feature name	AFT
Table name	AftLogEnable
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions
EnableSwitch	Whether enable AFT logging	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default).</li> </ul>

## AFT/AftFlowBegin

This table contains information about AFT flow begin enabling switch

## XML structure

```
<AFT>
  <AftFlowBegin>
    <EnableSwitch></EnableSwitch>
  </AftFlowBegin>
</AFT>
```

## Table description

Item	Description
Feature name	AFT
Table name	AftFlowBegin
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
EnableSwitch	Whether enable AFT flow-begin logging	N/A	Boolean: <ul style="list-style-type: none"><li>true—YES</li><li>false—NO(default).</li></ul>

## AFT/AftFlowEnd

This table contains information about AFT flow end enabling switch

## XML structure

```
<AFT>
  <AftFlowEnd>
    <EnableSwitch></EnableSwitch>
  </AftFlowEnd>
</AFT>
```

## Table description

Item	Description
Feature name	AFT
Table name	AftFlowEnd
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
EnableSwitch	Whether enable AFT flow-end logging	N/A	Boolean: <ul style="list-style-type: none"><li>true—YES</li><li>false—NO(default).</li></ul>

## AFT/AftPrefixNat64

This table contains information about AFT NAT64 prefix

## XML structure

```
<AFT>
  <AftPrefixNat64>
    <PrefixNat64>
      <Ipv6Prefix></Ipv6Prefix>
      <Ipv6PrefixLength></Ipv6PrefixLength>
    </PrefixNat64>
  </AftPrefixNat64>
</AFT>
```

## Table description

Item	Description
Feature name	AFT
Table name	AftPrefixNat64
Table type	Multi-instance table
Row name	PrefixNat64

Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6Prefix	IPv6 NAT64 prefix	Index	IPv6: Hexadecimal string, colon-separated.	Example: 1000::
Ipv6PrefixLength	IPv6 NAT64 prefix length	Index	Unsigned integer. Value range:32,40,48,56,64,96.	N/A

## AFT/AftAddressGroup

This table contains information about AFT address groups.

## XML structure

```

<AFT>
  <AftAddressGroup>
    <GroupNumbers>
      <GroupNumber></GroupNumber>
    </GroupNumbers>
  </AftAddressGroup>
</AFT>

```

## Table description

Item	Description
Feature name	AFT
Table name	AftAddressGroup
Table type	Muti-instance table
Row name	GroupNumbers
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
GroupNumber	AFT address group number	Index	Unsigned integer. Value range: 0 to 65535.

## AFT/AftAddressGroupMember

This table contains information about AFT address group members.

## XML structure

```
<AFT>
  <AftAddressGroupMember>
    <GroupMembers>
      <GroupNumber></GroupNumber>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </GroupMembers>
  </AftAddressGroupMember>
</AFT>
```

## Table description

Item	Description
Feature name	AFT
Table name	AftAddressGroupMember
Table type	Multi-instance table
Row name	GroupMembers
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	Address group number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
StartIpv4Address	Start IPv4 address of the address group	Index	IPv4: String, dotted decimal notation.	The <i>StartIpv4Address</i> cannot be greater than the <i>EndIpv4Address</i> . If

	member			<p>they are the same, the group member has only one IP address.</p> <p>The IP addresses of address members on the device must not overlap.</p> <p>The source address in a packet destined for an external network is translated into an address in one of group members.</p>
EndIpv4Address	End IPv4 address of the address group member	Index	IPv4: String, dotted decimal notation.	N/A

## AFT/AftV6toV4SrcDynamicAcl

This table contains information about AFT IPv6 to IPv4 source dynamic acl rules.

### XML structure

```

<AFT>
  <AftV6toV4SrcDynamicAcl>
    <RuleNumbers>
      <Ipv6Acl></Ipv6Acl>
      <Type></Type>
      <AddressGroup></AddressGroup>
      <IfIndex></IfIndex>
      <AddrGrpType></AddrGrpType>
      <PortBlockSize></PortBlockSize>
      <Ipv4VpnName></Ipv4VpnName>
    </RuleNumbers>
  </AftV6toV4SrcDynamicAcl>
</AFT>

```

### Table description

Item	Description
Feature name	AFT
Table name	AftV6toV4SrcDynamicAcl
Table type	Multi-instance table
Row name	RuleNumbers
Restrictions	None

Support for row creation and deletion	Yes
---------------------------------------	-----

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6Acl	Ipv6Acl name or number	Index	String, case-insensitive. Must start with a-z or A-Z, the word “all” can not be used as name. or the acl number Value range: 2000 to 3999. Length: 1 to 63 characters..	N/A
Type	Address group or easy ip	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—address group.</li> <li>1—easy ip.</li> </ul>	N/A
AddressGroup	Address group number	N/A	Unsigned integer. Value range: 0 to 65535	N/A
IfIndex	Interface index or interface name	N/A	String. case-sensitive. Length: 1 to 99 characters.	Some versions support interface name. For relevant information, you can reference the XSD document of your product. For more information about IfIndex, you can reference “Appendix” in Ifmgr NETCONF XML API Configuration document.
AddrGrpType	Address group type:pat or nopat	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—NPt.</li> <li>1—PT</li> </ul>	N/A
PortBlockSize	Whether to use port block	N/A	Unsigned integer. Value range: 100 to 64512.	Can be empty
Ipv4VpnName	Whether to use vpn	N/A	String. Length:1 to 31 characters	Can be empty

# AFT

## AFT/AftEnable

This table contains informations about AFT enable switch on the interface.

### XML structure

```
<AFT>
  <AftEnable>
    <Interface>
      <IfIndex></IfIndex>
      <EnableSwitch></EnableSwitch>
    </Interface>
  </AftEnable>
</AFT>
```

### Table description

Item	Description
Feature name	AFT
Table name	AftEnable
Table type	Multi-instance table
Row name	Interface
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index or interface name	Index	String. case-sensitive. Length: 1 to 99 characters.	Some versions support interface name. For relevant information, you can reference the XSD document of your product. For more information about IfIndex, you can reference “Appendix” in Ifmgr NETCONF XML API Configuration document.
EnableSwitch	Whether enable AFT on the inerface	N/A	Boolean: <ul style="list-style-type: none"><li>true—YES</li><li>false—NO</li></ul>	N/A

# AFT/AftLogEnable

This table contains informations about AFT log enable switch

## XML structure

```
<AFT>
  <AftLogEnable>
    <EnableSwitch></EnableSwitch>
  </AftLogEnable>
</AFT>
```

## Table description

Item	Description
Feature name	AFT
Table name	AftLogEnable
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
EnableSwitch	Whether enable AFT log	N/A	Boolean: <ul style="list-style-type: none"><li>true—YES</li><li>false—NO</li></ul>

# AFT/AftFlowBegin

This table contains informations about AFT flow begin enable switch

## XML structure

```
<AFT>
  <AftFlowBegin>
    <EnableSwitch></EnableSwitch>
  </AftFlowBegin>
</AFT>
```

</AFT>

## Table description

Item	Description
Feature name	AFT
Table name	AftFlowBegin
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
EnableSwitch	Whether enable AFT flow-begin log	N/A	Boolean: <ul style="list-style-type: none"><li>true—YES</li><li>false—NO</li></ul>

## AFT/AftFlowEnd

This table contains informations about AFT flow end enable switch

## XML structure

```
<AFT>
  <AftFlowEnd>
    <EnableSwitch></EnableSwitch>
  </AftFlowEnd>
</AFT>
```

## Table description

Item	Description
Feature name	AFT
Table name	AftFlowEnd
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
EnableSwitch	Whether enable AFT flow-end log	N/A	Boolean: <ul style="list-style-type: none"><li>true—YES</li><li>false—NO</li></ul>

## AFT/AftPrefixNat64

This table contains informations about AFT nat64 prefix

## XML structure

```
<AFT>
  <AftPrefixNat64>
    <PrefixNat64>
      <Ipv6Prefix></Ipv6Prefix>
      <Ipv6PrefixLength></Ipv6PrefixLength>
    </PrefixNat64>
  </AftPrefixNat64>
</AFT>
```

## Table description

Item	Description
Feature name	AFT
Table name	AftPrefixNat64
Table type	Multi-instance table
Row name	PrefixNat64
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6Prefix	Ipv6 nat64 prefix	index	IPv6: Hexadecimal string, colon-separated.	Example: 1000::
Ipv6PrefixLength	Ipv6 nat64 prefix length	index	Unsigned integer. Value range:32、40、48、56、64、96.	N/A

# AFT/AftAddressGroup

This table contains informations about AFT address groups.

## XML structure

```
<AFT>
  <AftAddressGroup>
    <GroupNumbers>
      <GroupNumber></GroupNumber>
    </GroupNumbers>
  </AftAddressGroup>
</AFT>
```

## Table description

Item	Description
Feature name	AFT
Table name	AftAddressGroup
Table type	Muti-instance table
Row name	GroupNumbers
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
GroupNumber	AFT address group number	Index	Unsigned integer. Value range: 0 to 65535.

# AFT/AftAddressGroupMember

This table contains informations about AFT address group members.

## XML structure

```
<AFT>
  <AftAddressGroupMember>
    <GroupMembers>
```

```

    <GroupNumber></GroupNumber>
    <StartIpv4Address></StartIpv4Address>
    <EndIpv4Address></EndIpv4Address>
  </GroupMembers>
</AftAddressGroupMember>
</AFT>

```

## Table description

Item	Description
Feature name	AFT
Table name	AftAddressGroupMember
Table type	Multi-instance table
Row name	GroupMembers
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	Address group number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
StartIpv4Address	Start IPv4 address of the address group member	Index	IPv4: String, dotted decimal notation.	<p>The <i>StartIpv4Address</i> cannot be greater than the <i>EndIpv4Address</i>. If they are the same, the group member has only one IP address.</p> <p>The IP addresses of address members on the device must not overlap.</p> <p>The source address in a packet destined for an external network is translated into an address in one of group members.</p>
EndIpv4Address	End IPv4 address of the address group member	Index	IPv4: String, dotted decimal notation.	N/A

## AFT/AftV6toV4SrcDynamicAcl

This table contains the aft ipv6 to ipv4 source dynamic acl rules.

# XML structure

```
<AFT>
  <AftV6toV4SrcDynamicAcl>
    <RuleNumbers>
      <Ipv6Acl></Ipv6Acl>
      <Type></Type>
      <AddressGroup></AddressGroup>
      <IfIndex></IfIndex>
      <AddrGrpType></AddrGrpType>
      <PortBlockSize></PortBlockSize>
      <Ipv4VpnName></Ipv4VpnName>
    </RuleNumbers>
  </AftV6toV4SrcDynamicAcl>
</AFT>
```

## Table description

Item	Description
Feature name	AFT
Table name	AftV6toV4SrcDynamicAcl
Table type	Multi-instance table
Row name	RuleNumbers
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6Acl	Ipv6Acl name or number	Index	String, case-insensitive. Must start with a-z or A-Z, the word “all” can not be used as name. or the acl number Value range: 2000 to 3999. Length: 1 to 63 characters..	N/A
Type	Address group or easy ip	N/A	Enumeration: <ul style="list-style-type: none"><li>0—address group.</li><li>1—easy ip.</li></ul>	N/A
AddressGroup	Address group number	N/A	Unsigned integer. Value range: 0 to 65535	N/A
IfIndex	Interface index or interface name	N/A	String, case-sensitive. Length: 1 to 99 characters.	Some versions support interface name. For relevant information, you can reference the XSD document of your product. For more information about

				IfIndex, you can reference “Appendix” in Ifmgr NETCONF XML API Configuration document.
AddrGrpType	Address group type:pat or nopat	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—NPt.</li> <li>• 1—PT</li> </ul>	N/A
PortBlockSize	Whether to use port block	N/A	Unsigned integer. Value range: 100 to 64512.	Can be empty
Ipv4VpnName	Whether to use vpn	N/A	String. Length:1 to 31 characters	Can be empty

## AntiVirus/SignatureManualUpgrading

This table contains the information of AntiVirus signatures manual upgrade.

### XML structure

```
<AntiVirus>
  <SignatureManualUpgrading>
    <URL></URL>
    <Location></Location>
  </SignatureManualUpgrading>
</AntiVirus>
```

### Table description

Item	Description
Feature name	AntiVirus
Table name	SignatureManualUpgrading
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	URL the upgrade signature file.	N/A	String: case-insensitive When the file is remote, Length: 1 to 255 characters. When the file is local, Length: 1 to 127 character.	N/A
Location	The Location of the file.	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—Local</li><li>• 1—remote</li></ul>	If Location is set to 0, the device deletes the signature file after the signature library update is complete.

## AntiVirus/SignatureAutoUpgradeNow

This table contains the information of AntiVirus signatures upgrade at once.

## XML structure

```
<AntiVirus>
  <SignatureAutoUpgrade>
    <UpgradeNow></UpgradeNow>
  </SignatureAutoUpgrade>
</AntiVirus>
```

## Table description

Item	Description
Feature name	AntiVirus
Table name	SignatureAutoUpgrade
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UpgradeNow	Auto upgrade at once.	N/A	This column must be empty.	N/A

## AntiVirus/SignatureRollback

This table contains the information of AntiVirus signatures rollback.

## XML structure

```
<AntiVirus>
  <SignatureRollback>
    <Rollback></Rollback>
  </SignatureRollback>
</AntiVirus>
```

## Table description

Item	Description
Feature name	AntiVirus
Table name	SignatureRollback
Table type	Single-instance table

Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Rollback	rollback	N/A	Boolean: <ul style="list-style-type: none"> <li>• true: rollback last version</li> <li>• false: rollback original version</li> </ul>	N/A

# AntiVirus

## AntiVirus/Policies

This table contains AntiVirus policy.

### XML structure

```
<AntiVirus>
  <Policies>
    <Policy>
      <PolicyName></PolicyName>
      <Description></Description>
      <CloudQuery></CloudQuery>
    </Policy>
  </Policies>
</AntiVirus>
```

### Table description

Item	Description
Feature name	AntiVirus
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the policy	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the policy	N/A	String: case-sensitive. Length: 1 to 255 characters.	N/A
CloudQuery	Enabling status of cloud querying	N/A	Enumeration: <ul style="list-style-type: none"><li>1—Enabled.</li><li>2—Disabled.</li></ul>	N/A

# AntiVirus/PolicyInProfile

This table contains AntiVirus policy applied to the profile.

## XML structure

```
<AntiVirus>
  <PolicyInProfile>
    <Profile>
      <ProfileName></ProfileName>
      <PolicyName></PolicyName>
    </Profile>
  </PolicyInProfile>
</AntiVirus>
```

## Table description

Item	Description
Feature name	AntiVirus
Table name	PolicyInProfile
Table type	Multi-instance table
Row name	Profile
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Name of the profile	Index	String: case-insensitive. Length: 1 to 100 characters.	N/A
PolicyName	Name of the policy	N/A	String: case-insensitive. Length: 1 to 63 characters.	N/A

# AntiVirus/RuleInPolicy

This table contains the information of rules in an AntiVirus policy.

## XML structure

```
<AntiVirus>
  <RuleInPolicy>
    <Policy>
```

```

<PolicyName></PolicyName>
<Protocol>
  <ProtocolName></ProtocolName>
  <Direction></Direction>
  <Action></Action>
</Protocol>
<Application>
  <AppName></AppName>
  <Action></Action>
</Application>
</Policy>
</RuleInPolicy>
</AntiVirus>

```

## Table description

Item	Description
Feature name	AntiVirus
Table name	RuleInPolicy
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the policy	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
Protocol	Protocol configuration	Data Structure	Members include: <ul style="list-style-type: none"> <li>ProtocolName</li> <li>Direction</li> <li>Action</li> </ul>	N/A
ProtocolName	Protocol name	N/A	String: case-insensitive <ul style="list-style-type: none"> <li>HTTP</li> <li>FTP</li> <li>SMTP</li> <li>POP3</li> <li>IMAP</li> </ul>	N/A
Direction	Direction of protocol traffic	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Upload</li> <li>1—Download</li> <li>2—Both</li> </ul>	N/A
Action	Actions for the	N/A	Enumeration:	N/A

	specified protocol's traffic		<ul style="list-style-type: none"> <li>1—Alert</li> <li>2—Block</li> <li>3—Redirect</li> </ul>	
Application	Application configuration	Data Structure	Members include: <ul style="list-style-type: none"> <li>AppName</li> <li>Action</li> </ul>	N/A
AppName	Application name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Action	Actions for the specified application	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Alert</li> <li>2—Block</li> <li>3—Permit</li> </ul>	N/A

## AntiVirus/SignatureAutoUpgrading

This table contains the information of AntiVirus signatures auto upgrading.

### XML structure

```

<AntiVirus>
  <SignatureAutoUpgrading>
    <Enabled></Enabled>
    <StartTime></StartTime>
    <Type></Type>
    <Day></Day>
  </SignatureAutoUpgrading>
</AntiVirus>

```

### Table description

Item	Description
Feature name	AntiVirus
Table name	SignatureAutoUpgrading
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enabled	Enabled or disabled	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> </ul>	Default is false

			<ul style="list-style-type: none"> <li>• false</li> </ul>	
StartTime	The time that the system auto upgrading	N/A	Time.	Default is 03:01:00, HH:MM:SS
Type	Type of the system auto upgrading	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—Week</li> <li>• 1—Periodic</li> </ul>	Default is 1
Day	Days	N/A	Unsigned integer. Value range: 0 to 15.	When Type is 0, the value range is 0 to 6. Otherwise, the value range is 1 to 15. The default is 3.

## AntiVirus/ActionDefaultParameters

This table contains Antivirus action default parameter information.

### XML structure

```

<AntiVirus>
  <ActionDefaultParameters>
    <ActionDefaultParameter>
      <Action></Action>
      <ParameterName></ParameterName>
    </ActionDefaultParameter>
  </ActionDefaultParameters>
</AntiVirus>

```

### Table description

Item	Description
Feature name	AntiVirus
Table name	ActionDefaultParameters
Table type	Multi-instance table
Row name	ActionDefaultParameter
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	action	Index	Enumeration: <ul style="list-style-type: none"> <li>• 1—Block</li> <li>• 2—Capture</li> </ul>	N/A

			<ul style="list-style-type: none"> <li>• 3—Logging</li> <li>• 4—Redirect</li> <li>• 5—Mail</li> </ul>	
ParameterName	Parameter-Name	N/A	String: case-insensitive. Length: 1 to 63 characters.	The value is from DIM table. E.g. If Action is block, the ParameterName's value is from DIM/BlockParameters.

## AntiVirus/RuleInPolicySigID

This table contains the Exception sigs information of an AntiVirus policy.

### XML structure

```
<AntiVirus>
  <RuleInPolicySigID>
    <Policy>
      <PolicyName></PolicyName>
      <ExceptionSigID></ExceptionSigID>
    </Policy>
  </RuleInPolicySigID>
</AntiVirus>
```

### Table description

Item	Description
Feature name	AntiVirus
Table name	RuleInPolicySigID
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the policy	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
ExceptionSigID	ID of the virus	Index	Unsigned integer. Value range: 1 to 536870910.	N/A

# AntiVirus/CloudQueryConfig

This table contains cloud query configuration.

## XML structure

```
<AntiVirus>
  <CloudQueryConfig>
    <HostName></HostName>
    <CacheSize></CacheSize>
    <CacheTime></CacheTime>
  </CloudQueryConfig>
</AntiVirus>
```

## Table description

Item	Description
Feature name	AntiVirus
Table name	CloudQueryConfig
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HostName	Name of the host	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
CacheSize	Size of the cache	N/A	Unsigned integer. Value range: 100000 to 200000.	N/A
CacheTime	Lifetime of the cached entries	N/A	Unsigned integer. Value range: 10 to 720.	N/A

# AntiVirus/RuleInPolicyMd5

This table contains the MD5 exception information of an AntiVirus policy.

## XML structure

```
<AntiVirus>
  <RuleInPolicyMd5>
```

```

<Policy>
  <PolicyName></PolicyName>
  <ExceptionMd5></ExceptionMd5>
</Policy>
</RuleInPolicyMd5>
</AntiVirus>

```

## Table description

Item	Description
Feature name	AntiVirus
Table name	RuleInPolicyMd5
Table type	Multi-instance table
Row name	Policy
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the policy	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
ExceptionMd5	Value of the MD5	Index	String: case-insensitive. Length: 32 characters.	N/A

## AntiVirus/Signatures

This table contains the pre-defined rules information of an AntiVirus policy.

### XML structure

```

<AntiVirus>
  <Signatures>
    <Signature>
      <SignatureID></SignatureID>
      <Severity></Severity>
      <SignatureName></SignatureName>
    </Signature>
  </Signatures>
</AntiVirus>

```

### Table description

Item	Description
Feature name	AntiVirus
Table name	Signatures
Table type	Multi-instance table
Row name	Signature
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SignatureID	ID of the virus	Index	Unsigned integer. Value range: 1 to 536870910.	From signature file.

Column name	Column description	Column type	Data type and restrictions	Remarks
Severity	Severity of the virus	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Critical</li> <li>2—High</li> <li>3—Minor</li> <li>4—Low</li> </ul>	From signature file.
SignatureName	Name of the virus	N/A	String: case-insensitive. Length: 1 to 127 characters.	From signature file.

## AntiVirus/SignatureFileInfos

This table contains AntiVirus policy.

### XML structure

```

<AntiVirus>
  <SignatureFileInfos>
    <FileInfo>
      <Version></Version>
      <FileName></FileName>
      <PublishedTime></PublishedTime>
      <Updates></Updates>
    </FileInfo>
  </SignatureFileInfos>
</AntiVirus>

```

### Table description

Item	Description
Feature name	AntiVirus
Table name	SignatureFileInfos
Table type	Multi-instance table
Row name	FileInfo
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Version	signature file version	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Current</li> <li>2—Latest</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>3—Factory</li> </ul>	
FileName	Name of the signature file	N/A	String: case-insensitive. Length: 1 to 31 characters.	v.v(2.1)
PublishedTime	The time when the signature is published	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	Consider time-zone
Updates	Updating Information	N/A	String: case-insensitive. Length: 1 to 255 characters.	N/A

## AntiVirus/UpdatePercentage

This table contains the percentage of update.

### XML structure

```
<AntiVirus>
  <UpdatePercentage>
    <Percentage></Percentage>
  </UpdatePercentage>
</AntiVirus>
```

### Table description

Item	Description
Feature name	AntiVirus
Table name	UpdatePercentage
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Percentage	Percentage of update	N/A	Unsigned integer. Value range: 0 to 100.	When the value range is 0 to 100, it means in upgrading, Otherwise, it means error

# AntiVirus/SignatureAutoUpgrading

This table contains the information of AntiVirus signatures auto upgrading.

## XML structure

```
<AntiVirus>
  <SignatureAutoUpgrading>
    <Enabled></Enabled>
    <StartTime></StartTime>
    <Type></Type>
    <Day></Day>
  </SignatureAutoUpgrading>
</AntiVirus>
```

## Table description

Item	Description
Feature name	AntiVirus
Table name	SignatureAutoUpgrading
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enabled	Enabled or disabled	N/A	Boolean: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>	Default is false
StartTime	The time that the system auto upgrading	N/A	Time.	Default is 03:01:00, HH:MM:SS
Type	Type of the system auto upgrading	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Week</li><li>1—Periodic</li></ul>	Default is 1
Day	Days	N/A	Unsigned integer. Value range: 0 to 15.	When Type is 0, the value range is 0 to 6. Otherwise, the value range is 1 to 15. The default is 3.

# AntiVirus/ActionDefaultParameters

This table contains Antivirus action default parameter information.

## XML structure

```
<AntiVirus>
  <ActionDefaultParameters>
    <ActionDefaultParameter>
      <Action></Action>
      <ParameterName></ParameterName>
    </ActionDefaultParameter>
  </ActionDefaultParameters>
</AntiVirus>
```

## Table description

Item	Description
Feature name	AntiVirus
Table name	ActionDefaultParameters
Table type	Multi-instance table
Row name	ActionDefaultParameter
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	action	Index	Enumeration: <ul style="list-style-type: none"><li>1—Block</li><li>2—Capture</li><li>3—Logging</li><li>4—Redirect</li><li>5—Mail</li></ul>	N/A
ParameterName	Parameter-Name	N/A	String: case-insensitive. Length: 1 to 63 characters.	The value is from DIM table. E.g. If Action is block, the ParameterName's value is from DIM/BlockParameters.

# AntiVirus/RuleInPolicySigID

This table contains the Exception sigs information of an AntiVirus policy.

## XML structure

```
<AntiVirus>
  <RuleInPolicySigID>
    <Policy>
      <PolicyName></PolicyName>
      <ExceptionSigID></ExceptionSigID>
    </Policy>
  </RuleInPolicySigID>
</AntiVirus>
```

## Table description

Item	Description
Feature name	AntiVirus
Table name	RuleInPolicySigID
Table type	Multi-instance table
Row name	Policy
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the policy	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
ExceptionSigID	ID of the virus	Index	Unsigned integer. Value range: 1 to 536870910.	N/A

## AntiVirus/FamilyInfos

This table contains information about virus families displayed on paginated lists.

## XML structure

```
<AntiVirus>
  <FamilyInfos>
    <FamilyInfo>
      <UserID></UserID>
      <Position></Position>
      <TotalCount></TotalCount>
      <FamilyID></FamilyID>
      <FamilyName></FamilyName>
    </FamilyInfo>
  </FamilyInfos>
</AntiVirus>
```

```

    </FamilyInfos>
</AntiVirus>

```

## Table description

Item	Description
Feature name	AntiVirus
Table name	FamilyInfos
Table type	Multi-instance table
Row name	FamilyInfo
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserID	ID of the current virtual user.	Index	Unsigned integer.	The value is used to identify each query results in back end, and send to fore-end to get other paginated results when query results is more than one page.
Position	Position of the family on the entire virus families list.	Index	Unsigned integer.	N/Az
TotalCount	Total number of virus families.	N/A	Unsigned integer.	If the query function is used, the total number of virus families in the query results is displayed.
FamilyID	ID of the family.	Index	Unsigned integer. Value range: 1 to 536870910.	The value is obtained from the anti-virus signature file.
FamilyName	Name of the family.	N/A	String: case-insensitive. Length: 1 to 63 characters.	The value is obtained from the anti-virus signature file.

## AntiVirus/CloudQueryConfig

This table contains cloud query configure information.

## XML structure

```

<AntiVirus>
  <CloudQueryConfig>

```

```

    <HostName></HostName>
    <CacheSize></CacheSize>
    <CacheTime></CacheTime>
  </CloudQueryConfig>
</AntiVirus>

```

## Table description

Item	Description
Feature name	AntiVirus
Table name	CloudQueryConfig
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HostName	Name of the host	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
CacheSize	Size of the cache	N/A	Unsigned integer. Value range: 100000 to 200000.	N/A
CacheTime	Lifetime of the cached entries	N/A	Unsigned integer. Value range: 10 to 720.	N/A

## AntiVirus/CloudQueryState

This table contains cloud query status information.

## XML structure

```

<AntiVirus>
  <CloudQueryState>
    <HostName></HostName>
    <HostState></HostState>
    <HostStateErrCode></HostStateErrCode>
  </CloudQueryState>
</AntiVirus>

```

## Table description

Item	Description
Feature name	AntiVirus
Table name	CloudQueryState
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
HostName	Name of the host	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
HostState	Status of the host	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Available</li><li>1—Unavailable</li></ul>	N/A
HostStateErrCode	Error code of cloud query	N/A	Unsigned integer. Value range: 0 to 3.	N/A

## AntiVirus/RuleInPolicyMd5

This table contains the MD5 exception information of an AntiVirus policy.

## XML structure

```
<AntiVirus>
  <RuleInPolicyMd5>
    <Policy>
      <PolicyName></PolicyName>
      <ExceptionMd5></ExceptionMd5>
    </Policy>
  </RuleInPolicyMd5>
</AntiVirus>
```

## Table description

Item	Description
Feature name	AntiVirus
Table name	RuleInPolicyMd5
Table type	Multi-instance table

Row name	Policy
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the policy	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
ExceptionMd5	Value of the MD5	Index	String: case-insensitive. Length: 32 characters.	N/A

## AntiVirus/SignatureManualUpgrading

Message	Explanation
Operation failed because no valid license could be found. 操作失败：没有找到有效的license。	Please install a valid license. 请安装正确的license。

## AntiVirus/SignatureAutoUpgradeNow

Message	Explanation
Operation failed because no valid license could be found. 操作失败：没有找到有效的license。	Please install a valid license. 请安装正确的license。
The signature file is updating. Please try again later. 特征库正在升级，请稍后再试。	Please try later. 正在升级，稍后再试。
Operation failed because a connection to the signature library server could not be established. 操作失败：连接特征库服务器失败。	Please examine your network or server. 请检查网络和服务器是否正常。
Cannot execute this operation because of memory alert. 由于内存门限不能执行此操作。	Please try later. 待设备内存门限解除后再试。
The signature version is up to date. No update is needed. 特征库已是最新版本，不需要进行升级。	No update is needed because the version is up to date. 不需要升级，已经是最新版本。
Cannot update the signature library because the required service card cannot be found. 未检测到业务板，特征库升级失败。	Cannot update the signature library because the required service card cannot be found. 特征库升级操作需要有业务板。

## AntiVirus/RuleInPolicy

Message	Explanation
The maximum number of 100 application exceptions already reached. 最多可配置100个应用例外。	A maximum of 100 application exceptions can be configured. 最多可配置100个应用例外。

# AntiVirus/RuleInPolicySigID

Message	Explanation
The maximum number of 512 signature exceptions already reached. 最多可配置512个病毒例外。	A maximum of 512 signature exceptions can be configured. 最多可配置512个病毒例外。

# AP

## AP/ResetAP

This table contains information of AP resetting.

### XML structure

```
<AP>
  <ResetAP>
    <AP>
      <ApName></ApName>
    </AP>
  </ResetAP>
</AP>
```

### Table description

Item	Description
Feature name	AP
Table name	ResetAP
Table type	Multi-instance table
Row name	AP
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.

## AP/ResetAllAP

This table contains information of resetting all APs.

### XML structure

```
<AP>
  <ResetAllAP>
    <Global>
      <ResetType></ResetType>
    </Global>
  </ResetAllAP>
</AP>
```

```

    </ResetAllAP>
  </AP>

```

## Table description

Item	Description
Feature name	AP
Table name	ResetAllAP
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ResetType	Which type of APs will be reset.	Index	Enumeration: <ul style="list-style-type: none"> <li>1—All.</li> <li>2—Unauthenticated.</li> </ul>

## AP/PersistentAP

This table contains information of AP persistence.

## XML structure

```

<AP>
  <PersistentAP>
    <AP>
      <ApName></ApName>
    </AP>
  </PersistentAP>
</AP>

```

## Table description

Item	Description
Feature name	AP
Table name	PersistentAP
Table type	Multi-instance table
Row name	AP
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.

## AP/RegroupAPByName

This table contains information of AP regrouping.

## XML structure

```
<AP>
  <RegroupAPByName>
    <AP>
      <ApName></ApName>
      <GroupName></GroupName>
    </AP>
  </RegroupAPByName>
</AP>
```

## Table description

Item	Description
Feature name	AP
Table name	RegroupAPByName
Table type	Multi-instance table
Row name	AP
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
GroupName	The name of AP group which the AP will belong to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A

## AP/RegroupAPByMac

This table contains information of AP regrouping by MAC address.

## XML structure

```
<AP>
  <RegroupAPByMac>
    <MAC>
      <MacAddress></MacAddress>
      <GroupName></GroupName>
    </MAC>
  </RegroupAPByMac>
</AP>
```

## Table description

Item	Description
Feature name	AP
Table name	RegroupAPByMac
Table type	Multi-instance table
Row name	MAC
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	AP MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
GroupName	The name of AP group which the AP will belong to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A

## AP/RegroupAPBySerialID

This table contains information of AP regrouping by serial ID.

## XML structure

```
<AP>
  <RegroupAPBySerialID>
    <SerialID>
      <SerialID></SerialID>
      <GroupName></GroupName>
    </SerialID>
  </RegroupAPBySerialID>
</AP>
```

## Table description

Item	Description
Feature name	AP
Table name	RegroupAPBySerialID
Table type	Multi-instance table
Row name	SerialID
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SerialID	AP serial ID	Index	String, uppercase. Length: 1 to 127 characters.	If this column contains lowercase character, it will be converted to uppercase automatically.
GroupName	The name of AP group which the AP will belong to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A

## AP/RegroupAPByGroup

This table contains information of AP regrouping by group.

## XML structure

```
<AP>
  <RegroupAPByGroup>
    <Group>
      <OldGroupName></OldGroupName>
      <NewGroupName></NewGroupName>
    </Group>
  </RegroupAPByGroup>
</AP>
```

## Table description

Item	Description
Feature name	AP
Table name	RegroupAPByGroup
Table type	Multi-instance table
Row name	Group

Restrictions	None
--------------	------

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
OldGroupName	The name of old AP group.	Index	String, lowercase. Length: 1 to 31 characters.	If this column contains uppercase character, it will be converted to lowercase automatically.
NewGroupName	The name of AP group which the AP in old group will belong to.	N/A	String, lowercase. Length: 1 to 31 characters.	If this column contains uppercase character, it will be converted to lowercase automatically.

## AP/AuthenticateAP

This table contains information of authenticating APs.

## XML structure

```

<AP>
  <AuthenticateAP>
    <AP>
      <ApName></ApName>
      <Action></Action>
    </AP>
  </AuthenticateAP>
</AP>

```

## Table description

Item	Description
Feature name	AP
Table name	AuthenticateAP
Table type	Multi-instance table
Row name	AP
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	The authenticating action type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Accept.</li> <li>2—<b>Reject.</b></li> </ul>	N/A

## AP/AuthenticateAllAP

This table contains information of authenticating all APs.

### XML structure

```

<AP>
  <AuthenticateAllAP>
    <Global>
      <Action></Action>
    </Global>
  </AuthenticateAllAP>
</AP>

```

### Table description

Item	Description
Feature name	AP
Table name	AuthenticateAllAP
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
Action	The authenticating action type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Accept.</li> <li>2—<b>Reject.</b></li> </ul>

## AP/ImportAuthenticateFile

This table contains information of importing authenticating file.

### XML structure

```

<AP>

```

```

<ImportAuthenticateFile>
  <FileName></FileName>
</ImportAuthenticateFile>
</AP>

```

## Table description

Item	Description
Feature name	AP
Table name	ImportAuthenticateFile
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	The TXT file name with full path which will be imported as the AP ACL rules for AP authentication.	N/A	String, case-insensitive. Length: 1 to 255 characters.	Should end with ".txt" and specify the authentication ACL first.

## AP/ProvisionAP

This table contains information of provisioning APs.

## XML structure

```

<AP>
  <ProvisionAP>
    <AP>
      <ApName></ApName>
      <Action></Action>
    </AP>
  </ProvisionAP>
</AP>

```

## Table description

Item	Description
Feature name	AP
Table name	ProvisionAP
Table type	Multi-instance table

Row name	AP
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
Action	The authenticating action type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Provision.</li> <li>2—Reset provisioning.</li> </ul>	N/A

## AP/RenameAP

This table contains information about renaming APs.

## XML structure

```

<AP>
  <RenameAP>
    <AP>
      <ApName></ApName>
      <NewApName></NewApName>
    </AP>
  </RenameAP>
</AP>

```

## Table description

Item	Description
Feature name	AP
Table name	RenameAP
Table type	Multi-instance table
Row name	AP
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.

Column name	Column description	Column type	Data type and restrictions	Remarks
NewApName	New AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.

    <ControlAddressIPv4></ControlAddressIPv4>
    <ControlAddressIPv6></ControlAddressIPv6>
  </GlobalCfg>
</AP>
```

### Table description

Item	Description
Feature name	AP
Table name	GlobalCfg
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AutoAp	Whether an AP can connect the AC without creating a manual AP.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul> Default value is false.	N/A
AutoPersistent	When an auto AP connects the AC , whether convert the AP to manual AP automatically.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul> Default value is false.	N/A
RegionCode	Region code of AP group.	N/A	Unsigned short.	Conform to ISO 3166 standard.
RegionLock	Whether the region code of the AC is locked	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul> Default value is false.	N/A
Preempt	Whether the AP in this group will be forced to switch the backup tunnel to active by priority.	N/A	Boolean: <ul style="list-style-type: none"> <li>true: Switch</li> <li>false: Not switch</li> </ul> Default value is false.	N/A
FirmwareUpgrade	Whether the AC will upgrade AP's firmware automatically if the software is mismatch.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable</li> <li>false—Disable</li> </ul> Default value is disable.	N/A
TunnelEncryption	Whether to enable tunnel encryption.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable</li> <li>false—Disable</li> </ul>	N/A
Gps	Whether to open the Gps report switch.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable</li> <li>false—Disable</li> </ul>	Only for FatAP Type
LocalAC	Whether to enable Local ac.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable</li> <li>false—Disable</li> </ul>	Only for Local-ac Type
CentralACIPv4	The IPv4 Central AC address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. Only for Local-ac Type
CentralACIPv6	The IPv6 Central AC address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. Only for Local-ac Type
ControlAddress	CAPWAP control address configuration	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable</li> <li>false—Disable</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ControlAddressIPv4	Specify an AC IPv4 address for AC rediscovery	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
ControlAddressIPv6	Specify an AC IPv4 address for AC rediscovery	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.

## Table description

Item	Description
Feature name	AP
Table name	ManualAP
Table type	Multi-instance table
Row name	AP
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
Model	AP model name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	Characters will be automatically convert case. Refer to AP/APDB. This column is mandatory when the row is being created. This column is not writable when the row is being deleted, removed. This column should not be changed when the row is being replaced or merged.
CfgSerialID	Configured AP serial ID.	N/A	String, uppercase. Length: 1 to 127 characters.	If this column contains lowercase character, it will be converted to uppercase automatically.
CfgMacAddress	Configured AP MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
RegionCode	Region code of AP.	N/A	Unsigned short.	Conform to ISO 3166 standart.
RegionLock	Whether the region code of the AP is locked.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
Priority	AP connection priority	N/A	Unsigned short. Value range: 0 to 7.	N/A
Preempt	Whether the AP will be forced to switch the backup tunnel to active by priority.	N/A	Boolean: <ul style="list-style-type: none"> <li>true: Switch</li> <li>false: Not switch</li> </ul>	N/A

EchoInterval	The transmit interval of tunnel echo messages.	N/A	Unsigned short. Value range: 0, 5 to 255. Unit: seconds	N/A
EchoCount	The allowed maximum number of echo messages which are not received. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 1 to 20.	N/A
RetransInterval	The interval to retransmit a request message.	N/A	Unsigned short. Value range: 1 to 30. Unit: seconds	N/A
RetransCount	The allowed maximum number of retransmission attempts. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 1 to 20. Unit: seconds	N/A
StatisInterval	The interval of AP sending the statistics informations to AC.	N/A	Unsigned short. Value range: 0 to 240. Default value is 50 seconds.	N/A
FirmwareUpgrade	Whether the AC will upgrade AP's firmware automatically if the software is mismatch.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true—Enable</li> <li>• false—Disable</li> </ul>	N/A
BackupACIPv4	The IPv4 backup AC address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
BackupACIPv6	The IPv6 backup AC address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
LocationName	Which location the AP group belongs to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A
Description	The description of AP.	N/A	String, Length: 1 to 64 characters.	N/A
TunnelEncryption	Whether to enable tunnel encryption.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true—Enable</li> <li>• false—Disable</li> </ul>	N/A
ControlAddress	CAPWAP control address configuration.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true—Enable.</li> <li>• false—Disable.</li> </ul>	N/A
ControlAddressIPv4	Specify an AC IPv4 address for AC rediscovery.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
ControlAddressIPv6	Specify an AC IPv4 address for AC rediscovery.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
ProvisionAutoUpgrade	Whether to enable provision	N/A	Boolean: <ul style="list-style-type: none"> <li>• true—Enable.</li> </ul>	N/A

	auto-upgrade.		<ul style="list-style-type: none"> <li>false—Disable.</li> </ul>	
ProvisionAutoRecover	Whether to enable provision auto-recover.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
LedMode	LED mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Normal</li> <li>1—Quiet</li> <li>2—Awake</li> <li>3—Always-on</li> <li>4—Inherit</li> </ul>	N/A

## Table description

Item	Description
Feature name	AP
Table name	RadioOfManualAP
Table type	Multi-instance table
Row name	Radio
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
RadioID	Radio ID	Index	Unsigned short. Value range: 1 to 31.	N/A
Mode	Radio mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—802.11b</li> <li>2—802.11a</li> <li>3—802.11g</li> <li>4—802.11n(2.4GHz)</li> <li>5—802.11n(5GHz)</li> <li>6—802.11ac(2.4GHz)</li> <li>7—802.11ac(5GHz)</li> </ul>	N/A
Bandwidth	Radio bandwidth.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—20M</li> <li>2—40M</li> <li>3—80M</li> <li>4—160M</li> <li>5—80M + 80M</li> <li>17—5M</li> <li>18—10M</li> </ul>	N/A
Status	Radio status	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable</li> <li>1—Enable</li> <li>2—Inherit</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RateMulticast	Multicast rate.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>• 1—1Mbps</li> <li>• 2—2Mbps</li> <li>• 3—5.5Mbps</li> <li>• 4—6Mbps</li> <li>• 5—9Mbps</li> <li>• 6—11Mbps</li> <li>• 7—12Mbps</li> <li>• 8—18Mbps</li> <li>• 9—24Mbps</li> <li>• 10—36Mbps</li> <li>• 11—48Mbps</li> <li>• 12—54Mbps</li> <li>• 13—auto</li> </ul> <p>If this column is not configured, the multicast rate will be calculated automatically.</p>	<p>The value can have multi-selections. List of enumeration, separated by comma Example: 1, 2.</p>
RateMandatory	Mandatory rate.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>• 1—1Mbps</li> <li>• 2—2Mbps</li> <li>• 3—5.5Mbps</li> <li>• 4—6Mbps</li> <li>• 5—9Mbps</li> <li>• 6—11Mbps</li> <li>• 7—12Mbps</li> <li>• 8—18Mbps</li> <li>• 9—24Mbps</li> <li>• 10—36Mbps</li> <li>• 11—48Mbps</li> <li>• 12—54Mbps</li> </ul>	<p>The value can have multi-selections. List of enumeration, separated by comma Example: 1, 2.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
RateSupported	Supported rate.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—1Mbps</li> <li>2—2Mbps</li> <li>3—5.5Mbps</li> <li>4—6Mbps</li> <li>5—9Mbps</li> <li>6—11Mbps</li> <li>7—12Mbps</li> <li>8—18Mbps</li> <li>9—24Mbps</li> <li>10—36Mbps</li> <li>11—48Mbps</li> <li>12—54Mbps</li> </ul>	The value can have multi-selections, exclude the one which multicast rate uses. List of enumeration, separated by comma Example: 1, 2.
RateDisabled	Disabled rate.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—1Mbps</li> <li>2—2Mbps</li> <li>3—5.5Mbps</li> <li>4—6Mbps</li> <li>5—9Mbps</li> <li>6—11Mbps</li> <li>7—12Mbps</li> <li>8—18Mbps</li> <li>9—24Mbps</li> <li>10—36Mbps</li> <li>11—48Mbps</li> <li>12—54Mbps</li> </ul>	The value can have multi-selections, exclude the one which multicast rate uses. List of enumeration, separated by comma Example: 1, 2.
Preamble	Preamble.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Short.</li> <li>false—Long.</li> </ul> The column is only for 2.4GHz radio mode.	N/A
BeaconInterval	Beacon Interval time.	N/A	Unsigned short. The value range is 32~8191. Unit: TU. 1TU = 1024ms	N/A
PowerLock	Lock the power.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable</li> <li>1—Enable</li> <li>2—Inherit</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ChannelAutoLock	<del>Lock the channel</del>	N/A	Boolean: <ul style="list-style-type: none"> <li><del>true ChannelAutoLock</del></li> <li><del>false ChannelAutoUnLock</del></li> </ul> The default value is true.	<del>When the value is true, the radio automatically selects an optimal channel, and then locks the channel.</del>  When the AC detects any radar signals on its channel, it immediately selects another channel (even if the channel auto lock is true) and locks the new channel.
Distance	The distance that Radio can cover.	N/A	Unsigned short. The value range is 1~40. Unit: km(kilometre).	N/A
MaxRxDuration	Max Reveived frame duration tim.	N/A	Unsigned integer. The value range is 500~250000. Unit: ms(millisecond).	N/A
FragmentThreshold	Fragment threshold.	N/A	Unsigned short. The value range is 256~2346. And the value must be an even number. Unit: byte.	N/A
LongRetryThreshold	Long retry threshold.	N/A	Unsigned short. The value range is 1~15. Unit: null.	N/A
ProtectionThreshold	Protection threshold.	N/A	Unsigned short. The value range is 0~2346. Unit: byte.	N/A
ShortRetryThreshold	Short retry threshold.	N/A	Unsigned short. The value range is 1~15. Unit: null.	N/A
CfgChannel	Configured channel number.	N/A	Unsigned short. The value range conforms to "AP/ChannelDB/Supported ChannelList" column. If this column is not configured, the channel number will be calculated automatically.	When the value is true, the radio automatically selects an optimal channel, and then locks the channel.  When the AC detects any radar signals on its channel, it immediately selects another channel (even if the channel auto lock is true) and locks the new channel.
CfgMaxPower	Configured maximum power	N/A	Unsigned short. Value range: 1 to "AP/PowerDB/ValidMaxPower". Unit: dBm	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CfgMaxPowerPercent	Configured maximum power in percentage	N/A	Unsigned short. Value range: 1 to 10. Unit: null.	<ul style="list-style-type: none"> <li>When both CfgMaxPower and CfgMaxPowerPercent are configured, CfgMaxPowerPercent has higher priority.</li> <li>Value 1 represents 10%, 2 represents 20%, etc.</li> </ul> <p>The Remove operation will set the value of this parameter to 10 by default.</p>

## Table description

Item	Description
Feature name	AP
Table name	PrvsOfManualAP
Table type	Multi-instance table
Row name	Prvs
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
ACHostName	Specify an AC by its hostname.	N/A	String. Length: 1 to 253 characters.	N/A
ACIPv4	Specify an AC by its IPv4 address.	N/A	List of string, dotted decimal notation, Separated by comma.	Example: 1.1.1.1, 1.1.1.2.
ACIPv6	Specify an AC by its IPv6 address.	N/A	List of hexadecimal string, colon-separated, Separated by comma.	Example: 1:1::1:1, 1:1::1:2.
DnsDomain	Specify the domain name suffix.	N/A	String. Length: 1 to 253.	N/A
DnsServerIPv4	Specify a DNS server by its IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
DnsServerIPv6	Specify a DNS server by its IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
GatewayIPv4	Specify a gateway by its IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
GatewayIPv6	Specify a gateway by its IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
IPv4Addresses	Specify an IP address that the AP uses to establish a CAPWAP tunnel.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv6Addresses	Specify an IPv6 address that the AP uses to establish a CAPWAP tunnel.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
Dot1xSupplAnonyIdent	Specify an anonymous identifier for the supplicant.	N/A	String. Length: 1 to 253 characters.	N/A
Dot1xSupplEapMethod	Specify an EAP authentication method.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—md5</li> <li>2—peap-gtc</li> <li>3—peap-mschapv2</li> <li>4—tls-gtc</li> <li>5—tls-mschapv2</li> </ul>	N/A
Dot1xSupplEnable	Enable the 802.1X supplicant feature.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Dot1xSupplPasswdCipher	Specify a ciphertext password for the 802.1X supplicant.	N/A	String. Length: 1 to 201 characters.	N/A
Dot1xSupplPasswdSimple	Specify a plaintext password for the 802.1X supplicant.	N/A	String. Length: 1 to 127 characters.	N/A
Dot1xSupplUsername	Specify a username for the 802.1X supplicant.	N/A	String. Length: 1 to 253 characters.	N/A

Feature name	AP
Table name	Radio11n
Table type	Multi-instance table
Row name	Dot11n
Restrictions	The table is only for 802.11n and 802.11ac radio mode.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
RadioID	Radio identifier.	Index	Unsigned char. Value range: 1 to 31.	N/A
MCSMulticast	The index for multicast MCS.	N/A	Unsigned short. Value range: 0 to 76, and 255. Default value is 255.	The MCSMulticast must be smaller than or equal to the MCSMandatory.
MCSMandatory	The maximum index for mandatory MCS.	N/A	Unsigned short. Value range: 0 to 76, and 255. Default value is 255.	The MCSMandatory must be smaller than or equal to the MCSSupported, and the MCSMandatory must be greater than or equal to the MCSMulticast.
MCSSupported	The maximum index for supported MCS.	N/A	Unsigned short. Value range: 0 to 76, and 255. Default value is 255.	The MCSSupported must be greater than or equal to the MCSMandatory.

Column name	Column description	Column type	Data type and restrictions	Remarks
Ampdu	A-mpdu function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Amsdu	A-msdu function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
ShortGI	Short GI function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Stbc	STBC function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Ldpc	LDPC function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Mimo	MIMO.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1: 1X1</li> <li>2: 2X2</li> <li>3: 3X3</li> <li>4: 4X4</li> </ul>	N/A
Greenap	Green ap function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
SmartAntenna	Smart antenna function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
SmartAntennaPolicy	Smart antenna policy.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1: Auto</li> <li>2: High-availability</li> <li>3: High-throughput</li> </ul>	Effective only when SmartAntenna is enabled.
Protection	802.11n protection function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Client11nOnly	Client dot11n only function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
BandwidthAutoswitch	Bandwidth autoswitch function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul> <p>The column is only for 2.4GHz radio mode, and AP/RadiusManualAP/Bandwidth must be 2..</p>	N/A

# AP/Radio11ac

This table contains radio 802.11ac information.

## XML structure

```
<AP>
  <Radio11ac>
    <Dot11ac>
      <ApName></ApName>
      <RadioID></RadioID>

```

## Table description

Item	Description
Feature name	AP
Table name	APGroup
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ApName	Region code of AP group.	N/A	Unsigned short.	Conform to ISO 3166 standard.
RegionLock	Whether the region code of the AP group is locked.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul> Default value is false.	N/A
Priority	AP connection priority	N/A	Unsigned short. Value range: 0 to 7.	N/A
Preempt	Whether the AP in this group will be forced to switch the backup tunnel to active by priority.	N/A	Boolean: <ul style="list-style-type: none"> <li>true: Switch</li> <li>false: Not switch</li> </ul> Default value is false.	N/A
EchoInterval	The transmit interval of tunnel echo messages.	N/A	Unsigned short. Value range: 0, 5 to 255. Unit: seconds Default value is 10 seconds.	N/A
EchoCount	The allowed maximum number of echo messages which are not received. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 1 to 20. Default value is 3.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RetransInterval	The interval to retransmit a request message.	N/A	Unsigned short. Value range: 1 to 30. Unit: seconds Default value is 5 seconds.	N/A
RetransCount	The allowed maximum number of retransmission attempts. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 1 to 20. Unit: seconds Default value is 6.	N/A
StatInterval	The interval of AP sending the statistics informations to AC.	N/A	Unsigned short. Value range: 0 to 240. Unit: seconds Default value is 50 seconds.	N/A
FirmwareUpgrade	Whether the AC will upgrade AP's firmware automatically if the software is mismatch.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable</li> <li>false—Disable</li> </ul> Default value is disable.	N/A
BackupACIPv4	The IPv4 backup AC address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
BackupACIPv6	The IPv6 backup AC address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
LocationName	Which location the AP group belongs to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A
Description	The description of APGroup.	N/A	String, Length: 1 to 64 cahracters	N/A
TunnelEncryption	Whether to enable tunnel encryption.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable</li> <li>false—Disable</li> </ul>	N/A
ProvisionAutoUpgrade	Whether to enable provision auto-upgrade	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable</li> <li>false—Disable</li> </ul>	N/A
ProvisionAutoRecover	Whether to enable provision auto-recover	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable</li> <li>false—Disable</li> </ul>	N/A
LedMode	LED mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Normal</li> <li>1—Quiet</li> <li>2—Awake</li> <li>3—Always-on</li> </ul>	N/A

# AP/APGroupMACRule

This table contains information of AP groups' rules of MAC address.

## XML structure

```
<AP>
  <APGroupMACRule>
    <Rule>
      <GroupName></GroupName>
      <MacAddress></MacAddress>
    </Rule>
  </APGroupMACRule>
</AP>
```

## Table description

Item	Description
Feature name	AP
Table name	APGroupMACRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
MacAddress	AP MAC address.	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

# AP/APGroupSerialIDRule

This table contains information of AP groups' rules of serial ID.

## XML structure

```
<AP>
  <APGroupSerialIDRule>
    <Rule>
```

```

    <GroupName></GroupName>
    <SerialID></SerialID>
    <Rule>
  </APGroupSerialIDRule>
</AP>

```

## Table description

Item	Description
Feature name	AP
Table name	APGroupSerialIDRule
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
SerialID	AP serial ID	Index	String, uppercase. Length: 1 to 127 characters.	N/A

## AP/APGroupNameRule

This table contains information of AP groups' rules of AP name.

## XML structure

```

<AP>
  <APGroupNameRule>
    <Rule>
      <GroupName></GroupName>
      <APName></APName>
    </Rule>
  </APGroupNameRule>
</AP>

```

## Table description

Item	Description
Feature name	AP
Table name	APGroupNameRule
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
APName	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A

## AP/APGroupIPv4Rule

This table contains information of AP groups' rules of IPv4 address range.

## XML structure

```
<AP>
  <APGroupIPv4Rule>
    <Rule>
      <GroupName></GroupName>
      <IPv4Addr></IPv4Addr>
      <IPv4Wildcard></IPv4Wildcard>
    </Rule>
  </APGroupIPv4Rule>
</AP>
```

## Table description

Item	Description
Feature name	AP
Table name	APGroupIPv4Rule
Table type	Multi-instance table
Row name	Rule

Item	Description
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
IPv4Addr	IPv4 address of AP.	Index	String, dotted decimal notation.	Example: 1.1.1.1.
IPv4Wildcard	Wildcard mask for the IPv4 address of AP.	Index	String, dotted decimal notation.	Example: 255.255.255.0.

## AP/APGroupIPv6Rule

This table contains information of AP groups' rules of IPv6 address range.

## XML structure

```

<AP>
  <APGroupIPv6Rule>
    <Rule>
      <GroupName></GroupName>
      <IPv6Addr></IPv6Addr>
      <IPv6Wildcard></IPv6Wildcard>
    </Rule>
  </APGroupIPv6Rule>
</AP>

```

## Table description

Item	Description
Feature name	AP
Table name	APGroupIPv6Rule
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
IPv6Addr	Source IPv6 address.	Index	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the SrcAny column is false.
IPv6Wildcard	Length of the source IPv6 address prefix.	Index	Unsigned integer. Value range: 1 to 128.	This column is available when the SrcAny column is false.

## AP/APGroupModel

This table contains information of AP group models.

## XML structure

```
<AP>
  <APGroupModel>
    <Model>
      <GroupName></GroupName>
      <ModelName></ModelName>
    </Model>
  </APGroupModel>
</AP>
```

## Table description

Item	Description
Feature name	AP
Table name	APGroupModel
Table type	Multi-instance table
Row name	Model
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ModelName	AP model name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

## AP/APGroupRadio

This table contains information of AP group radios.

## XML structure

```
<AP>
  <APGroupRadio>

    </Radio>
  </APGroupRadio>
</AP>
```

## Table description

Item	Description
Feature name	AP
Table name	APGroupRadio
Table type	Multi-instance table
Row name	Radio
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ModelName	AP model name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RadioID	Radio ID.	Index	Unsigned short. Value range: 1 to 31.	N/A
Mode	Radio mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—802.11b</li> <li>2—802.11a</li> <li>3—802.11g</li> <li>4—802.11n(2.4GHz)</li> <li>5—802.11n(5GHz)</li> <li>6—802.11ac(2.4GHz)</li> <li>7—802.11ac(5GHz)</li> </ul>	N/A
Bandwidth	Radio bandwidth.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—20M</li> <li>2—40M</li> <li>3—80M</li> <li>4—160M</li> <li>5—80M + 80M</li> <li>17—5M</li> <li>18—10M</li> </ul> <p>Default value is 1 when the Mode is 1、2、3、4、6.</p> <p>Default value is 2 when the Mode is 5.</p> <p>Default value is 3 when the Mode is 7.</p>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Spectrum	Supported radio spectrum.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Support both 5GHz and 2.4GHz</li> <li>2—Support 5GHz only</li> <li>3—Support 2.4GHz only</li> </ul>	N/A
Status	Radio status.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable</li> <li>1—Enable</li> <li>2—Inherit</li> </ul>	N/A
RateMulticast	Multicast rate.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—1Mbps</li> <li>2—2Mbps</li> <li>3—5.5Mbps</li> <li>4—6Mbps</li> <li>5—9Mbps</li> <li>6—11Mbps</li> <li>7—12Mbps</li> <li>8—18Mbps</li> <li>9—24Mbps</li> <li>10—36Mbps</li> <li>11—48Mbps</li> <li>12—54Mbps</li> <li>13—auto</li> </ul> If this column is not configured, the multicast rate will be calculated automatically. Default value: auto	The value can have multi-selections. List of enumeration, separated by comma Example: 1, 2.

Column name	Column description	Column type	Data type and restrictions	Remarks
RateMandatory	Mandatory rate.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>1—1Mbps</li> <li>2—2Mbps</li> <li>3—5.5Mbps</li> <li>4—6Mbps</li> <li>5—9Mbps</li> <li>6—11Mbps</li> <li>7—12Mbps</li> <li>8—18Mbps</li> <li>9—24Mbps</li> <li>10—36Mbps</li> <li>11—48Mbps</li> <li>12—54Mbps</li> </ul> <p>Default value:</p> <p>A. 1, 2Mbps(802.11b).</p> <p>B. 6, 12, 24Mbps(802.11a/802.11an)</p> <p>C. 1, 2, 5.5, 11Mbps(802.11g/802.11gn)</p>	<p>The value can have multi-selections. List of enumeration, separated by comma</p> <p>Example: 1, 2.</p>
RateSupported	Supported rate.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>1—1Mbps</li> <li>2—2Mbps</li> <li>3—5.5Mbps</li> <li>4—6Mbps</li> <li>5—9Mbps</li> <li>6—11Mbps</li> <li>7—12Mbps</li> <li>8—18Mbps</li> <li>9—24Mbps</li> <li>10—36Mbps</li> <li>11—48Mbps</li> <li>12—54Mbps</li> </ul> <p>Default value:</p> <p>A. 5.5, 11Mbps(802.11b)</p> <p>B. 9, 18, 24, 36, 48, 54Mbps(802.11a/802.11an)</p> <p>C. 6, 9, 12, 18, 24, 36, 54Mbps(802.11g/802.11gn)</p>	<p>The value can have multi-selections, exclude the one which multicast rate uses. List of enumeration, separated by comma</p> <p>Example: 1, 2.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
RateDisabled	Disabled rate.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>1—1Mbps</li> <li>2—2Mbps</li> <li>3—5.5Mbps</li> <li>4—6Mbps</li> <li>5—9Mbps</li> <li>6—11Mbps</li> <li>7—12Mbps</li> <li>8—18Mbps</li> <li>9—24Mbps</li> <li>10—36Mbps</li> <li>11—48Mbps</li> <li>12—54Mbps</li> </ul> <p>Default value: null.</p>	<p>The value can have multi-selections, exclude the one which multicast rate uses.</p> <p>List of enumeration, separated by comma</p> <p>Example: 1, 2.</p>
Preamble	Preamble.	N/A	<p>Boolean:</p> <ul style="list-style-type: none"> <li>true—Short.</li> <li>false—Long.</li> </ul> <p>The column is only for 2.4GHz radio mode.</p> <p>Default value: short.</p>	N/A
BeaconInterval	Beacon Interval time.	N/A	<p>Unsigned short.</p> <p>The value range is 32~8191.</p> <p>Unit: TU. 1TU = 1024ms</p> <p>Default value: 100</p>	N/A
PowerLock	Lock the power.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>0—Disable</li> <li>1—Enable</li> <li>2—Inherit</li> </ul>	N/A
<del>ChannelAutoLock</del>	<del>Lock the channel</del>	<del>N/A</del>	<p><del>Boolean:</del></p> <ul style="list-style-type: none"> <li><del>true—ChannelAutoLock.</del></li> <li><del>false—ChannelAutoUnLock.</del></li> </ul> <p><del>The default value is true.</del></p>	<p><del>When the value is true, the radio automatically selects an optimal channel, and then locks the channel.</del></p> <p><del>When the AC detects any radar signals on its channel, it immediately selects another channel (even if the channel auto lock is true) and locks the new channel.</del></p>
Distance	The distance that Radio can cover.	N/A	<p>Unsigned short.</p> <p>The value range is 1~40.</p> <p>Unit: km(kilometre).</p> <p>Default value: 1</p>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxRxDuration	Max Received frame duration time.	N/A	Unsigned integer. The value range is 500~250000. Unit: ms. Default value: 2000	N/A
FragmentThreshold	Fragment threshold.	N/A	Unsigned short. The value range is 256~2346. And the value must be an even number. Unit: byte. Default value: 2346	N/A
LongRetryThreshold	Long retry threshold.	N/A	Unsigned short. The value range is 1~15. Unit: null. Default value: 4	N/A
ProtectionThreshold	Protection threshold.	N/A	Unsigned short. The value range is 0~2346. Unit: byte. Default value: 2346	N/A
ShortRetryThreshold	Short retry threshold.	N/A	Unsigned short. The value range is 1~15. Unit: null. Default value: 7	N/A
CfgChannel	Configured channel number.	N/A	Unsigned short. The value range conforms to "AP/ChannelDB/Supported ChannelList" column. If this column is set to zero, the channel number will be calculated automatically.	N/A
CfgMaxPower	Configured maximum power.	N/A	Unsigned short. Value range: 1 to "AP/PowerDB/ValidMaxPower". Unit: dBm	N/A

Table type	Multi-instance table
Row name	Radio11n
Restrictions	The table is only for 802.11n and 802.11ac radio mode.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ModelName	AP model name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RadioID	Radio ID.	Index	Unsigned short. Value range: 1 to 31.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MCSMulticast	The index for multicast MCS.	N/A	Unsigned short. Value range: 0 to 76, and 255. Default value is 255.	The MCSMulticast must be smaller than or equal to the MCSMandatory.
MCSMandatory	The maximum index for mandatory MCS.	N/A	Unsigned short. Value range: 0 to 76, and 255. Default value is 255.	The MCSMandatory must be smaller than or equal to the MCSSupported, and the MCSMandatory must be greater than or equal to the MCSMulticast.
MCSSupported	The maximum index for supported MCS.	N/A	Unsigned short. Value range: 0 to 76, and 255. Default value is 76.	The MCSSupported must be greater than or equal to the MCSMandatory.
Ampdu	A-mpdu function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Amsdu	A-msdu function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
ShortGI	Short GI function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Stbc	STBC function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Ldpc	LDPC function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Mimo	MIMO.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1: 1X1</li> <li>2: 2X2</li> <li>3: 3X3</li> <li>4: 4X4</li> </ul>	N/A
Greenap	Green ap function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
SmartAntenna	Smart antenna function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
SmartAntennaPolicy	Smart antenna policy.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1: Auto</li> <li>2: High-availability</li> <li>3: High-throughput</li> </ul>	Effective only when SmartAntenna is enabled.

Column name	Column description	Column type	Data type and restrictions	Remarks
Protection	802.11n protection function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Client11nOnly	Client dot11n only function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
BandwidthAutoswitch	Bandwidth autoswitch function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul> The column is only for 2.4GHz radio mode, and AP/APGroupRadio/Bandwidth must be 2.	N/A

## AP/APGroupRadio11ac

This table contains 802.11ac information of AP group radios.

### XML structure

```

<AP>
  <APGroupRadio11ac>
    <Radio11ac>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <RadioID></RadioID>
      <VHTNSSMulticast></VHTNSSMulticast>
      <VHTMCSMulticast></VHTMCSMulticast>
      <VHTNSSMandatory></VHTNSSMandatory>
      <VHTNSSSupported></VHTNSSSupported>
      <Client11acOnly></Client11acOnly>
    </Radio11ac>
  </APGroupRadio11ac>
</AP>

```

### Table description

Item	Description
Feature name	AP
Table name	APGroupRadio11ac
Table type	Multi-instance table
Row name	Radio11ac
Restrictions	The table is only for 802.11ac radio mode.

Item	Description
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ModelName	AP model name.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RadioID	Radio ID.	Index	Unsigned short. Value range: 1 to 31.	N/A
VHTNSSMulticast	The NSS for multicast VHT-MCS.	N/A	Unsigned short. Value range: 0 to 8. Default value is 0.	The VHTNSSMulticast must be smaller than or equal to the VHTNSSMandatory.
VHTMCSMulticast	The index for multicast VHT-MCS.	N/A	Unsigned short. Value range: 0 to 9, 255. Default value is 255.	N/A
VHTNSSMandatory	The maximum NSS for mandatory VHT-MCS.	N/A	Unsigned short. Value range: 0 to 8. Default value is 0.	The VHTNSSMandatory must be smaller than or equal to the VHTNSSSupported, and the VHTNSSMandatory must be greater than or equal to the VHTNSSMulticast.
VHTNSSSupported	The maximum NSS for supported VHT-MCS.	N/A	Unsigned short. Value range: 0 to 8. Default value is 8.	The VHTNSSSupported must be greater than or equal to the VHTNSSMandatory.
Client11acOnly	Client dot11ac only function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A

## AP/APGroupPrvs

This table contains provision information of AP Group.

## XML structure

```

<AP>
  <APGroupPrvs>
    <Prvs>
      <GroupName></GroupName>
      <ACHostName></ACHostName>
    
```

```

<ACIPv4></ACIPv4>
<ACIPv6></ACIPv6>
<DnsDomain></DnsDomain>
<DnsServerIPv4></DnsServerIPv4>
<DnsServerIPv6></DnsServerIPv6>
</Prvs>
</APGroupPrvs>
</AP>

```

## Table description

Item	Description
Feature name	AP
Table name	APGroupPrvs
Table type	Multi-instance table
Row name	Prvs
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	GroupName.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ACHostName	Specify an AC by its hostname.	N/A	String. Length: 1 to 253 characters.	N/A
ACIPv4	Specify an AC by its IPv4 address	N/A	List of string, dotted decimal notation, Separated by comma.	Example: 1.1.1.1, 1.1.1.2.
ACIPv6	Specify an AC by its IPv6 address	N/A	List of hexadecimal string, colon-separated, Separated by comma.	Example: 1:1::1:1, 1:1::1:2.
DnsDomain	Specify the domain name suffix.	N/A	String. Length: 1 to 253.	N/A
DnsServerIPv4	Specify a DNS server by its IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
DnsServerIPv6	Specify a DNS server by its IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.

# AP/APGroupPrvsACIPv4

This table contains provision information of AP Group of IPv4 address.

## XML structure

```
<AP>
  <APGroupPrvsACIPv4>
    <Prvs>
      <GroupName></GroupName>
      <ACIPv4></ACIPv4>
    </Prvs>
  </APGroupPrvsACIPv4>
</AP>
```

## Table description

Item	Description
Feature name	AP
Table name	APGroupPrvsACIPv4
Table type	Multi-instance table
Row name	Prvs
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ACIPv4	Specify an AC by its IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.

# AP/APGroupPrvsACIPv6

This table contains provision information of AP group of IPv6 address.

## XML structure

```
<AP>
  <APGroupPrvsACIPv6>
    <Prvs>
      <GroupName></GroupName>
    </Prvs>
  </APGroupPrvsACIPv6>
</AP>
```

```

    <ACIPv6></ACIPv6>
  </Prvs>
</APGroupPrvsACIPv6>
</AP>

```

## Table description

Item	Description
Feature name	AP
Table name	APGroupPrvsACIPv6
Table type	Multi-instance table
Row name	Prvs
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	GroupName.	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ACIPv6	Specify an AC by its IPv6 address.	N/A	Hexadecimal string,colon-separated.	Example: 1:1::1:1. This column is available when the SrcAny column is false.

## AP/Location

This table contains the informations of locations.

## XML structure

```

<AP>
  <Location>
    <Location>
      <LocationName></LocationName>
    </Location>
  </Location>
</AP>

```

## Table description

Item	Description
Feature name	AP

Item	Description
Table name	Location
Table type	Multi-instance table
Row name	Location
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LocationName	Location name.	Index	String, lowercase. Length: 1 to 31 characters.	N/A

## AP/APAuthentication

This table contains the informations of AP authentication.

## XML structure

```

<AP>
  <APAuthentication>
    <Status></Status>
    <Method></Method>
    <PermitUnauth></PermitUnauth>
    <AuthDomain></AuthDomain>
    <AclNumber></AclNumber>
    <AclName></AclName>
  </APAuthentication>
</AP>

```

## Table description

Item	Description
Feature name	AP
Table name	APAuthentication
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	The status of AP authentication.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul> Default value is disable.	N/A
Method	The authentication method.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—MAC address.</li> <li>2—Serial ID.</li> </ul> Default value is MAC address.	N/A
PermitUnauth	Whether the un-authenticated AP is allowed to join the AC.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Allowed.</li> <li>false—Not allowed.</li> </ul> Default value is allowed.	N/A
AuthDomain	The ISP domain of remote AP authentication.	N/A	String, case-insensitive. Length: 1 to 24 characters.	N/A
AcINumber	The ACL number of local AP authentication.	N/A	Unsigned short. Value range: 200 to 299.	This column is unavailable when the AC uses an ACL name.
AcIName	The ACL name of local AP authentication.	N/A	String, case-sensitive. Length: 1 to 64 characters.	This column is unavailable when the AC uses an ACL number. The ACL name should not be "all".

## AP/LocalAC

This table contains local-ac information.

## XML structure

```

<AP>
  <LocalAC>
    <AC>
      <Name></Name>
      <Model></Model>
      <CfgSerialID></CfgSerialID>
      <EchoInterval></EchoInterval>
      <RetransInterval></RetransInterval>
      <RetransCount></RetransCount>
      <FirmwareUpgrade></FirmwareUpgrade>
    </AC>
  </LocalAC>
</AP>

```

## Table description

Item	Description
Feature name	AP
Table name	LocalAC
Table type	Multi-instance table
Row name	AC
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Local-ac name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
Model	Local-ac model name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	Characters will be automatically convert case. Refer to AP/ACDB. This column is mandatory when the row is being created. This column is not writable when the row is being deleted, removed. This column should not be changed when the row is being replaced or merged.
CfgSerialID	Configured Local-ac serial ID.	N/A	String, uppercase. Length: 1 to 63 characters.	If this column contains lowercase character, it will be converted to uppercase automatically.
EchoInterval	The transmit interval of tunnel echo messages.	N/A	Unsigned short. Value range: 0, 5 to 255. Unit: seconds	N/A
RetransInterval	The interval to retransmit a request message.	N/A	Unsigned short. Value range: 3 to 8 Unit: seconds	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RetransCount	The allowed maximum number of retransmission attempts. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 2 to 5. Unit: seconds	N/A
FirmwareUpgrade	Whether the AC will upgrade AP's firmware automatically if the software is mismatch.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A

## AP/ContainerTopology

This table contains information about all PoE ports on the container (such as SPM and WT).

### XML structure

```

<AP>
  <ContainerTopology>
    <Container>
      <ContainerName></ContainerName>
      <PoePort></PoePort>
      <PoeStatus></PoeStatus>
    </Container>
  </ContainerTopology>
</AP>

```

### Table description

Item	Description
Feature name	AP
Table name	ContainerTopology
Table type	Multi-instance table
Row name	Container
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContainerName	Container name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PoePort	Port on the container	Index	Unsigned short.	See AP/APDB/.
PoeStatus	PoE port status	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable</li> <li>false—Disable</li> </ul>	N/A

## AP/Container

This table contains information about containers.

## XML structure

```

<AP>
  <Container>
    <AP>
      <Name></Name>
      <Model></Model>
      <CfgMacAddress></CfgMacAddress>
    </AP>
  </Container>
</AP>

```

## Table description

Item	Description
Feature name	AP
Table name	Container
Table type	Multi-instance table
Row name	AP
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
Model	AP model name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CfgMacAddress	Configured AP MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

## Table description

Item	Description
Feature name	AP
Table name	APSummary
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ManualApNum	Number of manual APs	N/A	Unsigned integer. Value range: 0 to 65535.
RunApNum	Number of running APs	N/A	Unsigned integer. Value range: 0 to 65535.
OfflineApNum	Number of offline APs	N/A	Unsigned integer. Value range: 0 to 65535.
UnhealthyApNum	Number of Unhealthy APs	N/A	Unsigned integer. Value range: 0 to 65535.

Column name	Column description	Column type	Data type and restrictions
ApGroupNum	Number of AP groups	N/A	Unsigned integer. Value range: 0 to 65535.
LocationNum	Number of locations	N/A	Unsigned integer. Value range: 0 to 65535.
NorthIfOutPkt	Packets count of northbound interface with outbound direction.	N/A	Unsigned integer. Value range: 0 to 4294967295.
NorthIfOutByte	Throughput statistics of northbound interface with outbound direction.	N/A	Unsigned integer. Value range: 0 to 4294967295.
NorthIfInPkt	Packets count of northbound interface with inbound direction.	N/A	Unsigned integer. Value range: 0 to 4294967295.
NorthIfInByte	Throughput statistics of northbound interface with inbound direction.	N/A	Unsigned integer. Value range: 0 to 4294967295.
Is5gRadioNum	Number of radios which is 5GHz.	N/A	Unsigned integer. Value range: 0 to 4294967295.
Is2.4gRadioNum	Number of radios which is 2.4GHz.	N/A	Unsigned integer. Value range: 0 to 4294967295.
AccessModeNum	Number of radios in access mode.	N/A	Unsigned integer. Value range: 0 to 4294967295.
SensorModeNum	Number of radios in sensor mode.	N/A	Unsigned integer. Value range: 0 to 4294967295.
HybirdModeNum	Number of radios in hybird mode.	N/A	Unsigned integer. Value range: 0 to 4294967295.
ChannelBusyLower10PctNum	Number of radios which channel busy is lower than 10%	N/A	Unsigned integer. Value range: 0 to 4294967295.
ChannelBusy10PctNum	Number of radios which channel busy is between 10% and 20%	N/A	Unsigned integer. Value range: 0 to 4294967295.
ChannelBusy20PctNum	Number of radios which channel busy is between 20% and 30%	N/A	Unsigned integer. Value range: 0 to 4294967295.
ChannelBusy30PctNum	Number of radios which channel busy is between 30% and	N/A	Unsigned integer. Value range: 0 to 4294967295.

Column name	Column description	Column type	Data type and restrictions
	40%		
ChannelBusy40PctNum	Number of radios which channel busy is between 40% and 50%	N/A	Unsigned integer. Value range: 0 to 4294967295.
ChannelBusy50PctNum	Number of radios which channel busy is between 50% and 60%	N/A	Unsigned integer. Value range: 0 to 4294967295.
ChannelBusy60PctNum	Number of radios which channel busy is between 60% and 70%	N/A	Unsigned integer. Value range: 0 to 4294967295.
ChannelBusy70PctNum	Number of radios which channel busy is between 70% and 80%	N/A	Unsigned integer. Value range: 0 to 4294967295.
ChannelBusy80PctNum	Number of radios which channel busy is between 80% and 90%	N/A	Unsigned integer. Value range: 0 to 4294967295.
ChannelBusy90PctNum	Number of radios which channel busy is upper than 90%	N/A	Unsigned integer. Value range: 0 to 4294967295.
NoiseFloorLower105Num	Number of radios which noise floor is lower than 105dbm	N/A	Unsigned integer. Value range: 0 to 4294967295.
NoiseFloor100Num	Number of radios which noise floor is between 100dbm and 105dbm	N/A	Unsigned integer. Value range: 0 to 4294967295.
NoiseFloor95Num	Number of radios which noise floor is between 95dbm and 100dbm	N/A	Unsigned integer. Value range: 0 to 4294967295.
NoiseFloor90Num	Number of radios which noise floor is between 90dbm and 95dbm	N/A	Unsigned integer. Value range: 0 to 4294967295.
NoiseFloor85Num	Number of radios which noise floor is between 85dbm and 90dbm	N/A	Unsigned integer. Value range: 0 to 4294967295.
NoiseFloor80Num	Number of radios which noise floor is between 80dbm and 85dbm	N/A	Unsigned integer. Value range: 0 to 4294967295.
NoiseFloor75Num	Number of radios which noise floor is between 75dbm and 80dbm	N/A	Unsigned integer. Value range: 0 to 4294967295.

Column name	Column description	Column type	Data type and restrictions
NoiseFloor70Num	Number of radios which noise floor is between 70dbm and 75dbm	N/A	Unsigned integer. Value range: 0 to 4294967295.
NoiseFloorUpper70Num	Number of radios which noise floor is upper than 70dbm	N/A	Unsigned integer. Value range: 0 to 4294967295.
Dot11InterfLower10PctNum	Number of radios which 802.11 interference is lower than 10%	N/A	Unsigned integer. Value range: 0 to 4294967295.
Dot11Interf10PctNum	Number of radios which 802.11 interference is between 10% and 20%	N/A	Unsigned integer. Value range: 0 to 4294967295.
Dot11Interf20PctNum	Number of radios which 802.11 interference is between 20% and 30%	N/A	Unsigned integer. Value range: 0 to 4294967295.
Dot11Interf30PctNum	Number of radios which 802.11 interference is between 30% and 40%	N/A	Unsigned integer. Value range: 0 to 4294967295.
Dot11Interf40PctNum	Number of radios which 802.11 interference is between 40% and 50%	N/A	Unsigned integer. Value range: 0 to 4294967295.
Dot11Interf50PctNum	Number of radios which 802.11 interference is between 50% and 60%	N/A	Unsigned integer. Value range: 0 to 4294967295.
Dot11Interf60PctNum	Number of radios which 802.11 interference is between 60% and 70%	N/A	Unsigned integer. Value range: 0 to 4294967295.
Dot11Interf70PctNum	Number of radios which 802.11 interference is between 70% and 80%	N/A	Unsigned integer. Value range: 0 to 4294967295.
Dot11Interf80PctNum	Number of radios which 802.11 interference is between 80% and 90%	N/A	Unsigned integer. Value range: 0 to 4294967295.
Dot11Interf90PctNum	Number of radios which 802.11 interference is upper	N/A	Unsigned integer. Value range: 0 to

Column name	Column description	Column type	Data type and restrictions
	than 90%		4294967295.
NonDot11InterfLower10PctNum	Number of radios which non-802.11 interference is lower than 10%	N/A	Unsigned integer. Value range: 0 to 4294967295.
NonDot11Interf10PctNum	Number of radios which non-802.11 interference is between 10% and 20%	N/A	Unsigned integer. Value range: 0 to 4294967295.
NonDot11Interf20PctNum	Number of radios which non-802.11 interference is between 10% and 20%	N/A	Unsigned integer. Value range: 0 to 4294967295.
NonDot11Interf30PctNum	Number of radios which non-802.11 interference is between 20% and 30%	N/A	Unsigned integer. Value range: 0 to 4294967295.
NonDot11Interf40PctNum	Number of radios which non-802.11 interference is between 30% and 40%	N/A	Unsigned integer. Value range: 0 to 4294967295.
NonDot11Interf50PctNum	Number of radios which non-802.11 interference is between 50% and 60%	N/A	Unsigned integer. Value range: 0 to 4294967295.
NonDot11Interf60PctNum	Number of radios which non-802.11 interference is between 60% and 70%	N/A	Unsigned integer. Value range: 0 to 4294967295.
NonDot11Interf70PctNum	Number of radios which non-802.11 interference is between 70% and 80%	N/A	Unsigned integer. Value range: 0 to 4294967295.
NonDot11Interf80PctNum	Number of radios which non-802.11 interference is between 80% and 90%	N/A	Unsigned integer. Value range: 0 to 4294967295.
NonDot11Interf90PctNum	Number of radios which non-802.11 interference is upper than 90%	N/A	Unsigned integer. Value range: 0 to 4294967295.
RunSPMNum	Number of running SPMs	N/A	Unsigned integer. Value range: 0 to 65535.
OfflineSPMNum	Number of offline SPMs	N/A	Unsigned integer. Value range: 0 to 65535.

Column name	Column description	Column type	Data type and restrictions
MaxRunApNum	Max number of running APs	N/A	Unsigned integer. Value range: 0 to 65535.
MaxPersistentApNum	Max number of persistent APs	N/A	Unsigned integer. Value range: 0 to 65535.

### Table description

Item	Description
Feature name	AP

Item	Description
Table name	GlobalCfg
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AutoAp	Whether an AP can connect the AC without creating a manual AP.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul> Default value is false.	N/A
AutoPersistent	When an auto AP connects the AC , whether convert the AP to manual AP automatically.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul> Default value is false.	N/A
RegionCode	Region code of AP group.	N/A	Unsigned short.	Conform to ISO 3166 standart.
RegionLock	Whether the region code of the AC is locked.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul> Default value is false.	N/A
Priority	AP connection priority	N/A	Unsigned short. Value range: 0 to 7.	N/A
Preempt	Whether the AP in this group will be forced to switch the backup tunnel to active by priority.	N/A	Boolean: <ul style="list-style-type: none"> <li>true: Switch</li> <li>false: Not switch</li> </ul>	N/A
EchoInterval	The transmit interval of tunnel echo messages.	N/A	Unsigned short. Value range: 0, 5 to 255. Unit: seconds	N/A
EchoCount	The allowed maximum number of echo messges which are not received. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 1 to 20.	N/A
RetransInterval	The interval to retransmit a request message.	N/A	Unsigned short. Value range: 1 to 30. Unit: seconds	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RetransCount	The allowed maximum number of retransmission attempts. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 1 to 20. Unit: seconds.	N/A
StatInterval	The interval of AP sending the statistics informations to AC.	N/A	Unsigned short. Value range: 0 to 240. Unit: seconds.	N/A
FirmwareUpgrade	Whether the AC will upgrade AP's firmware automatically if the software is mismatch.	N/A	Boolean: <ul style="list-style-type: none"> <li>true: Enable</li> <li>false: Disable</li> </ul>	N/A
BackupACIPv4	The IPv4 backup AC address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
BackupACIPv6	The IPv6 backup AC address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
TunnelEncryption	Whether to enable tunnel encryption.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable</li> <li>false—Disable</li> </ul>	N/A
MainAPName	AP name.	N/A	String, case-sensitive. Length: 1 to 64 characters.	Only for FatAP Type.
Gps	Gps.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	Only for FatAP Type
LocalAC	Whether to enable Local ac.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	Only for Local-ac Type
CentralACIPv4	The IPv4 Central AC address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. Only for Local-ac Type
CentralACIPv6	The IPv6 Central AC address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. Only for Local-ac Type
ControlAddress	CAPWAP control address configuration.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
ControlAddressIPv4	Specify an AC IPv4 address for AC rediscovery	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
ControlAddressIPv6	Specify an AC IPv4 address for AC rediscovery	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.

## Table description

Item	Description
Feature name	AP
Table name	ManualAP
Table type	Multi-instance table
Row name	AP
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
Model	AP model name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
CfgSerialID	Configured AP serial ID.	N/A	String, uppercase. Length: 1 to 127 characters.	N/A
CfgMacAddress	Configured AP MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
RadioNum	Number of the radio.	N/A	Unsigned short. Value range: 1 to 4.	N/A
Status	AP associated status.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Online</li> <li>2—Offline</li> <li>3—Image downloading</li> </ul>	N/A
GroupName	The name of AP group which the AP belongs to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A
RegionCode	Region code of AP.	N/A	Unsigned short.	Conform to ISO 3166 standard.
RegionLock	Whether the region code of the AP is locked.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
Priority	AP connection priority.	N/A	Unsigned short. Value range: 0 to 7.	N/A
Preempt	Whether the AP will be forced to switch the backup tunnel to active by priority.	N/A	Boolean: <ul style="list-style-type: none"> <li>true: Switch</li> <li>false: Not switch</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
EchoInterval	The transmit interval of tunnel echo messages.	N/A	Unsigned short. Value range: 0, 5 to 255. Unit: seconds	N/A
EchoCount	The allowed maximum number of echo messages which are not received. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 1 to 20.	N/A
RetransInterval	The interval to retransmit a request message.	N/A	Unsigned short. Value range: 1 to 30. Unit: seconds.	N/A
RetransCount	The allowed maximum number of retransmission attempts. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 1 to 20. Unit: seconds.	N/A
StatInterval	RetransCount	N/A	Unsigned short. Value range: 0 to 240. Unit: seconds Default value is 50 seconds.	N/A
FirmwareUpgrade	Whether the AC will upgrade AP's firmware automatically if the software is mismatch.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable</li> <li>false—Disable</li> </ul>	N/A
BackupACIPv4	The IPv4 backup AC address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
BackupACIPv6	The IPv6 backup AC address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
LocationName	Which location the AP group belongs to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A
Description	The description of AP.	N/A	String, Length: 1 to 64 characters.	N/A
TunnelEncryption	Whether to enable tunnel encryption.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable</li> <li>false—Disable</li> </ul>	N/A
OfflineTime	The time since the AP online.	N/A	Unsigned integer. Value range: 0 to 4294967295. Unit: Second	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
OfflineMoment	The time of the AP offline in last time.	N/A	Date/Time. Format: YYYY-MM-DDTHH:MM:SS	Example: 2014-05-07T09:35:07
ControlAddress	CAPWAP control address configuration	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
ControlAddressIPv4	Specify an AC IPv4 address for AC rediscovery	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
ControlAddressIPv6	Specify an AC IPv6 address for AC rediscovery	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
ProvisionAutoUpgrade	Whether to enable provision auto-upgrade	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
ProvisionAutoRecover	Whether to enable provision auto-recover	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
ModelType	Model type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Normal.</li> <li>2—WT.</li> <li>3—WTU.</li> </ul>	When the value is 3, some commands can not be configured.
LedMode	LED mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Normal.</li> <li>1—Quiet.</li> <li>2—Awake.</li> <li>3—Always-on.</li> </ul>	N/A

Model	AP model name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
SerialID	AP serial ID.	N/A	String, uppercase. Length: 1 to 127 characters.	N/A
Type	AP type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—auto</li> <li>2—manual</li> </ul>	N/A
MacAddress	AP MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
RadioNum	Number of the radio.	N/A	Unsigned short. Value range: 1 to 4.	N/A
Status	AP associated status.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Online</li> <li>3—Image downloading</li> </ul>	N/A
Ipv4Address	AP IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is unavailable when the AP uses an IPv6 address.
Ipv6Address	AP IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is unavailable when the AP uses an IPv4 address.
PortNumber	AP port number.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
GroupName	The name of AP group which the AP belongs to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A
OnlineTime	AP online duration.	N/A	Unsigned integer. Value range: 0 to 4294967295. Unit: Second	N/A
HWVer	The version of AP hardware.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Ver.A</li> <li>2—Ver.B</li> <li>3—Ver.C</li> <li>4—Ver.D</li> <li>5—Ver.E</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SWVer	The version of AP software.	N/A	String. Length: 1 to 31 characters.	N/A
BWVer	The version of AP bootrom.	N/A	String. Length: 1 to 31 characters.	N/A
TransCtrlPkt	Count of transmitted control packets.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
RecvCtrlPkt	Count of received control packets.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
TransDataPkt	Count of transmitted data packets.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
RecvDataPkt	Count of received data packets.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
EchoReqCnt	Count of echo request packets.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
EchoRespLossCnt	Count of lost echo response packets.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
DiscoveryType	By which type the AP find the AC.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Unknown</li> <li>2—DHCP</li> <li>3—Static Configuration</li> <li>4—DNS</li> </ul>	N/A
ConfigFailCnt	Count of failed Configuration.	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
LastFailReason	The cause of synchronizing configurations to the AP failed in last time.	N/A	String. Length: 1 to 31 characters.	N/A
LastRebootReason	The cause of the AP rebooting in last time.	N/A	String. Length: 1 to 31 characters.	N/A
TunnelDownReason	The cause of the tunnel down in last time.	N/A	String. Length: 1 to 31 characters.	N/A
ConnectionType	The connection type of tunnel.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Active</li> <li>2—Standby</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PeerACIPv4 Address	The IPv4 address of peer AC that AP is connecting to.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is unavailable when the AP uses an IPv6 address.
PeerACIPv6 Address	The IPv6 address of peer AC that AP is connecting to.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is unavailable when the AP uses an IPv4 address.
LocationName	Which location the AP group belongs to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A
AuthenticatedFlag	Whether the auto-ap is authenticated.	N/A	Boolean: <ul style="list-style-type: none"> <li>Enable</li> <li>Disable</li> </ul>	When AP type is manual AP, this column is invalid.
LocalACName	Local-ac name.	N/A	String, case-sensitive. Length: 1 to 64 characters.	N/A

## AP/APHistory

This table contains the information of the AP history.

### XML structure

```

<AP>

Column name	Column description	Column type	Data type and restrictions	Remarks
SupportDot11A	Whether a radio supports 802.11a radio mode	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
SupportDot11G	Whether a radio supports 802.11g radio mode	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
SupportDot11GN	Whether a radio supports 802.11n(2.4GHz) radio mode	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
SupportDot11AN	Whether a radio supports 802.11n(5GHz) radio mode	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
SupportDot11GAC	Whether a radio supports 802.11ac(2.4GHz) radio mode	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
SupportDot11AC	Whether a radio supports 802.11ac(5GHz) radio mode	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
Bandwidth	Radio bandwidth.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—20M</li> <li>2—40M</li> <li>3—80M</li> <li>4—160M</li> <li>5—80M + 80M</li> <li>17—5M</li> <li>18—10M</li> </ul>	N/A
Spectrum	Supported radio spectrum.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Support both 5GHz and 2.4GHz</li> <li>2—Support 5GHz only</li> <li>3—Support 2.4GHz only</li> </ul>	N/A
Status	Radio status.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable</li> <li>1—Enable</li> <li>2—Inherit</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RateMulticast	Multicast.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>• 1—1Mbps</li> <li>• 2—2Mbps</li> <li>• 3—5.5Mbps</li> <li>• 4—6Mbps</li> <li>• 5—9Mbps</li> <li>• 6—11Mbps</li> <li>• 7—12Mbps</li> <li>• 8—18Mbps</li> <li>• 9—24Mbps</li> <li>• 10—36Mbps</li> <li>• 11—48Mbps</li> <li>• 12—54Mbps</li> <li>• 13—auto</li> </ul> <p>If this column is not configured, the multicast rate will be calculated automatically.</p>	<p>The value can have multi-selections. List of enumeration, separated by comma</p> <p>Example: 1, 2.</p>
RateMandatory	Mandatory rate.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>• 1—1Mbps</li> <li>• 2—2Mbps</li> <li>• 3—5.5Mbps</li> <li>• 4—6Mbps</li> <li>• 5—9Mbps</li> <li>• 6—11Mbps</li> <li>• 7—12Mbps</li> <li>• 8—18Mbps</li> <li>• 9—24Mbps</li> <li>• 10—36Mbps</li> <li>• 11—48Mbps</li> <li>• 12—54Mbps</li> </ul>	<p>The value can have multi-selections. List of enumeration, separated by comma</p> <p>Example: 1, 2.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
RateSupported	Supported rate.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—1Mbps</li> <li>2—2Mbps</li> <li>3—5.5Mbps</li> <li>4—6Mbps</li> <li>5—9Mbps</li> <li>6—11Mbps</li> <li>7—12Mbps</li> <li>8—18Mbps</li> <li>9—24Mbps</li> <li>10—36Mbps</li> <li>11—48Mbps</li> <li>12—54Mbps</li> </ul>	The value can have multi-selections, exclude the one which multicast rate uses. List of enumeration, separated by comma Example: 1, 2.
RateDisabled	Disabled rate.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—1Mbps</li> <li>2—2Mbps</li> <li>3—5.5Mbps</li> <li>4—6Mbps</li> <li>5—9Mbps</li> <li>6—11Mbps</li> <li>7—12Mbps</li> <li>8—18Mbps</li> <li>9—24Mbps</li> <li>10—36Mbps</li> <li>11—48Mbps</li> <li>12—54Mbps</li> </ul>	The value can have multi-selections, exclude the one which multicast rate uses. List of enumeration, separated by comma Example: 1, 2.
Preamble	Preamble.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Short.</li> <li>false—Long.</li> </ul> The column is only for 2.4GHz radio mode.	N/A
BeaconInterval	Beacon Interval time.	N/A	Unsigned short. The value range is 32~8191. Unit: TU. 1TU = 1024ms	N/A
PowerLock	Lock the power.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable</li> <li>1—Enable</li> <li>2—Inherit</li> </ul>	N/A
Distance	The distance that Radio can cover.	N/A	Unsigned short. The value range is 1~40. Unit: km(kilometre).	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxRxDuration	Max Received frame duration time.	N/A	Unsigned integer. The value range is 500~250000. Unit: ms(millisecond).	N/A
FragmentThreshold	Fragment threshold.	N/A	Unsigned short. The value range is 256~2346.And the value must be an even number. Unit: byte.	N/A
LongRetryThreshold	Long retry threshold.	N/A	Unsigned short. The value range is 1~15. Unit: null.	N/A
ProtectionThreshold	ProtectionThreshold.	N/A	Unsigned short. The value range is 0~2346. Unit: byte.	N/A
ShortRetryThreshold	ShortRetryThreshold.	N/A	Unsigned short. The value range is 1~15. Unit: null.	N/A
CfgChannel	Configured channel number.	N/A	The value range conforms to "AP/ChannelDB/Supported ChannelList" column. And 15 - auto lock、16-auto unlock.	When the value is 15, the radio automatically selects an optimal channel, and then locks the channel.  When the AC detects any radar signals on its channel, it immediately selects another channel (even if the channel auto lock is true) and locks the new channel.
CfgMaxPower	Configured maximum power.	N/A	Unsigned short. Value range: 1 to "AP/PowerDB/ValidMaxPower". Unit: dBm	N/A
ProtectionMode	Protection mode.	N/A	Enumeration: • 1—Rts/Cts. • 2—Cts To Self	N/A
ValidChannelNum	Number of the valid channels	N/A	Unsigned integer. Value range: 0 to 32.	N/A
ValidChannelList	a list of the valid channels.	N/A	Number string. It is a comma-separated list of valid channels. The string must not end with a comma or hyphen, or include any whitespace	Example: 1,2,3,4,5,6,7,8,9,10,11

SupportDot11GN	Whether a radio supports 802.11n(2.4GHz) radio mode	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
SupportDot11AN	Whether a radio supports 802.11n(5GHz) radio mode	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
SupportDot11GAC	Whether a radio supports 802.11ac(2.4GHz) radio mode	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
SupportDot11AC	Whether a radio supports 802.11ac(5GHz) radio mode	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Bandwidth	Radio bandwidth.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—20M</li> <li>2—40M</li> <li>3—80M</li> <li>4—160M</li> <li>5—80M + 80M</li> <li>17—5M</li> <li>18—10M</li> </ul>	N/A
Spectrum	Supported radio spectrum.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Support both 5GHz and 2.4GHz</li> <li>2—Support 5GHz only</li> <li>3—Support 2.4GHz only</li> </ul>	N/A
Status	Radio status.	N/A	Enumeration: <ul style="list-style-type: none"> <li>Disable</li> <li>Enable</li> </ul>	N/A
RateMulticast	Multicast rate.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—1Mbps</li> <li>2—2Mbps</li> <li>3—5.5Mbps</li> <li>4—6Mbps</li> <li>5—9Mbps</li> <li>6—11Mbps</li> <li>7—12Mbps</li> <li>8—18Mbps</li> <li>9—24Mbps</li> <li>10—36Mbps</li> <li>11—48Mbps</li> <li>12—54Mbps</li> <li>13—auto</li> </ul>	The value can have multi-selections. List of enumeration, separated by comma Example: 1, 2.

Column name	Column description	Column type	Data type and restrictions	Remarks
RateMandatory	Mandatory rate.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—1Mbps</li> <li>2—2Mbps</li> <li>3—5.5Mbps</li> <li>4—6Mbps</li> <li>5—9Mbps</li> <li>6—11Mbps</li> <li>7—12Mbps</li> <li>8—18Mbps</li> <li>9—24Mbps</li> <li>10—36Mbps</li> <li>11—48Mbps</li> <li>12—54Mbps</li> </ul>	The value can have multi-selections. List of enumeration, separated by comma Example: 1, 2.
RateSupported	Supported rate.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—1Mbps</li> <li>2—2Mbps</li> <li>3—5.5Mbps</li> <li>4—6Mbps</li> <li>5—9Mbps</li> <li>6—11Mbps</li> <li>7—12Mbps</li> <li>8—18Mbps</li> <li>9—24Mbps</li> <li>10—36Mbps</li> <li>11—48Mbps</li> <li>12—54Mbps</li> </ul>	The value can have multi-selections, exclude the one which multicast rate uses. List of enumeration, separated by comma Example: 1, 2.
RateDisabled	Disabled rate.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—1Mbps</li> <li>2—2Mbps</li> <li>3—5.5Mbps</li> <li>4—6Mbps</li> <li>5—9Mbps</li> <li>6—11Mbps</li> <li>7—12Mbps</li> <li>8—18Mbps</li> <li>9—24Mbps</li> <li>10—36Mbps</li> <li>11—48Mbps</li> <li>12—54Mbps</li> </ul>	The value can have multi-selections, exclude the one which multicast rate uses. List of enumeration, separated by comma Example: 1, 2.

Column name	Column description	Column type	Data type and restrictions	Remarks
Preamble	Preamble.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Short.</li> <li>false—Long.</li> </ul> The column is only for 2.4GHz radio mode.	N/A
BeaconInterval	Beacon Interval time.	N/A	Unsigned short. The value range is 32~8191. Unit: TU. 1TU = 1024ms	N/A
PowerLock	Lock the power.	N/A	Enumeration: <ul style="list-style-type: none"> <li>Disable</li> <li>Enable</li> </ul>	N/A
	<del>Lock the channel or not</del>		<del>Boolean:</del> <ul style="list-style-type: none"> <li><del>true—ChannelAutoLock.</del></li> <li><del>false—ChannelAutoUnLock.</del></li> </ul> <del>The default value is true.</del>	<del>When the value is true, the radio automatically selects an optimal channel, and then locks the channel.</del>  <del>When the AC detects any radar signals on its channel, it immediately selects another channel (even if the channel auto lock is true) and locks the new channel.</del>
Distance	The distance that Radio can cover.	N/A	Unsigned short. The value range is 1~40. Unit: km(kilometre).	N/A
MaxRxDuration	Max Reveived frame duration time.	N/A	Unsigned integer. The value range is 500~250000. Unit: ms(millisecond).	N/A
FragmentThreshold	Fragment threshold.	N/A	Unsigned short. The value range is 256~2346. And the value must be an even number. Unit: byte.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LongRetryThreshold	LongRetryThreshold.	N/A	Unsigned short. The value range is 1~15. Unit: null.	N/A
ProtectionThreshold	ProtectionThreshold.	N/A	Unsigned short. The value range is 0~2346. Unit: byte.	N/A
ShortRetryThreshold	ShortRetryThreshold.	N/A	Unsigned short. The value range is 1~15. Unit: null.	N/A
CfgChannel	Configured channel number.	N/A	The value range conforms to AP/ChannelDB/Supported ChannelList" column. And 15 - auto lock、16-auto unlock.	When the value is 15, the radio automatically selects an optimal channel, and then locks the channel. When the AC detects any radar signals on its channel, it immediately selects another channel (even if the channel auto lock is true) and locks the new channel.
CfgMaxPower	Configured maximum power.	N/A	Unsigned short. Value range: 1 to "AP/PowerDB/ValidMaxPower". Unit: dBm	N/A

## Table description

Item	Description
Feature name	AP
Table name	Radio11n
Table type	Multi-instance table
Row name	Dot11n
Restrictions	The table is only for 802.11n and 802.11ac radio mode.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
RadioID	Radio identifier.	Index	Unsigned char. Value range: 1 to 31.	N/A
MCSMulticast	The index for multicast MCS.	N/A	Unsigned short. Value range: 0 to 76, and 255. Default value is 255.	The MCSMulticast must be smaller than or equal to the MCSMandatory.
MCSMandatory	The maximum index for mandatory MCS.	N/A	Unsigned short. Value range: 0 to 76, and 255. Default value is 255.	The MCSMandatory must be smaller than or equal to the MCSSupported, and the MCSMandatory must be greater than or equal to the MCSMulticast.
MCSSupported	The maximum index for supported MCS.	N/A	Unsigned short. Value range: 0 to 76, and 255. Default value is 255.	The MCSSupported must be greater than or equal to the MCSMandatory.

Column name	Column description	Column type	Data type and restrictions	Remarks
Ampdu	A-mpdu function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Amsdu	A-msdu function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
ShortGI	Short GI function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Stbc	STBC function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Ldpc	LDPC function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Mimo	Mimo.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1: 1X1</li> <li>2: 2X2</li> <li>3: 3X3</li> <li>4: 4X4</li> </ul>	N/A
Greenap	Green ap function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
SmartAntenna	Smart antenna function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
SmartAntennaPolicy	Smart antenna policy.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1: Auto</li> <li>2: High-availability</li> <li>3: High-throughput</li> </ul>	Effective only when SmartAntenna is enabled.
Protection	802.11n protection function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Client11nOnly	Client dot11n only function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
BandwidthAutoswitch	Bandwidth autoswitch function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul> <p>The column is only for 2.4GHz radio mode, and AP/Radius/ManualAP/Bandwidth must be 2..</p>	N/A

# AP/Radio11ac

This table contains radio 802.11ac information.

### Table description

Item	Description
Feature name	AP
Table name	PrvsOfManualAP
Table type	Multi-instance table
Row name	Prvs

Item	Description
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
ACHostName	Specify an AC by its hostname.	N/A	String. Length: 1 to 253 characters.	N/A
ACIPv4	Specify an AC by its IPv4 address.	N/A	List of string, dotted decimal notation, Separated by comma.	Example: 1.1.1.1, 1.1.1.2.
ACIPv6	Specify an AC by its IPv6 address.	N/A	List of hexadecimal string, colon-separated, Separated by comma.	Example: 1:1::1:1, 1:1::1:2.
DnsDomain	Specify the domain name suffix.	N/A	String. Length: 1 to 253.	N/A
DnsServerIPv4	Specify a DNS server by its IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
DnsServerIPv6	Specify a DNS server by its IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
GatewayIPv4	Specify a gateway by its IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
GatewayIPv6	Specify a gateway by its IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
IPv4Addresses	Specify an IP address that the AP uses to establish a CAPWAP tunnel.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
IPv6Addresses	Specify an IPv6 address that the AP uses to establish a CAPWAP tunnel.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
Dot1xSupplicantAnonymousIdent	Specify an anonymous identifier for the supplicant.	N/A	String. Length: 1 to 253 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Dot1xSupplEapMethod	Specify an EAP authentication method.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—md5</li> <li>2—peap-gtc</li> <li>3—peap-mschapv2</li> <li>4—tls-gtc</li> <li>5—tls-mschapv2</li> </ul>	N/A
Dot1xSupplEnable	Enable the 802.1X supplicant feature.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Dot1xSupplPasswdCipher	Specify a ciphertext password for the 802.1X supplicant.	N/A	String. Length: 1 to 201 characters.	N/A
Dot1xSupplPasswdSimple	Specify a plaintext password for the 802.1X supplicant.	N/A	String. Length: 1 to 127 characters.	N/A
Dot1xSupplUsername	Specify a username for the 802.1X supplicant.	N/A	String. Length: 1 to 253 characters.	N/A

## AP/PrvsOfManualAPACIPv4

This table contains provision information of manual AP of IPv4 address.

### XML structure

```

<AP>
  <PrvsOfManualAPACIPv4>

## Table description

Item	Description
Feature name	AP
Table name	RadioDB
Table type	Multi-instance table
Row name	Radio
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ModelName	AP model name.	Index	String, uppercase. Length: 1 to 63 characters.	N/A
RadioID	Radio ID.	Index	Unsigned short. Value range: 1 to 31.	N/A
DefaultRadioMode	Default radio mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—802.11b</li> <li>2—802.11a</li> <li>3—802.11g</li> <li>4—802.11n(2.4GHz)</li> <li>5—802.11n(5GHz)</li> <li>6—802.11ac(2.4GHz)</li> <li>7—802.11ac(5GHz)</li> </ul>	N/A
SupportDot11B	Whether a radio supports 802.11b radio mode	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SupportDot11A	Whether a radio supports 802.11a radio mode.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
SupportDot11G	Whether a radio supports 802.11g radio mode.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
SupportDot11GN	Whether a radio supports 802.11n(2.4GHz) radio mode	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
SupportDot11AN	Whether a radio supports 802.11n(5GHz) radio mode	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
SupportDot11GAC	Whether a radio supports 802.11ac(2.4GHz) radio mode	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
SupportDot11AC	Whether a radio supports 802.11ac(5GHz) radio mode	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
Spectrum	Supported radio spectrum.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Support both 5GHz and 2.4GHz</li> <li>2—Support 5GHz only</li> <li>3—Support 2.4GHz only</li> </ul>	N/A
DefaultAntennaType	Default antenna type of radio.	N/A	String, case-insensitive. Length: 1 to 80 characters.	N/A
Aifsn	ArbitrationInter Frame Spacing Number	N/A	Unsigned integer. Value range is 1 to 15, and is restricted by chipset.	N/A
Ecwmin	Exponent form of CWmin	N/A	Unsigned integer. Value range is 0 to 10, and is restricted by chipset.	N/A
Ecwmax	Exponent form of CWmax	N/A	Unsigned integer. Value range is 1 to 10, and is restricted by chipset.	N/A
TxOpLimit	Transmission opportunity limit	N/A	Unsigned integer. Value range is 0 to 32767 and is restricted by chipset. Unit is millisecond.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SupportBandwidth	Supported channel bandwidth	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—20M</li> <li>2—40M</li> <li>3—80M</li> <li>4—160M</li> <li>5—80M + 80M</li> <li>17—5M</li> <li>18—10M</li> </ul>	N/A
SupportMCS	Supported MCS	N/A	Unsigned short. Value range: 0 to 76.	N/A
SupportVHTMCS	Supported VHT-MCS	N/A	Unsigned short. Value range: 1 to 8.	N/A
ShortGI20M	Supported short GI for 20MHz	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
ShortGI40M	Supported short GI for 40MHz	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
ShortGI80M	Supported short GI for 80MHz	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
ShortGI160M	Supported short GI for 160MHz	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
SUBeamformer	Supported SU-Beamformer	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
MUBeamformer	Supported MU-Beamformer	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
Ldpc	Supported ldpc	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
TxStbc	Supported TxStbc	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
RxStbc	Supported RxStbc	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
VHTLdpc	Supported VHT ldpc	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
VHTTxStbc	Supported VHT TxStbc	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
VHTRxStbc	Supported VHT RxStbc	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A

## AP/RegionDB

This table contains valid region list of AP models.

## XML structure

```

<AP>
  <RegionDB>
    <Region>
      <ModelName></ModelName>
      <RegionCode></RegionCode>
      <SupportedRadioList></SupportedRadioList>
    </Region>
  </RegionDB>
</AP>

```

## Table description

Item	Description
Feature name	AP
Table name	RegionDB
Table type	Multi-instance table
Row name	Region
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ModelName	AP model name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RegionCode	Region code of AP.	N/A	Unsigned short.	Conform to ISO 3166 standard.

Column name	Column description	Column type	Data type and restrictions	Remarks
SupportedRadioList	Supported radio list of current region.	N/A	Number string. It is a comma-separated list of supported radio IDs. The string must not end with a comma or hyphen, or include any whitespace	Example: 1,2

## AP/AntennaDB

This table contains valid antenna types of AP models.

## XML structure

```

<AP>
  <AntennaDB>
    <Antenna>
      <ModelName></ModelName>
      <RadioID></RadioID>
      <AntennaType></AntennaType>
    </Antenna>
  </AntennaDB>
</AP>

```

## Table description

Item	Description
Feature name	AP
Table name	AntennaDB
Table type	Multi-instance table
Row name	Antenna
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ModelName	AP model name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RadioID	Radio ID	Index	Unsigned short. Value range: 1 to 31.	N/A
AntennaType	Antenna type of radio	Index	String, case-insensitive. Length: 1 to 80 characters.	N/A

# AP/ChannelTypeMap

This table contains channel type of radios.

## XML structure

```
<AP>
  <ChannelTypeMap>
    <ChannelMap>
      <RadioMode></RadioMode>
      <Bandwidth></Bandwidth>
      <Channel></Channel>
      <ChannelType></ChannelType>
    </ChannelMap>
  </ChannelTypeMap>
</AP>
```

## Table description

Item	Description
Feature name	AP
Table name	ChannelTypeMap
Table type	Multi-instance table
Row name	ChannelMap
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RadioMode	Radio mode	Index	Enumeration: <ul style="list-style-type: none"><li>1—802.11b</li><li>2—802.11a</li><li>3—802.11g</li><li>4—802.11n(2.4GHz)</li><li>5—802.11n(5GHz)</li><li>6—802.11ac(2.4GHz)</li><li>7—802.11ac(5GHz)</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Bandwidth	Radio bandwidth	Index	Enumeration: <ul style="list-style-type: none"> <li>• 1—20M</li> <li>• 2—40M</li> <li>• 3—80M</li> <li>• 4—160M</li> <li>• 5—80M + 80M</li> <li>• 17—5M</li> <li>• 18—10M</li> </ul>	N/A
Channel	Legal channel number.	Index	Unsigned short.	Conform to IEEE 802.11 protocol , ISO 3166 standart and the related national and regional laws and regulations.

Column name	Column description	Column type	Data type and restrictions	Remarks
ChannelType	Type of spectrum, bandwidth and channel range.	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>1—802.11b</li> <li>2—802.11g</li> <li>3—802.11n(2.4GHz) in 20M mode</li> <li>4—802.11n(2.4GHz) in 40M mode</li> <li>5—802.11gac(2.4GHz) in 20M mode</li> <li>6—802.11gac(2.4GHz) in 40M mode</li> <li>7—802.11a(36 to 64)</li> <li>8—802.11a(100 to 144)</li> <li>9—802.11a(149 to 165)</li> <li>10—802.11n(5GHz) (36 to 64) in 20M mode</li> <li>11—802.11n(5GHz) (100 to 144) in 20M mode</li> <li>12—802.11n(5GHz) (149 to 165) in 20M mode</li> <li>13—802.11n(5GHz) (36 to 64) in 40M mode</li> <li>14—802.11n(5GHz) (100 to 144) in 40M mode</li> <li>15—802.11n(5GHz) (149 to 165) in 40M mode</li> <li>16—802.11ac (36 to 64) in 20M mode</li> <li>17—802. 11ac (100 to 144) in 20M mode</li> <li>18—802. 11ac (149 to 165) in 20M mode</li> <li>19—802.11ac (36 to 64) in 40M mode</li> <li>20—802. 11ac (100 to 144) in 40M mode</li> <li>21—802. 11ac (149 to 165) in 40M mode</li> <li>22—802.11ac (36 to 64) in 80M mode</li> <li>23—802. 11ac (100 to 144) in 80M mode</li> <li>24—802. 11ac (149 to 165) in 80M mode</li> <li>25—802.11ac (36 to 64) in 160M mode</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ChannelType	Type of spectrum, bandwidth and channel range.	Index	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>1—802.11b</li> <li>2—802.11g</li> <li>3—802.11n(2.4GHz) in 20M mode</li> <li>4—802.11n(2.4GHz) in 40M mode</li> <li>5—802.11gac in 20M mode</li> <li>6—802.11gac in 40M mode</li> <li>7—802.11a(36 to 64)</li> <li>8—802.11a(100 to 144)</li> <li>9—802.11a(149 to 165)</li> <li>10—802.11n(5GHz) (36 to 64) in 20M mode</li> <li>11—802.11n(5GHz) (100 to 144) in 20M mode</li> <li>12—802.11n(5GHz) (149 to 165) in 20M mode</li> <li>13—802.11n(5GHz) (36 to 64) in 40M mode</li> <li>14—802.11n(5GHz) (100 to 144) in 40M mode</li> <li>15—802.11n(5GHz) (149 to 165) in 40M mode</li> <li>16—802.11ac (36 to 64) in 20M mode</li> <li>17—802.11ac (100 to 144) in 20M mode</li> <li>18—802.11ac (149 to 165) in 20M mode</li> <li>19—802.11ac (36 to 64) in 40M mode</li> <li>20—802.11ac (100 to 144) in 40M mode</li> <li>21—802.11ac (149 to 165) in 40M mode</li> <li>22—802.11ac (36 to 64) in 80M mode</li> <li>23—802.11ac (100 to 144) in 80M mode</li> <li>24—802.11ac (149 to 165) in 80M mode</li> <li>25—802.11ac (36 to 64) in 160M mode</li> </ul>	Refer to AP/ChannelTypeMap/ChannelType.

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>26—802. 11ac (100 to 144) in 160M mode</li> <li>27—802. 11ac (149 to 165) in 160M mode</li> <li>28—802. 11ac (36 to 64) in 8080M mode</li> <li>29—802. 11ac (100 to 144) in 8080M mode</li> <li>30—802. 11ac (149 to 165) in 8080M mode</li> </ul>	
PowerSubIndex	The sub-index value of power table	Index	Unsigned short.	Refer to AP/PowerIndex/PowerSubIndex
Channel	Legal channel number.	Index	Unsigned short.	Refer to AP/ChannelID/SupportedChannelList.
ValidMaxPower	Legal maximum power. The upper limit of configurable maximum power.	N/A	Unsigned short. The value range is related to AP model, radio mode, antenna type, channel number and region code.	Conform to IEEE 802.11 protocol , ISO 3166 standard and the related national and regional laws and regulations.

## AP/ChannelReport

This table contains the fields which carry the channel reports of the Ap.

### XML structure

```

<AP>
  <ChannelReport>
    <Channel>
      <ApName></ApName>
      <RadioID></RadioID>
      <Channel></Channel>
      <NeighborCount></NeighborCount>
      <Load></Load>
      <Utilization></Utilization>
      <Interference></Interference>
      <PacketErr></PacketErr>
      <Retry></Retry>
      <RadarStatus><RadarStatus>
    </Channel>
  </ChannelReport>
</AP>

```

## Table description

Item	Description
Feature name	AP
Table name	ChannelReport
Table type	Multi-instance table
Row name	Channel
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
RadioID	Radio ID	Index	Unsigned short. Value range: 1 to 31.	N/A
Channel	Legal channel number.	Index	Unsigned short.	Refer to AP/ChannelDB/SupportedChannelList.
NeighborCount	Neighbour number of the legal channels.	N/A	Unsigned integer.	N/A
Load	Percentage of the time for transmitting all packets on the channel to the total time for scanning the channel.	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
Utilization	Percentage of the time for transmitting packets of the BSS to the total time for scanning the channel.	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
Interference	Percentage of the time for transmitting packets of other BSSs to the total time for scanning the channel.	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
PacketErr	Packet error rate of the legal channel.	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Retry	Retransmission rate of the legal channel.	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
RadarStatus	Radar detection status at the legal channel.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Radar is detected.</li> <li>false—Radar is not detected.</li> </ul>	N/A

## AP/NeighborAPReport

This table contains the fields which carry the information of the Ap's current neighbors.

### XML structure

```

<AP>
  <NeighborAPReport>
    <Neighbor>
      <ApName></ApName>
      <RadioID></RadioID>
      <MacAddress></MacAddress>
      <Channel></Channel>
      <Interference></Interference>
      <SignalStrength></SignalStrength>
      <NeighborType></NeighborType>
    </Neighbor>
  </NeighborAPReport>
</AP>

```

### Table description

Item	Description
Feature name	AP
Table name	NeighborAPReport
Table type	Multi-instance table
Row name	Neighbor
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
RadioID	Radio ID	Index	Unsigned short. Value range: 1 to 31.	N/A
MacAddress	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	If the neighbor is unmanaged AP, this column is MAC address; or if the neighbor is managed AP, it is basic BSSID.  Example: 00-0c-af-e3-5d-c0.
Channel	Channel number where the neighbor is discovered.	N/A	Unsigned short.  The value range is related to AP model, radio mode, antenna type and country code.	N/A
Interference	Percentage of the time for transmitting packets of the neighbor to the total time for scanning the channel.	N/A	Unsigned integer. Value range: 0 to 100. Unit: %.	N/A
SignalStrength	Strength of signal received.	N/A	Unsigned integer. Unit: dBm.	An indication of the total channel power (signal, noise, and interference) of a received frame measured on the channel and at the antenna connector used to receive the frame.
NeighborType	Management status of the neighbor.	N/A	Boolean: <ul style="list-style-type: none"><li>• true—Managed neighbor.</li><li>• false—UnManaged neighbor.</li></ul>	N/A

## AP/EdcaRadio

This table contains radio EDCA information.

## XML structure

```
<AP>
  <EdcaRadio>
```

```

<EdcaPara>
  <ApName></ApName>
  <RadioID></RadioID>
  <AccessCategory></AccessCategory>
  <Noack></Noack>
  <CfgAifsn></CfgAifsn>
  <CfgEcwmin></CfgEcwmin>
  <CfgEcwmax></CfgEcwmax>
  <CfgTxOpLimit></CfgTxOpLimit>
</EdcaPara>
</EdcaRadio>
</AP>

```

## Table description

Item	Description
Feature name	AP
Table name	EdcaRadio
Table type	Multi-instance table
Row name	EdcaPara
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name.	Index	String, case-sensitive. Length:1to 64 characters.	N/A.
RadioID	Radio identifier.	Index	Unsigned char. Value range: 1 to 31.	N/A
AccessCategory	A label for the common set of enhanced distributed channel access parameters that are used by a WMM STA to contend for the channel in order to transmit MSDUs with certain priorities..	Index	Enumeration: <ul style="list-style-type: none"> <li>0—BK.</li> <li>1—BE.</li> <li>2—VI.</li> <li>3—VO.</li> </ul>	N/A
Noack	Whether acknowledgement is required.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Not required.</li> <li>false—Required.</li> </ul>	N/A
CfgAifsn	Arbitration Inter Frame Spacing Number.	N/A	The value range conforms to "AP/RadioIDB/Aifsn" column.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CfgEcwmin	Exponent form of CWmin.	N/A	The value range conforms to "AP/RadiolDB/Ecwmin" column.	N/A
CfgEcwmax	Exponent form of CWmax.	N/A	The value range conforms to "AP/RadiolDB/Ecwmax" column.	N/A
CfgTxOpLimit	Transmission opportunity limit.	N/A	The value range conforms to "AP/RadiolDB/TxOpLimit" column.	N/A

## AP/RadioWmm

This table contains radio WMM information.

## XML structure

```

<AP>
  <RadioWmm>
    <Wmm>
      <ApName></ApName>
      <RadioID></RadioID>
      <Status></Status>
    </Wmm>
  </RadioWmm>
</AP>

```

## Table description

Item	Description
Feature name	AP
Table name	RadioWmm
Table type	Multi-instance table
Row name	Wmm
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ApName	AP name.	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A.
RadioID	Radio identifier.	Index	Unsigned char. Value range: 1 to 31.	N/A
Status	WMM status of radio.	N/A	Boolean: <ul style="list-style-type: none"><li>true—Enable.</li><li>false—Disable.</li></ul>	N/A

## AP/APGroup

This table contains information of AP groups.

## XML structure

```
<AP>
  <APGroup>
    <Group>
      <Name></Name>
      <RuleNum></RuleNum>
      <ModelNum></ModelNum>
      <APNum></APNum>
      <RegionCode></RegionCode>
      <RegionLock></RegionLock>
      <Priority></Priority>
      <Preempt></Preempt>
      <EchoInterval></EchoInterval>
      <EchoCount></EchoCount>
      <RetransInterval></RetransInterval>
      <RetransCount></RetransCount>
      <StatisInterval></StatisInterval>
      <FirmwareUpgrade></FirmwareUpgrade>
      <BackupACIPv4></BackupACIPv4>
      <BackupACIPv6></BackupACIPv6>
      <LocationName></LocationName>
      <Description></Description>
      <TunnelEncryption></TunnelEncryption>
      <ProvisionAutoUpgrade></ProvisionAutoUpgrade>
      <ProvisionAutoRecover></ProvisionAutoRecover>
      <LedMode></LedMode>
    </Group>
  </APGroup>
</AP>
```

## Table description

Item	Description
Feature name	AP
Table name	APGroup
Table type	Multi-instance table
Row name	Group
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
AP group name	Number of rules in the AP group	N/A	Unsigned short. Value range: 0 to 5.	N/A
ModelNum	Number of models in the AP group	N/A	Unsigned short. Value range: 0 to 65535.	N/A
APNum	Number of APs in the AP group	N/A	Unsigned short. Value range: 0 to 65535.	N/A
RegionCode	Region code of AP group.	N/A	Unsigned short.	Conform to ISO 3166 standard.
RegionLock	Whether the region code of the AP group is locked.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Support.</li> <li>false—Not support.</li> </ul>	N/A
Priority	AP connection priority	N/A	Unsigned short. Value range: 0 to 7.	N/A
Preempt	Whether the AP in this group will be forced to switch the backup tunnel to active by priority.	N/A	Boolean: <ul style="list-style-type: none"> <li>true: Switch</li> <li>false: Not switch.</li> </ul>	N/A
EchoInterval	The transmit interval of tunnel echo messages.	N/A	Unsigned short. Value range: 0, 5 to 255. Unit: seconds	N/A
EchoCount	The allowed maximum number of echo messages which are not received. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 1 to 20.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RetransInterval	The interval to retransmit a request message.	N/A	Unsigned short. Value range: 1 to 30. Unit: seconds	N/A
RetransCount	The allowed maximum number of retransmission attempts. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 1 to 20. Unit: seconds	N/A
StatsInterval	The interval of AP sending the statistics informations to AC.	N/A	Unsigned short. Value range: 0 to 240. Unit: seconds	N/A
FirmwareUpgrade	Whether the AC will upgrade AP's firmware automatically if the software is mismatch.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable</li> <li>false—Disable</li> </ul>	N/A
BackupACIPv4	The IPv4 backup AC address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
BackupACIPv6	The IPv6 backup AC address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
LocationName	Which location the AP group belongs to.	N/A	String, lowercase. Length: 1 to 31 characters.	N/A
Description	The description of APGroup.	N/A	String, Length: 1 to 64 cahracters	N/A
TunnelEncryption	Whether to enable tunnel encryption.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable</li> <li>false—Disable</li> </ul>	N/A
ProvisionAutoUpgrade	Whether to enable provision auto-upgrade	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
ProvisionAutoRecover	Whether to enable provision auto-recover	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
LedMode	LED mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Normal</li> <li>1—Quiet</li> <li>2—Awake</li> <li>3—Always-on</li> </ul>	N/A

## AP/APGroupMACRule

This table contains information of AP groups' rules of MAC address.

## XML structure

```
<AP>
  <APGroupMACRule>
    <Rule>
      <GroupName></GroupName>
      <MacAddress></MacAddress>
    </Rule>
  </APGroupMACRule>
</AP>
```

## Table description

Item	Description
Feature name	AP
Table name	APGroupMACRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
MacAddress	AP MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

## AP/APGroupSerialIDRule

This table contains information of AP groups' rules of serial ID.

## XML structure

```
<AP>
  <APGroupSerialIDRule>
    <Rule>
      <GroupName></GroupName>
      <SerialID></SerialID>
    </Rule>
  </APGroupSerialIDRule>
</AP>
```

## Table description

Item	Description
Feature name	AP
Table name	APGroupSerialIDRule
Table type	Multi-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
SerialID	AP serial ID	Index	String, uppercase. Length: 1 to 127 characters.	N/A

## AP/APGroupNameRule

This table contains information of AP groups' rules of AP name.

## XML structure

```
<AP>
  <APGroupNameRule>
    <Rule>
      <GroupName></GroupName>
      <APName></APName>
    </Rule>
  </APGroupNameRule>
</AP>
```

## Table description

Item	Description
Feature name	AP
Table name	APGroupNameRule
Table type	Multi-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
APName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A

## AP/APGroupIPv4Rule

This table contains information of AP groups' rules of IPv4 address range.

## XML structure

```
<AP>
  <APGroupIPv4Rule>
    <Rule>
      <GroupName></GroupName>
      <IPv4Addr></IPv4Addr>
      <IPv4Wildcard></IPv4Wildcard>
    </Rule>
  </APGroupIPv4Rule>
</AP>
```

## Table description

Item	Description
Feature name	AP
Table name	APGroupIPv4Rule
Table type	Multi-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
IPv4Addr	IPv4 address of AP.	Index	String, dotted decimal notation.	Example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
IPv4Wildcard	Wildcard mask for the IPv4 address of AP.	Index	String, dotted decimal notation.	Example: 255.255.255.0.

## AP/APGroupIPv6Rule

This table contains information of AP groups' rules of IPv6 address range.

### XML structure

```

<AP>
  <APGroupIPv6Rule>
    <Rule>
      <GroupName></GroupName>
      <IPv6Addr></IPv6Addr>
      <IPv6Wildcard></IPv6Wildcard>
    </Rule>
  </APGroupIPv6Rule>
</AP>

```

### Table description

Item	Description
Feature name	AP
Table name	APGroupIPv6Rule
Table type	Multi-instance table
Row name	Rule
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
IPv6Addr	Source IPv6 address.	Index	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the SrcAny column is false.
IPv6Wildcard	Length of the source IPv6 address prefix.	Index	Unsigned integer. Value range: 1 to 128.	This column is available when the SrcAny column is false.

# AP/APGroupModel

This table contains information of AP group models.

## XML structure

```
<AP>
  <APGroupModel>
    <Model>
      <GroupName></GroupName>
      <ModelName></ModelName>
      <RadioNum></RadioNum>
    </Model>
  </APGroupModel>
</AP>
```

## Table description

Item	Description

If this column is not configured, the multicast rate will be calculated automatically.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RateMandatory	Mandatory rate	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>1—1Mbps</li> <li>2—2Mbps</li> <li>3—5.5Mbps</li> <li>4—6Mbps</li> <li>5—9Mbps</li> <li>6—11Mbps</li> <li>7—12Mbps</li> <li>8—18Mbps</li> <li>9—24Mbps</li> <li>10—36Mbps</li> <li>11—48Mbps</li> <li>12—54Mbps</li> </ul> <p>Default value:</p> <p>A. 1, 2Mbps(802.11b).</p> <p>B. 6, 12, 24Mbps(802.11a/802.11an)</p> <p>C. 1, 2, 5.5, 11Mbps(802.11g/802.11gn)</p>	The value can have multi-selections.
RateSupported	Supported rate	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>1—1Mbps</li> <li>2—2Mbps</li> <li>3—5.5Mbps</li> <li>4—6Mbps</li> <li>5—9Mbps</li> <li>6—11Mbps</li> <li>7—12Mbps</li> <li>8—18Mbps</li> <li>9—24Mbps</li> <li>10—36Mbps</li> <li>11—48Mbps</li> <li>12—54Mbps</li> </ul> <p>Default value:</p> <p>A. 5.5, 11Mbps(802.11b)</p> <p>B. 9, 18, 24, 36, 48, 54Mbps(802.11a/802.11an)</p> <p>C. 6, 9, 12, 18, 24, 36, 54Mbps(802.11g/802.11gn)</p>	The value can have multi-selections, exclude the one which multicast rate uses.

Column name	Column description	Column type	Data type and restrictions	Remarks
RateDisabled	Disabled rate	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—1Mbps</li> <li>2—2Mbps</li> <li>3—5.5Mbps</li> <li>4—6Mbps</li> <li>5—9Mbps</li> <li>6—11Mbps</li> <li>7—12Mbps</li> <li>8—18Mbps</li> <li>9—24Mbps</li> <li>10—36Mbps</li> <li>11—48Mbps</li> <li>12—54Mbps</li> </ul>	The value can have multi-selections, exclude the one which multicast rate uses.
Preamble	Preamble	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Short.</li> <li>false—Long.</li> </ul> The column is only for 2.4GHz radio mode.	N/A
BeaconInterval	Beacon Interval time	N/A	Unsigned short. The value range is 32~8191. Unit: TU. 1TU = 1024ms	N/A
PowerLock	Lock the power	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Distance	The distance that Radio can cover	N/A	Unsigned short. The value range is 1~40. Unit: km(kilometre).	N/A
MaxRxDuration	Max Reveived frame duration time	N/A	Unsigned integer. The value range is 500~250000. Unit: ms.	N/A
FragmentThreshold	Fragment threshold	N/A	Unsigned short. The value range is 256~2346. And the value must be an even number. Unit: byte.	N/A
LongRetryThreshold	Long retry threshold	N/A	Unsigned short. The value range is 1~15. Unit: null.	N/A
ProtectionThreshold	Protection threshold	N/A	Unsigned short. The value range is 0~2346. Unit: byte.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ShortRetryThreshold	Short retry threshold	N/A	Unsigned short. The value range is 1~15. Unit: null.	N/A
CfgChannel	Configured channel number	N/A	The value range conforms to "AP/ChannelDB/Supported ChannelList" column. And 15 - auto lock、16-auto unlock.	When the value is 15, the radio automatically selects an optimal channel, and then locks the channel. When the AC detects any radar signals on its channel, it immediately selects another channel (even if the channel auto lock is true) and locks the new channel.
CfgMaxPower	Configured maximum power	N/A	Unsigned short. Value range: 1 to "AP/PowerDB/ValidMaxPower". Unit: dBm	N/A

## AP/APGroupRadio11n

## Table description

Item	Description
Feature name	AP
Table name	APGroupRadio11n
Table type	Multi-instance table
Row name	Radio11n
Restrictions	The table is only for 802.11n and 802.11ac radio mode.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ModelName	AP model name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RadioID	Radio ID	Index	Unsigned short. Value range: 1 to 31.	N/A
MCSMulticast	The index for multicast MCS.	N/A	Unsigned short. Value range: 0 to 76, and 255. Default value is 255.	The MCSMulticast must be smaller than or equal to the MCSMandatory.
MCSMandatory	The maximum index for mandatory MCS.	N/A	Unsigned short. Value range: 0 to 76, and 255. Default value is 255.	The MCSMandatory must be smaller than or equal to the MCSSupported, and the MCSMandatory must be greater than or equal to the MCSMulticast.
MCSSupported	The maximum index for supported MCS.	N/A	Unsigned short. Value range: 0 to 76, and 255. Default value is 76.	The MCSSupported must be greater than or equal to the MCSMandatory.
Ampdu	A-mpdu function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Amsdu	A-msdu function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ShortGI	Short GI function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Stbc	STBC function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Ldpc	LDPC function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Mimo	MIMO.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1: 1X1</li> <li>2: 2X2</li> <li>3: 3X3</li> <li>4: 4X4</li> </ul>	N/A
Greenap	Green ap function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
SmartAntenna	Smart antenna function	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
SmartAntennaPolicy	Smart antenna policy	N/A	Enumeration: <ul style="list-style-type: none"> <li>1: Auto</li> <li>2: High-availability</li> <li>3: High-throughput</li> </ul>	Effective only when SmartAntenna is enabled.
Protection	802.11n protection function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Client11nOnly	Client dot11n only function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
BandwidthAutoswitch	Bandwidth autoswitch function	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul> <p>The column is only for 2.4GHz radio mode, and AP/APGroupRadio/Bandwidth must be 2.</p>	N/A

## AP/APGroupRadio11ac

This table contains 802.11ac information of AP group radios.

### XML structure

      <DnsDomain></DnsDomain>
      <DnsServerIPv4></DnsServerIPv4>
      <DnsServerIPv6></DnsServerIPv6>
    </Prvs>
  </APGroupPrvs>
</AP>

```

### Table description

Item	Description
Feature name	AP
Table name	APGroupPrvs
Table type	Multi-instance table
Row name	Prvs
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ACHostName	Specify an AC by its hostname.	N/A	String. Length: 1 to 253 characters.	N/A
ACIPv4	Specify an AC by its IPv4 address.	N/A	List of string, dotted decimal notation, Separated by comma.	Example: 1.1.1.1, 1.1.1.2.
ACIPv6	Specify an AC by its IPv6 address.	N/A	List of hexadecimal string, colon-separated, Separated by comma.	Example: 1:1::1:1, 1:1::1:2.
DnsDomain	Specify the domain name suffix.	N/A	String. Length: 1 to 253.	N/A
DnsServerIPv4	Specify a DNS server by its IPv4 address.	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
DnsServerIPv6	Specify a DNS server by its IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.

## AP/APGroupPrvsACIPv4

This table contains provision information of AP Group of IPv4 address.

## XML structure

```
<AP>
  <APGroupPrvsACIPv4>
    <Prvs>
      <GroupName></GroupName>
      <ACIPv4></ACIPv4>
    </Prvs>
  </APGroupPrvsACIPv4>
</AP>
```

## Table description

Item	Description
Feature name	AP
Table name	APGroupPrvsACIPv4
Table type	Multi-instance table

Item	Description
Row name	Prvs
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String, dotted decimal notation.	Example: 1.1.1.1.
ACIPv4	Specify an AC by its IPv4 address.	N/A	List of string, dotted decimal notation, Separated by comma.	Example: 1.1.1.1, 1.1.1.2.

## AP/APGroupPrvsACIPv6

This table contains provision information of AP group of IPv6 address.

## XML structure

```

<AP>
  <APGroupPrvsACIPv6>
    <Prvs>
      <GroupName></GroupName>
      <ACIPv6></ACIPv6>
    </Prvs>
  </APGroupPrvsACIPv6>
</AP>

```

## Table description

Item	Description
Feature name	AP
Table name	APGroupPrvsACIPv6
Table type	Multi-instance table
Row name	Prvs
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ACIPv6	Specify an AC by its IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is available when the SrcAny column is false.

## AP/APListOfGroup

This table contains the AP list of AP groups.

## XML structure

```
<AP>
  <APListOfGroup>
    <AP>
      <GroupName></GroupName>
      <ApName></ApName>
    </AP>
  </APListOfGroup>
</AP>
```

## Table description

Item	Description
Feature name	AP
Table name	APListOfGroup
Table type	Multi-instance table
Row name	AP
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	AP group name	Index	String, lowercase. Length: 1 to 31 characters.	N/A
ApName	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A

# AP/Location

This table contains the informations of locations.

## XML structure

```
<AP>

    <AC>
      <Name></Name>
      <Model></Model>
      <CfgSerialID></CfgSerialID>
      <Status></Status>
      <EchoInterval></EchoInterval>
      <RetransInterval></RetransInterval>
      <RetransCount></RetransCount>
      <FirmwareUpgrade></FirmwareUpgrade>
      <Ipv4Address></Ipv4Address>
      <Ipv6Address></Ipv6Address>
    </AC>
  </LocalAC>
</AP>
```

## Table description

Item	Description
Feature name	AP
Table name	LocalAC
Table type	Multi-instance table
Row name	AC
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Local-ac name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
Model	Local-ac model name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
CfgSerialID	Configured Local-ac serial ID	N/A	String, uppercase. Length: 1 to 63 characters.	N/A
Status	Local-ac associated status	N/A	Enumeration: <ul style="list-style-type: none"><li>1—Online</li><li>2—Offline</li><li>3—Image downloading</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
EchoInterval	The transmit interval of tunnel echo messages.	N/A	Unsigned short. Value range: 0, 5 to 255. Unit: seconds	N/A
RetransInterval	The interval to retransmit a request message.	N/A	Unsigned short. Value range: 3 to 8 Unit: seconds	N/A
RetransCount	The allowed maximum number of retransmission attempts. If the count is reached, the tunnel will be down.	N/A	Unsigned short. Value range: 2 to 5. Unit: seconds	N/A
FirmwareUpgrade	Whether the AC will upgrade AP's firmware automatically if the software is mismatch.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	N/A
Ipv4Address	Local AC IPv4 address	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is unavailable when the AC uses an IPv6 address.
Ipv6Address	Local AC IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is unavailable when the AC uses an IPv4 address.

## AP/ContainerTopology

This table contains information about all PoE ports on the container and units (such as WAP and WTU) connected to the container (such as SPM and WT).

### XML structure

```

<AP>
  <ContainerTopology>

```

## Table description

Item	Description
Feature name	AP
Table name	ContainerTopology
Table type	Multi-instance table
Row name	Container
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContainerName	Container name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
PoePort	Port on the container	Index	Unsigned short.	See AP/APDB/.
PoeStatus	PoE port status	N/A	Boolean: <ul style="list-style-type: none"><li>true—Enable.</li><li>false—Disable.</li></ul>	N/A
UnitName	Unit name	N/A	String, case-sensitive. Length: 1 to 64 characters.	N/A

## AP/Container

This table contains information about containers.

## XML structure

```
<AP>
  <Container>
    <AP>
      <Name></Name>
      <Model></Model>
      <CfgMacAddress></CfgMacAddress>
      <APNum></APNum>
      <Status></Status>
      <Ipv4Address></Ipv4Address>
      <Ipv6Address></Ipv6Address>
      <OnlineTime></OnlineTime>
      <LastDownReason></LastDownReason>
      <LastRebootReason></LastRebootReason>
      <OfflineMoment></OfflineMoment>
    </AP>
  </Container>
</AP>
```

```
</Container>  
</AP>
```

## Table description

Item	Description
Feature name	AP
Table name	Container
Table type	Multi-instance table
Row name	AP
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP name	Index	String, case-sensitive. Length: 1 to 64 characters.	N/A
Model	AP model name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
CfgMacAddress	Configured AP MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
APNum	Number of APs connected to the container	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Status	AP association status	N/A	Enumeration: <ul style="list-style-type: none"><li>1—Online.</li><li>2—Image downloading.</li></ul>	N/A
Ipv4Address	AP IPv4 address	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column is unavailable when the AP uses an IPv6 address.
Ipv6Address	AP IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column is unavailable when the AP uses an IPv4 address.
OnlineTime	Time since the AP came online.	N/A	Unsigned integer. Value range: 0 to 4294967295. Unit: Second	N/A
LastDownReason	Cause of the tunnel down the last time.	N/A	String. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LastReboot Reason	Cause of the AP rebooting in last time.	N/A	String. Length: 1 to 31 characters.	N/A
OfflineMoment	The time of the AP offline in last time.	N/A	<b>DateTime.</b> <b>Format:</b> <b>YYYY-MM-DDTHH:MM:SS</b>	Example: 2014-05-07T09:35:07

# AppProxy

## AppProxy/MoveBeforeRules

This table is used to move a rule to before another rule.

### XML structure

```
<AppProxy>
  <MoveBeforeRules>
    <Rule>
      <ID></ID>
      <DestID></DestID>
    </Rule>
  </MoveBeforeRules>
</AppProxy>
```

### Table description

Item	Description
Feature name	AppProxy
Table name	MoveBeforeRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	ID of the rule to be moved	N/A	Unsigned integer. Value range: 1 to 65535	N/A
DestID	ID of the reference rule before which the rule is placed	N/A	Unsigned integer. Value range: 1 to 65536	When the value is 65536, the rule is placed after all rules.

## AppProxy/ImportCertificates

This table is used to import the certificate for SSL server in SSL decryption.

## XML structure

```
<AppProxy>
  <ImportCertificates>
    <ImportCertificate>
      <FileName></FileName>
      <Trust></Trust>
      <Password></Password>
    </ImportCertificate>
  </ImportCertificates>
</AppProxy>
```

## Table description

Item	Description
Feature name	AppProxy
Table name	ImportCertificates
Table type	Multi-instance table
Row name	ImportCertificate
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	File name of the certificate	Index	String, case-insensitive. Length: 1 to 255 characters.	N/A
Trust	Credibility of the certificate	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—untrust.</li><li>• 1—trust.</li><li>• 2—untrust and trust.</li></ul>	N/A
Password	Password of the certificate	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A

## AppProxy/DeleteCertificates

This table is used to delete the imported certificate.

## XML structure

```
<AppProxy>
  <DeleteCertificates>
    <FileName></FileName>
  </DeleteCertificates>
</AppProxy>
```

</AppProxy>

## Table description

Item	Description
Feature name	AppProxy
Table name	DeleteCertificates

# AppProxy

## AppProxy/PolicyRules

This table contains proxy rule information.

### XML structure

```
<AppProxy>
  <PolicyRules>
    <Rule>
      <ID></ID>
      <RuleName></RuleName>
      <Action></Action>
      <Enable></Enable>
    </Rule>
  </PolicyRules>
</AppProxy>
```

### Table description

Item	Description
Feature name	AppProxy
Table name	PolicyRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unsigned integer. Value range: 0 to 65536.	When creating a rule, if the ID is set to 0, the device will automatically assign an ID. The value 65536 is reserved for default rule.
RuleName	Rule name	N/A	String, case-insensitive. Length: 1 to 63 characters.	The value cannot be "default". When operating the default rule, this column cannot be specified.
Action	Action for the	N/A	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	rule		<ul style="list-style-type: none"> <li>1—No proxy.</li> <li>2—SSL decrypt.</li> <li>3—TCP proxy.</li> </ul>	
Enable	Enabling status of the rule	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disabled.</li> <li>1—Enabled.</li> </ul>	When operating the default rule, this column cannot be set to 0.

## AppProxy/RuleSrcAddrs

This table contains source address object group information for an existing app-proxy policy rule.

### XML structure

```

<AppProxy>
  <RuleSrcAddrs>
    <SrcAddr>
      <ID></ID>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </SrcAddr>
  </RuleSrcAddrs>
</AppProxy>

```

### Table description

Item	Description
Feature name	AppProxy
Table name	RuleSrcAddrs
Table type	Multi-instance table
Row name	SrcAddr
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unsigned integer. Value range: 1 to 65535	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IsIncrement	Whether to increment the data	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes.</li> <li><b>false</b>—No.</li> </ul>	N/A
NameList	Object group list	Data structure	Members include: <ul style="list-style-type: none"> <li>NameItem</li> </ul>	N/A
NameItem	Name of the source address object group	N/A	String, case-insensitive. Length: 0 to 31 characters.	The value cannot be “any”.

## AppProxy/RuleDestAddr

This table contains destination address object group information for an existing app-proxy policy rule.

### XML structure

```

<AppProxy>
  <RuleDestAddr>
    <DestAddr>
      <ID></ID>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </DestAddr>
  </RuleDestAddr>
</AppProxy>

```

### Table description

Item	Description
Feature name	AppProxy
Table name	RuleDestAddr
Table type	Multi-instance table
Row name	DestAddr
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unsigned integer. Value range: 1 to 65535	N/A
IsIncrement	Whether to increment the data	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Yes.</li><li>• <b>false</b>—No.</li></ul>	N/A
NameList	Object group list	Data structure	Members include: <ul style="list-style-type: none"><li>• NameItem</li></ul>	N/A
NameItem	Name of the destination address object group	N/A	String, case-insensitive. Length: 0 to 31 characters.	The value cannot be “any”.

## AppProxy/RuleSrcSecZones

This table contains source security zone information for an existing app-proxy policy rule.

## XML structure

```
<AppProxy>
  <RuleSrcSecZones>
    <SrcSecZone>
      <ID></ID>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </SrcSecZone>
  </RuleSrcSecZones>
</AppProxy>
```

## Table description

Item	Description
Feature name	AppProxy
Table name	RuleSrcSecZones
Table type	Multi-instance table
Row name	SrcSecZone
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unsigned integer. Value range: 1 to 65535	N/A
IsIncrement	Whether to increment the data	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Yes.</li><li><b>false</b>—No.</li></ul>	N/A
NameList	Zone list	Data structure	Members include: <ul style="list-style-type: none"><li>NameItem</li></ul>	N/A
NameItem	Name of the source security zone	N/A	String, case-insensitive. Length: 0 to 31 characters.	The value cannot be "any".

## AppProxy/RuleDestSecZones

This table contains destination security zone information for an existing app-proxy policy rule.

## XML structure

```
<AppProxy>
  <RuleDestSecZones>
    <DestSecZone>
      <ID></ID>
      <IsIncrement></IsIncrement>
      <NameList>
        <NameItem></NameItem>
      </NameList>
    </DestSecZone>
  </RuleDestSecZones>
</AppProxy>
```

## Table description

Item	Description
Feature name	AppProxy
Table name	RuleDestSecZones
Table type	Multi-instance table
Row name	DestSecZone
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unsigned integer. Value range: 1 to 65535	N/A
IsIncrement	Whether to increment the data	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Yes.</li><li><b>false</b>—No.</li></ul>	N/A
ZoneList	Zone list	Data structure	Members include: <ul style="list-style-type: none"><li>Nameltem</li></ul>	N/A
Nameltem	Name of the destination security zone	N/A	String, case-insensitive. Length: 0 to 31 characters.	The value cannot be "any".

## AppProxy/RuleUsers

This table contains user information for an existing app-proxy policy rule.

## XML structure

```
<AppProxy>
  <RuleUsers>
    <User>
      <ID></ID>
      <IsIncrement></IsIncrement>
      <UserList>
        <UserName></UserName>
        <DomainName></DomainName>
      </UserList>
    </User>
  </RuleUsers>
</AppProxy>
```

## Table description

Item	Description
Feature name	AppProxy
Table name	RuleUsers
Table type	Multi-instance table
Row name	User
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unsigned integer. Value range: 1 to 65535	N/A
IsIncrement	Whether to increment the data	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Yes.</li><li><b>false</b>—No.</li></ul>	N/A
UserList	User list	Data structure	Members include: <ul style="list-style-type: none"><li>UserName</li><li>DomainName</li></ul>	N/A
UserName	Name of the user	N/A	String, case-sensitive. Length: 1 to 55 characters.	The user name cannot be a, al, or all, and it cannot contain any of the following characters: \   / : * ? < > @.
DomainName	Name of the domain	N/A	String, case-sensitive. Length: 0 to 255 characters.	The domain name cannot contain any of the following characters: \   / ? : * ? < > @, and it cannot be d, de, def, defa, defau, default, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknow, or if-unknown.

## AppProxy/RuleUserGrps

This table contains user group information for an existing app-proxy policy rule.

## XML structure

```
<AppProxy>
  <RuleUserGrps>
    <UserGrp>
      <ID></ID>
      <IsIncrement></IsIncrement>
      <UserGrpList>
        <UserGrpName></UserGrpName>
        <DomainName></DomainName>
      </UserGrpList>
    </UserGrp>
  </RuleUserGrps>
</AppProxy>
```

## Table description

Item	Description
Feature name	AppProxy
Table name	RuleUserGrps
Table type	Multi-instance table
Row name	UserGrp
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unsigned integer. Value range: 1 to 65535	N/A
IsIncrement	Whether to increment the data	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Yes.</li><li><b>false</b>—No.</li></ul>	N/A
UserGrpList	User group list	Data structure	Members include: <ul style="list-style-type: none"><li>UserGrpName</li><li>DomainName</li></ul>	N/A
UserGrpName	Name of the user group	N/A	String, case-insensitive. Length: 1 to 200 characters.	N/A
DomainName	Name of the domain	N/A	String, case-sensitive. Length: 0 to 255 characters.	The domain name cannot contain any of the following characters: \   / ? : * ? < > @, and it cannot be d, de, def, defa, defau, default, default, i, if, if-, if-u, if-un, if-unk, if-unkn, if-unkno, if-unknown, or if-unknown.

## AppProxy/RuleServGrps

This table contains service object group information for an existing app-proxy policy rule.

## XML structure

```
<AppProxy>
  <RuleServGrps>
    <ServGrp>
      <ID></ID>
      <IsIncrement></IsIncrement>
      <NameList>
```

```

        <NameItem></NameItem>
    </NameList>
</ServGrp>
</RuleServGrps>
</AppProxy>

```

## Table description

Item	Description
Feature name	AppProxy
Table name	RuleServGrps
Table type	Multi-instance table
Row name	ServGrp
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unsigned integer. Value range: 1 to 65535	N/A
IsIncrement	Whether to increment the data	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes.</li> <li><b>false</b>—No.</li> </ul>	N/A
NameList	Service group list	Data structure	Members include: <ul style="list-style-type: none"> <li>NameItem</li> </ul>	N/A
NameItem	Name of the service object group	N/A	String, case-insensitive. Length: 0 to 31 characters.	The value cannot be "any".

## AppProxy/WhiteListHostNames

This table contains information of user-defined host name whitelist.

## XML structure

```

<AppProxy>
  <WhiteListHostNames>
    <HostName>
      <Name></Name>
    </HostName>
  </WhiteListHostNames>
</AppProxy>

```

## Table description

Item	Description
Feature name	AppProxy
Table name	WhiteListHostNames
Table type	Multi-instance table
Row name	HostName
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Host name	Index	String, case-insensitive. Length: 1 to 63 characters.	The host name may contain space.

## AppProxy/WhiteListPredefine

This table contains information of pre-defined host name whitelist.

## XML structure

```
<AppProxy>
  <WhiteListPredefine>
    <HostName>
      <Type></Type>
      <Name></Name>
      <Enable></Enable>
    </HostName>
  </WhiteListPredefine>
</AppProxy>
```

## Table description

Item	Description
Feature name	AppProxy
Table name	WhiteListPredefine
Table type	Multi-instance table
Row name	HostName
Restrictions	None

Item	Description
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Whether the host name belongs to the pre-define chrome-HSTS list	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Not in chrome-HSTS.</li> <li>2—in chrome-HSTS.</li> </ul>	N/A
Name	Host name	Index	String, case-insensitive. Length: 1 to 63 characters.	The host name may contain spaces.
Enable	Enabling status of the host name	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A

## AppProxy/WhiteListPredefineChromeHsts

This table contains the state information of chrome-HSTS in pre-defined host name whitelist.

## XML structure

```
<AppProxy>
  <WhiteListPredefineChromeHsts>
    <Enable></Enable>
  </WhiteListPredefineChromeHsts>
</AppProxy>
```

## Table description

Item	Description
Feature name	AppProxy
Table name	WhiteListPredefineChromeHsts
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enabling status of host names in chrome-HSTS whitelist	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled</li><li><b>false</b>—Disabled</li></ul>	N/A

## AppProxy/TrustCertificate

This table contains credibility information of certificates.

## XML structure

```
<AppProxy>
  <TrustCertificates>
    <TrustCertificate>
      <FileName></FileName>
      <Trust></Trust>
    </TrustCertificate>
  </TrustCertificates>
</AppProxy>
```

# AppProxy

## AppProxy/MoveBeforeRules

Message	Explanation
The default rule cannot be moved. 默认规则不能移动。	The default rule cannot be moved before any user-defined rules. 默认规则不能被移动到任何自定义规则之前。
The rule to be removed doesn't exist. 要移动的规则不存在。	The rule to be moved does not exist and processing fails. 将要移动的规则不存在，处理失败。
The two rule IDs cannot be the same. 要移动的规则与目标规则是同一个规则。	The rule to be moved and the target rule cannot be the same rule. 要移动的规则和目标规则不能是同一个规则

## AppProxy/ImportCertificates

Message	Explanation
Certificate file does not exist. 证书文件不存在。	The certificate file to import does not exist. 要导入的证书文件不存在。
Invalid password. 无效密码。	The input password does not match the imported certificate. 输入的密码与导入的证书不匹配。
The column Trust cannot be empty. Trust列不能为空。	Trust column must be specified when importing a certificate. 导入证书时必须制定trust列。
Failed to parse the certificate. 导入的证书解析失败。	Imported certificate is invalid and the parsing fails. 导入的证书不合法，导致解析失败
Failed to verify the certificate. 导入的证书验证失败。	The certificate verification fails because the imported certificate expires or other reasons. 导入的证书过期或由于其他原因导致验证失败。
The certificate file does not have a key pair. 导入的证书不含密钥对。	The imported certificate must contain a key pair. 导入的证书必须包含密钥对。
The certificate file does not have a root certificate. 导入的证书不包含根证书。	The imported certificate must contain the root certificate. 导入的证书必须包含根证书。
The certificate and the public key do not match. 导入的证书公钥不匹配。	The imported certificate and public key do not match. 导入的证书和公钥不匹配。
An SSL decryption certificate with the same name already exists. 该证书已存在。	Certificate cannot be imported if it has the same name with a certificate on the device. 不能导入文件名同名的证书。

# AppProxy/CommitWhiteLists

Message	Explanation
Failed to submit the SSL whitelist settings. 提交白名单失败。	Failure to compile the whitelist due to insufficient memory or other reasons. 由于内存不足或其他原因导致编译白名单失败，。
Activating the SSL whitelist settings. Please wait... 正在提交白名单，请稍等。	A whitelist is being submitted. The next submission can be processed only after the submission is completed. 正在提交白名单，需要等提交完之后，才可以处理下一次提交。

# AppProxy/RuleSrcAddrs

Message	Explanation
Object group type not supported. 对象组类型不支持。	The specified object group must be of the address type. 引用的对象组必须是地址类型的。
Maximum number of source IP address object groups in the rule already reached. 引用的源地址对象组已达上限。	A maximum of 64 source address object groups can be used in one rule. 规则下最多引用64个源地址对象组。
The object group does not exist. 对象组不存在。	The specified address object group does not exist. Please create the address object group before using it. 引用的地址对象组不存在，需要先创建地址对象组才可以引用。

# AppProxy/RuleDestAddrs

Message	Explanation
Object group type not supported. 对象组类型不支持。	The specified object group must be of the address type. 引用的对象组必须是地址类型的。
Maximum number of destination IP address object groups in the rule already reached. 引用的目的地址对象组已达上限。	A maximum of 64 destination address object groups can be used in one rule. 规则下最多引用64个目的地址对象组。
The object group does exist. 对象组不存在。	The specified address object group does not exist. Please create the address object group before using it. 引用的地址对象组不存在，需要先创建地址对象组才可以引用。

# AppProxy/RuleSrcSecZones

Message	Explanation
Maximum number of source security zones in the rule already reached. 引用的源安全域已达上限。	A maximum of 16 source security zones can be used in one rule. 规则下最多引用16个源安全域。
Configuration succeeded but the source security zone does not exist. 引用的源安全域不存在。	Configuration succeeded, but it does not take effect because the source security zone does not exist. 配置成功了，但是源安全域不存在，配置不生效。

## AppProxy/RuleDestSecZones

Message	Explanation
Maximum number of destination security zones in the rule already reached. 引用的源安全域已达上限。	Maximum 16 destination security zones referenced under rules. 规则下最多引用16个目的安全域。
Configuration succeeded but the destination security zone does not exist. 引用的源安全域不存在。	Configuration succeeded, but it does not take effect because the destination security zone does not exist. 配置成功了，但是源安全域不存在，配置不生效。

## AppProxy/RuleUsers

Message	Explanation
Configuration succeeded but the user doesn't exist. 引用的用户不存在。	Configuration succeeded, but it does not take effect because the user does not exist. 配置成功了，但是用户不存在，配置不生效。
Maximum number of users in the rule already reached. 引用的用户已达上限。	A maximum of 64 users can be specified in a rule. 规则下最多引用64个用户。
The user name cannot be a, al, or all and cannot contain the following special characters: \r\n\\   / : * ? < > @. 用户名不能包含 \r\n\\   / : * ? , < , > , @,且不能为 a、al、和all。	Input username is not valid. Please enter a new one according to the prompt message. 输入的用户名不合法，按照提示输入。
The domain name cannot contain the following characters: \r\n\\   / : * ? < > @. 域名不能包含 /, \r\n\\   / : * ? , < , > , @。	Input domain name is not valid. Please enter a new one according to the prompt message. 输入的域名不合法，按照提示输入。

## AppProxy/RuleUserGrps

Message	Explanation
Configuration succeeded but the user groups do not exist. 引用的用户组不存在。	Configuration succeeded, but it does not take effect because the user groups do not exist. 配置成功了，但是用户组不存在，配置不生效。
Maximum number of user groups in the rule already reached. 引用的用户组已达上限。	A maximum of 64 user groups can be specified by a under rule. 规则下最多引用64个用户组。
The domain name cannot contain the following characters: \r\n\\   / : * ? < > @.	Input domain name is not valid. Please enter a new one according to the prompt message.

域名不能包含 /, \,  , :, *, ?, <, >, @。	输入的域名不合法，按照提示输入。
-----------------------------------	------------------

## AppProxy/RuleServGrps

Message	Explanation
Incorrect object group type. 对象组类型不支持。	The specified object group must be of the service type. 引用的对象组必须是服务类型的。
Maximum number of service object groups in the rule already reached. 引用的服务已达上限。	A maximum of 64 service object groups can be specified in a rule. 规则下最多引用64个服务对象组。
The object group does not exist. 对象组不存在。	The specified service object group does not exist. Please create the service object group before using it. 引用的服务对象组不存在，需要先创建服务对象组才可以引用。

## AppProxy/WhiteListHostNames

Message	Explanation
Maximum number of user-defined hostnames on the SSL hostname whitelist already reached. 域名白名单已达上限。	A maximum of 1000 items can be created in user-defined hostname whitelist. 自定义域名白名单最多1000个。

## AppProxy/WhiteListPredefine

Message	Explanation
The hostname is not on the pre-defined SSL hostname whitelist. 预定义白名单中不存在指定的域名。	The specified domain name is not on the pre-defined whitelist. 指定的域名不在预定义白名单里。
To disable the Chrome-HSTS whitelist entry, you must first turn on the Chrome-HSTS whitelist by using the app-proxy ssl whitelist predefined-hostname chrome-hsts enable command. Chrome HSTS列表已经禁用。	Chrome HSTS whitelist is already disabled. Chrome HSTS列表已经去使能了，不需要再去使能。

## AppProxy/WhiteListPredefineChromeHsts

Message	Explanation
To activate the setting, execute app-proxy ssl	After modifying the whitelist, please submit the whitelist

whitelist activate. 白名单列表已修改，请提交。	to make it take effect. 修改白名单列表之后，需要提交白名单才能生效。
--------------------------------------	---

## AppProxy/PolicyRules

Message	Explanation
The rule ID is already used by another application proxy policy rule. 规则已经存在。	When creating a rule, the specified ID is already used. A new ID can be manually specified or automatically assigned without specifying an ID at the time of creation. 创建规则时，指定的ID已经被占用了，需要换一个ID或者创建时不指定ID，自动分配。
The rule name is already used by another application proxy policy rule. 规则名称已存在。	When creating a rule, a rule with the specified name already exists, but the ID is inconsistent with the ID of an existing rule. 创建规则时，已有指定名称的规则，但是ID跟已存在的规则的ID不一致。
Maximum number of application proxy policy rules already reached. 规则个数已达上限。	A maximum of 1024 rules can be created. 最多只能创建1024个代理策略规则。
Invalid name. 无效的规则名称。	Rule name cannot be default. 规则名称不能是default。
The default rule cannot delete. 默认策略不能删除。	The default rule is automatically created at startup and cannot be deleted. 默认策略在进程启动时自动创建，不能删除。
The default rule cannot be disabled. 默认策略不能禁用。	The default rule cannot be enabled. It can only be modified. 默认策略不能去使能，只能修改动作。

## APR/ClearApplicationStatistics

This table contains APR statistics information.

### XML structure

```
<APR>
  <ClearApplicationStatistics>
    <Statistic>
      <IfIndex></IfIndex>
      <Clear></Clear>
    </Statistic>
  </ClearApplicationStatistics>
</APR>
```

### Table description

Item	Description
Feature name	APR
Table name	ClearApplicationStatistics
Table type	Multi-instance table
Row name	Statistic
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
Clear	Resets counters.	N/A	This column must be empty.	N/A

# APR

## APR/GeneralPortMappings

This table contains informations about port mappings.

### XML structure

```
<APR>
  <GeneralPortMappings>
    <PortMapping>
      <PortNumber></PortNumber>
      <L4ProtocolID></L4ProtocolID>
      <AppName></AppName>
    </PortMapping>
  </GeneralPortMappings>
</APR>
```

### Table description

Item	Description
Feature name	APR
Table name	GeneralPortMappings
Table type	Multi-instance table
Row name	PortMapping
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	<p>If the destination port of a packet matches a general port mapping, APR recognizes the packet as the specified application protocol's packet.</p> <p>If two port mappings are configured with the same port number and transport layer protocol, but with different application protocols, the most recent configuration takes effect.</p>
L4ProtocolID	Transport layer portocol ID	Index	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>• <b>6</b>—TCP.</li> <li>• <b>17</b>—UDP.</li> <li>• <b>33</b>—DCCP.</li> <li>• <b>132</b>—SCTP.</li> <li>• <b>136</b>—UDP-Lite.</li> </ul>	<p>This index can be null.</p> <p>If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets.</p> <p>A mapping with the transport layer protocol specified has a higher priority than one without it.</p>
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	<p>Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other".</p> <p>The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time.</p> <p>This column is affirmatively chosen item.</p>
Support for row creation and deletion		Yes		

# APR/Ipv4PortMappings

This table contains informations about IPv4 address-based host-port mappings.

## XML structure

```
<APR>
  <Ipv4PortMappings>
    <PortMapping>
      <PortNumber></PortNumber>
      <L4ProtocolID></L4ProtocolID>
      <VRF></VRF>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
      <AppName></AppName>
    </PortMapping>
  </Ipv4PortMappings>
</APR>
```

## Table description

Item	Description
Feature name	APR
Table name	Ipv4PortMappings
Table type	Multi-instance table
Row name	PortMapping
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	<p>If the destination port of these packets matches a port mapping for packets destined for the specified IP address or IP subnet, APR recognizes them as the specified application protocol's packets.</p> <p>If two port mappings are configured with the same port number, transport layer protocol, and IP address or IP address ranges, but with different application protocols, the most recent configuration takes effect.</p>
L4ProtocolID	Transport layer portocol ID	Index	Enumeration: <ul style="list-style-type: none"> <li>• <b>6</b>—TCP.</li> <li>• <b>17</b>—UDP.</li> <li>• <b>33</b>—DCCP.</li> <li>• <b>132</b>—SCTP.</li> <li>• <b>136</b>—UDP-Lite.</li> </ul>	<p>This index can be null.</p> <p>If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets.</p> <p>A mapping with the transport layer protocol specified has a higher priority than one without it.</p>
VRF	VRF.	Index	String, case-sensitive. Length: 1 to 31 characters.	If you configure a mapping for the public network, do not specify this option.

Column name	Column description	Column type	Data type and restrictions	Remarks
StartIpv4Address	Start IPv4 address	Index	String, dotted decimal notation.	<p>Example: 1.1.1.1.</p> <p>To specify only one IP address, provide only the start IP address. To specify a range of IP addresses, provide both the start and end IP addresses, and make sure the end IP address is bigger than the start IP address.</p> <p>No overlapping of IP addresses is tolerable for the host-port mappings configured with the same application protocol, port number, and transport layer protocol.</p>
EndIpv4Address	End IPv4 address	Index	String, dotted decimal notation.	<p>Example: 1.1.1.6. This index can be null.</p>
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	<p>Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other".</p> <p>The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time.</p> <p>This column is affirmatively chosen item.</p>

## APR/Ipv6PortMappings

This table contains informations about IPv6 address-based host-port mappings.

### XML structure

```

<APR>
  <Ipv6PortMappings>
    <PortMapping>
      <PortNumber></PortNumber>

```

```

    <L4ProtocolID></L4ProtocolID>
    <VRF></VRF>
    <StartIpv6Address></StartIpv6Address>
    <EndIpv6Address></EndIpv6Address>
    <AppName></AppName>
  </PortMapping>
</Ipv6PortMappings>
</APR>

```

## Table description

Item	Description
Feature name	APR
Table name	Ipv6PortMappings
Table type	Multi-instance table
Row name	PortMapping
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	<p>If the destination port of these packets matches a port mapping for packets destined for the specified IP address or IP subnet, APR recognizes them as the specified application protocol's packets.</p> <p>If two port mappings are configured with the same port number, transport layer protocol, and IP address or IP address ranges, but with different application protocols, the most recent configuration takes effect.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
L4ProtocolID	Transport layer portocol ID	Index	Enumeration: <ul style="list-style-type: none"> <li>• <b>6</b>—TCP.</li> <li>• <b>17</b>—UDP.</li> <li>• <b>33</b>—DCCP.</li> <li>• <b>132</b>—SCTP.</li> <li>• <b>136</b>—UDP-Lite.</li> </ul>	This index can be null. If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets. A mapping with the transport layer protocol specified has a higher priority than one without it.
VRF	VRF.	Index	String, case-sensitive. Length: 1 to 31 characters.	If you configure a mapping for the public network, do not specify this option.
StartIpv6Address	Start IPv6 address	Index	Hexadecimal string, colon-separated.	Example: 1:1::1:1. To specify only one IP address, provide only the start IP address. To specify a range of IP addresses, provide both the start and end IP addresses, and make sure the end IP address is bigger than the start IP address. No overlapping of IP addresses is tolerable for the host-port mappings configured with the same application protocol, port number, and transport layer protocol.
EndIpv6Address	End IPv6 address	Index	Hexadecimal string, colon-separated..	Example: 1:1::1:6. This index can be null.

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	<p>Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other".</p> <p>The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time.</p> <p>This column is affirmatively chosen item.</p>

## APR/Ipv4SubnetPortMappings

This table contains informations about IPv4 subnet-based host-port mappings.

### XML structure

```

<APR>
  <Ipv4SubnetPortMappings>
    <PortMapping>
      <PortNumber></PortNumber>
      <L4ProtocolID></L4ProtocolID>
      <VRF></VRF>
      <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <AppName></AppName>
    </PortMapping>
  </Ipv4SubnetPortMappings>
</APR>

```

### Table description

Item	Description
Feature name	APR
Table name	Ipv4SubnetPortMappings
Table type	Multi-instance table

Row name	PortMapping
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	<p>If the destination port of these packets matches a port mapping for packets destined for the specified subnet, APR recognizes them as the specified application protocol's packets.</p> <p>If two port mappings are configured with the same port number, transport layer protocol, and subnet, but with different application protocols, the most recent configuration takes effect.</p>
L4ProtocolID	Transport layer portocol ID	Index	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>• <b>6</b>—TCP.</li> <li>• <b>17</b>—UDP.</li> <li>• <b>33</b>—DCCP.</li> <li>• <b>132</b>—SCTP.</li> <li>• <b>136</b>—UDP-Lite.</li> </ul>	<p>This index can be null.</p> <p>If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets.</p> <p>A mapping with the transport layer protocol specified has a higher priority than one without it.</p>
VRF	VRF.	Index	String, case-sensitive. Length: 1 to 31 characters.	If you configure a mapping for the public network, do not specify this option.

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.	Example: 1.1.1.1. APR uses a very precise method to match the packets. If multiple subnet-based mappings are applied to packets and these subnets overlap, APR matches the packets destined for the overlapped segment with the port mapping of the subnet that has the smallest range.
Ipv4PrefixLength	Length of the IPv4 address mask.	Index	Unsigned integer. Value range: 1 to 32.	N/A
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other".  The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time.  This column is affirmatively chosen item.

## APR/Ipv6SubnetPortMappings

This table contains informations about IPv6 subnet-based host-port mappings.

### XML structure

```

<APR>
  <Ipv6SubnetPortMappings>

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	<p>If the destination port of these packets matches a port mapping for packets destined for the specified subnet, APR recognizes them as the specified application protocol's packets.</p> <p>If two port mappings are configured with the same port number, transport layer protocol, and subnet, but with different application protocols, the most recent configuration takes effect.</p>
L4ProtocolID	Transport layer portocol ID	Index	<p>Enumeration:</p> <ul style="list-style-type: none"> <li><b>6</b>—TCP.</li> <li><b>17</b>—UDP.</li> <li><b>33</b>—DCCP.</li> <li><b>132</b>—SCTP.</li> <li><b>136</b>—UDP-Lite.</li> </ul>	<p>This index can be null.</p> <p>If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets.</p> <p>A mapping with the transport layer protocol specified has a higher priority than one without it.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF.	Index	String, case-sensitive. Length: 1 to 31 characters.	If you configure a mapping for the public network, do not specify this option.
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	Example: 1:1::1:1. APR uses a very precise method to match the packets. If multiple subnet-based mappings are applied to packets and these subnets overlap, APR matches the packets destined for the overlapped segment with the port mapping of the subnet that has the smallest range.
Ipv6PrefixLength	Length of the IPv6 address prefix.	Index	Unsigned integer. Value range: 1 to 128.	N/A
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other".  The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time.  This column is affirmatively chosen item.

## APR/ Ipv4ACLPortMappings

This table contains informations about IPv4 ACL-based host-port mappings.

### XML structure

```

<APR>
  <Ipv4ACLPortMappings>
    <PortMapping>
      <PortNumber></PortNumber>

```

```

    <L4ProtocolID></L4ProtocolID>
    <ACLNumber></ACLNumber>
    <AppName></AppName>
  </PortMapping>
</Ipv4ACLPortMappings>
</APR>

```

## Table description

Item	Description
Feature name	APR
Table name	Ipv4ACLPortMappings
Table type	Multi-instance table
Row name	PortMapping
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	<p>If the destination port of these packets matches a port mapping for packets matching the specified ACL, APR recognizes them as the specified application protocol's packets.</p> <p>If two port mappings are configured with the same port number, transport layer protocol, and ACL, but with different application protocols, the most recent configuration takes effect.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
L4ProtocolID	Transport layer protocol ID specified to the application layer protocol	Index	Enumeration: <ul style="list-style-type: none"> <li>• <b>6</b>—TCP.</li> <li>• <b>17</b>—UDP.</li> <li>• <b>33</b>—DCCP.</li> <li>• <b>132</b>—SCTP.</li> <li>• <b>136</b>—UDP-Lite.</li> </ul>	This index can be null. If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets. A mapping with the transport layer protocol specified has a higher priority than one without it.
ACLNumber	ACL number	Index	Unsigned integer. Value range: 2000 to 2999.	If the destination port of the packet that matches against the specified ACL maps with an application layer protocol, the packet is recognized as the corresponding application layer protocol packet.
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other". The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time. This column is affirmatively chosen item.

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	<p>If the destination port of these packets matches a port mapping for packets matching the specified ACL, APR recognizes them as the specified application protocol's packets.</p> <p>If two port mappings are configured with the same port number, transport layer protocol, and ACL, but with different application protocols, the most recent configuration takes effect.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
L4ProtocolID	Transport layer protocol ID specified to the application layer protocol	Index	Enumeration: <ul style="list-style-type: none"> <li>• <b>6</b>—TCP.</li> <li>• <b>17</b>—UDP.</li> <li>• <b>33</b>—DCCP.</li> <li>• <b>132</b>—SCTP.</li> <li>• <b>136</b>—UDP-Lite.</li> </ul>	This index can be null.  If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets.  A mapping with the transport layer protocol specified has a higher priority than one without it.
ACLNumber	ACL number	Index	Unsigned integer. Value range: 2000 to 2999.	If the destination port of the packet that matches against the specified ACL maps with an application layer protocol, the packet is recognized as the corresponding application layer protocol packet.
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other".  The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time.  This column is affirmatively chosen item.

## APR/Applications

This table contains informations about pre-defined and user-defined applications.

### XML structure

```
<APR>
  <Applications>
```

```

<Application>
  <Type></Type>
  <AppName></AppName>
  <SecRisk></SecRisk>
</Application>
</Applications>
</APR>

```

## Table description

Item	Description
Feature name	APR
Table name	Applications
Table type	Multi-instance table
Row name	Application
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Type of the application layer protocol	Index	Enumeration: <ul style="list-style-type: none"> <li>0—pre-defined.</li> <li>1—user-defined.</li> </ul>	N/A
AppName	Application layer protocol name	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other".  The application layer protocol name must be standard and can be identified by the equipment.
SecRisk	Application layer protocol security risk	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A

## APR/AppGroups

This table contains informations about the user-defined application groups.

## XML structure

```
<APR>
```

```

<AppGroups>
  <GroupInfo>
    <GroupName></GroupName>
    <Description></Description>
  </GroupInfo>
</AppGroups>
</APR>

```

## Table description

Item	Description
Feature name	APR
Table name	AppGroups
Table type	Multi-instance table
Row name	GroupInfo
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Predefined or user-defined application group name	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). Names, such as "invalid" or "other" are not allowed.  You can create up to 65536 application groups on the device.
Description	Description for the application group	N/A	String, case-sensitive. Length: 1 to 127 characters.	Blank space can be included in <i>Description</i> . The default description of the user-defined application group is "User defined group".

## APR/AppGroupMembers

This table contains the application protocols included in an user-defined application group.

## XML structure

```

<APR>
  <AppGroupMembers>
    <GroupMember>

```

```

    <GroupName></GroupName>
    <AppName></AppName>
  </GroupMember>
</AppGroupMembers>
</APR>

```

## Table description

Item	Description
Feature name	APR
Table name	AppGroupMembers
Table type	Multi-instance table
Row name	GroupMember
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	User-defined application group name	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). Names, such as "invalid" or "other" are not allowed.  You can create up to 65536 application groups on the device.

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Predefined or user-defined application protocol name which is added to the application group	Index	String, case-insensitive. Length: 1 to 63 characters.	<p>Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other".</p> <p>The application layer protocol name must be standard and can be identified by the equipment.</p> <p>A maximum of 65535 user-defined application protocols can be added to an application group.</p> <p>If you add a nonexistent application protocol to the application group, the system first creates the protocol before adding it to the application group.</p> <p>Whether the device can recognize the packets of this protocol depends on your configuration.</p>

## APR/ AppGroupMembersIncGrp

This table contains the application groups included in an application group.

### XML structure

```

<APR>
  <AppGroupMembersIncGrp>
    <GroupMember>
      <GroupName></GroupName>
      <IncGrpName></IncGrpName>
    </GroupMember>
  </AppGroupMembersIncGrp>
</APR>

```

### Table description

Item	Description
Feature name	APR
Table name	AppGroupMembersIncGrp
Table type	Multi-instance table

Row name	GroupMember
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Application group name	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). Names, such as "invalid" or "other" are not allowed.  You can create up to 65536 application groups on the device.
IncGrpName	Application group name which is added to the application group	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). Names, such as "invalid" or "other" are not allowed.  You can create up to 65536 application groups on the device.

## APR/StatisticOnInterfaces

This table contains the interfaces where statistic is enabled.

## XML structure

```

<APR>
  <StatisticOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <EnableStatistic></EnableStatistic>
    </Interface>
  </StatisticOnInterfaces>
</APR>

```

## Table description

Item	Description
Feature name	APR

Table name	StatisticOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
Direction	The direction of the interface	Index	<ul style="list-style-type: none"> <li>Enumeration:</li> <li>0—Inbound.</li> <li>1—Outbound.</li> </ul>	<b>N/A</b>
EnableStatistic	Whether enable statistic for the interface	N/A	<ul style="list-style-type: none"> <li>Boolean:</li> <li>true—YES.</li> <li>false—NO (default).</li> </ul>	N/A

# APR

## APR/PredefinedPortMappings

This table contains informations about predefined port mappings.

### XML structure

```
<APR>
  <PredefinedPortMappings>
    <PortMapping>
      <PortNumber></PortNumber>
      <L4ProtocolID></L4ProtocolID>
      <AppName></AppName>
    </PortMapping>
  </PredefinedPortMappings>
</APR>
```

### Table description

Item	Description
Feature name	APR
Table name	PredefinedPortMappings
Table type	Multi-instance table
Row name	PortMapping
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
L4ProtocolID	Transport layer protocol ID.	Index	Enumeration: <ul style="list-style-type: none"><li>• <b>6</b>—TCP.</li><li>• <b>17</b>—UDP.</li><li>• <b>33</b>—DCCP.</li><li>• <b>132</b>—SCTP.</li><li>• <b>136</b>—UDP-Lite.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Application layer protocol name using the port mapping.	N/A	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other".  The application layer protocol name must be standard and can be identified by the equipment.

## APR/GeneralPortMappings

This table contains informations about port mappings.

### XML structure

```

<APR>
  <GeneralPortMappings>
    <PortMapping>
      <PortNumber></PortNumber>
      <L4ProtocolID></L4ProtocolID>
      <AppName></AppName>
    </PortMapping>
  </GeneralPortMappings>
</APR>

```

### Table description

Item	Description
Feature name	APR
Table name	GeneralPortMappings
Table type	Multi-instance table
Row name	PortMapping
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	<p>If the destination port of a packet matches a general port mapping, APR recognizes the packet as the specified application protocol's packet.</p> <p>If two port mappings are configured with the same port number and transport layer protocol, but with different application protocols, the most recent configuration takes effect.</p>
L4ProtocolID	Transport layer portocol ID	Index	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>• <b>6</b>—TCP.</li> <li>• <b>17</b>—UDP.</li> <li>• <b>33</b>—DCCP.</li> <li>• <b>132</b>—SCTP.</li> <li>• <b>136</b>—UDP-Lite.</li> </ul>	<p>This index can be null.</p> <p>If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets.</p> <p>A mapping with the transport layer protocol specified has a higher priority than one without it.</p>
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	<p>Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other".</p> <p>The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time.</p> <p>This column is affirmatively chosen item.</p>

# APR/Ipv4PortMappings

This table contains informations about IPv4 address-based host-port mappings.

## XML structure

```
<APR>
  <Ipv4PortMappings>
    <PortMapping>
      <PortNumber></PortNumber>
      <L4ProtocolID></L4ProtocolID>
      <VRF></VRF>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
      <AppName></AppName>
    </PortMapping>
  </Ipv4PortMappings>
</APR>
```

## Table description

Item	Description
Feature name	APR
Table name	Ipv4PortMappings
Table type	Multi-instance table
Row name	PortMapping
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	<p>If the destination port of these packets matches a port mapping for packets destined for the specified IP address or IP subnet, APR recognizes them as the specified application protocol's packets.</p> <p>If two port mappings are configured with the same port number, transport layer protocol, and IP address or IP address ranges, but with different application protocols, the most recent configuration takes effect.</p>
L4ProtocolID	Transport layer portocol ID	Index	Enumeration: <ul style="list-style-type: none"> <li>• <b>6</b>—TCP.</li> <li>• <b>17</b>—UDP.</li> <li>• <b>33</b>—DCCP.</li> <li>• <b>132</b>—SCTP.</li> <li>• <b>136</b>—UDP-Lite.</li> </ul>	<p>This index can be null.</p> <p>If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets.</p> <p>A mapping with the transport layer protocol specified has a higher priority than one without it.</p>
VRF	VRF.	Index	String, case-sensitive. Length: 1 to 31 characters.	If you configure a mapping for the public network, do not specify this option.

Column name	Column description	Column type	Data type and restrictions	Remarks
StartIpv4Address	Start IPv4 address	Index	String, dotted decimal notation.	<p>Example: 1.1.1.1.</p> <p>To specify only one IP address, provide only the start IP address. To specify a range of IP addresses, provide both the start and end IP addresses, and make sure the end IP address is bigger than the start IP address.</p> <p>No overlapping of IP addresses is tolerable for the host-port mappings configured with the same application protocol, port number, and transport layer protocol.</p>
EndIpv4Address	End IPv4 address	Index	String, dotted decimal notation.	<p>Example: 1.1.1.6. This index can be null.</p>
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	<p>Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other".</p> <p>The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time.</p> <p>This column is affirmatively chosen item.</p>

## APR/Ipv6PortMappings

This table contains informations about IPv6 address-based host-port mappings.

### XML structure

```

<APR>
  <Ipv6PortMappings>
    <PortMapping>
      <PortNumber></PortNumber>

```

```

    <L4ProtocolID></L4ProtocolID>
    <VRF></VRF>
    <StartIpv6Address></StartIpv6Address>
    <EndIpv6Address></EndIpv6Address>
    <AppName></AppName>
  </PortMapping>
</Ipv6PortMappings>
</APR>

```

## Table description

Item	Description
Feature name	APR
Table name	Ipv6PortMappings
Table type	Multi-instance table
Row name	PortMapping
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	<p>If the destination port of these packets matches a port mapping for packets destined for the specified IP address or IP subnet, APR recognizes them as the specified application protocol's packets.</p> <p>If two port mappings are configured with the same port number, transport layer protocol, and IP address or IP address ranges, but with different application protocols, the most recent configuration takes effect.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
L4ProtocolID	Transport layer portocol ID	Index	Enumeration: <ul style="list-style-type: none"> <li>• <b>6</b>—TCP.</li> <li>• <b>17</b>—UDP.</li> <li>• <b>33</b>—DCCP.</li> <li>• <b>132</b>—SCTP.</li> <li>• <b>136</b>—UDP-Lite.</li> </ul>	This index can be null. If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets. A mapping with the transport layer protocol specified has a higher priority than one without it.
VRF	VRF.	Index	String, case-sensitive. Length: 1 to 31 characters.	If you configure a mapping for the public network, do not specify this option.
StartIpv6Address	Start IPv6 address	Index	Hexadecimal string, colon-separated.	Example: 1:1::1:1. To specify only one IP address, provide only the start IP address. To specify a range of IP addresses, provide both the start and end IP addresses, and make sure the end IP address is bigger than the start IP address. No overlapping of IP addresses is tolerable for the host-port mappings configured with the same application protocol, port number, and transport layer protocol.
EndIpv6Address	End IPv6 address	Index	Hexadecimal string, colon-separated..	Example: 1:1::1:6. This index can be null.

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	<p>Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other".</p> <p>The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time.</p> <p>This column is affirmatively chosen item.</p>

## APR/Ipv4SubnetPortMappings

This table contains informations about IPv4 subnet-based host-port mappings.

### XML structure

```

<APR>
  <Ipv4SubnetPortMappings>
    <PortMapping>
      <PortNumber></PortNumber>
      <L4ProtocolID></L4ProtocolID>
      <VRF></VRF>
      <Ipv4Address></Ipv4Address>
      <Ipv4PrefixLength></Ipv4PrefixLength>
      <AppName></AppName>
    </PortMapping>
  </Ipv4SubnetPortMappings>
</APR>

```

### Table description

Item	Description

VRF	VRF.	Index	String, case-sensitive. Length: 1 to 31 characters.	If you configure a mapping for the public network, do not specify this option.
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.	<p>Example: 1.1.1.1.</p> <p>APR uses a very precise method to match the packets. If multiple subnet-based mappings are applied to packets and these subnets overlap, APR matches the packets destined for the overlapped segment with the port mapping of the subnet that has the smallest range.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4PrefixLength	Length of the IPv4 address mask.	Index	Unsigned integer. Value range: 1 to 32.	N/A
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other".  The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time.  This column is affirmatively chosen item.

## APR/Ipv6SubnetPortMappings

This table contains informations about IPv6 subnet-based host-port mappings.

### XML structure

```

<APR>
  <Ipv6SubnetPortMappings>
    <PortMapping>
      <PortNumber></PortNumber>
      <L4ProtocolID></L4ProtocolID>
      <VRF></VRF>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <AppName></AppName>
    </PortMapping>
  </Ipv6SubnetPortMappings>
</APR>

```

### Table description

Item	Description
Feature name	APR

Table name	Ipv6SubnetPortMappings
Table type	Multi-instance table
Row name	PortMapping
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	If the destination port of these packets matches a port mapping for packets destined for the specified subnet, APR recognizes them as the specified application protocol's packets.  If two port mappings are configured with the same port number, transport layer protocol, and subnet, but with different application protocols, the most recent configuration takes effect.
L4ProtocolID	Transport layer protocol ID	Index	Enumeration: <ul style="list-style-type: none"> <li>• <b>6</b>—TCP.</li> <li>• <b>17</b>—UDP.</li> <li>• <b>33</b>—DCCP.</li> <li>• <b>132</b>—SCTP.</li> <li>• <b>136</b>—UDP-Lite.</li> </ul>	This index can be null.  If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets.  A mapping with the transport layer protocol specified has a higher priority than one without it.
VRF	VRF.	Index	String, case-sensitive. Length: 1 to 31 characters.	If you configure a mapping for the public network, do not specify this option.

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	Example: 1:1::1:1. APR uses a very precise method to match the packets. If multiple subnet-based mappings are applied to packets and these subnets overlap, APR matches the packets destined for the overlapped segment with the port mapping of the subnet that has the smallest range.
Ipv6PrefixLength	Length of the IPv6 address prefix.	Index	Unsigned integer. Value range: 1 to 128.	N/A
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other".  The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time.  This column is affirmatively chosen item.

## APR/ Ipv4ACLPortMappings

This table contains informations about IPv4 ACL-based host-port mappings.

### XML structure

```

<APR>
  <Ipv4ACLPortMappings>
    <PortMapping>
      <PortNumber></PortNumber>
      <L4ProtocolID></L4ProtocolID>
      <ACLNumber></ACLNumber>
      <AppName></AppName>
    </PortMapping>
  </Ipv4ACLPortMappings>
</APR>

```

```

    </PortMapping>
  </Ipv4ACLPortMappings>
</APR>

```

## Table description

Item	Description
Feature name	APR
Table name	Ipv4ACLPortMappings
Table type	Multi-instance table
Row name	PortMapping
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	<p>If the destination port of these packets matches a port mapping for packets matching the specified ACL, APR recognizes them as the specified application protocol's packets.</p> <p>If two port mappings are configured with the same port number, transport layer protocol, and ACL, but with different application protocols, the most recent configuration takes effect.</p>
L4ProtocolID	Transport layer portocol ID specified to the application layer protocol	Index	Enumeration: <ul style="list-style-type: none"> <li>• <b>6</b>—TCP.</li> <li>• <b>17</b>—UDP.</li> <li>• <b>33</b>—DCCP.</li> <li>• <b>132</b>—SCTP.</li> <li>• <b>136</b>—UDP-Lite.</li> </ul>	<p>This index can be null.</p> <p>If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets.</p> <p>A mapping with the transport layer protocol specified has a higher priority than one without it.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
ACLNumber	ACL number	Index	Unsigned integer. Value range: 2000 to 2999.	If the destination port of the packet that matches against the specified ACL maps with an application layer protocol, the packet is recognized as the corresponding application layer protocol packet.
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other".  The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time.  This column is affirmatively chosen item.

    </PortMapping>
  </Ipv6ACLPortMappings>
</APR>

```

## Table description

Item	Description
Feature name	APR
Table name	Ipv6ACLPortMappings
Table type	Multi-instance table
Row name	PortMapping
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortNumber	Port number	Index	Unsigned integer. Value range: 0 to 65535.	<p>If the destination port of these packets matches a port mapping for packets matching the specified ACL, APR recognizes them as the specified application protocol's packets.</p> <p>If two port mappings are configured with the same port number, transport layer protocol, and ACL, but with different application protocols, the most recent configuration takes effect.</p>
L4ProtocolID	Transport layer portocol ID specified to the application layer protocol	Index	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>• <b>6</b>—TCP.</li> <li>• <b>17</b>—UDP.</li> <li>• <b>33</b>—DCCP.</li> <li>• <b>132</b>—SCTP.</li> <li>• <b>136</b>—UDP-Lite.</li> </ul>	<p>This index can be null.</p> <p>If no transport layer protocol is specified, all the transport layer protocol packets and that have the specified port are recognized as the specified application protocol's packets.</p> <p>A mapping with the transport layer protocol specified has a higher priority than one without it.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
ACLNumber	ACL number	Index	Unsigned integer. Value range: 2000 to 2999.	If the destination port of the packet that matches against the specified ACL maps with an application layer protocol, the packet is recognized as the corresponding application layer protocol packet.
AppName	Application layer protocol name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other".  The application layer protocol name must be standard and can be identified by the equipment. It can be predefined port mapping application name or the application name which doesn't exist, but the user defined application will be created at the same time.  This column is affirmatively chosen item.

## APR/Applications

This table contains informations about pre-defined and user-defined applications.

### XML structure

```

<APR>
  <Applications>
    <Application>
      <Type></Type>
      <AppName></AppName>
      <AppID></AppID>
      <L5AppID></L5AppID>
      <AppSubCategoryID></AppSubCategoryID>
      <IsTunnel></IsTunnel>
      <IsEncrypted></IsEncrypted>
      <SecRisk></SecRisk>
      <RiskLevel></RiskLevel>
    </Application>
  
```

```

    </Applications>
  </APR>

```

## Table description

Item	Description
Feature name	APR
Table name	Applications
Table type	Multi-instance table
Row name	Application
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Type of the application layer protocol	Index	Enumeration: <ul style="list-style-type: none"> <li>0—pre-defined.</li> <li>1—user-defined.</li> </ul>	N/A
AppName	Application layer protocol name	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other".  The application layer protocol name must be standard and can be identified by the equipment.
AppID	Application layer protocol ID	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
L5AppID	Application layer 5 protocol ID	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
AppSubCategoryID	Identify a subCategory	N/A	Unsigned integer. Value range: 1 to $2^{32} - 1$ .	N/A
IsTunnel	Whether or not the protocol is a tunnel protocol	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO (default).</li> </ul>	N/A
IsEncrypted	Whether or not the protocol is a cryptographic protocol	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO (default).</li> </ul>	N/A
SecRisk	Application layer protocol security risk	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
RiskLevel	Application layer protocol risk level	N/A	Unsigned integer. Value range: 1 to $2^{16} - 1$ .	N/A

# APR/AppGroups

This table contains informations about the application groups.

## XML structure

```
<APR>
  <AppGroups>
    <GroupInfo>
      <GroupName></GroupName>
      <GroupID></GroupID>
      <Type></Type>
      <Description></Description>
    </GroupInfo>
  </AppGroups>
</APR>
```

## Table description

Item	Description
Feature name	APR
Table name	AppGroups
Table type	Multi-instance table
Row name	GroupInfo
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Predefined or user-defined application group name	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). Names, such as "invalid" or "other" are not allowed.  You can create up to 65536 application groups on the device.
GroupID	Application group ID	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
Type	Application group type	N/A	<ul style="list-style-type: none"><li>Enumeration:</li><li>0—pre-defined.</li><li>1—user-defined.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Description	Description for the application group	N/A	String, case-sensitive. Length: 1 to 127 characters.	Blank space can be included in <i>Description</i> . The default description of the user-defined application group is "User defined group".

## APR/AppGroupMembers

This table contains the application protocols included in an application group.

### XML structure

```

<APR>
  <AppGroupMembers>
    <GroupMember>
      <GroupName></GroupName>
      <AppName></AppName>
    </GroupMember>
  </AppGroupMembers>
</APR>

```

### Table description

Item	Description
Feature name	APR
Table name	AppGroupMembers
Table type	Multi-instance table
Row name	GroupMember
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupName	Predefined or user-defined application group name	Index	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). Names, such as "invalid" or "other" are not allowed.  You can create up to 65536 application groups on the device.

Column name	Column description	Column type	Data type and restrictions	Remarks
AppName	Predefined or user-defined application protocol name which is added to the application group	Index	String, case-insensitive. Length: 1 to 63 characters.	<p>Valid characters include digits, letters, hyphens (-), and underlines (_), but can't be "invalid" and "other".</p> <p>The application layer protocol name must be standard and can be identified by the equipment.</p> <p>A maximum of 65535 user-defined application protocols can be added to an application group.</p> <p>If you add a nonexistent application protocol to the application group, the system first creates the protocol before adding it to the application group.</p> <p>Whether the device can recognize the packets of this protocol depends on your configuration.</p>

## APR/StatisticOnInterfaces

This table contains the interfaces where statistic is enabled.

### XML structure

```

<APR>
  <StatisticOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <EnableStatistic></EnableStatistic>
    </Interface>
  </StatisticOnInterfaces>
</APR>

```

### Table description

Item	Description
Feature name	APR
Table name	StatisticOnInterfaces
Table type	Multi-instance table

Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
Direction	The direction of the interface	Index	<ul style="list-style-type: none"> <li>Enumeration:</li> <li>0—Inbound.</li> <li>1—Outbound.</li> </ul>	N/A
EnableStatistic	Whether enable statistic for the interface	N/A	<ul style="list-style-type: none"> <li>Boolean:</li> <li>true—YES.</li> <li>false—NO (default).</li> </ul>	N/A

## APR/ApplicationStatistics

This table contains the statistics for the specified application protocols on the interface.

## XML structure

```

<APR>
  <ApplicationStatistics>
    <Statistic>
      <IfIndex></IfIndex>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <AppName></AppName>
      <InPackets></InPackets>
      <InBytes></InBytes>
      <InPPS></InPPS>
      <InBPS></InBPS>
      <OutPackets></OutPackets>
      <OutBytes></OutBytes>
      <OutPPS></OutPPS>
      <OutBPS></OutBPS>
    </Statistic>
  </ApplicationStatistics>
</APR>

```

## Table description

Item	Description
Feature name	APR
Table name	ApplicationStatistics
Table type	Multi-instance table
Row name	Statistic
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65534.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
AppName	Application protocol name	Index	String, case-insensitive. Length: 1 to 63 characters.	The application protocol name must be standard and can be identified by the equipment.
InPackets	Number of packets received by the interface	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
InBytes	Number of bytes received by the interface	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
InPPS	Packets received per second by the interface	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
InBPS	Bytes received per second by the interface	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
OutPackets	Number of packets sent by the interface by the interface	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
OutBytes	Number of bytes sent by the interface	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
OutPPS	Packets sent per second by the interface	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
OutBPS	Bytes sent per second by the interface	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A

## APR/AppSubCategorys

This table contains informations about the application categories.

### XML structure

```

<APR>
  <AppSubCategorys>
    <AppSubCategoryEntry>
      <ID></ID>
      <Name></Name>
    </AppSubCategoryEntry>
  </AppSubCategorys>
</APR>

```

### Table description

Item	Description
Feature name	APR
Table name	AppSubCategorys
Table type	Multi-instance table
Row name	AppSubCategoryEntry
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Application category ID	Index	Unsigned integer. Value range: 0 to 232 - 1.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Predefined application category name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). Names, such as "invalid" or "other" are not allowed.  You can create up to 65536 application groups on the device.

## APR/SecurityRisks

This table contains informations about the application security risk.

### XML structure

```

<APR>
  <SecurityRisks>
    <SecurityRisk>
      <RiskID></RiskID>
      <RiskName></RiskName>
      <RiskValue></RiskValue>
    </SecurityRisk>
  </SecurityRisks>
</APR>

```

### Table description

Item	Description
Feature name	APR
Table name	SecurityRisks
Table type	Multi-instance table
Row name	SecurityRisk
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RiskID	Application layer protocol security risk ID	Index	Unsigned integer. Value range: 0 to $2^{16} - 1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RiskName	Application layer protocol security risk name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RiskValue	Risk value	N/A	Unsigned integer. Value range: 0 to $2^{16} - 1$ .	N/A

## APR/RiskLevels

This table contains informations about the application risk level.

### XML structure

```

<APR>
  <RiskLevels>
    <RiskLevel>
      <Level></Level>
      <Boundary></Boundary>
    </RiskLevel>
  </RiskLevels>
</APR>

```

# ARP

## ARP/ArpScan

This table is used to enable ARP automatic scanning in a specific Ipv4 address range.

### XML structure

```
<ARP>
  <ArpScan>
    <Scan>
      <IfIndex></IfIndex>
      <Ipv4AddressStart></Ipv4AddressStart>
      <Ipv4AddressEnd></Ipv4AddressEnd>
    </Scan>
  </ArpScan>
</ARP>
```

### Table description

Item	Description
Feature name	ARP
Table name	ArpScan
Table type	Multi-instance table
Row name	Scan
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/subinterface VLAN interface

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Address Start	The start IPv4 address of the scanning range	N/A	String, dotted decimal notation.	<p>If no address range is specified, the device only scans neighbors on the network where the primary IP address of the interface resides.</p> <p>The start IP address and end IP address must be on the same network as the primary IP address or manually configured secondary IP addresses of the interface.</p>
Ipv4Address End	The end IPv4 address of the scanning range	N/A	String, dotted decimal notation.	Must be specified if the Ipv4AddressStart column is specified.

## ARP/ArpFixup

This table is used to change the existing dynamic ARP entries into static ARP entries.

## XML structure

```

<ARP>
  <ArpFixup>
    <Fixup>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
    </Fixup>
  </ArpFixup>
</ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpFixup

Table type	Multi-instance table
Row name	Fixup
Restrictions	Only Layer 3 interface is supported.

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface Index	Index	Unsigned integer.
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.

## ARP/ArpClearByType

This table is used to clear ARP entries according to ARP entry type.

## XML structure

```

<ARP>
  <ArpClearByType>
    <ArpType></ArpType>
  </ArpClearByType>
</ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpClearByType
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ArpType	ARP entry type	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Dynamic.</li><li>• <b>1</b>—Static.</li><li>• <b>2</b>—Multiport.</li><li>• <b>3</b>—All.</li></ul>

## ARP/ArpClearByIfIndex

This table is used to clear dynamic ARP entries according to interface index.

## XML structure

```
<ARP>
  <ArpClearByIfIndex>
    <ClearByIfIndex>
      <IfIndex></IfIndex>
    </ClearByIfIndex>
  </ArpClearByIfIndex>
</ARP>
```

## Table description

Item	Description
Feature name	ARP
Table name	ArpClearByIfIndex
Table type	Multi-instance table
Row name	ClearByIfIndex
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface view Layer 3 Ethernet interface/subinterface view Layer 3 aggregate interface/aggregate subinterface view S-channel interface/S-channel aggregate interface view

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface Index	Index	Unsigned integer.

## ARP/ArpClearTable

This table is used to clear ARP entries by an IP address and an interface index.

## XML structure

```
<ARP>
  <ArpClearTable>
    <ClearEntry>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
    </ClearEntry>
  </ArpClearTable>
</ARP>
```

## Table description

Item	Description
Feature name	ARP
Table name	ArpClearTable
Table type	Multi-instance table
Row name	ClearEntry
Restrictions	Only Layer 3 interface is supported.

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface Index	Index	Unsigned integer.
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.

# ARP/ArpSnoopingClearByVLAN

This table is used to clear dynamic ARP Snnoping entries according to VLAN..

## XML structure

```
<ARP>
  <ArpSnoopingClearByVLAN>
    <ClearByVLAN>
      <VLANID></VLANID>
    </ClearByVLAN>
  </ArpSnoopingClearByVLAN>
</ARP>
```

## Table description

Item	Description
Feature name	ARP
Table name	ArpSnoopingClearByVLAN
Table type	Multi-instance table
Row name	ClearByVLAN
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
VLANID	VLAN ID	Index	Unsigned integer.

# ARP/ArpSnoopingClearByIP

This table is used to clear dynamic ARP Snnoping entries according to Ipv4 address.

## XML structure

```
<ARP>
  <ArpSnoopingClearByIP>
```

```

    <ClearByIP>
      <Ipv4Address></Ipv4Address>
    </ClearByIP>
  </ArpSnoopingClearByIP>
</ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpSnoopingClearByIP

# ARP

## ARP/ArpConfig

This table contains ARP configuration information.

### XML structure

```
<ARP>
  <ArpConfig>
    <Config>
      <VrfIndex></VrfIndex>
      <Ipv4Address></Ipv4Address>
      <MacAddress></MacAddress>
      <VLANID></VLANID>
      <PortIndex></PortIndex>
      <ArpType></ArpType>
    </Config>
  </ArpConfig>
</ARP>
```

### Table description

Item	Description
Feature name	ARP
Table name	ArpConfig
Table type	Multi-instance table
Row name	Config
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Index of the VRF	Index	Unsigned integer.	Some versions support VRF name. For relevant

Column name	Column description	Column type	Data type and restrictions	Remarks
				information, see the XSD document of your product. 0 means public network
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.	N/A
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Required.
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	It must be configured together with the PortIndex column when ArpType is static. It must be specified when ArpType is multiport.
PortIndex	Port index	N/A	Unsigned integer.	It must be configured together with the VLANID column when ArpType is static. It must not be specified when ArpType is multiport.
ArpType	ARP entry type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Static.</li> <li>2—Multiport.</li> </ul>	Required. If the multiport type is supported depends on the device model.

## ARP/ArpGratuitous

This table contains gratuitous ARP packets enable information.

### XML structure

```

<ARP>
  <ArpGratuitous>
    <LearnEnable></LearnEnable>
    <SendEnable></SendEnable>
  
```

```

    </ArpGratuitous>
  </ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpGratuitous
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
LearnEnable	Whether the learning of gratuitous ARP packets function is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b> (default)</li> <li><b>false</b></li> </ul>
SendEnable	Whether the function of sending gratuitous ARP packets upon receiving ARP requests whose target IP address is on a different subnet is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default)</li> </ul>

## ARP/ArpLearnLimit

This table contains the information of maximum number of dynamic ARP entries that an interface can learn.

## XML structure

```
<ARP>
  <ArpLearnLimit>
    <LearnLimit>
      <IfIndex></IfIndex>
      <LearnMaxNum></LearnMaxNum>
      <LearnAlarmThreshold></LearnAlarmThreshold>
    </LearnLimit>
  </ArpLearnLimit>
</ARP>
```

## Table description

Item	Description
Feature name	ARP
Table name	ArpLearnLimit
Table type	Multi-instance table
Row name	LearnLimit
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/aggregate subinterface S-channel interface/S-channel aggregate interface VLAN interface
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your

Column name	Column description	Column type	Data type and restrictions	Remarks
				product. For information about IfIndex, see IfMgr in Ifmgr  NETCONF XML API Configuration Reference.
LearnMaxNum	The maximum number of dynamic ARP entries that an interface can learn	N/A	Unsigned integer. Value range: 0 to LearnMaxNumLimit.	0 means the interface is disabled from learning dynamic ARP entries.  The value of LearnMaxNumLimit depends on the device model.  The default setting varies with device models.
LearnAlarmThreshold	Alarm threshold in percentage	N/A	Unsigned integer. Value range: 0 to 100.	To disable the threshold alarming, set the value to 0.  The default setting is 0.

## ARP/ArpGratuitousInterval

This table contains the information of periodic sending of gratuitous ARP packets and set the sending interval on an interface.

### XML structure

```

<ARP>
  <ArpGratuitousInterval>
    <GratuitousInterval>
      <IfIndex></IfIndex>
      <Interval></Interval>
    </GratuitousInterval>
  </ArpGratuitousInterval>
</ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpGratuitousInterval
Table type	Multi-instance table
Row name	GratuitousInterval
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/subinterface VLAN interface
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
Interval	The interval at which gratuitous ARP packets are sent	N/A	Unsigned integer. Value range: 0, 200 to 200000 ms. Default: 0.	0 means disable the interface from periodically sending gratuitous ARP packets.

## ARP/ArpProxy

This table contains ARP proxy enable and local ARP proxy enable information.

## XML structure

```
<ARP>
  <ArpProxy>
    <Proxy>
      <IfIndex></IfIndex>
      <ProxyEnable></ProxyEnable>
      <LocalProxyEnable></LocalProxyEnable>
      <LocalStartIpv4Address></LocalStartIpv4Address>
      <LocalEndIpv4Address></LocalEndIpv4Address>
    </Proxy>
  </ArpProxy>
</ARP>
```

## Table description

Item	Description
Feature name	ARP
Table name	ArpProxy
Table type	Single-instance table
Row name	Proxy
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/aggregate subinterface VLAN interface
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr

Column name	Column description	Column type	Data type and restrictions	Remarks
				NETCONF XML API Configuration Reference.
ProxyEnable	Whether proxy ARP is enabled on the interface	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default)</li> </ul>	N/A
LocalProxyEnable	Whether local proxy ARP is enabled on the interface	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default)</li> </ul>	N/A
LocalStartIpv4Address	Start IPv4 address of the specified address range for local proxy ARP	N/A	String, dotted decimal notation.	LocalStartIpv4Address and LocalEndIpv4Address must be configured together. LocalStartIpv4Address and LocalEndIpv4Address can be configured only when local proxy ARP on the interface is enabled.
LocalEndIpv4Address	End IPv4 address of the specified address range for local proxy ARP	N/A	String, dotted decimal notation.	N/A

## ARP/ArpAttackProtect

This table contains ARP attack protect information.

### XML structure

```

<ARP>
  <ArpAttackProtect>
    <ResolvingRouteEnable></ResolvingRouteEnable>
    <SourceSuppressionEnable></SourceSuppressionEnable>
    <SourceSuppressionLimitNum></SourceSuppressionLimitNum>
    <SourceMACDetectType></SourceMACDetectType>
    <SourceMACAgeTime></SourceMACAgeTime>
  </ArpAttackProtect>
</ARP>

```

```

<SourceMACThresholdValue></SourceMACThresholdValue>
<ValidCheckEnable></ValidCheckEnable>
<ActiveACKType></ActiveACKType>
<DetectionValidateSrcMAC></DetectionValidateSrcMAC>
<DetectionValidateDstMAC></DetectionValidateDstMAC>
<DetectionValidateIP></DetectionValidateIP>
</ArpAttackProtect>
</ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpAttackProtect
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ResolvingRouteEnable	Whether the resolving route function is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	The default value of ResolvingRouteEnable depends on the device model.
SourceSuppressionEnable	Whether the ARP suppression original address function is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default)</li> </ul>	N/A
SourceSuppressionLimitNum	Set the source suppression limit number	N/A	Unsigned integer. Value range: 2 to 1024. Default: 10.	N/A
SourceMACDetectType	Set the attack detection function of fixed source MAC address and	N/A	Unsigned integer. <ul style="list-style-type: none"> <li><b>0—Disabled</b> (default).</li> <li><b>1—Filter.</b></li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	select the mode		<ul style="list-style-type: none"> <li><b>2—Monitor.</b></li> </ul>	
SourceMAC AgeTime	Set the fixed source mac address aging time of arp attack detection entries	N/A	Unsigned integer. Value range: 60 to 6000. Default: 300.	N/A
SourceMAC ThresholdValue	Set the fixed source mac address threshold of ARP attack detection entries	N/A	Unsigned integer. Unsigned integer. Value range: uiSourceMinThreshold to uiSourceMaxThreshold.	The value of uiSourceMinThreshold and uiSourceMaxThreshold depend on the device model.  The default value of SourceMACThresholdValue depends on the device model.
ValidCheck Enable	Whether the source mac address consistency check function is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default)</li> </ul>	N/A
ActiveACKType	Enable ARP active acknowledgement	N/A	Unsigned integer. <ul style="list-style-type: none"> <li><b>0—Disabled</b> (default).</li> <li><b>1—Loose.</b></li> <li><b>2—Strict.</b></li> </ul>	N/A
DetectionValidateSrcMAC	Whether the effective checks on the source mac address function is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default)</li> </ul>	N/A
DetectionValidateDstMAC	Whether the effective checks on the destination mac address function is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default)</li> </ul>	N/A
DetectionValidateIP	Whether the effective checks	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	on the IP address is enabled		<ul style="list-style-type: none"> <li><b>false</b> (default)</li> </ul>	

## ARP/ArpRateLimit

This table contains ARP rate limit information.

## XML structure

```

<ARP>
  <ArpRateLimit>
    <RateLimit>
      <IfIndex></IfIndex>
      <RateLimitEnable></RateLimitEnable>
      <RateLimitNum></RateLimitNum>
    </RateLimit>
  </ArpRateLimit>
</ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpRateLimit
Table type	Single-instance table
Row name	RateLimit
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For

Column name	Column description	Column type	Data type and restrictions	Remarks
				relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
RateLimitEnable	Whether the rate limit function is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b> (default)</li> <li><b>false</b></li> </ul>	N/A
RateLimitNum	Set the rate limit number	N/A	Unsigned integer. Value range: uiRateLimitLowerLimit to uiRateLimitUpperLimit.	The value of uiRateLimitLowerLimit and uiRateLimitUpperLimit depend on the device model.  The default value of RateLimitNum depends on the device model.  RateLimitNum can be configured only when RateLimitEnable is true.

## ARP/ArpRateLimitLog

This table contains ARP rate limit log information.

## XML structure

```

<ARP>
  <ArpRateLimitLog>
    <LogEnable></LogEnable>
    <LogInterval></LogInterval>
  </ArpRateLimitLog>
</ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpRateLimitLog
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LogEnable	Whether the rate limit log function is enabled	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b></li><li><b>false</b>(default)</li></ul>	N/A
LogInterval	Set the interval of sending report or log	N/A	Unsigned integer. Value range: 1 to 86400. Default: 60.	N/A

## ARP/ArpSourceMACExclude

This table contains protective source mac address information.

## XML structure

```
<ARP>
  <ArpSourceMACExclude>
    <SourceMACExclude>
      <MacAddress></MacAddress>
    </SourceMACExclude>
  </ArpSourceMACExclude>
</ARP>
```

## Table description

Item	Description
Feature name	ARP
Table name	ArpSourceMACExclude
Table type	Multi-instance table
Row name	SourceMACExclude
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	The maximum number of protective source mac address that can be configured depends on the device model.

## ARP/ArpAuthorized

This table contains the authorized ARP information.

## XML structure

```
<ARP>
  <ArpAuthorized>
    <Authorized>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </Authorized>
  </ArpAuthorized>
</ARP>
```

## Table description

Item	Description
Feature name	ARP
Table name	ArpAuthorized
Table type	Single-instance table
Row name	Authorized
Restrictions	<p>This table supports interface types:</p> <p>Layer 3 Ethernet interface/subinterface</p> <p>Layer 3 aggregate interface/aggregate subinterface</p> <p>VLAN interface</p>
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	<p>Layer 3 Ethernet interface/subinterface</p> <p>Layer 3 aggregate interface/aggregate subinterface</p> <p>VLAN interface</p> <p>Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.</p>
Enable	Whether authorized ARP is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default)</li> </ul>	N/A

# ARP/ArpDetection

This table contains configuration information about ARP attack detection.

## XML structure

```
<ARP>
  <ArpDetection>
    <Detect>
      <VLANID></VLANID>
      <DetectionEnable></DetectionEnable>
      <RestrictedForwardingEnable></RestrictedForwardingEnable>
    </Detect>
  </ArpDetection>
</ARP>
```

## Table description

Item	Description
Feature name	ARP
Table name	ArpDetection
Table type	Multi-instance table
Row name	Detect
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094
DetectionEnable	Whether ARP attack detection is enabled	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b></li><li><b>false</b> (default)</li></ul>
RestrictedForwardingEnable	Whether ARP restricted	N/A	Boolean:

Column name	Column description	Column type	Data type and restrictions
able	forwarding is enabled		<ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default)</li> </ul>

## ARP/ArpDetectionTrust

This table contains information about ARP trusted interfaces.

### XML structure

```

<ARP>
  <ArpDetectionTrust>
    <Interface>
      <IfIndex></IfIndex>
      <TrustEnable></TrustEnable>
    </Interface>
  </ArpDetectionTrust>
</ARP>

```

### Table description

Item	Description
Feature name	ARP
Table name	ArpDetectionTrust
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports interface types: Layer 2 Ethernet interface Layer 2 aggregate interface
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Layer 2 Ethernet

Column name	Column description	Column type	Data type and restrictions	Remarks
				interface Layer 2 aggregate interface Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
TrustEnable	Whether the interface is configured as an ARP trusted interface	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A

## ARP/ArpFilterSource

This table contains information about ARP gateway protection and the protected gateway IP address.

## XML structure

```

<ARP>
  <ArpFilterSource>
    <FilterSource>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
    </FilterSource>
  </ArpFilterSource>
</ARP>

```

## Table description

Item	Description
Feature name	ARP

Item	Description
Table name	ArpFilterSource
Table type	Multi-instance table
Row name	FilterSource
Restrictions	This table supports interface types: Layer 2 Ethernet interface Layer 2 aggregate interface
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Layer 2 Ethernet interface Layer 2 aggregate interface Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
Ipv4Address	The protected gateway IP address	Index	String, dotted decimal notation.	N/A

## ARP/ArpFilterBinding

This table contains the information about restricting arp packet by source IP address and source mac address.

## XML structure

```
<ARP>
  <ArpFilterBinding>
    <FilterBinding>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
      <MacAddress></MacAddress>
    </FilterBinding>
  </ArpFilterBinding>
</ARP>
```

## Table description

Item	Description
Feature name	ARP
Table name	ArpFilterBinding
Table type	Multi-instance table
Row name	FilterBinding
Restrictions	This table supports interface types: Layer 2 Ethernet interface Layer 2 aggregate interface
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Layer 2 Ethernet interface. Layer 2 aggregate interface. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex,

Column name	Column description	Column type	Data type and restrictions	Remarks
				see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
Ipv4Address	The permitted IP address	Index	String, dotted decimal notation.	N/A
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	You cannot specify a MAC address when you remove or delete a rule.

## ARP/ArpSnooping

This table contains information about ARP snooping.

### XML structure

```

<ARP>
  <ArpSnooping>
    <Snooping>
      <VLANID></VLANID>
      <SnoopingEnable></SnoopingEnable>
    </Snooping>
  </ArpSnooping>
</ARP>

```

### Table description

Item	Description
Feature name	ARP
Table name	ArpSnooping
Table type	Multi-instance table
Row name	Snooping
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094
SnoopingEnable	Whether ARP snooping is enabled	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b> (default)</li></ul>

## ARP/ArpInterface

This table contains ARP interface information.

## XML structure

```
<ARP>
  <ArpInterface>
    <Interface>
      <IfIndex></IfIndex>
      <ModeUNI></ModeUNI>
    </Interface>
  </ArpInterface>
</ARP>
```

## Table description

Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only VLAN interfaces are supported.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
ModeUNI	Configure a port as a customer-side port	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Customer-side port.</li> <li><b>false</b>—Network-side port (default).</li> </ul>	Whether the ModeUNI is supported depends on the device model.

## ARP/ArpVsiConfig

This table contains ARP VSI configuration information.

## XML structure

```

<ARP>
  <ArpVsiConfig>
    <VsiConfig>
      <VrfIndex></VrfIndex>
      <Ipv4Address></Ipv4Address>
      <MacAddress></MacAddress>
      <VsiIfIndex></VsiIfIndex>
      <PortIndex></PortIndex>
      <SrvID></SrvID>
      <VsiName></VsiName>
    </VsiConfig>
  </ArpVsiConfig>

```

< /ARP>

## Table description

Item	Description
Feature name	ARP
Table name	ArpVsiConfig
Table type	Multi-instance table
Row name	VsiConfig
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Index of the VRF	Index	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product. 0 means public network.
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.	N/A
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Required.
VsilfIndex	VSI interface index	N/A	Unsigned integer.	The VSI interface must be bound to the VSI.
PortIndex	Port index	N/A	Unsigned integer.	The port can only be a Layer 2 Ethernet interface or a Tunnel interface.
SrvID	Service instance ID	N/A	Unsigned integer. Value range: 1 to 4096.	This field must be configured when the port is a Layer 2 Ethernet

Column name	Column description	Column type	Data type and restrictions	Remarks
				interface. It must be deleted when the port is a Tunnel interface.
VsiName	VSI name	N/A	String, Length: 1 to 31 characters.	You must create a VSI first before you merge, replace or create ARPs.

## ARP/ArpRouteAdvertise

This table contains the information about ARP direct route advertisement.

### XML structure

```

<ARP>
  <ArpRouteAdvertise>
    <RouteAdvertise>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </RouteAdvertise>
  </ArpRouteAdvertise>
</ARP>

```

### Table description

Item	Description
Feature name	ARP
Table name	ArpRouteAdvertise
Table type	Multi-instance table
Row name	RouteAdvertise
Restrictions	This table supports interface types: VE-L3VPN interface VSI interface
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	VE-L3VPN interface VSI interface Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see <a href="#">Appendix</a> in Ifmgr NETCONF XML API Configuration Reference.
Enable	Whether ARP direct route advertisement is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false (default)</b></li> </ul>	N/A

## ARP/ArpVsiFeature

This table contains ARP configuration information for VSIs.

## XML structure

```

<ARP>
  <ArpVsiFeature>
    <VsiFeature>
      <VsiName></VsiName>
      <SnoopingEnable></SnoopingEnable>
      <DetectionEnable></DetectionEnable>
    </VsiFeature>
  </ArpVsiFeature>
</ARP>

```

## Table description

Item	Description
Feature name	ARP

Item	Description
Table name	ArpVsiFeature
Table type	Multi-instance table
Row name	VsiFeature
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String, Length: 1 to 31 characters.	N/A
SnoopingEnable	Whether ARP snooping is enabled for the VSI	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
DetectionEnable	Whether ARP attack detection is enabled for the VSI	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A

## ARP/ArpVsiDetectionTrust

This table contains ARP trusted AC configuration information for Ethernet service instances.

## XML structure

```

<ARP>
  <ArpVsiDetectionTrust>
    <SRV>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <TrustEnable></TrustEnable>
    </SRV>
  </ArpVsiDetectionTrust>
</ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpVsiDetectionTrust
Table type	Multi-instance table
Row name	SRV
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
SrvID	Ethernet service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A
TrustEnable	Whether the Ethernet service instance is configured as an ARP trusted AC	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Yes.</li><li>• <b>false</b>—No.</li></ul>	N/A

# ARP

## ARP/ArpTable

This table contains ARP table information.

### XML structure

```
<ARP>
  <ArpTable>
    <ArpEntry>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
      <MacAddress></MacAddress>
      <VLANID></VLANID>
      <PortIndex></PortIndex>
      <VrfIndex></VrfIndex>
      <ArpType></ArpType>
    </ArpEntry>
  </ArpTable>
</ARP>
```

### Table description

Item	Description
Feature name	ARP
Table name	ArpTable
Table type	Multi-instance table
Row name	ArpEntry
Restrictions	Only Layer 3 interface is supported.

### Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface Index	Index	Unsigned integer.
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.

Column name	Column description	Column type	Data type and restrictions
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.
PortIndex	Port index	N/A	Unsigned integer.
VrfIndex	Index of the VRF	N/A	Unsigned integer.
ArpType	ARP entry type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Dynamic.</li> <li>• <b>1</b>—Static.</li> <li>• <b>2</b>—Multiport.</li> <li>• <b>3</b>—Rule.</li> <li>• <b>4</b>—Openflow.</li> </ul>

## ARP/ArpConfig

This table contains ARP configuration information.

## XML structure

```

<ARP>
  <ArpConfig>
    <Config>
      <VrfIndex></VrfIndex>
      <Ipv4Address></Ipv4Address>
      <MacAddress></MacAddress>
      <VLANID></VLANID>
      <PortIndex></PortIndex>
      <ArpType></ArpType>
    </Config>
  </ArpConfig>
</ARP>

```

## Table description

Item	Description
Feature name	ARP

Item	Description
Table name	ArpConfig
Table type	Multi-instance table
Row name	Config
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
VrfIndex	Index of the VRF	Index	Unsigned integer.
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.
PortIndex	Port index	N/A	Unsigned integer.
ArpType	ARP entry type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Static.</li> <li>2—Multiport.</li> </ul>

## ARP/ArpGratuitous

This table contains gratuitous ARP packets enable information.

## XML structure

```

<ARP>
  <ArpGratuitous>
    <LearnEnable></LearnEnable>
    <SendEnable></SendEnable>
  </ArpGratuitous>
</ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpGratuitous
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
LearnEnable	Whether the learning of gratuitous ARP packets function is enable.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>
SendEnable	Whether the function of sending gratuitous ARP packets upon receiving ARP requests whose target IP address is on a different subnet is enable.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>

## ARP/ArpLearnLimit

This table contains the information of maximum number of dynamic ARP entries that an interface can learn.

## XML structure

```
<ARP>
  <ArpLearnLimit>
```

```

<LearnLimit>
  <IfIndex></IfIndex>
  <LearnMaxNum></LearnMaxNum>
  <LearnAlarmThreshold></LearnAlarmThreshold>
</LearnLimit>
</ArpLearnLimit>
</ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpLearnLimit
Table type	Multi-instance table
Row name	LearnLimit
Restrictions	<p>This table supports interface types:</p> <p>Layer 2 Ethernet interface/Layer 2 aggregate interface</p> <p>Layer 3 Ethernet interface/subinterface</p> <p>Layer 3 aggregate interface/aggregate subinterface</p> <p>S-channel interface/S-channel aggregate interface</p> <p>VLAN interface</p>

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	N/A
LearnMaxNum	The maximum number of dynamic ARP entries that an interface can learn	N/A	Unsigned integer. Value range: 0 to LearnMaxNumLimit.	0 means the interface is disabled from learning dynamic ARP entries. The value of LearnMaxNumLimit depends on the device model.
LearnAlarmThreshold	Alarm threshold in percentage	N/A	Unsigned integer. Value range: 0 to 100.	To disable the threshold alarming, set the value to 0.

				0.
--	--	--	--	----

# ARP/ArpGratuitousInterval

This table contains the information of periodic sending of gratuitous ARP packets and set the sending interval on an interface.

## XML structure

```
<ARP>
  <ArpGratuitousInterval>
    <GratuitousInterval>
      <IfIndex></IfIndex>
      <Interval></Interval>
    </GratuitousInterval>
  </ArpGratuitousInterval>
</ARP>
```

## Table description

Item	Description
Feature name	ARP
Table name	ArpGratuitousInterval
Table type	Multi-instance table
Row name	GratuitousInterval
Restrictions	<p>This table supports interface types:</p> <p>Layer 3 Ethernet interface/subinterface</p> <p>Layer 3 aggregate interface/subinterface</p> <p>VLAN interface</p>

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	N/A
Interval	The interval at which gratuitous	N/A	Unsigned integer.	0 means disable the interface from

Column name	Column description	Column type	Data type and restrictions	Remarks
	ARP packets are sent		Value range: 0, 200 to 200000ms.	periodically sending gratuitous ARP packets.

## ARP/ArpProxy

This table contains ARP proxy enable and local ARP proxy enable information.

## XML structure

```

<ARP>
  <ArpProxy>
    <Proxy>
      <IfIndex></IfIndex>
      <ProxyEnable></ProxyEnable>
      <LocalProxyEnable></LocalProxyEnable>
      <LocalStartIpv4Address></LocalStartIpv4Address>
      <LocalEndIpv4Address></LocalEndIpv4Address>
    </Proxy>
  </ArpProxy>
</ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpProxy
Table type	Single-instance table
Row name	Proxy
Restrictions	<p>This table supports interface types:</p> <p>Layer 3 Ethernet interface/subinterface</p> <p>Layer 3 aggregate interface/aggregate subinterface</p> <p>VLAN interface</p>

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	N/A
ProxyEnable	Whether proxy ARP is enabled on the interface	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b></li><li><b>false</b></li></ul>	N/A
LocalProxyEnable	Whether local proxy ARP is enabled on the interface	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b></li><li><b>false</b></li></ul>	N/A
LocalStartIPv4Address	Start IPv4 address of the specified address range for local proxy ARP	N/A	String, dotted decimal notation.	N/A
LocalEndIPv4Address	End IPv4 address of the specified address range for local proxy ARP	N/A	String, dotted decimal notation.	N/A

## ARP/ArpAttackProtect

This table contains ARP attack protect information.

## XML structure

```
<ARP>
  <ArpAttackProtect>
    <ResolvingRouteEnable></ResolvingRouteEnable>
    <SourceSuppressionEnable></SourceSuppressionEnable>
    <SourceSuppressionLimitNum></SourceSuppressionLimitNum>
    <SourceMACDetectType></SourceMACDetectType>
    <SourceMACAgeTime></SourceMACAgeTime>
    <SourceMACThresholdValue></SourceMACThresholdValue>
    <ValidCheckEnable></ValidCheckEnable>
    <ActiveACKType></ActiveACKType>
    <DetectionValidateSrcMAC></DetectionValidateSrcMAC>
    <DetectionValidateDstMAC></DetectionValidateDstMAC>
```

```

    <DetectionValidateIP></DetectionValidateIP>
  </ArpAttackProtect>
</ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpAttackProtect
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ResolvingRouteEnable	Whether the resolving route function is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
SourceSuppressionEnable	Whether the ARP suppression original address function is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
SourceSuppressionLimitNum	Set the source suppression limit number	N/A	Unsigned integer. Value range: 2 to 1024.	N/A
SourceMACDetectType	Set the attack detection function of fixed source mac address and select the mode	N/A	Unsigned integer. <ul style="list-style-type: none"> <li><b>0—Disabled.</b></li> <li><b>1—Filter.</b></li> <li><b>2—Monitor.</b></li> </ul>	N/A
SourceMACAgeTime	Set the fixed source mac address aging time of ARP attack detection entries	N/A	Unsigned integer. Value range: 60 to 6000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SourceMAC ThresholdValue	Set the fixed source mac address threshold of ARP attack detection entries	N/A	Unsigned integer.	N/A
ValidCheck Enable	Whether the source mac address consistency check function is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
ActiveACKType	Enable ARP active acknowledgement	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>• <b>0—Disabled.</b></li> <li>• <b>1—Loose.</b></li> <li>• <b>2—Strict.</b></li> </ul>	N/A
DetectionValidateSrcMAC	Whether the effective checks on the source mac address function is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
DetectionValidateDstMAC	Whether the effective checks on the destination mac address function is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
DetectionValidateIP	Whether the effective checks on the IP address function is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A

## ARP/ArpRateLimit

This table contains ARP rate limit information.

## XML structure

```
<ARP>
```

```

<ArpRateLimit>
  <RateLimit>
    <IfIndex></IfIndex>
    <RateLimitEnable></RateLimitEnable>
    <RateLimitNum></RateLimitNum>
  </RateLimit>
</ArpRateLimit>
</ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpRateLimit
Table type	Single-instance table
Row name	RateLimit
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	N/A
RateLimitEnable	Whether the rate limit function is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
RateLimitNum	Set the rate limit number	N/A	Unsigned integer. Value range: uiRateLimitLowerLimit to uiRateLimitUpperLimit.	The value of uiRateLimitLowerLimit and uiRateLimitUpperLimit depend on the device model.

## ARP/ArpRateLimitLog

This table contains ARP rate limit log information.

## XML structure

```
<ARP>
  <ArpRateLimitLog>
    <LogEnable></LogEnable>
    <LogInterval></LogInterval>
  </ArpRateLimitLog>
</ARP>
```

## Table description

Item	Description
Feature name	ARP
Table name	ArpRateLimitLog
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LogEnable	Whether the rate limit log function is enabled	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b></li><li><b>false</b></li></ul>	N/A
LogInterval	Set the interval of sending report or log	N/A	Unsigned integer. Value range: 1 to 86400.	N/A

## ARP/ArpSourceMACExclude

This table contains protective source mac address information.

## XML structure

```
<ARP>
  <ArpSourceMACExclude>
```

```

    <SourceMACExclude>
      <MacAddress></MacAddress>
    </SourceMACExclude>
  </ArpSourceMACExclude>
</ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpSourceMACExclude
Table type	Multi-instance table
Row name	SourceMACExclude
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	The MAX number of protective source mac address that can be configured depends on the device model.

## ARP/ArpSourceMACAttackEntry

This table contains the information about the ARP attack detection entries of fixed source MAC address.

## XML structure

```

<ARP>
  <ArpSourceMACAttackEntry>
    <Entry>
      <DeviceNode>
        <Chassis></Chassis>
        <Slot></Slot>
      </DeviceNode>
    </Entry>
  </ArpSourceMACAttackEntry>
</ARP>

```

```

        <CPUID></CPUID>
    </DeviceNode>
    <VLANID></VLANID>
    <MacAddress></MacAddress>
    <IfIndex></IfIndex>
    <AgeTime></AgeTime>
</Entry>
</ArpSourceMACAttackEntry>
</ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpSourceMACAttackEntry
Table type	Multi-instance table
Row name	Entry
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DeviceNode	The information of Device Node	Data structure	Members include: <ul style="list-style-type: none"> <li>Chassis</li> <li>Slot</li> <li>CPUID</li> </ul>	N/A
Chassis	Chassis number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094,65535.	65535 means the interface is layer 3 Ethernet interface

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddress	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	N/A
IfIndex	Interface index.	N/A	Unsigned integer.	N/A
AgeTime	The remaining aging time of ARP attack defense policy entry	N/A	AgeTime	N/A

## ARP/ArpAuthorized

This table contains the authorized ARP information.

### XML structure

```

<ARP>
  <ArpAuthorized>
    <Authorized>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </Authorized>
  </ArpAuthorized>
</ARP>

```

### Table description

Item	Description
Feature name	ARP
Table name	ArpAuthorized
Table type	Single-instance table
Row name	Authorized
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/aggregate subinterface VLAN interface

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/aggregate subinterface VLAN interface
Enable	Whether authorized ARP is enabled	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b></li><li><b>false</b></li></ul>	N/A

## ARP/ArpDetection

This table contains information about ARP attack detection.

## XML structure

```
<ARP>
  <ArpDetection>
    <Detect>
      <VLANID></VLANID>
      <DetectionEnable></DetectionEnable>
      <RestrictedForwardingEnable></RestrictedForwardingEnable>
    </Detect>
  </ArpDetection>
</ARP>
```

## Table description

Item	Description
Feature name	ARP
Table name	ArpDetection
Table type	Multi-instance table
Row name	Detect
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094
DetectionEnabled	Whether ARP attack detection is enabled	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>
RestrictedForwardingEnabled	Whether ARP restricted forwarding is enabled	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>

## ARP/ArpDetectionTrust

This table contains information about ARP trusted interfaces.

## XML structure

```
<ARP>
  <ArpDetectionTrust>
    <Interface>
      <IfIndex></IfIndex>
      <TrustEnable></TrustEnable>
    </Interface>
  </ArpDetectionTrust>
</ARP>
```

## Table description

Item	Description
Feature name	ARP
Table name	ArpDetectionTrust
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports interface types:

Item	Description
	Layer 2 Ethernet interface
	Layer 2 aggregate interface

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Layer 2 Ethernet interface Layer 2 aggregate interface
TrustEnable	Whether the interface is configured as an ARP trusted interface	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A

## ARP/ArpFilterSource

This table contains information about ARP gateway protection and the protected gateway IP address.

## XML structure

```

<ARP>
  <ArpFilterSource>
    <FilterSource>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
    </FilterSource>
  </ArpFilterSource>
</ARP>

```

## Table description

Item	Description
Feature name	ARP

Item	Description
Table name	ArpFilterSource
Table type	Multi-instance table
Row name	FilterSource
Restrictions	This table supports interface types: Layer 2 Ethernet interface Layer 2 aggregate interface

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Layer 2 Ethernet interface. Layer 2 aggregate interface.
Ipv4Address	The protected gateway IP address	Index	String, dotted decimal notation.	N/A

## ARP/ArpFilterBinding

This table contains the information about restricting ARP packet by source IP address and source MAC address.

## XML structure

```

<ARP>
  <ArpFilterBinding>
    <FilterBinding>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
      <MacAddress></MacAddress>
    </FilterBinding>
  </ArpFilterBinding>
</ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpFilterBinding
Table type	Multi-instance table
Row name	FilterBinding
Restrictions	This table supports interface types: Layer 2 Ethernet interface Layer 2 aggregate interface

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Unsigned integer.
Ipv4Address	The permitted IP address	Index	String, dotted decimal notation.
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.

## ARP/ArpSpecification

This table contains ARP specification information.

## XML structure

```
<ARP>
  <ArpSpecification>
    <SupportMultiport></SupportMultiport>
    <RateLimitDefault></RateLimitDefault>
    <RateLimitLowerLimit></RateLimitLowerLimit>
    <RateLimitUpperLimit></RateLimitUpperLimit>
    <SMACDefaultThreshold></SMACDefaultThreshold>
    <SMACMinThreshold></SMACMinThreshold>
    <SMACMaxThreshold></SMACMaxThreshold>
    <SupportDetection></SupportDetection>
```

```

    <SupportFilter></SupportFilter>
    <SupportSnooping></SupportSnooping>
    <IntervalDefault></IntervalDefault>
    <LearnMaxNumLimit></LearnMaxNumLimit>
    <LearnMaxNumDefault></LearnMaxNumDefault>
    <SupportModeUNI></SupportModeUNI>
  </ArpSpecification>
</ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpSpecification
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SupportMulti port	Whether the multiport ARP entry is supported	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
RateLimitDefault	The default limit of rate	N/A	Unsigned integer.	N/A
RateLimitLowerLimit	The lower limit of rate	N/A	Unsigned integer.	0 means that ARP rate limit isn't supported.
RateLimitUpperLimit	The upper limit of rate	N/A	Unsigned integer.	0 means that ARP rate limit isn't supported.
SMACDefaultThreshold	The default of threshold	N/A	Unsigned integer.	N/A
SMACMinThreshold	The minimum of threshold.	N/A	Unsigned integer.	N/A
SMACMaxT	The maximum of	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
hreshold	threshold			
SupportDetection	Whether ARP detection is supported	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
SupportFilter	Whether ARP filter is supported	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
SupportSnopping	Whether ARP snooping is supported	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
IntervalDefault	The default of interval	N/A	Unsigned integer. Value range: 0 to 200000.	N/A
LearnMaxNumLimit	The limit of max learn number	N/A	Unsigned integer.	N/A
LearnMaxNumDefault	The default of max learn number	N/A	Unsigned integer.	N/A
SupportModeUNI	Whether the ARP customer-side port feature is supported	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A

## ARP/ ArpSnoopingEntry

This table contains information about ARP snooping entries.

### XML structure

```

<ARP>
  <ArpSnoopingEntry>
    <SnoopingEntry>
      <DeviceNode>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
      </DeviceNode>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
    </SnoopingEntry>
  </ArpSnoopingEntry>
</ARP>

```

```

    <VLANID></VLANID>
    <MacAddress></MacAddress>
    <Status></Status>
    <AgeTime></AgeTime>
  </SnoopingEntry>
</ArpSnoopingEntry>
</ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpSnoopingEntry
Table type	Multi-instance table
Row name	SnoopingEntry
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DeviceNode	The information of Device Node	Data structure	Members include: <ul style="list-style-type: none"> <li>Chassis</li> <li>Slot</li> <li>CPUID</li> </ul>	N/A
Chassis	Chassis number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
IfIndex	Interface index	Index	Unsigned integer.	Layer 2 Ethernet interface Layer 2 aggregate interface
Ipv4Address	IPv4 address	Index	String, dotted decimal	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			notation.	
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
Status	State of an entry	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Valid.</li> <li>2—Invalid.</li> <li>3—Collision.</li> </ul>	N/A
AgeTime	The remaining aging time of ARP attack defense policy entry	N/A	AgeTime	N/A

## ARP/ArpSnooping

This table contains information about ARP snooping.

### XML structure

```

<ARP>
  <ArpSnooping>
    <Snooping>
      <VLANID></VLANID>
      <SnoopingEnable></SnoopingEnable>
    </Snooping>
  </ArpSnooping>
</ARP>

```

### Table description

Item	Description
Feature name	ARP
Table name	ArpSnooping
Table type	Multi-instance table

Item	Description
Row name	Snooping
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094	N/A
SnoopingEnable	Whether ARP snooping is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A

## ARP/ArpInterface

This table contains ARP interface information.

## XML structure

```

<ARP>
  <ArpInterface>
    <Interface>
      <IfIndex></IfIndex>
      <ModeUNI></ModeUNI>
    </Interface>
  </ArpInterface>
</ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpInterface
Table type	Multi-instance table
Row name	Interface

Item	Description
Restrictions	VLAN interfaces

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only VLAN interfaces are supported.
ModeUNI	Configure a port as a customer-side port	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Customer-side port.</li> <li><b>false</b>—Network-side port.</li> </ul>	N/A

## ARP/ArpVsiConfig

This table contains ARP VSI configuration information.

## XML structure

```

<ARP>
  <ArpVsiConfig>
    <VsiConfig>
      <VrfIndex></VrfIndex>
      <Ipv4Address></Ipv4Address>
      <MacAddress></MacAddress>
      <VsiIfIndex></VsiIfIndex>
      <PortIndex></PortIndex>
      <SrvID></SrvID>
      <VsiName></VsiName>
    </VsiConfig>
  </ArpVsiConfig>
</ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpVsiConfig
Table type	Multi-instance table
Row name	VsiConfig
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Index of the VRF	Index	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product. 0 means public network.
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.	N/A
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
VsilfIndex	VSI interface index	N/A	Unsigned integer.	N/A
PortIndex	Port index	N/A	Unsigned integer.	The port can only be a Layer 2 Ethernet interface or a Tunnel interface.
SrvID	Service instance ID	N/A	Unsigned integer. Value range: 1 to 4096.	This field cannot be displayed when the port is a Tunnel interface. It is displayed when the port is a Layer 2 Ethernet interface.
VsiName	VSI name	N/A	String,	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 31 characters.	

## ARP/ArpRouteAdvertise

This table contains the information about ARP direct route advertisement.

### XML structure

```

<ARP>
  <ArpRouteAdvertise>
    <RouteAdvertise>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </RouteAdvertise>
  </ArpRouteAdvertise>
</ARP>

```

### Table description

Item	Description
Feature name	ARP
Table name	ArpRouteAdvertise
Table type	Multi-instance table
Row name	RouteAdvertise
Restrictions	This table supports interface types: VE-L3VPN interface VSI interface

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	VE-L3VPN interface VSI interface
Enable	Whether ARP	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	direct route advertisement is enabled		<ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	

## ARP/ArpVsiFeature

This table contains ARP configuration information for VSIs.

## XML structure

```

<ARP>
  <ArpVsiFeature>
    <VsiFeature>
      <VsiName></VsiName>
      <SnoopingEnable></SnoopingEnable>
      <DetectionEnable></DetectionEnable>
    </VsiFeature>
  </ArpVsiFeature>
</ARP>

```

## Table description

Item	Description
Feature name	ARP
Table name	ArpVsiFeature
Table type	Multi-instance table
Row name	VsiFeature
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String, Length: 1 to 31 characters.	N/A
SnoopingEn	Whether ARP	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
able	snooping is enabled for the VSI		<ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled (default).</li> </ul>	
DetectionEnable	Whether ARP attack detection is enabled for the VSI	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled (default).</li> </ul>	N/A

## ARP/ArpVsiDetectionTrust

This table contains ARP trusted AC configuration information for Ethernet service instances.

### XML structure

```

<ARP>
  <ArpVsiDetectionTrust>
    <SRV>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <TrustEnable></TrustEnable>
    </SRV>
  </ArpVsiDetectionTrust>
</ARP>

```

### Table description

Item	Description
Feature name	ARP
Table name	ArpVsiDetectionTrust
Table type	Multi-instance table
Row name	SRV
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
SrvID	Ethernet service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A
TrustEnable	Whether the Ethernet service instance is configured as an ARP trusted AC	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes.</li> <li><b>false</b>—No (Default).</li> </ul>	N/A

# ARP

## ARP/ArpTable

Message	Explanation
Invalid IP address. 非法的IP地址。	Invalid IP address configuration 无效的 IP 地址配置

## ARP/ArpConfig

Message	Explanation
VPN-Instance does not exist. 该VPN不存在。	The VPN-Instance does not exist when set the configuration. 配置时对应 VPN 不存在
Invalid MAC address. 非法的MAC地址。	Invalid MAC address configuration. 非法的 MAC 地址配置。
The VLAN doesn't exist. 该VLAN不存在。	The VLAN does not exist when set the configuration. 配置时 VLAN 不存在
Please create the VLAN interface first. 请先创建相应的VLAN接口。	The VLAN interface does not exist when set the configuration. 配置时 VLAN 接口不存在
Invalid IP address. 非法的IP地址。	Invalid IP address configuration 无效的 IP 地址配置
Can't set S-channel subinterface as the output interface. 不支持S通道子接口。	Do not support set S-channel subinterface as the output interface. 不支持 S 通道子接口。
The port doesn't belong to the VLAN, or the VLAN is not permitted on the port. 端口不属于指定VLAN或Trunk类型的端口不允许指定VLAN内的报文通过。	The port doesn't belong to the VLAN, or the VLAN is not permitted on the port. 端口不属于指定 VLAN 或 Trunk 类型的端口不允许指定 VLAN 内的报文通过。
The VPN instance of the configured entry is different from that of the interface. 配置表项的VRF与接口的VRF不相同。	The VPN instance of the configured entry is different from that of the interface. 配置表项的 VRF 与接口的 VRF 不相同。

The multiport ARP entry contains invalid parameters. 多端口参数非法。	The ARP entry does not have vlans or have port interfaces. 没有配置 VLAN 或者接口
Configuration items don't meet the requirements. 不符合配置要求。	Invalid configuration, please modify configuration under guidance. 无效配置，请按照配置说明修改
Maximum number of ARP entries already reached. 已到达ARP表项的上限。	Maximum number of ARP entries already reached,p Please check configuration or specifications 已到达 ARP 表项的上限,请检查配置或者设备规格
The Ethernet service instance doesn't exist. 以太网服务实例不存在。	The Ethernet service instance doesn't exist,when set the configuration. 以太网服务实例不存在。
The Ethernet interface and Ethernet service instance are not mapped to the VSI. 以太接口和以太网服务实例与VSI未关联。	The Ethernet interface and Ethernet service instance are not mapped to the VSI,please check configuration. 以太接口和以太网服务实例与VSI未关联,请检查配置
Failed to configure the static ARP entry because it has the same IP address and output interface as an existing remote static ARP entry. 不能配置该静态ARP，因为它与远端已存在的静态ARP表项有相同IP地址和出接口。	Failed to configure the static ARP entry because it has the same IP address and output interface as an existing remote static ARP entry. 不能配置该静态ARP，因为它与远端已存在的静态ARP表项有相同IP地址和出接口。

## ARP/ArpLearnLimit

Message	Explanation
Configuration items don't meet the requirements. 不符合配置要求。	Invalid configuration, please modify configuration under guidance. 无效配置，请按照配置说明修改

## ARP/ArpGratuitousInterval

Message	Explanation
Maximum number of interfaces enabled with the feature already reached. 可用接口个数超过上限。	Maximum number of interfaces enabled with the feature already reached, please modify configuration under guidance. 可用接口个数超过上限,请按照配置说明修改

--	--

## ARP/ArpProxy

Message	Explanation
Configuration items don't meet the requirements. 不符合配置要求。	Invalid configuration, please modify configuration under guidance. 无效配置，请按照配置说明修改
Invalid start IPv4 address. 非法的IPv4开始地址。	Invalid start IPv4 address. 非法的IPv4开始地址。
Invalid end IPv4 address. 非法的IPv4结束地址。	Invalid end IPv4 address. 非法的IPv4结束地址。
Start IPv4 address must be lower than or equal to end IPv4 address. IPv4开始地址必须低于或者等于IPv4结束地址。	Start IPv4 address must be lower than or equal to end IPv4 address, please modify configuration under guidance. IPv4开始地址必须低于或者等于IPv4结束地址。，请按照配置说明修改

## ARP/ArpAttackProtect

Message	Explanation
Configuration items don't meet the requirements. 不符合配置要求。	Invalid configuration, please modify configuration under guidance. 无效配置，请按照配置说明修改

## ARP/ArpRateLimit

Message	Explanation
Failed to set the maximum number of dynamic ARP entries. 指定ARP最大动态表项数失败。	The device returned failed when set the maximun number of dynamic ARP entries. 指定 ARP 最大动态表项数失败。
Configuration items don't meet the requirements. 不符合配置要求。	Invalid configuration, please modify configuration under guidance. 无效配置，请按照配置说明修改
The value is out of range. 参数值超出范围。	Invalid configuration, please modify configuration under guidance.

	无效配置，请按照配置说明修改
--	----------------

## ARP/ArpSourceMACExclude

Message	Explanation
Maximum number of protected MAC addresses already reached. 受保护的MAC的个数达到上限。	Maximum number of protected MAC addresses already reached, please check configuration or specifications 受保护的MAC的个数达到上限,请检查配置或者设备规格

## ARP/ArpDetection

Message	Explanation
The VLAN doesn't exist. 该VLAN不存在。	The VLAN does not exist when set the configuration. 配置时 VLAN 不存在

## ARP/ArpFilterSource

Message	Explanation
Maximum number of protected gateway IP addresses already reached. 可配置的被保护网关IP地址超过上限。	Maximum number of protected gateway IP addresses already reached, Please check configuration or specifications 可配置的被保护网关IP地址超过上限,请检查配置或者设备规格
Configuration failed. Please disable ARP filtering first. 配置ARP网关保护功能失败。需要先关闭ARP过滤保护功能。	Please disable ARP filtering first. 配置ARP网关保护功能需要先关闭ARP过滤保护功能。

## ARP/ArpFilterBinding

Message	Explanation
Configuration items don't meet the requirements. 不符合配置要求。	Invalid configuration, please modify configuration under guidance. 无效配置，请按照配置说明修改
Maximum number of permitted IP-to-MAC	Maximum number of permitted IP-to-MAC bindings already reached, please modify configuration under

bindings already reached. 可配置的IP地址和MAC地址超过上限。	guidance. 可配置的IP地址和MAC地址超过上限,请按照配置说明修改
Configuration failed. Please disable ARP gateway protection first. 配置ARP过滤保护功能失败。需要先关闭ARP网关保护功能。	Please disable ARP gateway protection first, please modify configuration under guidance. 配置ARP过滤保护需要先关闭ARP网关保护功能,请按照配置说明修改

## ARP/ArpSnooping

Message	Explanation
The VLAN doesn't exist. 该VLAN不存在。	The VLAN does not exist when set the configuration. 配置时 VLAN 不存在

## ARP/ArpVsiConfig

Message	Explanation
VPN-Instance does not exist. 该VRF不存在。	The VPN-Instance does not exist when set the configuration. 配置时对应 VPN 不存在
Invalid MAC address. 非法的MAC地址。	Invalid MAC address configuration. 非法的 MAC 地址配置。
Invalid IP address. 非法的IP地址。	Invalid IP address configuration 无效的 IP 地址配置
The VPN instance of the configured entry is different from that of the interface. 配置表项的VRF与接口的VRF不相同。	The VPN instance of the configured entry is different from that of the interface., please modify configuration under guidance. 配置表项的VRF与接口的VRF不相同。请按照配置说明修改
Configuration items don't meet the requirements. 不符合配置要求。	Invalid configuration, please modify configuration under guidance. 无效配置, 请按照配置说明修改
Maximum number of ARP entries already reached. 已到达ARP表项的上限。	Maximum number of ARP entries already reached,please check configuration or specifications. 已到达 ARP 表项的上限,请检查配置或者设备规格
The VSI doesn't exist. 指定的VSI不存在。	The VSI does not exist when set the configuration. 配置时VSI不存在

The VSI interface is not associated with the VSI. 指定的VSI虚接口与VSI未绑定。	The VSI interface is not associated with the VSI, please check configuration . 指定的VSI虚接口与VSI未绑定。请检查配置。
The Ethernet service instance doesn't exist. 以太网服务实例不存在。	The Ethernet service instance doesn't exist, please check configuration. 以太网服务实例不存在,请检查配置
The Ethernet interface and Ethernet service instance are not mapped to the VSI. 以太接口和以太网服务实例与VSI未关联。	The Ethernet interface and Ethernet service instance are not mapped to the VSI, please check configuration. 以太接口和以太网服务实例与VSI未关联, 请检查配置

## ARP/ArpScan

Message	Explanation
Invalid IP address. 非法的IP地址。	Invalid IP address configuration. 非法的 IP 地址配置。
Start IP address must be lower than or equal to end IP address. 起始IP地址必须低于或者等于终止IP地址。	Start IP address must be lower than or equal to end IP address, please modify configuration under guidance. 起始IP地址必须低于或者等于终止IP地址,请按照配置说明修改
The interface is down or has no IP address configured. 扫描接口处于关闭状态或者未配置IP地址。	The interface is down or has no IP address configured, please modify configuration under guidance. 扫描接口处于关闭状态或者未配置 IP 地址, 请按照配置说明修改
The start and end IP addresses must be on the same subnet as the interface IP address. 起始IP地址和终止IP地址必须与扫描接口IP地址在相同的网段。	The start and end IP addresses must be on the same subnet as the interface IP address, please modify configuration under guidance. 起始 IP 地址和终止 IP 地址必须与扫描接口 IP 地址在相同的网段,请按照配置说明修改
ARP scanning is interrupted. 扫描表项过程中断。	ARP scanning is interrupted,please try again. 扫描表项过程中断,请再试一次

## ARP/ArpFixup

Message	Explanation
Maximum number of ARP entries already reached.	Maximum number of ARP entries already reached, please modify configuration under guidance.

已到达ARP表项的上限。	已到达 ARP 表项的上限，请检查配置或者设备规格
--------------	---------------------------

## ARP/ArpClearTable

Message	Explanation
Invalid IP address. 非法的IP地址。	Invalid IP address configuration 无效的 IP 地址配置

# ARPSYNC

## ARPSYNC/ARPCConfig

This table contains ARP table synchronization information.

### XML structure

```
<ARPSYNC>
  <ARPCConfig>
    <ARPEnable>
      <Enable></Enable>
      <Interval></Interval>
      <Timeout></Timeout>
    </ARPEnable>
  </ARPCConfig>
</ARPSYNC>
```

### Table description

Item	Description
Feature name	ARPSYNC
Table name	ARPCConfig
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ARPEnable	ARP table synchronization information.	Data structure	Members include: <ul style="list-style-type: none"><li>• Enable</li><li>• Interval</li><li>• Timeout</li></ul>	N/A
Enable	Whether to enable the rule.	N/A	Boolean: <ul style="list-style-type: none"><li>• true—Enable.</li><li>• false—Disable.</li></ul>	N/A
Interval	ARP table synchronization request interval.	N/A	Unassigned integer. Value range: 5 to 30 seconds.	N/A.

Column name	Column description	Column type	Data type and restrictions	Remarks
Timeout	Request timeout.	N/A	Unassigned integer. Value range: 1 to 5 seconds.	N/A.

## ARPSYNC/ServerList

This table contains SNMP server information.

### XML structure

```

<ARPSYNC>
  <ServerList>
    <ServerConfigInfo>
      <Index></Index>
      <SNMPVersion></SNMPVersion>
      <IPAddress></IPAddress>
      <CommunityName></CommunityName>
      <UserName></UserName>
      <SecurityParam>
        <AuthProtocol></AuthProtocol>
        <AuthKey></AuthKey>
        <PrivProtocol></PrivProtocol>
        <PrivKey></PrivKey>
      </SecurityParam>
    </ServerConfigInfo>
  </ServerList>
</ARPSYNC>

```

### Table description

Item	Description
Feature name	ARPSYNC
Table name	ServerList
Table type	Multi-instance table
Row name	ServerConfigInfo
Restrictions	None
Support for row creation and deletion	Yes

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Index number	Index	Unassigned integer. Value range: 0 to 64.	To create an SNMP server, set this column to 64.
SNMPVersion	SNMP version.	N/A	Enumeration: <ul style="list-style-type: none"> <li>2—v2c.</li> <li>3—v3.</li> </ul>	N/A
IPAddress	IP address of the SNMP server.	N/A	IPv4: String, dotted decimal notation.	IPv4 address example: 1.1.1.1.
CommunityName	SNMP v2c community name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	Applicable only when 'SNMP version' is 'v2c'.
UserName	SNMP v3 user name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	Applicable only when 'SNMP version' is 'v3'.
SecurityParam	Security parameters of this user.	Data structure	Members include: <ul style="list-style-type: none"> <li>AuthProtocol</li> <li>AuthKey</li> <li>PrivProtocol</li> <li>PrivKey</li> </ul>	Applicable only when 'SNMP version' is 'v3'.  'PrivProtocol' and 'PrivKey' must be specified with 'AuthProtocol' and 'AuthKey' together.
AuthProtocol	Authentication algorithm	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—NoAuth.</li> <li>1—SHA.</li> <li>2—MD5.</li> </ul>	N/A
AuthKey	Authentication key	N/A	String. Length: 8 to 64 characters.	Plaintext key string. Must be specified with AuthProtocol.
PrivProtocol	Encryption algorithm for privacy	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—NoPriv.</li> <li>1—AES128.</li> <li>2—DES56.</li> </ul>	N/A
PrivKey	Privacy key	N/A	String. Length: 8 to 64 characters.	Plaintext key string. Must be specified with PrivProtocol.

# ARPSYNC

## ARPSYNC/ARPCConfig

This table contains ARP table synchronization information.

### XML structure

```
<ARPSYNC>
  <ARPCConfig>
    <ARPEnable>
      <Enable></Enable>
      <Interval></Interval>
      <Timeout></Timeout>
    </ARPEnable>
  </ARPCConfig>
</ARPSYNC>
```

### Table description

Item	Description
Feature name	ARPSYNC
Table name	ARPCConfig
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ARPEnable	ARP table synchronization information.	Data structure	Members include: <ul style="list-style-type: none"><li>• Enable</li><li>• Interval</li><li>• Timeout</li></ul>	N/A
Enable	Whether to enable the rule.	N/A	Boolean: <ul style="list-style-type: none"><li>• true—Enable.</li><li>• false—Disable.</li></ul>	N/A
Interval	ARP table synchronization request interval.	N/A	Unassigned integer. Value range: 5 to 30 seconds.	N/A
Timeout	Request timeout.	N/A	Unassigned integer.	N/A

			Value range: 1 to 5 seconds.	
--	--	--	------------------------------	--

## ARPSYNC/ServerList

This table contains SNMP server information.

### XML structure

```
<ARPSYNC>
  <ServerList>
    <ServerConfigInfo>
      <Index></Index>
      <SNMPVersion></SNMPVersion>
      <IPAddress></IPAddress>
      <CommunityName></CommunityName>
      <UserName></UserName>
      <SecurityParam>
        <AuthProtocol></AuthProtocol>
        <AuthKey></AuthKey>
        <PrivProtocol></PrivProtocol>
        <PrivKey></PrivKey>
      </SecurityParam>
    </ServerConfigInfo>
  </ServerList>
</ARPSYNC>
```

### Table description

Item	Description
Feature name	ARPSYNC
Table name	ServerList
Table type	Multi-instance table
Row name	ServerConfigInfo
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Index number	Index	Unassigned integer. Value range: 0 to 64.	To create an SNMP server, set this column to 64.
SNMPVersion	SNMP version.	N/A	Enumeration: • 2—v2c.	N/A

			<ul style="list-style-type: none"> <li>3—v3.</li> </ul>	
IPAddress	IP address of the SNMP server.	N/A	IPv4: String, dotted decimal notation	IPv4 address example: 1.1.1.1.
CommunityName	SNMP v2c community name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	Applicable only when 'SNMP version' is 'v2c'.
UserName	SNMP v3 user name.	N/A	String, case-insensitive. Length: 1 to 32 characters.	Applicable only when 'SNMP version' is 'v3'.
SecurityParam	Security parameters of this user.	Data structure	Members include: <ul style="list-style-type: none"> <li>AuthProtocol.</li> <li>AuthKey.</li> <li>PrivProtocol.</li> <li>PrivKey.</li> </ul>	Applicable only when 'SNMP version' is 'v3'.  'PrivProtocol' and 'PrivKey' must be specified with 'AuthProtocol' and 'AuthKey' together.
AuthProtocol	Authentication algorithm.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—NoAuth.</li> <li>1—SHA.</li> <li>2—MD5.</li> </ul>	N/A
AuthKey	Authentication key.	N/A	String. Length: 8 to 64 characters.	Plaintext key string. Must be specified with 'AuthProtocol'.
PrivProtocol	Encryption algorithm for privacy.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—NoPriv.</li> <li>1—AES128.</li> <li>2—DES56.</li> </ul>	N/A
PrivKey	Privacy key.	N/A	String. Length: 8 to 64 characters.	Plaintext key string. Must be specified with 'PrivProtocol'.

## ARPSYNC/ARPTable

This table contains ARP table synchronization information.

### XML structure

```

<ARPSYNC>
  <ARPTable>
    <ARPTableInfo>
      <Index></Index>
      <IPAddr></IPAddr>
      <MACAddr></MACAddr>
      <Aging></Aging>
      <Count></Count>
    </ARPTableInfo>
  </ARPTable>

```

</ARPSYNC>

## ASPF/Policies

This table contains ASPF policy configurations.

### XML structure

```
<ASPF>
  <Policies>
    <Policy>
      <PolicyNumber></PolicyNumber>
      <ICMPErrDrop></ICMPErrDrop>
      <TCPSynCheck></TCPSynCheck>
    </Policy>
  </Policies>
</ASPF>
```

### Table description

Item	Description
Feature name	ASPF
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyNumber	ASPF policy number.	Index	Unsigned integer. Value range: 1 to 256.	N/A
ICMPErrDrop	Whether enable ICMP error message check and drop faked messages.	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—YES.</li><li><b>false</b>—NO(default).</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TCPSynCheck	Whether enable TCP SYN check.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—YES</li> <li><b>false</b>—NO(default).</li> </ul>	TCP SYN check checks the first packet to establish a TCP connection whether it is a SYN packet. If the first packet is not a SYN packet, ASPF drops the packet.

## ASPF/DetectL4Protocols

This table contains the transport layer protocols inspected by ASPF policies.

### XML structure

```
<ASPF>
  <DetectL4Protocols>
    <Protocol>
      <PolicyNumber></PolicyNumber>
      <ProtocolID></ProtocolID>
      <EnableDetect></EnableDetect>

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
InterfaceApply	Support apply an ASPF policy to interfaces.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
ZonePairApply	Support apply an ASPF policy to security zone pairs.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
DetectAppAction	Whether support set illegal packet's action of application layer protocol.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
DetectDCCP	<b>Whether support DCCP transport layer protocol detection.</b>	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DetectDNS	<b>Whether support DNS application layer protocol detection.</b>	N/A	Boolean: • true • false	N/A
DetectFTP	<b>Whether support FTP application layer protocol detection.</b>	N/A	Boolean: • true • false	N/A
DetectGTP	<b>Whether support GTP application layer protocol detection.</b>	N/A	Boolean: • true • false	N/A
DetectH323	<b>Whether support H323 application layer protocol detection.</b>	N/A	Boolean: • true • false	N/A
DetectHTTP	<b>Whether support HTTP application layer protocol detection.</b>	N/A	Boolean: • true • false	N/A
DetectICMP	<b>Whether support ICMP transport layer protocol detection.</b>	N/A	Boolean: • true • false	N/A
DetectICMPv6	<b>Whether support ICMPv6 transport layer protocol detection.</b>	N/A	Boolean: • true • false	N/A
DetectILS	<b>Whether support ILS application layer protocol detection.</b>	N/A	Boolean: • true • false	N/A
DetectMGCP	<b>Whether support MGCP application layer protocol detection.</b>	N/A	Boolean: • true • false	N/A
DetectNBT	<b>Whether support NBT application layer protocol detection.</b>	N/A	Boolean: • true • false	N/A
DetectPPTP	<b>Whether support PPTP application layer protocol detection.</b>	N/A	Boolean: • true • false	N/A
DetectRAWIP	<b>Whether support RAWIP transport layer protocol detection.</b>	N/A	Boolean: • true • false	N/A
DetectRSH	<b>Whether support RSH application layer protocol detection.</b>	N/A	Boolean: • true • false	N/A
DetectRTSP	<b>Whether support RTSP application layer protocol detection.</b>	N/A	Boolean: • true • false	N/A
DetectSCCP	<b>Whether support SCCP application layer</b>	N/A	Boolean: • true	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	<b>protocol detection.</b>		<ul style="list-style-type: none"> <li>• <b>false</b></li> </ul>	
DetectSCTP	<b>Whether support SCTP transport layer protocol detection.</b>	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
DetectSIP	<b>Whether support SIP application layer protocol detection.</b>	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
DetectSMTP	<b>Whether support SMTP application layer protocol detection.</b>	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
DetectSQLNET	<b>Whether support SQLNET application layer protocol detection.</b>	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
DetectTCP	<b>Whether support TCP transport layer protocol detection.</b>	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
DetectTFTP	<b>Whether support TFTP application layer protocol detection.</b>	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
DetectUDP	<b>Whether support UDP transport layer protocol detection.</b>	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
DetectUDP-Lite	<b>Whether support UDP-Lite transport layer protocol detection.</b>	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
DetectXDMCP	<b>Whether support XDMCP application layer protocol detection.</b>	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A

# ATK

## ATK/ClearInterfaceAttackStatistics

This table is used to clear interface ATK statistics.

### XML structure

```
<ATK>
  <ClearInterfaceAttackStatistics>
    <Statistics>
      <IfIndex></IfIndex>
      <Clear></Clear>
    </Statistics>
  </ClearInterfaceAttackStatistics>
</ATK>
```

### Table description

Item	Description
Feature name	ATK
Table name	ClearInterfaceAttackStatistics
Table type	Multi-instance table
Row name	Statistics
Restrictions	None.

### Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
Clear	Clear interface statistics	N/A	This column must be empty.

## ATK/ClearLocalAttackStatistics

This table is used to clear local ATK statistics.

## XML structure

```
<ATK>
  <ClearLocalAttackStatistics>
    <Clear></Clear>
  </ClearLocalAttackStatistics>
</ATK>
```

## Table description

Item	Description
Feature name	ATK
Table name	ClearLocalAttackStatistics
Table type	Single-instance table
Row name	N/A
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions
Clear	Clear local statistics	N/A	This column must be empty.

## ATK/ClearZoneAttackStatistics

This table is used to clear ATK statistics for a security zone.

## XML structure

```
<ATK>
  <ClearZoneAttackStatistics >
    <Statistics>
      <ZoneID></ZoneID>
      <Clear></Clear>
    </Statistics>
  </ClearZoneAttackStatistics >
</ATK>
```

## Table description

Item	Description
Feature name	ATK
Table name	ClearZoneAttackStatistics

Item	Description
Table type	Multi-instance table
Row name	Statistics
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ZoneID	Security zone ID	Index	Unsigned integer.
Clear	Clear ATK statistics	N/A	This column must be empty.

## ATK/Blacklist/IPv4Blacklists

This table is used to clear ipv4blacklist.

## XML structure

```

<ATK>
  <Blacklist>
    <IPv4Blacklists>
      <Item>
        <VrfIndex></VrfIndex>
        <Ipv4Address></Ipv4Address>
        <DSLitePeer></DSLitePeer>
        <Clear></Clear>
      </Item>
    </IPv4Blacklists>
  </Blacklist>
</ATK>

```

## Table description

Item	Description
Feature name	ATK
Table name	IPv4Blacklists
Table type	Multi-instance table
Row name	Item
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Vpn index	Index	Unsigned integer.	N/A
Ipv4Address	Ip address	Index	Ipv4 address.	N/A
DSLitePeer	Ip address	Index	Ipv6 address	In DS-Lite network, this parameter refers to B4 addresses. Leave it empty in other circumstances.
Clear	Clear local statistics	N/A	This column must be empty.	N/A

## ATK/Blacklist/IPv6Blacklists

This table is used to clear ipv6blacklist.

## XML structure

```
<ATK>
  <Blacklist>
    <IPv6Blacklists>
      <Item>
        <VrfIndex></VrfIndex>
        <Ipv6Address></Ipv6Address>
        <Clear></Clear>
      </Item>
    </IPv6Blacklists>
  </Blacklist>
</ATK>
```

## Table description

Item	Description
Feature name	ATK
Table name	IPv6Blacklists
Table type	Multi-instance table
Row name	Item
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions
VrfIndex	Vpn index	Index	Unsigned integer.
Ipv6Address	Ip address	Index	Ipv6 address.
Clear	Clear local statistics	N/A	This column must be empty.

## ATK/Blacklist/ClearItems

This table is used to clear blacklist items.

## XML structure

```
<ATK>
  <Blacklist>
    <ClearItems>
      <Item>
        <AddrFamily></AddrFamily>
        <Clear></Clear>
      </Item>
    </ClearItems>
  </Blacklist>
</ATK>
```

## Table description

Item	Description
Feature name	ATK
Table name	ClearItems
Table type	Multi-instance table
Row name	item
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions
AddrFamily	Address family	Index	Enumeration: <ul style="list-style-type: none"><li>• 2—IPv4.</li><li>• 10—IPv6.</li></ul>

Column name	Column description	Column type	Data type and restrictions
Clear	Clear blacklist items	N/A	This column must be empty.

## ATK/Blacklist/IPv4DstBlacklists

This table is used to clear IPv4 destination blacklist.

### XML structure

```

<ATK>
  <Blacklist>
    <IPv4DstBlacklists>
      <Item>
        <VrfIndex></VrfIndex>
        <Ipv4Address></Ipv4Address>
        <Clear></Clear>
      </Item>
    </IPv4DstBlacklists>
  </Blacklist>
</ATK>

```

### Table description

Item	Description
Feature name	ATK
Table name	IPv4DstBlacklists
Table type	Multi-instance table
Row name	Item
Restrictions	None.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Vpn index	Index	Unsigned integer.	N/A
Ipv4Address	Ip address	Index	IPv4 address.	N/A
Clear	Clear local statistics	N/A	This column must be empty.	N/A

# ATK/Blacklist/IPv6DstBlacklists

This table is used to clear IPv6 destination blacklist.

## XML structure

```
<ATK>
  <Blacklist>
    <IPv6DstBlacklists>
      <Item>
        <VrfIndex></VrfIndex>
        <Ipv6Address></Ipv6Address>
        <Clear></Clear>
      </Item>
    </IPv6DstBlacklists>
  </Blacklist>
</ATK>
```

## Table description

Item	Description
Feature name	ATK
Table name	IPv6DstBlacklists
Table type	Multi-instance table
Row name	Item
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions
VrfIndex	Vpn index	Index	Unsigned integer.
Ipv6Address	Ip address	Index	IPv6 address.
Clear	Clear local statistics	N/A	This column must be empty.

# ATK/Blacklist/ClearDstItems

This table is used to clear destination blacklist items.

## XML structure

```
<ATK>
```

```

<Blacklist>
  <ClearDstItems>
    <Item>
      <AddrFamily></AddrFamily>
      <Clear></Clear>
    </Item>
  </ClearDstItems>
</Blacklist>
</ATK>

```

## Table description

Item	Description
Feature name	ATK
Table name	ClearDstItems
Table type	Multi-instance table
Row name	item
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions
AddrFamily	Address family	Index	Enumeration: <ul style="list-style-type: none"> <li>2—IPv4.</li> <li>10—IPv6.</li> </ul>
Clear	Clear blacklist items	N/A	This column must be empty.

## ATK/Blacklist/ClearStatistics

This table is used to clear blacklist statistics.

## XML structure

```

<ATK>
  <Blacklist>
    <ClearStatistics>
      <Clear></Clear>
    </ClearStatistics>
  </Blacklist>
</ATK>

```

## Table description

Item	Description
Feature name	ATK
Table name	ClearStatistics
Table type	Single-instance table
Row name	N/A
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions
Clear	Clear blacklist statistics	N/A	This column must be empty.

# ATK/ClientVerify/ClearProtectHostStatistics

This table is used to clear client verification protected hosts' statistics.

## XML structure

```
<ATK>
  <ClientVerify>
    <ClearProtectHostStatistics>
      <Statistics>
        <VerifyType></VerifyType>
        <AddrFamily></AddrFamily>
        <Clear></Clear>
      </Statistics>
    </ClearProtectHostStatistics>
  </ClientVerify>
</ATK>
```

## Table description

Item	Description
Feature name	ATK
Table name	ClearProtectHostStatistics
Table type	Multi-instance table
Row name	Statistics
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions
VerifyType	Verification type	Index	Enumeration: <ul style="list-style-type: none"><li>• 0—TCP proxy</li><li>• 1—DNS client verification.</li><li>• 2—HTTP client verification.</li><li>• 3—DNS reply verification.</li><li>• 4—SIP client verification.</li></ul>
AddrFamily	Address family	Index	Enumeration: <ul style="list-style-type: none"><li>• 2—IPv4.</li><li>• 10—IPv6.</li></ul>
Clear	Clear protected hosts' statistics	N/A	This column must be empty.

## ATK/ClientVerify/ClearTrustClients

This table is used to clear client verification authenticated clients.

## XML structure

```
<ATK>
  <ClientVerify>
    <ClearTrustClients>
      <Client>
        <VerifyType></VerifyType>
        <AddrFamily></AddrFamily>
        <Clear></Clear>
      </Client>
    </ClearTrustClients>
  </ClientVerify>
</ATK>
```

## Table description

Item	Description
Feature name	ATK
Table name	ClearTrustClients
Table type	Multi-instance table

Item	Description
Row name	Client
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions
VerifyType	Verification type	Index	Enumeration: <ul style="list-style-type: none"> <li>• 0—TCP proxy</li> <li>• 1—DNS client verification.</li> <li>• 2—HTTP client verification.</li> <li>• 3—DNS reply verification.</li> <li>• 4—SIP client verification.</li> </ul>
AddrFamily	Address family	Index	Enumeration: <ul style="list-style-type: none"> <li>• 2—IPv4.</li> <li>• 10—IPv6.</li> </ul>
Clear	Clear trust clients	N/A	This column must be empty.

# ATK

## ATK/Policies

This table is used to operate ATK policies.

### XML structure

```
<ATK>
  <Policies>
    <Policy>
      <PolicyName></PolicyName>
    </Policy>
  </Policies>
</ATK>
```

### Table description

Item	Description
Feature name	ATK
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive

## ATK/PolicyInterfaces

This table is used to operate ATK policy appliances on interfaces.

### XML structure

```
<ATK>
  <PolicyInterfaces>
```

```

    <Apply>
      <IfIndex></IfIndex>
      <PolicyName></PolicyName>
    </Apply>
  </PolicyInterfaces>
</ATK>

```

## Table description

Item	Description
Feature name	ATK
Table name	PolicyInterfaces
Table type	Multi-instance table
Row name	Apply
Restrictions	None.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
PolicyName	Name of Attack Defense policy	N/A	String. Length: 1 to 31 characters.	Case insensitive

## ATK/PolicyZones

This table is used to apply an attack defense policy to a security zone.

## XML structure

```

<ATK>
  <PolicyZones>
    <Apply>
      <ZoneID></ZoneID>
      <PolicyName></PolicyName>
    </Apply>
  </PolicyZones>
</ATK>

```

## Table description

Item	Description
Feature name	ATK
Table name	PolicyZones
Table type	Multi-instance table
Row name	Apply
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ZoneID	Security zone ID	Index	Unsigned integer.	N/A
PolicyName	Attack defense policy name	N/A	String. Length: 1 to 31 characters.	Case insensitive. Valid characters include letters, digits, underscores (_), and hyphens (-).

## ATK/PolicyLocal

This table is used to operate local ATK policy appliance.

## XML structure

```
<ATK>
  <PolicyLocal>
    <PolicyName></PolicyName>
  </PolicyLocal>
</ATK>
```

## Table description

Item	Description
Feature name	ATK
Table name	PolicyLocal
Table type	Single-instance table
Row name	N/A
Restrictions	None.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	N/A	String. Length: 1 to 31 characters.	Case insensitive

## ATK/IPv4Exempts

This table contains IPv4 exemption information

## XML structure

```
<ATK>
  <IPv4Exempts>
    <Exempt>
      <PolicyName></PolicyName>
      <AclNum></AclNum>
      <AclName></AclName>
    </Exempt>
  </IPv4Exempts>
</ATK>
```

## Table description

Item	Description
Feature name	ATK
Table name	IPv4Exempts
Table type	Multi-instance table
Row name	Exempt
Restrictions	None.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive
AclNum	Acl number	N/A	Unsigned integer. Value range: 2000 to 3999	AclNum and AclName are

Column name	Column description	Column type	Data type and restrictions	Remarks
				mutual exclusive and only one of them can be set in a single message.
AclName	Acl name	N/A	String. Length: 1 to 63 characters.	AclNum and AclName are mutual exclusive and only one of them can be set in a single message.

## ATK/IPv6Exempts

This table contains IPv6 exemption information

### XML structure

```

<ATK>
  <IPv6Exempts>
    <Exempt>
      <PolicyName></PolicyName>
      <AclNum></AclNum>
      <AclName></AclName>
    </Exempt>
  </IPv6Exempts>
</ATK>

```

### Table description

Item	Description
Feature name	ATK
Table name	IPv6Exempts
Table type	Multi-instance table
Row name	Exempt
Restrictions	None.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive
AclNum	Acl number	N/A	Unsigned integer. Value range: 2000 to 3999	AclNum and AclName are mutual exclusive and only one of them can be set in a single message.
AclName	Acl name	N/A	String. Length: 1 to 63 characters.	AclNum and AclName are mutual exclusive and only one of them can be set in a single message.

## ATK/Scan/Policies

This table contains scan policy information.

### XML structure

```
<ATK>
  <Scan>
    <Policies>
      <Policy>
        <PolicyName></PolicyName>
        <Level></Level>
        <UserDefinedCfg>
          <PortScanEnable></PortScanEnable>
          <PortScanThreshold></PortScanThreshold>
          <IPSweepEnable></IPSweepEnable>
          <IPSweepThreshold></IPSweepThreshold>
          <Period></Period>
        </UserDefinedCfg>
        <Log></Log>
        <Drop></Drop>
        <BlockSource>
          <Enable></Enable>
          <BlockTime></BlockTime>
        </BlockSource>
      </Policy>
    </Policies>
```

</Scan>  
</ATK>

## Table description

Item	Description
Feature name	ATK
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String,case-insensitive. Length: 1 to 31 characters.	N/A
Level	Scan detect level	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—Don't detect.</li> <li>• 1—Low sensibility.</li> <li>• 2—Middle sensibility.</li> <li>• 3—High sensibility.</li> <li>• 4—User defined sensibility.</li> </ul>	UserDefinedCfg and its members are available only in scan detect level 4.
UserDefinedCfg	Custom scan detection configuration.	Data struct	Members include: <ul style="list-style-type: none"> <li>• PortScanEnable</li> <li>• PortScanThreshold</li> <li>• IPSweepEnable</li> <li>• IPSweepThreshold</li> </ul> Period	N/A
PortScanEnable	Port scan detection switch.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true.</li> <li>• false.</li> </ul>	Default is false.
PortScanThreshold	Port scan detection threshold.	N/A	Signed integer. Value range: 1 to 1000000000 pps.	Value must be set if PortScanEnable is true.
IPSweepEnable	IP sweep detection switch.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true.</li> <li>• false.</li> </ul>	Default is false.
IPSweepThreshold	IP sweep detection threshold.	N/A	Signed integer. Value range: 1 to 1000000000 pps.	Value must be set if IPSweepEnable is true.

Column name	Column description	Column type	Data type and restrictions	Remarks
Period	Detection cycle.	N/A	Signed integer. Value range: 1 to 1000000000 seconds.	Default detection cycle is 10 seconds.
Log	Log switch	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	Default is false.
Drop	Drop packet switch	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	Default is false. Drop and BlockSource are mutually exclusive and only one of them can be set in a single message.
BlockSource	Block source configs	Data struct	Members include: <ul style="list-style-type: none"> <li>• <b>Enable</b></li> <li>• <b>BlockTime</b></li> </ul>	Drop and BlockSource are mutually exclusive and only one of them can be set in a single message.
Enable	Block source switch.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	Default is false.
BlockTime	Source block duration.	N/A	Unsigned integer, value range 1 to 1000 minutes.	Default is 10 minutes. When and only when Enable is true, this column is useful.

## ATK/Flood/DefaultConfigs

This table contains flood default configurations.

### XML structure

```

<ATK>
  <Flood>
    <DefaultConfigs>
      <Config>
        <PolicyName></PolicyName>
        <MainType></MainType>
        <SubType></SubType>
        <Log></Log>
        <Drop></Drop>
        <ClientVerify></ClientVerify>
        <Threshold></Threshold>

```

```

    <MonitorPort></MonitorPort>
    <NonSpecificSwitch></NonSpecificSwitch>
  </Config>
</DefaultConfigs>
</Flood>
</ATK>

```

## Table description

Item	Description
Feature name	ATK
Table name	DefaultConfigs
Table type	Multi-instance table
Row name	Config
Restrictions	None.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive
Maintype	Main flood type	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Transport layer flood.</li> <li>1—Application layer flood.</li> </ul>	N/A
SubType	Sub flood type	Index	Enumeration, value range varies according to MainType.  For transport layer flood: <ul style="list-style-type: none"> <li>0—SYN flood.</li> <li>1—ACK flood.</li> <li>2—SYN-ACK flood.</li> <li>3—RESET flood.</li> <li>4—FIN flood.</li> <li>5—UDP flood.</li> <li>6—ICMP flood.</li> <li>7—ICMPv6 flood.</li> </ul> For application layer flood: <ul style="list-style-type: none"> <li>0—DNS flood.</li> <li>1—HTTP flood.</li> <li>2—DNS reply flood.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>3—SIP flood.</li> </ul>	
Log	Log switch	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Default is false.
Drop	Drop packet switch	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Default is false.
ClientVerify	Client verification switch	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Default is false.
Threshold	Flood detect threshold	N/A	Signed integer, value range: 1 to 1000000 pps.	Default value is 1000
MonitorPort	Monitor service port range	N/A	Port range string, port value range: 1 to 65535.	Support Application layer only for now. For http flood, default monitored port is 80. For DNS flood, default monitored port is 53. For DNS reply flood, default monitored port is 53. For SIP flood, default monitored port is 5060. For example, "80,8000-8080" can be set as default monitored ports for http flood detecting. At most specify a maximum of 32 port items.
NonSpecificSwitch	Non specific protect hosts detect switch	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li>false</li> </ul>	Default value is false which means only detect protect hosts.

## ATK/Flood/IPv4ProtectHosts

This table contains IPv4 flood protect hosts information.

## XML structure

```

Table name	LevelActions
Table type	Multi-instance table
Row name	LevelAction
Restrictions	None.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive
Level	Severity level	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Information.</li> <li>1—Low.</li> <li>2—Medium.</li> <li>3—High.</li> </ul>	N/A
Log	Log switch	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li>false</li> </ul>	Default value is true
Drop	Drop packet switch	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li>false</li> </ul>	The default value varies by severity level. For information level or low level, default value is false. For medium level or high level default value is true.

# ATK/Signature/LogAggregate

This table contains signature log aggregation information.

## XML structure

```
<ATK>
  <Signature>
    <LogAggregate>
      <Enable></Enable>
    </LogAggregate>
  </Signature>
</ATK>
```

## Table description

Item	Description
Feature name	ATK
Table name	LogAggregate
Table type	Single-instance table
Row name	N/A
Restrictions	None.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Log aggregate switch.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	Default is true.

# ATK/Blacklist/IPv4Blacklists

This table contains IPv4 blacklist information.

## XML structure

```
<ATK>
  <Blacklist>
    <IPv4Blacklists>
      <Item>
        <VrfIndex></VrfIndex>
      </Item>
    </IPv4Blacklists>
  </Blacklist>
</ATK>
```

```

        <Ipv4Address></Ipv4Address>
        <DSLitePeer></DSLitePeer>
        <TTL></TTL>
    </Item>
</IPv4Blacklists>
</Blacklist>
</ATK>

```

## Table description

Item	Description
Feature name	ATK
Table name	IPv4Blacklists
Table type	Multi-instance table
Row name	Item
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Vrf index	Index	Unsigned integer, 0 represents public vrf.	N/A
Ipv4Address	IPv4 blacklist address	Index	IPv4 address.	N/A
DSLitePeer	DS-Lite tunnel peer address	Index	IPv6 address.	In DS-Lite network, this parameter refers to B4 addresses. Leave it empty in other circumstances.
TTL	Time to live	N/A	Unsigned integer, unit second, value range: 60 to 604800 second.	N/A

## ATK/Blacklist/IPv6Blacklists

This table contains IPv6 blacklist information.

## XML structure

```

<ATK>
  <Blacklist>

```

```

<IPv6Blacklists>
  <Item>
    <VrfIndex></VrfIndex>
    <Ipv6Address></Ipv6Address>
    <TTL></TTL>
  </Item>
</IPv6Blacklists>
</Blacklist>
</ATK>

```

## Table description

Item	Description
Feature name	ATK
Table name	IPv6DstBlacklists
Table type	Multi-instance table
Row name	Item
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
VrfIndex	Vpn index	Index	Unsigned integer, 0 represents public vrf.
Ipv6Address	IPv6 blacklist address	Index	IPv6 address.
AgingTime	Time to live	N/A	Unsigned integer, unit second, value range: 60 to 604800 second.

## ATK/Blacklist/InterfaceSwitches

This table contains blacklist interface switch information.

## XML structure

```

<ATK>
  <Blacklist>
    <InterfaceSwitches>
      <Switch>
        <IfIndex></IfIndex>
        <Enable></Enable>
      </Switch>
    </InterfaceSwitches>
  </Blacklist>
</ATK>

```

## Table description

Item	Description
Feature name	ATK
Table name	InterfaceSwitches
Table type	Multi-instance table
Row name	Switch
Restrictions	None.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
Enable	Blacklist switch.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	Default is false.

## ATK/Blacklist/ZoneSwitches

This table is used to configure the blacklist for a security zone.

## XML structure

```
<ATK>
  <Blacklist>
    <ZoneSwitches>
      <Switch>
        <ZoneID></ZoneID>
        <Enable></Enable>
      </Switch>
    </ZoneSwitches>
  </Blacklist>
</ATK>
```

## Table description

Item	Description
Feature name	ATK
Table name	ZoneSwitches
Table type	Multi-instance table
Row name	Switch

Item	Description
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
ZoneID	Security zone ID	Index	Unsigned integer.
Enable	Whether to enable the blacklist	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables the blacklist.</li> <li><b>false</b>—Disables the blacklist (default).</li> </ul>

## ATK/Blacklist/GlobalConfigs

This table contains blacklist global configuration information.

## XML structure

```

<ATK>
  <Blacklist>
    <GlobalConfigs>
      <Enable></Enable>
      <Log></Log>
    </GlobalConfigs>
  </Blacklist>
</ATK>

```

## Table description

Item	Description
Feature name	ATK
Table name	GlobalConfigs
Table type	Single-instance table
Row name	N/A
Restrictions	None.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Global switch.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	Default is false.
Log	Log switch	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	Default is false.

## ATK/Whitelist/IPv4ObjItems

This table contains IPv4 whitelist information.

## XML structure

```
<ATK>
  <Whitelist>
    <IPv4ObjItems>
      <Item>
        <ObjGrpName></ObjGrpName>
      </Item>
    </IPv4ObjItems>
  </Whitelist>
</ATK>
```

## Table description

Item	Description
Feature name	ATK
Table name	IPv4ObjItems
Table type	Multi-instance table
Row name	Item
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ObjGrpName	Object group IP Name	Index	String, case insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 31 characters.	

## ATK/Whitelist/IPv6ObjItems

This table contains IPv6 whitelist information.

### XML structure

```

<ATK>
  <Whitelist>
    <IPv6ObjItems>
      <Item>
        <ObjGrpName></ObjGrpName>
      </Item>
    </IPv6ObjItems>
  </Whitelist>
</ATK>

```

### Table description

Item	Description
Feature name	ATK
Table name	IPv6ObjItems
Table type	Multi-instance table
Row name	Item
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ObjGrpName	Object group IPv6 Name	Index	String, case insensitive. Length: 1 to 31 characters.	N/A

# ATK/Whitelist/InterfaceSwitches

This table is used to configure the whitelist for an interface.

## XML structure

```
<ATK>
  <Whitelist>
    <InterfaceSwitches>
      <Switch>
        <IfIndex></IfIndex>
        <Enable></Enable>
      </Switch>
    </InterfaceSwitches>
  </Whitelist>
</ATK>
```

## Table description

Item	Description
Feature name	ATK
Table name	InterfaceSwitches
Table type	Multi-instance table
Row name	Switch
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Enable	Enable or disable	N/A	Boolean:	Default is false.

Column name	Column description	Column type	Data type and restrictions	Remarks
	the whitelist function		<ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	

## ATK/Whitelist/ZoneSwitches

This table is used to configure the whitelist for a security zone.

### XML structure

```

<ATK>
  <Whitelist>
    <ZoneSwitches>
      <Switch>
        <ZoneID></ZoneID>
        <Enable></Enable>
      </Switch>
    </ZoneSwitches>
  </Whitelist>
</ATK>

```

### Table description

Item	Description
Feature name	ATK
Table name	ZoneSwitches
Table type	Multi-instance table
Row name	Switch
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ZoneID	Security zone ID	Index	Unsigned integer.	N/A
Enable	Enable or disable the whitelist	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Default is false.

# ATK/Whitelist/GlobalSwitches

This table contains whitelist global switch information.

## XML structure

```
<ATK>
  <Whitelist>
    <GlobalSwitches>
      <Enable></Enable>
    </GlobalSwitches>
  </Whitelist>
</ATK>
```

## Table description

Item	Description
Feature name	ATK
Table name	GlobalSwitches
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable or disable the global configuration.	N/A	Boolean: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>	Default is false.

# ATK/ClientVerify/Switches

This table contains client verification switch information.

## XML structure

```
<ATK>
  <ClientVerify>
    <Switches>
      <Switch>
        <IfIndex></IfIndex>
      </Switch>
    </Switches>
  </ClientVerify>
</ATK>
```

```

        <VerifyType></VerifyType>
        <VerifyMode></VerifyMode>
    </Switch>
</Switches>
</ClientVerify>
</ATK>

```

## Table description

Item	Description
Feature name	ATK
Table name	Switches
Table type	Multi-instance table
Row name	Switch
Restrictions	None.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
VerifyType	Verification type	Index	<p>Enumeration:</p> <ul style="list-style-type: none"> <li>• 0—TCP proxy</li> <li>• 1—DNS client verification.</li> <li>• 2—HTTP client verification.</li> <li>• 3—DNS reply verification.</li> <li>• 4—SIP client verification.</li> </ul>
VerifyMode	Verification mode	N/A	<p>Enumeration, value range varies according to MainType.</p> <p>For TCP proxy:</p> <ul style="list-style-type: none"> <li>• 0—Shutdown.</li> <li>• 1—SYN cookie.</li> <li>• 2—Safe reset.</li> </ul> <p>For DNS client verification:</p> <ul style="list-style-type: none"> <li>• 0—Shutdown.</li> <li>• 1—Truncate.</li> </ul> <p>For HTTP client verification:</p>

Column name	Column description	Column type	Data type and restrictions
			<ul style="list-style-type: none"> <li>0—Shutdown.</li> <li>1—Redirection.</li> </ul> <p>For DNS reply verification:</p> <ul style="list-style-type: none"> <li>0—DNS request.</li> </ul> <p>For SIP client verification:</p> <ul style="list-style-type: none"> <li>0—Shutdown.</li> <li>1—Redirection.</li> </ul>

## ATK/ClientVerify/ZoneSwitches

This table is used to configure client verification for a security zone.

### XML structure

```

<ATK>
  <ClientVerify>
    <ZoneSwitches>
      <Switch>
        <ZoneID></ZoneID>
        <VerifyType></VerifyType>
        <VerifyMode></VerifyMode>
      </Switch>
    </ZoneSwitches>
  </ClientVerify>
</ATK>

```

### Table description

Item	Description
Feature name	ATK
Table name	ZoneSwitches
Table type	Multi-instance table
Row name	Switch
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
ZoneID	Security zone ID	Index	Unsigned integer.
VerifyType	Verification type	Index	Enumeration: <ul style="list-style-type: none"> <li>0—TCP proxy.</li> <li>1—DNS client verification.</li> <li>2—HTTP client verification.</li> <li>3—DNS reply verification.</li> <li>4—SIP client verification.</li> </ul>
VerifyMode	Verification mode	N/A	Enumeration: For TCP proxy: <ul style="list-style-type: none"> <li>0—Shutdown.</li> <li>1—SYN cookie.</li> <li>2—Safe reset.</li> </ul> For DNS client verification: <ul style="list-style-type: none"> <li>0—Shutdown.</li> <li>1—Truncation.</li> </ul> For HTTP client verification: <ul style="list-style-type: none"> <li>0—Shutdown.</li> <li>1—Redirection.</li> </ul> For DNS reply verification: <ul style="list-style-type: none"> <li>0—DNS request.</li> </ul> For SIP client verification: <ul style="list-style-type: none"> <li>0—Shutdown.</li> <li>1—Redirection.</li> </ul>

## ATK/ClientVerify/IPv4ProtectHosts

This table contains IPv4 client verification protect hosts information.

## XML structure

```

<ATK>
  <ClientVerify>
    <IPv4ProtectHosts>
      <Host>
        <VerifyType></VerifyType>
        <VrfIndex></VrfIndex>
        <Ipv4Address></Ipv4Address>
        <PortNumber></PortNumber>
      </Host>
    </IPv4ProtectHosts>
  </ClientVerify>
</ATK>

```

## Table description

Item	Description
Feature name	ATK
Table name	IPv4ProtectHosts
Table type	Multi-instance table
Row name	Host
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VerifyType	Verification type	Index	Enumeration: <ul style="list-style-type: none"><li>• 0—TCP proxy</li><li>• 1—DNS client verification.</li><li>• 2—HTTP client verification.</li><li>• 3—DNS reply verification.</li><li>• 4—SIP client verification.</li></ul>	N/A
VrfIndex	Vrf index	Index	Unsigned integer, 0 represents public vrf.	N/A
Ipv4Address	Host address	Index	IPv4 address.	N/A
PortNumber	Port number	Index	Unsigned integer. The value range varies by verification type. For TCP proxy: 0-65535 For DNS, HTTP, DNS reply and SIP client verification: 1-65535	For TCP proxy, port number 0 is available which means that any hosts connected to any service port will be monitored. For DNS, HTTP, DNS reply and SIP client verification, port number 0 is unavailable.

## ATK/ClientVerify/IPv6ProtectHosts

This table contains IPv6 client verification protect hosts information.

## XML structure

```
<ATK>
  <ClientVerify>
    <IPv6ProtectHosts>
      <Host>
        <VerifyType></VerifyType>
        <VrfIndex></VrfIndex>
        <Ipv6Address></Ipv6Address>
        <PortNumber></PortNumber>
      </Host>
    </IPv6ProtectHosts>
  </ClientVerify>
</ATK>
```

## Table description

Item	Description
Feature name	ATK
Table name	IPv6ProtectHosts
Table type	Multi-instance table
Row name	Host
Restrictions	None.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VerifyType	Verification type	Index	Enumeration: <ul style="list-style-type: none"><li>• 0—TCP proxy</li><li>• 1—DNS client verification.</li><li>• 2—HTTP client verification.</li><li>• 3—DNS reply verification.</li><li>• 4—SIP client verification.</li></ul>	N/A
VrfIndex	Vrf index	Index	Unsigned integer, 0 represents public vrf.	N/A
Ipv6Address	Host address	Index	IPv6 address.	N/A
PortNumber	Port number	Index	Unsigned integer. The value range varies by verification type. For TCP proxy:	Zero can be set only when TCP proxy is specified, which means detect all

Column name	Column description	Column type	Data type and restrictions	Remarks
			0-65535 For DNS, HTTP, DNS reply and SIP client verification: 1-65535	service ports.

## ATK/TopStatisticsSwitch

This table contains ATK top statistics switch configuration.

### XML structure

```
<ATK>
  <TopStatisticsSwitch>
    <Enable></Enable>
  </TopStatisticsSwitch>
</ATK>
```

### Table description

Item	Description
Feature name	ATK
Table name	TopStatisticsSwitch
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether enable ATK top statistics function	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO</li> </ul>	N/A

# ATK

## ATK/Policies

This table is used to operate ATK policies.

### XML structure

```
<ATK>
  <Policies>
    <Policy>
      <PolicyName></PolicyName>
    </Policy>
  </Policies>
</ATK>
```

### Table description

Item	Description
Feature name	ATK
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive

## ATK/PolicyInterfaces

This table is used to operate ATK policy appliances on interfaces.

### XML structure

```
<ATK>
  <PolicyInterfaces>
    <Apply>
```

```

    <IfIndex></IfIndex>
    <PolicyName></PolicyName>
  </Apply>
</PolicyInterfaces>
</ATK>

```

## Table description

Item	Description
Feature name	ATK
Table name	PolicyInterfaces
Table type	Multi-instance table
Row name	Apply
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
PolicyName	Name of Attack Defense policy	N/A	String. Length: 1 to 31 characters.	Case insensitive

## ATK/PolicyZoneApplies

This table contains information about the application of an attack defense policy to security zones.

## XML structure

```

<ATK>
  <PolicyZoneApplies>
    <Apply>
      <PolicyName></PolicyName>
      <ZoneID></ZoneID>
    </Apply>
  </PolicyZoneApplies>
</ATK>

```

## Table description

Item	Description
Feature name	ATK
Table name	PolicyZoneApplies

Item	Description
Table type	Multi-instance table
Row name	Apply
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Attack defense policy name	Index	String. Length: 1 to 31 characters.	Case insensitive. Valid characters include letters, digits, underscores (_), and hyphens (-).
ZoneID	Security zone ID	Index	Unsigned integer.	N/A

## ATK/PolicyZones

This table contains information about the attack defense policy applied to a security zone.

## XML structure

```

<ATK>
  <PolicyZones>
    <Apply>
      <ZoneID></ZoneID>
      <PolicyName></PolicyName>
    </Apply>
  </PolicyZones>
</ATK>

```

## Table description

Item	Description
Feature name	ATK
Table name	PolicyZones
Table type	Multi-instance table
Row name	Apply
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ZoneID	Security zone ID	Index	Unsigned integer.	N/A
PolicyName	Attack defense policy name	N/A	String. Length: 1 to 31 characters.	Case insensitive. Valid characters include letters, digits, underscores (_), and hyphens (-).

## ATK/PolicyApplies

This table is used to operate ATK policy appliances on interfaces.

## XML structure

```
<ATK>
  <PolicyApplies>
    <Entity>
      <PolicyName></PolicyName>
      <IfIndex></IfIndex>
    </Entity>
  </PolicyApplies>
</ATK>
```

## Table description

Item	Description
Feature name	ATK
Table name	PolicyApplies
Table type	Multi-instance table
Row name	Entity
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive
IfIndex	Interface index	Index	Unsigned integer.	N/A

# ATK/PolicyLocal

This table is used to operate local ATK policy appliance.

## XML structure

```
<ATK>
  <PolicyLocal>
    <PolicyName></PolicyName>
  </PolicyLocal>
</ATK>
```

## Table description

Item	Description
Feature name	ATK
Table name	PolicyLocal
Table type	Single-instance table
Row name	N/A
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	N/A	String. Length: 1 to 31 characters.	Case insensitive

# ATK/IPv4Exempts

This table contains IPv4 exemption information

## XML structure

```
<ATK>
  <IPv4Exempts>
    <Exempt>
      <PolicyName></PolicyName>
      <AclNum></AclNum>
      <AclName></AclName>
    </Exempt>
  </IPv4Exempts>
</ATK>
```

```

    </Exempt>
  </IPv4Exempts>
</ATK>

```

## Table description

Item	Description
Feature name	ATK
Table name	IPv4Exempts
Table type	Multi-instance table
Row name	Exempt
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive
AclNum	Acl number	N/A	Unsigned integer. Value range: 2000 to 3999	AclNum and AclName are mutual exclusive and only one of them can be set in a single message.
AclName	Acl name	N/A	String. Length: 1 to 63 characters.	AclNum and AclName are mutual exclusive and only one of them can be set in a single message.

## ATK/IPv6Exempts

This table contains IPv6 exemption information

## XML structure

```

<ATK>
  <IPv6Exempts>
    <Exempt>
      <PolicyName></PolicyName>
      <AclNum></AclNum>
      <AclName></AclName>
    </Exempt>
  </IPv6Exempts>
</ATK>

```

```

    </Exempt>
  </IPv6Exempts>
</ATK>

```

## Table description

Item	Description
Feature name	ATK
Table name	IPv6Exempts
Table type	Multi-instance table
Row name	Exempt
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive
AclNum	Acl number	N/A	Unsigned integer. Value range: 2000 to 3999	AclNum and AclName are mutual exclusive and only one of them can be set in a single message.
AclName	Acl name	N/A	String. Length: 1 to 63 characters.	AclNum and AclName are mutual exclusive and only one of them can be set in a single message.

## ATK/InterfaceAttackStatistics

This table contains interface attack statistics.

## XML structure

```

<ATK>
  <InterfaceAttackStatistics>
    <Statistics>
      <IfIndex></IfIndex>
      <Chassis></Chassis>
      <Slot></Slot>
    </Statistics>
  </InterfaceAttackStatistics>
</ATK>

```

```

Column name	Column description	Column type	Data type and restrictions	Remarks
			<p>request.</p> <ul style="list-style-type: none"> <li>• 0—ICMP echo reply.</li> <li>• 4—ICMP source quench.</li> <li>• 3—ICMP destination unreachable.</li> <li>• 5—ICMP redirect.</li> <li>• 11—ICMP time exceeded.</li> <li>• 12—ICMP parameter problem.</li> <li>• 13—ICMP timestamp request.</li> <li>• 14—ICMP timestamp reply.</li> <li>• 15—ICMP information request.</li> <li>• 16—ICMP information reply.</li> <li>• 17—ICMP address mask request.</li> <li>• 18—ICMP address mask reply.</li> </ul> <p>For ICMPv6 single packet attack, SubType is the ICMPv6 type value, range: 0 to 255.</p> <ul style="list-style-type: none"> <li>• 128—ICMPv6 echo request.</li> <li>• 129—ICMPv6 echo reply.</li> <li>• 130—ICMPv6 group query.</li> <li>• 131—ICMPv6 group report.</li> <li>• 132—ICMPv6 group reduction.</li> <li>• 1—ICMPv6 destination unreachable.</li> <li>• 3—ICMPv6 time exceeded.</li> <li>• 4—ICMPv6 parameter problem.</li> <li>• 2—ICMPv6 packet too big.</li> </ul> <p>For IPv6 extend header single packet attack, SubType is the header type value, range: 0 to 255.</p> <p>For IPv6 extend header abnormal attack, SubType</p>	

Column name	Column description	Column type	Data type and restrictions	Remarks
			is not needed.  For IPv6 extend header exceed attack, SubType is the maximum number of extension headers. Value range: 0 to 7.	
Log	Log switch	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• false</li> </ul>	Default is false.
Drop	Drop packet switch	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• false</li> </ul>	Default is false.
Level	Severity level	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—Information.</li> <li>• 1—Low.</li> <li>• 2—Medium.</li> <li>• 3—High.</li> </ul>	N/A

## ATK/Signature/LargeICMPLength

This table contains large ICMP and ICMPv6 signature information.

### XML structure

```

<ATK>
  <Signature>
    <LargeICMPLength>
      <Policy>
        <PolicyName></PolicyName>
        <IPv4Threshold></IPv4Threshold>
        <IPv6Threshold></IPv6Threshold>
      </Policy>
    </LargeICMPLength>
  </Signature>
</ATK>

```

### Table description

Item	Description
Feature name	ATK
Table name	LargeICMPLength
Table type	Multi-instance table

Item	Description
Row name	Policy
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive
IPv4Threshold	ICMP packet length threshold	N/A	Unsigned integer, value range: 28 to 65534 bytes.	N/A
IPv6Threshold	ICMPv6 packet length threshold	N/A	Unsigned integer, value range: 48 to 65534 bytes.	N/A

## ATK/Signature/LevelActions

This table contains signature level action information.

## XML structure

```

<ATK>
  <Signature>
    <LevelActions>
      <LevelAction>
        <PolicyName></PolicyName>
        <Level></Level>
        <Log></Log>
        <Drop></Drop>
      </LevelAction>
    </LevelActions>
  </Signature>
</ATK>

```

## Table description

Item	Description
Feature name	ATK
Table name	LevelActions
Table type	Multi-instance table
Row name	LevelAction
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of Attack Defense policy	Index	String. Length: 1 to 31 characters.	Case insensitive
Level	Severity level	Index	Enumeration: <ul style="list-style-type: none"><li>• 0—Information.</li><li>• 1—Low.</li><li>• 2—Medium.</li><li>• 3—High.</li></ul>	N/A
Log	Log switch	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	Default value is true
Drop	Drop packet switch	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	The default value varies by severity level. For information level or low level, default value is false. For medium level or high level default value is true.

## ATK/Signature/LogAggregate

This table contains signature log aggregation information.

## XML structure

```
<ATK>
  <Signature>
    <LogAggregate>
      <Enable></Enable>
    </LogAggregate>
  </Signature>
</ATK>
```

## Table description

Item	Description
Feature name	ATK
Table name	LogAggregate
Table type	Single-instance table
Row name	N/A

Item	Description
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Log aggregate switch.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	Default is true.

## ATK/Blacklist/IPv4Blacklists

This table contains IPv4 blacklist information.

## XML structure

```

<ATK>
  <Blacklist>
    <IPv4Blacklists>
      <Item>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>

        <Ipv4Address></Ipv4Address>
        <DSLitePeer></DSLitePeer>
        <AddType></AddType>
        <TTL></TTL>
        <DropCnt></DropCnt>
      </Item>
    </IPv4Blacklists>
  </Blacklist>
</ATK>

```

## Table description

Item	Description
Feature name	ATK
Table name	IPv4Blacklists
Table type	Multi-instance table
Row name	Item
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the blacklist resides	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID of the blacklist	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
VrfIndex	Vrf index	Index	Unsigned integer, 0 represents public vrf.	N/A
Ipv4Address	IPv4 blacklist address	Index	IPv4 address.	N/A
DSLitePeer	DS-Lite tunnel peer address	Index	IPv6 address.	In DS-Lite network, this parameter refers to B4 addresses. Leave it empty in other circumstances.
AddType	Add type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Manual add.</li> <li>1—Automatic add.</li> </ul>	N/A
TTL	Time to live	N/A	Unsigned integer, unit second.	N/A
DropCnt	Dropped packet count	N/A	Unsigned integer.	N/A

## ATK/Blacklist/IPv6Blacklists

This table contains IPv6 blacklist information.

### XML structure

```

<ATK>
  <Blacklist>
    <IPv6Blacklists>
      <Item>
        <Chassis></Chassis>
        <Slot></Slot>

</ATK>

```

### Table description

Item	Description
Feature name	ATK
Table name	IPv4ProtectHosts
Table type	Multi-instance table
Row name	Host
Restrictions	None.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the host resides	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID of the host	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
VerifyType	Verification type	Index	Enumeration: <ul style="list-style-type: none"> <li>0—TCP proxy</li> <li>1—DNS client verification.</li> <li>2—HTTP client verification.</li> <li>3—DNS reply verification.</li> <li>4—SIP client verification.</li> </ul>	N/A
VrfIndex	Vrf index	Index	Unsigned integer, 0 represents public vrf.	N/A
Ipv4Address	Host address	Index	IPv4 address.	N/A
PortNumber	Port number	Index	Unsigned integer. The value range varies by the verification type. For TCP proxy: 0-65535 For DNS, DNS reply, SIP and HTTP client verification: 1-65535	For TCP proxy, port number 0 is available which means that any hosts connected to any service port will be monitored. For DNS, DNS reply, SIP and HTTP client verification, port number 0 is unavailable.
AddType	Add type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Manual add.</li> <li>1—Automatic add.</li> </ul>	N/A
ReqCnt	Request count	N/A	Unsigned integer.	N/A
AuthCnt	Authenticated request count	N/A	Unsigned integer.	N/A

## ATK/ClientVerify/IPv6ProtectHosts

This table contains IPv6 client verification protect hosts information.

## XML structure

```
<ATK>
  <ClientVerify>
    <IPv6ProtectHosts>

# ATK

## ATK/IPv4Exempts

Message	Explanation
Please specify an ACL by either its number or its name. 不能同时设置ACL组名与ACL组号。	During executing create、merge or replace operation, ACL numer and ACL name are mutual exclusive and only one of them can be set in a single message. 当执行create、merge、release操作时，ACL 组号和ACL组名同一时刻只能设置其一。

## ATK/IPv6Exempts

Message	Explanation
Please specify an ACL by either its number or its name. 不能同时设置ACL组名与ACL组号。	During executing create、merge or replace operation, ACL numer and ACL name are mutual exclusive and only one of them can be set in a single message. 当执行create、merge和release操作时，ACL 组号和ACL组名同一时刻只能设置其一。

## ATK/Scan/Policies

Message	Explanation
Please specify the detection sensitivity before specifying defense actions. 未开启指定敏感度的扫描攻击防范时，不能设置行攻击防范处理行为。	During executing configuration operation(create、merge、replace、delete or remove), Please specify the detection sensitivity before specifying defense actions. 当执行配置操作（包括create、merge、release、delete和remove）时，未开启指定敏感度的扫描攻击防范时，不能设置行攻击防范处理行为。
Please specify at least one defense action. 请至少设置一个攻击防范处理行为。	During executing configuration operation(create、merge、replace、delete or remove),please specify at least one defense action. 当执行配置操作（包括create、merge、release、delete和remove）时，请至少设置一个攻击防范处理行为。
The drop and block-source actions cannot be both specified. 扫描攻击防范的执行动作不能同时设置为丢弃报文与阻塞攻击源地址。	During executing configuration operation(create、merge、replace、delete or remove),drop and BlockSource are mutual exclusive and only one of them can be set in a single message. 当执行配置操作（包括create、merge、release、delete和remove）时，扫描攻击防范的执行动作丢弃报文与阻塞攻击源地址同一时刻只能设置其一。
The blacklist aging time can only be set for the block-source action. 仅在扫描攻击防范的执行动作为阻塞源地址时才能设置黑名单的老化时间。	During executing configuration operation(create、merge、replace、delete or remove), the blacklist aging time can only be set for the block-source action. 当执行配置操作（包括create、merge、release、delete和remove）时，仅在扫描攻击防范的执行动作为阻塞源地址时才能设置黑名单

	的老化时间。
At least one of scan attack detect ways should be specified. 设置自定义级别扫描攻击防范时至少应指定端口检测和IP检测中的一种方式。	During executing configuration operation(create、merge、replace、delete or remove), at least one of scan attack detect ways should be specified. 当执行配置操作（包括create、merge、release、delete和remove）时，设置自定义级别扫描攻击防范时至少应指定端口检测和IP检测中的一种方式。
The port scan attack detect switch and the port scan attack detect threshold should all be set or neither be set. 设置自定义级别扫描攻击防范时端口扫描检测开关和端口扫描检测阈值应该同时设置或不设置。	During executing configuration operation(create、merge、replace、delete or remove), the port scan attack detect switch and the port scan attack detect threshold should all be set or neither be set. 当执行配置操作（包括create、merge、release、delete和remove）时，设置自定义级别扫描攻击防范时端口扫描检测开关和端口扫描检测阈值应该同时设置或不设置。
The IP scan attack detect switch and the IP attack detect threshold should all be set or neither be set. 设置自定义级别扫描攻击防范时IP扫描检测开关和IP扫描检测阈值应该同时设置或不设置。	During executing configuration operation(create、merge、replace、delete or remove), the IP scan attack detect switch and the IP attack detect threshold should all be set or neither be set. 当执行配置操作（包括create、merge、release、delete和remove）时，设置自定义级别扫描攻击防范时IP扫描检测开关和IP扫描检测阈值应该同时设置或不设置。
Ipsweep switch and portscan switch cannot be open when the detect level is UNDO. 级别为UNDO时，地址检测或端口检测开关不能为打开状态。	During executing configuration operation(create、merge、replace、delete or remove), IP sweep switch and port scan switch cannot be open when the detect level is UNDO. 当执行配置操作（包括create、merge、release、delete和remove）时，级别为UNDO时，地址检测或端口检测开关不能为打开状态。

## ATK/Flood/DefaultConfigs

Message	Explanation
The operation is not supported on the device. 设备不支持此操作。	During executing create、merge or replace operation, the client verification operation is must supported on the device. 当执行create、merge和release操作时，请确保设备支持客户端验证功能。
The flood attack type doesn't exist. 该泛洪攻击防范类型不存在。	During executing configuration operation(create、merge、replace、delete or remove) or get operation, the flood attack type must exist. 当执行配置操作（包括create、merge、release、delete和remove）时，请确保相应的泛洪攻击防范类型必须存在。
Client verification is not an available defense action for this flood attack. 该类型的泛洪攻击防范的处理行为不能设置为客户端验证。	During executing configuration operation(create、merge、replace、delete or remove) or get operation, client verification is not an available defense action for this flood attack. 当执行配置操作（包括create、merge、release、delete和remove）时，该类型的泛洪攻击防范的处理行为不能设置为客户端验证。
Only HTTP DNS DNS-REPLY and SIP flood attack defense supports port configuration. 仅HTTP泛洪攻击防范、DNS泛洪攻击防范、DNS-REPLY泛洪攻击防范和SIP泛洪攻击防范支持设置检测端口。	During executing configuration operation(create、merge、replace、delete or remove) or get operation,only HTTP DNS DNS-REPLY and SIP flood attack defense supports port configuration. 当执行配置操作（包括create、merge、release、delete和remove）时，仅HTTP泛洪攻击防范、DNS泛洪攻击防范、DNS-REPLY泛洪攻击防范和SIP泛洪攻击防范支持设置检测端口。
The number of detection ports exceeds the upper	During executing configuration operation(create、merge、replace、

limit. 检测端口数量超过上限。	delete or remove) or get operation,the number of detection ports must not exceeds the upper limit. 当执行配置操作（包括create、merge、release、delete和remove）时，请确保检测端口数量不能超过上限。
-----------------------	---

## ATK/Flood/IPv4ProtectHosts

Message	Explanation
The operation is not supported on the device. 设备不支持此操作。	During executing create、merge or replace operation, the client verification operation is must supported on the device. 当执行create、merge和release操作时，请确保设备支持客户端验证功能。
The flood attack type doesn't exist. 该泛洪攻击防范类型不存在。	During executing configuration operation(create、merge、replace、delete or remove) or get operation, the flood attack type must exist. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，请确保相应的泛洪攻击防范类型必须存在。
Client verification is not an available defense action for this flood attack. 该类型的泛洪攻击防范的处理行为不能设置为客户端验证。	During executing configuration operation(create、merge、replace、delete or remove) or get operation, client verification is not an available defense action for this flood attack. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，该类型的泛洪攻击防范的处理行为不能设置为客户端验证。
Only HTTP DNS DNS-REPLY and SIP flood attack defense supports port configuration. 仅HTTP泛洪攻击防范、DNS泛洪攻击防范、DNS-REPLY泛洪攻击防范和SIP范洪攻击防范支持设置检测端口。	During executing configuration operation(create、merge、replace、delete or remove) or get operation,only HTTP DNS DNS-REPLY and SIP flood attack defense supports port configuration. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，仅HTTP泛洪攻击防范、DNS泛洪攻击防范、DNS-REPLY泛洪攻击防范和SIP范洪攻击防范支持设置检测端口。
The number of detection ports exceeds the upper limit. 检测端口数量超过上限。	During executing configuration operation(create、merge、replace、delete or remove) or get operation,the number of detection ports must not exceeds the upper limit. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，请确保检测端口数量不能超过上限。
Invalid IP address. 指定的地址不合法。	During executing configuration operation(create、merge、replace、delete or remove) or get operation, the IP address is must valid. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，指定的地址必须合法。

## ATK/Flood/IPv6ProtectHosts

Message	Explanation
The operation is not supported on the device. 设备不支持此操作。	During executing create、merge or replace operation, the client verification operation is must supported on the device. 当执行create、merge和release操作时，请确保设备支持客户端验证功能。

## ATK/Signature/Detects

Message	Explanation
<p>The single-packet attack type doesn't exist.</p> <p>该单包攻击防范类型不存在。</p>	<p>During executing configuration operation(create、merge、replace、delete or remove) or get operation, the single-packet attack type must exist.</p> <p>当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，单包攻击防范类型必须存在。</p>

## ATK/Blacklist/ZoneSwitches

Message	Explanation
<p>The operation is not supported on Local zone.</p> <p>Local域上不支持该操作。</p>	<p>During executing configuration operation(create、merge、replace、delete or remove) or get operation, The operation is not supported on Local zone.</p> <p>当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，Local域上不支持该操作。</p>

## ATK/Blacklist/IPv4Blacklists

Message	Explanation
The VRF instance doesn't exist. 指定的VRF不存在。	During executing create、merge or replace operation, the specified VPN instance must exist. 当执行create、merge和release操作时，指定的VRF必须存在。

## ATK/Blacklist/IPv6Blacklists

Message	Explanation
The VRF instance doesn't exist. 指定的VRF不存在。	During executing create、merge or replace operation, the specified VPN instance must exist. 当执行create、merge和release操作时，指定的VRF必须存在。

## ATK/Whitelist/ZoneSwitches

Message	Explanation
The operation is not supported on Local zone. Local域上不支持该操作。	During executing configuration operation(create、merge、replace、delete or remove) or get operation, The operation is not supported on Local zone. 当执行create、merge和release操作时，指定的VRF必须存在。

## ATK/Whitelist/IPv4ObjItems

Message	Explanation
The IP address object group doesn't exist. 该地址对象组不存在。	During executing configuration operation(create、merge、replace、delete or remove),the IP address object group must exist. 当执行配置操作（包括create、merge、release、delete和remove）时，指定的地址对象组必须存在。
The object group is not an IP address object group. 该对象组不是地址对象组。	During executing configuration operation(create、merge、replace、delete or remove),the object group is must an IP address object group. 当执行配置操作（包括create、merge、release、delete和remove）时，指定的对象组必须是地址对象组。

## ATK/Whitelist/IPv6ObjItems

Message	Explanation
The IP address object group doesn't exist. 该地址对象组不存在。	During executing configuration operation(create、merge、replace、delete or remove),the IP address object group must exist. 当执行配置操作（包括create、merge、release、delete和remove）

	时，指定的地址对象组必须存在。
The object group is not an IP address object group. 该对象组不是地址对象组。	During executing configuration operation(create、merge、replace、delete or remove),the object group is must an IP address object group. 当执行配置操作（包括create、merge、release、delete和remove）时，指定的对象组必须是地址对象组。

## ATK/ClientVerify/IPv4ProtectHosts

Message	Explanation
The VRF instance doesn't exist. 指定的VRF不存在。	During executing configuration operation(create、merge、replace、delete or remove) or get operation, the specified VPN instance must exist. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，指定的VRF必须存在。
Invalid IP address. 指定的地址不合法。	During executing configuration operation(create、merge、replace、delete or remove) or get operation, the IP address is must valid. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，指定的地址必须合法。

## ATK/ClientVerify/IPv6ProtectHosts

Message	Explanation
The VRF instance doesn't exist. 指定的VRF不存在。	During executing configuration operation(create、merge、replace、delete or remove) or get operation, the specified VPN instance must exist. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，指定的VRF必须存在。
Invalid IP address. 指定的地址不合法。	During executing configuration operation(create、merge、replace、delete or remove) or get operation, the IP address is must valid. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，指定的地址必须合法。

## ATK/ClientVerify/Switches

Message	Explanation
The verification mode is not supported. 该类型客户端验证不支持指定的工作模式。	During executing create、merge or replace operation,the verification mode is must supported. 当执行create、merge和release操作时，客户端验证需要支持指定的工作模式。

# ATK/ClientVerify/ZoneSwitches

Message	Explanation
The verification mode is not supported. 该类型客户端验证不支持指定的工作模式。	During executing create、merge or replace operation,the verification mode is must supported. 当执行create、merge和release操作时，客户端验证需要支持指定的工作模式。
The operation is not supported on Local zone. Local域上不支持该操作。	During executing configuration operation(create、merge、replace、delete or remove) or get operation, The operation is not supported on Local zone. 当执行配置操作（包括create、merge、release、delete和remove）和获取操作时，Local域上不支持该操作。

# ATK/TopStatisticsSwitch

Message	Explanation
The stop process is running. Please try it later. 关闭操作尚未执行完毕，请稍后重试。	During executing create、merge、replace or action operation, The close operation must been completed. 当执行create、merge、release及action操作时，需要等到关闭操作执行完毕。

# AUDIT

## AUDIT/SignatureManualUpgrade

This table contains the information of AUDIT signatures manual upgrading.

### XML structure

```
<AUDIT>
  <SignatureManualUpgrade>
    <URL></URL>
    <Location></Location>
  </SignatureManualUpgrade>
</AUDIT>
```

### Table description

Item	Description
Feature name	AUDIT
Table name	SignatureManualUpgrade
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	URL of the imported rule file	N/A	String: case-insensitive When the file is remote, Length: 1 to 255 characters. When the file is local, Length: 1 to 127 characters.	N/A
Location	The Location of the file	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—local.</li><li>• 1—remote.</li></ul>	N/A

## AUDIT/SignatureAutoUpgradeNow

This table contains the information of AUDIT signatures auto upgrading at once.

## XML structure

```
<AUDIT>
  <SignatureAutoUpgradeNow>
    <AutoUpgradeNow></AutoUpgradeNow>
  </SignatureAutoUpgradeNow>
</AUDIT>
```

## Table description

Item	Description
Feature name	AUDIT
Table name	SignatureAutoUpgradeNow
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AutoUpgradeNow	Auto upgrade at once	N/A	This column must be empty.	N/A

## AUDIT/SignatureRollback

This table contains the information of AUDIT signatures rollback.

## XML structure

```
<AUDIT>
  <SignatureRollback>
    <Rollback></Rollback>
  </SignatureRollback>
</AUDIT>
```

## Table description

Item	Description
Feature name	AUDIT
Table name	SignatureRollback
Table type	Single-instance table

      <PolicyType></PolicyType>
      <RuleMatchType></RuleMatchType>
    </Policy>
  </Policies>
</AUDIT>
```

### Table description

Item	Description
Feature name	AUDIT
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy Name	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
Disable	Set this value to true to disable the policy	N/A	Boolean: <ul style="list-style-type: none"><li>true.</li><li>false.</li></ul>	N/A
TimeRangeName	Time Range Name	N/A	String: case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyType	Policy Type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—NoAudit.</li> <li>1—Audit.</li> <li>2—Deny.</li> </ul>	The policy type must be set when policy is created.
DefaultRuleAction	Default Rule Action	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Permit.</li> <li>1—Deny.</li> </ul>	N/A
RuleMatchType	Rule Matching Type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Order.</li> <li>1—Full.</li> </ul>	N/A

## AUDIT/PolicyOptions

This table contains some multiple option information about the AUDIT's policy.

### XML structure

```

<AUDIT>
  <PolicyOptions>
    <Option>
      <PolicyName></PolicyName>
      <OptionType></OptionType>
      <OptionValue></OptionValue>
    </Option>
  </PolicyOptions>
</AUDIT>

```

### Table description

Item	Description
Feature name	AUDIT
Table name	PolicyOptions
Table type	Multi-instance table
Row name	Option
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy Name	Index	String: case-insensitive. Length: 1 to 63 characters.	Name can not be same with its siblings. It is Mandatory.
OptionType	Type of the option in the policy	Index	Enumeration: <ul style="list-style-type: none"> <li>• 1—SourceZones.</li> <li>• 2—DestZones.</li> <li>• 3—SourceIPv4AddressSets.</li> <li>• 4—SourceIPv6AddressSets.</li> <li>• 5—DestIPv4AddressSets.</li> <li>• 6—DestIPv6AddressSets.</li> <li>• 7—Users.</li> <li>• 8—User Groups.</li> <li>• 9—Applications.</li> <li>• 10—AppGroups.</li> <li>• 11—Service.</li> </ul>	N/A
OptionValue	Value of the special option type in the policy	Index	String: case-insensitive. Length: 1 to 63 characters (for OptionTypes 9 and 10). Length: 1 to 31 characters (for OptionTypes 1 through 6, and OptionType 11). Length: 1 to 480 characters (for OptionTypes 7 and 8).	Values of OptionTypes 7 and 8 are in Json format.

## AUDIT/DefaultPolicyAction

This table contains information about the AUDIT's default policy action.

### XML structure

```

<AUDIT>
  <DefaultPolicyAction>
    <DefaultAction>
      <Action></Action>
    </DefaultAction>
  </DefaultPolicyAction>
</AUDIT>

```

### Table description

Item	Description
Feature name	AUDIT
Table name	DefaultPolicyAction
Table type	Multi-instance table

Row name	DefaultAction
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Packet Action which not match any Audit's policy	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Permit.</li> <li>1—Deny.</li> </ul>	N/A

# AUDIT/ AppPolicyKeywordGroups

This table contains information about the AUDIT's keywordgroup.

## XML structure

```

<AUDIT>
  <AppPolicyKeywordGroups>
    <KeywordGroup>
      <KeywordGroupName></KeywordGroupName>
      <Description></Description>
      <RefCnt></RefCnt>
    </KeywordGroup>
  </AppPolicyKeywordGroups>
</AUDIT>

```

## Table description

Item	Description
Feature name	AUDIT
Table name	AppPolicyKeywordGroups
Table type	Multi-instance table
Row name	KeywordGroup
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
KeywordGroup pName	Keyword Group	Index	String: case-insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	Name		Length: 1 to 63 characters.	
Description	Description about keyword group	N/A	String: case-insensitive Length: 1 to 256 characters.	N/A
RefCnt	Refer count about keyword group	N/A	Unsigned integer: Value range: 0 to $2^{16} - 1$ .	N/A

## AUDIT/Keywords

This table contains information about the keywords of keywordgroup.

### XML structure

```

<AUDIT>
  <Keywords>
    <Keyword>
      <KeywordGroupName></KeywordGroupName>
      <Keyword></Keyword>
    </Keyword>
  </Keywords>
</AUDIT>

```

### Table description

Item	Description
Feature name	AUDIT
Table name	Keywords
Table type	Multi-instance table
Row name	Keyword
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
KeywordGroup pName	Keyword Group Name	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
Keyword	Keyword of matching the application behavior content	Index	String: case-sensitive. Length: 1 to 63 characters.	N/A

# AUDIT/PolicyRules

This table contains the information of a Audit Rule in specify policy.

## XML structure

```
<AUDIT>
  <PolicyRules>
    <Rule>
      <PolicyName></PolicyName>
      <RuleID></RuleID>
      <AppCategoryID></AppCategoryID>
      <AppID></AppID>
      <BehaviorID></BehaviorID>
      <BhContentID></BhContentID>
      <FilterType></FilterType>
      <MatchType></MatchType>
      <KeywordGroupName></KeywordGroupName>
      <Number></Number>
      <PktAction></PktAction>
      <AuditLogging></AuditLogging>
    </Rule>
  </PolicyRules>
</AUDIT>
```

## Table description

Item	Description
Feature name	Audit
Table name	PolicyRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy Name	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
RuleID	Rule ID	Index	Unsigned integer: Value range: 1 to 64.	N/A
AppCategoryl	App Category	N/A	Unsigned integer:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
D	ID		Value range: 0 to $2^{32} - 1$ .	
AppID	Application layer protocol ID	N/A	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	N/A
BehaviorID	Application Behavior ID	N/A	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	N/A
BhContentID	Application behavior content ID	N/A	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	N/A
FilterType	Filter type the application behavior content	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Keyword Filter.</li> <li>1—Number Filter.</li> </ul>	N/A
KeywordGroup Name	Keyword Group Name	N/A	String: case-insensitive. Length: 1 to 63 characters.	Contain the keyword for matching application behavior content.
Number	Number	N/A	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	Number for matching the application behavior content.
MatchType	Match Type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Equal.</li> <li>1—Greater.</li> <li>2—Less.</li> <li>3—Include.</li> <li>4—Greater or Equal.</li> <li>5—Less or Equal.</li> <li>6—Unequal.</li> <li>7—Exclude.</li> </ul>	N/A
PktAction	Packet Action	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Permit.</li> <li>1—Deny.</li> </ul>	N/A
AuditLogging	Whether or not send the Audit Logging	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Don't Send Audit log.</li> <li>1—Send Audit log.</li> </ul>	N/A

## AUDIT/SignatureAutoUpgrading

This table contains the information of AUDIT signatures auto upgrading.

### XML structure

```

<AUDIT>
  <SignatureAutoUpgrading>
    <Enabled></Enabled>
    <StartTime></StartTime>
    <Type></Type>
    <Day></Day>
  </SignatureAutoUpgrading>

```

</AUDIT>

## Table description

Item	Description
Feature name	AUDIT
Table name	SignatureAutoUpgrading
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enabled	Enabled or disabled	N/A	Boolean: <ul style="list-style-type: none"><li>• true.</li><li>• false.</li></ul>	N/A
StartTime	The time that the system auto upgrading	N/A	Date Time. Format: HH:MM:SS	N/A
Type	Type of the system auto upgrading	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—Week.</li><li>• 1—periodic.</li></ul>	N/A
Day	Days	N/A	Unsigned integer: Value range: 0-6.	When Type is 0, the value range is 0 to 6. Otherwise, the value is invalid.

# AUDIT

## AUDIT/ Policies

This table contains information about the AUDIT's policy.

### XML structure

```
<AUDIT>
  <Policies>
    <Policy>
      <PolicyName></PolicyName>
      <Disable></Disable>
      <TimeRangeName></TimeRangeName>
      <DefaultRuleAction></DefaultRuleAction>
      <PolicyType></PolicyType>
      <RuleMatchType></RuleMatchType>
    </Policy>
  </Policies>
</AUDIT>
```

### Table description

Item	Description
Feature name	AUDIT
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy Name	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
Disable	Set this value to true to disable the policy	N/A	Boolean: <ul style="list-style-type: none"><li>true.</li><li>false.</li></ul>	N/A
TimeRangeName	Time Range Name	N/A	String: case-insensitive. Length: 1 to 63 characters.	N/A
PolicyType	Policy Type	N/A	Enumeration: <ul style="list-style-type: none"><li>0—NoAudit.</li></ul>	The policy type must be set when policy is

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>1—Audit.</li> <li>2—Deny.</li> </ul>	created.
DefaultRuleAction	Default Rule Action	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Permit.</li> <li>1—Deny.</li> </ul>	N/A
RuleMatchType	Rule Matching Type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Order.</li> <li>1—Full.</li> </ul>	N/A

## AUDIT/PolicyOptions

This table contains some multiple information about the AUDIT's policy.

### XML structure

```

<AUDIT>
  <PolicyOptions>
    <Option>
      <PolicyName></PolicyName>
      <OptionType></OptionType>
      <OptionValue></OptionValue>
    </Option>
  </PolicyOptions>
</AUDIT>

```

### Table description

Item	Description
Feature name	AUDIT
Table name	PolicyOptions
Table type	Multi-instance table
Row name	Option
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy Name	Index	String: case-insensitive. Length: 1 to 63 characters.	Name can not be same with its siblings. It is Mandatory

Column name	Column description	Column type	Data type and restrictions	Remarks
OptionType	Type of the option in the policy	Index	Enumeration: <ul style="list-style-type: none"> <li>1—SourceZones.</li> <li>2—DestZones.</li> <li>3—SourceIPv4AddressSets.</li> <li>4—SourceIPv6AddressSets.</li> <li>5—DestIPv4AddressSets.</li> <li>6—DestIPv6AddressSets.</li> <li>7—Users.</li> <li>8—User Groups.</li> <li>9—Applications.</li> <li>10—AppGroups.</li> <li>11—Service.</li> </ul>	N/A
OptionValue	Value of the special option type in the policy	Index	String: case-insensitive. Length: 1 to 63 characters (for OptionTypes 9 and 10). Length: 1 to 31 characters (for OptionTypes 1 through 6, and OptionType 11). Length: 1 to 480 characters (for OptionTypes 7 and 8).	Values of OptionTypes 7 and 8 are in Json format.

## AUDIT/DefaultPolicyAction

This table contains information about the AUDIT's default policy action.

### XML structure

```

<AUDIT>
  <DefaultPolicyAction>
    <DefaultAction>
      <Action></Action>
    </DefaultAction>
  </DefaultPolicyAction>
</AUDIT>

```

### Table description

Item	Description
Feature name	AUDIT
Table name	DefaultPolicyAction
Table type	Multi-instance table
Row name	DefaultAction
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Packet Action which not match any Audit's policy	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Permit.</li><li>1—Deny.</li></ul>	N/A

## AUDIT/AppPolicyKeywordGroups

This table contains information about the AUDIT's keywordgroup.

## XML structure

```
<AUDIT>
  <AppPolicyKeywordGroups>
    <KeywordGroup>
      <KeywordGroupName></KeywordGroupName>
      <Description></Description>
      <RefCnt></RefCnt>
    </KeywordGroup>
  </AppPolicyKeywordGroups>
</AUDIT>
```

## Table description

Item	Description
Feature name	AUDIT
Table name	AppPolicyKeywordGroups
Table type	Multi-instance table
Row name	KeywordGroup
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
KeywordGroup pName	Keyword Group Name	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description about keyword group	N/A	String: case-insensitive. Length: 1 to 256 characters.	N/A
RefCnt	Refer count about keyword	N/A	Unsigned integer: Value range: 0 to $2^{16} - 1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	group			

## AUDIT/Keywords

This table contains information about the keywords of keywordgroup.

### XML structure

```

<AUDIT>
  <Keywords>
    <Keyword>
      <KeywordGroupName></KeywordGroupName>
      <Keyword></Keyword>
    </Keyword>
  </Keywords>
</AUDIT>

```

### Table description

Item	Description
Feature name	AUDIT
Table name	Keywords
Table type	Multi-instance table
Row name	Keyword
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
KeywordGroup pName	Keyword Group Name	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
Keyword	Keyword of matching the application behavior content	Index	String: case-sensitive. Length: 1 to 63 characters.	N/A

## AUDIT/PolicyRules

This table contains the information of a Audit Rule in specify policy.

## XML structure

```
<AUDIT>
  <PolicyRules>
    <Rule>
      <PolicyName></PolicyName>
      <RuleID></RuleID>
      <AppCategoryID></AppCategoryID>
      <AppID></AppID>
      <BehaviorID></BehaviorID>
      <BhContentID></BhContentID>
      <FilterType></FilterType>
      <MatchType></MatchType>
      <KeywordGroupName></KeywordGroupName>
      <Number></Number>
      <PktAction></PktAction>
      <AuditLogging></AuditLogging>
    </Rule>
  </PolicyRules>
</AUDIT>
```

## Table description

Item	Description
Feature name	Audit
Table name	PolicyRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy Name	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
RuleID	Rule ID	Index	Unsigned integer: Value range: 1 to 64.	N/A
AppCategoryID	App Category ID	N/A	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	N/A
AppID	Application layer protocol ID	N/A	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	N/A
BehaviorID	Application Behavior ID	N/A	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BhContentID	Application behavior content ID	N/A	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	N/A
FilterType	Filter type the application behavior content	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Keyword Filter.</li> <li>1—Number Filter.</li> </ul>	N/A
KeywordGroup Name	Keyword Group Name	N/A	String: case-insensitive. Length: 1 to 63 characters.	Contain the keyword for matching application behavior content.
Number	Number	N/A	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	Number for matching the application behavior content.
MatchType	Match Type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Equal.</li> <li>1—Greater.</li> <li>2—Less.</li> <li>3—Include.</li> <li>4—Greater or Equal.</li> <li>5—Less or Equal.</li> <li>6—Unequal.</li> <li>7—Exclude.</li> </ul>	N/A
PktAction	Packet Action	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Permit.</li> <li>1—Deny.</li> </ul>	N/A
AuditLogging	Whether or not send the Audit Logging	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Don't Send Audit log.</li> <li>1—Send Audit log.</li> </ul>	N/A

## AUDIT/AppBehaviors

This table contains the behavior of the application or application category.

### XML structure

```

<AUDIT>
  <AppBehaviors>
    <AppBehavior>
      <AppCategoryID></AppCategoryID>
      <AppID></AppID>
      <BehaviorIDs>
        <BehaviorID></BehaviorID>
      </BehaviorIDs>
    </AppBehavior>
  </AppBehaviors>
</AUDIT>

```

## Table description

Item	Description
Feature name	Audit
Table name	AppBehaviors
Table type	Multi-instance table
Row name	AppBehavior
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppCategoryID	App Category ID	Index	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	N/A
AppID	Application layer protocol ID	Index	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	N/A
BehaviorIDs	Behavior ID list	Data structure	Members include: <ul style="list-style-type: none"><li>BehaviorID.</li></ul>	N/A
BehaviorID	Behavior ID	N/A	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	Contains Multiple BehaviorID in the application or application category.

## AUDIT/AppBehaviorContents

This table contains the behavior Content of the application or application category.

## XML structure

```
<AUDIT>
  <AppBehaviorContents>
    <BhContent>
      <AppCategoryID></AppCategoryID>
      <AppID></AppID>
      <BehaviorID></BehaviorID>
      <BhContentIDs>
        <BhContentID></BhContentID>
      </BhContentIDs>
    </BhContent>
  </AppBehaviorContents>
</AUDIT>
```

## Table description

Item	Description
Feature name	Audit
Table name	AppBehaviorContents
Table type	Multi-instance table
Row name	BhContent
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppCategoryID	App Category ID	Index	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	N/A
AppID	Application layer protocol ID	Index	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	N/A
BehaviorID	Behavior ID	Index	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	N/A
BhContentIDs	Behavior content ID list	Data structure	Members include: <ul style="list-style-type: none"><li>BhContentID.</li></ul>	N/A
BhContentID	Behavior content ID	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	Contains Multiple BhContentID in the application or application category.

## AUDIT/AppBhContentsFilterType

This table contains the behavior content filter type of the application or application category.

## XML structure

```
<AUDIT>
  <AppBhContentFilterType>
    <BhContentFilterType>
      <AppCategoryID></AppCategoryID>
      <AppID></AppID>
      <BehaviorID></BehaviorID>
      <BhContentID></BhContentID>
      <FilterType></FilterType>
    </BhContentFilterType>
  </AppBhContentFilterType>
</AUDIT>
```

## Table description

Item	Description
Feature name	Audit
Table name	AppBhContentFilterType
Table type	Multi-instance table
Row name	BhContentFilterType
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppCategoryID	App Category ID	Index	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	N/A
AppID	Application layer protocol ID	Index	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	N/A
BehaviorID	Behavior ID	Index	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	N/A
BhContentID	Behavior content ID	Index	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
FilterType	Filter type the application behavior content	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Keyword Filter.</li><li>1—Number Filter.</li></ul>	N/A

## AUDIT/AppCategories

This table contains informations about the Audit's application categories.

## XML structure

```
<AUDIT>
  <AppCategories>
    <AppCategory>
      <AppCategoryID></AppCategoryID>
      <AppCategoryName></AppCategoryName>
    </AppCategory>
  </AppCategories>
</AUDIT>
```

## Table description

Item	Description
Feature name	Audit
Table name	AppCategories
Table type	Multi-instance table
Row name	AppCategory
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppCategoryID	App Category ID	Index	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	N/A
AppCategory Name	App Category Name	N/A	String: case-insensitive. Length: 1 to 63 characters.	N/A

## AUDIT/AppCategoryMembers

This table contains the Audit's application protocols included in an application category.

## XML structure

```
<AUDIT>
  <AppCategoryMembers>
    <AppCategoryMember>
      <AppCategoryID></AppCategoryID>
      <AppID></AppID>
      <AppName></AppName>
    </AppCategoryMember>
  </AppCategoryMembers>
</AUDIT>
```

## Table description

Item	Description
Feature name	Audit
Table name	AppCategoryMembers
Table type	Multi-instance table
Row name	AppCategoryMember

Restrictions	None
--------------	------

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppCategoryID	App Category ID	Index	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	N/A
AppID	Application layer protocol ID	Index	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	N/A
AppName	Application layer protocol name	N/A	String: case-insensitive. Length: 1 to 63 characters.	N/A

## AUDIT/Behaviors

This table contains informations about the Audit's application behaviors

## XML structure

```

<AUDIT>
  <Behaviors>
    <Behavior>
      <BehaviorID></BehaviorID>
      <BehaviorName></BehaviorName>
    </Behavior>
  </Behaviors>
</AUDIT>

```

## Table description

Item	Description
Feature name	Audit
Table name	Behaviors
Table type	Multi-instance table
Row name	Behavior
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorID	App Behavior ID	Index	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	App Behavior Name	N/A	String: case-insensitive. Length: 1 to 63 characters.	N/A

## AUDIT/BehaviorContents

This table contains informations about the Audit's application behavior contents.

### XML structure

```

<AUDIT>
  <BehaviorContents>
    <BehaviorContent>
      <BhContentID></BhContentID>
      <BhContentName></BhContentName>
    </BehaviorContent>
  </BehaviorContents>
</AUDIT>

```

### Table description

Item	Description
Feature name	Audit
Table name	BehaviorContents
Table type	Multi-instance table
Row name	BehaviorContent
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BhContentID	App Behavior Content ID	Index	Unsigned integer: Value range: 0 to $2^{32} - 1$ .	N/A
BhContentName	App Behavior Content Name	N/A	String, case-insensitive: Length: 1 to 63 characters.	N/A

## AUDIT/SignatureAutoUpgrading

This table contains the information of AUDIT signatures auto upgrading.

## XML structure

```
<AUDIT>
  <SignatureAutoUpgrading>
    <Enabled></Enabled>
    <StartTime></StartTime>
    <Type></Type>
    <Day></Day>
  </SignatureAutoUpgrading>
</AUDIT>
```

## Table description

Item	Description
Feature name	AUDIT
Table name	SignatureAutoUpgrading
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enabled	Enabled or disabled	N/A	Boolean: <ul style="list-style-type: none"><li>true.</li><li>false.</li></ul>	N/A
StartTime	The time that the system auto upgrading	N/A	Date Time. Format: HH:MM:SS.	N/A
Type	Type of the system auto upgrading	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Week.</li><li>1—periodic.</li></ul>	N/A
Day	Days	N/A	Unsigned integer: Value range: 0-6.	When Type is 0, the value range is 0 to 6. Otherwise, the value is invalid.

## AUDIT/SignatureFileInfos

This table contains the signature file information.

## XML structure

```
<AUDIT>
  <SignatureFileInfos>
    <FileInfo>
      <FileStatus></FileStatus>
      <Version></Version>
      <PublishedTime></PublishedTime>
      <Description></Description>
    </FileInfo>
  </SignatureFileInfos>
</AUDIT>
```

## Table description

Item	Description
Feature name	AUDIT
Table name	SignatureFileInfos
Table type	MultiSingle-instance table
Row name	FileInfo
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileStatus	signature file Status	Index	Enumeration: <ul style="list-style-type: none"><li>1—current.</li><li>2—last.</li><li>3—factory.</li></ul>	N/A
Version	Version of the signature file	N/A	String: case-insensitive. Length: 1 to 31 characters.	v.v(2.1)
PublishedTime	The time when the signature is published	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	Consider time-zone.
Description	DescriptionInformation	N/A	String: case-insensitive Length: 1 to 255 characters.	N/A

## AUDIT/UpdatePercentage

This table contains the percentage of update.

## XML structure

```
<AUDIT>
  <UpdatePercentage>
    <Percentage></Percentage>
  </UpdatePercentage>
</AUDIT>
```

## Table description

Item	Description
Feature name	AUDIT
Table name	UpdatePercentage
Table Type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Percentage	the percentage of update.	N/A	Unsigned integer:	When the value range is 0 to 100,it means in upgrading, Otherwise, means error.

## AUDIT/KeywordGroupReferences

This table contains the information about the relationship between AUDIT's policys and keywordgroups.

## XML structure

```
<AUDIT>
  <KeywordGroupReferences>
    <KeywordGroupReference>
      <KeywordGroupName></KeywordGroupName>
      <PolicyName></PolicyName>
      <RuleID></RuleID>
    </KeywordGroupReference>
  </KeywordGroupReferences>
</AUDIT>
```

## Table description

Item	Description
Feature name	AUDIT
Table name	KeywordGroupReferences
Table type	Multi-instance table
Row name	KeywordGroupReference
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
KeywordGroupPName	Keyword Group Name	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
PolicyName	Policy Name	Index	String: case-insensitive. Length: 1 to 63 characters.	N/A
RuleID	Rule ID	Index	Unsigned integer: Value range: 1 to 64.	N/A

## AUDIT/AUDITSpecification

This table contains the AUDIT specification information.

## XML structure

```
<AUDIT>
  <AUDITSpecification>
    <SupportDomain></SupportDomain>
  </AUDITSpecification>
</AUDIT>
```

## Table description

Item	Description
Feature name	AUDIT
Table name	AUDITSpecification
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SupportDomain	Whether the function of AUDIT domain is supported.	N/A	Boolean: <ul style="list-style-type: none"><li>• true.</li><li>• false.</li></ul>	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileNumber	Profile number	Index	Unsigned integer: Value range: 1 to 4294967295.	Rule option is the match order.
ProfileName	Profile Name, cannot be same with other profiles	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ReferenceMode	Rule shared mode	N/A	Unsigned integer: <ul style="list-style-type: none"> <li>0—per-rule.</li> <li>1—rule-shared.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IpAverageEnable	Ip average enable	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	N/A
TotalMaxKbps	Total max kbps	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
TotalGuaranteedKbps	Total guaranteed kbps	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
TotalGuaranteedKbpsPerIP	Total guaranteed kbps per ip	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
TotalGuaranteedKbpsPerUser	Total guaranteed kbps per user	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
TotalMaxKbpsPerIP	Total max kbps per ip	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
TotalMaxKbpsPerUser	Total max kbps per user	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
DnGuaranteedKbpsPerIP	Down guaranteed kbps per ip	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
UpGuaranteedKbpsPerIP	Up guaranteed kbps per ip	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
DnGuaranteedKbpsPerUser	Down guaranteed kbps per user	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
UpGuaranteedKbpsPerUser	Up guaranteed kbps per user	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
DnGuaranteedKbps	Downstream Guaranteed bandwidth	N/A	Unsigned integer: Value range: 8 to 100,000,000.	Optional
UpGuaranteedKbps	Upstream guaranteed Kbps	N/A	Unsigned integer: Value range: 8 to 100,000,000.	Optional
DnMaxKbps	Downstream Max Kbps	N/A	Unsigned integer: Value range: 8 to 100,000,000.	Optional
UpMaxKbps	Upstream Max Kbps	N/A	Unsigned integer: Value range: 8 to 100,000,000.	Optional
DnMaxKbpsPerIP	Downstream Max Kbps per iP	N/A	Unsigned integer: Value range: 8 to 100,000,000.	Optional
UpMaxKbpsPerIP	Upstream Max Kbps Per IP	N/A	Unsigned integer: Value range: 8 to 100,000,000.	Optional. Per-IP and Per-User are exclusive.
DnMaxKbpsPerUser	Downstream Max Kbps per User	N/A	Unsigned integer: Value range: 8 to 100,000,000.	Optional

Column name	Column description	Column type	Data type and restrictions	Remarks
UpMaxKbpsPerUser	Upstream Max Kbps PerUser	N/A	Unsigned integer: Value range: 8 to 100,000,000.	Optional
Priority	Stream Priority level	N/A	Unsigned integer: Value range: 1 to 7.	When the outbound bandwidth is limited, the priority of the stream is higher, the stream is prior to pass the interface.
RemarkDSCP	Dscp value	N/A	Unsigned integer: Value range: 0 to 63.	Optional
MaxConnNum	Max up connections	N/A	Unsigned integer: Value range: 1 to 12,000,000.	Optional
MaxConnNumPerIP	Max up connections per IP	N/A	Unsigned integer: Value range: 1 to 12,000,000.	Optional Per-IP and Per-User are exclusive.
MaxConnNumPerUser	Max up connections per User	N/A	Unsigned integer: Value range: 1 to 12,000,000.	Optional
MaxConnRate	Max up connections rate	N/A	Unsigned integer: Value range: 1 to 12,000,000 times per second.	Optional
MaxConnRatePerIP	Max up connections rate per IP	N/A	Unsigned integer: Value range: 1 to 12,000,000 times per second.	Optional Per-IP and Per-User are exclusive.
MaxConnRatePerUser	Max up connections rate per user	N/A	Unsigned integer: Value range: 1 to 12,000,000 times per second.	Optional

## AVC/ RuleJsonOptions

# AVC

## AVC/TrafficParentRules

This table contains information about parent traffic rules.

### XML structure

```
<AVC>
  <TrafficParentRules>
    <Rule>
      <Position></Position>
      <RuleNumber></RuleNumber>
      <RuleName></RuleName>
      <OptionContent></OptionContent>
      <TotalCount></TotalCount>
      <FirstSonRuleNum></FirstSonRuleNum>
      <Enable></Enable>
      <TimeRange></TimeRange>
      <ProfileName></ProfileName>
    </Rule>
  </TrafficParentRules>
</AVC>
```

### Table description

Item	Description
Feature name	AVC
Table name	TrafficParentRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Position	Record the Number	Index	Unsigned integer: Value range: 0 to 200.	N/A
RuleNumber	Rule number	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
RuleName	Rule name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
OptionContent	Match criterion content	N/A	String, case-insensitive. Length: 1 to 65535 characters. Content: JSON array.	This column stores all match criteria of a parent traffic rule in the JSON array format. A JSON array is made up of JSON objects. A JSON object describes information about one match criterion type by using optionType and optionVal. The optionVal is a set of values for the match criterion. A JSON object contains a maximum of 64 characters.
TotalCount	Total number of rules	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
FirstSonRuleNum	Return the number of the first child rule	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
Enable	Set this value to true to enable the rule	N/A	Boolean: • true. • false.	N/A
TimeRange	Time range name	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
ProfileName	Traffic profile name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A

## AVC/TrafficPolicyChildRules

This table contains information about child traffic rules.

### XML structure

```

<AVC>
  <TrafficPolicyChildRules>
    <Rule>
      <RuleNumber></RuleNumber>
      <ParentRuleNumber></ParentRuleNumber>
      <RuleName></RuleName>
      <FirstSonRuleNum></FirstSonRuleNum>
      <Enable></Enable>
      <TimeRange></TimeRange>
      <ProfileName></ProfileName>
      <OptionContent></OptionContent>
    </Rule>
  </TrafficPolicyChildRules>

```

</AVC>

## Table description

Item	Description
Feature name	AVC
Table name	TrafficPolicyChildRules
Table type	Multi-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleNumber	Rule number	Index	Unsigned integer: Value range: 1 to 4294967295.	N/A
ParentRuleNumber	Number of the parent rule	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
RuleName	Rule name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
FirstSonRuleNum	Return the number of the first child rule	N/A	Unsigned integer: Value range: 1 to 4294967295.	N/A
Enable	Set this value to true to enable the rule	N/A	Boolean: <ul style="list-style-type: none"><li>true.</li><li>false.</li></ul>	N/A
TimeRange	Time range name	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
ProfileName	Traffic profile name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
OptionContent	Match criterion content	N/A	String, case-insensitive. Length: 1 to 10240. Content: JSON array.	This column stores all match criteria of a parent traffic rule in the JSON array format. A JSON array is made up of JSON objects. A JSON object describes information about one match criterion type by using optionType and optionVal. The optionVal is a set of values for the match criterion. A JSON object contains a maximum of 64 characters.

# AVC/AvcRuleOptions

This table contains match criterion types.

## XML structure

```
<AVC>
  <AvcRuleOptions>
    <AvcOption>
      <AvcRuleNumber></AvcRuleNumber>
      <AvcSeqNum></AvcSeqNum>
      <AvcOptionType></AvcOptionType>
      <AvcOptionVal></AvcOptionVal>
    </AvcOption>
  </AvcRuleOptions>
</AVC>
```

## Table description

Item	Description
Feature name	AVC
Table name	AvcRuleOptions
Table type	Multi-instance table
Row name	AvcOption
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AvcRuleNumber	Rule number	Index	Unsigned integer: Value range: 1 to 4294967295.	N/A
AvcSeqNum	Sequence numbers for values of a match criterion	Index	Unsigned integer: Value range: 1 to 4294967295.	N/A
AvcOptionType	Match criterion type	N/A	Enumeration: <ul style="list-style-type: none"><li>• 1—SourceZones.</li><li>• 2—DestZones.</li><li>• 3—SourceAddressSets.</li><li>• 4—DestAddressSets.</li><li>• 5—Users.</li><li>• 6—UserGroups.</li><li>• 7—Applications.</li><li>• 8—AppGroups.</li><li>• 9—Services.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>10—Dscp.</li> </ul>	
AvcOptionVal	Match criterion value	N/A	String, case-insensitive. Length: 1 to 65535 characters. Content: JSON array. Such as: [Optionval1,optionval2,...].	A JSON array contains strings of 1 to 64 characters.

## AVC/TrafficPolicyQuery

This table contains information about each match criterion type.

### XML structure

```

<AVC>
  <TrafficPolicyQuery>
    <RuleQuery>
      <UserID></UserID>
      <Position></Position>

## Table description

Item	Description
Feature name	AVC
Table name	TrafficPolicyProfiles
Table type	Multi-instance table
Row name	Profile
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileNumber	Profile number	Index	Unsigned integer: Value range: 1 to 4294967295.	Rule option is the match order.
ProfileName	Profile Name, cannot be same with other profiles	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ReferenceMo	Rule shared	N/A	Unsigned integer:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
de	mode		<ul style="list-style-type: none"> <li>0—per-rule.</li> <li>1—rule-shared.</li> </ul>	
IpAverageEnable	Ip average enable	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	N/A
TotalMaxKbps	Total max kbps	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
TotalGuaranteedKbps	Total guaranteed kbps	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
TotalGuaranteedKbpsPerIP	Total guaranteed kbps per ip	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
TotalGuaranteedKbpsPerUser	Total guaranteed kbps per user	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
TotalMaxKbpsPerIP	Total max kbps per ip	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
TotalMaxKbpsPerUser	Total max kbps per user	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
DnGuaranteedKbpsPerIP	Down guaranteed kbps per ip	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
UpGuaranteedKbpsPerIP	Up guaranteed kbps per ip	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
DnGuaranteedKbpsPerUser	Down guaranteed kbps per user	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
UpGuaranteedKbpsPerUser	Up guaranteed kbps per user	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
DnGuaranteedKbps	Downstream Guaranteed bandwidth	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
UpGuaranteedKbps	Upstream guaranteed kbps	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
DnMaxKbps	Downstream Max kbps	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
UpMaxKbps	Upstream Max kbps	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
DnMaxKbpsPerIP	Downstream Max kbps per iP	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
UpMaxKbpsPerIP	Upstream Max kbps Per IP	N/A	Unsigned integer: Value range: 8 to 100,000,000.	Per-IP and Per-User are exclusive.
DnMaxKbpsPerUser	Downstream Max kbps per	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	User			
UpMaxKbpsPerUser	Upstream Max kbps PerUser	N/A	Unsigned integer: Value range: 8 to 100,000,000.	N/A
Priority	Stream Priority level	N/A	Unsigned integer: Value range: 1 to 7.	When the outbound bandwidth is limited, the priority of the stream is higher, the stream is prior to pass the interface.
RemarkDSCP	Dscp value	N/A	Unsigned integer: Value range: 0 to 63.	N/A
MaxConnNum	Max up connections	N/A	Unsigned integer: Value range: 1 to 12,000,000.	N/A
MaxConnNumPerIP	Max up connections per IP	N/A	Unsigned integer: Value range: 1 to 12,000,000.	Per-IP and Per-User are exclusive
MaxConnNumPerUser	Max up connections per User	N/A	Unsigned integer: Value range: 1 to 12,000,000.	N/A
MaxConnRate	Max up connections rate	N/A	Unsigned integer: Value range:1 to 12,000,000 times per second.	N/A
MaxConnRatePerIP	Max up connections rate per IP	N/A	Unsigned integer: Value range:1 to 12,000,000 times per second.	Per-IP and Per-User are exclusive
MaxConnRatePerUser	Max up connections rate per user	N/A	Unsigned integer: Value range:1 to 12,000,000 times per second.	N/A

## AVC/AVCSpecification

This table contains the AVC specification information.

## AVC/TrafficPolicyRules

Message	Explanation
Operation failed. The parent rule and the child rule cannot use the same traffic profile. 操作失败：父策略与子策略不能引用同一个带宽通道。	The parent rule and the child rule cannot use the same traffic profile. 配置父子策略时，父子策略不能引用同一个带宽通道。
Operation failed. The parent rule's guaranteed bandwidth must be greater than or equal to the child rule's guaranteed bandwidth. 操作失败：父策略的保证带宽要大于等于子策略的保证带宽。	The parent rule's guaranteed bandwidth must be greater than or equal to the child rule's guaranteed bandwidth. 配置父子策略时，父策略的保证带宽要大于等于子策略的保证带宽。
Operation failed. The maximum bandwidth of a child rule cannot be greater than that of the parent rule. 操作失败：子策略的最大带宽不能大于父策略的最大带宽。	The maximum bandwidth of a child rule cannot be greater than that of the parent rule. 配置父子策略时，子策略的最大带宽不能大于父策略的最大带宽。
Operation failed. The child rule's guaranteed bandwidth cannot be greater than parent rule's maximum bandwidth. 操作失败：子策略的保证带宽不能大于父策略的最大限制带宽。	The child rule's guaranteed bandwidth cannot be greater than parent rule's maximum bandwidth. 配置父子策略时，子策略的保证带宽不能大于父策略的最大限制带宽。
The rule name already exists. 策略名称已存在。	The rule name already exists. 配置带宽策略时，策略名称不能相同。
A level-4 rule cannot act as a parent rule. 该父策略是一个四级策略。	A level-4 rule cannot act as a parent rule. 配置子带宽策略时，不能指定一个四级策略作为父策略。
The traffic profile reference mode for the parent and child traffic rules must be the same. 父子策略引用的带宽通道的限流方式必须一致。	The traffic profile reference mode for the parent and child traffic rules must be the same. 配置子带宽策略时，父子策略引用的带宽通道的限流方式必须一致。
The guaranteed bandwidth for the parent traffic rule must be greater than or equal to the guaranteed bandwidth for its child traffic rule. 父策略引用带宽通道的的保证带宽不能小于子策略引用带宽通道的保证带宽。	The guaranteed bandwidth for the parent traffic rule must be greater than or equal to the guaranteed bandwidth for its child traffic rule. 配置子带宽策略时，父策略引用带宽通道的的保证带宽不能小于子策略引用带宽通道的保证带宽。
The maximum bandwidth for the parent traffic rule must be greater than or equal to the maximum bandwidth for its child traffic rule. 父策略引用带宽通道的的最大带宽不能小于子策略引用带宽通道的最大带宽。	When configuring the child rule, the maximum bandwidth for the parent traffic rule must be greater than or equal to the maximum bandwidth for its child traffic rule. 配置子带宽策略时，父策略引用带宽通道的的最大带宽不能小于子策略引用带宽通道的最大带宽。
The maximum bandwidth for the parent traffic rule must be greater than or equal to the guaranteed bandwidth for its child traffic rule. 父策略引用带宽通道的的最大带宽不能小于子策略引用带宽通道的保证带宽。	When configuring the child rule, the maximum bandwidth for the parent traffic rule must be greater than or equal to the guaranteed bandwidth for its child traffic rule. 配置子带宽策略时，父策略引用带宽通道的的最大带宽不能小于子

	策略引用带宽通道的保证带宽。
<p>The guaranteed bandwidth for a child traffic rule must be smaller than the guaranteed bandwidth for its parent traffic rule.</p> <p>子策略引用带宽通道的的保证带宽不能大于父策略引用带宽通道的保证带宽。</p>	<p>When configuring the child rule, the guaranteed bandwidth for a child traffic rule must be smaller than the guaranteed bandwidth for its parent traffic rule.</p> <p>配置子带宽策略时，子策略引用带宽通道的的保证带宽不能大于父策略引用带宽通道的保证带宽。</p>
<p>The guaranteed bandwidth for its child traffic rule must be smaller than the maximum bandwidth for its parent traffic rule.</p> <p>子策略引用带宽通道的的保证带宽不能大于父策略引用带宽通道的最大带宽。</p>	<p>When configuring the child rule, the guaranteed bandwidth for its child traffic rule must be smaller than the maximum bandwidth for its parent traffic rule.</p> <p>配置子带宽策略时，子策略引用带宽通道的的保证带宽不能大于父策略引用带宽通道的最大带宽。</p>
<p>The maximum bandwidth for its child traffic rule must be smaller than the maximum bandwidth for its parent traffic rule.</p> <p>子策略引用带宽通道的的最大带宽不能大于父策略引用带宽通道的最大带宽。</p>	<p>When configuring the child rule, the maximum bandwidth for its child traffic rule must be smaller than the maximum bandwidth for its parent traffic rule.</p> <p>配置子带宽策略时，子策略引用带宽通道的的最大带宽不能大于父策略引用带宽通道的最大带宽。</p>

## AVC/TrafficPolicyProfiles

Message	Explanation
<p>Operation failed. The profile has been used by a rule.</p> <p>操作失败：无法删除已经被引用的带宽通道。</p>	<p>Can't delete a profile that has been used by a rule.</p> <p>删除带宽通道时，无法删除已经被策略引用的带宽通道。</p>
<p>The profile name already exists.</p> <p>带宽通道名称已存在。</p>	<p>The profile name already exists.</p> <p>新建带宽通道时，通道名称不能相同。</p>
<p>The per-IP/per-user guaranteed bandwidth must be smaller than or equal to the per-IP/per-user maximum bandwidth.</p> <p>每IP或每用户的保证带宽不能大于每IP或每用户的最大带宽。</p>	<p>The per-IP/per-user guaranteed bandwidth must be smaller than or equal to the per-IP/per-user maximum bandwidth.</p> <p>配置带宽通道时，每IP或每用户的保证带宽要小于等于最大带宽。</p>
<p>The per-IP/per-user guaranteed bandwidth must be smaller than or equal to the total guaranteed bandwidth.</p> <p>每IP或每用户的保证带宽不能大于整体的保证带宽。</p>	<p>The per-IP/per-user guaranteed bandwidth must be smaller than or equal to the total guaranteed bandwidth.</p> <p>配置带宽通道时，每IP或每用户的保证带宽不能大于整体的保证带宽。</p>
<p>The total guaranteed bandwidth must be smaller than or equal to the total maximum bandwidth.</p> <p>整体保证带宽不能大于整体最大带宽。</p>	<p>The total guaranteed bandwidth must be smaller than or equal to the total maximum bandwidth.</p> <p>配置带宽通道时，整体保证带宽不能大于整体最大带宽。</p>
<p>The per-IP/per-user guaranteed bandwidth must be smaller than or equal to the total maximum bandwidth.</p> <p>每IP或每用户的保证带宽不能大于整体最大带宽。</p>	<p>The per-IP/per-user guaranteed bandwidth must be smaller than or equal to the total maximum bandwidth.</p> <p>配置带宽通道时，每IP或每用户的保证带宽不能大于整体最大带宽。</p>

Table type	Single-instance table
Row name	None
Restrictions	This table supports only global configurations.
Support for row creation and deletion	No

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MultihopMinTransmitInterval	Minimum interval for transmitting multihop BFD control packet.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
MultihopMinReceiveInterval	Minimum interval for receiving multihop BFD control packet.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
MultihopDetectMultiplier	Multihop detection time multiplier.	N/A	Unsigned integer.	The value range for this argument varies by device model.
EchoSourceIp	Specify source IP address in BFD echo packet.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. 0.0.0.0 is an invalid value.
EchoSourceIpv6	Specify source IPv6 address in BFD echo packet.	N/A	Hexadecimal string, colon-separated.	Example: 1::1. 0::0 is an invalid value.
MultihopAuthentication	Multihop Authentication.	Data structure	Members include: <ul style="list-style-type: none"> <li>• AuthenticationType.</li> <li>• KeyID.</li> <li>• KeyType.</li> <li>• Key.</li> </ul>	N/A
AuthType	Authentication Type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—simple.</li> <li>• 2—md5.</li> <li>• 3—m-md5.</li> <li>• 4—sha1.</li> <li>• 5—m-sha1.</li> <li>• 6—hmac-md5.</li> <li>• 7—hmac-m-md5.</li> <li>• 8—hmac-sha1.</li> <li>• 9—hmac-m-sha1.</li> </ul>	N/A
KeyID	Key ID.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
KeyType	Key Type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—cipher.</li> <li>• 2—plain.</li> </ul>	N/A
Key	Key.	N/A	String, case-sensitive.	If KeyType is cipher, the length are 33 to 53

Column name	Column description	Column type	Data type and restrictions	Remarks
				characters. If KeyType is plain, the length are 1 to 16 characters.
IpRouterAlert	Set the Router Alert option in BFD control packets for MPLS.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true.</b></li> <li><b>false.</b></li> </ul>	When set the ip router alert option, set the value to <b>true.</b> Otherwise, set the value to <b>false.</b>
InitMode	Specify mode before creating BFD session.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Active.</li> <li>1—Passive.</li> </ul>	N/A
MultihopMinControlInterval	Minimum interval for transmitting and receiving multihop BFD control packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.  It can be used on some special devices, and cannot be used with MinTransmitInterval or MinReceiveInterval at the same time on these special devices.

## BFD/Interfaces

This table contains BFD interface information.

## XML structure

```

<BFD>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <MinTransmitInterval></MinTransmitInterval>
      <MinReceiveInterval></MinReceiveInterval>
      <DetectMultiplier></DetectMultiplier>
      <MinEchoReceiveInterval></MinEchoReceiveInterval>
      <Authentication>
        <AuthType></AuthType>
        <KeyID></KeyID>
        <KeyType></KeyType>
        <Key></Key>
      </Authentication>
    </Interface>
  </Interfaces>
</BFD>

```

```

    <Demand></Demand>
    <Echo></Echo>
    <MinControlInterval></MinControlInterval>
  </Interface>
</Interfaces>
</BFD>

```

## Table description

Item	Description
Feature name	BFD
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	none
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer	Some versions support interface names. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
MinTransmitInterval	Minimum interval for transmitting single-hop BFD control.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
MinReceiveInterval	Minimum interval for receiving single-hop BFD control.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
DetectMultiplier	Single-hop detection time multiplier.	N/A	Unsigned integer.	The value range for this argument varies by device model.

Column name	Column description	Column type	Data type and restrictions	Remarks
MinEchoReceiveInterval	Minimum interval for receiving BFD echo.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
Authentication	Authentication.	Data structure	Members include: <ul style="list-style-type: none"> <li>AuthenticationType.</li> <li>KeyID.</li> <li>KeyType.</li> <li>Key.</li> </ul>	N/A
AuthType	Authentication Type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—simple.</li> <li>2—md5.</li> <li>3—m-md5.</li> <li>4—sha1.</li> <li>5—m-sha1.</li> <li>6—hmac-md5.</li> <li>7—hmac-m-md5.</li> <li>8—hmac-sha1.</li> <li>9—hmac-m-sha1.</li> </ul>	N/A
KeyID	Key ID.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
KeyType	Key Type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—cipher.</li> <li>2—plain.</li> </ul>	N/A
Key	Key.	N/A	String, case-sensitive.	If Key Type is cipher, the length are 33 to 53 characters. If Key Type is plain, the length are 1 to 16 characters.
Demand	Specify BFD session mode.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true.</b></li> <li><b>false.</b></li> </ul>	When set the BFD Demand mode, set the value to <b>true</b> . Otherwise, set the value to <b>false</b> .
Echo	BFD echo function.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Not enable echo function.</li> <li>1—enable echo receive function.</li> <li>2—enable echo send function.</li> <li>3—enable echo receive and send function.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MinControlInterval	Minimum interval for transmitting and receiving single-hop BFD control packets.	N/A	Unsigned integer. Unit: millisecond.	<p>The value range for this argument varies by device model.</p> <p>It can be used on some special devices, and cannot be used with MinTransmitInterval or MinReceiveInterval at the same time on these special devices.</p>

MultihopMinReceiveInterval	Minimum interval for receiving multihop BFD control packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
MultihopDetectMultiplier	Multihop detection time multiplier.	N/A	Unsigned integer.	The value range for this argument varies by device model.
EchoSourceIp	Specify source IP address in BFD echo packet.	N/A	String, dotted decimal notation.	Example: 1.1.1.1. 0.0.0.0 is an invalid value.
EchoSourceIpv6	Specify source IPv6 address in BFD echo packet.	N/A	Hexadecimal string, colon-separated.	Example: 1::1. 0::0 is an invalid value.
MultihopAuthentication	Multihop Authentication.	Data structure	Members include: <ul style="list-style-type: none"> <li>• AuthenticationType.</li> <li>• KeyID.</li> <li>• KeyType.</li> <li>• Key.</li> </ul>	N/A
AuthType	Authentication Type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—simple.</li> <li>• 2—md5.</li> <li>• 3—m-md5.</li> <li>• 4—sha1.</li> <li>• 5—m-sha1.</li> <li>• 6—hmac-md5.</li> <li>• 7—hmac-m-md5.</li> <li>• 8—hmac-sha1.</li> <li>• 9—hmac-m-sha1.</li> </ul>	N/A
KeyID	Key ID.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
KeyType	Key Type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—cipher.</li> <li>• 2—plain.</li> </ul>	N/A
Key	Key.	N/A	String, case-sensitive.	If Key Type is cipher,the length are 33 to 53 characters. If Key Type is plain,the length are 1 to 16

Column name	Column description	Column type	Data type and restrictions	Remarks
				characters.
IpRouterAlert	Set the Router Alert option in BFD control packets for MPLS.	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	When set the ip router alert option, set the value to <b>true</b> . Otherwise, set the value to <b>false</b> .
InitMode	Specify mode before creating BFD session.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Active.</li> <li>1—Passive.</li> </ul>	N/A
MultihopMinControlInterval	Minimum interval for transmitting and receiving multihop BFD control packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.  It can be used on some special devices, and cannot be used with MinTransmitInterval or MinReceiveInterval at the same time on these special devices.

## BFD/Interfaces

This table contains BFD interface information.

## XML structure

```

## Table description

Item	Description
Feature name	BFD
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	none

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
MinTransmitInterval	Minimum interval for transmitting single-hop BFD control packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
MinReceiveInterval	Minimum interval for receiving single-hop BFD control packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
DetectMultiplier	Single-hop detection time multiplier.	N/A	Unsigned integer.	The value range for this argument varies by device model.

Column name	Column description	Column type	Data type and restrictions	Remarks
MinEchoReceiveInterval	Minimum interval for receiving BFD echo packets	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
MinEchoReceiveInterval	Minimum interval for receiving BFD echo.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.
Authentication	Authentication.	Data structure	Members include: <ul style="list-style-type: none"> <li>• AuthenticationType.</li> <li>• KeyID.</li> <li>• KeyType.</li> <li>• Key.</li> </ul>	N/A
AuthType	Authentication Type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—simple.</li> <li>• 2—md5.</li> <li>• 3—m-md5.</li> <li>• 4—sha1.</li> <li>• 5—m-sha1.</li> <li>• 6—hmac-md5.</li> <li>• 7—hmac-m-md5.</li> <li>• 8—hmac-sha1.</li> <li>• 9—hmac-m-sha1.</li> </ul>	N/A
KeyID	Key ID.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
KeyType	Key Type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—cipher.</li> <li>• 2—plain.</li> </ul>	N/A
Key	Key.	N/A	String, case-sensitive.	If Key Type is cipher,the length are 33 to 53 characters. If Key Type is plain,the length are 1 to 16 characters.
Demand	Specify BFD session mode.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true.</li> <li>• false.</li> </ul>	When set the BFD Demand mode, set the value to <b>true</b> . Otherwise, set the value to <b>false</b> .
Echo	BFD echo function.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—Not enable echo function.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>1—enable echo receive function.</li> <li>2—enable echo send function.</li> <li>3—enable echo receive and send function.</li> </ul>	
MinControlInterval	Minimum interval for transmitting and receiving single-hop BFD control packets.	N/A	Unsigned integer. Unit: millisecond.	The value range for this argument varies by device model.  It can be used on some special devices, and cannot be used with MinTransmitInterval or MinReceiveInterval at the same time on these special devices.

# BGP

## BGP/Operations

This table is a description of BGP protocol actions.

### XML structure

```
<BGP>
  <Operations>
    <Operation>
      <OperationType></OperationType>
      <Name></Name>
    </Operation>
  </Operations>
</BGP>
```

### Responded XML structure

N/A

### Table description

Item	Description
Feature name	BGP
Table name	Operations
Table type	Multi-instance table
Row name	Operation
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
OperationType	Operation type	Index	Enumeration 1 – Send update message immediately 2 – Notice BGP protocol smooth start 3 –Notice BGP protocol smooth end	The operation type specify the operation which BGP protocol should perform.
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.

## Responded columns

N/A

## BGP/FlushRoutes

This table flush routes to BGP protocol.

## XML structure

```
<BGP>
  <FlushRoutes>
    <FlushRoute>
      <Name></Name>
      <VRF></VRF>
      <OperationType></OperationType>
      <RouteType></RouteType>
      <RouteKey></RouteKey>
      <RouteSegment></RouteSegment>
      <RouteAttr></RouteAttr>
    </FlushRoute>
  </FlushRoutes>
</BGP>
```

## Responded XML structure

N/A

Table name	Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	No
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process. When execute get

Column name	Column description	Column type	Data type and restrictions	Remarks
				bulk operation, you can only get the data of the specified BGP instance.
ASNumber	Autonomous System number		Unsigned integer. Value range: 1 to 4294967295	N/A
NSR	Nonstop Routing		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.(default)</li> <li>1—Enable.</li> </ul>	N/A
SendDelayTime	Send delay time in seconds		Unsigned integer. Value range: 0 to 3600	The value 0 indicates that the BGP speaker never send the update message.
SendDelayPrefix	Send delay using IPv4 prefix list		String. Length: 1 to 63 characters.	N/A
SendDelayIPv6Prefix	Send delay using IPv6 prefix list		String. Length: 1 to 63 characters.	N/A
SendStartupTime	Send startup time in seconds		Unsigned integer. Value range: 0 to 3600	The value 0 indicates that the BGP speaker always send the update message with the startup policy.
StartupPolicy Med	Satrtup policy MED		Unsigned integer. Value range: 0 to 4294967295	N/A
FlushSuboptimalRoute	Flush suboptimal route to RIB		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
RouteReplicateEnable	Enable mutual route replication between public and private networks		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A

## BGP/VRFs

This table contains BGP VRF information.

## XML structure

<BGP>

```

<VRFs>

Support for row creation and deletion	Yes

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
SessAF	Address family of session	Index	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4.</li> <li>2—IPv6.</li> </ul>	N/A
IpAddress	Address of session	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
Mask	Mask of session address	Index	Unsigned integer. Value range: 0 to 128,or 255	For non-dynamic peers, this is 255.For IPv4 dynamic peers,this is 0 to 32.For IPv6 dynamic peers, this is 0 to 128. Dynamic peers are not supported.
ASNumber	Autonomous System number		Unsigned integer. Value range: 1 to 4294967295	N/A
GroupName	Group Name		String. Length: 1 to 47 characters.	N/A
ConnectInterface	Connect Interface		String. Length: 1 to 47 characters.	N/A
UpdateInterval	Route Update Interval		Unsigned integer. Value range: 0 to 600	N/A
PasswordType	Password type.		Enumeration. <ul style="list-style-type: none"> <li>1—Ciphertext.</li> <li>2—Plaintext.</li> </ul>	N/A
Password	Password.		String. Length: 1 to 80 characters for MD5 plaintext password. 33 to 137 characters for MD5 ciphertext password.	N/A
BfdType	Bfd type		Enumeration. <ul style="list-style-type: none"> <li>0—default type</li> <li>1—single-hop</li> <li>2—multi-hop</li> </ul>	The default type indicate that actual bfd type (single-hop or multi-hop) depend on different

Column name	Column description	Column type	Data type and restrictions	Remarks
				situations
EbgpMaxHop	EBGP multihop		Unsigned integer. Value range: 1 to 255	N/A
Ignore	Disable session establishment to the peers		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.(default)</li> <li>1—Enable.</li> </ul>	N/A
Description	Peer Description		String. Length: 1 to 79 characters.	Case Sensitive
NextHopRecursivePolicyDisable	Disable route recursion policy control for routes received from the specified peer or peer group		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
FakeAS	Specify a virtual local AS number for the peer or peer group		Unsigned integer. Value range: 1 to 4294967295. String. Length: 3 to 11 characters. Format: AA<0-65535>.NN<0-65535>	By default, the fake AS number does not exist.
DualAS	Support both real and fake AS numbers for peer relationship establishment		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	The object does not exist if FakeAS is not configured. If you configure FakeAS but not DualAS, the value for DualAS is 0.
PrependGlobalAS	Add the real AS number to the AS_PATH attribute in sent packets		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	The object does not exist if FakeAS is not configured. If you configure FakeAS but not PrependGlobalAS, the value for PrependGlobalAS is 0.
PrependFakeAS	Add the fake AS number to the AS_PATH attribute in received packets		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	The object does not exist if FakeAS is not configured. If you configure FakeAS but not PrependFakeAS, the value for PrependFakeAS is 0.

## Table description

Item	Description
Feature name	BGP
Table name	Family
Table type	Multi-instance table
Row name	Family
Restrictions	No
Support for row creation and deletion	Yes

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Type	Address Family Identifier	Index	Enumeration: <ul style="list-style-type: none"> <li>• 1—IPv4 Unicast.</li> <li>• 2—IPv4 Multicast.</li> <li>• 3—MDT</li> <li>• 4—VPNv4</li> <li>• 5—IPv6 Unicast</li> <li>• 6—IPv6 Multicast.</li> <li>• 7—VPNv6</li> <li>• 8—L2VPN</li> <li>• 9—L2VPN EVPN</li> <li>• 10—Link-State</li> </ul>	N/A
Preference	Preference for BGP Routes	Data Structure	Include: <ul style="list-style-type: none"> <li>• Ebgp</li> <li>• Ibgp</li> <li>• Local</li> </ul>	N/A
Ebgp	Preference for eBGP Routes		Unsigned integer. Value range: 1 to 255	N/A
Ibgp	Preference for iBGP Routes		Unsigned integer. Value range: 1 to 255	N/A
Local	Preference for Local Routes		Unsigned integer. Value range: 1 to 255	N/A
BalanceAsPathNeglect	Ignore the AS_PATH attribute when implementing load balancing		Enumeration: <ul style="list-style-type: none"> <li>• 0—Disable.</li> <li>• 1—Enable.</li> </ul>	N/A
BalanceAsPathRelax	Load balancing for routes that have different AS_PATH attributes of the same length		Enumeration: <ul style="list-style-type: none"> <li>• 0—Disable.</li> <li>• 1—Enable.</li> </ul>	N/A
Balance	number of BGP ECMP routes for load balancing	Data Structure	Include: <ul style="list-style-type: none"> <li>• MaxBalance</li> <li>• MaxEBGPPBalance</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>• MaxIBGPBalance</li> <li>• MaxEIBGPBalance</li> </ul>	

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxBalance	maximum number of BGP ECMP routes for load balancing		Unsigned integer. Value range: 1 to 255	N/A
MaxEBGPBalance	Maximum number of EBGP ECMP routes for load balancing		Unsigned integer. Value range: 1 to 255	EBGP load balancing and EBGP/IBGP load balancing cannot be configured at the same time
MaxIBGPBalance	Maximum number of IBGP ECMP routes for load balancing		Unsigned integer. Value range: 1 to 255	EBGP load balancing and EBGP/IBGP load balancing cannot be configured at the same time
MaxEIBGPBalance	Maximum number of ECMP routes between EBGP and IBGP routes for load balancing		Unsigned integer. Value range: 1 to 255	EBGP load balancing and EBGP/IBGP load balancing cannot be configured at the same time
PolicyVpnTarget	Filter VPN routes with VPN-Target attribute		Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
ReflectBtwClients	Route reflection between clients		Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
ReflectorClusterID	cluster ID of the route reflector		String, IPv4 address string or Unsigned integer. Value range: 1 to 4294967295	N/A
RrFilter	Specify reflector route Extended community filter policy		Unsigned integer. Value range: 1 to 199	Only IBGP routes whose extended community attribute matches the specified extended community list are reflected.
DefaultRtImport	Import default route		Enumeration: <ul style="list-style-type: none"> <li>0—Disable</li> <li>1—Enable.</li> </ul>	N/A
DomainDistinguisher	A globally unique identifier for LS domain		String. Length: 9 to 26 characters. The format is AS<1-4294967295>:routerID <X.X.X.X>.	Example: 100:13.14.23.22
PIC	Enable Prefix		Enumeration: <ul style="list-style-type: none"> <li>0—Disable</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	Independent Convergence		<ul style="list-style-type: none"> <li>1—Enable.</li> </ul>	
VpnCrossMulti path	Redistribute multiple routes with the same prefix and RD to the VPN routing table		Enumeration: <ul style="list-style-type: none"> <li>0—Disable</li> <li>1—Enable.</li> </ul>	N/A
RouteSelectDelay	Optimal route calculation delay time		Unsigned integer. Value range: 0 to 600 seconds.	N/A
AdvertiseEvpnRoute	Advertise BGP EVPN routes through the current address family	Data Structure	Include: <ul style="list-style-type: none"> <li>AdvertiseEvpnEnable</li> <li>AdvertiseEvpnPolicy</li> <li>AdvertiseEvpnReplaceRt</li> </ul>	N/A
AdvertiseEvpnEnable	Enable advertise BGP EVPN routes through the current address family		Enumeration: <ul style="list-style-type: none"> <li>0—Disable</li> <li>1—Enable.</li> </ul>	N/A
AdvertiseEvpnPolicy	Filter BGP EVPN routes by a routing policy		String. Length: 1 to 63 characters.	N/A
AdvertiseEvpnReplaceRt	Replace the route targets of BGP EVPN routes with those of VPN instances		Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
AdvertiseL2vpnEvpnRoute	Advertise BGP EVPN route to the local site		Enumeration: <ul style="list-style-type: none"> <li>0—Disable</li> <li>1—Enable. (default)</li> </ul>	N/A
AdvertiseL3vpnRoute	Advertise BGP L3VPN routes through the BGP EVPN address family	Data Structure	Include: <ul style="list-style-type: none"> <li>AdvertiseL3vpnEnable</li> <li>AdvertiseL3vpnPolicy</li> <li>AdvertiseL3vpnReplaceRt</li> </ul>	N/A
AdvertiseL3vpnEnable	Enable advertise BGP L3VPN routes through the		Enumeration: <ul style="list-style-type: none"> <li>0—Disable</li> <li>1—Enable.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	BGP EVPN address family			
AdvertiseL3vpnPolicy	Filter BGP L3VPN routes by a routing policy		String. Length: 1 to 63 characters.	N/A
AdvertiseL3vpnReplaceRt	Replace the route targets of BGP L3VPN routes with those of EVPN instances		Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
ImportEvpnMacIp	Redistribute MAC/IP advertisement routes		Enumeration: <ul style="list-style-type: none"> <li>0—Disable. (default)</li> <li>1—Enable.</li> </ul>	N/A
DefaultLocalPreference	Configure default local preference		Unsigned integer. Value range: 0 to 4294967295	The default local preference is supported only by IPv4 unicast, IPv4 multicast, IPv6 unicast, and IPv6 multicast routes.

## BGP/Networks

This table contains BGP network information.

### XML structure

```

<BGP>
  <Networks>
    <Network>
      <Name></Name>
      <VRF></VRF>
      <Family></Family>
      <IpAddress></IpAddress>
      <Mask></Mask>
      <RoutePolicy></RoutePolicy>
    </Network>
  </Networks>
</BGP>

```

## Table description

Item	Description
Feature name	BGP
Table name	Networks
Table type	Multi-instance table
Row name	Network
Restrictions	No
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier of Network	Index	Enumeration: <ul style="list-style-type: none"><li>• 1—IPv4 Unicast</li><li>• 2—IPv4 Multicast</li><li>• 5—IPv6 Unicast</li><li>• 6—IPv6 Multicast</li></ul>	N/A
IpAddress	Address of Network	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
Mask	Mask of Network address	Index	Unsigned integer. Value range: 0 to 128	For IPv4,this is 0 to 32.For IPv6 this is 0 to 128.
RoutePolicy	Name of the routing policy		String. Length: 1 to 63 characters.	N/A

## BGP/Aggregates

This table contains BGP aggregate information.

## XML structure

<BGP>

```

<Aggregates>
  <Aggregate>

    <DetailSuppressed></DetailSuppressed>
    <AsSet></AsSet>
    <AttributePolicy></AttributePolicy>
    <OriginPolicy></OriginPolicy>
    <SuppressPolicy></SuppressPolicy>
  </Aggregate>
</Aggregates>
</BGP>

```

## Table description

Item	Description
Feature name	BGP
Table name	Aggregates
Table type	Multi-instance table
Row name	Aggregate
Restrictions	No
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier of Aggregate	Index	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4 Unicast</li> <li>2—IPv4 Multicast</li> <li>5—IPv6 Unicast</li> <li>6—IPv6 Multicast</li> </ul>	N/A
IpAddress	Address of aggregate	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
Mask	Mask of aggregate address	Index	Unsigned integer. Value range: 0 to 128	For IPv4,this is 0 to 32.For IPv6 this is 0 to 128.
DetailSuppressed	Detail Suppressed		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.(default)</li> <li>1—Enable.</li> </ul>	N/A
AsSet	Creating a summary route with AS set path		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.(default)</li> <li>1—Enable.</li> </ul>	N/A
AttributePolicy	Routing policy used to set the attributes of the summary route		String. Length: 1 to 63 characters.	N/A
OriginPolicy	Routing policy used to filter original specific routes to be summarized		String. Length: 1 to 63 characters.	N/A
SuppressPolicy	Routing policy used to filter specific routes to be advertised		String. Length: 1 to 63 characters.	N/A

## BGP/NeighborGroups

This table contains BGP neighbor group information.

## XML structure

<BGP>

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier of NeighborGroup	Index	Enumeration: <ul style="list-style-type: none"> <li>• 1—IPv4 Unicast.</li> <li>• 2—IPv4 Multicast.</li> <li>• 3—MDT</li> <li>• 4—VPNv4</li> <li>• 5—IPv6 Unicast</li> <li>• 6—IPv6 Multicast.</li> <li>• 7—VPNv6</li> <li>• 8—L2VPN</li> <li>• 9—L2VPN EVPN</li> <li>• 10—Link-State</li> </ul>	N/A
GroupName	Group Name	Index	String. Length: 1 to 47 characters.	N/A
RtPolicyImport	Import Route-Policy for NeighborGroup		String. Length: 1 to 63 characters.	N/A
RtPolicyExport	Export Route-Policy for NeighborGroup		String. Length: 1 to 63 characters.	N/A
AllowAsLoop	allow a local AS number to exist in the AS_PATH attribute of routes		Unsigned integer. Value range: 1 to 10	N/A
ReflectClient	Configure the device as a route reflector and specify a peer or peer group as a client		Enumeration. <ul style="list-style-type: none"> <li>• 0—Disable.</li> <li>• 1—Enable.</li> </ul>	N/A
NextHopInvariable	Send original next hop for routes advertised to the peer		Enumeration. <ul style="list-style-type: none"> <li>• 0—Disable.</li> <li>• 1—Enable.</li> </ul>	Next-hop-local conflict with next-hop-invariable .
NextHopLocal	Specify local address as the next hop of routes advertised to the peers		Enumeration. <ul style="list-style-type: none"> <li>• 0—Disable.</li> <li>• 1—Enable.</li> </ul>	Next-hop-local conflict with next-hop-invariable

Column name	Column description	Column type	Data type and restrictions	Remarks
RouterMacLocal	Specify local MAC as the router MAC of routes advertised to and received from the peers		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
AdvertiseCommunity	Send community attribute to the peers		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
AdvertiseExtCommunity	Send extended community attribute to the peers		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
ReOriginated	Re-originate EVPN routes received from the peer by modifying the L3 VXLAN ID and RD		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
AdvEvpnRouteSuppressMac	Advertise EVPN routes to the peer excluding MAC/IP advertisement routes		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
AdvEvpnRouteSuppressPrefix	Advertise EVPN routes to the peer excluding IP prefix advertisement routes		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
DefaultgatewayNoAdv	Advertise EVPN routes by deleting the default gateway extended community attribute		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
RouteLimit	Configure the maximum number of routes that can be received from the peers	Data Structure	Include: <ul style="list-style-type: none"> <li>Number</li> <li>Percentage</li> <li>AlertOnly</li> <li>Discard</li> <li>Reconnect</li> </ul>	N/A
Number	Number of prefixes		Unsigned integer. Value range: 1 to 4294967295	N/A
Percentage	Percentage value to trigger a warning message		Unsigned integer. Value range: 1 to 100. Default is 75	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AlertOnly	Generate a log message when the route limit is exceeded		Enumeration. <ul style="list-style-type: none"> <li>0—Disable. (default)</li> <li>1—Enable.</li> </ul>	N/A
Discard	Discard routes received after the route limit is exceeded		Enumeration. <ul style="list-style-type: none"> <li>0—Disable. (default)</li> <li>1—Enable.</li> </ul>	N/A
Reconnect	Reconnect time in seconds		Unsigned integer. Value range: 1 to 65535	N/A
PreferredValue	Set a preferred value for routes received from the peers		Unsigned integer. Value range: 0 to 65535	N/A
NextHopVpn	Change the next hop of received VPNv4 routes to that of the matching VPN instance		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A

## Table description

Item	Description
Feature name	BGP
Table name	Neighbors
Table type	Multi-instance table
Row name	Neighbor
Restrictions	No
Support for row creation and deletion	Yes

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier of Neighbor	Index	Enumeration: <ul style="list-style-type: none"> <li>• 1—IPv4 Unicast.</li> <li>• 2—IPv4 Multicast.</li> <li>• 3—MDT</li> <li>• 4—VPNv4</li> <li>• 5—IPv6 Unicast</li> <li>• 6—IPv6 Multicast.</li> <li>• 7—VPNv6</li> <li>• 8—L2VPN</li> <li>• 9—L2VPN EVPN</li> <li>• 10—Link-State</li> </ul>	N/A
SessAF	Address family of session	Index	Enumeration: <ul style="list-style-type: none"> <li>• 1—IPv4.</li> <li>• 2—IPv6.</li> </ul>	N/A
IpAddress	Address of session	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
Mask	Mask of session address	Index	Unsigned integer. Value range: 0 to 128,or 255	For non-dynamic peers, this is 255.For IPv4 dynamic peers,this is 0 to 32.For IPv6 dynamic peers, this is 0 to 128. Dynamic peers are not supported.
RtPolicyImport	Import Route-Policy for Neighbor		String. Length: 1 to 63 characters.	N/A
RtPolicyExport	Export Route-Policy for Neighbor		String. Length: 1 to 63 characters.	N/A
AllowAsLoop	allow a local AS number to exist in the AS_PATH attribute of routes		Unsigned integer. Value range: 1 to 10	N/A
ReflectClient	Configure the device as a route reflector and specify a peer or peer group as a		Enumeration. <ul style="list-style-type: none"> <li>• 0—Disable.</li> <li>• 1—Enable.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	client			
NextHopInvariable	Send original next hop for routes advertised to the peer		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	Next-hop-local conflict with next-hop-invariable
NextHopLocal	Specify local address as the next hop of routes advertised to the peers		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	Next-hop-local conflict with next-hop-invariable
RouterMacLocal	Specify local MAC as the router MAC of routes advertised to and received from the peers		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
AdvertiseCommunity	Send community attribute to the peers		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
AdvertiseExtCommunity	Send extended community attribute to the peers		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
ReOriginated	Re-originate EVPN routes received from the peer by modifying the L3 VXLAN ID and RD		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
AdvEvpnRouteSuppressMac	Advertise EVPN routes to the peer excluding MAC/IP advertisement routes		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable</li> </ul>	N/A
AdvEvpnRouteSuppressPrefix	Advertise EVPN routes to the peer excluding IP prefix advertisement routes		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable</li> </ul>	N/A
DefaultgatewayNoAdv	Advertise EVPN routes by deleting the default gateway extended community attribute		<ul style="list-style-type: none"> <li>Enumeration.</li> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
RouteLimit	Configure the maximum	Data Structure	Include: <ul style="list-style-type: none"> <li>Number</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	number of routes that can be received from the peers		<ul style="list-style-type: none"> <li>Percentage</li> <li>AlertOnly</li> <li>Discard</li> <li>Reconnect</li> </ul>	
Number	Number of prefixes		Unsigned integer. Value range: 1 to 4294967295	N/A
Percentage	Percentage value to trigger a warning message		Unsigned integer. Value range: 1 to 100. Default is 75	N/A
AlertOnly	Generate a log message when the route limit is exceeded		Enumeration. <ul style="list-style-type: none"> <li>0—Disable. (default)</li> <li>1—Enable.</li> </ul>	N/A
Discard	Discard routes received after the route limit is exceeded		Enumeration. <ul style="list-style-type: none"> <li>0—Disable. (default)</li> <li>1—Enable.</li> </ul>	N/A
Reconnect	Reconnect time in seconds		Unsigned integer. Value range: 1 to 65535	N/A
PreferredValue	Set a preferred value for routes received from the peers		Unsigned integer. Value range: 0 to 65535	N/A
NextHopVpn	Change the next hop of received VPNv4 routes to that of the matching VPN instance		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A

## BGP/Redistributes

This table contains BGP redistribute information.

# BGP

## BGP/Instances

This table contains BGP instance information.

### XML structure

```
<BGP>
  <Instances>
    <Instance>
      <Name></Name>
      <ASNumber></ASNumber>
      <NSR></NSR>
      <SendDelayTime></SendDelayTime>
      <SendDelayPrefix></SendDelayPrefix>
      <SendDelayIPv6Prefix></SendDelayIPv6Prefix>
      <SendStartupTime></SendStartupTime>
      <StartupPolicyMed></StartupPolicyMed>
      <FlushSuboptimalRoute></FlushSuboptimalRoute>
      <RouteReplicateEnable></RouteReplicateEnable>
    </Instance>
  </Instances>
</BGP>
```

### Table description

Item	Description
Feature name	BGP
Table name	Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process. When execute get bulk operation, you

Column name	Column description	Column type	Data type and restrictions	Remarks
				can only get the data of the specified BGP instance.
ASNumber	Autonomous System number		Unsigned integer. Value range: 1 to 4294967295	N/A
NSR	Nonstop Routing		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
SendDelayTime	Send delay time in seconds		Unsigned integer. Value range: 0 to 3600	The value 0 indicates that the BGP speaker never send the update message.
SendDelayPrefix	Send delay using IPv4 prefix list		String. Length: 1 to 63 characters.	N/A
SendDelayIPv6Prefix	Send delay using IPv6 prefix list		String. Length: 1 to 63 characters.	N/A
SendStartupTime	Send startup time in seconds		Unsigned integer. Value range: 0 to 3600	The value 0 indicates that the BGP speaker always send the update message with the startup policy.
StartupPolicy Med	Satrtup policy MED		Unsigned integer. Value range: 0 to 4294967295	N/A
FlushSuboptimalRoute	Flush suboptimal route to RIB		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
RouteReplicateEnable	Enable mutual route replication between public and private networks		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A

## BGP/VRFs

This table contains BGP VRF information.

## XML structure

<BGP>

```

<VRFs>

    <CompareDifferentAsMED></CompareDifferentAsMED>

  </VRF>
</VRFs>
</BGP>

```

## Table description

Item	Description
Feature name	BGP
Table name	VRFs
Table type	Multi-instance table
Row name	VRF
Restrictions	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.

Column name	Column description	Column type	Data type and restrictions	Remarks
RouterId	BGP Router Id		String,IPv4 address string	N/A
Timer	Keepalive and Holdtime	Data Structure	Include: <ul style="list-style-type: none"> <li>KeepAlive</li> <li>HoldTime</li> </ul>	N/A
KeepAlive	Keepalive Interval in Seconds		Unsigned integer. Value range: 0 to 21845	N/A
HoldTime	Holdtime in Seconds		Unsigned integer. Value range: 0, or 3 to 65535	N/A
BestRouteIgp MetricIgnore	Ignore IGP metrics during optimal route selection		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
BestRouteAs PathNeglect	Ignore the AS-PATH attribute during optimal route selection		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
BestRouteCompareMED	Consider MED value during optimal route selection		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
BestRouteConfederationMED	Compare the MEDs of routes from confederation peers during optimal route selection		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
BestRouteRouterIdIgnore	Ignore router ID during optimal route selection		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
CompareDifferentAsMED	Compare the MEDs of routes from different ASs during optimal route selection		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A

## BGP/CfgSessionGroups

This table contains configure information of BGP session group.

### XML structure

```
<BGP>
  <CfgSessionGroups>

  <PrependFakeAS></PrependFakeAS>
</CfgSessionGroup>
</CfgSessionGroups>
</BGP>

```

## Table description

Item	Description
Feature name	BGP
Table name	CfgSessionGroups
Table type	Multi-instance table
Row name	CfgSessionGroup
Restrictions	No

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
GroupName	Group Name	Index	String. Length: 1 to 47 characters.	N/A
Type	Internal or External		Enumeration. <ul style="list-style-type: none"> <li>• 0—Internal.</li> <li>• 1—<b>External.</b></li> </ul>	N/A
ASNumber	Autonomous System number		Unsigned integer. Value range: 1 to 4294967295	N/A
ConnectInterface	Connect Interface		String. Length: 1 to 47 characters.	N/A
UpdateInterval	Route Update Interval		Unsigned integer. Value range: 0 to 600	N/A
PasswordType	Password type.		Enumeration. <ul style="list-style-type: none"> <li>• 1—Ciphertext.</li> <li>• 2—Plaintext.</li> </ul>	The password can only be displayed in cipher text.
Password	Password.		String. Length: 1 to 80 characters for MD5 plaintext password. 33 to 137 characters for MD5 ciphertext password.	
BfdType	Bfd type		Enumeration. <ul style="list-style-type: none"> <li>• 0—default type</li> <li>• 1—single-hop</li> <li>• 2—multi-hop</li> </ul>	The default type indicate that actual bfd type (single-hop or multi-hop) depend on different situations
EbgpMaxHop	EBGP multihop		Unsigned integer. Value range: 1 to 255	N/A
Ignore	Disable session establishment to the peers		Enumeration. <ul style="list-style-type: none"> <li>• 0—Disable.</li> <li>• 1—Enable.</li> </ul>	N/A
Description	Peer Description		String. Length: 1 to 79 characters.	Case Sensitive

Column name	Column description	Column type	Data type and restrictions	Remarks
NextHopRecursivePolicyDisable	Disable route recursion policy control for routes received from the specified peer or peer group		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
FakeAS	Specify a virtual local AS number for the peer or peer group		Unsigned integer. Value range: 1 to 4294967295. String. Length: 3 to 11 characters. Format: AA<0-65535>.NN<0-65535>	By default, the fake AS number does not exist.
DualAS	Support both real and fake AS numbers for peer group relationship establishment		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	The object does not exist if FakeAS is not configured. If you configure FakeAS but not DualAS, the value for DualAS is 0.
PrependGlobalAS	Add the real AS number to the AS_PATH attribute in sent packets		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	The object does not exist if FakeAS is not configured. If you configure FakeAS but not PrependGlobalAS, the value for PrependGlobalAS is 0.
PrependFakeAS	Add the fake AS number to the AS_PATH attribute in received packets		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	The object does not exist if FakeAS is not configured. If you configure FakeAS but not PrependFakeAS, the value for PrependFakeAS is 0.

## BGP/CfgSessions

This table contains configure information of BGP session.

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
AF	Address family of session	Index	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4.</li> <li>2—IPv6.</li> </ul>	N/A
IpAddress	Address of session	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
ASNumber	Autonomous System number		Unsigned integer. Value range: 1 to 4294967295	N/A
State	Session state		Enumeration: <ul style="list-style-type: none"> <li>0—Idle</li> <li>1—Connect</li> <li>2—Active</li> <li>3—Opensent</li> <li>4—Openconfirm</li> <li>5—Established</li> </ul>	Established state means that the BGP session is established, but whether the address families are negotiated is unknown.
Version	BGP version		Unsigned integer. Value range:4	N/A
LocalRouterID	Local router ID		String,IPv4 address string	N/A
Type	Internal or External		Enumeration. <ul style="list-style-type: none"> <li>0—Internal.</li> <li>1—External.</li> </ul>	N/A
RemoteRouterID	Router ID of the peer		String,IPv4 address string	N/A
RcvdMsgCnt	Number of messages received		Unsigned integer. Value range: 0 to 4294967295	N/A
SentMsgCnt	Number of messages sent		Unsigned integer. Value range: 0 to 4294967295	N/A
Time	Lasting time of the current BGP session state		Unsigned integer. Value range: 0 to 4294967295. Unit is second.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
DynamicallyPeer	Whether the peer is a dynamic peer		Boolean: <ul style="list-style-type: none"> <li>• <b>true.</b></li> <li>• <b>false.</b></li> </ul>	N/A
CurrentEvent	Current event of the BGP session between the local router and the peer		Enumeration: <ul style="list-style-type: none"> <li>• <b>0—Start</b></li> <li>• <b>1—Stop</b></li> <li>• <b>2—CRTimerExpired</b></li> <li>• <b>3—KATimerExpired</b></li> <li>• <b>4—HoldTimerExpired</b></li> <li>• <b>5—CR ACKED</b></li> <li>• <b>6—ConnConfirmed</b></li> <li>• <b>7—ConnFailed</b></li> <li>• <b>8—RecvOpen</b></li> <li>• <b>9—HeadErr</b></li> <li>• <b>10—OpenMsgErr</b></li> <li>• <b>11—RecvVerNotification</b></li> <li>• <b>12—RecvNotification</b></li> <li>• <b>13—RecvKeepalive</b></li> <li>• <b>14—RecvUpdate</b></li> <li>• <b>15—UpdateMsgErr</b></li> <li>• <b>16—RecvRouteRefresh</b></li> <li>• <b>17—Unknown</b></li> </ul>	N/A
LastState	Previous state of the BGP session		Enumeration: <ul style="list-style-type: none"> <li>• <b>0—Idle</b></li> <li>• <b>1—Connect</b></li> <li>• <b>2—Active</b></li> <li>• <b>3—Opensent</b></li> <li>• <b>4—Openconfirm</b></li> <li>• <b>5—Established</b></li> </ul>	Established state means that the BGP session is established, but whether the address families are negotiated is unknown.
LocalPort	Local TCP port numbers of the local router and its peer		Unsigned integer. Value range: 179, 1025 to 65535	N/A
RemotePort	Remote TCP port numbers of the local router and its peer		Unsigned integer. Value range: 179, 1025 to 65535	N/A
ConfiguredHoldTime	Configured holdtime in seconds		Unsigned integer. Value range: 0, or 3 to 65535	N/A
ConfiguredKeepaliveTime	Configured keepalive time in seconds		Unsigned integer. Value range: 0 to 21845	N/A
ReceivedHoldTime	Received holdtime in seconds		Unsigned integer. Value range: 0, or 3 to 65535	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
NegotiatedHoldTime	Negotiated holdtime in seconds		Unsigned integer. Value range: 0, or 3 to 65535	N/A
NegotiatedKeepaliveTime	Negotiated keepalive time in seconds		Unsigned integer. Value range: 0 to 21845	N/A
MultiProtocolExtensionCapability	Support for multiprotocol extension capability		Boolean: <ul style="list-style-type: none"> <li>• <b>true.</b></li> <li>• <b>false.</b></li> </ul>	N/A
RouteRefreshCapability	Support for route refresh capability		Boolean: <ul style="list-style-type: none"> <li>• <b>true.</b></li> <li>• <b>false.</b></li> </ul>	N/A
GracefulRestartCapability	Support for GR capability		Boolean: <ul style="list-style-type: none"> <li>• <b>true.</b></li> <li>• <b>false.</b></li> </ul>	N/A
AS4Capability	Support for 4-byte AS capability		Boolean: <ul style="list-style-type: none"> <li>• <b>true.</b></li> <li>• <b>false.</b></li> </ul>	N/A
AddressfamilyCapability	Support for address family capability	Data Structure	Include: <ul style="list-style-type: none"> <li>• Family</li> <li>• Advertised</li> <li>• Received</li> </ul>	N/A
Family	Address Family Identifier	Index	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—IPv4 Unicast.</li> <li>• <b>2</b>—IPv4 Multicast.</li> <li>• <b>3</b>—MDT</li> <li>• <b>4</b>—VPNv4</li> <li>• <b>5</b>—IPv6 Unicast</li> <li>• <b>6</b>—IPv6 Multicast.</li> <li>• <b>7</b>—VPNv6</li> <li>• <b>8</b>—L2VPN</li> <li>• <b>9</b>—L2VPN EVPN</li> <li>• <b>10</b>—Link-State</li> </ul>	N/A
Advertised	Advertised address family identifier		Boolean: <ul style="list-style-type: none"> <li>• <b>true.</b></li> <li>• <b>false.</b></li> </ul>	N/A
Received	Received address family identifier		Boolean: <ul style="list-style-type: none"> <li>• <b>true.</b></li> <li>• <b>false.</b></li> </ul>	N/A
InQUpdates	Number of		Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	received updates to be processed.		Value range: 0 to 4294967295	
OutQUpdates	Number of updates to be sent to the peer.		Unsigned integer. Value range: 0 to 4294967295	N/A
UpdateInterval	Route update interval		Unsigned integer. Value range: • 0 to 600	N/A

## BGP/Familys

This table contains address family identifier information of BGP.

## Table description

Item	Description
Feature name	BGP
Table name	Family
Table type	Multi-instance table
Row name	Family
Restrictions	No

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Type	Address Family Identifier	Index	Enumeration: <ul style="list-style-type: none"> <li>• 1—IPv4 Unicast.</li> <li>• 2—IPv4 Multicast.</li> <li>• 3—MDT</li> <li>• 4—VPNv4</li> <li>• 5—IPv6 Unicast</li> <li>• 6—IPv6 Multicast.</li> <li>• 7—VPNv6</li> <li>• 8—L2VPN</li> <li>• 9—L2VPN EVPN</li> <li>• 10—Link-State</li> </ul>	N/A
Preference	Preference for BGP Routes	Data Structure	Include: <ul style="list-style-type: none"> <li>• Ebgp</li> <li>• Ibgp</li> <li>• Local</li> </ul>	N/A
Ebgp	Preference for eBGP Routes		Unsigned integer. Value range: 1 to 255	N/A
Ibgp	Preference for iBGP Routes		Unsigned integer. Value range: 1 to 255	N/A
Local	Preference for Local Routes		Unsigned integer. Value range: 1 to 255	N/A
BalanceAsPathNeglect	Ignore the AS_PATH attribute when implementing load balancing		Enumeration: <ul style="list-style-type: none"> <li>• 0—Disable.</li> <li>• 1—Enable.</li> </ul>	N/A
BalanceAsPathRelax	Load balancing for routes that have different AS_PATH attributes of the same length		Enumeration: <ul style="list-style-type: none"> <li>• 0—Disable.</li> <li>• 1—Enable.</li> </ul>	N/A
Balance	number of BGP ECMP routes for load balancing	Data Structure	Include: <ul style="list-style-type: none"> <li>• MaxBalance</li> <li>• MaxEBGPPBalance</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>• MaxIBGPBalance</li> <li>• MaxEIBGPBalance</li> </ul>	

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxBalance	maximum number of BGP ECMP routes for load balancing		Unsigned integer. Value range: 1 to 255	N/A
MaxEBGPPBalance	Maximum number of EBGPP ECMP routes for load balancing		Unsigned integer. Value range: 1 to 255	EBGP load balancing and EBGPP/IBGP load balancing cannot be configured at the same time
MaxIBGPPBalance	Maximum number of IBGP ECMP routes for load balancing		Unsigned integer. Value range: 1 to 255	EBGP load balancing and EBGPP/IBGP load balancing cannot be configured at the same time
MaxEIBGPPBalance	Maximum number of ECMP routes between EBGPP and IBGP routes for load balancing		Unsigned integer. Value range: 1 to 255	EBGP load balancing and EBGPP/IBGP load balancing cannot be configured at the same time
PolicyVpnTarget	Filter VPN routes with VPN-Target attribute		Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
ReflectBtwClients	Route reflection between clients		Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
ReflectorClusterID	cluster ID of the route reflector		String,IPv4 address string or Unsigned integer. Value range: 1 to 4294967295	N/A
RrFilter	Specify reflector route Extended community filter policy		Unsigned integer. Value range: 1 to 199	Only IBGP routes whose extended community attribute matches the specified extended community list are reflected.
DefaultRtImport	Import default route		Enumeration: <ul style="list-style-type: none"> <li>0—Disable</li> <li>1—Enable.</li> </ul>	N/A
DomainDistinguisher	A globally unique identifier for LS domain		String. Length: 9 to 26 characters. The format is AS<1-4294967295>:routerID <X.X.X.X>.	Example: 100:13.14.23.22
PIC	Enable Prefix Independent		Enumeration: <ul style="list-style-type: none"> <li>0—Disable</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	Convergence		<ul style="list-style-type: none"> <li>1—Enable.</li> </ul>	
VpnCrossMulti path	Redistribute multiple routes with the same prefix and RD to the VPN routing table		Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
RouteSelectDe lay	Optimal route calculation delay time		Unsigned integer. Value range: 0 to 600 seconds.	N/A
AdvertiseEv pnRoute	Advertise BGP EVPN routes through the current address family	Data Structure	Include: <ul style="list-style-type: none"> <li>AdvertiseEvpnEnable</li> <li>AdvertiseEvpnPolicy</li> <li>AdvertiseEvpnReplaceRt</li> </ul>	N/A
AdvertiseEv pnEnable	Enable advertisement of BGP EVPN routes through the current address family		Enumeration: <ul style="list-style-type: none"> <li>0—Disable</li> <li>1—Enable.</li> </ul>	N/A
AdvertiseEv pnPolicy	Filter BGP EVPN routes by a routing policy		String. Length: 1 to 63 characters.	N/A
AdvertiseEv pnReplaceR t	Replace the route targets of BGP EVPN routes with those of VPN instances		Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
AdvertiseL2 vpnEvpnRou te	Advertise BGP EVPN route to the local site		Enumeration: <ul style="list-style-type: none"> <li>0—Disable</li> <li>1—Enable.</li> </ul>	N/A
AdvertiseL3 vpnRoute	Advertise BGP L3VPN routes through the BGP EVPN address family	Data Structure	Include: <ul style="list-style-type: none"> <li>AdvertiseL3vpnEnable</li> <li>AdvertiseL3vpnPolicy</li> <li>AdvertiseL3vpnReplac eRt</li> </ul>	N/A
AdvertiseL3 vpnEnable	Enable advertise BGP L3VPN routes through the BGP EVPN		Enumeration: <ul style="list-style-type: none"> <li>0—Disable</li> <li>1—Enable.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	address family			
AdvertiseL3vpnPolicy	Filter BGP L3VPN routes by a routing policy		String. Length: 1 to 63 characters.	N/A
AdvertiseL3vpnReplaceRt	Replace the route targets of BGP L3VPN routes with those of EVPN instances		Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
ImportEvpnMacIp	Redistribute MAC/IP advertisement routes		Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
DefaultLocalIPreference	Configure default local preference		Unsigned integer. Value range: 0 to 4294967295	The default local preference is supported only by IPv4 unicast, IPv4 multicast, IPv6 unicast, and IPv6 multicast routes.

## BGP/Networks

This table contains BGP network information.

### XML structure

```

<BGP>
  <Networks>
    <Network>
      <Name></Name>
      <VRF></VRF>
      <Family></Family>
      <IpAddress></IpAddress>
      <Mask></Mask>
      <RoutePolicy></RoutePolicy>
    </Network>
  </Networks>
</BGP>

```

## Table description

Item	Description
Feature name	BGP
Table name	Networks
Table type	Multi-instance table
Row name	Network
Restrictions	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier of Aggregate	Index	Enumeration: <ul style="list-style-type: none"><li>• 1—IPv4 Unicast</li><li>• 2—IPv4 Multicast</li><li>• 5—IPv6 Unicast</li><li>• 6—IPv6 Multicast</li></ul>	N/A
IpAddress	Address of Network	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
Mask	Mask of Network address	Index	Unsigned integer. Value range: 0 to 128	For IPv4,this is 0 to 32.For IPv6, this is 0 to 128.
RoutePolicy	Name of the routing policy		String. Length: 1 to 63 characters.	N/A

## BGP/Aggregates

This table contains BGP aggregate information.

## XML structure

```
<BGP>
  <Aggregates>
    <Aggregate>
```

```

    <Name></Name>
    <VRF></VRF>
    <Family></Family>

    <Mask></Mask>
    <DetailSuppressed></DetailSuppressed>
    <AsSet></AsSet>
    <AttributePolicy></AttributePolicy>
    <OriginPolicy></OriginPolicy>
    <SuppressPolicy></SuppressPolicy>
  </Aggregate>
</Aggregates>
</BGP>

```

## Table description

Item	Description
Feature name	BGP
Table name	Aggregates
Table type	Multi-instance table
Row name	Aggregate
Restrictions	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier of Aggregate	Index	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4 Unicast</li> <li>2—IPv4 Multicast</li> <li>5—IPv6 Unicast</li> <li>6—IPv6 Multicast</li> </ul>	N/A
IpAddress	Address of aggregate	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
Mask	Mask of aggregate address	Index	Unsigned integer. Value range: 0 to 128.	For IPv4,this is 0 to 32.For IPv6, this is 0 to 128.
DetailSuppressed	Detail Suppressed		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—<b>Enable.</b></li> </ul>	N/A
AsSet	Creating a summary route with AS set path		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
AttributePolicy	Routing policy used to set the attributes of the summary route		String. Length: 1 to 63 characters.	N/A
OriginPolicy	Routing policy used to filter original specific routes to be summarized		String. Length: 1 to 63 characters.	N/A
SuppressPolicy	Routing policy used to filter specific routes to be advertised		String. Length: 1 to 63 characters.	N/A

## BGP/NeighborGroups

This table contains BGP neighbor group information.

## XML structure

```

## Table description

Item	Description
Feature name	BGP
Table name	NeighborGroups
Table type	Multi-instance table
Row name	NeighborGroup
Restrictions	No

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier of NeighborGroup	Index	Enumeration: <ul style="list-style-type: none"> <li>• 1—IPv4 Unicast.</li> <li>• 2—IPv4 Multicast.</li> <li>• 3—MDT</li> <li>• 4—VPNv4</li> <li>• 5—IPv6 Unicast</li> <li>• 6—IPv6 Multicast.</li> <li>• 7—VPNv6</li> <li>• 8—L2VPN</li> <li>• 9—L2VPN EVPN</li> <li>• 10—Link-State</li> </ul>	N/A
GroupName	Group Name	Index	String. Length: 1 to 47 characters.	N/A
RtPolicyImport	Import Route-Policy for NeighborGroup		String. Length: 1 to 63 characters.	N/A
RtPolicyExport	Export Route-Policy for NeighborGroup		String. Length: 1 to 63 characters.	N/A
AllowAsLoop	allow a local AS number to exist in the AS_PATH attribute of routes		Unsigned integer. Value range: 1 to 10	N/A
ReflectClient	Configure the device as a route reflector and specify a peer or peer group as a client		Enumeration. <ul style="list-style-type: none"> <li>• 0—Disable.</li> <li>• 1—Enable.</li> </ul>	N/A
NextHopInvariable	Send original next hop for routes advertised to the peer		Enumeration. <ul style="list-style-type: none"> <li>• 0—Disable.</li> <li>• 1—Enable.</li> </ul>	Next-hop-local conflict with next-hop-invariable
NextHopLocal	Specify local address as the next hop of routes advertised to the peers		Enumeration. <ul style="list-style-type: none"> <li>• 0—Disable.</li> <li>• 1—Enable.</li> </ul>	Next-hop-local conflict with next-hop-invariable.
RouterMacLocal	Specify local MAC as the router MAC of		Enumeration. <ul style="list-style-type: none"> <li>• 0—Disable.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	routes advertised to and received from the peers		<ul style="list-style-type: none"> <li>1—Enable.</li> </ul>	
AdvertiseCommunity	Send community attribute to the peers		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
AdvertiseExtCommunity	Send extended community attribute to the peers		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
ReOriginated	Re-originate EVPN routes received from the peer by modifying the L3 VXLAN ID and RD		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
AdvEvpnRouteSuppressMac	Advertise EVPN routes to the peer excluding MAC/IP advertisement routes		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
AdvEvpnRouteSuppressPrefix	Advertise EVPN routes to the peer excluding IP prefix advertisement routes		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
DefaultgatewayNoAdv	Advertise EVPN routes by deleting the default gateway extended community attribute		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
RouteLimit	Configure the maximum number of routes that can be received from the peers	Data Structure	Include: <ul style="list-style-type: none"> <li>Number</li> <li>Percentage</li> <li>AlertOnly</li> <li>Discard</li> <li>Reconnect</li> </ul>	N/A
Number	Number of prefixes		Unsigned integer. Value range: 1 to 4294967295	N/A
Percentage	Percentage value to trigger a warning message		Unsigned integer. Value range: 1 to 100. Default is 75	N/A
AlertOnly	Generate a log message when the route limit is		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	exceeded		<ul style="list-style-type: none"> <li>1—Enable.</li> </ul>	
Discard	Discard routes received after the route limit is exceeded		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
Reconnect	Reconnect time in seconds		Unsigned integer. Value range: 1 to 65535	N/A
PreferredValue	Set a preferred value for routes received from the peers		Unsigned integer. Value range: 0 to 65535	N/A
NextHopVpn	Change the next hop of received VPNv4 routes to that of the matching VPN instance		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier of Neighbor	Index	Enumeration: <ul style="list-style-type: none"> <li>• 1—IPv4 Unicast.</li> <li>• 2—IPv4 Multicast.</li> <li>• 3—MDT</li> <li>• 4—VPNv4</li> <li>• 5—IPv6 Unicast</li> <li>• 6—IPv6 Multicast.</li> <li>• 7—VPNv6</li> <li>• 8—L2VPN</li> <li>• 9—L2VPN EVPN</li> <li>• 10—Link-State</li> </ul>	N/A
SessAF	Address family of session	Index	Enumeration: <ul style="list-style-type: none"> <li>• 1—IPv4.</li> <li>• 2—IPv6.</li> </ul>	N/A
IpAddress	Address of session	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
Mask	Mask of session address	Index	Unsigned integer. Value range: 0 to 128,or 255	For non-dynamic peers, this is 255.For IPv4 dynamic peers,this is 0 to 32.For IPv6 dynamic peers, this is 0 to 128. Dynamic peers are not supported.
RtPolicyImport	Import Route-Policy for Neighbor		String. Length: 1 to 63 characters.	N/A
RtPolicyExport	Export Route-Policy for Neighbor		String. Length: 1 to 63 characters.	N/A
AllowAsLoop	allow a local AS number to exist in the AS_PATH attribute of routes		Unsigned integer. Value range: 1 to 10	N/A
ReflectClient	Configure the device as a route reflector and specify a peer or peer group as a		Enumeration. <ul style="list-style-type: none"> <li>• 0—Disable.</li> <li>• 1—Enable.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	client			
NextHopInvariable	Send original next hop for routes advertised to the peer		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
NextHopLocal	Specify local address as the next hop of routes advertised to the peers		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	Next-hop-local conflict with next-hop-invariable.
RouterMacLocal	Specify local MAC as the router MAC of routes advertised to and received from the peers		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
AdvertiseCommunity	Send community attribute to the peers		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
AdvertiseExtCommunity	Send extended community attribute to the peers		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
ReOriginated	Re-originate EVPN routes received from the peer by modifying the L3 VXLAN ID and RD		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
AdvEvpnRouteSuppressMac	Advertise EVPN routes to the peer excluding MAC/IP advertisement routes		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable</li> </ul>	N/A
AdvEvpnRouteSuppressPrefix	Advertise EVPN routes to the peer excluding IP prefix advertisement routes		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable</li> </ul>	N/A
DefaultgatewayNoAdv	Advertise EVPN routes by deleting the default gateway extended community attribute		<ul style="list-style-type: none"> <li>Enumeration.</li> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
RouteLimit	Configure the maximum number of routes	Data Structure	Include: <ul style="list-style-type: none"> <li>Number</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	that can be received from the peers		<ul style="list-style-type: none"> <li>Percentage</li> <li>AlertOnly</li> <li>Discard</li> <li>Reconnect</li> </ul>	
Number	Number of prefixes		Unsigned integer. Value range: 1 to 4294967295	N/A
Percentage	Percentage value to trigger a warning message		Unsigned integer. Value range: 1 to 100. Default is 75	N/A
AlertOnly	Generate a log message when the route limit is exceeded		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
Discard	Discard routes received after the route limit is exceeded		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
Reconnect	Reconnect time in seconds		Unsigned integer. Value range: 1 to 65535	N/A
PreferredValue	Set a preferred value for routes received from the peers		Unsigned integer. Value range: 0 to 65535	N/A
NextHopVpn	Change the next hop of received VPNv4 routes to that of the matching VPN instance		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A

## BGP/Redistributes

This table contains BGP redistribute information.

### XML structure

```

<BGP>
  <Redistributes>
    <Redist>

    <Med></Med>
    <RoutePolicy></RoutePolicy>
  </Redist>
</Redistributes>
</BGP>

```

## Table description

Item	Description
Feature name	BGP
Table name	Redistributes
Table type	Multi-instance table
Row name	Redist
Restrictions	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier	Index	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4 Unicast.</li> <li>2—IPv4 Multicast.</li> <li>5—IPv6 Unicast</li> <li>6—IPv6 Multicast.</li> </ul>	N/A
Protocol	Protocol name	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Direct.</li> <li>2—Static.</li> <li>3—RIP</li> <li>4—OSPF</li> <li>5—ISIS</li> <li>6—EIGRP</li> <li>7—UNR</li> <li>8—Guard</li> </ul>	N/A
RedistName	Redistributed process name	Index	String. Length: 0 to 31 characters.	It must be empty when the Protocol column is Direct, Static.
AllowDirect	Include direct routes.		Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
Med	Value of the MED.		Unsigned integer. Value range: 0 to 4294967295	N/A
RoutePolicy	Name of the routing policy.		String. Length: 1 to 63 characters.	N/A

## BGP/SessionCounts

This table contains session statistics.

### XML structure

```

<BGP>
  <SessionCounts>
    <SessionCount>

```

```

    <Name></Name>
    <VRF></VRF>
    <State></State>
    <Count></Count>
  </SessionCount>
</SessionCounts>
</BGP>

```

## Table description

Item	Description
Feature name	BGP
Table name	SessionCounts
Table type	Multi-instance table
Row name	SessionCount
Restrictions	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
State	Session state	Index	Enumeration: <ul style="list-style-type: none"> <li>• <b>0—Idle</b></li> <li>• <b>1—Connect</b></li> <li>• <b>2—Active</b></li> <li>• <b>3—Opensent</b></li> <li>• <b>4—Openconfirm</b></li> <li>• <b>5—Established</b></li> </ul>	Established state means that the BGP session is established, but whether the address families are negotiated is unknown.
Count	Total number of sessions		Unsigned integer. Value range: 0 to 4294967295	N/A

## BGP/NeighborInformations

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name	Index	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	Index	String. Length: 0 to 31 characters.	An empty string indicates the public network.
Family	Address Family Identifier of neighbor	Index	Enumeration: <ul style="list-style-type: none"> <li>• 1—IPv4 Unicast.</li> <li>• 2—IPv4 Multicast.</li> <li>• 3—MDT</li> <li>• 4—VPNv4</li> <li>• 5—IPv6 Unicast</li> <li>• 6—IPv6 Multicast.</li> <li>• 7—VPNv6</li> <li>• 8—L2VPN</li> <li>• 9—L2VPN EVPN</li> <li>• 10—Link-State</li> </ul>	N/A
SessAF	Address family of session	Index	Enumeration: <ul style="list-style-type: none"> <li>• 1—IPv4.</li> <li>• 2—IPv6.</li> </ul>	N/A
IpAddress	Address of session	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
OutQPrefixCnt	Number of prefixes to be sent		Unsigned integer. Value range: 0 to 4294967295	N/A
RcvdPrefixCnt	Number of prefixes that have been received from the peer and added into the local BGP routing table		Unsigned integer. Value range: 0 to 4294967295	N/A
RcvdUnReachNLRI	Number of the unreachable routes received from the peer after the BGP session is established		Unsigned integer. Value range: 0 to 4294967295	N/A
RcvdReachNLRI	Number of the reachable routes received from the peer after the BGP session is established		Unsigned integer. Value range: <ul style="list-style-type: none"> <li>• 0 to 4294967295</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SentUnReachNLRI	Number of the unreachable routes sent to the peer after the BGP session is established		Unsigned integer. Value range: <ul style="list-style-type: none"> <li>0 to 4294967295</li> </ul>	N/A
SentReachNLRI	Number of the reachable routes sent to the peer after the BGP session is established		Unsigned integer. Value range: <ul style="list-style-type: none"> <li>0 to 4294967295</li> </ul>	N/A
RouteLimitNumber	Number of prefixes		Unsigned integer. Value range: <ul style="list-style-type: none"> <li>1 to 4294967295</li> </ul>	N/A
Percentage	Percentage value to trigger a warning message		Unsigned integer. Value range: <ul style="list-style-type: none"> <li>1 to 100. Default is 75</li> </ul>	N/A
PreferredValue	Set a preferred value for routes received from the peers		Unsigned integer. Value range: 0 to 65535	N/A
NextHopInvariable	Send original next hop for routes advertised to the peer		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	Next-hop-local conflict with next-hop-invariable
NextHopLocal	Specify local address as the next hop of routes advertised to the peers		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	Next-hop-local conflict with next-hop-invariable.
AdvertiseCommunity	Send community attribute to the peers		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
AdvertiseExtCommunity	Send extended community attribute to the peers		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
ReflectClient	Configure the device as a route reflector and specify a peer or peer group as a client		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
RtPolicyImport	Import routing policy for peer group		String. Length: 1 to 63 characters.	N/A
RtPolicyExport	Export routing policy for peer group		String. Length: 1 to 63 characters.	N/A
AllowAsLoop	Allow a local AS		Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	number to exist in the AS_PATH attribute of routes		Value range: 1 to 10	
RouterMacLocal	Specify local MAC as the router MAC of routes advertised to and received from the peers		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
ReOriginated	Re-originate EVPN routes received from the peer by modifying the L3 VXLAN ID and RD		Enumeration. <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A

# BGP

## BGP/Instances

Message	Explanation
The BGP process already exists but the AS number doesn't match. BGP进程已存在，AS号不匹配。	Configuration already exists, when set new configuration.
BGP is disabling NSR. BGP进程正在处理NSR删除，请稍后再进行配置。	The NSR is being deleted, when replacing or deleting it.
Can't enable NSR because the address family which not support NSR has been configured. 地址族配置与NSR配置冲突，不能配置NSR。	Invalid configuration, please modify configuration under the guidance.
Centralized device doesn't support NSR. 集中式设备，无法支持NSR。	Invalid configuration, please modify configuration under the guidance.
AS number is required for BGP instance. 必须为BGP实例指定AS号。	Invalid configuration, please modify configuration under the guidance.

## BGP/VRFs

Message	Explanation
The BGP process already exists but the AS number doesn't match. BGP进程已存在，AS号不匹配。	Configuration already exists, when set new configuration.
AS number is required for BGP instance. 必须为BGP实例指定AS号。	Invalid configuration, please modify configuration under the guidance.
The VRF instance doesn't exist. 该VPN不存在。	Invalid configuration, please modify configuration under the guidance.
The VRF instance is being deleted. 该VPN正在删除中。	The specified VRF is being deleted, when replacing or deleting it.
The VRF instance RD is not configured. 该VPN没有配置RD。	Invalid configuration, please modify configuration under the guidance.
The public VRF can't be deleted. 公网VPN实例不允许删除。	Invalid configuration, please modify configuration under the guidance.
Invalid hold or keepalive time value. Keepalive定时器或Hold定时器取值错误。	Invalid configuration, please modify configuration under the guidance.
Invalid router ID. 无效的RouterID。	Invalid configuration, please modify configuration under the guidance.

# BGP/CfgSessionGroups

Message	Explanation
The BGP process already exists but the AS number doesn't match. BGP进程已存在，AS号不匹配。	Configuration already exists, when set new configuration.
AS number is required for BGP instance. 必须为BGP实例指定AS号。	Invalid configuration, please modify configuration under the guidance.
The VRF instance doesn't exist. 该VPN不存在。	Invalid configuration, please modify configuration under the guidance.
The VRF instance is being deleted. 该VPN正在删除中。	The specified VRF is being deleted, when replacing or deleting it.
The VRF instance is not configured. 该VPN没有配置。	Invalid configuration, please modify configuration under the guidance.
The interface is not belong to the VRF instance. 指定接口不属于该VPN。	Invalid configuration, please modify configuration under the guidance.
When the operation is create, merge or replace, the group type must not be null. Create、merge、replace操作时，会话组类型不能为空。	Invalid configuration, please modify configuration under the guidance.
When the operation is delete or remove, the group type must be null. Delete、remove操作时，会话组类型必须为空。	Invalid configuration, please modify configuration under the guidance.
Not necessary to configure AS number for an IBGP group. 不能配置或者删除IBGP组的AS号。	Invalid configuration, please modify configuration under the guidance.
Can't change or delete AS number for a peer group that contains peers. 会话组中存在会话，不能变更或者删除会话组AS号。	Invalid configuration, please modify configuration under the guidance.
Invalid peer group name. 组名称不合法。	Invalid configuration, please modify configuration under the guidance.
The specified peer group doesn't exist. 指定的对等体组不存在。	Invalid configuration, please modify configuration under the guidance.
The interface is not belong to the VRF instance. 指定接口不属于该VPN。	Invalid configuration, please modify configuration under the guidance.
PasswordType and Password must both be configured. PasswordType和Password必须同时配置。	Invalid configuration, please modify configuration under the guidance.
Invalid ciphertext password. 密文密码不合法。	Invalid configuration, please modify configuration under the guidance.
Invalid simpletext password length. 明文密码长度不合法。	Invalid configuration, please modify configuration under the guidance.

Invalid ciphertext password length. 密文密码长度不合法。	Invalid configuration, please modify configuration under the guidance.
BFD not supported. 不支持BFD	BFD service has not been started.
When enabling dual-as, prepend-global-as, or prepend-fake-as, you must specify the fake AS number. 配置dual-as、prepend-global-as、prepend-fake-as使能时，fake-as不能为空。	Invalid configuration, please modify configuration under the guidance.
Invalid fake AS number. 指定的fake-as无效。	Invalid configuration, please modify configuration under the guidance.

## BGP/CfgSessions

Message	Explanation
The BGP process already exists but the AS number doesn't match. BGP进程已存在，AS号不匹配。	Configuration already exists, when set new configuration.
AS number is required for BGP instance. 必须为BGP实例指定AS号。	Invalid configuration, please modify configuration under the guidance.
The VRF instance doesn't exist. 该VPN不存在。	Invalid configuration, please modify configuration under the guidance.
The VRF instance is being deleted. 该VPN正在删除中。	The specified VRF is being deleted, when replacing or deleting it.
The VRF instance is not configured. 该VPN没有配置。	Invalid configuration, please modify configuration under the guidance.
The interface is not belong to the VRF instance. 指定接口不属于该VPN。	Invalid configuration, please modify configuration under the guidance.
The session already exists. The AS number can't be changed. 会话已存在，不允许修改会话的AS号。	Configuration already exists, when set new configuration.
Invalid IP address. 无效的IP地址。	Invalid configuration, please modify configuration under the guidance.
Interface name is invalid, or interface failed RBAC check. 接口名称非法或者无法通过RBAC检查。	Invalid configuration, please modify configuration under the guidance.
When the operation is create, merge, or replace, the AS number must not be null. Create、merge、replace操作时，AS号不能为空。	Invalid configuration, please modify configuration under the guidance.
When the operation is delete or remove, the AS number must be null. Delete、remove操作时，AS号必须为空。	Invalid configuration, please modify configuration under the guidance.
The specified peer group doesn't exist.	Invalid configuration, please modify configuration under the

指定的对等体组不存在。	guidance.
The interface is not belong to the VRF instance. 指定接口不属于该VPN。	Invalid configuration, please modify configuration under the guidance.
PasswordType and Password must both be configured. PasswordType和Password必须同时配置。	Invalid configuration, please modify configuration under the guidance.
Invalid ciphertext password. 密文密码不合法。	Invalid configuration, please modify configuration under the guidance.
Invalid simpletext password length. 明文密码长度不合法。	Invalid configuration, please modify configuration under the guidance.
Invalid ciphertext password length. 密文密码长度不合法。	Invalid configuration, please modify configuration under the guidance.
BFD not supported. 不支持BFD	BFD service has not been started.
Not EBGp peers. 仅EBGP邻居支持本配置。	Only EBGp peers support the configuration.
When enabling dual-as, prepend-global-as, or prepend-fake-as, you must specify the fake AS number. 配置dual-as、prepend-global-as、prepend-fake-as使能时，fake-as不能为空。	Invalid configuration, please modify configuration under the guidance.
Invalid fake AS number. 指定的fake-as无效。	Invalid configuration, please modify configuration under the guidance.

## BGP/Famillys

Message	Explanation
The BGP process already exists but the AS number doesn't match. BGP进程已存在，AS号不匹配。	Configuration already exists, when set new configuration.
AS number is required for BGP instance. 必须为BGP实例指定AS号。	Invalid configuration, please modify configuration under the guidance.
The VRF instance doesn't exist. 该VPN不存在。	Invalid configuration, please modify configuration under the guidance.
The VRF instance is being deleted. 该VPN正在删除中。	The specified VRF is being deleted, when replacing or deleting it.
The VRF instance is not configured. 该VPN没有配置。	Invalid configuration, please modify configuration under the guidance.
This address family doesn't support NSR. Please disable NSR first. 当前地址族不支持NSR，请先将NSR配置删除。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't exist.	Invalid configuration, please modify configuration under the guidance.

指定的地址族不存在。	
Can't configure both EIBGP load balancing and EIBGP/IBGP load balancing at the same time. EIBGP等价不能和EBGP等价、IBGP等价同时配置。	Invalid configuration, please modify configuration under the guidance.
Unsupported address family. 不支持该地址族。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the preference command. 指定地址族不支持preference命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the balance command. 指定地址族不支持balance命令。	Invalid configuration, please modify configuration under the guidance.
Number of BGP routes exceeded the maximum for load balancing. 配置的等价条数超过产品所能配置的最大值。	Invalid configuration, please modify configuration under the guidance.
You must set all of the EIBGP preference, IBGP preference, and LOCAL preference, or set none of them. EBGP preference、IBGP preference、LOCAL preference必须同时进行配置或取消配置。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support policy vpn-target command. 指定地址族不支持policy vpn-target命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support rr-filter command. 指定地址族不支持rr-filter命令。	Invalid configuration, please modify configuration under the guidance.
Cluster ID must be an IPv4 address or a number between 1 to 0xFFFFFFFF(notice that it must not be 0.0.0.0). Cluster ID必须是一个合法的IPv4地址或者32位无符号正整数(注意不能是0.0.0.0或者数字0)。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support default-route imported command. 指定的地址族不支持default-route imported命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the pic command. 指定的地址族不支持pic命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the balance as-path-neglect command. 指定的地址族不支持balance as-path-neglect命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the balance as-path-relax command. 指定的地址族不支持balance as-path-relax命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the advertise l3vpn route command. 指定的地址族不支持advertise l3vpn route命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the	Invalid configuration, please modify configuration under the

advertise l2vpn evpn command. 指定的地址族不支持advertise l2vpn evpn命令。	guidance.
The specified address family doesn't support the import evpn mac-ip command. 指定的地址族不支持import evpn mac-ip命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support advertise evpn route command. 指定的地址族不支持advertise evpn route命令。	Invalid configuration, please modify configuration under the guidance.
To configure replace-rt or advertise-policy, you must enable EVPN route advertisement for the VPNv4 or VPNv6 address family. 配置修改路由的RT或通过路由策略过滤BGP EVPN路由时需要配置允许BGP EVPN路由通过VPNv4或VPNv6地址族发布给邻居	Invalid configuration, please modify configuration under the guidance.
To configure replace-rt or advertise-policy, you must enable VPNv4 or VPNv6 route advertisement for the EVPN address family. 配置修改路由的RT或通过路由策略过滤BGP VPNv4或VPNv6路由时需要配置允许VPNv4或VPNv6路由通过EVPN地址族发布给邻居	Invalid configuration, please modify configuration under the guidance.

## BGP/Networks

Message	Explanation
The BGP process already exists but the AS number doesn't match. BGP进程已存在，AS号不匹配。	Configuration already exists, when set new configuration.
AS number is required for BGP instance. 必须为BGP实例指定AS号。	Invalid configuration, please modify configuration under the guidance.
The VRF instance doesn't exist. 该VPN不存在。	Invalid configuration, please modify configuration under the guidance.
The VRF instance is being deleted. 该VPN正在删除中。	The specified VRF is being deleted, when replacing or deleting it.
The VRF instance is not configured. 该VPN没有配置。	Invalid configuration, please modify configuration under the guidance.
Invalid IP address. 无效的IP地址。	Invalid configuration, please modify configuration under the guidance.
IPv4 address mask length can't be greater than 32. IPv4地址的掩码长度不能超过32。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the network command. 指定地址族不支持network命令。	Invalid configuration, please modify configuration under the guidance.

# BGP/Aggregates

Message	Explanation
The BGP process already exists but the AS number doesn't match. BGP进程已存在，AS号不匹配。	Configuration already exists, when set new configuration.
AS number is required for BGP instance. 必须为BGP实例指定AS号。	Invalid configuration, please modify configuration under the guidance.
The VRF instance doesn't exist. 该VPN不存在。	Invalid configuration, please modify configuration under the guidance.
The VRF instance is being deleted. 该VPN正在删除中。	The specified VRF is being deleted, when replacing or deleting it.
The VRF instance is not configured. 该VPN没有配置。	Invalid configuration, please modify configuration under the guidance.
Invalid IP address. 无效的IP地址。	Invalid configuration, please modify configuration under the guidance.
IPv4 address mask length can't be greater than 32. IPv4地址的掩码长度不能超过32。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the aggregate command. 指定地址族不支持aggregate命令。	Invalid configuration, please modify configuration under the guidance.

# BGP/NeighborGroups

Message	Explanation
The BGP process already exists but the AS number doesn't match. BGP进程已存在，AS号不匹配。	Configuration already exists, when set new configuration.
AS number is required for BGP instance. 必须为BGP实例指定AS号。	Invalid configuration, please modify configuration under the guidance.
The VRF instance doesn't exist. 该VPN不存在。	Invalid configuration, please modify configuration under the guidance.
The VRF instance is being deleted. 该VPN正在删除中。	The specified VRF is being deleted, when replacing or deleting it.
The VRF instance is not configured. 该VPN没有配置。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the route-policy import command. 指定地址族不支持route-policy import命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the route-policy export command. 指定地址族不支持route-policy export命令。	Invalid configuration, please modify configuration under the guidance.

Reflect not for EBGp peer groups. EBGP对等体组不能配置反射	Invalid configuration, please modify configuration under the guidance.
Next-hop-local conflict with next-hop-invariable. Next-hop-local命令和next-hop-invariable命令存在冲突，不能同时配置。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the next-hop-invariable command. 指定地址族不支持next-hop-invariable命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the reflect between-clients command. 指定地址族不支持reflect between-clients命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the reflector cluster-id command. 指定地址族不支持reflector cluster-id命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the reflect-client command. 指定地址族不支持reflect-client命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the next-hop-local command. 指定地址族不支持next-hop-local命令	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the router-mac-local command. 指定地址族不支持router-mac-local命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the advertise-community command. 指定地址族不支持advertise-community命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the allow-as-loop command. 指定地址族不支持allow-as-loop命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the route-limit command. 指定地址族不支持route-limit命令。	Invalid configuration, please modify configuration under the guidance.
Invalid prefix count. 前缀数目配置错误。	Invalid configuration, please modify configuration under the guidance.
Alert-only, Discard, Reconnect can't be configured at the same time. Alert-only、Discard、Reconnect不能同时配置。	Invalid configuration, please modify configuration under the guidance.
Invalid peer group name. 组名称不合法。	Invalid configuration, please modify configuration under the guidance.
The specified peer group doesn't exist. 指定的对等体组不存在。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the next-hop-vpn command. 指定地址族不支持next-hop-vpn命令	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the	Invalid configuration, please modify configuration under the

advertise-ext-community command. 指定地址族不支持advertise-ext-community命令。	guidance.

## BGP/Neighbors

Message	Explanation
The BGP process already exists but the AS number doesn't match. BGP进程已存在，AS号不匹配。	Configuration already exists, when set new configuration.
AS number is required for BGP instance. 必须为BGP实例指定AS号。	Invalid configuration, please modify configuration under the guidance.
The VRF instance doesn't exist. 该VPN不存在。	Invalid configuration, please modify configuration under the guidance.
The VRF instance is being deleted. 该VPN正在删除中。	The specified VRF is being deleted, when replacing or deleting it.
The VRF instance is not configured. 该VPN没有配置。	Invalid configuration, please modify configuration under the guidance.
The specified neighbor can't be enabled in the current address family. 指定的会话在该实例下不能使能。	Invalid configuration, please modify configuration under the guidance.
The specified peer doesn't exist. 指定的对等体会话不存在。	Invalid configuration, please modify configuration under the guidance.
Reflect not for EBGp peers. EBGP邻居不能配置反射	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the route-policy import command. 指定地址族不支持route-policy import命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the route-policy export command. 指定地址族不支持route-policy export命令。	Invalid configuration, please modify configuration under the guidance.
Next-hop-local conflict with next-hop-invariable. Next-hop-local命令和next-hop-invariable命令存在冲突，不能同时配置。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the next-hop-invariable command. 指定地址族不支持next-hop-invariable命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the reflect between-clients command. 指定地址族不支持reflect between-clients命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the reflector cluster-id command. 指定地址族不支持reflector cluster-id命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the reflect-client command.	Invalid configuration, please modify configuration under the guidance.

指定地址族不支持reflect-client命令。	
The specified address family doesn't support the next-hop-local command. 指定地址族不支持next-hop-local命令	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the router-mac-local command. 指定地址族不支持router-mac-local命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the advertise-community command. 指定地址族不支持advertise-community命令。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the allow-as-loop command. 指定地址族不支持allow-as-loop命令。	Invalid configuration, please modify configuration under the guidance.
Invalid IP address. 无效的IP地址。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the route-limit command. 指定地址族不支持route-limit命令。	Invalid configuration, please modify configuration under the guidance.
Invalid prefix count. 前缀数目配置错误。	Invalid configuration, please modify configuration under the guidance.
Alert-only, Discard, Reconnect can't be configured at the same time. Alert-only、Discard、Reconnect不能同时配置。	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the next-hop-vpn command. 指定地址族不支持next-hop-vpn命令	Invalid configuration, please modify configuration under the guidance.
The specified address family doesn't support the advertise-ext-community command. 指定地址族不支持advertise-ext-community命令。	Invalid configuration, please modify configuration under the guidance.

## BGP/Redistributes

Message	Explanation
The BGP process already exists but the AS number doesn't match. BGP进程已存在，AS号不匹配。	Configuration already exists, when set new configuration.
AS number is required for BGP instance. 必须为BGP实例指定AS号。	Invalid configuration, please modify configuration under the guidance.
The VRF instance doesn't exist. 该VPN不存在。	Invalid configuration, please modify configuration under the guidance.
The VRF instance is being deleted. 该VPN正在删除中。	The specified VRF is being deleted, when replacing or deleting it.
The VRF instance is not configured.	Invalid configuration, please modify configuration under the guidance.

该VPN没有配置。	
The specified address family doesn't support the import-route command. 指定地址族不支持import-route命令。	Invalid configuration, please modify configuration under the guidance.
You cannot specify a process ID when you redistribute direct or static routes. 引入协议为直连或者静态时，协议进程号必须为空。	Invalid configuration, please modify configuration under the guidance.
Invalid RIP, OSPF, or IS-IS process ID. Please specify a process ID in the range of 1 to 65535, or specify the all-processes keyword to redistribute routes from all processes of the specified protocol. RIP、OSPF或ISIS路由协议的进程号非法，请指定1~65535之间的协议进程号或指定all-processes参数引入指定路由协议所有进程的路由。	Invalid configuration, please modify configuration under the guidance.
Invalid EIGRP process ID. Please specify a process ID in the range of 1 to 65535, or specify the all-as keyword to redistribute routes from all EIGRP processes. EIGRP路由协议的进程号非法，请指定1~65535之间的协议进程号或指定all-as参数引入指定路由协议所有进程的路由。	Invalid configuration, please modify configuration under the guidance.
When the Protocol is DIRECT or STATIC, allow-direct can not be configured. 引入协议为DIRECT或者STATIC时，不能配置allow-direct。	Invalid configuration, please modify configuration under the guidance.

## BGP/RedistributesAppend

# BGP event stream

BGP stream description.

## bgp-operations-to-controller event

This event is used to notice to controller the operation event of BGP protocol.

### XML structure for event subscription

```
<bgp-operations-to-controller>
</bgp-operations-to-controller>

Example:
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>bgp_stream</stream>
    <filter type="subtree">
      <bgp-operations-to-controller
xmlns="http://www.h3c.com/netconf/event:1.0/BGP:1.0">
        </bgp-operations-to-controller>
      </filter>
    </create-subscription>
  </rpc>
```

#### Table description

Item	Description
Event stream name	BGP stream
Event name	bgp-operations-to-controller
Event namespace	http://www.h3c.com/netconf/event:1.0/BGP:1.0
Support for extended query	No

### XML structure for event report

```
<bgp-operations-to-controller>
  <Operation>
    <OperationType></OperationType>
    <Name></Name>
  </Operation>
</bgp-operations-to-controller>

Example:
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <bgp-operations-to-controller xmlns="http://www.h3c.com/netconf/event:1.0/BGP:1.0">
    <Operation>
      <OperationType>1</OperationType>
```

```

        <Name></Name>
    </Operation>
</bgp-operations-to-controller>
</notification>

```

### Table description

Column name	Column description	Data type and restrictions	Remarks
OperationType	Operation type	Enumeration 1 – Notice controller smooth start 2 – Notice controller smooth end 3 – Notice controller the lipc disconnect 4 – Notice controller the lipc connect successfully	The operation type specifies the operation that BGP protocol should perform.
Name	Instance name	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.

## bgp-report-route-to-controller event

This event is used to report BGP route to controller.

### XML structure for event subscription

```

<bgp-report-route-to-controller>
</bgp-report-route-to-controller>

```

Example:

```

<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>bgp_stream</stream>
    <filter type="subtree">
      <bgp-report-route-to-controller
xmlns="http://www.h3c.com/netconf/event:1.0/BGP:1.0">
        </bgp-report-route-to-controller>
      </filter>
    </create-subscription>
  </rpc>

```

### Table description

Item	Description
Event stream name	BGP stream
Event name	bgp-report-route-to-controller
Event namespace	http://www.h3c.com/netconf/event:1.0/BGP:1.0
Support for extended query	No

# XML structure for event report

```
<bgp-report-route-to-controller>
  <ReportRoute>
    <Name></Name>
    <VRF></VRF>
    <OperationType></OperationType>
    <RouteType></RouteType>
    <RouteKey></RouteKey>
    <RouteSegment></RouteSegment>
    <RouteAttr></RouteAttr>
  </ReportRoute>
</bgp-report-route-to-controller>
```

## Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <bgp-report-route-to-controller
xmlns="http://www.h3c.com/netconf/event:1.0/BGP:1.0">
    <ReportRoute>
      <Name></Name>
      <VRF></VRF>
      <OperationType>1</OperationType>
      <RouteType>9</RouteType>
      <RouteKey></RouteKey>
      <RouteSegment>ACcCJQAAAAEAAAPoAAAAAAAAAAAAAAAAAAwAAwpo3rjIEQCAG+</RouteSegment>
      <RouteAttr>AgAGAgEAAADI</RouteAttr>
      <RouteAttr>AwAEYgAIRA==</RouteAttr>
      <RouteAttr>CAAEAAEA/w==</RouteAttr>
    </ReportRoute>
  </bgp-report-route-to-controller>
</notification>
```

## Table description

Column name	Column description	Data type and restrictions	Remarks
Name	Instance name	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	String. Length: 0 to 31 characters.	An empty string indicates the public network.
OperationType	Operation type	Enumeration 1 – Add 2 – Delete	The operation type specifies the operation that BGP protocol should perform.
RouteType	Type of route	Enumeration: <ul style="list-style-type: none"><li>• 1—IPv4 Unicast.</li><li>• 2—IPv4 Multicast.</li><li>• 3—MDT</li><li>• 4—VPNv4</li><li>• 5—IPv6 Unicast</li><li>• 6—IPv6 Multicast.</li><li>• 7—VPNv6</li><li>• 8—L2VPN</li><li>• 9—EVPN</li></ul>	
RouteKey	Key of route	Binary. Length: 0 to 128 characters.	An empty string indicates there is no key of the route.
RouteSegment	Route information	Binary. Length: 1 to 4096 characters.	
RouteAttr	Attribute of route	Binary. Length: 1 to 4096 characters.	

## bgp-report-sessionstate-to-controller event

This event is used to report BGP session state to controller.

## XML structure for event subscription

```
<bgp-report-sessionstate-to-controller>
</bgp-report-sessionstate-to-controller>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>bgp_stream</stream>
    <filter type="subtree">
      <bgp-report-sessionstate-to-controller
xmlns="http://www.h3c.com/netconf/event:1.0/BGP:1.0">
        </bgp-report-sessionstate-to-controller>
      </filter>
    </create-subscription>
```

</rpc>

## Table description

Item	Description
Event stream name	BGP stream
Event name	bgp-report-sessionstate-to-controller
Event namespace	http://www.h3c.com/netconf/event:1.0/BGP:1.0
Support for extended query	No

## XML structure for event report

```
<bgp-report-sessionstate-to-controller>
  <ReportSessionstate>
    <Name></Name>
    <VRF></VRF>
    <AF></AF>
    <IpAddress></IpAddress>
    <CurrentState></CurrentState>
    <LastState></LastState>
  </ReportSessionstate>
</bgp-report-sessionstate-to-controller>
```

### Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2018-09-05T09:10:51</eventTime>
  <bgp-report-sessionstate-to-controller
xmlns="http://www.h3c.com/netconf/event:1.0/BGP:1.0">
    <ReportSessionstate>
      <Name></Name>
      <VRF></VRF>
      <AF>1</AF>
      <IpAddress>1.1.1.1</IpAddress>
      <CurrentState>5</CurrentState>
      <LastState>4</LastState>
    </ReportSessionstate>
  </bgp-report-sessionstate-to-controller>
</notification>
```

## Table description

Column name	Column description	Data type and restrictions	Remarks
Name	Instance name	String. Length: 0 to 31 characters.	An empty string indicates the default BGP process.
VRF	VRF name	String. Length: 0 to 31 characters.	An empty string indicates the public network.
AF	Address family of session	Index	Enumeration: <ul style="list-style-type: none"> <li>• 1—IPv4.</li> <li>• 2—IPv6.</li> </ul>
IpAddress	Address of session	<ul style="list-style-type: none"> <li>• Index</li> </ul>	String, IPv4 address string or IPv6 address string.
CurrentState	Current state of the session		Enumeration: <ul style="list-style-type: none"> <li>• 0—Idle</li> <li>• 1—Connect</li> <li>• 2—Active</li> <li>• 3—Opensent</li> <li>• 4—Openconfirm</li> <li>• 5—Established</li> </ul>
LastState	Previous state of the session		Enumeration: <ul style="list-style-type: none"> <li>• 0—Idle</li> <li>• 1—Connect</li> <li>• 2—Active</li> <li>• 3—Opensent</li> <li>• 4—Openconfirm</li> <li>• 5—Established</li> </ul>

# BufferMonitor

## BufferMonitor/GlobalConfigurations

This table is used to configure the global configurations for buffer monitor.

### XML structure

```
<BufferMonitor>
  <GlobalConfigurations>
    <DropAlarmEnable></DropAlarmEnable>
    <DropAlarmInterval></DropAlarmInterval>
    <IngressAlarmEnable></IngressAlarmEnable>
    <IngressAlarmInterval></IngressAlarmInterval>
    <EgressAlarmEnable></EgressAlarmEnable>
    <EgressAlarmInterval></EgressAlarmInterval>
    <HeadroomAlarmEnable></HeadroomAlarmEnable>
    <HeadroomAlarmInterval></HeadroomAlarmInterval>
  </GlobalConfigurations>
</BufferMonitor>
```

### Table description

Item	Description
Feature name	BufferMonitor
Table name	GlobalConfigurations
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	None

### Columns

Column name	Column description	Column type	Data type and restrictions
DropAlarmEnable	Drop alarm enable status	N/A	Enumeration: 1 ENABLE. 2 DISABLE.
DropAlarmInterval	Drop alarm suppression interval.	N/A	Unsigned integer. Value range: 0 to 60.

Column name	Column description	Column type	Data type and restrictions
IngressAlarmEnable	Ingress threshold alarm enable status	N/A	Enumeration: 1 ENABLE. 2 DISABLE.
IngressAlarmInterval	Ingress threshold alarm suppression interval.	N/A	Unsigned integer. Value range: 0 to 60.
EgressAlarmEnable	Egress threshold alarm enable status	N/A	Enumeration: 1 ENABLE. 2 DISABLE.
EgressAlarmInterval	Egress threshold alarm suppression interval.	N/A	Unsigned integer. Value range: 0 to 60.
HeadroomAlarmEnable	Headroom threshold alarm enable status	N/A	Enumeration: 1 ENABLE. 2 DISABLE.
HeadroomAlarmInterval	Headroom threshold alarm suppression interval.	N/A	Unsigned integer. Value range: 0 to 60.

## BufferMonitor/BoardConfigurations

This table is used to configure the node's configuration for buffer monitor.

### XML structure

```

<BufferMonitor>
  <BoardConfigurations>
    <BoardConfiguration>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <HeadroomThreshold></HeadroomThreshold>
    </BoardConfiguration>
  </BoardConfigurations>
</BufferMonitor>

```

### Table description

Item	Description
Feature name	BufferMonitor
Table name	BoardConfigurations
Table type	Multi-instance table
Row name	BoardConfiguration
Restrictions	None

Item	Description
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.
HeadroomThreshold	Headroom threshold in ratio.	N/A	Unsigned integer. Value range: 1 to 100.

## BufferMonitor/BoardQueueConfigurations

This table is used to configurate the queue of node for buffer monitor.

## XML structure

```

<BufferMonitor>
  <BoardQueueConfigurations>
    <BoardQueueConfiguration>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <QueueIndex></QueueIndex>
      <IngressThreshold></IngressThreshold>
      <EgressThreshold></EgressThreshold>
    </BoardQueueConfiguration>
  </BoardQueueConfigurations>
</BufferMonitor>

```

## Table description

Item	Description
Feature name	BufferMonitor
Table name	BoardQueueConfigurations
Table type	Multi-instance table
Row name	BoardQueueConfiguration
Restrictions	None

Item	Description
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the entity	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.
QueueIndex	Queue index	Index	Unsigned integer. Value range: 0 to 7.
IngressThreshold	Ingress threshold in ratio.	N/A	Unsigned integer. Value range: 1 to 100.
EgressThreshold	Egress threshold in ratio.	N/A	Unsigned integer. Value range: 1 to 100.

## BufferMonitor/PortQueueConfigurations

This table is used to configure the queue of interface for buffer monitor..

## XML structure

```

<BufferMonitor>
  <PortQueueConfigurations>
    <PortQueueConfiguration>
      <IfIndex></IfIndex>
      <QueueIndex></QueueIndex>
      <IngressThreshold></IngressThreshold>
      <EgressThreshold></EgressThreshold>
      <HeadroomThreshold></HeadroomThreshold>
    </PortQueueConfiguration>
  </PortQueueConfigurations>
</BufferMonitor>

```

## Table description

Item	Description
Feature name	BufferMonitor
Table name	PortQueueConfigurations

Item	Description
Table type	Multi-instance table
Row name	PortQueConfiguration
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
QueIndex	Queue index	Index	Unsigned integer. Value range: 0 to 7.
IngressThresh hold	Ingress threshold in ratio.	N/A	Unsigned integer. Value range: 1 to 100.
EgressThresh old	Egress threshold in ratio.	N/A	Unsigned integer. Value range: 1 to 100.
HeadroomThr eshold	Headroom threshold in ratio.	N/A	Unsigned integer. Value range: 1 to 100.

# BufferMonitor

## BufferMonitor/EgressDrops

This table is used to get the egress drops data for buffer monitor.

### XML structure

```
<BufferMonitor>
  <EgressDrops>
    <EgressDrop>
      <IfIndex/>
      <IfName/>
      <UnicastDroppedPkts/>
      <UnicastDroppedBytes/>
      <MulticastDroppedPkts/>
      <MulticastDroppedBytes/>
      <DroppedPkts/>
      <DroppedBytes/>
    </EgressDrop>
  </EgressDrops>
</BufferMonitor>
```

### Table description

Item	Description
Feature name	BufferMonitor
Table name	EgressDrops
Table type	Multi-instance table
Row name	EgressDrop
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2
UnicastDroppedPk	Number of packets	N/A	Unsigned integer64

Column name	Column description	Column type	Data type and restrictions
ts	lost in outgoing unicast queue		
UnicastDroppedBytes	Number of bytes lost in outgoing unicast queue	N/A	Unsigned integer64
MulticastDroppedPkts	Number of packets lost in outgoing Multicast queue	N/A	Unsigned integer64
MulticastDroppedBytes	Number of bytes lost in outgoing Multicast queue	N/A	Unsigned integer64
DroppedPkts	Number of packets lost in specific interface	N/A	Unsigned integer64
DroppedBytes	Number of bytes lost in specific interface	N/A	Unsigned integer64

## BufferMonitor/BoardEgressDrops

This table is used to get the slot egress drops data for buffer monitor.

### XML structure

```

<BufferMonitor>
  <BoardEgressDrops>
    <BoardEgressDrop>
      <Chassis/>
      <Slot/>
      <Cpu/>
      <DroppedPkts/>
      <DroppedBytes/>
    </BoardEgressDrop>
  </BoardEgressDrops>
</BufferMonitor>

```

### Table description

Item	Description
Feature name	BufferMonitor
Table name	BoardEgressDrops
Table type	Multi-instance table
Row name	BoardEgressDrop
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	Chassis number	Index	Unsigned integer.
Slot	Slot number	Index	Unsigned integer.
Cpu	Cpu number	Index	Unsigned integer.
DroppedPkts	Number of packets lost in Egress direction at whole slot	N/A	Unsigned integer64
DroppedBytes	Number of bytes lost in Egress direction at whole slot	N/A	Unsigned integer64

## BufferMonitor event stream

### BoardOverrunEvent event

This event is used to report counters of board overrun threshold.

### XML structure for event subscription

```
<BoardOverrunEvent>
  <BoardOverrun>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
    <AlarmType></AlarmType>
  </BoardOverrun>
</BoardOverrunEvent>
```

#### Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>BufferMonitor</stream>
    <filter>
      <BoardOverrunEvent xmlns="http://www.h3c.com/netconf/event:1.0/BufferMonitor:1.0">
        <BoardOverrun>
          <Chassis>0</Chassis>
          <Slot>0</Slot>
          <CPUID>0</CPUID>
          <AlarmType>1</AlarmType>
        </BoardOverrun>
      </BoardOverrunEvent>
    </filter>
  </create-subscription>
</rpc>]]>]]>
```

#### Table description

Item	Description
Event stream name	BufferMonitor
Event name	BoardOverrunEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/BufferMonitor:1.0
Support for extended query	No

## Columns

Column name	Column description	Data type and restrictions	Support for extended query	Remarks
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.	No	N/A
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.	No	N/A
CPUID	ID of the CPU.	Unsigned integer. Value range: 0 to 65535.	No	N/A
AlarmType	Alarm type.	Unsigned integer.	1—for Headroom overrun	Alarm type.

## XML structure for event report

```

<BoardOverrunEvent>
  <BoardOverrun>
    <Chassis/>
    <Slot/>
    <CPUID/>
    <AlarmType/>
    <CurrentValue/>
    <CurrentRatio/>
    <Threshold/>
  </BoardOverrun>
</BoardOverrunEvent>

```

## Table description

Column name	Column description	Data type and restrictions	Remarks
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	ID of the CPU.	Unsigned integer. Value range: 0 to 65535.	N/A
AlarmType	Alarm type.	Unsigned integer.	1—for Headroom overrun
CurrentValue	Current value.	Unsigned integer. Value range: 0 to 65535.	
CurrentRatio	Current usage ratio.	Unsigned integer. Value range: 1 to 100.	

Column name	Column description	Data type and restrictions	Remarks
Threshold	Threshold usage ratio.	Unsigned integer. Value range: 1 to 100.	

## PortQueOverrunEvent event

This event is used to report counters of interface's queue overrun threshold.

### XML structure for event subscription

```

<PortQueOverrunEvent>
  <PortQueOverrun>
    <IfIndex></IfIndex>
    <QueIndex></QueIndex>
    <AlarmType></AlarmType>
    <IfName></IfName>
  </PortQueOverrun>
</PortQueOverrunEvent>

```

#### Example:

```

<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>BufferMonitor</stream>
    <filter>
      <PortQueOverrunEvent xmlns="http://www.h3c.com/netconf/event:1.0/BufferMonitor:1.0">
        <PortQueOverrun>
          <IfIndex>20</IfIndex>
          <QueIndex>1</QueIndex>
          <AlarmType>2</AlarmType>
          <IfName>GigabitEthernet2/0/2</IfName>
        </PortQueOverrun>
      </PortQueOverrunEvent>
    </filter>
  </create-subscription>
</rpc>]]>]]>

```

#### Table description

Item	Description
Event stream name	BufferMonitor
Event name	PortQueOverrunEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/BufferMonitor:1.0
Support for extended query	No

## Columns

Column name	Column description	Data type and restrictions	Support for extended query	Remarks
IfIndex	Interface index	Unsigned integer.	No	N/A
QueIndex	Queue index	Unsigned integer.	No	N/A
AlarmType	Alarm type.	Unsigned integer.	No	1— for ingress overrun 2— for egress overrun 3— for headroom overrun
IfName	Full name of an interface	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	No	N/A

## XML structure for event report

```

<PortQueOverrunEvent>
  <IfIndex></IfIndex>
  <QueIndex></QueIndex>
  <AlarmType></AlarmType>
  <CurrentValue><CurrentValue>
  <CurrentRatio></CurrentRatio>
  <Threshold></Threshold>
  <IfName></IfName>
</PortQueOverrunEvent>

```

## Table description

Column name	Column description	Data type and restrictions	Remarks
IfIndex	Interface index	Unsigned integer.	N/A
QueIndex	Queue index	Unsigned integer.	N/A
AlarmType	Alarm type.	Unsigned integer.	1— for ingress overrun 2— for egress overrun 3— for headroom overrun
CurrentValue	Current value.	Unsigned integer.	
CurrentRatio	Current usage ratio.	Unsigned integer. Value range: 1 to 100.	
Threshold	Threshold usage ratio.	Unsigned integer. Value range: 1 to 100.	
IfName	Full name of an interface	String. Length: 2 to 47 characters. Example:	N/A

# PortQueDropEvent event

This event is used to report counters of interface's queue drop threshold.

## XML structure for event subscription

```
<PortQueDropEvent>
  <PortQueDrop>
    <IfIndex></IfIndex>
    <QueIndex></QueIndex>

## BYOD/DhcpOption55Rules

BYOD DHCP Option 55 rule table for endpoint identification.

### XML structure

```
<BYOD>
  <DhcpOption55Rules>
    <DhcpOption55Rule>
      <DhcpOption55Value></DhcpOption55Value>
      <DeviceType></DeviceType>
    </DhcpOption55Rule>
  </DhcpOption55Rules>
</BYOD>
```

### Table description

Item	Description
Feature name	BYOD
Table name	DhcpOption55Rules
Table type	Multi-instance table
Row name	DhcpOption55Rule
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions
DhcpOption55Value	DHCP Option 55 value.	Index	String. Length: 1 to 255 characters.
DeviceType	Device type.	N/A	String. Length: 1 to 127 characters.

## BYOD/UserAgentRules

BYOD HTTP user agent rule table for endpoint identification.

## XML structure

```
<BYOD>
  <UserAgentRules>
    <UserAgentRule>
      <UserAgentValue></UserAgentValue>
      <DeviceType></DeviceType>
    </UserAgentRule>
  </UserAgentRules>
</BYOD>
```

## Table description

Item	Description
Feature name	BYOD
Table name	UserAgentRules
Table type	Multi-instance table
Row name	UserAgentRule
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
UserAgentValue	HTTP user agent value.	Index	String. Length: 1 to 255 characters.
DeviceType	Device type.	N/A	String. Length: 1 to 127 characters.

## BYOD/MacRules

BYOD MAC address rule table for endpoint identification.

## XML structure

```
<BYOD>
  <MacRules>
    <MacRule>
      <MacAddr></MacAddr>
      <MacMask></MacMask>
      <DeviceType></DeviceType>
```

```

    </MacRule>
  </MacRules>
</BYOD>

```

## Table description

Item	Description
Feature name	BYOD
Table name	MacRules
Table type	Multi-instance table
Row name	MacRule
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddr	MAC address.	Index	String, six groups of two hexadecimal digits, hyphen-separated. Length: 1 to 17 characters.	For example, 00-0c-af-e3-5d-c0.
MacMask	MAC address mask.	Index	String, six groups of two hexadecimal digits, hyphen-separated. Length: 1 to 17 characters.	The significant bits must be consecutive Fs. For example, ff-ff-ff-00-00-00.
DeviceType	Device type.	N/A	String. Length: 1 to 127 characters.	N/A

## BYOD/AuthorizationInfos

BYOD authorization information table.

## XML structure

```

<BYOD>
  <AuthorizationInfos>
    <AuthorizationInfo>
      <UserGroupName></UserGroupName>
      <DeviceType></DeviceType>
      <AuthorizationData>
        <AclNumber></AclNumber>
      </AuthorizationData>
    </AuthorizationInfo>
  </AuthorizationInfos>
</BYOD>

```

```

    <CallbackNumber></CallbackNumber>
    <SessTimeout></SessTimeout>
    <IdleTimeout></IdleTimeout>
    <PrimaryDNSServer></PrimaryDNSServer>
    <PrimaryDNSIPv6Server></PrimaryDNSIPv6Server>
    <SecondaryDNSServer></SecondaryDNSServer>
    <SecondaryDNSIPv6Server></SecondaryDNSIPv6Server>
    <URL></URL>
    <UserProfile></UserProfile>
    <VLANID></VLANID>
    <VRF></VRF>
    <IpPool></IpPool>
    <Ipv6Pool></Ipv6Pool>
    <SSLVPNPolicy></SSLVPNPolicy>
  </AuthorizationData>
  <AuthorizationIPv6PrefixInfo>
    <IPv6Address></IPv6Address>
    <IPv6PrefixLength></IPv6PrefixLength>
  </AuthorizationIPv6PrefixInfo>
</AuthorizationInfo>
</AuthorizationInfos>
</BYOD>

```

## Table description

Item	Description
Feature name	BYOD
Table name	AuthorizationInfos
Table type	Multi-instance table
Row name	AuthorizationInfo
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserGroupName	User group name.	Index	String. Length: 1 to 32 characters.	N/A
DeviceType	Device type.	Index	String. Length: 1 to 127 characters.	N/A
Authorization Data	Authorization information.	Data structure	Members include: <ul style="list-style-type: none"> <li>AclNumber.</li> <li>CallbackNumber.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>• FTPHomeDir.</li> <li>• IdleTimeout.</li> <li>• PrimaryDNSServer.</li> <li>• SecondaryDNSServer.</li> <li>• URL.</li> <li>• UserProfile.</li> <li>• VLANID.</li> <li>• VRF.</li> <li>• IpPool.</li> <li>• Ipv6Pool.</li> </ul>	
AcINumber	ACL number.	N/A	Unsigned integer. Value range: 2000 to 5999.	N/A
CallbackNumber	Callback number.	N/A	String. Length: 1 to 64 characters.	N/A
SessTimeout	Session timeout.	N/A	Unsigned integer. Value range: 1 to 1440, in minutes.	N/A
IdleTimeout	Idle timeout timer.	N/A	Unsigned integer. Value range: 1 to 120, in minutes.	N/A
PrimaryDNSServer	Primary DNS server.	N/A	IPv4: String, dotted decimal notation.	N/A
PrimaryDNSIpv6Server	Primary DNS Ipv6 server.	N/A	IPv6: Hexadecimal string, colon-separated.	
SecondaryDNSServer	Secondary DNS server.	N/A	IPv4: String, dotted decimal notation.	N/A
SecondaryDNSIpv6Server	Secondary DNS Ipv6 Server.	N/A	IPv6: Hexadecimal string, colon-separated.	N/A
URL	URL information.	N/A	String. Length: 1 to 255 characters.	N/A
UserProfile	User profile name.	N/A	String. Length: 1 to 32 characters.	The name can contain digits, letters, and underscores (_), but the name can't start with a digit.
VLANID	ID of the authorization VLAN.	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VRF	Name of the authorization VPN instance.	N/A	String. Length: 1 to 31 characters.	N/A
IpPool	Available IP pool name.	N/A	String. Length: 1 to 31 characters.	N/A
Ipv6Pool	Available IPv6 pool name.	N/A	String. Length: 1 to 63 characters.	N/A
SSLVPNPolic	Name of the SSL	N/A	String, case-insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
y	VPN policy assigned to the local user.		Length: 1 to 31 characters.	
AuthorizationIpv6PrefixInfo	Available IPv6 prefix.	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv6Address.</li> <li>Ipv6PrefixLength.</li> </ul>	N/A
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	For example, 2003:10::1:1. This column is effective only when the Ipv6PrefixLength column is set.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 1 to 128.	This column is effective only when the Ipv6Address column is set.

## BYOD/DhcpOption55Rules

BYOD DHCP Option 55 rule table for endpoint identification.

### XML structure

```
<BYOD>
  <DhcpOption55Rules>
    <DhcpOption55Rule>
      <DhcpOption55Value></DhcpOption55Value>
      <DeviceType></DeviceType>
      <RuleClass></RuleClass>
    </DhcpOption55Rule>
  </DhcpOption55Rules>
</BYOD>
```

### Table description

Item	Description
Feature name	BYOD
Table name	DhcpOption55Rules
Table type	Multi-instance table
Row name	DhcpOption55Rule
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions
DhcpOption55Value	DHCP Option 55 value.	Index	String. Length: 1 to 255 characters.
DeviceType	Device type.	N/A	String. Length: 0 to 127 characters.
RuleClass	Rule class.	N/A	Boolean: <ul style="list-style-type: none"><li>• True.</li><li>• False.</li></ul>

# BYOD/UserAgentRules

BYOD HTTP user agent rule table for endpoint identification.

## XML structure

```
< BYOD>
  <UserAgentRules>
    <UserAgentRule>
      <UserAgentValue></UserAgentValue>
      <DeviceType></DeviceType>
      <RuleClass></RuleClass>
    </UserAgentRule>
  </UserAgentRules>
</BYOD>
```

## Table description

Item	Description
Feature name	BYOD
Table name	UserAgentRules
Table type	Multi-instance table
Row name	UserAgentRule
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
UserAgentValue	HTTP user agent value.	Index	String. Length: 1 to 255 characters.
DeviceType	Device type.	N/A	String. Length: 1 to 127 characters.
RuleClass	Rule class.	N/A	Boolean: <ul style="list-style-type: none"><li>• True.</li><li>• False.</li></ul>

# BYOD/MacRules

BYOD MAC address rule table for endpoint identification.

# XML structure

```
< BYOD>
  <MacRules>
    <MacRule>
      <MacAddr></MacAddr>
      <MacMask></MacMask>
      <DeviceType></DeviceType>
      <RuleClass></RuleClass>
    </MacRule>
  </MacRules>
</BYOD>
```

## Table description

Item	Description
Feature name	BYOD
Table name	MacRules
Table type	Multi-instance table
Row name	MacRule
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddr	MAC address.	Index	String, six groups of two hexadecimal digits, hyphen-separated. Length: 1 to 17 characters.	For example, 00-0c-af-e3-5d-c0.
MacMask	MAC address mask.	Index	String, six groups of two hexadecimal digits, hyphen-separated. Length: 1 to 17 characters.	The significant bits must be consecutive Fs. For example, ff-ff-ff-00-00-00.
DeviceType	Device type.	N/A	String. Length: 1 to 127 characters.	N/A
RuleClass	Rule class.	N/A	Boolean: <ul style="list-style-type: none"><li>• True.</li><li>• False.</li></ul>	N/A

# BYOD/AuthorizationInfos

BYOD authorization information table.

## XML structure

```
<BYOD>
  <AuthorizationInfos>
    <AuthorizationInfo>
      <UserGroupName></UserGroupName>
      <DeviceType></DeviceType>
      <AuthorizationData>
        <AclNumber></AclNumber>
        <CallbackNumber></CallbackNumber>
        <SessTimeout></SessTimeout>
        <IdleTimeout></IdleTimeout>
        <PrimaryDNSServer></PrimaryDNSServer>
        <PrimaryDNSIpv6Server></PrimaryDNSIpv6Server>
        <SecondaryDNSServer></SecondaryDNSServer>
        <SecondaryDNSIpv6Server></SecondaryDNSIpv6Server>
        <URL></URL>
        <UserProfile></UserProfile>
        <VLANID></VLANID>
        <VRF></VRF>
        <IpPool></IpPool>
        <Ipv6Pool></Ipv6Pool>
        <SSLVPNPolicy></SSLVPNPolicy>
      </AuthorizationData>
      <AuthorizationIpv6PrefixInfo>
        <Ipv6Address></Ipv6Address>
        <Ipv6PrefixLength></Ipv6PrefixLength>
      </AuthorizationIpv6PrefixInfo>
    </AuthorizationInfo>
  </AuthorizationInfos>
</BYOD>
```

## Table description

Item	Description
Feature name	BYOD
Table name	AuthorizationInfos
Table type	Multi-instance table

Row name	AuthorizationInfo
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserGroupName	User group name.	Index	String. Length: 1 to 32 characters.	N/A
DeviceType	Device type.	Index	String. Length: 1 to 127 characters.	N/A
Authorization Data	Authorization information.	Data structure	Members include: <ul style="list-style-type: none"> <li>• AclNumber.</li> <li>• CallbackNumber.</li> <li>• FTPHomeDir.</li> <li>• IdleTimeout.</li> <li>• PrimaryDNSServer.</li> <li>• SecondaryDNSServer.</li> <li>• URL.</li> <li>• UserProfile.</li> <li>• VLANID.</li> <li>• VRF.</li> <li>• IpPool.</li> <li>• Ipv6Pool.</li> </ul>	N/A
AclNumber	ACL number.	N/A	Unsigned integer. Value range: 2000 to 5999.	N/A
CallbackNumber	Callback number.	N/A	String. Length: 1 to 64 characters.	N/A
SessTimeout	Session timeout.	N/A	Unsigned integer. Value range: 1 to 1440, in minutes.	N/A
IdleTimeout	Idle timeout timer.	N/A	Unsigned integer. Value range: 1 to 120, in minutes.	N/A
PrimaryDNSServer	Primary DNS server.	N/A	IPv4: String, dotted decimal notation.	N/A
PrimaryDNSIpv6Server	Primary DNS Ipv6 server.	N/A	IPv6: Hexadecimal string, colon-separated.	N/A
SecondaryDNSServer	Secondary DNS server.	N/A	IPv4: String, dotted decimal notation.	N/A
SecondaryDNSIpv6Server	Secondary DNS Ipv6 server.	N/A	Ipv6: Hexadecimal string, colon-separated.	N/A
URL	URL information.	N/A	String. Length: 1 to 255 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
UserProfile	User profile name.	N/A	String. Length: 1 to 32 characters.	The name can contain digits, letters, and underscores (_), but the name can't start with a digit.
VLANID	ID of the authorization VLAN.	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VRF	Name of the authorization VPN instance.	N/A	String. Length: 1 to 31 characters.	N/A
IpPool	Available IP pool name.	N/A	String. Length: 1 to 31 characters.	N/A
Ipv6Pool	Available IPv6 pool name.	N/A	String. Length: 1 to 63 characters.	N/A
SSLVPNPolicy	Name of the SSL VPN policy assigned to the local user.	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A
AuthorizationIpv6PrefixInfo	Available IPv6 prefix.	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv6Address.</li> <li>Ipv6PrefixLength.</li> </ul>	N/A
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	For example, 2003:10::1:1.  This column is effective only when the Ipv6PrefixLength column is set.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 1 to 128.	This column is effective only when the Ipv6Address column is set.

## Table description

Item	Description
Feature name	CAR
Table name	CarLists
Table type	Multi-instance table
Row name	List
Restrictions	Only one match column can be configured once.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CarIID	CAR list number	Index	Unsigned integer. Value range: 1 to 199.	N/A
Mac	Match the MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
Dscp	Match DSCP values.	N/A	Unsigned integer. Value range: 0 to 63.	You can specify up to 8 <b>Dscp</b> for a rule
Exp	Match MPLS EXP value.	N/A	Unsigned integer. Value range: 0 to 7.	You can specify up to 8 <b>Exp</b> for a rule
IPPrecedence	Match IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	You can specify up to 8 <b>IPPrecedence</b> for a rule
DestIPRange	Match destination IP by range.	Data structure	Members include: <ul style="list-style-type: none"> <li><b>DestIPStart</b></li> <li><b>DestIPEnd</b></li> </ul>	The two members must both be specified.
DestIPStart	Start IP of range.	N/A	String, dotted decimal notation.	Example: 10.153.93.54.
DestIPEnd	End IP of range.	N/A	String, dotted decimal notation.	Example: 10.153.93.60. <b>DestIPEnd</b> must be bigger than <b>DestIPStart</b> .
SrcIPRange	Match source IP by range.	Data structure	Members include: <ul style="list-style-type: none"> <li><b>SrcIPStart</b></li> <li><b>SrcIPEnd</b></li> </ul>	The two members must both be specified.
SrcIPStart	Start IP of range.	N/A	String, dotted decimal notation.	Example: 10.153.93.54.
SrcIPEnd	End IP of range.	N/A	String, dotted decimal notation.	Example: 10.153.93.60. <b>SrcIPEnd</b> must be bigger than <b>SrcIPStart</b> .

DestIPSubnet	Match destination IP by subnet.	Data structure	Members include: <ul style="list-style-type: none"> <li>• <b>DestSubnetIP</b></li> <li>• <b>DestMaskLength</b></li> </ul>	The two members must both be specified.
DestSubnetIP	Subnet IP.	N/A	String, dotted decimal notation.	Example: 10.153.93.60.
DestMaskLength	MaskLength.	N/A	Unsigned integer.	The maximum value is 31. The minimum value varies by device model.
SrcIPSubnet	Match source IP by subnet.	Data structure	Members include: <ul style="list-style-type: none"> <li>• <b>SrcSubnetIP</b></li> <li>• <b>SrcMaskLength</b></li> </ul>	The two members must both be specified.
SrcSubnetIP	Subnet IP.	N/A	String, dotted decimal notation.	Example: 10.153.93.60.
SrcMaskLength	MaskLength.	N/A	Unsigned integer.	The maximum value is 31. The minimum value varies by device model.
SrcIPObjGroup	Match source IP by object group.	N/A	String case insensitive. Length: 1 to 31 characters.	The object group name can't contain '?'. The character '\r\n' in object group name can't be treated as escape character.
DestIPObjGroup	Match destination IP by object group.	N/A	String case insensitive. Length: 1 to 31	The object group name can't contain '?'. The character '\r\n' in object group name can't be treated as escape character.
Mode	Match Mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—PerAddress.</li> <li>• <b>2</b>—SharedBandwidth.</li> </ul>	It can be specified when <b>SrcIPSubnet</b> or <b>DestIPSubnet</b> or <b>SrcIPRange</b> or <b>DestIPRange</b> is specified.  When the <b>Mode</b> column is 1, Per-IP address rate is limited within the network segment, and traffic of all IP addresses within the network segment doesn't share the remaining bandwidth.  When the <b>Mode</b> column is 2, Per-IP address rate is limited within the network segment, and traffic of all IP addresses within the network segment shares the remaining bandwidth.
Trange	Name of the time range	N/A	String, case-insensitive. Length: 1 to 32 characters.	The time range name cannot be <b>all</b> and the '?' should not be used. The character '\r\n' in time range name can't be

				treated as escape character.
--	--	--	--	------------------------------

### Table description

Item	Description
Feature name	CAR
Table name	CarPolicies
Table type	Multi-instance table
Row name	Policy

Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
Direction	Application direction	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Inbound.</li> <li>1—Outbound.</li> </ul>	N/A
Type	Match type	Index	Enumeration : <ul style="list-style-type: none"> <li>1—IPv4Acl</li> <li>2—IPv6Acl</li> <li>3—CarI</li> <li>4—Any</li> </ul>	N/A
Value	Match type value	Index	Unsigned integer.	When <b>Type</b> is <b>1</b> , the value is 2000~5999. When <b>Type</b> is <b>2</b> , the value is 2000~3999. When <b>Type</b> is <b>3</b> , the value is 1~199. When <b>Type</b> is <b>4</b> , this column only can be configured as 0.
BandwidthUnit	Specify the bandwidth unit	N/A	Enumeration: <ul style="list-style-type: none"> <li>2—kbps</li> <li>3—percent.</li> </ul>	If this column is not configured, the default bandwidth unit is kbps.
Name	Aggregate CAR policy name	N/A	String. Length: 1 to 31 characters. The string must start with an English letter.	This column cannot be configured together with the other column. This column support only when BandwidthUnit is 3.
CIR	Committed information rate	N/A	Unsigned integer.	Required when the <b>Name</b> is not specified. When BandwidthUnit is 3, the value range is 1 to 100.
CBS	Committed burst size	N/A	Unsigned integer.	When BandwidthUnit is 3, the value range is 50 to 2000.
EBS	Excess burst size	N/A	Unsigned integer.	If <b>CBS</b> or <b>PIR</b> is not configured, <b>EBS</b> cannot be configured. When BandwidthUnit is 3, the value range is 0 to

Column name	Column description	Column type	Data type and restrictions	Remarks
				2000.
PIR	Peak information rate	N/A	Unsigned integer.	When BandwidthUnit is 3, the value range is 1 to 100.
GreenAction	Specify behavior for green packets	Data structure	Members include: <ul style="list-style-type: none"> <li><b>GreenActionType</b></li> <li><b>GreenActionValue</b></li> </ul>	GreenActionValue is required when GreenActionType is not 1, 10 or 19.
GreenActionType	Action type	N/A	<p>Enumeration:</p> <ul style="list-style-type: none"> <li><b>1</b>—pass.</li> <li><b>2</b>—remark-dscp-pass</li> <li><b>3</b>—remark-precedence-pass</li> <li><b>4</b>—remark-mpls-exp-pass</li> <li><b>5</b>—remark-dot1p-pass</li> <li><b>6</b>—remark-atm-clp-pass</li> <li><b>7</b>—remark-fr-de-pass</li> <li><b>8</b>—remark-local-prec-pass</li> <li><b>10</b>—discard</li> <li><b>11</b>—remark-dscp-continue</li> <li><b>12</b>—remark-precedence-continue</li> <li><b>13</b>—remark-mpls-exp-continue</li> <li><b>14</b>—remark-dot1p-continue</li> <li><b>15</b>—remark-atm-clp-continue.</li> <li><b>16</b>—remark-fr-de-continue.</li> <li><b>17</b>—remark-local-prec-continue.</li> <li><b>19</b>—continue.</li> </ul>	<p>The default GreenActionType is pass.</p> <p>When <b>GreenActionType</b> is <b>1</b>, send the packet.</p> <p>When <b>GreenActionType</b> is <b>2</b>, remark DSCP value of the packet and send it.</p> <p>When <b>GreenActionType</b> is <b>3</b>, remark IP precedence of the packet and send it.</p> <p>When <b>GreenActionType</b> is <b>4</b>, remark EXP of the MPLS packet and send it.</p> <p>When <b>GreenActionType</b> is <b>5</b>, remark 802.1p priority value of the packet and send it.</p> <p>When <b>GreenActionType</b> is <b>6</b>, remark CLP bit of the ATM packet and send it.</p> <p>When <b>GreenActionType</b> is <b>7</b>, remark DE bit of the FR packet and send it.</p> <p>When <b>GreenActionType</b> is <b>8</b>, drop the packet.</p> <p>When <b>GreenActionType</b> is <b>10</b>, remark local precedence of the packet and send it.</p> <p>When <b>GreenActionType</b> is <b>11</b>, remark DSCP value of the packet and continue to process it using the next CAR policy.</p> <p>When <b>GreenActionType</b> is <b>12</b>, remark IP precedence of the packet and continue to process it using the next CAR policy.</p> <p>When <b>GreenActionType</b> is <b>13</b>, remark EXP of the MPLS packet and continue to process it using the next CAR policy.</p> <p>When <b>GreenActionType</b> is <b>14</b>, remark 802.1p</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
				<p>priority value of the packet and continue to process it using the next CAR policy.</p> <p>When <b>GreenActionType</b> is <b>15</b>, remark CLP bit of the ATM packet and continue to process it using the next CAR policy.</p> <p>When <b>GreenActionType</b> is <b>16</b>, remark DE bit of the FR packet and continue to process it using the next CAR policy.</p> <p>When <b>GreenActionType</b> is <b>17</b>, remark local precedence of the packet and continue to process it using the next CAR policy.</p> <p>When <b>GreenActionType</b> is <b>19</b>, continue to process the packet using the next CAR policy.</p>
GreenActionValue	Action value	N/A	Unsigned integer. ## Table description

Item	Description
Feature name	CAR
Table name	CarLists
Table type	Multi-instance table
Row name	List
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CarIID	CAR list number	Index	Unsigned integer. Value range: 1 to 199.	N/A
Mac	Match the MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
Dscp	Match DSCP values.	N/A	Unsigned integer. Value range: 0 to 63.	You can specify up to 8 <b>Dscp</b> for a rule
Exp	Match MPLS EXP value.	N/A	Unsigned integer. Value range: 0 to 7.	You can specify up to 8 <b>Exp</b> for a rule
IPPrecedence	Match IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	You can specify up to 8 <b>IPPrecedence</b> for a rule
DestIPRange	Match destination IP by range.	Data structure	Members include: <ul style="list-style-type: none"> <li><b>DestIPStart</b></li> <li><b>DestIPEnd</b></li> </ul>	The two members must both be specified.
DestIPStart	Start IP of range.	N/A	String, dotted decimal notation.	Example: 10.153.93.54.
DestIPEnd	End IP of range.	N/A	String, dotted decimal notation.	Example: 10.153.93.60. <b>DestIPEnd</b> must be bigger than <b>DestIPStart</b> .
SrcIPRange	Match source IP by range.	Data structure	Members include: <ul style="list-style-type: none"> <li><b>SrcIPStart</b></li> <li><b>SrcIPEnd</b></li> </ul>	The two members must both be specified.
SrcIPStart	Start IP of range.	N/A	String, dotted decimal notation.	Example: 10.153.93.54.
SrcIPEnd	End IP of range.	N/A	String, dotted decimal notation.	Example: 10.153.93.60. <b>SrcIPEnd</b> must be bigger than <b>SrcIPStart</b> .
DestIPSubnet	Match destination IP by	Data structure	Members include: <ul style="list-style-type: none"> <li><b>DestSubnetIP</b></li> </ul>	The two members must both be specified.

	subnet.		<ul style="list-style-type: none"> <li>DestMaskLength</li> </ul>	
DestSubnetIP	Subnet IP.	N/A	String, dotted decimal notation.	Example: 10.153.93.60.
DestMaskLength	MaskLength.	N/A	Unsigned integer.	The maximum value is 31. The minimum value varies by device model.
SrcIPSubnet	Match source IP by subnet.	Data structure	Members include: <ul style="list-style-type: none"> <li>SrcSubnetIP</li> <li>SrcMaskLength</li> </ul>	The two members must both be specified.
SrcSubnetIP	Subnet IP.	N/A	String, dotted decimal notation.	Example: 10.153.93.60.
SrcMaskLength	MaskLength.	N/A	Unsigned integer.	The maximum value is 31. The minimum value varies by device model.
SrcIPObjGroup	Match source IP by object group.	N/A	String case insensitive. Length: 1 to 31 characters.	The object group name cannot contain '?'. The character '\n' in object group name can't be treated as escape character.
DestIPObjGroup	Match destination IP by object group.	N/A	String case insensitive. Length: 1 to 31	The object group name can't contain '?'. The character '\n' in object group name can't be treated as escape character.
Mode	Match Mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—PerAddress.</li> <li>2—SharedBandwidth.</li> </ul>	When the <b>Mode</b> column is 1, Per-IP address rate is limited within the network segment, and traffic of all IP addresses within the network segment doesn't share the remaining bandwidth. When the <b>Mode</b> column is 2, Per-IP address rate is limited within the network segment, and traffic of all IP addresses within the network segment shares the remaining bandwidth.
Trange	Name of the time range	N/A	String, case-insensitive. Length: 1 to 32 characters.	The time range name cannot be <b>all</b> and the '?' <b>should not be used</b> . The character '\n' in time range name can't be treated as escape character.

# CAR

## CAR

Message	Explanation
PIR can't be smaller than CIR. PIR的值不能小于CIR。	Configure a CAR action, PIR can't be smaller than CIR. 配置流量监管动作，峰值速率不能小于承诺信息速率。
The end address should be larger than the start address. 结束地址值应该大于起始地址值。	Configure a CAR list, The end address should be larger than the start address. 配置CAR列表，IP地址段终止地址必须大于IP地址段起始地址。
The number of IP addresses in the IP address range exceeds %u. IP地址的数量超出了个数为%u的限制。	Configure a CAR list, The number of IP addresses in the IP address range has max number. 配置CAR列表，IP地址段数量存在上限。
Total UNI bandwidth can't be greater than NNI bandwidth. 下行接口总带宽不能超过上行接口带宽。	Total UNI bandwidth can't be greater than NNI bandwidth. 配置带宽保证组，下行接口总带宽不能超过上行接口带宽。
Please remove UNI configuration of this interface first. 请先删除下行接口配置。	Del if CAR, remove UNI configuration of this interface first. 删除接口CAR配置时需要保证此接口不是带宽保证组的下行口。
The maximum number of CAR policies that can be configured has been reached. CAR策略的数目已经达到最大值。	The maximum number of CAR policies that can be configured has been reached. 接口下配置流量监管的数量存在上限。
CIR or PIR must be configured in the same unit (percentage or kbps) as it was previously configured. 必须与之前配置的CIR或者PIR配置相同单位（percentage or kbps）	CIR or PIR must be configured in the same unit (percentage or kbps) as it was previously configured. 接口下配置流量监管的单位需要保持一致。
Percentage-based CAR can be only used on interface. 百分比CAR只能被应用到接口。	Percentage-based CAR can be only used on interface. 百分比CAR只能被应用到接口。

## CCdefense/MovePolicyRule

This table is used to number the rules in a CC attack defense policy.

### XML structure

```
<CCdefense>
  <MovePolicyRule>
    <Move>
      <PolicyName></PolicyName>
      <RuleId></RuleId>
      <NextRuleId></NextRuleId>
    </Move>
  </MovePolicyRule>
</CCdefense>
```

### Table description

Item	Description
Feature name	CCdefense
Table name	MovePolicyRule
Table type	Single-instance table
Row name	Move
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the policy	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
RuleId	Rule ID	Index	Unsigned integer. Value range: 1 to 64.	Single value.
NextRuleId	ID of the next rule	N/A	Unsigned integer. Value range: 1 to 64.	Single value.

## CCdefense/Policies

This table contains Challenge Collapsar (CC) attack defense policy information.

### XML structure

```
<CCdefense>
  <Policies>
    <Policy>
      <PolicyName></PolicyName>
      <Description></Description>
      <Frequency></Frequency>
      <ExceptionIPv4List>
        <Ipv4address></Ipv4address>
      </ExceptionIPv4List>
      <ExceptionIPv6List>
        <Ipv6address></Ipv6address>
      </ExceptionIPv6List>
    </Policy>
  </Policies>
</CCdefense>
```

### Table description

Item	Description
Feature name	CCdefense
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the policy	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
Description	Description of the policy	N/A	String, case-sensitive. Length: 1 to 255 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Frequency	Value of the frequency	N/A	Unsigned integer. Value range: 10 to 720.	Default is 300.
Ipv4address	Source IPv4 address	N/A	String, decimal notation. Length: 1 to 15 characters.	N/A
Ipv6address	Source IPv6 address	N/A	Hexadecimal string, colon-separated. Length: 1 to 45 characters.	N/A

## CCdefense/RuleInPolicy

This table contains information about the rules in a CC attack defense policy.

### XML structure

```

<CCdefense>
  <RuleInPolicy>
    <Rule>
      <PolicyName></PolicyName>

## CELLULAR/CellularVerificationEnable

This table is used to enable or disable pin verification in a specific cellular interface.

### XML structure

```
<Cellular>
  <CellularVerificationEnable>
    <VerificationEnable>
      <IfIndex></IfIndex>
      <Enable></Enable>
      <PinCode></PinCode>
    </VerificationEnable>
  </CellularVerificationEnable>
</Cellular>
```

### Table description

Item	Description
Feature name	Cellular
Table name	CellularVerificationEnable
Table type	Multi-instance table
Row name	VerificationEnable
Restrictions	This table supports interface types: Cellular interface

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable or disable pin verification	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>false</b>—Disable</li> <li>• <b>true</b>—Enable</li> </ul>	N/A
PinCode	Pin Code	N/A	String of digits Length: 4 to 6	Pin code may be required, It is determined by the device.

## CELLULAR/CellularMode

This table contains the information about network connection mode.

### XML structure

```
<Cellular>
  <CellularMode>
    <Mode>
      <IfIndex></IfIndex>
      <ModeType></ModeType>
    </Mode>
  </CellularMode>
</Cellular>
```

### Table description

Item	Description
Feature name	Cellular
Table name	CellularMode
Table type	Multi-instance table
Row name	Mode
Restrictions	This table supports interface types: Cellular interface
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
ModeType	network connection mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—1XRTT.</li> <li>• 2—EVDO.</li> <li>• 3—HYBRID.</li> <li>• 4—GSMONLY.</li> <li>• 5—GSMPREFER.</li> <li>• 6—WCDMAONLY.</li> <li>• 7—WCDMAPREFER.</li> <li>• 8—TDONLY.</li> <li>• 9—TDPREFER.</li> <li>• 10—LTEONLY.</li> <li>• 11—AUTO.</li> </ul>	Which mode is supported depends on the device. The default ModeType depends on the modem model.

## CELLULAR/CellularApnProfile

This table contains the information about network cellular apn-profile.

### XML structure

```

<Cellular>
  <CellularApnProfile>
    <ApnProfile>
      <ProfileName></ProfileName>
      <ProfileType></ProfileType>
      <Apn></Apn>
      <AuthType></AuthType>
      <UserName></UserName>
      <PassWord></PassWord>
    </ApnProfile>
  </CellularApnProfile>
</Cellular>

```

### Table description

Item	Description
Feature name	Cellular
Table name	CellularApnProfile
Table type	Multi-instance table
Row name	ApnProfile
Restrictions	N/A
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Profile name	Index	String. case-sensitive. Length: 1 to 31 characters.	N/A
ProfileType	Access point type	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—dynamic.</li><li>• 1—static.</li></ul>	When the ProfileType is dynamic, apn is not needed, otherwise apn is required.
Apn	Access point name	N/A	String. case-sensitive. Length: 1 to 100 characters.	Only when the ProfileType is static, the Apn is required.
AuthType	Specifies the authentication mode	N/A	Enumeration: <ul style="list-style-type: none"><li>• 1—pap.</li><li>• 2—chap.</li><li>• 3—pap and chap</li></ul>	When choosing the AuthType, UserName and PassWord is required.
UserName	User name	N/A	String. case-sensitive. Length: 1 to 32 characters.	N/A
PassWord	Password string	N/A	String. case-sensitive. Length: 1 to 32 characters.	N/A

## CELLULAR/CellularApplyProfile

This table contains the information about cellular apply profile to an interface.

## XML structure

```
<Cellular>
  <CellularApplyProfile>
    <ApplyProfile>
      <IfIndex></IfIndex>
      <MainProfile></MainProfile>
      <BackupProfile></BackupProfile>
    </ApplyProfile>
  </CellularApplyProfile>
</Cellular>
```

## Table description

Item	Description
Feature name	Cellular
Table name	CellularApplyProfile
Table type	Multi-instance table
Row name	ApplyProfile
Restrictions	N/A
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
MainProfile	Main parameter profile	N/A	String. case-sensitive. Length: 1 to 31 characters.	Configure the main apn profile first.
BackupProfile	Backup parameter profile	N/A	String. case-sensitive. Length: 1 to 31 characters.	N/A

## CELLULAR/CellularProfile

This table contains the information about network cellular profile.

## XML structure

```
<Cellular>
  <CellularProfile>
    <Profile>
      <IfIndex></IfIndex>
      <ProfileNum></ProfileNum>
      <ProfileType></ProfileType>
      <Apn></Apn>
```

```

    <AuthType></AuthType>
    <UserName></UserName>
    <PassWord></PassWord>
  </Profile>
</CellularProfile>
</Cellular>

```

## Table description

Item	Description
Feature name	Cellular
Table name	CellularProfile
Table type	Multi-instance table
Row name	Profile
Restrictions	This table supports interface types: Cellular interface
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Interface				Some versions support interface name. For relevant information, see the XSD document of your product. For information about Interface, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IfIndex	Interface index.	Index	Unsigned integer.	
ProfileNum	Modem parameter number	Index	Unsigned integer Value range: 1 to 255.	N/A
ProfileType	Access point type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—dynamic.</li> <li>1—static.</li> </ul>	When the ProfileType is dynamic, apn is not needed, otherwise apn is required.
Apn	Access point name	N/A	String. case-sensitive. Length: 1 to 100 characters.	Only when the ProfileType is static, the Apn is required.
AuthType	Specifies the	N/A	Enumeration:	When AuthType is none,

Column name	Column description	Column type	Data type and restrictions	Remarks
	authentication mode		<ul style="list-style-type: none"> <li>• <b>0</b>—none.</li> <li>• <b>1</b>—pap.</li> <li>• <b>2</b>— chap</li> <li>• <b>3</b>— pap and chap</li> </ul>	UserName is not required, otherwise UserName is required.
UserName	User name	N/A	String. case-sensitive. Length: 1 to 32 characters.	N/A
PassWord	Password string	N/A	String. case-sensitive. Length: 1 to 32 characters.	PassWord can not be returned when you get data.

# CELLULAR

## CELLULAR/CellularMode

This table contains the information about network connection mode.

### XML structure

```
<Cellular>
  <CellularMode>
    <Mode>
      <IfIndex></IfIndex>
      <ModeType></ModeType>
      <ModeSupport></ModeSupport>
    </Mode>
  </CellularMode>
</Cellular>
```

### Table description

Item	Description
Feature name	Cellular
Table name	CellularMode
Table type	Multi-instance table
Row name	Mode
Restrictions	This table supports interface types: Cellular interface

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
ModeType	Network connection mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—Unknown.</li> <li>• 1—CDMA-1x RTT.</li> <li>• 2—CDMA-EVDO.</li> <li>• 3—Hybrid.</li> <li>• 4—GSM.</li> <li>• 5—GSM-Preference.</li> <li>• 6—WCDMA.</li> <li>• 7—WCD-Preference.</li> <li>• 8—TD-SCDMA.</li> <li>• 9—TD-Preference.</li> <li>• 10—LTE.</li> <li>• 11—Auto.</li> </ul>	Some devices get the ModeType is unknown, when they don't have SIM/UM card.
ModeSupport	The modem support mode	N/A	Unsigned integer.	ModeSupport is bitmap. Only be used to get the support network connection mode. Auto: 1 CDMA-1x RTT: 1 << 1 CDMA-EVDO: 1 << 2 Hybrid: 1 << 3 GSM: 1 << 4 GSM-Preference: 1 << 5 WCDMA: 1 << 6 WCD-Preference: 1 << 7 TD-SCDMA: 1 << 8 TD-Preference: 1 << 9 LTE: 1 << 10

## CELLULAR/CellularVerificationDis

This table contains the information about pin verification.

### XML structure

```

<Cellular>
  <CellularVerificationDis>
    <VerificationDis>
      <IfIndex></IfIndex>
      <Enable></Enable>
      <UimStatus></UimStatus>
      <RemainNum></RemainNum>
    </VerificationDis>
  </CellularVerificationDis>
</Cellular>

```

```

    </CellularVerificationDis>
</Cellular>

```

## Table description

Item	Description
Feature name	Cellular
Table name	CellularVerificationDis
Table type	Multi-instance table
Row name	VerificationDis
Restrictions	This table supports interface types: Cellular interface

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
lIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about lIndex, see "Appendix" in lfmgr NETCONF XML API Configuration Reference.
Enable	Enable or disable pin verification	N/A	Boolean: <ul style="list-style-type: none"> <li><b>false</b>—Disable</li> <li><b>true</b>—Enable</li> </ul>	N/A
UimStatus	PIN status	N/A	Unsigned integer.	N/A
RemainNum	Remaining retries available for entering the PIN or PUK.	N/A	Unsigned integer.	N/A

## CELLULAR/CellularApnProfile

This table contains the information about network cellular apn-profile.

## XML structure

```

<Cellular>
  <CellularApnProfile>
    <ApnProfile>

```

```

    <ProfileName></ProfileName>
    <ProfileType></ProfileType>
    <Apn></Apn>
    <AuthType></AuthType>
    <UserName></UserName>
    <PassWord></PassWord>
  </ApnProfile>
</CellularApnProfile>
</Cellular>

```

## Table description

Item	Description
Feature name	Cellular
Table name	CellularApnProfile
Table type	Multi-instance table
Row name	ApnProfile
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions
ProfileName	Profile name	Index	String, case-sensitive. Length: 1 to 31 characters.
ProfileType	Access point type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—dynamic.</li> <li>• <b>1</b>—static.</li> </ul>
Apn	Access point name	N/A	String, case-sensitive. Length: 1 to 100 characters.
AuthType	Specifies the authentication mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—pap.</li> <li>• <b>2</b>—chap.</li> <li>• <b>3</b>—pap and chap</li> </ul>
UserName	User name	N/A	String, case-sensitive. Length: 1 to 80 characters.
PassWord	Password string	N/A	String, case-sensitive. Length: 1 to 32 characters.

## CELLULAR/CellularApplyProfile

This table contains the information about cellular apply profile to an interface.

## XML structure

```
<Cellular>
  <CellularApplyProfile>
    <ApplyProfile>
      <IfIndex></IfIndex>
      <MainProfile></MainProfile>
      <BackupProfile></BackupProfile>
    </ApplyProfile>
  </CellularApplyProfile>
</Cellular>
```

## Table description

Item	Description
Feature name	Cellular
Table name	CellularApplyProfile
Table type	Multi-instance table
Row name	ApplyProfile
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
MainProfile	Main parameter profile	N/A	String. case-sensitive. Length: 1 to 31 characters.	N/A
BackupProfile	Backup parameter profile	N/A	String. case-sensitive. Length: 1 to 31 characters.	N/A

# CELLULAR/CellularProfile

This table contains the information about network cellular profile.

## XML structure

```
<Cellular>
  <CellularProfile>
    <Profile>
      <IfIndex></IfIndex>
      <ProfileNum></ProfileNum>
      <ProfileType></ProfileType>
      <Apn></Apn>
      <AuthType></AuthType>
      <UserName></UserName>
      <PassWord></PassWord>
    </Profile>
  </CellularProfile>
</Cellular>
```

## Table description

Item	Description
Feature name	Cellular
Table name	CellularProfile
Table type	Multi-instance table
Row name	Profile
Restrictions	This table supports interface types: Cellular interface

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileNum	Modem parameter number	Index	Unsigned integer Value range: 1 to 255.	N/A
ProfileType	Access point type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—dynamic.</li> <li>• <b>1</b>—static.</li> </ul>	When the ProfileType is dynamic, apn is not needed, otherwise apn is required.
Apn	Access point name	N/A	String. case-sensitive. Length: 1 to 100 characters.	Only when the ProfileType is static, the Apn is required.
AuthType	Specifies the authentication mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—none.</li> <li>• <b>1</b>—pap.</li> <li>• <b>2</b>—chap</li> <li>• <b>3</b>—pap and chap</li> </ul>	When AuthType is none, UserName is not required, otherwise UserName is required.
UserName	User name	N/A	String. case-sensitive. Length: 1 to 32 characters.	N/A
PassWord	Password string	N/A	String. case-sensitive. Length: 1 to 32 characters.	PassWord can not be returned when you get data.

# Comware 7 Cellular NETCONF XML API Error Message Reference

## Cellular/CellularVerify

Message	Explanation
Failed to process the command, because another command is being processed. 正在使用中，配置失败。	Another command is being processed. 有未执行完的配置。
This command is not supported. 不支持此命令。	The device does not support this command. 设备不支持这个命令。
CELLULAR is not configured. CELLULAR口未配置。	The cellular need to be configured. 需要配置cellular接口。
UIM card has been locked. Please verify PIN first. UIM卡锁定，请先解锁。	UIM card has been locked. UIM卡被锁定。
SIM card has been locked. Please verify PIN first. SIM卡锁定，请先解锁。	SIM card has been locked. SIM卡被锁定。
Please enable PIN verification first. 请先使能PIN认证功能	Need to be enable PIN verification. 需要使能PIN认证。
Failed to change the PIN, and the number of retries remaining is x. 改变PIN码失败剩余次数x次。	The SIM card will be locked after a certain number of failed to change the PIN 更改PIN失败x次后SIM卡会被锁定。
Failed to change the PIN. 改变PIN码失败。	Failed to change the PIN. 改变PIN码失败。
PIN has been locked. Please use PUK to unlock PIN. PIN锁定，请先使用PUK解锁。	PIN has been locked. PIN被锁定。
3G Modem has no PIN verification requirement. 3G上网卡没有PIN认证需求。	It does not need to be enable PIN verification. 不需要PIN认证。
Failed to verify PIN, and the number of retries remaining is x. 认证PIN失败剩余次数x次。	The SIM card will be locked after a certain number of failed to verify PIN 认证PIN失败x次后SIM卡会被锁定。
Failed to verify PIN. 认证PIN失败。	PIN Code is error. PIN码错误。
No 3G/4G modem on this interface. 3G/4G Modem不存在。	No 3G/4G modem on this interface. 3G/4G Modem不存在。
3G/4G Modem is being initialized. Please wait. 正在初始化3G/4G上网卡，请稍等片刻。	3G/4G Modem is in the process of being started. 3G/4G上网卡正在启动。
3G/4G Modem is abnormal.	3G/4G Modem is in wrong state.

3G/4G上网卡异常。

3G/4G上网卡状态异常。

## Cellular/UnLock

Message	Explanation
Operation failed because there is no PIN unlocking requirement. 操作失败，没有PIN码解锁请求。	3G modem has no PIN unlocking requirement. 3G Modem没有PIN码解锁要求。
Failed to unlock the PIN, and the number of retries remaining is x. 解锁失败，剩余解锁次数x。.	The SIM card will be locked after a certain number of failed to unlock the PIN 解锁PIN失败x次后SIM卡会被锁定。
Failed to unlock the PIN. PIN码解锁失败。	PIN Code is error. PIN码错误。
PIN Code is invalid. PIN码不合法。	PIN Code is error. PIN码错误。
PUK Code is invalid. PUK码不合法。	PUK Code is error. PUK码错误。
No 3G/4G modem on this interface. 3G/4G Modem不存在。	The operation can't be used on the interface which has not a 3G/4G modem. 没有3G/4G modem的接口不能执行这个操作。
3G/4G Modem is being initialized. Please wait. 正在初始化3G/4G上网卡，请稍等。	3G/4G Modem is in the process of being started. 3G/4G上网卡正在启动。
3G/4G Modem is abnormal. 3G/4G上网卡异常。	3G/4G Modem is in wrong state. 3G/4G上网卡状态异常。
Failed to process the command, because another command is being processed. 正在使用中，配置失败。	Another command is being processed. 有未执行完的配置。
This command is not supported. 不支持此命令。	The device does not support this command. 设备不支持这个命令。

## Cellular/CellularVerificationEnable

Message	Explanation
UIM card has been locked. Please verify PIN first. UIM卡锁定，请先解锁。	UIM card has been locked. UIM卡被锁定。
SIM card has been locked. Please verify PIN first. SIM卡锁定，请先解锁。	SIM card has been locked. SIM卡锁定。
PIN has been locked. Please use PUK to unlock PIN. PIN锁定，请先使用PUK解锁。	PIN has been locked. PIN码被锁定。

PIN is not required. 不需要PIN码。	No need to enter a PIN. 不需要输入PIN码。
PIN is required. 需要PIN码。	need to enter a PIN. 需要输入PIN码。
Failed to enable PIN verification, and the number of retries remaining is x. 开启PIN认证失败，剩余次数：x次。	The SIM card will be locked after a certain number of failed to enable PIN verification. 开启认证PIN失败x次后，SIM卡会被锁定。
Failed to disable PIN verification, and the number of retries remaining is x. 关闭PIN认证失败，剩余次数：x次。	The SIM card will be locked after a certain number of failed to disable PIN verification. 关闭认证PIN失败x次后，SIM卡会被锁定。
Failed to enable PIN verification. 开启PIN认证失败。	Failed to enable PIN verification. 开启PIN认证失败。
Failed to disable PIN verification. 关闭PIN认证失败。	Failed to disable PIN verification. 关闭PIN认证失败。
The configuration doesn't meet the requirements. 不符合配置要求。	The configuration parameter is incomplete. 配置参数不全。
PIN Code is invalid. PIN码不合法。	PIN Code is error. PIN码错误。
No 3G/4G modem on this interface. 3G/4G Modem不存在。	The operation can't be used on the interface which has not a 3G/4G modem. 没有3G/4G modem的接口不能执行这个操作。
3G/4G Modem is being initialized. Please wait. 正在初始化3G/4G上网卡，请稍等片刻。	3G/4G Modem is in the process of being started. 3G/4G上网卡正在启动。
3G/4G Modem is abnormal. 3G/4G上网卡异常。	3G/4G Modem is in wrong state. 3G/4G上网卡状态异常。
Failed to process the command, because another command is being processed. 正在使用中，配置失败。	Another command is being processed. 有未执行完的配置。
This command is not supported. 不支持此命令。	The device does not support this command. 设备不支持这个命令。

## Cellular/CellularMode

Message	Explanation
Failed to get the network connection mode. 获取网络连接模式失败。	Failed to get the network connection mode. 获取网络连接模式失败。
Don't support the mode. 不支持此连接模式。	Don't support the mode. 不支持此连接模式。
No 3G/4G modem on this interface. 3G/4G Modem不存在。	The operation can't be used on the interface which has not a 3G/4G modem.

3G/4G Modem is being initialized. Please wait. 正在初始化3G/4G上网卡，请稍等片刻。	没有3G/4G modem的接口不能执行这个操作。
3G/4G Modem is abnormal. 3G/4G上网卡异常。	3G/4G Modem is in the process of being started. 3G/4G上网卡正在启动。
Failed to process the command, because another command is being processed. 正在使用中，配置失败。	3G/4G Modem is in wrong state. 3G/4G上网卡状态异常。
This command is not supported. 不支持此命令。	Another command is being processed. 有未执行完的配置。
	The device does not support this command. 设备不支持这个命令。

## Cellular/CellularVerificationDis

Message	Explanation
Failed to get pin verification. 获取PIN认证失败。	Failed to get pin verification. 获取PIN认证失败。
No 3G/4G modem on this interface. 3G/4G Modem不存在。	The operation can't be used on the interface which has not a 3G/4G modem. 没有3G/4G modem的接口不能执行这个操作。
3G/4G Modem is being initialized. Please wait. 正在初始化3G/4G上网卡，请稍等片刻。	3G/4G Modem is in the process of being started. 3G/4G上网卡正在启动。
3G/4G Modem is abnormal. 3G/4G上网卡异常。	3G/4G Modem is in wrong state. 3G/4G上网卡状态异常。
Failed to process the command, because another command is being processed. 正在使用中，配置失败。	Another command is being processed. 有未执行完的配置。
This command is not supported. 不支持此命令。	The device does not support this command. 设备不支持这个命令。

## Cellular/CellularProfile

Message	Explanation
Failed to create a parameter profile of 3G/4G Modem. 创建3G/4G Modem参数模板失败。	Failed to create a parameter profile of 3G/4G Modem. 创建3G/4G Modem参数模板失败。
Failed to delete a parameter profile of 3G/4G Modem. 删除3G/4G Modem参数模板失败。	Failed to delete a parameter profile of 3G/4G Modem. 删除3G/4G Modem参数模板失败。
The configuration doesn't meet the requirements. 不符合配置要求。	The configuration parameter is incomplete. 配置参数不全。

No 3G/4G modem on this interface. 3G/4G Modem不存在。	The operation can't be used on the interface which has not a 3G/4G modem. 没有3G/4G modem的接口不能执行这个操作。
3G/4G Modem is being initialized. Please wait. 正在初始化3G/4G上网卡，请稍等片刻。	3G/4G Modem is in the process of being started. 3G/4G上网卡正在启动。
3G/4G Modem is abnormal. 3G/4G上网卡异常。	3G/4G Modem is in wrong state. 3G/4G上网卡状态异常。
Failed to process the command, because another command is being processed. 正在使用中，配置失败。	Another command is being processed. 有未执行完的配置。
This command is not supported. 不支持此命令。	The device does not support this command. 设备不支持这个命令。

## Cellular/CellularApnProfile

Message	Explanation
The configuration doesn't meet the requirements. 不符合配置要求。	The configuration parameter is incomplete. 配置参数不全。
The apn profile has been applied by interface, delete the applying first. 该参数模板已被接口应用，请先删除应用。	The apn profile has been applied by interface. 模板已在其他接口上使用。

## Cellular/CellularApplyProfile

Message	Explanation
The configuration doesn't meet the requirements. 不符合配置要求。	The configuration parameter is incomplete. 配置参数不全。
Please configure the apn profile first. 请先配置参数模板。	This message means apn profile not be configured. apn profile模板不存在。

## Cellular/CellularModemReboot

Message	Explanation
Cellular feature is not enabled. CELLULAR特性未启动。	This message means cellular not be configured. 没有cellular特性。
Failed to reboot 3G/4G Modem. 3G/4G Modem重启失败。	3G/4G Modem reboot failed. 3G/4G Modem重启失败。

Restrictions	NO

## Columns

Column name	Column description	Column type	Data type and restrictions
MepID	Specify a MEP	Index	Unsigned short. <b>Value range:1 to 8191.</b>
LossStatistics	N/A	Data structure	Members include: <ul style="list-style-type: none"><li>• TestIndex.</li><li>• FarEndLoss</li><li>• NearEndLoss</li><li>• FarEndLossRate</li><li>• NearEndLossRate</li></ul>
TestIndex	Specify a test index	N/A	Unsigned integer: <b>Length:32bits</b>
FarEndLoss	Specify packet loss on the target MEP	N/A	Unsigned integer: <b>Length: 32 bits</b>
NearEndLoss	Specify packet loss on the source MEP	N/A	Unsigned integer: <b>Length:32bits</b>

Column name	Column description	Column type	Data type and restrictions
FarEndLossRate	Specify packet loss rate on the target MEP	N/A	String
NearEndLossRate	Specify packet loss rate on the source MEP	N/A	String
FarEndLossAverage	Specify average packet loss on the target MEP	N/A	Unsigned integer: <b>Length:32bits</b>
NearEndLossAverage	Specify average packet loss on the source MEP	N/A	Unsigned integer: <b>Length:32bits</b>
FarEndLossAverageRate	Specify average packet loss rate on the target MEP	N/A	String
NearEndLossAverageRate	Specify average packet loss rate on the source MEP	N/A	String

## CFD/Y1731Statistics/Dlms

This table contains DLM information.

### XML structure

Please refer to the XML structure of Y1731Statistics.

### Table description

Item	Description
Feature name	CFD
Table name	Dlms
Table type	Multi-instance table
Row name	Dlm
Restrictions	NO

### Columns

Column name	Column description	Column type	Data type and restrictions
ServiceInstance	Specify a service instance	index	Unsigned integer: <b>Value range:1 to 32767</b>
MepIDs	MEP ID	Sublist	N/A

# CFD/Y1731Statistics/Dlms/MepIDs

This table contains DLM information for a MEP.

## XML structure

Please refer to the XML structure of Y1731Statistics.

## Table description

Item	Description
Feature name	CFD
Table name	MepIDs
Table type	Multi-instance table
Row name	MepID
Restrictions	NO

## Columns

Column name	Column description	Column type	Data type and restrictions
MepID	Specify a MEP	index	Unsigned short. <b>Value range:1 to 8191.</b>
LossStatistics	N/A	Data structure	Members include: <ul style="list-style-type: none"><li>• TestIndex.</li><li>• FarEndLoss</li><li>• NearEndLoss</li><li>• FarEndLossRate</li><li>• NearEndLossRate</li></ul>

## Cmtnlmgr/CloudAccount

This table contains information about cloud accounts.

### XML structure

```
<Cmtnlmgr>
  <CloudAccount>
    <CloudAccountEntry>
      <CloudAccountName></CloudAccountName>
      <CloudConnectionState></CloudConnectionState>
    </CloudAccountEntry>
  </CloudAccount>
</Cmtnlmgr>
```

### Table description

Item	Description
Feature name	Cmtnlmgr
Table name	CloudAccount
Table type	Single-instance table
Row name	CloudAccountEntry
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
CloudAccountName	Name of the cloud account.	Index	String, case-sensitive. Length: 1 to 128 characters.	N/A
CloudConnectionState	Connection state of the cloud.	N/A	Enumeration. <ul style="list-style-type: none"><li>1—Online</li><li>2—Offline</li></ul>	N/A

## Cmtnlmgr/CloudConnect

This table contains connection information for the cloud.

## XML structure

```
<Cmtnlmgr>
  <CloudConnect>
    <CloudConnectEntry>
      <LastConnectTime></LastConnectTime>
      <LastSyncTime></LastSyncTime>
    </CloudConnectEntry>
  </CloudConnect>
</Cmtnlmgr>
```

## Table description

Item	Description
Feature name	Cmtnlmgr
Table name	CloudConnect
Table type	Single-instance table
Row name	CloudConnectEntry
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LastConnectTime	Last connection time of the device.	N/A	String, case-sensitive. Length: 1 to 128 characters.	N/A
LastSyncTime	Last synchronization time of the device.	N/A	String, case-sensitive. Length: 1 to 128 characters.	N/A

## Cmtnlmgr/CloudDomain

This table contains information about cloud domains.

## XML structure

```
<Cmtnlmgr>
  <CloudDomainName>
    <DomainName></DomainName>
  </CloudDomainName>

## Configuration/Files

This table contains configuration file information.

### XML structure

```
<Configuration>
  <Files>
    <File>
      <Name></Name>
      <NextMain></NextMain>
      <NextBackup></NextBackup>
    </File>
  </Files>
</Configuration>
```

### Table description

Item	Description
Feature name	Configuration
Table name	Files
Table type	Multi-instance table
Row name	File
Restrictions	Configuration file must have the suffix .cfg, and must already exist in the root directory of storage medium.

### Columns

Column name	Column description	Column type	Data type and restrictions
Name	Full path and filename. Example: flash:/startup.cfg chassis3#slot1#flash:/main.cfg	Index	String. Length: 1 to 255 characters.
NextMain	Whether the configuration file is the main next-startup configuration file.	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b></li><li><b>false</b></li></ul>
NextBackup	Whether the configuration file is the backup next-startup configuration file.	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b></li><li><b>false</b></li></ul>

# Configuration/MDCOrContextFiles

This table contains information about an MDC or a context.

## XML structure

```
<Configuration>
  <MDCOrContextFiles>
    <MDCOrContextFile>
      <MDCOrContextID></MDCOrContextID>
      <Name></Name>
      <Save></Save>
      <Overwrite></Overwrite>
    </MDCOrContextFile>
  </MDCOrContextFiles>
</Configuration>
```

## Table description

Item	Description
Feature name	Configuration
Table name	MDCOrContextFiles
Table type	Multi-instance table
Row name	MDCOrContextFile
Restrictions	On the default MDC or context, all MDCs or contexts can be operated. On a non-default MDC or context, only the current MDC or context can be operated.

## Columns

Column name	Column description	Column type	Data type and restrictions
MDCOrContextID	MDC or context index	Index	Unsigned integer.
Name	Full path and filename. Example: chassis3#slot1#flash:/main.cfg flash:/startup.cfg main.cfg	Index	String. Length: 1 to 300 characters. This directory must be the root directory of the active MPU. <b>The filename (without the chassisN#slotN# field) must not exceed 255 characters.</b>
Save	Save configuration.	N/A	This column must be empty.
Overwrite	Whether to overwrite the configuration file if it has already existed.	N/A	Boolean: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>

Column name	Column description	Column type	Data type and restrictions
			This column must coexist with the <b>Save</b> column.

</MDCOrContextFiles>
</Configuration>

```

## Table description

Item	Description
Feature name	Configuration
Table name	MDCOrContextFiles
Table type	Multi-instance table
Row name	MDCOrContextFile
Restrictions	<p>On the default MDC or context, information about all MDCs or contexts can be queried.</p> <p>On a non-default MDC or context, only information about the current MDC or context can be queried.</p>

## Columns

Column name	Column description	Column type	Data type and restrictions
MDCOrContextID	MDC or context index	Index	Unsigned integer.
Name	<p>Full path and filename. Example:</p> <ul style="list-style-type: none"> <li>flash:/startup.cfg</li> <li>chassis3#slot1#flash:/main.cfg</li> </ul>	Index	String. Length: 1 to 300 characters.
Running	Whether the configuration file is the current startup configuration file.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>
NextMain	Whether the configuration file is the main next-startup configuration file.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>
NextBackup	Whether the configuration file is the backup next-startup configuration file.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>

## Configuration/ArchiveLocal

This table contains configuration local archivel information.

## XML structure

```
<Configuration>
  <ArchiveLocal>
    <Interval></Interval>
    <Count></Count>
    <DirPath></DirPath>
    <Prefix></Prefix>
  </ArchiveLocal>
</Configuration>
```

## Table description

Item	Description
Feature name	Configuration
Table name	ArchiveLocal
Table type	Single-instance
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Interval	Time interval to automatic backup.	N/A	Unsigned integer. Value range: 10 to 525600.
Count	Save the maximum number of backup files locally.	N/A	Unsigned integer. Value range: 1 to 10.
DirPath	Local save path.	N/A	String. Length: 1 to 63 characters.
Prefix	Local save file prefix.	N/A	String. Length: 1 to 30 characters.

## Configuration/ArchiveServer

This table contains configuration server archive information.

## XML structure

```
<Configuration>
  <ArchiveServer>
    <ArchiveHost>
      <ServerType></ServerType>
      <AddressType></AddressType>
      <Address></Address>
    </ArchiveHost>
  </ArchiveServer>
</Configuration>
```

```

<VRF></VRF>
<Interval></Interval>
<UserName></UserName>
<Password></Password>
<Port></Port>
<DirPath></DirPath>
<Prefix></Prefix>
</ArchiveHost>
</ArchiveServer>
</Configuration>

```

## Table description

Item	Description
Feature name	Configuration
Table name	ArchiveServer
Table type	Single-instance
Row name	ArchiveHost
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerType	Type of the server.	Index	Enumeration: <ul style="list-style-type: none"> <li>1—FTP</li> <li>2—TFTP</li> </ul>	N/A
AddressType	Type of the address.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4</li> <li>2—IPv6</li> </ul>	N/A
Address	Address of the remote manage.	Index	String. Length: 1 to 253 characters.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	N/A
Interval	Time interval to automatic backup.	N/A	Unsigned integer. Value range: 10 to 525600.	N/A
UserName	User name.	N/A	String. Length: 1 to 63 characters.	N/A
Password	Password.	N/A	String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Port	Port Number.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
DirPath	Server save path.	N/A	String. Length: 1 to 63 characters.	N/A
Prefix	Server save file prefix.	N/A	String. Length: 1 to 30 characters.	N/A

## Configuration/ReplaceServer

This table contains configuration server replace information.

### XML structure

```

<Configuration>
  <ReplaceServer>
    <ReplaceHost>
      <ServerType></ServerType>
      <AddressType></AddressType>
      <Address></Address>
      <VRF></VRF>
      <UserName></UserName>
      <Password></Password>
      <Port></Port>
      <DirPath></DirPath>
      <RollbackName></RollbackName>
    </ReplaceHost>
  </ReplaceServer>
</Configuration>

```

### Table description

Item	Description
Feature name	Configuration
Table name	ReplaceServer
Table type	Single-instance
Row name	ReplaceHost
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerType	Type of the server.	Index	Enumeration: <ul style="list-style-type: none"> <li>1—FTP</li> <li>2—TFTP</li> </ul>	N/A
AddressType	Type of the address.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—IPV4</li> <li>2—IPV6</li> </ul>	N/A
Address	Address of the remote manage.	Index	String. Length: 1 to 253 characters.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	N/A
UserName	User name.	N/A	String. Length: 1 to 63 characters.	N/A
Password	Password.	N/A	String. Length: 1 to 63 characters.	N/A
Port	Port Number.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
DirPath	Server save path.	N/A	String. Length: 1 to 63 characters.	N/A
RollbackName	Server Rollback.	N/A	String. Length: 1 to 255 characters.	N/A

# Configuration

## Configuration/Files

Message	Explanation
The file name is invalid or the file is not in the root directory! 文件名称不合法或者文件不在主用主控板存储介质的根目录下。	Startup configuration file must be in the root directory. 文件名有非法字符或者文件不在主用主控板存储介质的根目录下。
The file does not exist or is not as the same as the file on the active MPU. 文件不存在或者备用主控板的文件与主用主控板的文件不同。	Startup configuration file must be the same on all boards. 主用主控板和备用控制板的启动配置文件保持完全相同。
Please specify one or both of the NextMain and NextBackup columns. 未配置NextMain或NextBackup列。	Please specify the main next-startup configuration file or the backup next-startup configuration file. 请配置NextMain或NextBackup配置文件。

# Configuration event stream

## SaveEvent event

This event is used to report configuration saving operations.

## XML structure for event subscription

```
<SaveEvent>
</SaveEvent>
```

### Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Configuration</stream>
    <filter type="subtree">
      <SaveEvent xmlns="http://www.h3c.com/netconf/event:1.0/Configuration:1.0">
      </SaveEvent>
    </filter>
  </create-subscription>
</rpc>
```

### Table description

Item	Description
Event stream name	Configuration
Event name	SaveEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/Configuration:1.0
Support for extended query	No

## XML structure for event report

```
<SaveEvent>
  <FileName>
  </FileName>
</SaveEvent>
```

### Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <SaveEvent xmlns="http://www.h3c.com/netconf/event:1.0/Configuration:1.0">
    <FileName>flash:/123.cfg</FileName>
  </SaveEvent>
</notification>
```

## Columns

Column name	Column description	Data type and restrictions
FileName	File path and name	String. Length: 1 to 511 characters.

## ConfigurationEvent event

This event is used to report configuration change information.

## XML structure for event subscription

```
<ConfigurationEvent>  
</ConfigurationEvent>
```

### Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"  
  xmlns:xs="http://www.h3c.com/netconf/base:1.0">  
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">  
    <stream>Configuration</stream>  
    <filter type="subtree">  
      <ConfigurationEvent  
xmlns="http://www.h3c.com/netconf/event:1.0/Configuration:1.0">  
        </ConfigurationEvent >  
      </filter>  
    </create-subscription>  
  </rpc>
```

## Table description

Item	Description
Event stream name	Configuration
Event name	ConfigurationEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/Configuration:1.0
Support for extended query	No

## XML structure for event report

```
<ConfigurationEvent>  
  <User></User>  
  <IpAddress></IpAddress>  
  <ConfigSource></ConfigSource>  
  <ConfigResult></ConfigResult>  
  <Context></Context>  
</ConfigurationEvent>
```

### Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
```

```

<eventTime>2016-07-21T09:10:51</eventTime>
<ConfigurationEvent xmlns="http://www.h3c.com/netconf/event:1.0/Configuration:1.0">
  <User>**</User>
  <IpAddress>**</IpAddress>
  <ConfigSource>CLI</ConfigSource>
  <ConfigResult>Success</ConfigResult>
  <Context>[system]:display this</Context>
</ConfigurationEvent>
</notification>

```

## Columns

Column name	Column description	Data type and restrictions	Remarks
User	User-name of the configuration operator	String. Length: 1 to 255 characters.	If the user logged in through, for example, a console port, the value of this field is **
IpAddress	IP address of the configuration operator	String. Length: 1 to 255 characters.	If the user logged in through, for example, a console port, the value of this field is **
ConfigSource	Source of the configuration	String. Length: 1 to 255 characters.	The device supports only the CLI in the current software version.
ConfigResult	Configuration result	String. Length: 1 to 255 characters.	The values include <b>Success</b> and <b>Failed</b> .
Context	Executed command and the view of the command	String. Length: 1 to 1023 characters.	N/A

# Context

## Context/ContextInformations

This table is used to configure contexts for a device and show context's state.

### XML structure

```
<Context>
  <ContextInformations>
    <ContextInformation>
      <ContextID></ContextID>
      <Name></Name>
      <State></State>
      <Description></Description>
      <Mode></Mode>
      <Belongto></Belongto>
      <BladeControllerTeam></BladeControllerTeam>
    </ContextInformation>
  </ContextInformations>
</Context>
```

### Table description

Item	Description
Feature name	Context
Table name	ContextInformations
Table type	Multi-instance table
Row name	ContextInformation
Restrictions	firewall card:to start or stop a context should act in mdc the context belongedto ;Other actions only support default MDC. centralized firewall and packaging firewall:Only support default Context.
Support for row creation and deletion	YES

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context index	Index	Unsigned integer.	0 means the system assigns the lowest ID number

Column name	Column description	Column type	Data type and restrictions	Remarks
				among the available IDs to the Context.
Name	Full name of an context	N/A	String. Length: 1 to 15 characters.	firewall card: There is no default context. centralized firewall and packaging firewall:The name of default context is Admin
State	State of the MDC	N/A	Enumeration: 1: start 2: stop	start—Start the context. stop—Stop the context.
Description	Description of context	N/A	String. Length: 1 to 255 characters.	N/A
Belongto	Name of context's parentMDC	N/A	String. Length: 1 to 15 characters.	firewall card: Name of context's parentMDC. centralized firewall and packaging firewall: not support
Mode	Vlan mode of a context.	N/A	Enumeration: 1: VLAN shared 2: VLAN unshared	VLAN shared: Vlans can be allocated to different context sharely. VLAN unshared: 4k vlans belong to the context unsharely. Default : mode is VLAN SHARED, firewall card and centralized firewall: the mode can't be customized packaging firewall: the mode can be customized.
BladeControllerTeam	BladeControllerTeam ID	N/A	Unsigned integer. Value range: 1 to 256.	Location: Authorize the context to use the resource of BladeControllerTeams.

## Context/Resources/Disks

This table contains disk information.

## XML structure

```
<Context>
  <Resources>
    <Disks>
      <Disk>
        <ContextID></ContextID>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
        <ReservedRatio></ReservedRatio>
        <QuotaRatio></QuotaRatio>
      </Disk>
    </Disks>
  </Resources>
</Context>
```

## Table description

Item	Description
Feature name	Context
Table name	Disks
Table type	Multi-instance table
Row name	Disk
Restrictions	firewall card: Only can be configured in default MDC. centralized firewall and packaging firewall:Disk resource of user contexts can be configured by the default context, while disk resource of default context can't be configured.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context index	Index	Unsigned integer.	N/A
Chassis	Chassis number of disk resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of disk resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of disk resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
ReservedR	reserve resources of	N/A	Unsigned integer.	Not support yet.

Column name	Column description	Column type	Data type and restrictions	Remarks
atio	disk(%)		Value range: 0 to 100.	
QuotaRatio	The total limit resources of disk.(%)	N/A	Positive integer. Value range: 1 to 100.	The default value is 100.

## Context/Resources/Memories

This table contains memory information.

### XML structure

```

<Context>
  <Resources>
    <Memories>
      <Memory>
        <ContextID></ContextID>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
        <ReservedRatio></ReservedRatio>
        <QuotaRatio></QuotaRatio>
      </Memory>
    </Memories>
  </Resources>
</Context>

```

### Table description

Item	Description
Feature name	Context
Table name	Memories
Table type	Multi-instance table
Row name	Memory
Restrictions	firewall card: Only can be configured in default MDC. centralized firewall and packaging firewall: Memory resource of user contexts can be configured by the default context, while memory resource of default context can't be configured.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context index	Index	Unsigned integer.	N/A
Chassis	Chassis number of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
ReservedRatio	reserve resources of memory(%)	N/A	Unsigned integer. Value range: 0 to 100.	Not support yet.
QuotaRatio	The total limit resources of memory(%)	N/A	Unsigned integer. Value range: 1 to 100.	The default value is 100.

## Context/Resources/CPU

This table contains cpu information.

## XML structure

```
<Context>
  <Resources>
    <CPUs>
      <CPU>
        <ContextID></ContextID>
        <Weight></Weight>
      </CPU>
    </CPUs>
  </Resources>
</Context>
```

## Table description

Item	Description
Feature name	Context
Table name	CPUs
Table type	Multi-instance table
Row name	CPU
Restrictions	firewall card: Only can be configured in default MDC.

	centralized firewall and packaging firewall:CPU resource of user contexts can be configured by the default context, while CPU resource of default context can't be configured.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context index	Index	Unsigned integer.	N/A
Weight	CPU weight-maximum of available resources of CPU. UNITS : weight	N/A	Positive integer. Value range:1-10	Limit maximum of cpu resource. Default:Each context has a CPU weight of 10.

## Context/Resource/Throughputs

This table contains information of throughputs.

## XML structure

```

<Context>
  <Resources>
    <Throughputs>
      <Throughput>
        <ContextID></ContextID>
        <ThroughputValue>
          <Unit></Unit>
          <Value></Value>
        </ThroughputValue>
      </Throughput>
    </Throughputs>
  </Resources>
</Context>

```

## Table description

Item	Description
Feature name	Context
Table name	Throughputs
Table type	Multi-instance table
Row name	Throughput
Restrictions	Only the default context supports.

Support for row creation and deletion	No
---------------------------------------	----

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	context index	Index	Unsigned integer.	N/A
ThroughputValue	Throughputs value	Data structure	Members include: <ul style="list-style-type: none"> <li>Unit.</li> <li>Value.</li> </ul>	"Unit" should be configed together with "value"
Unit	Unit of throughput	N/A	Enumeration: <ul style="list-style-type: none"> <li>1: kbps</li> <li>2: pps</li> </ul>	N/A
Value	Value of throughput	N/A	Unsigned integer. Value range: 1000 to 100000000.	N/A

## Context/Resource/ObjectPolicyRules

This table contains information of Object Policy Rules.

## XML structure

```

<Context>
  <Resources>
    <ObjectPolicyRules>
      <ObjectPolicyRule>
        <ContextID></ContextID>
        <Max></Max>
      </ObjectPolicyRule>
    </ObjectPolicyRules>
  </Resources>
</Context>

```

## Table description

Item	Description
Feature name	Context
Table name	ObjectPolicyRules
Table type	Multi-instance table
Row name	ObjectPolicyRule
Restrictions	Only the default context supports.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	context index	Index	Unsigned integer.	N/A
Max	Maxnum of ObjectPolicyRules	N/A	Positive integer.	The value range depends on the device model.

## Context/Resource/Sessions

This table contains information of sessions.

## XML structure

```

<Context>
  <Resources>
    <Sessions>
      <Session>
        <ContextID></ContextID>
        <MaxNum></MaxNum>
        <MaxRate></MaxRate>
      </Session>
    </Sessions>
  </Resources>
</Context>

```

## Table description

Item	Description
Feature name	Context
Table name	Sessions
Table type	Multi-instance table
Row name	Session
Restrictions	Only the default context supports.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	context index	Index	Unsigned integer.	N/A
MaxNum	Maxnum of sessions	N/A	Positive integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxRate	Maxnum of transfer rate:1/s	N/A	Positive integer.	N/A

## Context/Allocations

This table contains physical interface.

### XML structure

```

<Context>
  <Allocations>
    <Allocation>
      <ContextID></ContextID>
      <UnsharedInterfaceList></UnsharedInterfaceList>
      <SharedInterfaceList></SharedInterfaceList>
      <VLAN></VLAN>
    </Allocation>
  </Allocations>
</Context>

```

### Table description

Item	Description
Feature name	Context
Table name	Allocations
Table type	Multi-instance table
Row name	Allocation
Restrictions	firewall card : only support MDC. centralized firewall and packaging firewall:Only support default Context.
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context ID	N/A	Unsigned integer.	N/A
UnsharedInterfaceList	List of unshared interfaces	N/A	String.	firewall card :not support centralized firewall and packaging firewall:allocate

Column name	Column description	Column type	Data type and restrictions	Remarks
				unshared interfaces. Different interfaces combinations(a single interface or interface list)are separated by comma',',interface lists are separated by 'to '(There is a space on both sides of the word 'to'). reference: GigabitEthernet4/5/0/1 to GigabitEthernet4/5/0/24 , GigabitEthernet4/5/0/48
SharedInterfaceList	List of shared interfaces	N/A	String.	firewall card :not support centralized firewall and packaging firewall:allocate shared interfaces. Different interfaces combinations(a single interface or interface list)are separated by comma',',interface lists are separated by 'to '(There is a space on both sides of the word 'to'). reference: GigabitEthernet4/5/0/1 to GigabitEthernet4/5/0/24 , GigabitEthernet4/5/0/48
VLAN	Vlan list	N/A	Numeric string separated by comma and minus,end of which can't be comma or minus,can't contain blank. Such as: 1,2,3,5-8,10-20	N/A

## Context/LocationBladeControllerTeams(discard)

This table contains location state of a BladeControllerTeam.

### XML structure

```

<Context>
  <LocationBladeControllerTeams>
    <LocationBCT>
      <ContextID></ContextID>
      <BladeControllerTeam></BladeControllerTeam>
      <State></State>
    </LocationBCT>
  </LocationBladeControllerTeams>
</Context>

```

## Table description

Item	Description
Feature name	Context
Table name	LocationBladeControllerTeams
Table type	Multi-instance table
Row name	LocationBCT
Restrictions	firewall card: query all contexts' information in the default MDC. centralized firewall and packaging firewall: query all contexts' information in the default Context.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	context index	Index	Unsigned integer.	N/A
BladeControllerTeam	BladeControllerTeam ID	Index	Unsigned integer. Value range: 1 to 256.	
State	Configure State of location	N/A	Enumeration: 1: location 2: undo location	Location: Authorize the context to use the resource of BladeControllerTeams. the default context is authorized to use resource of all the bladecontroller teams

## Context/Resource/SSLVPNs

This table contains information about SSL VPNs.

## XML structure

```
<Context>
  <Resources>
    <SSLVPNs>
      <SSLVPN>
        <ContextID></ContextID>
        <MaxUserNum></MaxUserNum>
      </SSLVPN>
    </SSLVPNs>
  </Resources>
</Context>
```

## Table description

Item	Description
Feature name	Context
Table name	SSLVPNs
Table type	Multi-instance table
Row name	SSLVPN
Restrictions	Only the default context supports SSL VPN.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	context index	Index	Unsigned integer.	N/A
MaxUserNum	Maximum number of SSL VPN users	N/A	Unsigned integer. Value range: 1 to 1048575.	N/A

# Context

## Context/ContextInformations

This table is used to configure contexts for a device and show context's state.

### XML structure

```
<Context>
  <ContextInformations>
    <ContextInformation>
      <ContextID></ContextID>
      <Name></Name>
      <Description></Description>
      <Belongto></Belongto>
      <Mode></Mode>
      <Status></Status>
      <BladeControllerTeam></BladeControllerTeam>
    </ContextInformation>
  </ContextInformations>
</Context>
```

### Table description

Item	Description
Feature name	Context
Table name	ContextInformations
Table type	Multi-instance table
Row name	ContextInformation
Restrictions	firewall card:query contexts' infomation in mdc the context belongedto ; query all contexts' information in the default MDC. centralized firewall and packaging firewall:query all contexts' information in the default Context.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context index	Index	Unsigned integer.	N/A
Name	Full name of an Context	N/A	String. Length: 1 to 15 characters.	firewall card:There is no default context.

Column name	Column description	Column type	Data type and restrictions	Remarks
				centralized firewall and packaging firewall: The name of default context is Admin
Description	Description of context	N/A	String. Length: 1 to 255 characters.	N/A
Belongto	Name of context's parentMDC	N/A	String. Length: 1 to 15 characters.	firewall card: Name of context's parentMDC. centralized firewall and packaging firewall: blank
Mode	Vlan mode of a context.	N/A	Enumeration: 1: VLAN shared 2: VLAN unshared	VLAN shared: Vlans can be allocated to different context sharely. VLAN unshared: 4k vlans belong to the context unsharely. Default : mode is VLAN SHARED, firewall card and centralized firewall: the mode can't be customized packaging firewall: the mode can be customized.
Status	Status of the context	N/A	Enumeration: <ul style="list-style-type: none"> <li>1: inactive</li> <li>2: starting</li> <li>3: active</li> <li>4: stopping</li> <li>5: updating</li> </ul>	<ul style="list-style-type: none"> <li>inactive—The context is stopped or not started yet.</li> <li>starting—The device is executing the context start command to start the context.</li> <li>active—The context is operating correctly.</li> <li>stopping—The device is executing the undo context start command to stop the context.</li> <li>updating—The context is updating.</li> </ul>
BladeControll	BladeControllerT	N/A	Unsigned integer.	Location: Authorize

Column name	Column description	Column type	Data type and restrictions	Remarks
erTeam	eam ID		Value range: 0 to 256.	the context to use the resource of BladeControllerTeams. 0 means the context dose not location bladecontrollerteam

## Context/Resources/Disks

This table contains disk information.

## XML structure

```

<Context>
  <Resources>
    <Disks>
      <Disk>
        <ContextID></ContextID>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
        <Partition></Partition>
        <Quota></Quota>
        <Reserved></Reserved>
        <Used></Used>
        <Available></Available>
      </Disk>
    </Disks>
  </Resources>
</Context>

```

## Table description

Item	Description
Feature name	Context
Table name	Disks
Table type	Multi-instance table
Row name	Disk
Restrictions	firewall card:query contexts'disk resource in mdc the context belonged to ; query all contexts' disk resource in the default MDC.

Item	Description
	centralized firewall and packaging firewall:query all contexts' disk resource in the default Context.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context index	Index	Unsigned integer.	N/A
Chassis	Chassis number of disk resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of disk resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of disk resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Partition	Instance name of disk resource	Index	String. Length: 1 to 31 characters.	N/A
Quota	The total limit resources of disk(KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.	Limit maximum of disk resource.
Reserved	reserve resources of disk(KB)	N/A	Unsigned integer.	Limit minimum of disk resource. 0 means the context doesn't have reserve resource of disk.
Used	Current usage of disk resources(KB)	N/A	Unsigned integer.	N/A
Available	Current available resources of disk(KB)	N/A	Unsigned integer.	The minimum between(Quota-Used)and idle resource of disk.

## Context/Resources/Memories

This table contains memory information.

## XML structure

```

<Context>
  <Resources>
    <Memories>
      <Memory>
        <ContextID></ContextID>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>

```

```

    <Quota></Quota>
    <Reserved></Reserved>
    <Used></Used>
    <Available></Available>
  </Memory>
</Memories>
</Resources>
</Context>

```

## Table description

Item	Description
Feature name	Context
Table name	Memories
Table type	Multi-instance table
Row name	Memory
Restrictions	<p>firewall card:query contexts' memory resource in mdc the context belonged to ; query all contexts' memory resource in the default MDC.</p> <p>centralized firewall and packaging firewall:query all contexts' memory resource in the default Context.</p>

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context index	Index	Unsigned integer.	N/A
Chassis	Chassis number of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Quota	The total limit resources of memory(KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.	Limit maximum of disk resource.
Reserved	reserve resources of memory(KB)	N/A	Unsigned integer.	Limit minimum of disk resource. 0 means the context doesn't have reserve resource of memory.
Used	Current usage of memory resources(KB)	N/A	Unsigned integer.	N/A
Available	Current available	N/A	Unsigned integer.	The minimum

Column name	Column description	Column type	Data type and restrictions	Remarks
	resources of memory(KB)			between(Quota-Used)and idle resource of disk.

## Context/Resources/CPU

This table contains cpu information.

### XML structure

```

<Context>
  <Resources>
    <CPUs>
      <CPU>
        <ContextID></ContextID>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
        <Weight></Weight>
        <Usage></Usage>
      </CPU>
    </CPUs>
  </Resources>
</Context>

```

### Table description

Item	Description
Feature name	Context
Table name	CPUs
Table type	Multi-instance table
Row name	CPU
Restrictions	firewall card:query contexts' cpu resource in mdc the context belonged to ; query all contexts' cpu resource in the default MDC. centralized firewall and packaging firewall:query all contexts' cpu resource in the default Context.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	Context index	Index	Unsigned integer.	N/A
Chassis	Chassis number of	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	CPU resource		Value range: 0 to 65535.	
Slot	Slot number of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Weight	CPU weight-maximum of available resources of CPU(weight)	N/A	Positive integer. Value range:1-10	Limit maximum of cpu resource. Default:Each context has a CPU weight of 10.
Usage	Current usage of CPUresources(%)	N/A	Unsigned integer. Value range: 0 to 100.	N/A

## Context/Resource/Throughputs

This table contains information of throughputs.

### XML structure

```

<Context>
<Resources>
  <Throughputs>
    <Throughput>
      <ContextID></ContextID>
      <ThroughputValue>
        <Unit></Unit>
        <Value></Value>
      </ThroughputValue>
    </Throughput>
  </Throughputs>
</Resources>
</Context>

```

### Table description

Item	Description
Feature name	Context
Table name	Throughputs
Table type	Multi-instance table
Row name	Throughput
Restrictions	Only the default context supports.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	context index	Index	Unsigned integer.	N/A
ThroughputValue	Throughputs value	Data structure	Members include: <ul style="list-style-type: none"><li>Unit.</li><li>Value.</li></ul>	N/A
Unit	Unit of throughput	N/A	Enumeration: <ul style="list-style-type: none"><li>1: kbps</li><li>2: pps</li></ul>	N/A
Value	Value of throughput	N/A	Unsigned integer. Value range: 1000 to 100000000.	0 means no restrictions

## Context/Resource/ObjectPolicyRules

This table contains information of Object Policy Rules.

### XML structure

```
<Context>
<Resources>
  <ObjectPolicyRules>
    <ObjectPolicyRule>
      <ContextID></ContextID>
      <Max></Max>
    </ObjectPolicyRule>
  </ObjectPolicyRules>
</Resources>
</Context>
```

### Table description

Item	Description
Feature name	Context
Table name	ObjectPolicyRules
Table type	Multi-instance table
Row name	ObjectPolicyRule
Restrictions	Only the default context supports.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	context index	Index	Unsigned integer.	N/A
Max	Maxnum of ObjectPolicyRules	N/A	Positive integer.	The value range depends on the device model. 0 means no restrictions

## Context/Resource/Sessions

This table contains information of sessions.

## XML structure

```

<Context>
  <Resources>
    <Sessions>
      <Session>
        <ContextID></ContextID>
        <MaxNum></MaxNum>
        <MaxRate></MaxRate>
      </Session>
    </Sessions>
  </Resources>
</Context>

```

## Table description

Item	Description
Feature name	Context
Table name	Sessions
Table type	Multi-instance table
Row name	Session
Restrictions	Only the default context supports.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	context index	Index	Unsigned integer.	N/A
MaxNum	Maxnum of sessions	N/A	Positive integer.	0 means no restrictions
MaxRate	Maxnum of	N/A	Positive integer.	0 means no restrictions

Column name	Column description	Column type	Data type and restrictions	Remarks
	transfer rate:1/s			

## Context/InterfaceAllocations

This table contains physical interface.

### XML structure

```

<Context>
  <InterfaceAllocations>
    <InterfaceAllocation>
      <IfName></IfName>
      <ContextID></ContextID>
      <AllocType></AllocType>
    </InterfaceAllocation>
  </InterfaceAllocations>
</Context>

```

### Table description

Item	Description
Feature name	Context
Table name	InterfaceAllocations
Table type	Multi-instance table
Row name	Interface
Restrictions	Default Context can query the contexts' information of all the interfaces.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfName	Full name of an interface	Index	String. Length: 2 to 47 characters.	N/A
ContextID	Context ID	Index	Unsigned integer.	N/A
AllocType	Interface assignment type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0: Invalid</li> <li>1: The interface has not been allocated.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>2: The allocation type is shared.</li> <li>3: The allocation type is exclusive.</li> </ul>	

## Context/VLANAllocations

This table contains informations of vlans.

### XML structure

```

<Context>
  <VLANAllocations>
    <VLANAllocation>
      <VLANID></VLANID>
      <ContextID></ContextID>
      <ContextIDList></ContextIDList>
    </VLANAllocation>
  </VLANAllocations>
</Context>

```

### Table description

Item	Description
Feature name	Context
Table name	VLANAllocations
Table type	Multi-instance table
Row name	VLANAllocation
Restrictions	Default Context can query the contexts' information of all the vlans.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	Vlan Index	Index	Positive integer.	firewall card :There is not default context. centralized firewall and packaging firewall:the default Context's ID is 1.
ContextID	Context ID	N/A	Unsigned integer.	The minimal Context ID of the VLAN
ContextIDList	Context ID List	N/A	String.	Example: 2,3,5-8,10-20.

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 65535 characters.  It is a comma-separated list of Context ID items. An item can be an individual Context ID or a Context ID range. Use a hyphen (-) to separate the start and end Context IDs of a range.  The string cannot end with a comma or hyphen, or include any whitespace characters.	Available Context IDs are in the ContextID column in the Context/ContextInformation table.

## Context/Capabilities

This table contains capability information of context.

### XML structure

```

<Context>
  <Capabilities>
    <BelongtoSupport></BelongtoSupport>
    <ModeSupport></ModeSupport>
  </Capabilities>
</Context>

```

### Table description

Item	Description
Feature name	Context
Table name	Capabilities
Table type	Multi-instance table
Row name	N/A
Restrictions	Only support the default context.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BelongtoSupport	Check whether belongto can be configured.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
ModeSupport	Check whether vlan mode can be configured.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A

# Context/LocationBladeControllerTeams(discard)

This table contains location state of a BladeControllerTeam.

## XML structure

```
<Context>
  <LocationBladeControllerTeams>
    <LocationBCT>
      <ContextID></ContextID>
      <BladeControllerTeam></BladeControllerTeam>
      <State></State>
    </LocationBCT>
  </LocationBladeControllerTeams>
</Context>
```

## Table description

Item	Description
Feature name	Context
Table name	LocationBladeControllerTeams
Table type	Multi-instance table
Row name	LocationBCT
Restrictions	firewall card: query all contexts' information in the default MDC. centralized firewall and packaging firewall:query all contexts' information in the default Context.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	context index	Index	Unsigned integer.	N/A
BladeControllerTeam	BladeControllerTeam ID	N/A	Unsigned integer. Value range: 1 to 256.	
State	Configure State of location	N/A	Enumeration: 1: location 2: undo location	Location: Authorize the context to use the resource of BladeControllerTeams. the default context is authorized to use resource of all the bladecontrollerteams

# Context/Resource/SSLVPNs

This table contains information about SSL VPNs.

## XML structure

```
<Context>
  <Resources>
    <SSLVPNs>
      <SSLVPN>
        <ContextID></ContextID>
        <MaxUserNum></MaxUserNum>
      </SSLVPN>
    </SSLVPNs>
  </Resources>
</Context>
```

## Table description

Item	Description
Feature name	Context
Table name	SSLVPNs
Table type	Multi-instance table
Row name	SSLVPN
Restrictions	Only the default context supports SSL VPN.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ContextID	context index	Index	Unsigned integer.	N/A
MaxUserNum	Maximum number of SSL VPN users	N/A	Unsigned integer. Value range: 1 to 1048575.	0 means no limit on the number of SSL VPN users.

## CP/Polycys

This table contains information about a caching policy.

### XML structure

```
<CP>
  <Polycys>
    <Policy>
      <Name></Name>
      <Type></Type>
      <Size></Size>
      <FileSize></FileSize>
      <DefaultAgeTime></DefaultAgeTime>
    </Policy>
  </Polycys>
</CP>
```

### Table description

Item	Description
Feature name	CP
Table name	Polycys
Table type	Multi-instance table
Row name	Policy
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the caching policy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Type	Type of the caching policy.	N/A	Enumeration: • 0—HTTP.	This column is required. Once created, this column cannot be changed..
Size	Size of the caching policy.	N/A	Unsigned integer. Value range: 8 to 64.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Unit: MB. By default, the value is 64M.	
FileSize	Maximum total size of the files that can be cached.	N/A	Unsigned integer. Value range: 1 to 4096. Unit: KB. By default, the value is 2048KB.	N/A
DefaultAgeTime	Default aging time of the caching policy.	N/A	Unsigned integer. Value range: 1 to 1440. Unit: Minute. By default, the value is 60.	N/A

## CP/HTTPMatchRules

This table contains information about an HTTP match rule.

### XML structure

## DFILTER/Policy

This table contains data filter policie information.

### XML structure

```
<DFILTER>
  <Policies>
    <Policy>
      <PolicyName></PolicyName>
      <PolicyDescription></PolicyDescription>
    </Policy>
  </Policies>
</DFILTER>
```

### Table description

Item	Description
Feature name	DFILTER
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the data filter policy	Index	String, case-insensitive Length: 1 to 31 characters.	N/A
PolicyDescription	Description of the data filter policy	N/A	String, case-sensitive Length: 1 to 255 characters.	N/A

## DFILTER/PolicyInProfile

This table contains data filter policies applied to the profile.

### XML structure

```
<DFILTER>
```

```

<PolicyInProfile>
  <Profile>
    <ProfileName></ProfileName>
    <PolicyName></PolicyName>
  </Profile>
</PolicyInProfile>
</DFILTER>

```

## Table description

Item	Description
Feature name	DFILTER
Table name	PolicyInProfile
Table type	Multi-instance table
Row name	Profile
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProfileName	Name of the profile	Index	String, case-insensitive Length: 1 to 100 characters.	N/A
PolicyName	Name of the policy	NA	String, case-insensitive Length: 1 to 31 characters.	N/A

## DFILTER/RuleInPolicy

This table contains information about rules in a data filter policy.

## XML structure

```

<DFILTER>
  <RuleInPolicy>
    <Rule>
      <PolicyName></PolicyName>
      <RuleName></RuleName>
      <KGroupName></KGroupName>
      <Application></Application>
      <Direction></Direction>
      <Action></Action>
      <Logging></Logging>
    </Rule>
  </RuleInPolicy>
</DFILTER>

```

## Table description

Item	Description
Feature name	DFILTER
Table name	RuleInPolicy
Table type	Multi-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the policy	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
RuleName	Name of the rule	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
KGroupName	Name of the keyword-group	N/A	String, case-insensitive. Length: 0 to 31 characters.	N/A
Application	Application of the rule	N/A	Enumeration: <ul style="list-style-type: none"><li>1—HTTP</li><li>2—FTP</li><li>4—SMTP</li><li>8—IMAP</li><li>16—POP3</li><li>32—NFS</li><li>64—SMB</li><li>128—RTMP</li></ul>	Examples: <ul style="list-style-type: none"><li>3—Application is HTTP and FTP.</li></ul>
Direction	Direction of the rule	N/A	Enumeration: <ul style="list-style-type: none"><li>0—upload.</li><li>1—download</li><li>2—both</li></ul>	Default is 0.
Action	Action for packets matching the rule	N/A	Enumeration: <ul style="list-style-type: none"><li>0—drop.</li><li>1—permit</li></ul>	Default is 0.
Logging	Logging or not	N/A	Boolean: <ul style="list-style-type: none"><li>true.</li><li>false.</li></ul>	N/A

## DFILTER/KGroup

This table contains data filter keyword groups information.

## XML structure

```
<DFILTER>
  <KGroups>
    <KGroup>
      <KGroupName></KGroupName>
      <KGroupDescription></KGroupDescription>
    </KGroup>

Column name	Column description	Column type	Data type and restrictions	Remarks
				<p>phddns60.oray.net, client.oray.net, ph031.oray.net, and so on. Determine the domain name in the URL according to the actual situation.</p> <p>The port number in the URL address is optional. If no port number is specified, the default port number is used. HTTP uses port 80, HTTPS uses port 443, and the PeanutHull server uses port 6060.</p> <p>The system automatically performs the following operations:</p> <p>Fills &lt;h&gt; with the FQDN that is specified when the DDNS policy is applied to the interface.</p> <p>Fills &lt;a&gt; with the primary IP address of the interface to which the DDNS policy is applied.</p> <p>You might also manually specify an FQDN and an IP address in &lt;h&gt; and &lt;a&gt;, respectively. After that, the FQDN that is specified when the DDNS policy is applied becomes ineffective. However, manual configuration of &lt;h&gt; and &lt;a&gt; is not recommended.</p> <p>You cannot specify an FQDN and IP address in the URL address for contacting the PeanutHull server. Alternatively, you can specify an FQDN when applying the DDNS policy to an interface. The system automatically uses the primary IP address of the interface to which the DDNS policy is applied as the IP address for DDNS update.</p> <p>To avoid misinterpretation, do not include colons (:), at signs (@), and question marks (?) in your login ID or password, even if you can do so.</p> <p>If you use the url command multiple times with different URL addresses, the most recent configuration takes effect.</p>
IntervalDay	Interval for sending DDNS update requests after DDNS update is enabled (Day)	N/A	Unsigned integer. Value range: 0 to 365 days. Default: 0.	<p>It must be configured together with the IntervalHour column and IntervalMinute column.</p> <p>If you set the interval to 0, the device does not periodically initiate DDNS update request. However, it initiates a DDNS update request in either of the following situations:</p> <ul style="list-style-type: none"> <li>When the primary IP address of the interface changes.</li> <li>When the link state of the interface changes from down to up.</li> </ul>
IntervalHour	Interval for sending DDNS update requests after DDNS update is enabled (Hour)	N/A	Unsigned integer. Value range: 0 to 23 hours. Default: 1.	It must be configured together with the IntervalDay column and IntervalMinute column.
IntervalMinute	Interval for sending DDNS update requests after DDNS update is enabled (minute)	N/A	Unsigned integer. Value range: 0 to 59 minutes. Default: 0.	It must be configured together with the IntervalDay column and IntervalHour column.

Column name	Column description	Column type	Data type and restrictions	Remarks
Username	Username to be included in the URL address for DDNS update requests	N/A	String, case sensitive. Length: 1 to 32 characters.	N/A
Password	Password to be included in the URL address for DDNS update requests	N/A	String, case sensitive. Length: 1 to 32 characters.	Support for configuring in plain text only.
Method	Transmission method for sending DDNS update requests to HTTP/HTTPS-based DDNS servers	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Http-get (default).</li> <li>1—Http-post.</li> </ul>	N/A
SSLClient Policy	Associate a specific SSL client policy with a DDNS policy	N/A	String, case insensitive. Length: 1 to 31 characters.	The SSL client policy is effective only for HTTPS-based DDNS update requests.

## DDNS/DDNSIfApply

This table contains DDNS policy applying configuration information.

## XML structure

```

<DDNS>
  <DDNSIfApply>
    <IfApply>
      <IfIndex></IfIndex>
      <PolicyName></PolicyName>
      <FQDN></FQDN>
    </IfApply>
  </DDNSIfApply>
</DDNS>

```

## Table description

Item	Description
Feature name	DDNS

Table name	DDNSIfApply
Table type	Multi-instance table
Row name	IfApply
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
PolicyName	DDNS policy name	Index	String, case insensitive. Length: 1 to 32 characters.	N/A
FQDN	Type of the DNS server IP address	N/A	String, case insensitive. Length: 1 to 253 characters.	Specifies the FQDN to replace <h> in the URL for DDNS update. It can include letters, digits, hyphens (-), underscores (_), and dots (.).

HTTP uses port 80, HTTPS uses port 443, and the PeanutHull server uses port 6060.</p> <p>The system automatically performs the following operations:</p> <p>Fills &lt;h&gt; with the FQDN that is specified when the DDNS policy is applied to the interface.</p> <p>Fills &lt;a&gt; with the primary IP address of the interface to which the DDNS policy is applied.</p> <p>You might also manually specify an FQDN and an IP address in &lt;h&gt; and &lt;a&gt;, respectively. After that, the FQDN that is specified when the DDNS policy is applied becomes ineffective. However, manual configuration of &lt;h&gt; and &lt;a&gt; is not recommended.</p> <p>You cannot specify an FQDN and IP address in the URL address for contacting the PeanutHull server. Alternatively, you can specify an FQDN when applying the DDNS policy to an interface. The system automatically uses the primary IP address of the interface to which the DDNS policy is applied as the IP address for DDNS update.</p> <p>To avoid misinterpretation, do not include colons (:), at signs (@), and question marks (?) in your login ID or password, even if you can do so.</p> <p>If you use the url command multiple times with different URL addresses, the most recent configuration takes effect.</p>
IntervalDay	Interval for sending DDNS update requests after DDNS update is enabled (Day)	N/A	Unsigned integer. Value range: 0 to 365 days.	<p>It must be configured together with the IntervalHour column and IntervalMinute column.</p> <p>If you set the interval to 0, the device does not periodically initiate DDNS update request. However, it initiates a DDNS update request in either of the following situations:</p> <ul style="list-style-type: none"> <li>When the primary IP address of the interface changes.</li> <li>When the link state of the interface changes from down to up.</li> </ul>
IntervalHour	Interval for sending DDNS update requests after DDNS update is enabled (Hour)	N/A	Unsigned integer. Value range: 0 to 23 hours.	It must be configured together with the IntervalDay column and IntervalMinute column.
IntervalMinute	Interval for sending DDNS update requests after DDNS update is enabled (minute)	N/A	Unsigned integer. Value range: 0 to 59 minutes.	It must be configured together with the IntervalDay column and IntervalHour column.

Column name	Column description	Column type	Data type and restrictions	Remarks
Username	Username to be included in the URL address for DDNS update requests	N/A	String, case sensitive. Length: 1 to 32 characters.	N/A
Password	Password to be included in the URL address for DDNS update requests	N/A	String, case sensitive. Length: 1 to 32 characters.	N/A
Method	Transmission method for sending DDNS update requests to HTTP/HTTPS-based DDNS servers	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Http-get</li> <li>1—Http-post.</li> </ul>	N/A
SSLClient Policy	Associate a specific SSL client policy with a DDNS policy	N/A	String, case insensitive. Length: 1 to 31 characters.	The SSL client policy is effective only for HTTPS-based DDNS update requests.

## DDNS/DDNSIfApply

This table contains DDNS policy applying configuration information.

### XML structure

```

<DDNS>
  <DDNSIfApply>
    <IfApply>
      <IfIndex></IfIndex>
      <PolicyName></PolicyName>
      <FQDN></FQDN>
    </IfApply>
  </DDNSIfApply>
</DDNS>

```

### Table description

Item	Description
Feature name	DDNS

Table name	DDNSIfApply
Table type	Multi-instance table
Row name	IfApply
Restrictions	This table supports only Layer 3 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported.
PolicyName	DDNS policy name	Index	String, case insensitive. Length: 1 to 32 characters.	N/A
FQDN	Type of the DNS server IP address	N/A	String, case insensitive. Length: 1 to 253 characters.	Specifies the FQDN to replace <h> in the URL for DDNS update. It can include letters, digits, hyphens (-), underscores (_), and dots (.).

## DDR/DiaGroupRule

This table contains dialer-group rule information.

### XML structure

```
<DDR>
  <DiaGroupRule>
    <GroupRule>
      <GroupNumber></GroupNumber>
      <IpProtocol></IpProtocol>
      <IpPermit></IpPermit>
      <AclNum></AclNum>
      <AclName></AclName>
    </GroupRule>
  </DiaGroupRule>
</DDR>
```

### Table description

Item	Description
Feature name	DDR
Table name	DiaGroupRule
Table type	Multi-instance table
Row name	GroupRule
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	Dialer-group rule <i>group-number</i>	Index	Unsigned integer. Value range: 1 to 255	N/A
IpProtocol	Dialer-group rule ip protocol	Index	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—IPv4 protocol</li><li>• <b>1</b>—IPv6 protocol</li></ul>	N/A
IpPermit	Denies or permits packets of the	N/A	Boolean:	IpPermit AclNum AclName are mutually

Column name	Column description	Column type	Data type and restrictions	Remarks
	specified protocol		<ul style="list-style-type: none"> <li>• <b>false</b></li> <li>• true</li> </ul>	<p>exclusive relationship.</p> <p>When executing the create, merge, replace operation must and only be use one of IpPermit, AclNum, AclName.</p> <p>Whe performing the delete, remove operation, one of IpPermit, AclNum, AclName don't need.</p>
AclNum	Specifies an ACL by its number	N/A	Unsigned integer. Value range: 2000 to 3999	N/A
AclName	Specifies an ACL by its name	N/A	String, case insensitive. Length: 1 to 63 characters.	The ACL name must start with letter a to z or A to Z. The ACL name cannot be <b>all</b> in any combination of upper- and lower-case letters.

## DDR/Bundle

This table contains the dialer bundle enable of DDR information.

## XML structure

```

<DDR>
  <Bundle>
    <DiaBundle>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </DiaBundle>
  </Bundle>
</DDR>

```

## Table description

Item	Description
Feature name	DDR
Table name	Bundle
Table type	Multi-instance table
Row name	DiaBundle

Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Enable	Before using bundle DDR, use it to enable bundle DDR on a dialer interface.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false (default)</b></li> </ul>	N/A

## DDR/IfDiaGroup

This table contains the dialer group of DDR information.

## XML structure

```

<DDR>
  <IfDiaGroup>
    <DiaGroup>
      <IfIndex></IfIndex>
      <Num></Num>
    </DiaGroup>
  </IfDiaGroup>
</DDR>

```

## Table description

Item	Description
Feature name	DDR
Table name	IfDiaGroup

Table type	Multi-instance table
Row name	DiaGroup
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Num	Specifies a dialer group by its number in the range of 1 to 255. Before the assignment, you must create the dialer group.	N/A	Unsigned integer. Value range: 1 to 255.	N/A

## DDR/DDRAutodial

This table contains the information about using **dialer timer autodial** to set the auto-dial timer.

## XML structure

```

<DDR>
  <DDRAutodial>
    <Autodial>
      <IfIndex></IfIndex>
      <Time></Time>
    </Autodial>
  </DDRAutodial>
</DDR>

```

## Table description

Item	Description
Feature name	DDR
Table name	DDRAutodial
Table type	Multi-instance table
Row name	Autodial
Restrictions	This table supports interface types: am interface bri interface/subinterface asy interface aux interface serial interface dialer interface ethchannel interface
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Time	Time of auto-dial	N/A	Unsigned integer. Value range: 1 to 604800. Default: 300.	Specifies the interval between auto-dial attempts.

## DDR/DDRIidle

This table contains the information about using **dialer timer idle** to set the link idle-timeout timer.

## XML structure

<DDR>

```

<DDRIdle>
  <Idle>
    <IfIndex></IfIndex>
    <Time></Time>
    <Direct></Direct>
  </Idle>
</DDRIdle>
</DDR>

```

## Table description

Item	Description
Feature name	DDR
Table name	DDRIdle
Table type	Multi-instance table
Row name	Idle
Restrictions	<p>This table supports interface types:</p> <ul style="list-style-type: none"> <li>am interface</li> <li>bri interface/subinterface</li> <li>asy interface</li> <li>aux interface</li> <li>serial interface</li> <li>dialer interface</li> <li>ethchannel interface</li> </ul>
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Time	link idle-timeout timer	N/A	Unsigned integer. Value range: 0 to 65535. Default: 120.	

Column name	Column description	Column type	Data type and restrictions	Remarks
Direct	Direct of interesting packets timer	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>• 1—OUT.</li> <li>• 2—IN.</li> <li>• 3—INOUT.</li> </ul>	Specifies the Direct of interesting packets timer.

## DDR/DDRCircularEnable

This table contains the information about using **dialer circular enable** to enable traditional DDR on a dialup interface.

### XML structure

```

<DDR>
  <DDRCircularEnable>
    <CircularEnable>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </CircularEnable>
  </DDRCircularEnable>
</DDR>

```

### Table description

Item	Description
Feature name	DDR
Table name	DDRCircularEnable
Table type	Multi-instance table
Row name	CircularEnable
Restrictions	This table supports interface types: Dialup interface
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of

Column name	Column description	Column type	Data type and restrictions	Remarks
				your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Enable	Before using traditional DDR, use it to enable traditional DDR on the dialup interface.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false (default)</b></li> </ul>	N/A

## DDR/DDRdialNumber

This table contains the information about using **dialer number** to configure a dial string for placing calls to a single remote site.

### XML structure

```

<DDR>
  <DDRdialNumber>
    <DialNumber>
      <IfIndex></IfIndex>
      <Num></Num>
      <AutoDial></AutoDial>
    </DialNumber>
  </DDRdialNumber>
</DDR>

```

### Table description

Item	Description
Feature name	DDR
Table name	DDRdialNumber
Table type	Multi-instance table
Row name	DialNumber
Restrictions	This table supports interface types: Dialup interface
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Num	A dial string for calling a remote site	N/A	String, case-insensitive. Length: 1 to 30 characters.	Specifies a dial string for calling a remote site, a case-insensitive string of 1 to 30 characters.
AutoDial	Automatically dial the remote site	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>• 0—NOTAUTO(<b>default</b>).</li> <li>• 1—AUTO</li> </ul>	Enables the interface to automatically dial the remote site by using the specified dial string at specified intervals. The interval is set in the dialer timer autodial command and defaults to 300 seconds.

    </FailoverGroup>
  </FailoverGroups>
</Device>
```

## Table description

Item	Description
Feature name	Device
Table name	FailoverGroups
Table type	Multi-instance table
Row name	FailoverGroup
Restrictions	N/A
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Failover group id	index	Unsigned integer. Value range: 0 to 31.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Failover group name	N/A	String. Length: 1 to 63 characters.	N/A
PrimaryNode	Primary node of the failover group.	Data structure	Members include: <ul style="list-style-type: none"> <li>Chassis</li> <li>Slot</li> <li>CPUID</li> </ul>	N/A
Chassis	Chassis ID of the failover group primary node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID of the failover group primary node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of the failover group primary node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
SecondaryNode	Secondary node of the failover group.	Data structure	Members include: <ul style="list-style-type: none"> <li>Chassis</li> <li>Slot</li> <li>CPUID</li> </ul>	N/A
Chassis	Chassis ID of the failover group secondary node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot ID of the failover group secondary node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of the failover group secondary node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

## Device/TemperatureSensors

This table contains temperature sensor alarm settings.

### XML structure

```

<Device>
  <TemperatureSensors>
    <Sensor>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <SensorType></SensorType>
      <SensorIndex></SensorIndex>
      <LowerLimit></LowerLimit>
      <WarningLimit></WarningLimit>
      <AlarmLimit></AlarmLimit>
    </Sensor>
  
```

```

    </TemperatureSensors>
  </Device>

```

## Table description

Item	Description
Feature name	Device
Table name	TemperatureSensors
Table type	Multi-instance table
Row name	Sensor
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Member ID of the member device where the entity resides	Index	Unsigned short. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	ID of the CPU.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
SensorType	Type of the temperature sensor	Index	Enumeration: <ul style="list-style-type: none"> <li>0-Inflow</li> <li>1-Outflow</li> <li>2- Hotspot</li> </ul>	N/A
SensorIndex	Resource ID of the temperature sensor.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
LowerLimit	Low-temperature threshold in Celsius degrees	N/A	Short	The specific range is different according to the equipment, and the beyond range can not be set

Column name	Column description	Column type	Data type and restrictions	Remarks
WarningLimit	High-temperature warning threshold in Celsius degrees	N/A	Short	The specific range is different according to the equipment, and the beyond range can not be set
AlarmLimit	High-temperature alarming threshold in Celsius degrees	N/A	Short	The specific range is different according to the equipment, and the beyond range can not be set

MemUsageThreshold	Memory usage threshold (%)	N/A	Unsigned integer. Value range: 0 to 100
MemSize	Memory size (bytes)	N/A	Unsigned integer.
Uptime	Time that elapsed after the entity started up (seconds)	N/A	Unsigned integer.
Temperature	Temperature of the entity (°C)	N/A	Signed integer.
TemperatureThreshold	High-temperature threshold (°C)	N/A	Signed integer.
Voltage	Voltage of the	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
	entity (V)		
VoltageLowThreshold	Low-voltage threshold (V)	N/A	Unsigned integer.
VoltageHighThreshold	High-voltage threshold (V)	N/A	Unsigned integer.
TemperatureCriticalThreshold	Critical high-voltage threshold (°C)	N/A	Signed integer.
MAC	MAC address of the entity	N/A	String. Format: HH-HH-HH-HH-HH-HH
ErrorStatus	Error status of the entity	N/A	Unsigned integer, greater than 0. Commonly used states: <ul style="list-style-type: none"> <li>• 1-Not supported.</li> <li>• 2-Normal.</li> <li>• 3-Power-on self test failure.</li> <li>• 4-The entity is absent.</li> <li>• 11-POE error.</li> <li>• 21-Stack error.</li> <li>• 22-IRF port is blocked.</li> <li>• 23-IRF port failed.</li> <li>• 31-SFP receiving error.</li> <li>• 32-SFP sending error.</li> <li>• 33-SFP error in both direction.</li> <li>• 41-Fan error.</li> <li>• 51-PSU error.</li> <li>• 61-RPS error.</li> <li>• 71-Module is faulty.</li> <li>• 81-Sensor error.</li> <li>• 91-Hardware is faulty.</li> </ul>
CpuMaxUsage	Maximum CPU usage (%)	N/A	Unsigned integer. Value range: 0 to 100
TemperatureLowThreshold	Low temperature threshold (°C)	N/A	Signed integer.
TemperatureShutdownThreshold	Shutdown temperature threshold (°C)	N/A	Signed integer.
PhyMemSize	Physical memory size (bytes)	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$
CpuFrequency	CPU frequency (Hz)	N/A	Unsigned integer.
FristUsedDate	Time when the entity was used for the first time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.
CpuAvgUsage	Average CPU usage (%)	N/A	Unsigned integer. Value range: 0 to 100

Column name	Column description	Column type	Data type and restrictions
MemAvgUsage	Average memory usage (%)	N/A	Unsigned integer. Value range: 0 to 100
MemType	Memory type	N/A	String. Length: 0 to 32 characters.

## Device/Transceivers

This table contains power information about a transceiver module.

## Table description

Item	Description
Feature name	Device
Table name	Transceiver
Table type	Multi-instance table
Row name	Interface
Restrictions	Available only for interfaces that support a transceiver

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
lflIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about lflIndex, see <i>lflmgr NETCONF XML API Configuration Reference</i> .

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Interface name	N/A	String. Length: 2 to 47 characters.	N/A
HardwareType	Hardware type	N/A	String. Length: 0 to 63 characters.	For example, SM indicates single mode.
TransceiverType	Transceiver type	N/A	String. Length: 0 to 63 characters.	For example, SFP, XFP, and GBIC.
WaveLength	Wave length (nm)	N/A	Integer.	N/A
VendorName	Vendor name	N/A	String. Length: 0 to 63 characters.	N/A
SerialNumber	Serial number	N/A	String. Length: 0 to 63 characters.	N/A
FiberDiameterType	Fiber diameter type	N/A	Unsigned integer. Commonly used values: <ul style="list-style-type: none"> <li>1-Fiber, 9 µm.</li> <li>2-Fiber, 50 µm.</li> <li>3-Fiber, 62.5 µm.</li> <li>4-Copper.</li> <li>65535-Unknown.</li> </ul>	N/A
TransferDistance	Maximum transmission distance (meters)	N/A	Integer.	N/A
Diagnostic	Diagnostic function	N/A	Unsigned integer: <ul style="list-style-type: none"> <li>1-Enabled.</li> <li>2-Disabled.</li> </ul>	N/A
CurRxPower	Current received optical power (hundredths of dBm)	N/A	Integer.	2147483647 means the device doesn't support this feature.
MaxRxPower	Maximum received optical power (hundredths of dBm)	N/A	Integer.	2147483647 means the device doesn't support this feature.
MinRxPower	Minimum received optical power (hundredths of dBm)	N/A	Integer.	2147483647 means the device doesn't support this feature.
CurTxPower	Current transmitted optical power (hundredths of dBm)	N/A	Integer.	2147483647 means the device doesn't support this feature.
MaxTxPower	Maximum transmitted	N/A	Integer.	2147483647 means the device

Column name	Column description	Column type	Data type and restrictions	Remarks
	optical power (hundredths of dBm)			doesn't support this feature.
MinTxPower	Minimum transmitted optical power (hundredths of dBm)	N/A	Integer.	2147483647 means the device doesn't support this feature.
Temperature	Temperature (°C)	N/A	Integer.	N/A
Voltage	Voltage (one hundredth of a volt)	N/A	Integer.	N/A
BiasCurrent	Current (one hundredth of an mA)	N/A	Integer.	N/A
TemperatureHiAlarm	Transceiver temperature high alarm threshold (thousandths of degrees Celsius)	N/A	Integer.	N/A
TemperatureLoAlarm	Transceiver temperature low alarm threshold (thousandths of degrees Celsius)	N/A	Integer.	N/A
TemperatureHiWarn	Transceiver temperature high warning threshold (thousandths of degrees Celsius)	N/A	Integer.	N/A
TemperatureLoWarn	Transceiver temperature low warning threshold (thousandths of degrees Celsius)	N/A	Integer.	N/A
VccHiAlarm	Transceiver VCC high alarm threshold (hundreds of microvolts)	N/A	Integer.	N/A
VccLoAlarm	Transceiver VCC low alarm threshold (hundreds of	N/A	Integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	microvolts)			
VccHiWarn	Transceiver VCC high warning threshold (hundreds of microvolts)	N/A	Integer.	N/A
VccLoWarn	Transceiver VCC low warning threshold (hundreds of microvolts)	N/A	Integer.	N/A
BiasHiAlarm	Transceiver bias high alarm threshold (microamps)	N/A	Integer.	N/A
BiasLoAlarm	Transceiver bias low alarm threshold (microamps)	N/A	Integer.	N/A
BiasHiWarn	Transceiver bias high warning threshold (microamps)	N/A	Integer.	N/A
BiasLoWarn	Transceiver bias low warning threshold (microamps)	N/A	Integer.	N/A
PwrOutHiAlarm	Transceiver transmit power high alarm threshold (tenths of microwatts)	N/A	Integer.	N/A
PwrOutLoAlarm	Transceiver transmit power low alarm threshold (tenths of microwatts)	N/A	Integer.	N/A
PwrOutHiWarn	Transceiver transmit power high warning threshold (tenths of microwatts)	N/A	Integer.	N/A
PwrOutLoWarn	Transceiver transmit	N/A	Integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	power low warning thresholdt (tenths of microwatts)			
RcvPwrHiAlarm	Transceiver receive power high alarm threshold (tenths of microwatts)	N/A	Integer.	N/A
RcvPwrLoAlarm	Transceiver receive power low alarm threshold (tenths of microwatts)	N/A	Integer.	N/A
RcvPwrHiWarn	Transceiver receive power high warning threshold (tenths of microwatts)	N/A	Integer.	N/A
RcvPwrLoWarn	Transceiver receive power low warning threshold (tenths of microwattss)	N/A	Integer.	N/A
TransceiverErrors	Bitmask indicating transceiver errors	N/A	1: xcvrIOError(0) 2: xcvrChecksum(1) 3: xcvrTypeAndPortConfigMismatch(2) 4: xcvrTypeNotSupported(3) 5: wisLocalFault(4) 6: rcvOpticalPowerFault(5) 7: pmapmdReceiverLocalFault(6) 8: pcsReceiveLocalFault(7) 9: phyXSReceiveLocalFault(8) 10: laserBiasCurrentFault(9) 11: laserTemperatureFault(10) 12: laserOutputPowerFault(11) 13: txFault(12) 14: pmapmdTransmitterLocalFault(13) 15: pcsTransmitLocalFault(14) 16: phyXSTransmitLocalFault(15) 17: rxLossOfSignal(16)	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			18:tecError(17) 19:wavelengthUnlocked (18) 20:txIsNotReadyDueToTuning (19)	
VendorOUI	Vendor OUI of the interface	N/A	String. Length: 0 to 255 characters.	N/A
RevisionNumber	Revision number of the interface	N/A	String. Length: 0 to 255 characters.	N/A
Frequency	Frequency(hundredths of THz)	N/A	Integer.	N/A
ActiveITUChannel	Index of the current ITU channel	N/A	Unsigned integer. Value range:1 to 4294967295.	N/A
CurWaveErr	Current wave length error(thousandths of nm)	N/A	Integer.	N/A
WaveErrHiAlarm	High wave length error alarm threshold (thousandths of nm)	N/A	Integer.	N/A
WaveErrLoAlarm	Low wave length error alarm threshold (thousandths of nm)	N/A	Integer.	N/A
CurFreqErr	Current frequency error(tenths of GHz)	N/A	Integer.	N/A
FreqErrHiAlarm	High frequency error alarm threshold (tenths of GHz)	N/A	Integer.	N/A
FreqErrLoAlarm	Low frequency error alarm threshold (tenths of GHz)	N/A	Integer.	N/A

# Device/TransceiversChannels

This table provides statistics for transceiver modules with multiple channels.

## XML structure

```
<Device>
  <TransceiversChannels>
    <Interface>
      <IfIndex></IfIndex>
      <ChannelIndex></ChannelIndex>
      <ChannelCurTXPower></ChannelCurTXPower>
      <ChannelCurRXPower></ChannelCurRXPower>
      <ChannelTemperature></ChannelTemperature>
      <ChannelBiasCurrent></ChannelBiasCurrent>
    </Interface>
  </TransceiversChannels>
</Device>
```

## Table description

Item	Description
Feature name	Device
Table name	TransceiversChannels
Table type	Multi-instance table
Row name	Interface
Restrictions	Available only for interfaces that support a transceiver module

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column is available in some versions. For more information, see the XSD document for your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
ChannelIndex	Optical channel index	Index	Unsigned integer. Value range: 1 to 4294967295.	N/A
ChannelCurT	Current	N/A	Integer.	2147483647

Column name	Column description	Column type	Data type and restrictions	Remarks
XPower	transmitted optical power of the channel (hundredths of dBm)			means the device doesn't support this feature.
ChannelCurRXPower	Current received optical power of the channel (hundredths of dBm)	N/A	Integer.	2147483647 means the device doesn't support this feature.
ChannelTemperature	Temperature of the channel (°C)	N/A	Integer.	Some versions support current temperature. For relevant information, see the XSD document of your product. 2147483647 means the device doesn't support this feature.
ChannelBiasCurrent	Current of the channel (one hundredth of an mA)	N/A	Integer.	2147483647 means the device doesn't support this feature.

## Device/TransceiversITUChannels

This table contains information about ITU channels supported on the transceiver that is connected to this interface.

### XML structure

```

<Device>
  <TransceiversITUChannels>
    <Interface>
      <IfIndex></IfIndex>
      <ITUChannelIndex></ITUChannelIndex>
      <ITUChannelFrequency></ITUChannelFrequency>
      <ITUChannelWaveLength></ITUChannelWaveLength>
    </Interface>
  </TransceiversITUChannels>
</Device>

```

### Table description

Item	Description
Feature name	Device
Table name	TransceiversITUChannels

Table type	Multi-instance table
Row name	Interface
Restrictions	Available only for ITU channels supported on the transceiver that is connected to this interface

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
ITUChannelIndex	The index of the specified ITU channel	Index	Unsigned integer. Value range:1 to 4294967295.	N/A
ITUChannelFrequency	The frequency of the specified ITU channel (hundredths of THz)	N/A	Integer.	N/A
ITUChannelWaveLength	The wave length of the specified ITU channel (thousandths of nm)	N/A	Integer.	N/A

## Device/CPU

This table contains usage information about the logical CPUs.

### XML structure

```

<Device>
  <CPUs>
    <CPU>
      <PhysicalIndex></PhysicalIndex>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <CPUUsage></CPUUsage>
    </CPU>
  </CPUs>
</Device>

```

## Table description

Item	Description
Feature name	Device
Table name	CPUs
Table type	Multi-instance table
Row name	CPU
Restrictions	Available only for logical CPUs

## Columns

Column name	Column description	Column type	Data type and restrictions
PhysicalIndex	Entity index	Index	Unsigned integer.
Chassis	ID of the member where the entity resides	N/A	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the entity	N/A	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID	N/A	Unsigned integer. Value range: 0 to 7.
CPUUsage	CPU usage (%)	N/A	Unsigned integer. Value range: 0 to 100.

## Device/SummerTime

This table contains summer-time information.

## XML structure

```
<Device>
  <SummerTime>
    <Name></Name>
    <AddTime></AddTime>
    <DateBased>
      <BeginMonth></BeginMonth>
      <BeginDay></BeginDay>
      <BeginHour></BeginHour>
      <BeginMinute></BeginMinute>
      <BeginSecond></BeginSecond>
      <EndMonth></EndMonth>
      <EndDay></EndDay>
      <EndHour></EndHour>
```

```

    <EndMinute></EndMinute>
    <EndSecond></EndSecond>
  </DateBased>
  <WeekBased>
    <BeginMonth></BeginMonth>
    <BeginWeek></BeginWeek>
    <BeginWeekDay></BeginWeekDay>
    <BeginHour></BeginHour>
    <BeginMinute></BeginMinute>
    <BeginSecond></BeginSecond>
    <EndMonth></EndMonth>
    <EndWeek></EndWeek>
    <EndWeekDay></EndWeekDay>
    <EndHour></EndHour>
    <EndMinute></EndMinute>
    <EndSecond></EndSecond>
  </WeekBased>
</SummerTime>
</Device>

```

## Table description

Item	Description
Feature name	Device
Table name	SummerTime
Table type	Single-instance table
Row name	N/A
Restrictions	Group DateBased and WeekBased are two configuration ways. Only one way can take effect at the same time.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name for the daylight saving time.	N/A	String. Length: 1 to 32 characters.	N/A
AddTime	The time to be added to the standard time.	N/A	String. Formats: <ul style="list-style-type: none"> <li>HH:MM:SS</li> </ul>	Value ranges: <ul style="list-style-type: none"> <li><b>HH</b>-0 to 23.</li> <li><b>MM</b>-0 to 59.</li> <li><b>SS</b>-0 to 59.</li> </ul>
DateBased	Daylight saving time configuration	Data Structure	Members include: <ul style="list-style-type: none"> <li>BeginMonth</li> <li>BeginDay</li> </ul>	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions
DeviceNode	Position of the device Node.	Data structure	Members include: <ul style="list-style-type: none"> <li>Chassis</li> <li>Slot</li> <li>CPUID</li> </ul>
Chassis	ID of the member where the entity resides.	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the device node.	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID.	Index	Unsigned integer. Value range: 0 to 65535.
Model	Device model of PEX board.	N/A	String. Length: 1 to 63 characters.

## Device/BladeCapabilities

This table contains capabilities of blade board.

## XML structure

```

<Device>
  <BladeCapabilities>
    <Blade>
      <Model></Model>
    </Blade>
  </BladeCapabilities>
</Device>

```

## Table description

Item	Description
Feature name	Device
Table name	BladeCapabilities
Table type	Multi-instance table
Row name	Blade
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions
Model	Device model of blade board.	Index	String. Length: 1 to 63 characters.

## Device/PEXCapabilities

This table contains capabilities of PEX board.

## XML structure

```
<Device>
  <PEXCapabilities>
    <PEX>
      <Model></Model>
    </PEX>
  </PEXCapabilities>
</Device>
```

## Table description

Item	Description
Feature name	Device
Table name	PEXCapabilities
Table type	Multi-instance table
Row name	PEX
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions
Model	Device model of PEX board.	Index	String. Length: 1 to 63 characters.

## Device/FailoverGroupCapabilities

This table contains capabilities of failover group.

## XML structure

```
<Device>
  <FailoverGroupCapabilities>
    <FailoverGroupSupport></FailoverGroupSupport>
  </FailoverGroupCapabilities>
</Device>
```

## Table description

Item	Description
Feature name	Device
Table name	FailoverGroupCapabilities
Table type	Single -instance table
Row name	N/A
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions
FailoverGroupSupport	Is support failover group.	N/A	Boolean: <ul style="list-style-type: none"><li>• true</li><li>• false</li></ul>

## Device/FailoverGroups

This table contains failover group information.

## XML structure

```
<Device>
  <FailoverGroups>
    <FailoverGroup>
      <ID></ID>
      <Name></Name>
      <PrimaryNode>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
      </PrimaryNode>
      <SecondaryNode>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>

</Device>
```

```

    </SecondaryNode>
    <State></State>
  </FailoverGroup>
</FailoverGroups>
</Device>

```

## Table description

Item	Description
Feature name	Device
Table name	FailoverGroups
Table type	Multi-instance table
Row name	FailoverGroup
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions
ID	Failover group id	index	Unsigned integer. Value range: 0 to 31.
Name	Failover group name	N/A	String. Length: 1 to 63 characters.
PrimaryNode	Primary node of the failover group.	Data structure	Members include: <ul style="list-style-type: none"> <li>Chassis</li> <li>Slot</li> <li>CPUID</li> </ul>
Chassis	Chassis ID of the failover group primary node.	N/A	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the failover group primary node.	N/A	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID of the failover group primary node.	N/A	Unsigned integer. Value range: 0 to 65535.
SecondaryNode	Secondary node of the failover group.	Data structure	Members include: <ul style="list-style-type: none"> <li>Chassis</li> <li>Slot</li> <li>CPUID</li> </ul>
Chassis	Chassis ID of the failover group secondary node.	N/A	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the failover group secondary node.	N/A	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID of the failover	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
	group secondary node.		Value range: 0 to 65535.
State	State of the failover group.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1-Initial</li> <li><b>2-Primary</b></li> <li><b>3-Secondary</b></li> </ul>

## Device/Subcards

This table contains subcard information.

### XML structure

```

<Device>
  <Subcards>
    <Subcard>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <SubSlot></SubSlot>
      <PhysicalIndex></PhysicalIndex>
      <Status></Status>
    </Subcard>
  </Subcards>
</Device>

```

### Table description

Item	Description
Feature name	Device
Table name	Subcards
Table type	Multi-instance table
Row name	Subcard
Restrictions	N/A

### Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	ID of the member where the entity resides.	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the device node.	Index	Unsigned integer. Value range: 0 to 65535.

Column name	Column description	Column type	Data type and restrictions
CPUID	CPU ID.	Index	Unsigned integer. Value range: 0 to 65535.
SubSlot	Subslot number of the entity	Index	Unsigned integer. Value range: 0 to 65535.
PhysicalIndex	Physical index of the subslot	N/A	Unsigned integer. Value range: 0 to 65535.
Status	Status of the subcard	N/A	Enumeration: <ul style="list-style-type: none"> <li>SubcardRemoved-The subcard has been removed.</li> <li>SubcardNormal-The subcard is operating correctly.</li> <li>SubcardFault-The subcard is fault.</li> </ul>

## Device/TemperatureSensors

This table contains the temperature sensor information.

### XML structure

```

<Device>
  <TemperatureSensors>
    <Sensor>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <SensorType></SensorType>
      <SensorIndex></SensorIndex>
      <SensorStatus></SensorStatus>
      <CurrentTemperature></CurrentTemperature>
      <LowerLimit></LowerLimit >
      <WarningLimit></WarningLimit >
      <AlarmLimit></AlarmLimit>
      <ShutdownLimit></ShutdownLimit>
    </Sensor>
  </TemperatureSensors>
</Device>

```

### Table description

Item	Description
Feature name	Device

Table name	TemperatureSensors
Table type	Multi-instance table
Row name	Sensor
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	ID of the member where the entity resides.	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot ID of the device node.	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU ID.	Index	Unsigned integer. Value range: 0 to 65535.
SensorType	Type of the temperature sensor.	Index	Enumeration: <ul style="list-style-type: none"> <li>0-inflow</li> <li>1-outflow</li> <li>2-Hotspot</li> </ul>
SensorIndex	Resource ID of the temperature sensor.	Index	Unsigned integer. Value range: 0 to 65535.
SensorStatus	Status of the temperature sensor	N/A	Enumeration: <ul style="list-style-type: none"> <li>TemperatureNormal-The temperature is normal.</li> <li>TemperatureLower-The temperature dropped to or below the low-temperature threshold.</li> <li>TemperatureWarning-The temperature increased to or above the high-temperature warning threshold.</li> <li>TemperatureAlarm-The temperature increased to or above the high-temperature alarming threshold.</li> <li>TemperatureShutdown-The temperature increased to or above the high-temperature shutdown threshold.</li> </ul>
CurrentTemperature	Current temperature (°C)	N/A	Short
LowerLimit	Lower limit temperature (°C)	N/A	Short
WarningLimit	Warning limit temperature (°C)	N/A	Short
AlarmLimit	Alarm limit temperature (°C)	N/A	Short
ShutdownLimit	Shutdown limit temperature (°C)	N/A	Short

# Device/SystemStableStatus

This table contains system stability and status information.

## XML structure

```
<Device>
  <SystemStableStatus>
    <SystemStatus></SystemStatus>
    <Redundancy></Redundancy>
  </SystemStableStatus>
</Device>
```

## Table description

Item	Description
Feature name	Device
Table name	SystemStableStatus
Table type	Single-instance table
Row name	N/A
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions
SystemStatus	System status	N/A	Enumeration: <ul style="list-style-type: none"><li>Stable</li><li>Not ready</li></ul>
Redundancy	System redundancy status	N/A	Enumeration: <ul style="list-style-type: none"><li>Stable</li><li>No redundancy</li><li>Not ready</li></ul>

# Device/BoardStableStatus

This table contains stability and status information for cards or member devices

## XML structure

```
<Device>
  <BoardStableStatus>
    <StableState>
      <Chassis></Chassis>
      <Slot></Slot>
    </StableState>
  </BoardStableStatus>

```

```

    <CPU></CPU>
    <Role></Role>
    <Status></Status>
  </StableState>
</BoardStableStatus>
</Device>

```

## Table description

Item	Description
Feature name	Device
Table name	BoardStableStatus
Table type	Multi-instance table
Row name	StableState
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions
chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Index	Unsigned integer. Value range: 0 to 65535.
CPU	ID of the CPU.	Index	Unsigned integer. Value range: 0 to 65535.
Role	Role of the card or member device	N/A	Enumeration: <ul style="list-style-type: none"> <li>• Active</li> <li>• Standby</li> <li>• Other</li> </ul>
Status	Status of the card or member device	N/A	Enumeration: <ul style="list-style-type: none"> <li>• Stable</li> <li>• Board inserted</li> <li>• Kernel initiating</li> <li>• Service starting</li> <li>• Service stopping</li> <li>• HA Batch backup</li> <li>• Interface data batch backup</li> <li>• MDC starting</li> <li>• MDC stopping</li> <li>• Context starting</li> <li>• Context stopping</li> </ul>

# Device/NetworkClockChassisStatus

This table contains network clock monitoring module status information.

## XML structure

```
<Device>
  <NetworkClockChassisStatus>
    <ChassisStatus>
      <Chassis></Chassis>
      <Mode></Mode>
      <LockMode></LockMode>
      <SSMOutputLevel></SSMOutputLevel>
      <ControlEnable></ControlEnable>
      <ReferenceType></ReferenceType>
      <ReferenceIndex></ReferenceIndex>
    </ChassisStatus>
  </NetworkClockChassisStatus>
</Device>
```

## Table description

Item	Description
Feature name	Device
Table name	NetworkClockChassisStatus
Table type	Multi-instance table
Row name	ChassisStatus
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Mode	Work mode	N/A	Enumeration: <ul style="list-style-type: none"><li>• Auto</li><li>• Manual</li></ul>	N/A
LockMode	Phase lock status	N/A	Enumeration: <ul style="list-style-type: none"><li>• Freerun</li><li>• Locked</li><li>• Holdover</li><li>• Pre-Locked</li><li>• Pre-Locked2</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>Lost</li> <li>Unknown</li> </ul>	
SSMOutputLevel	Signal quality level of the clock source in the SSM	N/A	Enumeration: <ul style="list-style-type: none"> <li>PRC</li> <li>SSU-A</li> <li>SSU-B</li> <li>SEC</li> <li>DNU</li> <li>Unknown</li> </ul>	N/A
ControlEnable	SSM control enabling status	N/A	Enumeration: <ul style="list-style-type: none"> <li>On</li> <li>Off</li> </ul>	N/A
ReferenceType	Reference type	N/A	Enumeration: <ul style="list-style-type: none"> <li>SrcClkmIndex</li> <li>InterfaceIndex</li> </ul>	Used with ReferenceIndex When there is no selected clock source, this column is empty.
ReferenceIndex	Reference index	N/A	Unsigned integer. Value range: 0 to 65535.	When ReferenceType is SrcClkmIndex, this field represents an enumeration, which might be: <ul style="list-style-type: none"> <li>BITS0</li> <li>BITS1</li> <li>PTP</li> </ul> Otherwise it represents an interface index. When there is no selected clock source, this column is empty.

## Device/NetworkClockSrcStatus

This table contains clock source status information.

### XML structure

```

<Device>
  <NetworkClockSrcStatus>
    <SrcStatus>
      <Chassis></Chassis>
      <ClockSource></ClockSource>
      <State></State>
      <Priority></Priority>
      <SSMLLevel></SSMLLevel>
      <ForceSSM></ForceSSM>
      <SABit></SABit>
      <Frequency></Frequency>
    </SrcStatus>
  </NetworkClockSrcStatus>
</Device>

```

```

    </SrcStatus>
  </NetworkClockSrcStatus>
</Device>

```

## Table description

Item	Description
Feature name	Device
Table name	NetworkClockSrcStatus
Table type	Multi-instance table
Row name	SrcStatus
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	ID of the member where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
ClockSource	Clock source	Index	Enumeration: <ul style="list-style-type: none"> <li>• BITS0</li> <li>• BITS1</li> <li>• PTP</li> </ul>
State	Clock state	N/A	Enumeration: <ul style="list-style-type: none"> <li>• N/A</li> <li>• Normal</li> <li>• Lost</li> </ul>
Priority	Clock priority	N/A	Unsigned integer. Value range: 0 to 255.
SSMLLevel	Clock source quality level in the SSM	N/A	Enumeration: <ul style="list-style-type: none"> <li>• PRC</li> <li>• SSU-A</li> <li>• SSU-B</li> <li>• SEC</li> <li>• DNU</li> <li>• Unknown</li> </ul>
ForceSSM	Whether or not get the SSM level	N/A	Enumeration: <ul style="list-style-type: none"> <li>• On</li> <li>• Off</li> </ul>
SABit	Sa bit used by BITS to transmit the SSM	N/A	Enumeration: <ul style="list-style-type: none"> <li>• N/A</li> <li>• sa4</li> <li>• sa5</li> <li>• sa6</li> <li>• sa7</li> <li>• sa8</li> </ul>

Column name	Column description	Column type	Data type and restrictions
Frequency	Frequency of the BITS clock	N/A	Enumeration: <ul style="list-style-type: none"> <li>N/A</li> <li>2Mbps</li> <li>2MHz</li> </ul>

## Device/NetworkClockLPUPortStatus

This table contains line clock input port status information.

### XML structure

```

<Device>
  <NetworkClockLPUPortStatus>
    <LPUPortStatus>
      <Port></Port>
      <Chassis></Chassis>
      <State></State>
      <Priority></Priority>

# Device

## Device/summer time

Message	Explanation
Unsupported parameter. 不支持此参数。	When modify the time protocol by netconf, check the parameters are not supported. 通过 netconf 配置时间协议时，检查到参数不支持。
Incomplete parameter. 参数输入不完整。	When modify the time protocol by netconf, check the parameters are incomplete. 通过netconf配置时间协议时，检查到参数不完整。
Please set clock protocol manual mode first. 请先将时间协议配置为手工模式。	If it's not allowed to set system time, please set clock protocol manual mode first. 如果不被允许设置系统时间，需要先将时间协议配置为手工模式。
End time must be later than start time, and the time range determined can't be shorter than one day or longer than one year. 结束时间必须晚于起始时间，并且时间范围不得短于一天或长于一年。	The prompt when failed to set summer time. 设置夏令时失败时的提示。
Please choose either datebased or weekbased to configure the summertime. 请选择基于日期或者基于周的配置方式。	When setting summer time, date and week can only choose one, if both of them are not 0, this prompt will be printed. 设置夏令时时，日期和周只能配置一个，如果日期和周的参数都不为0，则打印此提示。
The device does not support PTP. 当前设备不支持PTP协议。	When setting time source with PTP protocol, but the device doesn't support PTP, this prompt will be printed. 设置设备通过PTP协议获取时间，但设备不支持PTP协议时，会打印此提示。
Invalid date 无效的日期	Setting summer time with begin time and end time, if check out that the begin time or the end time are not allowed, this prompt will be printed. 设置夏令时的起始和终止时间时，检查起始和终止时间不合法时，打印此提示。

## Device/ failovergroup

Message	Explanation
Failed to create the failover group. 创建备份组失败。	The prompt when failed to create the failover group. 创建备份组失败时的提示。
Number of failover groups exceeded the limit. 备份组个数达到最大值。	The prompt when the number of failover groups exceeded the limit. 创建备份组时，备份组个数达到最大值。
This member has been configured as the primary member for another failover group. Please specify another member. 这个节点已经指定为另一个备份组的主节点，请绑	When operate a member, if this member has been configured as the primary member for another failover group, this prompt will be printed. 对某一个节点进行操作时，如果这个节点已经被指定为另一个备份

定其他节点。	组的主节点，则打印此提示。
<p>This member has been added with a different attribute to the group. To change the attribute, remove the member and add the member with the new attribute.</p> <p>这个节点已配置为该备份组的另一属性。需要改变节点属性，请先移除该节点再以新的属性绑定。</p>	<p>When configuring attribute to a member, if this member has been added with a different attribute to the group, this prompt will be printed.</p> <p>对某一节点配置属性时，如果已经配置为该备份组的另一属性，则打印此提示。</p>
<p>The attribute has been configured for another member in this failover group.</p> <p>备份组的这个属性已经配置了另一节点。</p>	<p>When configuring attribute to a member, if this attribute has been added to a different member of the group, this prompt will be printed.</p> <p>对某一节点配置属性时，如果该属性已经配置给了该备份组的另一节点，则打印此提示。</p>
<p>Main and Standby conflict.</p> <p>主备节点冲突。</p>	暂未使用
<p>Operation failed.</p> <p>操作失败。</p>	<p>When operate the failover group failed, and the reason is not clear, this prompt will be printed by default.</p> <p>对备份组操作失败时，但又没有返回问题原因，则默认打印此提示。</p>
<p>The failovergroup name and ID must identify the same failovergroup.</p> <p>输入的备份组名称有误，请输入与ID对应的名称。</p>	<p>When the name and ID is not matched to the failovergroup, this prompt will be printed.</p> <p>如果获取的备份组名称和ID与备份组不匹配，则打印此提示。</p>
<p>Invalid failovergroup ID or Name.</p> <p>输入的备份组ID或Name无效。</p>	<p>When the name and ID is invalid, this prompt will be printed.</p> <p>创建备份组时，输入的备份组ID或Name无效，则打印此提示。</p>

## Device/ transceiver

<p>The transceiver is absent.</p> <p>可插拔光模块不在位。</p>	<p>When failed to set ITU channel num to the driver, the reason is the transceiver is absent.</p> <p>设置ITU channel 通道号到驱动失败时，驱动返回失败原因为可插拔光模块不在位。</p>
<p>The transceiver does not support this function.</p> <p>可插拔光模块不支持该功能。</p>	<p>When failed to set ITU channel num to the driver, the reason is the transceiver does not support this function.</p> <p>设置ITU channel 通道号到驱动失败时，驱动返回失败原因为可插拔光模块不支持该功能。</p>
<p>The port has no transceiver information.</p> <p>获取可插拔光模块信息失败。</p>	<p>When failed to set ITU channel num to the driver, the reason is the port has no transceiver information.</p> <p>设置ITU channel 通道号到驱动失败时，驱动返回失败原因为获取可插拔光模块信息失败。</p>
<p>Operation failed.</p> <p>操作失败。</p>	<p>When failed to set ITU channel num to the driver, and the reason does not given, this prompt will be printed by default.</p> <p>设置ITU channel 通道号到驱动失败时，驱动没有返回失败原因，则默认打印此提示。</p>

# Device event stream

## BoardEvent event

This event is used to report card or member device alarm information.

## XML structure for event subscription

```
<BoardEvent>
  <Board>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
  </Board>
</BoardEvent>
```

### Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Device</stream>
    <filter type="subtree">
      <BoardEvent xmlns="http://www.h3c.com/netconf/event:1.0/Device:1.0">
        <Board>
          <Chassis>0</Chassis>
          <Slot>0</Slot>
          <CPUID>0</CPUID>
        </Board>
      </BoardEvent >
    </filter>
  </create-subscription>
</rpc>
```

### Table description

Item	Description
Event stream name	Device
Event name	BoardEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/Device:1.0
Support for extended query	No

### Columns

Column name	Column description	Data type and restrictions	Support for extended queries
Chassis	Member ID of the member device where the entity	Unsigned integer. Value range: 0 to	No

Column name	Column description	Data type and restrictions	Support for extended queries
	resides	65535.	
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.	No
CPUID	ID of the CPU.	Unsigned integer. Value range: 0 to 65535.	No

## XML structure for event report

```

<BoardEvent>
  <Board>

      <BoardStatus>BoardNormal</BoardStatus>
    </Board>
  </BoardEvent>
</notification>

```

## Columns

Column name	Column description	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.
CPUID	ID of the CPU	Unsigned integer. Value range: 0 to 65535.
PhysicalIndex	Entity index.	Unsigned integer.

Column name	Column description	Data type and restrictions
		Value range: 0 to 65535.
BoardStatus	Status of the card	Enumeration: <ul style="list-style-type: none"> <li>BoardRemoved-The card has been removed.</li> <li>BoardNormal-The card is operating correctly.</li> <li>BoardFault-The card is faulty.</li> </ul>

## SubcardEvent event

This event is used to report subcard alarm information.

## XML structure for event subscription

```
<SubcardEvent>
  <Subcard>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
    <SubSlot></SubSlot>
  </Subcard>
</SubcardEvent>
```

### Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Device</stream>
    <filter type="subtree">
      <SubcardEvent xmlns="http://www.h3c.com/netconf/event:1.0/Device:1.0">
        <Subcard>
          <Chassis>0</Chassis>
          <Slot>0</Slot>
          <CPUID>0</CPUID>
          <SubSlot>1</SubSlot>
        </Subcard>
      </SubcardEvent>
    </filter>
  </create-subscription>
</rpc>
```

### Table description

Item	Description
Event stream name	Device
Event name	SubcardEvent

# address-pool event stream

## ama-register-to-controller event

This event is used to notify controller that AMA registered successfully.

### XML structure for event subscription

```
<ama-register-to-controller>
</ama-register-to-controller>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>address_pool</stream>
  </create-subscription>
</rpc>
```

#### Table description

Item	Description
Event stream name	address-pool
Event name	ama-register-to-controller
Event namespace	urn:ietf:params:xml:ns:yang:ietf-address-pool:flexbng:vbras
Support for extended query	no

### XML structure for event report

```
<ama-register-to-controller>
  <device-id></device-id>
</ama-register-to-controller>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <ama-register-to-controller
xmlns="urn:ietf:params:xml:ns:yang:ietf-address-pool:flexbng:vbras">
    <device-id>5</device-id>
  </ama-register-to-controller>
</notification>
```

#### Table description

Column name	Column description	Data type and restrictions	Remarks
device-id	AMA device id assigned	Unsigned Integer 32	

Column name	Column description	Data type and restrictions	Remarks
	by app	Value range: 0 to 4294967295.	

## ama-report-heart-beat-to-controller event

This event is used to report heart beat to controller for AMA

Controller uses this to detect the inactive of AMA.

The period of heart beat is according to the configuration: flexbng-device-info /controller-send-configuration-to-ama/ device-keep-alive-interval.

.

## XML structure for event subscription

```
<ama-report-heart-beat-to-controller>
</ama-report-heart-beat-to-controller>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>address_pool</stream>
  </create-subscription>
</rpc>
```

### Table description

Item	Description
Event stream name	address-pool
Event name	ama-report-heart-beat-to-controller
Event namespace	urn:ietf:params:xml:ns:yang:ietf-address-pool:flexbng:vbras
Support for extended query	no

## XML structure for event report

```
<ama-report-heart-beat-to-controller>
  <ama-id>5</ama-id>
</ama-report-heart-beat-to-controller>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <ama-report-heart-beat-to-controller
xmlns="urn:ietf:params:xml:ns:yang:ietf-address-pool:flexbng:vbras">
    <ama-id>5</ama-id>
  </ama-report-heart-beat-to-controller>
</notification>
```

## Table description

Column name	Column description	Data type and restrictions	Remarks
ama-id	AMA device id assigned by app	Unsigned Integer 32. Value range: 0 to 4294967295.	

# address-pool-status event

This event is used to report address pool status.

## XML structure for event subscription

```
<ama-register-to-controller >
```

```
</ama-register-to-controller>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
```

```
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
```

```
    <stream>address_pool</stream>
```

```
  </create-subscription>
```

```
</rpc>
```

## Table description

Item	Description
Event stream name	address-pool
Event name	address-pool-status
Event namespace	urn:ietf:params:xml:ns:yang:ietf-address-pool:flexbng:vbras
Support for extended query	no

## XML structure for event report

```
<address-pool-status>
```

```
  <device-id></device-id>
```

```
  <time></time>
```

```

result	Distribution result of ipv4 address pools	Enumeration: <ul style="list-style-type: none"> <li>success</li> <li>fail</li> </ul>	

## ama-report-address-got-to-controller-ipv6 event

This event is used to notify controller the distribution result of ipv6 address pools.

### XML structure for event subscription

```
<ama-report-address-got-to-controller-ipv6>
</ama-report-address-got-to-controller-ipv6>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>address_pool</stream>
  </create-subscription>
</rpc>
```

### Table description

Item	Description
Event stream name	address-pool
Event name	ama-report-address-got-to-controller-ipv6
Event namespace	urn:ietf:params:xml:ns:yang:ietf-address-pool:flexbng:vbras
Support for extended query	no

### XML structure for event report

# flexbng-device-info

The namespace of flexbng-device-info is "urn:ietf:params:xml:ns:yang:ietf-address-pool:flexbng:vbras".

## flexbng-device-info/controller-netconf-registration

This table contains flexbng device registration information.

### XML structure

```
<flexbng-device-info>
  <controller-netconf-registration>
    <device-id></device-id>
  </controller-netconf-registration>
</flexbng-device-info>
```

### Table description

Item	Description
Feature name	flexbng-device-info
Table name	controller-netconf-registration
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions
device-id	AMA device id assigned by app	N/A	Unsigned Integer 32. Value range: 0 to 4294967295.

### Example

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <edit-config>
    <target>
      <running/>
    </target>
    <config xmlns:xc="urn:ietf:params:xml:ns:netconf:base:1.0">
      <v:controller-netconf-registration
xmlns:v="urn:ietf:params:xml:ns:yang:ietf-address-pool:flexbng:vbras">
```

```

        <v:device-id>5</v:device-id>
    </v:controller-netconf-registration>
</config>
</edit-config>
</rpc>

```

## flexbng-device-info/controller-send-configuration-to-ama

This table is used to send configuration to ama for controller.

### XML structure

```

<flexbng-device-info >
  <controller-send-configuration-to-ama>
    <device-keep-alive-interval></device-keep-alive-interval>
    <ipv4-address-pool-usage-threshold></ipv4-address-pool-usage-threshold>
    <ipv6-address-pool-usage-threshold></ipv6-address-pool-usage-threshold>
    <state-update-interval></state-update-interval>
    <device-sampling-interval></device-sampling-interval>
  </controller-send-configuration-to-ama>
</flexbng-device-info>

```

### Table description

Item	Description
Feature name	flexbng-device-info
Table name	controller-send-configuration-to-ama
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions
device-keep-alive-interval	Heartbeat interval of confd service	N/A	Unsigned Integer 32. Value range: 0 to 4294967295.
ipv4-address-pool-usage-threshold	IPv4 threshold of pool block usage ratio	N/A	DOUBLE. Value range: 0 to 100.
ipv6-address-pool-usage-threshold	IPv6 threshold of pool block usage ratio	N/A	DOUBLE. Value range: 0 to 100.
state-update-interv	Report interval for pool	N/A	Unsigned Integer 32.

al	block status		Value range: 0 to 4294967295.
device-sampling-interval	Sampling interval for pool block usage ratio	N/A	Unsigned Integer 32. Value range: 0 to 4294967295.

## Example

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <edit-config>
    <target>
      <running/>

          <ipv6-prefix-length></ipv6-prefix-length>
          <time></time>
        </ipv6-address-block>
      </address-pool-entries>
    </address-pool>
  </address-pools>
</ietf-address-pool>
```

## Table description

Item	Description
Feature name	ietf-address-pool
Table name	address-pools
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
device-id	AMA device id assigned by app	N/A	Unsigned Integer 32. Value range:0 to 4294967295.
address-pool	Information of the address pool	Sublist	The details of the sublist refer to address-pool table.

## ietf-address-pool/address-pools/address-pool

This table contains address pool configuration information.

## XML structure

Please refer to the XML Structure of ietf-address-pool/address-pools.

## Table description

Item	Description
Feature name	ietf-address-pool
Table name	address-pool
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
address-pool-name	Name of address pool	index	String Length: 1 to 63 characters
address-pool-id	Address pool ID	N/A	Unsigned Integer 32. Value range: 0 to 4294967295.
domain-name	Domain name	N/A	String Length:1 to 63 characters
ipv4-usergateway	Used for IPv4 user addressing	N/A	IPv4 address
ipv6-usergateway	Used for IPv6 user addressing	N/A	IPv6 address
gwnetmask	Netmask for user gateway	N/A	Unsigned Integer 32. Value range: 1 to 128
leasing-time	Leasing time with default 3 days	N/A	Unsigned Integer 32. Value range: 0 to 4294967295. The column can't be changed.Its returned value is always 3 ,no matter which number it is configured for.
primarydns	Primary DNS information	N/A	IP address
secondarydns	Secondary DNS information	N/A	IP address
ipv4-address-block	Information of the ipv4 address block	Sublist	The details of the sublist refer to ipv4-address-block table.
ipv6-address-block	Information of the ipv6 address block	Sublist	The details of the sublist refer to ipv6-address-block table.

## ietf-address-pool/address-pools/address-pool/ipv4-address-block

This table contains address pool configuration information.

## XML structure

Please refer to the XML Structure of ietf-address-pool/address-pools.

## Table description

Item	Description
Feature name	ietf-address-pool
Table name	ipv4-address-block
Table type	Multi-instance table

Row name	None
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
address-pool-name	Name of address pool	index	String Length:1 to 63 characters	Index of present table
ipv4-address-block-name	Name of IPv4 address block	index	String Length:1 to 63 characters	N/A
ipv4-address-block-id	ID of IPv4 address block	N/A	Unsigned Integer 32. Value range: 0 to 4294967295.	N/A
ipv4-prefix	IPv4 address prefix	N/A	Ipv4Address	N/A
ipv4-prefix-length	IPv4 address prefix length	N/A	Unsigned Integer 32. Value range: 1 to 30.	N/A
time	Address block allocation time	N/A	Unsigned Integer 32. Value range: 0 to 4294967295	For table: ipv4-address-block

## ietf-address-pool/address-pools/address-pool/ipv6-address-block

This table contains address-pool configuration information.

## XML structure

Please refer to the XML Structure of ietf-address-pool/address-pools.

## Table description

Item	Description
Feature name	ietf-address-pool
Table name	Ipv6-address-block
Table type	Multi-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
address-pool-name	Name of address pool	index	String Length: 1 to 63 characters	Index of present table
ipv6-address-block-name	Name of IPv6 address block	index	String Length: 1 to 63 characters	N/A
ipv6-address-block-id	ID of IPv6 address block	N/A	Unsigned Integer 32. Value range: 0 to 4294967295.	N/A
ipv6-prefix	IPv6 address prefix	N/A	Ipv6Address	N/A
ipv6-prefix-length	IPv6 address prefix length	N/A	Unsigned Integer 32. Value range: 1 to 128.	N/A
time	Address block allocation time	N/A	Unsigned Integer 32. Value range: 0 to 4294967295	For table: ipv6-address-block

## Example

配置一个 IPv4 地址池 pool4

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <edit-config>
    <target>
      <running/>
    </target>
    <config xmlns:xc="urn:ietf:params:xml:ns:netconf:base:1.0">
      <v:address-pools xc:operation="merge"
xmlns:v="urn:ietf:params:xml:ns:yang:ietf-address-pool">
        <v:device-id>3</v:device-id>
        <v:address-pool>
          <v:address-pool-name>pool4</v:address-pool-name>
          <v:address-pool-id>104</v:address-pool-id>
          <v:domain-name>pppoe</v:domain-name>
          <v:ipv4-usergateway>10.2.1.1</v:ipv4-usergateway>
          <v:gwnetmask>24</v:gwnetmask>
          <v:address-pool-entries>
            <v:ipv4-address-block>
              <v:ipv4-address-block-name>network-4</v:ipv4-address-block-name>
              <v:ipv4-address-block-id>40</v:ipv4-address-block-id>
              <v:ipv4-prefix>10.2.1.1</v:ipv4-prefix>
              <v:ipv4-prefix-length>24</v:ipv4-prefix-length>
              <v:time>3</v:time>
            </v:ipv4-address-block>
          </v:address-pool-entries>
        </v:address-pool>
      </v:address-pools>
    </config>
  </edit-config>
</rpc>
```

```

        </v:address-pool>
    </v:address-pools>
</config>
</edit-config>
</rpc>

```

# DHCP

## DHCP/DHCPRelayClearUserInfoByIfIndex

This table is used to clear DHCP relay entries according to interface index.

### XML structure

```
<DHCP>
  <DHCPRelayClearUserInfoByIfIndex>
    <RelayClearUserInfo>
      <IfIndex></IfIndex>
    </RelayClearUserInfo>
  </DHCPRelayClearUserInfoByIfIndex>
</DHCP>
```

### Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayClearUserInfoByIfIndex
Table type	Multi-instance table
Row name	RelayClearUserInfo
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	If the length of the column is set to 0, all entries will be cleared.

## DHCP/DHCPServerClearIpInUseByPool

This table is used to clear binding information about assigned IP addresses according to pool name.

### XML structure

```
<DHCP>
  <DHCPServerClearIpInUseByPool>
    <ServerClearIpInUse>
      <PoolName></PoolName>
    </ServerClearIpInUse>
  </DHCPServerClearIpInUseByPool>
</DHCP>
```

```

        </ServerClearIpInUse>
    </DHCPServerClearIpInUseByPool>
</DHCP>

```

## Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerClearIpInUseByPool
Table type	Multi-instance table
Row name	ServerClearIpInUse
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
PoolName	DHCP address pool name	Index	String, case insensitive. Length: 1 to 63 characters.

# DHCP/DHCPServerClearIpInUse

This table is used to clear binding information about assigned IP addresses.

## XML structure

```

<DHCP>
  <DHCPServerClearIpInUse>
    <ServerClearIpInUse>
      <PoolIndex></PoolIndex>
      <Ipv4Address></Ipv4Address>
    </ServerClearIpInUse>
  </DHCPServerClearIpInUse>
</DHCP>

```

## Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerClearIpInUse

      <DomainName></DomainName>
      <GatewayIpv4Address></GatewayIpv4Address>
      <DNSIpv4Address></DNSIpv4Address>
      <NetbiosType></NetbiosType>
      <NbnsIpv4Address></NbnsIpv4Address>
      <SubnetAlloc></SubnetAlloc>
      <ForbiddenIp>
        <StartForbiddenIpv4Address></StartForbiddenIpv4Address>
        <EndForbiddenIpv4Address></EndForbiddenIpv4Address>
      </ForbiddenIp>
    </IpPool>
  </DHCPServerIpPool>
</DHCP>
```

### Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerIpPool

Table type	Multi-instance table
Row name	IpPool
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	DHCP address pool index	Index	Unsigned integer. Value range: 0 to 4096.	For the merge, create and replace operations, 0 means to automatically assign a minimum unused index.  For the delete and remove operations, 0 cannot be set.
PoolName	DHCP address pool name	N/A	String, case insensitive. Length: 1 to 63 characters.	Required when create a new row, cannot be modified.
NetworkIpv4Address	Primary subnet for dynamic allocation	N/A	String, dotted decimal notation.	Modifying or removing the network configuration deletes the assigned addresses from the current address pool.
NetworkIpv4Mask	Primary subnet mask for dynamic allocation	N/A	String, dotted decimal notation.	If no mask is specified, the natural mask will be used.
StartIpv4Address	Start IP address of IP address range in a DHCP address pool for dynamic allocation	N/A	String, dotted decimal notation.	The address range specified must be within the subnet. The addresses out of the address range cannot be assigned.  It must be configured together with the

Column name	Column description	Column type	Data type and restrictions	Remarks
				EndIpv4Address column.
EndIpv4Address	End IP address of IP address range in a DHCP address pool for dynamic allocation	N/A	String, dotted decimal notation.	It must be configured together with the StartIpv4Address column.
LeaseDay	Days of lease duration	N/A	Unsigned integer. Value range: 0 to 365. Default: 1.	LeaseDay, LeaseHour, LeaseMinute, LeaseSecond must be configured together.  Can not be configured together with LeaseUnlimit.
LeaseHour	Hours of lease duration	N/A	Unsigned integer. Value range: 0 to 23. Default: 0.	N/A
LeaseMinute	Minutes of lease duration	N/A	Unsigned integer. Value range: 0 to 59. Default: 0.	N/A
LeaseSecond	Seconds of lease duration	N/A	Unsigned integer. Value range: 0 to 59. Default: 0.	N/A
LeaseUnlimit	Whether the function of unlimited lease duration is specified.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b>(default)</li> </ul>	Can not be configured together with LeaseDay, LeaseHour, LeaseMinute, LeaseSecond.
DomainName	Domain name	N/A	String, case sensitive. Length: 1 to 50 characters.	N/A
GatewayIpv4Address	Gateway addresses	N/A	String, case insensitive. Length: 1 to 1024 characters.	You can specify a space-separated list of up to 64 addresses. Example:

Column name	Column description	Column type	Data type and restrictions	Remarks
				1.1.1.1 2.2.2.2 3.3.3.3.
DNSIpv4Address	DNS server addresses	N/A	String, case insensitive. Length: 1 to 127 characters.	You can specify a space-separated list of up to eight addresses. Example: 1.1.1.1 2.2.2.2 3.3.3.3.
NetbiosType	NetBIOS node type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—b-node.</li> <li>• 2—p-node.</li> <li>• 3—m-node.</li> <li>• 4—h-node.</li> </ul>	<p>b-node: Specifies the broadcast node. A b-node client sends the destination name in a broadcast message to get the name-to-IP mapping from a server.</p> <p>h-node: Specifies the hybrid node. An h-node client unicasts the destination name to a WINS server. If it does not receive a response, the h-node client broadcasts the destination name to get the mapping from a server.</p> <p>m-node: Specifies the mixed node. An m-node client broadcasts the destination name. If it does not receive a response, the m-node client unicasts the destination name to the WINS server to get the mapping.</p> <p>p-node: Specifies the peer-to-peer node. A p-node client sends the destination name in a unicast message to get</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
				the mapping from the WINS server.
NbnsIpv4Address	WINS server addresses	N/A	String, case insensitive. Length: 1 to 127 characters.	You can specify a space-separated list of up to eight addresses. Example: 1.1.1.1 2.2.2.2 3.3.3.3.
SubnetAlloc	The flag of dynamic pool	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—normal pool (default).</li> <li>• 1—dynamic pool.</li> </ul>	Address pool type does not support change again. Configuration StartIpv4Address and EndIpv4Address is not supported when the pool type is dynamic.
ForbiddenIp	IPv4 address excluded from dynamic allocation in the current IP pool.	Data structure	Members include: <ul style="list-style-type: none"> <li>• StartForbiddenIpv4Address</li> <li>• EndForbiddenIpv4Address</li> </ul>	You can specify an IPv4 address range excluded from dynamic allocation.
StartForbiddenIpv4Address	Start IP address of an IP address range that is excluded from dynamic allocation in the current IP pool	N/A	String, dotted decimal notation.	N/A
EndForbiddenIpv4Address	End IP address of an IP address range that is excluded from dynamic allocation in the current IP pool	N/A	String, dotted decimal notation.	EndForbiddenIpv4Address cannot be lower than the StartForbiddenIpv4Address.

# DHCP/DHCPServerPoolStatic

This table contains static binding information of DHCP server IP pool.

## XML structure

```
<DHCP>
  <DHCPServerPoolStatic>
    <IpPoolStatic>
      <PoolIndex></PoolIndex>
      <Ipv4Address></Ipv4Address>
      <Ipv4Mask></Ipv4Mask>
      <CID></CID>
      <HAddress></HAddress>
      <HType></HType>
      <Description></Description>
    </IpPoolStatic>
  </DHCPServerPoolStatic>
</DHCP>
```

## Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerPoolStatic
Table type	Multi-instance table
Row name	IpPoolStatic
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	DHCP address pool index	Index	Unsigned integer. Value range: 0 to 4096.	The specified PoolIndex must already exist.
Ipv4Address	IP address of the static binding	Index	String, dotted decimal notation.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Mask	IP address mask of the static binding	N/A	String, dotted decimal notation.	If no mask is specified, the natural mask will be used.
CID	Client ID of the static binding	N/A	String, case insensitive. Length: 4 to 254 characters.	<p>The string can contain only hexadecimal numbers and hyphen (-), in the format of H-H-H.... The last H can be a two-digit or four-digit hexadecimal number while the other Hs must be all four-digit hexadecimal numbers. For example, aabb-cccc-dd is correct, and aabb-c-dddd and aabb-cc-dddd are not correct.</p> <p>Can not be configured together with HAddress, HType column, but one of the CID and HAddress is required.</p> <p>Can not modify bindings. To change the binding for a DHCP client, you must delete the existing binding first and create a new binding.</p>
HAddress	Client hardware address of the static binding	N/A	String, case insensitive. Length: 4 to 79 characters.	<p>The string can contain only hexadecimal numbers and hyphen (-), in the format of H-H-H.... The last H can be a two-digit or four-digit hexadecimal number while the other Hs must be all four-digit</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
				hexadecimal numbers. For example, aabb-cccc-dd is correct, and aabb-c-dddd and aabb-cc-dddd are not correct.
HType	Client hardware address type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—Ethernet (default).</li> <li>• <b>2</b>—TokenRing.</li> </ul>	It must be configured together with the HAddress column.
Description	Description of the static binding	N/A	String, case insensitive. Length: 1 to 255 characters.	N/A

## DHCP/DHCPConfig

This table contains DHCP server and DHCP relay configuration information.

## XML structure

```

<DHCP>
  <DHCPConfig>
    <DHCPEnable></DHCPEnable>
    <ServerConfig>
      <AlwaysBroadcast></AlwaysBroadcast>
      <IgnoreBOOTP></IgnoreBOOTP>
      <BOOTPReplyRFC1048></BOOTPReplyRFC1048>
      <Opt82Enabled></Opt82Enabled>
      <PingNumber></PingNumber>
      <PingTimeout></PingTimeout>
    </ServerConfig>
    <RelayConfig>
      <UserInfoRecord></UserInfoRecord>
      <UserInfoRefresh></UserInfoRefresh>
      <UserInfoFlushTime></UserInfoFlushTime>
    </RelayConfig>
  </DHCPConfig>
</DHCP>

```

## Table description

Item	Description
Feature name	DHCP
Table name	DHCPConfig
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DHCPEnable	Whether the function of DHCP is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b>(default)</li> </ul>	N/A
ServerConfig	The configuration of DHCP server	Data structure	Members include: <ul style="list-style-type: none"> <li>AlwaysBroadcastAlert</li> <li>IgnoreBOOTP</li> <li>BOOTPReplyRFC1048</li> <li>Opt82Enabled</li> <li>PingNumber</li> <li>PingTimeout</li> </ul>	N/A
AlwaysBroadcast	Whether enable the DHCP server to broadcast all responses or not.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b>(default)</li> </ul>	N/A
IgnoreBOOTP	Whether ignore BOOTP requests or not.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default)</li> </ul>	N/A
BOOTPReplyRFC1048	Whether enable the DHCP server	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	to send BOOTP responses in RFC 1048 format when it receives RFC 1048-incompliant BOOTP requests for statically bound addresses or not.		<ul style="list-style-type: none"> <li><b>false</b>(default)</li> </ul>	
Opt82Enabled	Whether enable the DHCP server to handle Option 82 or not.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b> (default)</li> <li><b>false</b></li> </ul>	N/A
PingNumber	Maximum number of ping packets	N/A	Unsigned integer. Value range: 0 to 10. Default: 1.	To disable the address conflict detection, set the value to 0.
PingTimeout	Ping response timeout time on the DHCP server	N/A	Unsigned integer. Value range: 0 to 10000 milliseconds. Default: 500 milliseconds.	To disable the ping operation for address conflict detection, set the value to 0 milliseconds.
RelayConfig	The configuration of DHCP relay	Data structure	Members include: <ul style="list-style-type: none"> <li>UserInfoRecord</li> <li>UserInfoRefresh</li> <li>UserInfoFlushTime</li> </ul>	N/A
UserInfoRecord	Whether the function of recording client information in relay entries is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b>(default)</li> </ul>	N/A
UserInfoRefresh	Whether enable the relay agent to periodically refresh dynamic relay entries or	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>(default)</li> <li><b>false</b></li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	not.			
UserInfoFlushTime	Interval at which the DHCP relay agent periodically refreshes relay entries	N/A	Unsigned integer. Value range: 0 to 120 seconds. Default: 0 seconds.	To automatically calculate the refresh interval, set the value to 0 seconds.

## DHCP/DHCPIfMode

This table contains DHCP interface mode information.

## XML structure

```

<DHCP>
  <DHCPIfMode>
    <IfMode>
      <IfIndex></IfIndex>
      <Mode></Mode>
      <ClientDetect></ClientDetect>
    </IfMode>
  </DHCPIfMode>
</DHCP>

```

## Table description

Item	Description
Feature name	DHCP
Table name	DHCPIfMode
Table type	Multi-instance table
Row name	IfMode
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Mode	DHCP mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—None.</li> <li>• <b>1</b>—Server (default).</li> <li>• <b>2</b>—Relay.</li> <li>• <b>3</b>—RelayProxy.</li> </ul>	N/A
ClientDetect	Whether to enable client offline detection	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b> (default)</li> </ul>	N/A

## DHCP/DHCPRelaySrvIPv4Address

This table contains DHCP servers on the DHCP relay agent information.

## XML structure

```

<DHCP>
  <DHCPRelaySrvIPv4Address>
    <RelaySrvIPv4>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
    </RelaySrvIPv4>
  </DHCPRelaySrvIPv4Address>
</DHCP>

```

## Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelaySrvIPv4Address
Table type	Multi-instance table
Row name	RelaySrvIPv4
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Ipv4Address	DHCP servers IP address on the DHCP relay agent	Index	String, dotted decimal notation.	N/A

## DHCP/DHCPServerPoolOption

This table contains DHCP server IP pool options information.

## XML structure

```
<DHCP>
  <DHCPServerPoolOption>
    <IpPoolOption>
```

```

    <PoolIndex></PoolIndex>
    <OptionCode></OptionCode>
    <OptionValueHex></OptionValueHex>
    <OptionValueAscii></OptionValueAscii>
    <OptionValueIpAddresses></OptionValueIpAddresses>
  </IpPoolOption>
</DHCPServerPoolOption>
</DHCP>

```

## Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerPoolOption
Table type	Multi-instance table
Row name	IpPoolOption
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	DHCP address pool index	Index	Unsigned integer. Value range: 0 to 4096.	The specified PoolIndex must already exist.
OptionCode	Number of the customized option	Index	Unsigned integer. Value range: 2 to 254.	Excluding 50 through 54, 56, 58, 59, 61, and 82.
OptionValueHex	Hex string as the option content	N/A	String, case insensitive. Length: 2 to 256 characters.	Only one of OptionValueHex, OptionValueAscii and OptionValueIpAddresses can be set. Hex string of even numbers from 2 to 256 as the option content.
OptionValueAscii	ASCII string as	N/A	String, case sensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	the option content		Length: 1 to 255 characters.	
OptionValueIpAddresses	IP addresses as the option content	N/A	String, case insensitive. Length: 1 to 127 characters.	If there are multiple addresses, separated them by space. Example: 1.1.1.1 2.2.2.2 3.3.3.3.

## DHCP/DHCPRelaySourceAddress

This table contains information about source IP addresses of the packets sent by the DHCP relay agent.

### XML structure

```

<DHCP>
  <DHCPRelaySourceAddress>
    <RelaySrcAddr>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
      <SourceIfIndex></SourceIfIndex>
    </RelaySrcAddr>
  </DHCPRelaySourceAddress>
</DHCP>

```

### Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelaySourceAddress
Table type	Multi-instance table
Row name	RelaySrcAddr
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Ipv4Address	Source IP addresses of the packets sent by the DHCP relay agent	N/A	String, dotted decimal notation.	Ipv4Address and SourceIfIndex can not be set at the same time.
SourceIfIndex	Index of the interface from which the DHCP relay agent sends packets.	N/A	Unsigned integer.	Ipv4Address and SourceIfIndex cannot be set at the same time.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .

## DHCP/DHCPRelayInfoEnable

This table contains information about whether the DHCP relay agent support Option 82.

## XML structure

<DHCP>

```

<DHCPRelayInfoEnable>
  <RelayInfoEnable>
    <IfIndex></IfIndex>
    <InfoEnable></InfoEnable>
  </RelayInfoEnable>
</DHCPRelayInfoEnable>
</DHCP>

```

## Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayInfoEnable
Table type	Multi-instance table
Row name	RelayInfoEnable
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For related information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
InfoEnable	Whether the DHCP relay agent support Option 82.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default)</li> </ul>	N/A

# DHCP/DHCPServerForbiddenIp

This table contains information about IP addresses excluded from dynamic allocation globally.

## XML structure

```
<DHCP>
  <DHCPServerForbiddenIp>
    <ForbiddenIp>
      <VRF></VRF>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </ForbiddenIp>
  </DHCPServerForbiddenIp>
</DHCP>
```

## Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerForbiddenIp
Table type	Multi-instance table
Row name	ForbiddenIp
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If the lease is on the public network, the length of characters is 0.
StartIpv4Address	Start IP address of an IP address range that is excluded from	Index	String, dotted decimal notation.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	dynamic allocation globally			
EndIpv4Address	End IP address of an IP address range that is excluded from dynamic allocation globally	Index	String, dotted decimal notation.	EndIpv4Address cannot be lower than the StartIpv4Address.

## DHCP/DHCPRelayDiscReqFromTnlEnable

This table contains information about whether the DHCP relay discard request from tunnel.

### XML structure

```

<DHCP>
  <DHCPRelayDiscReqFromTnlEnable>
    <RelayDiscardReqFromTnlEnable>
      <IfIndex></IfIndex>
      <DiscardReqFromTnlEnable></DiscardReqFromTnlEnable>
    </RelayDiscardReqFromTnlEnable>
  </DHCPRelayDiscReqFromTnlEnable>
</DHCP>

```

### Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayDiscReqFromTnlEnable
Table type	Multi-instance table
Row name	RelayDiscardReqFromTnlEnable
Restrictions	This table supports only interface of VSI type
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For related information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
DiscardReqFrom TnlEnable	Whether the DHCP relay agent support discard request packet from tunnel .	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default)</li> </ul>	N/A

## DHCP/DHCPRelayMacFowardEnable

This table contains information about whether the DHCP Relay support forward ACK or OFFER packet by Mac Address

## XML structure

```

<DHCP>
  <DHCPRelayMacFowardEnable>
    <RelayMacForwardEnable>
      <MacEnable></MacEnable>
      <MacBroadCast></MacBroadCast>
    </RelayMacForwardEnable>
  </DHCPRelayMacFowardEnable>
</DHCP>

```

## Table description

Item	Description
Feature name	DHCP

Table name	DHCPRelayMacForwardEnable
Table type	Multi-instance table
Row name	RelayMacForwardEnable
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacEnable	Whether enable mac forward	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default)</li> </ul>	If mac forward is enable, DHCP server OFFER or ACK packet will forward via unicast.
MacBroadCast	Whether enable mac broadcast		Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default)</li> </ul>	It must configured with MacEnable and Mac Enable must be true.

## DHCP/DHCPRelayInfo

This table contains information about the DHCP relay agent option (Option 82).

## XML structure

```

<DHCP>
  <DHCPRelayInfo>
    <RelayInfo>
      <IfIndex></IfIndex>
      <CircuitIdMode></CircuitIdMode>
    </RelayInfo>
  </DHCPRelayInfo>
</DHCP>

```

# DHCP

## DHCP/DHCPServerIpPool

This table contains DHCP server IP pool information.

### XML structure

```
<DHCP>
  <DHCPServerIpPool>
    <IpPool>
      <PoolIndex></PoolIndex>
      <PoolName></PoolName>
      <NetworkIpv4Address></NetworkIpv4Address>
      <NetworkIpv4Mask></NetworkIpv4Mask>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
      <LeaseDay></LeaseDay>
      <LeaseHour></LeaseHour>
      <LeaseMinute></LeaseMinute>
      <LeaseSecond></LeaseSecond>
      <LeaseUnlimit></LeaseUnlimit>
      <DomainName></DomainName>
      <GatewayIpv4Address></GatewayIpv4Address>
      <DNSIpv4Address></DNSIpv4Address>
      <NetbiosType></NetbiosType>
      <NbnsIpv4Address></NbnsIpv4Address>
      <ForbiddenIp>
        <StartForbiddenIpv4Address></StartForbiddenIpv4Address>
        <EndForbiddenIpv4Address></EndForbiddenIpv4Address>
      </ForbiddenIp>
    </IpPool>
  </DHCPServerIpPool>
</DHCP>
```

### Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerIpPool
Table type	Multi-instance table

Row name	IpPool
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	DHCP address pool index	Index	Unsigned integer. Value range: 0 to 4096.	N/A
PoolName	DHCP address pool name	N/A	String, case insensitive. Length: 1 to 63 characters.	N/A
NetworkIpv4Address	Primary subnet for dynamic allocation	N/A	String, dotted decimal notation.	N/A
NetworkIpv4Mask	Primary subnet mask for dynamic allocation	N/A	String, dotted decimal notation.	If no mask is specified, the natural mask will be used.
StartIpv4Address	Start IP address of IP address range in a DHCP address pool for dynamic allocation	N/A	String, dotted decimal notation.	N/A
EndIpv4Address	End IP address of IP address range in a DHCP address pool for dynamic allocation	N/A	String, dotted decimal notation.	N/A
LeaseDay	Days of lease duration	N/A	Unsigned integer. Value range: 0 to 365.	N/A
LeaseHour	Hours of lease duration	N/A	Unsigned integer. Value range: 0 to 23.	N/A
LeaseMinute	Minutes of lease duration	N/A	Unsigned integer. Value range: 0 to 59.	N/A
LeaseSecond	Seconds of lease duration	N/A	Unsigned integer. Value range: 0 to 59.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LeaseUnlimit	Whether the function of unlimited lease duration is specified.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
DomainName	Domain name	N/A	String, case sensitive. Length: 1 to 50 characters.	N/A
GatewayIpv4Address	Gateway addresses	N/A	String, case insensitive. Length: 1 to 1024 characters.	You can specify a space-separated list of up to 64 addresses. Example: 1.1.1.1 2.2.2.2 3.3.3.3.
DNSIpv4Address	DNS server addresses	N/A	String, case insensitive. Length: 1 to 127 characters.	You can specify a space-separated list of up to eight addresses. Example: 1.1.1.1 2.2.2.2 3.3.3.3.
NetbiosType	NetBIOS node type	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—b-node.</li> <li><b>2</b>—p-node.</li> <li><b>3</b>—m-node.</li> <li><b>4</b>—h-node.</li> </ul>	b-node: Specifies the broadcast node. A b-node client sends the destination name in a broadcast message to get the name-to-IP mapping from a server.  h-node: Specifies the hybrid node. An h-node client unicasts the destination name to a WINS server. If it does not receive a response, the h-node client broadcasts the destination name to get the mapping from a server.  m-node: Specifies the

Column name	Column description	Column type	Data type and restrictions	Remarks
				<p>mixed node. An m-node client broadcasts the destination name. If it does not receive a response, the m-node client unicasts the destination name to the WINS server to get the mapping.</p> <p>p-node: Specifies the peer-to-peer node. A p-node client sends the destination name in a unicast message to get the mapping from the WINS server.</p>
NbnsIpv4Address	WINS server addresses	N/A	String, case insensitive. Length: 1 to 127 characters.	<p>You can specify a space-separated list of up to eight addresses.</p> <p>Example: 1.1.1.1 2.2.2.2 3.3.3.3.</p>
ForbiddenIp	IPv4 address excluded from dynamic allocation in the current IP pool.	Data structure	<p>Members include:</p> <ul style="list-style-type: none"> <li>StartForbiddenIpv4Address</li> <li>EndForbiddenIpv4Address</li> </ul>	You can specify an IPv4 address range excluded from dynamic allocation.
StartForbiddenIpv4Address	Start IP address of an IP address range that is excluded from dynamic allocation in the current IP pool	N/A	String, dotted decimal notation.	N/A
EndForbiddenIpv4Address	End IP address of an IP address range that is excluded from dynamic allocation	N/A	String, dotted decimal notation.	EndForbiddenIpv4Address cannot be lower than the StartForbiddenIpv4Address.

Column name	Column description	Column type	Data type and restrictions	Remarks
	in the current IP pool			

## DHCP/DHCPServerPoolStatic

This table contains static binding information of DHCP server IP pool.

### XML structure

```

<DHCP>
  <DHCPServerPoolStatic>
    <IpPoolStatic>
      <PoolIndex></PoolIndex>
      <Ipv4Address></Ipv4Address>
      <Ipv4Mask></Ipv4Mask>
      <CID></CID>
      <HAddress></HAddress>
      <HType></HType>
      <Description></Description>
    </IpPoolStatic>
  </DHCPServerPoolStatic>
</DHCP>

```

### Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerPoolStatic
Table type	Multi-instance table
Row name	IpPoolStatic
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	DHCP address	Index	Unsigned integer.	The specified PoolIndex

Column name	Column description	Column type	Data type and restrictions	Remarks
	pool index		Value range: 0 to 4096.	must already exist.
Ipv4Address	IP address of the static binding	Index	String, dotted decimal notation.	N/A
Ipv4Mask	IP address mask of the static binding	N/A	String, dotted decimal notation.	If no mask is specified, the natural mask will be used.
CID	Client ID of the static binding	N/A	String, case insensitive. Length: 4 to 254 characters.	The string can contain only hexadecimal numbers and hyphen (-), in the format of H-H-H.... The last H can be a two-digit or four-digit hexadecimal number while the other Hs must be all four-digit hexadecimal numbers. For example, aabb-cccc-dd is correct, and aabb-c-dddd and aabb-cc-dddd are not correct.
HAddress	Client hardware address of the static binding	N/A	String, case insensitive. Length: 4 to 79 characters.	The string can contain only hexadecimal numbers and hyphen (-), in the format of H-H-H.... The last H can be a two-digit or four-digit hexadecimal number while the other Hs must be all four-digit hexadecimal numbers. For example, aabb-cccc-dd is correct, and aabb-c-dddd and aabb-cc-dddd are not correct.
HType	Client hardware address type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Ethernet.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>2—TokenRing.</li> </ul>	
Description	Description of the static binding	N/A	String, case insensitive. Length: 1 to 255 characters.	N/A

## DHCP/DHCPServerIpInUse

This table contains binding information about assigned IP addresses.

### XML structure

```

<DHCP>
  <DHCPServerIpInUse>
    <IpInUse>
      <PoolIndex></PoolIndex>
      <Ipv4Address></Ipv4Address>
      <CID></CID>
      <HAddress></HAddress>
      <HType></HType>
      <VLANID></VLANID>
      <EndLease></EndLease>
      <Type></Type>
      <IfIndex></IfIndex>
    </IpInUse>
  </DHCPServerIpInUse>
</DHCP>

```

### Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerIpInUse
Table type	Multi-instance table
Row name	IpInUse
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	DHCP address pool index	Index	Unsigned integer. Value range: 0 to 4096.	N/A
Ipv4Address	IP address allocated to client	N/A	String, dotted decimal notation.	N/A
CID	Client ID of the static binding	N/A	String, case-insensitive. Length: 4 to 254 characters.	The string can contain only hexadecimal numbers and hyphen (-), in the format of H-H-H.... The last H can be a two-digit or four-digit hexadecimal number while the other Hs must be all four-digit hexadecimal numbers. For example, aabb-cccc-dd is correct, and aabb-c-dddd and aabb-cc-dddd are not correct.
HAddress	Client hardware address of the static binding	N/A	String, case-insensitive. Length: 4 to 79 characters.	The string can contain only hexadecimal numbers and hyphen (-), in the format of H-H-H.... The last H can be a two-digit or four-digit hexadecimal number while the other Hs must be all four-digit hexadecimal numbers. For example, aabb-cccc-dd is correct, and

Column name	Column description	Column type	Data type and restrictions	Remarks
				aabb-c-dddd and aabb-cc-dddd are not correct.
HType	Client hardware address of the static binding	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—ethernet.</li> <li>2—tokenRing.</li> </ul>	ethernet: the client hardware address type is Ethernet. tokenRing: the client hardware address type as token ring.
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
EndLease		N/A	String, case-insensitive. Length: 1 to 19 characters.	Format: month/day/year hour:minute:second (MM/DD/YYYY hh:mm:ss)
Type		N/A	Enumeration: <ul style="list-style-type: none"> <li>1—staticUnallocated.</li> <li>2—staticOffered.</li> <li>3—staticCommitted.</li> <li>4—autoOffered.</li> <li>5—autoCommitted.</li> </ul>	staticUnallocated: A free static binding whose IP address has not been assigned.  staticOffered: An offered static binding whose IP address has been selected and sent by the DHCP server in a DHCP-OFFER packet to the client.  staticCommitted: A committed static binding whose IP address has been assigned to the DHCP client.  autoOffered: An offered temporary dynamic binding whose IP address has

Column name	Column description	Column type	Data type and restrictions	Remarks
				<p>been dynamically selected by the DHCP server and sent in a DHCP-OFFER packet to the DHCP client.</p> <p>autoCommitted: A committed dynamic binding whose IP address has been dynamically assigned to the DHCP client.</p>
lflIndex	Interface index		Unsigned integer.	N/A

## DHCP/DHCPConfig

This table contains DHCP server and DHCP relay configuration information.

## XML structure

```

<DHCP>
  <DHCPConfig>
    <DHCPEnable></DHCPEnable>
    <ServerConfig>
      <AlwaysBroadcast></AlwaysBroadcast>

      <PingNumber></PingNumber>
      <PingTimeout></PingTimeout>
    </ServerConfig>
    <RelayConfig>
      <UserInfoRecord></UserInfoRecord>
      <UserInfoRefresh></UserInfoRefresh>
      <UserInfoFlushTime></UserInfoFlushTime>
    </RelayConfig>
  </DHCPConfig>
</DHCP>

```

## Table description

Item	Description
Feature name	DHCP
Table name	DHCPConfig
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DHCPEnable	Whether the function of DHCP is enabled.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	N/A
ServerConfig	The configuration of DHCP server	Data structure	Members include: <ul style="list-style-type: none"><li>• AlwaysBroadcastAlert</li><li>• IgnoreBOOTP</li><li>• BOOTPReplyRFC1048</li><li>• Opt82Enabled</li><li>• PingNumber</li><li>• PingTimeout</li></ul>	N/A
AlwaysBroadcast	Whether Enable the DHCP server to broadcast all responses or not.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	N/A
IgnoreBOOTP	Whether Ignore BOOTP requests or not.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	N/A
BOOTPReplyRFC1048	Whether enable the DHCP server to send BOOTP	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	responses in RFC 1048 format when it receives RFC 1048-incompliant BOOTP requests for statically bound addresses or not.			
Opt82Enabled	Whether enable the DHCP server to handle Option 82 or not.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
PingNumber	Maximum number of ping packets	N/A	Unsigned integer. Value range: 0 to 10.	To disable the address conflict detection, set the value to 0.
PingTimeout	Ping response timeout time on the DHCP server	N/A	Unsigned integer. Value range: 0 to 10000 milliseconds.	To disable the ping operation for address conflict detection, set the value to 0 milliseconds.
RelayConfig	The configuration of DHCP relay	Data structure	Members include: <ul style="list-style-type: none"> <li>UserInfoRecord</li> <li>UserInfoRefresh</li> <li>UserInfoFlushTime</li> </ul>	N/A
UserInfoRecord	Whether the function of recording client information in relay entries is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
UserInfoRefresh	Whether enable the relay agent to periodically refresh dynamic relay entries or not.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
UserInfoFlushTime	Interval at which the DHCP relay agent periodically refreshes relay entries	N/A	Unsigned integer. Value range: 0 to 120 seconds.	To automatically calculate the refresh interval, set the value to 0 seconds.

## DHCP/DHCPIfMode

This table contains DHCP interface mode information.

### XML structure

```

<DHCP>
  <DHCPIfMode>
    <IfMode>
      <IfIndex></IfIndex>
      <Mode></Mode>
      <ClientDetect></ClientDetect>
    </IfMode>
  </DHCPIfMode>
</DHCP>

```

### Table description

Item	Description
Feature name	DHCP
Table name	DHCPIfMode
Table type	Multi-instance table
Row name	IfMode
Restrictions	This table supports only Layer 3 interfaces.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Mode	DHCP mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—None.</li> <li>• <b>1</b>—Server.</li> <li>• <b>2</b>—Relay.</li> <li>• <b>3</b>—RelayProxy.</li> </ul>	N/A
ClientDetect	Whether to enable client offline detection	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	

## DHCP/DHCPRelaySrvIPv4Address

This table contains DHCP servers on the DHCP relay agent information.

### XML structure

```

<DHCP>
  <DHCPRelaySrvIPv4Address>
    <RelaySrvIPv4>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
    </RelaySrvIPv4>
  </DHCPRelaySrvIPv4Address>
</DHCP>

```

### Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelaySrvIPv4Address
Table type	Multi-instance table
Row name	RelaySrvIPv4
Restrictions	This table supports only Layer 3 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	N/A
Ipv4Address	DHCP servers IP address on the DHCP relay agent	Index	String, dotted decimal notation.	N/A

## DHCP/DHCPRelayUserInfo

This table contains DHCP relay entries information.

## XML structure

```
<DHCP>
  <DHCPRelayUserInfo>
    <RelayUserInfo>
      <VrfIndex></VrfIndex>
      <Ipv4Address></Ipv4Address>
      <MacAddress></MacAddress>
      <IfIndex></IfIndex>
    </RelayUserInfo>
  </DHCPRelayUserInfo>
</DHCP>
```

## Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayUserInfo
Table type	Multi-instance table
Row name	RelayUserInfo
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Index of the VRF	Index	Unsigned integer.	0 means public network.
Ipv4Address	DHCP servers IP address on the DHCP relay agent	Index	String, dotted decimal notation.	N/A
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
IfIndex	Interface Index	N/A	Unsigned integer.	0 means no interface information.

## DHCP/DHCPServerPoolOption

This table contains DHCP server IP pool options information.

## XML structure

```
<DHCP>
  <DHCPServerPoolOption>
    <IpPoolOption>
      <PoolIndex></PoolIndex>
      <OptionCode></OptionCode>
      <OptionValueHex></OptionValueHex>

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	DHCP address pool index	Index	Unsigned integer. Value range: 0 to 4096.	The specified PoolIndex must already exist.
OptionCode	Number of the customized option	Index	Unsigned integer. Value range: 2 to 254.	Excluding 50 through 54, 56, 58, 59, 61, and 82.
OptionValueHex	Hex string as the option content	N/A	String, case insensitive. Length: 2 to 256 characters.	Hex string of even numbers from 2 to 256 as the option content.
OptionValueAscii	ASCII string as the option content	N/A	String, case sensitive. Length: 1 to 255 characters.	N/A
OptionValueIpAddresses	IP addresses as the option content	N/A	String, case insensitive. Length: 1 to 127 characters.	Separated by space if there are multiple addresses. Example: 1.1.1.1 2.2.2.2 3.3.3.3.

## DHCP/DHCPServerPoolStatistics

This table contains DHCP server pool statistics information.

## XML structure

```

<DHCP>
  <DHCPServerPoolStatistics>
    <IpPoolStatistics>
      <PoolName></PoolName>
      <UsedIpNumber></UsedIpNumber>
      <ExpiredIpNumber></ExpiredIpNumber>
      <TotalIpNumber></TotalIpNumber>
    </IpPoolStatistics>
  </DHCPServerPoolStatistics>
</DHCP>

```

```

    </IpPoolStatistics>
  </DHCPServerPoolStatistics>
</DHCP>

```

## Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerPoolStatistics
Table type	Multi-instance table
Row name	IpPoolStatistics
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolName	DHCP pool name	Index	String.	N/A
UsedIpNumber	Number of used IP addresses in the address pool	N/A	Unsigned integer.	N/A
ExpiredIpNumber	Number of expired IP address leases in the address pool	N/A	Unsigned integer.	N/A
TotallpNumber	Total number of IP addresses in the address pool	N/A	Unsigned integer.	N/A

## DHCP/DHCPRelaySourceAddress

This table contains information about source IP addresses of the packets sent by the DHCP relay agent.

## XML structure

```
<DHCP>
  <DHCPRelaySourceAddress>
    <RelaySrcAddr>
      <IfIndex></IfIndex>
      <Ipv4Address></Ipv4Address>
      <SourceIfIndex></SourceIfIndex>
    </RelaySrcAddr>
  </DHCPRelaySourceAddress>
</DHCP>
```

## Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelaySourceAddress
Table type	Multi-instance table
Row name	RelaySrcAddr
Restrictions	This table supports only Layer 3 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Ipv4Address	Source IP addresses of the packets sent by the DHCP relay	N/A	String, dotted decimal notation.	Ipv4Address and SourceIfIndex cannot be set at the same time.

Column name	Column description	Column type	Data type and restrictions	Remarks
	agent			
SourcelIndex	Index of the interface from which the DHCP relay agent sends packets.	N/A	Unsigned integer.	Ipv4Address and SourcelIndex cannot be set at the same time.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .

## DHCP/DHCPRelayInfoEnable

This table contains information about whether the DHCP relay agent support Option 82.

### XML structure

```

<DHCP>
  <DHCPRelayInfoEnable>
    <RelayInfoEnable>
      <IfIndex></IfIndex>
      <InfoEnable></InfoEnable>
    </RelayInfoEnable>
  </DHCPRelayInfoEnable>
</DHCP>

```

### Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayInfoEnable
Table type	Multi-instance table
Row name	RelayInfoEnable

Restrictions	This table supports only Layer 3 interfaces.
--------------	--

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For related information, see the XSD document of your product. For information about IfIndex, see “Appendix” in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
InfoEnable	Whether the DHCP relay agent support Option 82.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A

## DHCP/DHCPServerLeaseInfo

This table contains DHCP server lease information.

## XML structure

```

<DHCP>
  <DHCPServerLeaseInfo>
    <LeaseInfo>
      <VRF></VRF>
      <Ipv4Address></Ipv4Address>
      <MacAddress></MacAddress>
      <HostName></HostName>
      <Option55></Option55>
    </LeaseInfo>
  </DHCPServerLeaseInfo>
</DHCP>

```

## Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerLeaseInfo
Table type	Multi-instance table
Row name	LeaseInfo
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If the lease is on the public network, the length of characters is 0.
Ipv4Address	IP address allocated to client	Index	String, dotted decimal notation.	N/A
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
HostName	Host name of the client	N/A	String, case insensitive. Length: 1 to 253 characters.	The length of characters is 0 when a specific client is used.
Option55	Parameter request list	N/A	String, case insensitive. Length: 2 to 510 characters.	The length of characters is 0 when a specific client is used.

## DHCP/DHCPServerForbiddenIp

This table contains information about IP addresses excluded from dynamic allocation globally.

## XML structure

<DHCP>

```

<DHCPServerForbiddenIp>
  <ForbiddenIp>
    <VRF></VRF>
    <StartIpv4Address></StartIpv4Address>
    <EndIpv4Address></EndIpv4Address>
  </ForbiddenIp>
</DHCPServerForbiddenIp>
</DHCP>

```

## Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerForbiddenIp
Table type	Multi-instance table
Row name	ForbiddenIp
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If the lease is on the public network, the length of characters is 0.
StartIpv4Address	Start IP address of an IP address range that is excluded from dynamic allocation globally	Index	String, dotted decimal notation.	N/A
EndIpv4Address	End IP address of an IP address range that is excluded from dynamic allocation globally	Index	String, dotted decimal notation.	EndIpv4Address cannot be lower than the StartIpv4Address.

# DHCP/DHCPServerSubnetInUse

This table contains information about subnet allocation IP addresses.

## XML structure

```
<DHCP>
  <DHCPServerSubnetInUse>
    <SubnetInUse>
      <VRF></VRF>
      <NetworkAddress></NetworkAddress>
      <NetworkMask></NetworkMask>
      <SubAllocMode></SubAllocMode>
      <VXLANID></VXLANID>
      <DPAAddress></DPAAddress>
      <UsedIpNumber></UsedIpNumber>
      <ExpiredIpNumber></ExpiredIpNumber>
      <TotalIpNumber></TotalIpNumber>
      <PoolName></PoolName>
    </SubnetInUse>
  </DHCPServerSubnetInUse>
</DHCP>
```

## Table description

Item	Description
Feature name	DHCP
Table name	DHCPServerSubnetInUse
Table type	Multi-instance table
Row name	SubnetInUse
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case-sensitive. Length: 0 to 31 characters.	If the lease is on the public network, the length of characters is 0.

Column name	Column description	Column type	Data type and restrictions	Remarks
Network Address	Subnet Address	Index	String, dotted decimal notation.	N/A
NetworkMask	Subnet Mask	Index	Unsigned integer. Value range: 1 to 30.	N/A
SubAllocMode	Subnet Alloc Mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—vxlanId.</li> <li>1—dp-address.</li> </ul>	If the subnet alloc by the vxlanId mode, the DP address cannot be displayed.  If the subnet alloc by the dp-address mode, the vxlanId cannot be displayed.
VXLAN ID	VXLAN ID	N/A	Unsigned integer. Value range: 1 to 16777215.	N/A
DPAddress	DP Address	N/A	String, dotted decimal notation.	N/A
UsedIpNumber	Number of used IP addresses in subnet.	N/A	Unsigned integer.	N/A
ExpiredIpNumber	Number of expired IP addresses in subnet.	N/A	Unsigned integer.	N/A
TotallpNumber	Total Number of allocated IP addresses in subnet	N/A	Unsigned integer.	N/A
PoolName	Subnet-alloc Pool Name	N/A	String.	N/A

## DHCP/DHCPRelayDiscReqFromTnlEnable

This table contains information about whether the DHCP relay discard request from tunnel.

## XML structure

```
<DHCP>
  <DHCPRelayDiscReqFromTnlEnable>
    <RelayDiscardReqFromTnlEnable>
      <IfIndex></IfIndex>
      <DiscardReqFromTnlEnable></DiscardReqFromTnlEnable>
    </RelayDiscardReqFromTnlEnable>
  </DHCPRelayDiscReqFromTnlEnable>
</DHCP>
```

## Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayDiscReqFromTnlEnable
Table type	Multi-instance table
Row name	RelayDiscardReqFromTnlEnable
Restrictions	This table supports only interface of VSI type

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For related information, see the XSD document of your product. For information about IfIndex, see “Appendix” in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
DiscardReqFromTnlEnable	Whether the DHCP relay agent support discard request packet	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b></li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	from tunnel .			

## DHCP/DHCPRelayMacFowardEnable

This table contains information about whether the DHCP Relay support forward ACK or OFFER packet by Mac Address.

### XML structure

```
<DHCP>
  <DHCPRelayMacFowardEnable>
    <RelayMacForwardEnable>
      <MacEnable></MacEnable>
      <MacBroadCast></MacBroadCast>
    </RelayMacForwardEnable>
  </DHCPRelayMacFowardEnable>
</DHCP>
```

### Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayMacFowardEnable
Table type	Multi-instance table
Row name	RelayMacForwardEnable
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacEnable	Whether enable mac forward	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	If mac forward is enable, DHCP server OFFER or ACK packet will forward

Column name	Column description	Column type	Data type and restrictions	Remarks
				via unicast.
MacBroadCast	Whether enable mac broadcast		Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	It must configured with MacEnable and Mac Enable must be true.

## DHCP/DHCPRelayInfo

This table contains information about the DHCP relay agent option (Option 82).

### XML structure

```

<DHCP>
  <DHCPRelayInfo>
    <RelayInfo>
      <IfIndex></IfIndex>
      <CircuitIdMode></CircuitIdMode>
    </RelayInfo>
  </DHCPRelayInfo>
</DHCP>

```

### Table description

Item	Description
Feature name	DHCP
Table name	DHCPRelayInfo
Table type	Multi-instance table
Row name	RelayInfo
Restrictions	This table supports only Layer 3 interfaces.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For

Column name	Column description	Column type	Data type and restrictions	Remarks
				related information, see the XSD document of your product. For information about IfIndex, see “Appendix” in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
CircuitIdMode	Mode of the Circuit ID sub-option in Option 82	N/A	String, case-insensitive. Values include: <ul style="list-style-type: none"> <li>• <b>NormalHex</b></li> <li>• <b>NormalAscii</b></li> <li>• <b>VxlanPort</b></li> </ul>	N/A

# DHCP

## DHCP/dhcp

Message	Explanation
Maximum number of DHCP address pools already reached. DHCP地址池个数超过上限。	Maximum number of DHCP address pools already reached, when created more than 8192 pools before.
Invalid network address. 无效的网段地址。	Invalid network address, please check your network address.
Mask length must be in the range of 1 to 30. 掩码长度范围必须为1到30。	The mask length is Invalid.
Invalid start IP address. 无效的起始IP地址。	Invalid start IP address, please check your IP address.
Invalid end IP address. 无效的结束IP地址。	Invalid end IP address, please check your IP address.
The start IP address can't be greater than the end IP address. 起始IP地址必须小于或等于结束IP地址。	Please make certain that the start IP address is not be greater than the end IP address.
Lease duration can't be zero. IP地址租约有效期限不能为零。	Invalid Lease duration, please check your Lease duration.
Failed to set the response timeout time for ping requests. 为IP地址冲突检测指定等待回显响应超时时间失效。	The setting about the response timeout time for ping requests is failed.
Failed to enable DHCP. 开启DHCP功能失败。	DHCP process is not activated.
Invalid IP address. 无效的IP地址。	Invalid IP address, please check your IP address.
Invalid mask. 无效的掩码。	Invalid mask, please check your IP address.
Maximum number of statically bound IP address already reached. 静态绑定地址个数超过上限。	Maximum number of statically bound IP address already reached, when the number of statically bound IP address is greater than 8192.
The IP address is bound to another DHCP client. 该IP地址已经被绑定在一台DHCP客户端上。	The IP address is bound to another DHCP client, please try another IP address.
Failed to set the mode. 指定处理模式失败。	The setting about the mode is failed.
Failed to set the address pool name. 指定地址池名称失败。	The setting about the address pool name is failed.
Another address pool is using the name.	The name of address pool is already used.

地址池名称已经存在。	
The configuration doesn't meet the requirements. 不符合配置要求。	The configuration doesn't meet the requirements, please check your configuration.
Maximum number of server IP address already reached. 中继服务器IP地址个数超过上限。	Maximum number of server IP address already reached, when the number of server IP address is greater than 8.
The option is not configurable. 该DHCP选项的配置是被禁止的。	The option is not configurable, please check your option.
Invalid client ID. 无效的客户端ID。	Invalid client ID, please check your client ID.
The address pool doesn't exist. 该DHCP地址池不存在。	The address pool doesn't exist, when getting or deleting it
The subnet has already been configured. 该网段的IP地址已经在其他网段配置。	The subnet has already been configured, please try another subnet.
Invalid client hardware address. 无效的客户端硬件地址。	Invalid client hardware address, please check your client hardware address.
The statically bound IP address should be a unicast address. 该静态绑定IP地址需要是一个单播地址。	Please make certain that the statically bound IP address is a unicast address.
Not used. 未使用。	The lease is not used.
Failed to configure the Option 82. 配置Option82功能失败。	The configure the Option 82 is failed.
Ipv4Address and SourcelIndex cannot be set at the same time. 指定DHCP中继向DHCP服务器转发报文的源地址和源接口不能在一次操作中同时配置	Ipv4Address and SourcelIndex are set at the same time. 用户指定DHCP中继向DHCP服务器转发报文的源地址时，同时下发了源地址和源接口信息

# DHCP event stream

DHCP event stream description.

## DHCP instance status event

This event is used to report status of the DHCP instance.

## XML structure for event subscription

```
<InstanceStatus>
</InstanceStatus>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>DHCP</stream>
    <filter type="subtree">
      <InstanceStatus xmlns="http://www.h3c.com/netconf/event:1.0/dhcp:1.0">
        </InstanceStatus>
      </filter>
    </create-subscription>
  </rpc>
```

### Table description

Item	Description
Event stream name	DHCP
Event name	InstanceStatus
Event namespace	http://www.h3c.com/netconf/event:1.0/dhcp:1.0
Support for extended query	No

## XML structure for event report

```
<InstanceStatus>
  <ProtocolType></ProtocolType>
  <Status></Status>
</InstanceStatus>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2019-01-21T10:12:15</eventTime>
  <InstanceStatus xmlns="http://www.h3c.com/netconf/event:1.0/dhcp:1.0">
```

```
<ProtocolType>1</ProtocolType>
<Status>Master</Status>
</InstanceStatus>
</notification>
```

### Table description

Column name	Column description	Data type and restrictions	Remarks
ProtocolType	Protocol type	Enumeration: <ul style="list-style-type: none"><li>• 1—IPv4.</li><li>• 2—IPv6.</li></ul>	N/A
Status	Instance status	String: <ul style="list-style-type: none"><li>• Master</li><li>• Backup</li><li>• Down</li></ul>	N/A

# DHCP6

## DHCP6/DHCP6ServerUpdateDatabase

This table is used to save current IPv6 DHCP server entries to the file and stop downloading these entries from the file.

### XML structure

```
<DHCP6>
  <DHCP6ServerUpdateDatabase>
    <UpdateMode></UpdateMode>
  </DHCP6ServerUpdateDatabase>
</DHCP6>
```

### Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerUpdateDatabase
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
UpdateMode	Update IPv6 DHCP server database immediately. Stop downloading entries from IPv6 DHCP server database.	N/A	Unsigned integer: <ul style="list-style-type: none"><li>• <b>0</b>—Now.</li><li>• <b>1</b>—Stop.</li></ul>

## DHCP6/DHCP6ServerClearIpInUse

This table is used to clear binding information about assigned IPv6 addresses according to VRF and IP6 address.

### XML structure

```
<DHCP6>
  <DHCP6ServerClearIpInUse>
    <ClearIpInUse>
      <VRF></VRF>
    </ClearIpInUse>
  </DHCP6ServerClearIpInUse>
</DHCP6>
```

```

        <Ipv6Address></Ipv6Address>
    </ClearIpInUse>
</DHCP6ServerClearIpInUse>
</DHCP6>

```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerClearIpInUse
Table type	Multi-instance table
Row name	ClearIpInUse
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If the Ipv6 pool is on the public network, the length of characters is 0.
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	N/A

# DHCP6/DHCP6ServerClearIpInUseByPool

This table is used to clear binding information about assigned IPv6 addresses according to pool name.

## XML structure

```

<DHCP6>
  <DHCP6ServerClearIpInUseByPool>
    <ClearIpInUse>
      <PoolName></PoolName>
    </ClearIpInUse>
  </DHCP6ServerClearIpInUseByPool>
</DHCP6>

```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerClearIpInUseByPool

Table type	Multi-instance table
Row name	ClearIpInUse
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
PoolName	IPv6 DHCP address pool name	Index	String, case-insensitive. Length: 1 to 63 characters.

## DHCP6/DHCP6ServerClearPDInUseByPrefix

This table is used to clear prefix binding information about assigned IPv6 addresses according to VRF, IPv6 address and Ipv6 prefix length.

## XML structure

```

<DHCP6>
  <DHCP6ServerClearPDInUseByPrefix>
    <ClearPDInUseByPrefix>
      <VRF></VRF>
      <Ipv6Prefix>
        <Ipv6Address></Ipv6Address>
        <Ipv6PrefixLength></Ipv6PrefixLength>
      </Ipv6Prefix>
    </ClearPDInUseByPrefix>
  </DHCP6ServerClearPDInUseByPrefix>
</DHCP6>

```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerClearPDInUseByPrefix
Table type	Multi-instance table
Row name	ClearPDInUseByPrefix
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If the Ipv6 pool is on the public network, the length of characters is 0.
Ipv6Prefix	Ipv6Prefix	Data structure	Members include: <ul style="list-style-type: none"><li>Ipv6Address</li><li>Ipv6PrefixLength</li></ul>	N/A
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	N/A
Ipv6PrefixLength	Length of the IPv6 prefix	Index	Unsigned integer. Value range: 1 to 128.	N/A

## DHCP6/DHCP6ServerClearPDInUseByPool

This table is used to clear prefix binding information about assigned IPv6 addresses according to pool name.

## XML structure

```
<DHCP6>
  <DHCP6ServerClearPDInUseByPool>
    <ClearPDInUseByPool>
      <PoolName></PoolName>
    </ClearPDInUseByPool>
  </DHCP6ServerClearPDInUseByPool>
</DHCP6>
```

## Table description

# DHCP6

## DHCP6/DHCP6ServerDatabase

This table contains IPv6 DHCP server database configuration information.

### XML structure

```
<DHCP6>
  <DHCP6ServerDatabase>
    <FileName></FileName>
    <URL></URL>
    <Username></Username>
    <Password></Password>
    <UpdateInterval></UpdateInterval>
  </DHCP6ServerDatabase>
</DHCP6>
```

### Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerDatabase
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Database file name	N/A	String, case-insensitive. Length: 1 to 255 characters.	For the merge, create and replace operations, FileName and URL can not be configured simultaneously.

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	Object URL string	N/A	String. case-sensitive. Length: 1 to 255 characters.	Specifies the URL of a remote file. Do not include a username or password in the URL. Case sensitivity and the supported format type of the path depend on the server.  If URL is configured for the delete and remove operations, Username and Password will be removed automatically.
Username	FTP username	N/A	String. case-sensitive. Length: 1 to 32 characters.	Can not be configured for the delete and remove operations.
Password	FTP password	N/A	String. case-sensitive. Length: 1 to 32 characters.	Only plaintext password is supported.  For the merge, create and replace operations, Password must be configured with Username.  Can not be configured for the delete and remove operations.
UpdateInterval	Auto update interval	N/A	Unsigned integer. Value range: 60 to 864000 seconds. Default: 300 seconds.	N/A

## DHCP6/DHCP6ServerIpPool

This table contains IPv6 DHCP server pool information.

## XML structure

```
<DHCP6>
  <DHCP6ServerIpPool>
    <Pool>
      <PoolIndex></PoolIndex>
      <PoolName></PoolName>
      <VRF></VRF>
      <Network>
        <NetworkIpv6Address></NetworkIpv6Address>
        <NetworkIpv6PrefixLength></NetworkIpv6PrefixLength>
        <NetworkPreferLifetime></NetworkPreferLifetime>

## Table description

Item	Description
Feature name	DHCP6

Table name	DHCP6ServerIpPool
Table type	Multi-instance table
Row name	Pool
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 0 to 1024.	For the merge, create and replace operations, 0 means to automatically assign a minimum unused index.  For the delete and remove operations, 0 can not be set.
PoolName	IPv6 DHCP address pool name	N/A	String, case-insensitive. Length: 1 to 63 characters.	Required when create a new row, can not be modified.
VRF	VRF instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	If the Ipv6 pool is on the public network, the length of characters is 0.
Network	The configuration of the IPv6 subnet	Data structure	Members include: <ul style="list-style-type: none"> <li>NetworkIpv6Address</li> <li>NetworkIpv6Prefix Length</li> <li>NetworkPreferLifetime</li> <li>NetworkValidLifetime</li> </ul>	N/A
NetworkIpv6Address	IPv6 address prefix	N/A	Hexadecimal string, colon-separated.	Modifying or removing the network configuration deletes the

Column name	Column description	Column type	Data type and restrictions	Remarks
				assigned addresses from the current address pool.
NetworkIpv6PrefixLength	Length of the IPv6 prefix	N/A	Unsigned integer. Value range: 1 to 128.	Must be specified with NetworkIpv6Address.
NetworkPreferredLifetime	The preferred lifetime of the IPv6 subnet	N/A	Unsigned integer. Value range: 60 to 4294967295. Default: 604800.	It must be configured together with NetworkIpv6Address when the configuration of the IPv6 subnet is not exist.
NetworkValidLifetime	The valid lifetime of the IPv6 subnet	N/A	Unsigned integer. Value range: 60 to 4294967295. Default: 2592000.	It must be configured together with NetworkIpv6Address when the configuration of the IPv6 subnet is not exist.  The preferred lifetime can't be longer than the valid lifetime.
NetworkExportRoute	Whether advertise the subnet assigned to IPv6 DHCP clients or not.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false (default)</b></li> </ul>	It must be configured together with NetworkIpv6Address when the configuration of the IPv6 subnet is not exist.
Range	The configuration of the non-temporary IPv6 address range	Data structure	Members include: <ul style="list-style-type: none"> <li>StartIpv6Address</li> <li>EndIpv6Address</li> <li>RangePreferredLifetime</li> <li>RangeValidLifetime</li> </ul>	N/A
StartIpv6Address	The start IPv6 address	N/A	Hexadecimal string, colon-separated.	N/A
EndIpv6Address	The end IPv6 address	N/A	Hexadecimal string, colon-separated.	Must be specified with StartIpv6Address.

Column name	Column description	Column type	Data type and restrictions	Remarks
RangePreferLifetime	The preferred lifetime of the non-temporary IPv6 address range	N/A	Unsigned integer. Value range: 60 to 4294967295. Default: 604800.	It must be configured together with StartIpv6Address when the configuration of the non-temporary IPv6 address range is not exist.  The preferred lifetime can't be longer than the valid lifetime.
RangeValidLifetime	The valid lifetime of the non-temporary IPv6 address range	N/A	Unsigned integer. Value range: 60 to 4294967295. Default: 2592000.	It must be configured together with StartIpv6Address when the configuration of the non-temporary IPv6 address range is not exist.
TempRange	The configuration of the temporary IPv6 address range	Data structure	Members include: <ul style="list-style-type: none"> <li>TempStartIpv6Address</li> <li>TempEndIpv6Address</li> <li>TempRangePreferLifetime</li> <li>TempRangeValidLifetime</li> </ul>	N/A
TempStartIpv6Address	The start IPv6 address	N/A	Hexadecimal string, colon-separated.	N/A
TempEndIpv6Address	The end IPv6 address	N/A	Hexadecimal string, colon-separated.	Must be specified with TempStartIpv6Address.
TempRangePreferLifetime	The preferred lifetime of the temporary IPv6 address range	N/A	Unsigned integer. Value range: 60 to 4294967295. Default: 604800.	It must be configured together with TempStartIpv6Address when the configuration of the temporary IPv6 address range is not exist.

Column name	Column description	Column type	Data type and restrictions	Remarks
				The preferred lifetime can't be longer than the valid lifetime.
TempRangeValidLifetime	The valid lifetime of the temporary IPv6 address range	N/A	Unsigned integer. Value range: 60 to 4294967295. Default: 2592000.	It must be configured together with TempStartIpv6Address when the configuration of the temporary IPv6 address range is not exist.
PrefixPool	The configuration of the prefix pool applied in the IPv6 DHCP address pool	Data structure	Members include: <ul style="list-style-type: none"> <li>PrefixPoolNumber</li> <li>PrefixPoolPreferLifetime</li> <li>PrefixPoolValidLifetime</li> </ul>	N/A
PrefixPoolNumber	Prefix pool number	N/A	Unsigned integer. Value range: 1 to 128	N/A
PrefixPoolPreferLifetime	The preferred lifetime of the prefix pool	N/A	Unsigned integer. Value range: 60 to 4294967295. Default: 604800.	It must be configured together with PrefixPoolNumber when the configuration of the prefix pool is not exist.  The preferred lifetime can't be longer than the valid lifetime.
PrefixPoolValidLifetime	The valid lifetime of the prefix pool	N/A	Unsigned integer. Value range: 60 to 4294967295. Default: 2592000.	It must be configured together with PrefixPoolNumber when the configuration of the prefix pool is not exist.
DomainName	Domain name suffix	N/A	String, case-sensitive. Length: 1 to 50 characters	N/A
GatewayIpv6Addr	Gateway	N/A	String, case-insensitive.	Separated by space if

Column name	Column description	Column type	Data type and restrictions	Remarks
ess	addresses		Length: 1 to 367 characters.	there are multiple addresses.  Specifies a space-separated list of up to eight addresses  Example: 1::1 2::2.
DNSIPv6Address	DNS server addresses	N/A	String, case-insensitive.  Length: 1 to 367 characters.	Separated by space if there are multiple addresses.  Specifies a space-separated list of up to eight addresses  Example: 1::1 2::2.
SIPIPv6Address	SIP server addresses	N/A	String, case-insensitive.  Length: 1 to 367 characters.	Separated by space if there are multiple addresses.  Specifies a space-separated list of up to eight addresses  Example: 1::1 2::2.
SIPDomainName	DNS server domain name	N/A	String, case-insensitive.  Length: 1 to 407 characters.	Separated by space if there are multiple SIP domain name.  The max length of a SIP domain name is 50.  Specifies a space-separated list of up to eight SIP domain names  Example: aa.com bb.com.

# DHCP6/ DHCP6OptionGroup

This table contains IPv6 DHCP option group and self-defined IPv6 DHCP option configuration information.

## XML structure

```
<DHCP6>
  <DHCP6OptionGroup>
    <OptionGroup>
      <GroupNumber></GroupNumber>
      <DNSIPv6Address></DNSIPv6Address>
      <DomainName></DomainName>
      <SIPIpv6Address></SIPIpv6Address>
      <SIPDomainName></SIPDomainName>
    </OptionGroup>
  </DHCP6OptionGroup>
</DHCP6>
```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6OptionGroup
Table type	Multi-instance table
Row name	OptionGroup
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	Group index	Index	Unsigned integer. Value range: 1 to 100	N/A
DNSIPv6Address	DNS server	N/A	String, case-insensitive.	Separated by space if

Column name	Column description	Column type	Data type and restrictions	Remarks
	addresses		Length: 1 to 367 characters.	there are multiple addresses.  Specifies a space-separated list of up to eight addresses  Example: 1::1 2::2.
DomainName	Domain name suffix	N/A	String, case-sensitive.  Length: 1 to 50 characters	N/A
SIPIpv6Address	SIP server addresses	N/A	String, case-insensitive.  Length: 1 to 367 characters.	Separated by space if there are multiple addresses.  Specifies a space-separated list of up to eight addresses  Example: 1::1 2::2.
SIPDomainName	DNS server domain name	N/A	String, case-insensitive.  Length: 1 to 407 characters.	Separated by space if there are multiple SIP domain name.  The max length of a SIP domain name is 50.  Specifies a space-separated list of up to eight SIP domain names  Example: aa.com bb.com.

## DHCP6/ DHCP6OptionGroupOption

This table contains self-defined IPv6 DHCP option configuration information.

## XML structure

```
<DHCP6>
  <DHCP6OptionGroupOption>
    <GroupOption>
      <GroupNumber></GroupNumber>
      <OptionCode></OptionCode>
      <OptionValueHex></OptionValueHex>
    </GroupOption>
  </DHCP6OptionGroupOption>
</DHCP6>
```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6OptionGroupOption
Table type	Multi-instance table
Row name	GroupOption
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	Group index	Index	Unsigned integer. Value range: 1 to 100	The specified GroupNumber must already exist.
OptionCode	Number of the option	Index	Unsigned integer. Value range: 21 to 65535	Following values of OptionCode are forbidden: 25,26,37 to 40 and 43 to 48
OptionValueHex	Option content	N/A	String. case-insensitive. Length: 2 to 256	Length of OptionValueHex must be an even number.

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters.	

## DHCP6/DHCP6RelayPoolRemoteServer

This table contains IPv6 DHCP relay pool remote server configuration information.

### XML structure

```

<DHCP6>
  <DHCP6RelayPoolRemoteServer>
    <RemoteServer>
      <PoolIndex></PoolIndex>
      <RemoteServerIpv6Address></RemoteServerIpv6Address>
      <OutIfIndex></OutIfIndex>
    </RemoteServer>
  </DHCP6RelayPoolRemoteServer>
</DHCP6>

```

### Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6RelayPoolRemoteServer
Table type	Multi-instance table
Row name	RemoteServer
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 1 to 1024.	The specified PoolIndex must already exist.

Column name	Column description	Column type	Data type and restrictions	Remarks
RemoteServerIpv6Address	IPv6 DHCP server address.	Index	Hexadecimal string, colon-separated.	For the merge, create and replace operations, 0::0,0::1 and local multi-cast address are invalid addresses.
OutIfIndex	The outgoing interface for the IPv6 DHCP relay agent to forward packets to the IPv6 DHCP server	Index	Unsigned integer.	If a IPv6 DHCP server address is a link-local address, you must specify an outgoing interface  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.

## DHCP6/DHCP6Config

This table contains IPv6 DHCP DSCP configuration information.

## XML structure

```

<DHCP6>
  <DHCP6Config>
    <DSCP></DSCP>
  </DHCP6Config>
</DHCP6>

```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6Config

Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
DSCP	The DSCP value for IPv6 DHCP packets	N/A	Unsigned integer. Value range: 0 to 63. Default: 56.

## DHCP6/DHCP6ServerPoolStaticAddress

This table contains IPv6 DHCP server pool static address information.

## XML structure

```

<DHCP6>
  <DHCP6ServerPoolStaticAddress>
    <PoolStaticAddress>
      <PoolIndex></PoolIndex>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <DUID></DUID>
      <IAID></IAID>
      <PreferLifetime></PreferLifetime>
      <ValidLifetime></ValidLifetime>
      <Description></Description>
    </PoolStaticAddress>
  </DHCP6ServerPoolStaticAddress>
</DHCP6>

```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerPoolStaticAddress

Table type	Multi-instance table
Row name	PoolStaticAddress
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 1 to 1024.	The specified PoolIndex must already exist.
Ipv6Address	IPv6 address prefix	Index	Hexadecimal string, colon-separated.	N/A
Ipv6PrefixLength	Length of the IPv6 prefix	N/A	Unsigned integer. Value range: 1 to 128.	Required when create a new row, can not be deleted.
DUID	The value is an even hexadecimal number in the range of 2 to 256.	N/A	String, case-insensitive. Length: 2 to 256 characters.	Required when create a new row, can not be deleted.
IAID	The value is a hexadecimal number in the range of 0 to FFFFFFFF	N/A	String, case-insensitive. Length: 8 characters.	If you do not specify an IAID, the server does not match the client IAID for prefix assignment.
PreferLifetime	The preferred lifetime of the IPv6 subnet	N/A	Unsigned integer. Value range: 60 to 4294967295. Default: 604800	The preferred lifetime can't be longer than the valid lifetime.
ValidLifetime	The valid lifetime of the IPv6 subnet	N/A	Unsigned integer. Value range: 60 to 4294967295. Default: 2592000.	N/A
Description	Description of the	N/A	String, case insensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	static binding		Length: 1 to 255 characters.	

## DHCP6/DHCP6ServerPoolStaticPrefix

This table contains IPv6 DHCP server pool static prefix information.

### XML structure

```

<DHCP6>
  <DHCP6ServerPoolStaticPrefix>
    <PoolStaticPrefix>
      <PoolIndex></PoolIndex>
      <Ipv6Prefix>
        <Ipv6Address></Ipv6Address>
        <Ipv6PrefixLength></Ipv6PrefixLength>
      </Ipv6Prefix>
      <DUID></DUID>
      <IAID></IAID>
      <PreferLifetime></PreferLifetime>
      <ValidLifetime></ValidLifetime>
      <Description></Description>
    </PoolStaticPrefix>
  </DHCP6ServerPoolStaticPrefix>
</DHCP6>

```

### Table description

Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 1 to 1024.	The specified PoolIndex must already exist.
Ipv6Prefix	Ipv6Prefix	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv6Address</li> <li>Ipv6PrefixLength</li> </ul>	N/A
Ipv6Address	IPv6 address prefix	Index	Hexadecimal string, colon-separated.	N/A
Ipv6PrefixLength	Length of the IPv6 prefix	Index	Unsigned integer. Value range: 1 to 128.	N/A
DUID	The value is an even hexadecimal number in the range of 2 to 256.	N/A	String, case-insensitive. Length: 2 to 256 characters.	Required when create a new row, can not be deleted.
IAID	The value is a hexadecimal number in the range of 0 to FFFFFFFF	N/A	String, case-insensitive. Length: 8 characters.	If you do not specify an IAID, the server does not match the client IAID for prefix assignment.
PreferLifetime	The preferred lifetime of the IPv6 static prefix	N/A	Unsigned integer. Value range: 60 to 4294967295. Default: 604800	The preferred lifetime can't be longer than the valid lifetime.
ValidLifetime	The valid lifetime of the IPv6 static prefix	N/A	Unsigned integer. Value range: 60 to 4294967295. Default: 2592000.	N/A
Description	Description of the static binding	N/A	String, case insensitive. Length: 1 to 255 characters.	N/A

# DHCP6/DHCP6RelaySrvAddress

This table contains IPv6 DHCP relay server configuration information.

## XML structure

```
<DHCP6>
  <DHCP6RelaySrvAddress>
    <RelaySrvIPv6>
      <IfIndex></IfIndex>
      <Ipv6Address></Ipv6Address>
      <OutIfIndex></OutIfIndex>
    </RelaySrvIPv6>
  </DHCP6RelaySrvAddress>
</DHCP6>
```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6RelaySrvAddress
Table type	Multi-instance table
Row name	RelaySrvIPv6
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr

Column name	Column description	Column type	Data type and restrictions	Remarks
				NETCONF XML API Configuration Reference.
Ipv6Address	IPv6 DHCP DHCP servers IPv6 address on the IPv6 DHCP relay agent.	Index	Hexadecimal string, colon-separated.	For the merge, create and replace operations, 0::0,0::1.and local multi-cast address are invalid addresses.
OutIflIndex	The outgoing interface for the IPv6 DHCP relay agent to forward packets to the IPv6 DHCP server	Index	Unsigned integer.	If a IPv6 DHCP server address is a link-local address, you must specify an outgoing interface

## DHCP6/ DHCP6PrefixPool

This table contains IPv6 DHCP prefix pool configuration information.

### XML structure

```

<DHCP6>
  <DHCP6PrefixPool>
    <PrefixPool>
      <VRF></VRF>
      <PrefixPoolNumber></PrefixPoolNumber>
      <Ipv6Prefix>
        <Ipv6Address></Ipv6Address>
        <Ipv6PrefixLength></Ipv6PrefixLength>
      </Ipv6Prefix>
      <AssignIpv6PrefixLength></AssignIpv6PrefixLength>
    </PrefixPool>
  </DHCP6PrefixPool>
</DHCP6>

```

### Table description

Item	Description
Feature name	DHCP6

Table name	DHCP6PrefixPool
Table type	Multi-instance table
Row name	PrefixPool
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If the prefix pool is on the public network, the length of characters is 0.
PrefixPoolNumber	Prefix pool number	Index	Unsigned integer. Value range: 1 to 128.	N/A
Ipv6Prefix	Ipv6Prefix	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv6Address</li> <li>Ipv6PrefixLength</li> </ul>	N/A
Ipv6Address	IPv6 address	N/A	Hexadecimal string, colon-separated.	Required when create a new row, can not be deleted.
Ipv6PrefixLength	Length of the IPv6 prefix	N/A	Unsigned integer. Value range: 1 to 128.	Required when create a new row, can not be deleted.
AssignIpv6PrefixLength	Length of the assigned IPv6 prefix	N/A	Unsigned integer. Value range: 1 to 128.	Required when create a new row, can not be deleted.  The value can't be shorter than Ipv6PrefixLength. The difference between AssignIpv6PrefixLength and Ipv6PrefixLength can't be greater than 16.

# DHCP6/DHCP6If

This table contains IPv6 DHCP config information on interface.

## XML structure

```
<DHCP6>
  <DHCP6If>
    <IfConfigure>
      <IfIndex></IfIndex>
      <Mode></Mode>
      <ServerAllowHint></ServerAllowHint>
      <ServerRapidCommit></ServerRapidCommit>
      <ServerPreference></ServerPreference>
      <ApplyPoolName></ApplyPoolName>
      <ApplyPoolAllowHint></ApplyPoolAllowHint>
      <ApplyPoolRapidCommit></ApplyPoolRapidCommit>
      <ApplyPoolPreference></ApplyPoolPreference>
      <RelayInterfaceIDMode></RelayInterfaceIDMode>
      <RelayGatewayAddress></RelayGatewayAddress>
    </IfConfigure>
  </DHCP6If>
</DHCP6>
```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6If
Table type	Multi-instance table
Row name	IfConfigure
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support

Column name	Column description	Column type	Data type and restrictions	Remarks
				interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
Mode	DHCPv6 mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—None(default).</li> <li>• <b>1</b>—Server.</li> <li>• <b>2</b>—Relay.</li> </ul>	None means the interface discards IPv6 DHCP packets from IPv6 DHCP clients.
ServerAllowHint	Allow client suggested IPv6 addresses and prefixes.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b>(default).</li> </ul>	N/A
ServerRapidCommit	Enable the rapid commit function.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b>(default).</li> </ul>	N/A
ServerPreference	Specify the server preference.	N/A	Unsigned integer. Value range: 0 to 255, 4294967295. Default: 4294967295	N/A
ApplyPoolName	IPv6 DHCP address pool name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ApplyPoolAllowHint	Allow client suggested IPv6 addresses and prefixes.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b>(default)</li> </ul>	It must be configured together with ApplyPoolName when apply a IPv6 DHCP address pool to an interface.

Column name	Column description	Column type	Data type and restrictions	Remarks
ApplyPoolRapidCommit	Enable the rapid commit function.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b>(default)</li> </ul>	It must be configured together with ApplyPoolName when apply a IPv6 DHCP address pool to an interface.
ApplyPoolPreference	Specify the server preference.	N/A	Unsigned integer. Value range: 0 to 255, 4294967295. Default: 4294967295	It must be configured together with ApplyPoolName when apply a IPv6 DHCP address pool to an interface.
RelayInterfaceID Mode	IPv6 Interface-Id Option	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—None(default).</li> <li><b>1</b>—Bas.</li> <li><b>2</b>—Interface.</li> </ul>	None means the IPv6 DHCP relay agent fills the Interface-ID option with the interface index of the interface.
RelayGatewayAddress	Gateway for DHCPv6 clients	N/A	Hexadecimal string, colon-separated.	N/A

## DHCP6/ DHCP6ServerPoolOption

This table contains IPv6 DHCP server pool option information.

### XML structure

```

<DHCP6>
  <DHCP6ServerPoolOption>
    <PoolOption>
      <PoolIndex></PoolIndex>
      <OptionCode></OptionCode>
      <OptionValueHex></OptionValueHex>
    </PoolOption>
  </DHCP6ServerPoolOption>
</DHCP6>

```

## Table description

# DHCP6

## DHCP6/DHCP6ServerDatabase

This table contains IPv6 DHCP server database information.

### XML structure

```
<DHCP6>
  <DHCP6ServerDatabase>
    <FileName></FileName>
    <URL></URL>
    <Username></Username>
    <Password></Password>
    <UpdateInterval></UpdateInterval>
  </DHCP6ServerDatabase>
</DHCP6>
```

### Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerDatabase
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
FileName	Object file name	N/A	String, case-insensitive. Length: 1 to 255 characters.
URL	Object URL string	N/A	String, case-sensitive. Length: 1 to 255 characters.
Username	FTP username	N/A	String, case-sensitive.

Column name	Column description	Column type	Data type and restrictions
			Length: 1 to 32 characters.
Password	FTP password	N/A	String. case-sensitive. Length: 1 to 32 characters.
UpdateInterval	Auto update interval	N/A	Unsigned integer. Value range: 60 to 864000 seconds.

## DHCP6/DHCP6ServerIpPool

This table contains IPv6 DHCP server pool information.

### XML structure

```

<DHCP6>
  <DHCP6ServerIpPool>
    <Pool>
      <PoolIndex></PoolIndex>
      <PoolName></PoolName>
      <VRF></VRF>
      <Network>
        <NetworkIpv6Address></NetworkIpv6Address>
        <NetworkIpv6PrefixLength></NetworkIpv6PrefixLength>
        <NetworkPreferLifetime></NetworkPreferLifetime>
        <NetworkValidLifetime></NetworkValidLifetime>
        <NetworkExportRoute></NetworkExportRoute>
      </Network>
      <Range>
        <StartIpv6Address></StartIpv6Address>
        <EndIpv6Address></EndIpv6Address>
        <RangePreferLifetime></RangePreferLifetime>
        <RangeValidLifetime></RangeValidLifetime>
      </Range>
      <TempRange>
        <TempStartIpv6Address></TempStartIpv6Address>
        <TempEndIpv6Address></TempEndIpv6Address>
        <TempRangePreferLifetime></TempRangePreferLifetime>
        <TempRangeValidLifetime></TempRangeValidLifetime>
      </TempRange>
      <PrefixPool>
        <PrefixPoolNumber></PrefixPoolNumber>
        <PrefixPoolPreferLifetime></PrefixPoolPreferLifetime>
        <PrefixPoolValidLifetime></PrefixPoolValidLifetime>
      </PrefixPool>
    </Pool>
  </DHCP6ServerIpPool>
</DHCP6>

```

```

    <DomainName></DomainName>
    <GatewayIpv6Address></GatewayIpv6Address>
    <DNSIpv6Address></DNSIpv6Address>
    <SIPIpv6Address></SIPIpv6Address>
    <SIPDomainName></SIPDomainName>
  </Pool>
</DHCP6ServerIpPool>
</DHCP6>

```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerIpPool
Table type	Multi-instance table
Row name	Pool
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 1 to 1024.	N/A
PoolName	IPv6 DHCP address pool name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
VRF	VRF instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	If the Ipv6 pool is on the public network, the length of characters is 0.
Network	The configuration of the IPv6 subnet	Data structure	Members include: <ul style="list-style-type: none"> <li>NetworkIpv6Address</li> <li>NetworkIpv6PrefixLength</li> <li>NetworkPreferLifet</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			ime <ul style="list-style-type: none"> <li>NetworkValidLifetime</li> </ul>	
NetworkIpv6Address	IPv6 address prefix	N/A	Hexadecimal string, colon-separated.	N/A
NetworkIpv6PrefixLength	Length of the IPv6 prefix	N/A	Unsigned integer. Value range: 1 to 128.	N/A
NetworkPreferredLifetime	The preferred lifetime of the IPv6 subnet	N/A	Unsigned integer. Value range: 60 to 4294967295.	N/A
NetworkValidLifetime	The valid lifetime of the IPv6 subnet	N/A	Unsigned integer. Value range: 60 to 4294967295.	N/A
NetworkExportRoute	Whether advertise the subnet assigned to DHCPv6 clients or not.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
Range	The configuration of the non-temporary IPv6 address range	Data structure	Members include: <ul style="list-style-type: none"> <li>StartIpv6Address</li> <li>EndIpv6Address</li> <li>RangePreferredLifetime</li> <li>RangeValidLifetime</li> </ul>	N/A
StartIpv6Address	The start IPv6 address	N/A	Hexadecimal string, colon-separated.	N/A
EndIpv6Address	The end IPv6 address	N/A	Hexadecimal string, colon-separated.	N/A
RangePreferredLifetime	The preferred lifetime of the non-temporary IPv6 address range	N/A	Unsigned integer. Value range: 60 to 4294967295.	N/A .
RangeValidLifetime	The valid lifetime	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
me	of the non-temporary IPv6 address range		Value range: 60 to 4294967295.	
TempRange	The configuration of the temporary IPv6 address range	Data structure	Members include: <ul style="list-style-type: none"> <li>TempStartIpv6Address</li> <li>TempEndIpv6Address</li> <li>TempRangePreferredLifetime</li> <li>TempRangeValidLifetime</li> </ul>	N/A
TempStartIpv6Address	The start IPv6 address	N/A	Hexadecimal string, colon-separated.	N/A
TempEndIpv6Address	The end IPv6 address	N/A	Hexadecimal string, colon-separated.	N/A
TempRangePreferredLifetime	The preferred lifetime of the temporary IPv6 address range	N/A	Unsigned integer. Value range: 60 to 4294967295.	N/A
TempRangeValidLifetime	The valid lifetime of the temporary IPv6 address range	N/A	Unsigned integer. Value range: 60 to 4294967295.	N/A
PrefixPool	The configuration of the prefix pool applied in the IPv6 DHCP address pool	Data structure	Members include: <ul style="list-style-type: none"> <li>PrefixPoolNumber</li> <li>PrefixPoolPreferredLifetime</li> <li>PrefixPoolValidLifetime</li> </ul>	N/A
PrefixPoolNumber	Prefix pool number	N/A	Unsigned integer. Value range: 1 to 128	N/A
PrefixPoolPreferredLifetime	The preferred lifetime of the	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	prefix pool		Value range: 60 to 4294967295.	
PrefixPoolValidLifetime	The valid lifetime of the prefix pool	N/A	Unsigned integer. Value range: 60 to 4294967295.	N/A
DomainName	Domain name suffix	N/A	String, case-sensitive. Length: 1 to 50 characters	N/A
GatewayIpv6Address	Gateway addresses	N/A	String, case-insensitive. Length: 1 to 367 characters.	Seperated by space if there are multiple addresses. Example: 1::1 2::2.
DNSIpv6Address	DNS server addresses	N/A	String, case-insensitive. Length: 1 to 367 characters.	Seperated by space if there are multiple addresses. Example: 1::1 2::2.
SIPIpv6Address	SIP server addresses	N/A	String, case-insensitive. Length: 1 to 367 characters.	Seperated by space if there are multiple addresses. Example: 1::1 2::2.
SIPDomainName	DNS server domain name	N/A	String, case-sensitive. Length: 1 to 407 characters.	Seperated by space if there are multiple SIP domain name. The max length of a SIP domain name is 50. Example: aa.com bb.com.

## DHCP6/DHCP6OptionGroup

This table contains IPv6 DHCP option group and self-defined IPv6 DHCP option configuration information.

## XML structure

```
<DHCP6>
  <DHCP6OptionGroup>
    <OptionGroup>
      <GroupNumber></GroupNumber>
      <DNSIPv6Address></DNSIPv6Address>
      <DomainName></DomainName>
      <SIPIpv6Address></SIPIpv6Address>
      <SIPDomainName></SIPDomainName>
    </OptionGroup>
  </DHCP6OptionGroup>
</DHCP6>
```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6OptionGroup
Table type	Multi -instance table
Row name	OptionGroup
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	Group index	Index	Unsigned integer. Value range: 1 to 100	N/A
DNSIPv6Address	DNS server addresses	N/A	String, case-insensitive. Length: 1 to 367 characters.	Separated by space if there are multiple addresses. Specifies a space-separated list of up to eight addresses

Column name	Column description	Column type	Data type and restrictions	Remarks
				Example: 1::1 2::2.
DomainName	Domain name suffix	N/A	String, case-sensitive. Length: 1 to 50 characters	N/A
SIPIpv6Address	SIP server addresses	N/A	String, case-insensitive. Length: 1 to 367 characters.	Separated by space if there are multiple addresses. Specifies a space-separated list of up to eight addresses Example: 1::1 2::2.
SIPDomainName	DNS server domain name	N/A	String, case-insensitive. Length: 1 to 407 characters.	Separated by space if there are multiple SIP domain name. The max length of a SIP domain name is 50. Specifies a space-separated list of up to eight SIP domain names Example: aa.com bb.com.

## DHCP6/DHCP6OptionGroupOption

This table contains self-defined IPv6 DHCP option configuration information.

### XML structure

```

<DHCP6>
  <DHCP6OptionGroupOption>
    <GroupOption>
      <GroupNumber></GroupNumber>
      <OptionCode></OptionCode>
    </GroupOption>
  </DHCP6OptionGroupOption>
</DHCP6>

```

```

        <OptionValueHex></OptionValueHex>
    </GroupOption>
</DHCP6OptionGroupOption>
</DHCP6>

```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6OptionGroupOption
Table type	Multi -instance table
Row name	GroupOption
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
GroupNumber	Group index	Index	Unsigned integer. Value range: 1 to 100
OptionCode	Number of the option	Index	Unsigned integer. Value range: 21 to 65535
OptionValueHex	Option content	N/A	String. case-insensitive. Length: 2 to 256 characters.

## DHCP6/DHCP6RelayPoolRemoteServer

This table contains IPv6 DHCP relay pool remote server configuration information.

## XML structure

```

<DHCP6>
  <DHCP6RelayPoolRemoteServer>
    <RemoteServer>
      <PoolIndex></PoolIndex>
      <RemoteServerIpv6Address></RemoteServerIpv6Address>
    </RemoteServer>
  </DHCP6RelayPoolRemoteServer>
</DHCP6>

```

```

        <OutIfIndex></OutIfIndex>
    </RemoteServer>
</DHCP6RelayPoolRemoteServer>
</DHCP6>

```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6RelayPoolRemoteServer
Table type	Multi -instance table
Row name	RemoteServer
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 1 to 1024.
RemoteServerIpv6Address	IPv6 DHCP server address.	Index	Hexadecimal string, colon-separated.
OutIfIndex	The outgoing interface for the IPv6 DHCP relay agent to forward packets to the DHCPv6 server	Index	Unsigned integer.

## DHCP6/DHCP6Config

This table contains IPv6 DHCP DSCP configuration information.

## XML structure

```
<DHCP6>
```

```

<DHCP6Config>
  <DSCP></DSCP>
</DHCP6Config>
</DHCP6>

```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6Config
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
DSCP	The DSCP value for IPv6 DHCP packets	N/A	Unsigned integer. Value range: 0 to 63.

# DHCP6/DHCP6ServerPoolStaticAddress

This table contains IPv6 DHCP server pool static address information.

## XML structure

```

<DHCP6>
  <DHCP6ServerPoolStaticAddress>
    <PoolStaticAddress>
      <PoolIndex></PoolIndex>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <DUID></DUID>
      <IAID></IAID>
      <PreferLifetime></PreferLifetime>
      <ValidLifetime></ValidLifetime>
      <Description></Description>
    </PoolStaticAddress>
  </DHCP6ServerPoolStaticAddress>

```

</DHCP6>

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerPoolStaticAddress
Table type	Multi-instance table
Row name	PoolStaticAddress
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 1 to 1024.
Ipv6Address	IPv6 address prefix	Index	Hexadecimal string, colon-separated.
Ipv6PrefixLength	Length of the IPv6 prefix	N/A	Unsigned integer. Value range: 1 to 128.
DUID	The value is an even hexadecimal number in the range of 2 to 256.	N/A	String, case-insensitive. Length: 2 to 256 characters.
IAID	The value is a hexadecimal number in the range of 0 to FFFFFFFF	N/A	String, case-insensitive. Length: 8 characters.
PreferLifetime	The preferred lifetime of the IPv6 subnet	N/A	Unsigned integer. Value range: 60 to 4294967295.
ValidLifetime	The valid lifetime of the IPv6 subnet	N/A	Unsigned integer. Value range: 60 to 4294967295.
Description	Description of the static binding	N/A	String, case insensitive. Length: 1 to 255 characters.

# DHCP6/DHCP6ServerPoolStaticPrefix

This table contains IPv6 DHCP server pool static prefix information.

## XML structure

```
<DHCP6>
  <DHCP6ServerPoolStaticPrefix>
    <PoolStaticPrefix>
      <PoolIndex></PoolIndex>
      <Ipv6Prefix>
        <Ipv6Address></Ipv6Address>
        <Ipv6PrefixLength></Ipv6PrefixLength>
      </Ipv6Prefix>
      <DUID></DUID>
      <IAID></IAID>
      <PreferLifetime></PreferLifetime>
      <ValidLifetime></ValidLifetime>
      <Description></Description>
    </PoolStaticPrefix>
  </DHCP6ServerPoolStaticPrefix>
</DHCP6>
```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerPoolStaticPrefix
Table type	Multi-instance table
Row name	PoolStaticPrefix
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 1 to 1024.

Column name	Column description	Column type	Data type and restrictions
Ipv6Prefix	Ipv6Prefix	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv6Address</li> <li>Ipv6PrefixLength</li> </ul>
Ipv6Address	IPv6 address prefix	Index	Hexadecimal string, colon-separated.
Ipv6PrefixLength	Length of the IPv6 prefix	Index	Unsigned integer. Value range: 1 to 128.
DUID	The value is an even hexadecimal number in the range of 2 to 256.	N/A	String, case-insensitive. Length: 2 to 256 characters.
IAID	The value is a hexadecimal number in the range of 0 to FFFFFFFF	N/A	String, case-insensitive. Length: 8 characters.
PreferLifetime	The preferred lifetime of the IPv6 static prefix	N/A	Unsigned integer. Value range: 60 to 4294967295.
ValidLifetime	The valid lifetime of the IPv6 static prefix	N/A	Unsigned integer. Value range: 60 to 4294967295.
Description	Description of the static binding	N/A	String, case insensitive. Length: 1 to 255 characters.

## DHCP6/DHCP6RelaySrvAddress

This table contains IPv6 DHCP relay server configuration information.

### XML structure

```

<DHCP6>
  <DHCP6RelaySrvAddress>
    <RelaySrvIPv6>
      <IfIndex></IfIndex>
      <Ipv6Address></Ipv6Address>
      <OutIfIndex></OutIfIndex>
    </RelaySrvIPv6>
  </DHCP6RelaySrvAddress>
</DHCP6>

```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6RelaySrvAddress
Table type	Multi-instance table
Row name	RelaySrvIPv6
Restrictions	This table supports only Layer 3 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Unsigned integer.
Ipv6Address	IPv6 DHCP servers IPv6 address on the IPv6 DHCP relay agent.	Index	Hexadecimal string, colon-separated.
OutIfIndex	The outgoing interface for the IPv6 DHCP relay agent to forward packets to the IPv6 DHCP server	Index	Unsigned integer.

## DHCP6/ DHCP6PrefixPool

This table contains IPv6 DHCP prefix pool configuration information.

## XML structure

```
<DHCP6>
  <DHCP6PrefixPool>
    <PrefixPool>
      <VRF></VRF>
      <PrefixPoolNumber></PrefixPoolNumber>
      <Ipv6Prefix>
        <Ipv6Address></Ipv6Address>
        <Ipv6PrefixLength></Ipv6PrefixLength>
      </Ipv6Prefix>
    </PrefixPool>
  </DHCP6PrefixPool>
</DHCP6>
```

```

    <AssignIpv6PrefixLength></AssignIpv6PrefixLength>
  </PrefixPool>
</DHCP6PrefixPool>
</DHCP6>

```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6PrefixPool
Table type	Multi-instance table
Row name	PrefixPool
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case-sensitive. Length: 1 to 31 characters.	If the prefix pool is on the public network, the length of characters is 0.
PrefixPoolNumber	Prefix pool number	Index	Unsigned integer. Value range: 1 to 128.	N/A
Ipv6Prefix	Ipv6Prefix	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv6Address</li> <li>Ipv6PrefixLength</li> </ul>	N/A
Ipv6Address	IPv6 address	N/A	Hexadecimal string, colon-separated.	N/A
Ipv6PrefixLength	Length of the IPv6 prefix	N/A	Unsigned integer. Value range: 1 to 128.	N/A
AssignIpv6PrefixLength	Length of the assigned IPv6 prefix	N/A	Unsigned integer. Value range: 1 to 128.	N/A

# DHCP6/DHCP6If

This table contains IPv6 DHCP config information on interface.

## XML structure

```
<DHCP6>
  <DHCP6If>
    <IfConfigure>
      <IfIndex></IfIndex>
      <Mode></Mode>
      <ServerAllowHint></ServerAllowHint>
      <ServerRapidCommit></ServerRapidCommit>
      <ServerPreference></ServerPreference>
      <ApplyPoolName></ApplyPoolName>
      <ApplyPoolAllowHint></ApplyPoolAllowHint>
      <ApplyPoolRapidCommit></ApplyPoolRapidCommit>
      <ApplyPoolPreference></ApplyPoolPreference>
      <RelayInterfaceIDMode></RelayInterfaceIDMode>
      <RelayGatewayAddress></RelayGatewayAddress>
    </IfConfigure>
  </DHCP6If>
</DHCP6>
```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6If
Table type	Multi-instance table
Row name	IfConfigure
Restrictions	This table supports only Layer 3 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Mode	DHCPv6 mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—None.</li> <li>• <b>1</b>—Server.</li> <li>• <b>2</b>—Relay.</li> </ul>	None means the interface discards IPv6 DHCP packets from IPv6 DHCP clients.
ServerAllowHint	Allow client suggested IPv6 addresses and prefixes.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
ServerRapidCommit	Enable the rapid commit function.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	N/A
ServerPreference	Specify the server preference.	N/A	Unsigned integer. Value range: 0 to 255, 4294967295.	N/A
ApplyPoolName	IPv6 DHCP address pool name	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
ApplyPoolAllowHint	Allow client suggested IPv6 addresses and prefixes.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	It must be configured together with ApplyPoolName when apply a IPv6 DHCP address pool to an interface.
ApplyPoolRapidCommit	Enable the rapid commit function.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b></li> </ul>	It must be configured together with ApplyPoolName when apply a IPv6 DHCP address pool to an interface.
ApplyPoolPreference	Specify the server preference.	N/A	Unsigned integer. Value range: 0 to 255, 4294967295.	It must be configured together with ApplyPoolName when apply a IPv6 DHCP address pool to an interface.

Column name	Column description	Column type	Data type and restrictions	Remarks
RelayInterfaceID Mode	IPv6 Interface-Id Option	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—None.</li> <li>• <b>1</b>—Bas.</li> <li>• <b>2</b>—Interface.</li> </ul>	None means the IPv6 DHCP relay agent fills the Interface-ID option with the interface index of the interface.
RelayGatewayAddress	Gateway for DHCPv6 clients	N/A	Hexadecimal string, colon-separated.	N/A

## DHCP6/DHCP6ServerIpInUse

This table contains binding information about assigned IPv6 addresses.

### XML structure

```

<DHCP6>
  <DHCP6ServerIpInUse>
    <IpInUse>
      <PoolIndex></PoolIndex>
      <Ipv6Address></Ipv6Address>
      <Type></Type>
      <EndLease></EndLease>
      <ClientIPv6Address></ClientIPv6Address>
      <DUID></DUID>
      <IAID></IAID>
      <PreferLifetime></PreferLifetime>
      <ValidLifetime></ValidLifetime>
    </IpInUse>
  </DHCP6ServerIpInUse>
</DHCP6>

```

### Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerIpInUse
Table type	Multi-instance table
Row name	IpInUse
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 1 to 1024.
Ipv6Address	IPv6 address prefix	Index	Hexadecimal string, colon-separated.
Type	IPv6 address binding types	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Static(F).</li> <li>• <b>1</b>—Static(O).</li> <li>• <b>2</b>—Static(C)..</li> <li>• <b>3</b>—Auto(E)</li> <li>• <b>4</b>—Auto(O)</li> <li>• <b>5</b>—Auto(C)</li> </ul>
EndLease	Time when the lease of the IPv6 address will expire.	N/A	String, case-sensitive. Length: 1 to 19 characters.
ClientIPv6Addresses	Client IPv6 address	N/A	Hexadecimal string, colon-separated.
DUID	The value is an even hexadecimal number in the range of 2 to 256.	N/A	String, case-insensitive. Length: 2 to 256 characters.
IAID	The value is a hexadecimal number in the range of 0 to FFFFFFFF	N/A	String, case-insensitive. Length: 8 characters.
PreferLifetime	Preferred lifetime in seconds of the IPv6 address	N/A	Unsigned integer. Value range: 60 to 4294967295.
ValidLifetime	Valid lifetime in seconds of the IPv6 address	N/A	Unsigned integer. Value range: 60 to 4294967295.

## DHCP6/DHCP6ServerPDInUse

This table contains prefix binding information about assigned IPv6 addresses.

## XML structure

```
<DHCP6>
  <DHCP6ServerPDInUse>
    <PDInUse>
      <PoolIndex></PoolIndex>
      <Ipv6Prefix>
        <Ipv6Address></Ipv6Address>
        <Ipv6PrefixLength></Ipv6PrefixLength>
      </Ipv6Prefix>
      <Type></Type>
      <EndLease></EndLease>
      <ClientIPv6Address></ClientIPv6Address>
      <DUID></DUID>
      <IAID></IAID>
      <PreferLifetime></PreferLifetime>
      <ValidLifetime></ValidLifetime>
    </PDInUse>
  </DHCP6ServerPDInUse>
</DHCP6>
```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerPDInUse
Table type	Multi-instance table
Row name	PDInUse
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 1 to 1024.
Ipv6Prefix	Ipv6Prefix	Data structure	Members include: <ul style="list-style-type: none"><li>Ipv6Address</li><li>Ipv6PrefixLength</li></ul>

Column name	Column description	Column type	Data type and restrictions
Ipv6Address	IPv6 address prefix	Index	Hexadecimal string, colon-separated.
Ipv6PrefixLength	Length of the IPv6 prefix	Index	Unsigned integer. Value range: 1 to 128.
Type	IPv6 address binding types	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Static(F).</li> <li>• <b>1</b>—Static(O).</li> <li>• <b>2</b>—Static(C)..</li> <li>• <b>3</b>—Auto(E)</li> <li>• <b>4</b>—Auto(O)</li> <li>• <b>5</b>—Auto(C)</li> </ul>
EndLease	Time when the lease of the IPv6 address will expire.	N/A	String, case-sensitive. Length: 1 to 19 characters.
ClientIPv6Addresses	Client IPv6 address	N/A	Hexadecimal string, colon-separated.
DUID	The value is an even hexadecimal number in the range of 2 to 256.	N/A	String, case-insensitive. Length: 2 to 256 characters.
IAID	The value is a hexadecimal number in the range of 0 to FFFFFFFF	N/A	String, case-insensitive. Length: 8 characters.
PreferLifetime	Preferred lifetime in seconds of the IPv6 prefix	N/A	Unsigned integer. Value range: 60 to 4294967295.
ValidLifetime	Valid lifetime in seconds of the IPv6 prefix	N/A	Unsigned integer. Value range: 60 to 4294967295.

## DHCP6/ DHCP6ServerPoolOption

This table contains IPv6 DHCP server pool option information.

### XML structure

```

<DHCP6>
  <DHCP6ServerPoolOption>
    <PoolOption>

```

```

    <PoolIndex></PoolIndex>
    <OptionCode></OptionCode>
    <OptionValueHex></OptionValueHex>
  </PoolOption>
</DHCP6ServerPoolOption>
</DHCP6>

```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6ServerPoolOption
Table type	Multi-instance table
Row name	PoolOption
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
PoolIndex	IPv6 DHCP address pool index	Index	Unsigned integer. Value range: 1 to 1024.
OptionCode	Number of the option	Index	Unsigned integer. Value range: 21 to 65535
OptionValueHex	Option content	N/A	String. case-insensitive. Length: 2 to 256 characters.

# DHCPC

## DHCPC/DHCPConfig

This table contains DHCP client configuration information.

### XML structure

```
<DHCPC>
  <DHCPConfig>
    <DadEnable></DadEnable>
    <DSCP></DSCP>
  </DHCPConfig>
</DHCPC>
```

### Table description

Item	Description
Feature name	DHCPC
Table name	DHCPConfig
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DadEnable	Whether the function of duplicated address detection is enabled	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b> (default)</li><li>• <b>false</b></li></ul>	N/A
DSCP	Set the DSCP value for DHCP packets sent by the DHCP client	N/A	Unsigned integer. Value range: 0 to 63. Default: 56.	A bigger DSCP value represents a higher priority.

## DHCPC/DHCPAlloc

This table contains the information about using DHCP for IP address acquisition.

## XML structure

```
<DHCPC>
  <DHCPAlloc>
    <Alloc>
      <IfIndex></IfIndex>
      <AllocEnable></AllocEnable>
    </Alloc>
  </DHCPAlloc>
</DHCPC>
```

## Table description

Item	Description
Feature name	DHCPC
Table name	DHCPAlloc
Table type	Multi-instance table
Row name	Alloc
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
AllocEnable	Whether the function of the interface to use DHCP for IP address acquisition is enabled	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b> (default)</li></ul>	N/A

## DHCPClientID

This table contains DHCP client ID configuration information.

## XML structure

```
<DHCPC>
  <DHCPClientID>
    <ClientID>
      <IfIndex></IfIndex>
      <ASCII></ASCII>
      <Hex></Hex>
      <ClientIfIndex></ClientIfIndex>
    </ClientID>
  </DHCPClientID>
</DHCPC>
```

## Table description

Item	Description
Feature name	DHCP
Table name	DHCPClientID
Table type	Multi-instance table
Row name	ClientID
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
ASCII	DHCP Client ID in ASCII code type	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must be ASCII string.	This column cannot be configured with Hex column or ClientIfIndex column together.

Column name	Column description	Column type	Data type and restrictions	Remarks
Hex	DHCP Client ID in hex code type	N/A	Hexadecimal string. Length: 4 to 64 characters.	This column cannot be configured with ASCII column or ClientIfIndex column together.
ClientIfIndex	Uses the MAC address of interface as a DHCP client ID	N/A	Unsigned integer.	Only Layer 3 interfaces are supported. This column cannot be configured with ASCII column or Hex column together.

## DHCPC/BootpAlloc

This table contains the information about using BOOTP for IP address acquisition.

### XML structure

```

<DHCPC>
  <BootpAlloc>
    <Alloc>
      <IfIndex></IfIndex>
      <AllocEnable></AllocEnable>
    </Alloc>
  </BootpAlloc>
</DHCPC>

```

### Table description

Column name	Column description	Column type	Data type and restrictions	Remarks
				information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
PrefixNumber	IPv6 prefix ID	N/A	Unsigned integer. Value range: 1 to 1024.	No prefix ID as default. After obtaining an IPv6 prefix, the client assigns the ID to the IPv6 prefix.
OptionGroup	Enables the DHCPv6 client to create a dynamic DHCPv6 option group for saving the configuration parameters, and assigns an ID to the option group	N/A	Unsigned integer. Value range: 1 to 100.	DHCPv6 client does not create any dynamic DHCPv6 option groups as default. This column is available when the PrefixNumber column is <b>set</b> .
RapidCommit	Whether rapid address or prefix assignment is supported	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default)</li> </ul>	This column is available when the PrefixNumber column is <b>set</b> .

## DHCPC6/DHCP6Stateless

This table contains stateless DHCPv6 configuration information.

### XML structure

```

<DHCPC6>
  <DHCP6Stateless>
    <Stateless>
      <IfIndex></IfIndex>
      <StatelessEnable></StatelessEnable>
    </Stateless>
  </DHCP6Stateless>
</DHCPC6>

```

### Table description

Item	Description
Feature name	DHCPC6
Table name	DHCP6Stateless
Table type	Multi-instance table
Row name	Stateless
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface view

	Layer 3 aggregate interface/subinterface view VLAN interface view
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
StatelessEnable	Whether the function of stateless DHCPv6 is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default)</li> </ul>	N/A

# DHCPC6

## DHCPC6/DHCPC6Config

This table contains DHCPv6 client configuration information.

### XML structure

```
<DHCPC6>
  <DHCPC6Config>
    <DSCP></DSCP>
  </DHCPC6Config>
</DHCPC6>
```

### Table description

Item	Description
Feature name	DHCPC6
Table name	DHCPC6Config
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DSCP	Set DSCP value for DHCPv6 packets sent by the DHCPv6 client	N/A	Unsigned integer. Value range: 0 to 63.	A bigger DSCP value represents a higher priority.

## DHCPC6/DHCP6Alloc

This table contains the information about using DHCPv6 for IPv6 address acquisition.

### XML structure

```
<DHCPC6>
  <DHCP6Alloc>
    <Alloc>
      <IfIndex></IfIndex>
      <AllocEnable></AllocEnable>
    </Alloc>
  </DHCP6Alloc>
</DHCPC6>
```

```

    <OptionGroup></OptionGroup>
    <RapidCommit></RapidCommit>
  </Alloc>
</DHCP6Alloc>
</DHCP6>

```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6Alloc
Table type	Multi-instance table
Row name	Alloc
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface view Layer 3 aggregate interface/subinterface view VLAN interface view

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	N/A
AllocEnable	Whether the function of the interface to use DHCPv6 for IPv6 address acquisition is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
OptionGroup	Enables the DHCPv6 client to create a dynamic DHCPv6 option group for saving the configuration parameters, and assigns an ID to the option group	N/A	Unsigned integer. Value range: 1 to 100.	This column is available when the AllocEnable column is <b>true</b> .
RapidCommit	Whether rapid address or prefix assignment is supported	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	This column is available when the AllocEnable column is <b>true</b> .

## DHCP6/DHCP6PrefixDelegation

This table contains the information about using DHCPv6 for IPv6 prefix acquisition.

## XML structure

```
<DHCP6>
  <DHCP6PrefixDelegation>
    <PrefixDelegation>
      <IfIndex></IfIndex>
      <PrefixNumber></PrefixNumber>
      <OptionGroup></OptionGroup>
      <RapidCommit></RapidCommit>
    </PrefixDelegation>
  </DHCP6PrefixDelegation>
</DHCP6>
```

## Table description

Item	Description
Feature name	DHCP6
Table name	DHCP6PrefixDelegation
Table type	Multi-instance table
Row name	PrefixDelegation
Restrictions	This table supports interface types: Layer 3 Ethernet interface/subinterface view Layer 3 aggregate interface/subinterface view VLAN interface view

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	N/A
PrefixNumber	IPv6 prefix ID	N/A	Unsigned integer. Value range: 1 to 1024.	After obtaining an IPv6 prefix, the client assigns the ID to the IPv6 prefix.

Column name	Column description	Column type	Data type and restrictions	Remarks
OptionGroup	Enables the DHCPv6 client to create a dynamic DHCPv6 option group for saving the configuration parameters, and assigns an ID to the option group	N/A	Unsigned integer. Value range: 1 to 100.	This column is available when the PrefixNumber column is <b>set</b> .
RapidCommit	Whether rapid address or prefix assignment is supported	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	This column is available when the PrefixNumber column is <b>set</b> .

## DHCPC6/DHCP6Stateless

This table contains stateless DHCPv6 configuration information.

### XML structure

```

<DHCPC6>
  <DHCP6Stateless>
    <Stateless>
      <IfIndex></IfIndex>
      <StatelessEnable></StatelessEnable>
    </Stateless>

--	--

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	N/A
Type	Types of DHCPv6 client	Index	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Stateless client.</li> <li>• <b>1</b>—Stateful client requesting prefix.</li> <li>• <b>2</b>—Stateful client requesting address.</li> </ul>	N/A
State	Current states of the DHCPv6 client	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—IDLE.</li> <li>• <b>1</b>—SOLICIT.</li> <li>• <b>2</b>—REQUEST.</li> <li>• <b>3</b>—OPEN.</li> <li>• <b>4</b>—RENEW.</li> <li>• <b>5</b>—REBIND.</li> <li>• <b>6</b>—RELEASE.</li> <li>• <b>7</b>—DECLINE.</li> <li>• <b>8</b>—INFO-REQUESTING.</li> </ul>	N/A
IAID	IA identifier	N/A	Hexadecimal string. Length: 1 to 10 characters.	N/A
ClientDUID	DUID of the DHCPv6 client	N/A	Hexadecimal string. Length: 4 to 64 characters.	N/A
ReachableVialpv6Address	Reachable address for the DHCPv6 client. It is the link local address of the DHCPv6 server or DHCPv6 relay agent	N/A	Hexadecimal string, colon-separated.	N/A
Ipv6Address	IPv6 address obtained.	N/A	Hexadecimal string, colon-separated.	This column is not available when the DHCPv6 client type is Stateless client.
Ipv6PrefixLength	IPv6 prefix length obtained.	N/A	Unsigned integer. Value range: 1 to 128.	This column is not available when the DHCPv6 client type is Stateless client.
DNSServer	IPv6 address of the DNS server	N/A	String, case insensitive.	Separated by space if there are multiple

Column name	Column description	Column type	Data type and restrictions	Remarks
				addresses. Example: 1::1 2::2 3::3.
DomainName	Domain name suffix	N/A	String, case insensitive. Length: 1 to 50 characters.	N/A
PreferredLifetime	Preferred lifetime in seconds	N/A	Unsigned integer.	N/A
ValidLifetime	Valid lifetime in seconds	N/A	Unsigned integer.	N/A
T1	T1 time value in seconds	N/A	Unsigned integer.	N/A
T2	T2 time value in seconds	N/A	Unsigned integer.	N/A

## DHCPSP/DHCPSPUpdateBindingDatabase

This table is used to save current DHCP snooping entries to the file.

### XML structure

```
<DHCPSP>
  <DHCPSPUpdateBindingDatabase>
    <Update></Update>
  </DHCPSPUpdateBindingDatabase>
</DHCPSP>
```

### Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPUpdateBindingDatabase
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Update	Update DHCP snooping database immediately	N/A	String.	This column must be empty.

## DHCPSP/DHCPSPClearBinding

This table is used to clear DHCP snooping entries.

### XML structure

```
<DHCPSP>
  <DHCPSPClearBinding>
    <ClearBinding>
      <Ipv4Address></Ipv4Address>
      <VLANID></VLANID>
    </ClearBinding>
  </DHCPSPClearBinding>
</DHCPSP>
```

```

        </ClearBinding>
    </DHCPSPClearBinding>
</DHCPSP>

```

## Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPUpdateBindingDatabase
Table type	Multi-instance table
Row name	ClearBinding
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.	If Ipv4Address is empty, clears all DHCP snooping entries.
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	If VLANID is empty, clears the DHCP snooping entry for the specified IP address in all Vlan.

# DHCPSP

## DHCPSP/DHCPSPBindingDatabase

This table contains DHCP snooping binding database configuration information.

### XML structure

```
<DHCPSP>
  <DHCPSPBindingDatabase>
    <FileName></FileName>
    <URL></URL>
    <Username></Username>
    <Password></Password>
    <UpdateInterval></UpdateInterval>
  </DHCPSPBindingDatabase>
</DHCPSP>
```

### Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPBindingDatabase
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Database file name	N/A	String, case-insensitive. Length: 1 to 255 characters.	For the merge, create and replace operations, FileName and URL cannot be configured simultaneously.

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	Object URL string	N/A	String. case sensitive. Length: 1 to 255 characters.	Specifies the URL of a remote file. Do not include a username or password in the URL. Case sensitivity and the supported format type of the path depend on the server.  If URL is configured for the delete and remove operations, Username and Password will be removed automatically.
Username	FTP username	N/A	String. case sensitive. Length: 1 to 32 characters.	Cannot be configured for the delete and remove operations.
Password	FTP password	N/A	String. case sensitive. Length: 1 to 32 characters.	Only plaintext password is supported.  For the merge, create and replace operations, Password must be configured with Username.  Cannot be configured for the delete and remove operations.
UpdateInterval	Auto update interval	N/A	Unsigned integer. Value range: 60 to 864000 seconds. Default: 300 seconds.	N/A

## DHCPSP/DHCPSPInterface

This table contains the configuration information on interface about using DHCP snooping.

## XML structure

```
<DHCPSP>
  <DHCPSPInterface>
    <Interface>
      <IfIndex></IfIndex>
      <BindingRecord></BindingRecord>
      <CheckMacAddress></CheckMacAddress>
      <CheckRequestMessage></CheckRequestMessage>
      <Trust></Trust>
      <LearnMaxNum></LearnMaxNum>
      <RateLimitNum></RateLimitNum>
    </Interface>
  </DHCPSPInterface>
</DHCPSP>
```

## Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPInterface
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface Layer 3 Ethernet interface/subinterface Layer 3 aggregate interface/aggregate subinterface S-channel interface/S-channel aggregate interface
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document

Column name	Column description	Column type	Data type and restrictions	Remarks
				of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
BindingRecord	Whether enable the interface to record DHCP snooping entry or not.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b> (default)</li> </ul>	Applicable to only Layer 2 interfaces of the Restrictions.
CheckMacAddresses	Whether enable the interface to check MAC address in DHCP packets or not.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b>(default)</li> </ul>	N/A
CheckRequestMessage	Whether enable the interface to check request message in DHCP packets or not.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b> (default)</li> </ul>	Applicable to only Layer 2 interfaces of the Restrictions.
Trust	Whether to configure an interface as a trusted interface.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b> (default)</li> </ul>	N/A
LearnMaxNum	The maximum number of DHCP snooping entries for an interface to learn	N/A	Unsigned integer. Value range: 0 to 4294967295.	No limit as default. 0 means No limit.
RateLimitNum	The maximum rate for an interface to receive DHCP packets, in Kbps	N/A	Unsigned integer. Value range: 0, RateLimitMinNum to RateLimitMaxNum.	Values of RateLimitMinNum and RateLimitMaxNum depend on the device model.  Applicable to only Layer 2 interfaces of the Restrictions.

Column name	Column description	Column type	Data type and restrictions	Remarks
				No limit as default. 0 means No limit.

## DHCPSP/DHCPSPOpt82CircuitIDVLAN

This table contains DHCP snooping option 82 circuit ID with VLAN configuration information.

### XML structure

```

<DHCPSP>
  <DHCPSPOpt82CircuitIDVLAN>
    <VLANCircuitID>
      <IfIndex></IfIndex>
      <VLANID></VLANID>
      <CircuitID></CircuitID>
    </VLANCircuitID>
  </DHCPSPOpt82CircuitIDVLAN>
</DHCPSP>

```

### Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPOpt82CircuitIDVLAN
Table type	Multi-instance table
Row name	VLANCircuitID
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 2 interfaces are supported.

Column name	Column description	Column type	Data type and restrictions	Remarks
				Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
CircuitID	Option82 circuit ID string	N/A	String, case-insensitive. Length: 3 to 63 characters.	For the merge, create and replace operations, the CircuitID must be configured.  For the remove and delete operations, the CircuitID cannot be configured.

## DHCPSP/DHCPSPOpt82RemoteIDVLAN

This table contains DHCP snooping option 82 remote ID with VLAN configuration information.

### XML structure

```

<DHCPSP>
  <DHCPSPOpt82RemoteIDVLAN>
    <VLANRemoteID>
      <IfIndex></IfIndex>
      <VLANID></VLANID>
      <RemoteID></RemoteID>
      <Sysname></Sysname>
    </VLANRemoteID>
  </DHCPSPOpt82RemoteIDVLAN>
</DHCPSP>

```

## Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPOpt82RemoteIDVLAN
Table type	Multi-instance table
Row name	VLANRemoteID
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 2 interfaces are supported.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
RemoteID	Option82 remote ID string	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must be ASCII string.	For the merge, create and replace operations, the RemoteID and Sysname cannot be configured simultaneously and RemoteID or Sysname must be configured.

Column name	Column description	Column type	Data type and restrictions	Remarks
				Cannot be configured for the delete and remove operations.
Sysname	Whether the function of system name fix in option 82 remote ID is used.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b> (default)</li> </ul>	For the merge, create and replace operations, the RemoteID and Sysname cannot be configured simultaneously and RemoteID or Sysname must be configured.  Cannot be configured for the delete and remove operations.

## DHCPSP/DHCPSPOpt82

This table contains DHCP snooping option 82 configuration information.

### XML structure

```

<DHCPSP>
  <DHCPSPOpt82>
    <Option82>
      <IfIndex></IfIndex>
      <Option82Enable></Option82Enable>
      <Strategy></Strategy>
      <Circuit>
        <CircuitID></CircuitID>
        <CircuitIDMode></CircuitIDMode>
        <CircuitIDNodeIDType></CircuitIDNodeIDType>
        <CircuitIDNodeID></CircuitIDNodeID>
        <CircuitIDFormat></CircuitIDFormat>
      </Circuit>

If RemoteIDMode is configured for the remove and delete operations, RemoteID will be removed

Column name	Column description	Column type	Data type and restrictions	Remarks
				automatically.
RemoteID	Remote ID user defined string	N/A	String. case insensitive. Length: 1 to 63 characters.	For the merge, create and replace operations, the RemoteID must be configured if RemoteIDMode is 2 and can't be configured if RemoteIDMode is 0 or 1.
RemoteIDFormat	Remote ID format type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—Hex.</li> <li>• 1—Ascii.</li> </ul>	It must be configured together with the RemoteIDMode.  RemoteIDFormat must be 1 if RemoteIDMode is 1 or 2.  The default RemoteIDFormat is Hex when RemoteIDMode is Normal;  The default RemoteIDFormat is Ascii when CircuitIDMode is Sysname or User-defined;

## DHCPSP/DHCPSPConfig

This table contains DHCP snooping configuration information.

### XML structure

```

<DHCPSP>
  <DHCPSPConfig>
    <DHCPSPEnable></DHCPSPEnable>
  </DHCPSPConfig>
</DHCPSP>

```

## Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPConfig
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DHCPSPEnable	Whether the function of DHCP snooping is enabled.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true.</b></li><li>• <b>false</b> (default)</li></ul>	N/A

## DHCPSP/DHCPSPEthernetServiceInstance

This table contains the Ethernet service instance configuration information of DHCP snooping.

## XML structure

```
<DHCPSP>
  <DHCPSPEthernetServiceInstance>
    <EthernetServiceInstance>
      <IfIndex></IfIndex>
      <ServiceInstance></ServiceInstance>
      <Trust></Trust>
    </EthernetServiceInstance>
  </DHCPSPEthernetServiceInstance>
</DHCPSP>
```

## Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPEthernetServiceInstance
Table type	Multi-instance table
Row name	EthernetServiceInstance
Restrictions	This table supports only Layer 2 Ethernet interfaces or Layer 2 aggregate interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
ServiceInstance	Service instance ID.	Index	Unsigned integer.	N/A
Trust	Whether to configure the interface for the Ethernet service instance as a trusted interface.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b></li><li>• <b>false</b> (default)</li></ul>	N/A

# DHCPSP/DHCPSPVsi

This table contains the VSI configuration information of DHCP snooping.

## XML structure

```
<DHCPSP>
  <DHCPSPVsi>
    <Vsi>
      <VsiName></VsiName>
      <BindingRecord></BindingRecord>
      <TrustTunnel></TrustTunnel>

# DHCPSP

## DHCPSP/DHCPSPBindingDatabase

This table contains DHCP snooping binding database information.

### XML structure

```
<DHCPSP>
  <DHCPSPBindingDatabase>
    <FileName></FileName>
    <URL></URL>
    <Username></Username>
    <Password></Password>
    <UpdateInterval></UpdateInterval>
  </DHCPSPBindingDatabase>
</DHCPSP>
```

### Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPBindingDatabase
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
FileName	Object file name	N/A	String, case-insensitive. Length: 1 to 255 characters.
URL	Object URL string	N/A	String, case-insensitive. Length: 1 to 255 characters.
Username	FTP username	N/A	String, case-insensitive.

Column name	Column description	Column type	Data type and restrictions
			Length: 1 to 32 characters.
Password	FTP password	N/A	String, case-insensitive. Length: 1 to 32 characters.
UpdateInterval	Auto update interval	N/A	Unsigned integer. Value range: 60 to 864000 seconds.

## DHCPSP/DHCPSPInterface

This table contains the configuration information on interface about using DHCP snooping.

### XML structure

```

<DHCPSP>
  <DHCPSPInterface>
    <Interface>
      <IfIndex></IfIndex>
      <BindingRecord></BindingRecord>
      <CheckMacAddress></CheckMacAddress>
      <CheckRequestMessage></CheckRequestMessage>
      <Trust></Trust>
      <LearnMaxNum></LearnMaxNum>
      <RateLimitNum></RateLimitNum>
    </Interface>
  </DHCPSPInterface>
</DHCPSP>

```

### Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPInterface
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface Layer 3 Ethernet interface/subinterface

	Layer 3 aggregate interface/aggregate subinterface S-channel interface/S-channel aggregate interface
--	---

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
BindingRecord	Whether enable the interface to record DHCP snooping entry or not.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	Applicable to only Layer 2 interfaces of the Restrictions.
CheckMacAddress	Whether enable the interface to check MAC address in DHCP packets or not.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
CheckRequestMessage	Whether enable the interface to check request message in DHCP packets or not.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	Applicable to only Layer 2 interfaces of the Restrictions.
Trust	Whether to configure an interface as a trusted interface.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
LearnMaxN	The	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
um	maximum number of DHCP snooping entries for an interface to learn		Value range: 0 to 4294967295.	
RateLimitNum	The maximum rate for an interface to receive DHCP packets, in Kbps	N/A	Unsigned integer. Value range: 0, RateLimitMinNum to RateLimitMaxNum.	Values of RateLimitMinNum and RateLimitMaxNum depend on the device model.  Applicable to only Layer 2 interfaces of the Restrictions.

## DHCPSP/DHCPSPOpt82CircuitIDVLAN

This table contains DHCP snooping option 82 circuit ID with VLAN configuration information.

### XML structure

```

<DHCPSP>
  <DHCPSPOpt82CircuitIDVLAN>
    <VLANCircuitID>
      <IfIndex></IfIndex>
      <VLANID></VLANID>
      <CircuitID></CircuitID>
    </VLANCircuitID>
  </DHCPSPOpt82CircuitIDVLAN>
</DHCPSP>

```

### Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPOpt82CircuitIDVLAN
Table type	Multi-instance table

Row name	VLANCircuitID
Restrictions	This table supports only Layer 2 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Unsigned integer.
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.
CircuitID	Option82 circuit ID string	N/A	String, case-insensitive. Length: 3 to 63 characters. The string must be ASCII string.

## DHCPSP/DHCPSPOpt82RemoteIDVLAN

This table contains DHCP snooping option 82 remote ID with VLAN configuration information.

## XML structure

```

<DHCPSP>
  <DHCPSPOpt82RemoteIDVLAN>
    <VLANRemoteID>
      <IfIndex></IfIndex>
      <VLANID></VLANID>
      <RemoteID></RemoteID>
      <Sysname></Sysname>
    </VLANRemoteID>
  </DHCPSPOpt82RemoteIDVLAN>
</DHCPSP>

```

## Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPOpt82RemoteIDVLAN
Table type	Multi-instance table

Row name	VLANRemoteID
Restrictions	This table supports only Layer 2 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Unsigned integer.
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.
RemoteID	Option82 remote ID string	N/A	String, case-insensitive. Length: 1 to 63 characters. The string must be ASCII string.
Sysname	Whether the function of system name fix in option 82 remote ID is used.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>

## DHCPSP/DHCPSPOpt82

This table contains DHCP snooping option 82 configuration information.

## XML structure

```

<DHCPSP>
  <DHCPSPOpt82>
    <Option82>
      <IfIndex></IfIndex>
      <Option82Enable></Option82Enable>
      <Strategy></Strategy>
      <Circuit>
        <CircuitID></CircuitID>
        <CircuitIDMode></CircuitIDMode>
        <CircuitIDNodeIDType></CircuitIDNodeIDType>
        <CircuitIDNodeID></CircuitIDNodeID>
        <CircuitIDFormat></CircuitIDFormat>
      </Circuit>
      <Remote>

```

```

    <RemoteIDMode></RemoteIDMode>
    <RemoteID></RemoteID>
    <RemoteIDFormat></RemoteIDFormat>
  </Remote>
</Option82>
</DHCPSPOpt82>
</DHCPSP>

```

## Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPOpt82
Table type	Multi-instance table
Row name	Option82
Restrictions	This table supports only Layer 2 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Unsigned integer.
Option82Enable	Whether enable the DHCP snooping to support Option 82 or not.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>
Strategy	Option 82 strategy type	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Drop.</li> <li><b>1</b>—Keep.</li> <li><b>2</b>—Replace.</li> </ul>
Circuit	The configuration of Circuit ID sub-option	Data structure	Members include: <ul style="list-style-type: none"> <li>CircuitID</li> <li>CircuitIDMode</li> <li>CircuitIDNodeIDType</li> <li>CircuitIDNodeID</li> <li>CircuitIDFormat</li> </ul>

Column name	Column description	Column type	Data type and restrictions
CircuitID	Circuit ID user defined string	N/A	String, case-insensitive. Length: 3 to 63 characters.
CircuitIDMode	Circuit ID mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Normal.</li> <li>• <b>1</b>—Verbose.</li> <li>• <b>2</b>—User-defined.</li> </ul>
CircuitIDNodeIDType	Circuit IP node-identifier type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Mac.</li> <li>• <b>1</b>—Sysname.</li> <li>• <b>2</b>—User-defined.</li> </ul>
CircuitIDNodeID	Circuit ID node-identifier user defined string	N/A	String, case-insensitive. Length: 1 to 50 characters.
CircuitIDFormat	Circuit ID format type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Hex.</li> <li>• <b>1</b>—Ascii.</li> <li>• <b>2</b>—Undefined.</li> </ul>
Remote	The configuration of Remote ID sub-option	Data structure	Members include: <ul style="list-style-type: none"> <li>• RemoteIDMode</li> <li>• RemoteID</li> <li>• RemoteIDFormat</li> </ul>
RemoteIDMode	Remote ID mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Normal.</li> <li>• <b>1</b>—Sysname.</li> <li>• <b>2</b>—User-defined.</li> </ul>
RemoteID	Remote ID user defined string	N/A	String, case-insensitive. Length: 1 to 63 characters.
RemoteIDFormat	Remote ID format type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Hex.</li> <li>• <b>1</b>—Ascii.</li> </ul>

## DHCPSP/DHCPSPBinding

This table contains DHCP snooping entries information.

## XML structure

```
<DHCPSP>
  <DHCPSPBinding>
    <Binding>
      <Ipv4Address></Ipv4Address>
      <VLANID></VLANID>
      <SVLANID></SVLANID>
      <MacAddress></MacAddress>
      <Lease></Lease>
      <IfIndex></IfIndex>
    </Binding>
  </DHCPSPBinding>
</DHCPSP>
```

## Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPBinding
Table type	Multi-instance table
Row name	Binding
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Ipv4Address	IPv4 address	Index	String, dotted decimal notation.
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.
SVLANID	Second VLAN ID	Index	Unsigned integer. Value range: 1 to 4094 and 65535. 65535 means do not have SVLANID.
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.
Lease	Left Lease time	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	N/A	Unsigned integer.

## DHCPSP/DHCPSPConfig

This table contains DHCP snooping configuration information.

### XML structure

```
<DHCPSP>
  <DHCPSPConfig>
    <DHCPSPEnable></DHCPSPEnable>
  </DHCPSPConfig>
</DHCPSP>
```

### Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPConfig
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
DHCPSPEnable	Whether the function of DHCP snooping is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>

## DHCPSP/DHCPSPSpecification

This table contains DHCP snooping specification information.

## XML structure

```
<DHCPSP>
  <DHCPSPSpecification>
    <RateLimitMinNum></RateLimitMinNum>
    <RateLimitMaxNum></RateLimitMaxNum>
  </DHCPSPSpecification>
</DHCPSP>
```

## Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPSpecification
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RateLimitMinNum	The minimum rate number can be configured	N/A	Unsigned integer.	N/A
RateLimitMaxNum	The maximum rate number can be configured	N/A	Unsigned integer.	0 means that rate limit isn't supported.

## DHCPSP/DHCPSPEthernetServiceInstance

This table contains the Ethernet service instance configuration information of DHCP snooping.

## XML structure

```
<DHCPSP>
  <DHCPSPEthernetServiceInstance>
```

```

<EthernetServiceInstance>
  <IfIndex></IfIndex>
  <ServiceInstance></ServiceInstance>
  <Trust></Trust>
</EthernetServiceInstance>
</DHCPSPEthernetServiceInstance>
</DHCPSP>

```

## Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPEthernetServiceInstance
Table type	Multi-instance table
Row name	EthernetServiceInstance
Restrictions	This table supports only Layer 2 Ethernet interfaces or Layer 2 aggregate interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
ServiceInstance	Service instance ID	Index	Unsigned integer.	N/A
Trust	Whether to configure the interface for the Ethernet service instance as a	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	trusted interface			

## DHCPSP/DHCPSPVsi

This table contains the VSI configuration information of DHCP snooping.

### XML structure

```

<DHCPSP>
  <DHCPSPVsi>
    <Vsi>
      <VsiName></VsiName>
      <BindingRecord></BindingRecord>
      <TrustTunnel></TrustTunnel>
    </Vsi>
  </DHCPSPVsi>
</DHCPSP>

```

### Table description

Item	Description
Feature name	DHCPSP
Table name	DHCPSPVsi
Table type	Multi-instance table
Row name	Vsi
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
VsiName	VSI name	Index	String, case-sensitive. Length: 1 to 31 characters.
BindingRecord	Whether to enable recording DHCP	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> </ul>

Column name	Column description	Column type	Data type and restrictions
	snooping entries in the VSI.		<ul style="list-style-type: none"> <li><b>false</b></li> </ul>
TrustTunnel	Whether to configure the tunnel interface of the VSI as a trusted interface.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>

## DHCPSP6/DHCPSP6UpdateBindingDatabase

This table is used to save current DHCP snooping entries to the file.

### XML structure

```
<DHCPSP6>
  <DHCPSP6UpdateBindingDatabase>
    <Update></Update>
  </DHCPSP6UpdateBindingDatabase>
</DHCPSP6>
```

### Table description

Item	Description
Feature name	DHCPSP6
Table name	DHCPSP6UpdateBindingDatabase
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Update	Update DHCP snooping database immediately	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled.</li><li><b>false</b>—Disabled.</li></ul>	This column must be empty.

## DHCPSP6/DHCPSP6ClearBinding

This table is used to clear DHCP snooping entries.

### XML structure

```
<DHCPSP6>
  <DHCPSP6ClearBinding>
    <ClearBinding>
      <Ipv6Address></Ipv6Address>
      <VLANID></VLANID>
    </ClearBinding>
  </DHCPSP6ClearBinding>
</DHCPSP6>
```

```

        </ClearBinding>
    </DHCPSP6ClearBinding>
</DHCPSP6>

```

## Table description

Item	Description
Feature name	DHCPSP6
Table name	DHCPSP6ClearBinding
Table type	Single-instance table
Row name	ClearBinding
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	If Ipv6Address is empty, clears all DHCP snooping entries.
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	If VLANID is empty, clears the DHCP snooping entry for the specified IP address in all Vlan.

# DHCPSP6

## DHCPSP6/DHCPSP6BindingDatabase

This table contains IPv6 DHCP snooping binding database configuration information.

### XML structure

```
<DHCPSP6>
  <DHCPSP6BindingDatabase>
    <FileName></FileName>
    <URL></URL>
    <Username></Username>
    <Password></Password>
    <UpdateInterval></UpdateInterval>
  </DHCPSP6BindingDatabase>
</DHCPSP6>
```

### Table description

Item	Description
Feature name	DHCPSP6
Table name	DHCPSP6BindingDatabase
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
FileName	Database file name	N/A	String, case-insensitive. Length: 1 to 255 characters.	For the merge, create and replace operations, FileName and URL can not be configured simultaneously.

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	Object URL string	N/A	String. case sensitive. Length: 1 to 255 characters.	Specifies the URL of a remote file. Do not include a username or password in the URL. Case sensitivity and the supported format type of the path depend on the server.  If URL is configured for the delete and remove operations, Username and Password will be removed automatically.
Username	FTP username	N/A	String. case sensitive. Length: 1 to 32 characters.	Can not be configured for the delete and remove operations.
Password	FTP password	N/A	String. case sensitive. Length: 1 to 32 characters.	Only plaintext password is supported.  For the merge, create and replace operations, Password must be configured with Username.  Can not be configured for the delete and remove operations.
UpdateInterval	Auto update interval	N/A	Unsigned integer. Value range: 60 to 864000 seconds. Default: 300 seconds.	N/A

## DHCPSP6/DHCPSP6Interface

This table contains the configuration information on interface about using IPv6 DHCP snooping.

## XML structure

```
<DHCPSP6>

      <BindingRecord></BindingRecord>
      <Trust></Trust>
    </Interface>
  </DHCPSP6Interface>
</DHCPSP6>
```

## Table description

Item	Description
Feature name	DHCPSP6
Table name	DHCPSP6Interface
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interfaceS-channel interface/S-channel aggregate interface
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in

Column name	Column description	Column type	Data type and restrictions	Remarks
				Ifmgr NETCONF XML API Configuration Reference.
LearnMaxNum	The maximum number of IPv6 DHCP snooping entries for an interface to learn	N/A	Unsigned integer. Value range: 0 to 4294967295.	No limit as default. 0 means No limit.
RateLimitNum	The maximum rate for an interface to receive IPv6 DHCP packets, in Kbps.	N/A	Unsigned integer. Value range: 0, RateLimitMinNum to RateLimitMaxNum.	Values of RateLimitMinNum and RateLimitMaxNum depend on the device model. No limit as default. 0 means No limit.
BindingRecord	Whether enable the interface to record IPv6 DHCP snooping entry or not.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true.</b></li> <li>• <b>false</b>(default)</li> </ul>	N/A
CheckRequestMessage	Whether enable the interface to check request message in IPv6 DHCP packets or not.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true.</b></li> <li>• <b>false</b>(default)</li> </ul>	N/A
Trust	Whether configurate an interface to be trusted or not.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true.</b></li> <li>• <b>false</b>(default)</li> </ul>	N/A

## DHCPSP6/DHCPSP6OptionInterfaceID

This table contains IPv6 DHCP snooping option 18 DUID configuration information.

## XML structure

```
<DHCPSP6>
  <DHCPSP6OptionInterfaceID>
    <InterfaceID>
      <IfIndex></IfIndex>
      <VLANID></VLANID>
      <InterfaceID></InterfaceID>
    </InterfaceID>
  </DHCPSP6OptionInterfaceID>
</DHCPSP6>
```

## Table description

Item	Description
Feature name	DHCPSP6
Table name	DHCPSP6OptionInterfaceID
Table type	Multi-instance table
Row name	InterfaceID
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 2 interfaces are supported.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	Index	Unsigned integer. Value range: 0 to 4094.	0 means don't specify the VLAN.
InterfaceID	Option18 DUID string	N/A	String, case-insensitive. Length: 1 to 128 characters.	For the merge, create and replace operations, the InterfaceID must be configured.  For the remove and delete operations, the InterfaceID can not be configured.

## DHCPSP6/DHCPSP6OptionRemoteID

This table contains IPv6 DHCP snooping option 37 DUID configuration information.

### XML structure

```

<DHCPSP6>
  <DHCPSP6OptionRemoteID>
    <RemoteID>
      <IfIndex></IfIndex>
      <VLANID></VLANID>
      <RemoteID></RemoteID>
    </RemoteID>
  </DHCPSP6OptionRemoteID>
</DHCPSP6>

```

### Table description

Item	Description

# DHCPSP6

## DHCPSP6/DHCPSP6BindingDatabase

This table contains IPv6 DHCP snooping binding database configuration information.

### XML structure

```
<DHCPSP6>
  <DHCPSP6BindingDatabase>
    <FileName></FileName>
    <URL></URL>
    <Username></Username>
    <Password></Password>
    <UpdateInterval></UpdateInterval>
  </DHCPSP6BindingDatabase>
</DHCPSP6>
```

### Table description

Item	Description
Feature name	DHCPSP6
Table name	DHCPSP6BindingDatabase
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
FileName	Database file name	N/A	String, case-insensitive. Length: 1 to 255 characters.
URL	Object URL string.	N/A	String. case sensitive. Length: 1 to 255 characters.
Username	FTP username	N/A	String. case sensitive.

Column name	Column description	Column type	Data type and restrictions
			Length: 1 to 32 characters.
Password	FTP password	N/A	String. case sensitive. Length: 1 to 32 characters.
UpdateInterval	Auto update interval	N/A	Unsigned integer. Value range: 60 to 864000 seconds. Default: 300 seconds.

## DHCPSP6/DHCPSP6Interface

This table contains the configuration information on interface about using IPv6 DHCP snooping.

### XML structure

```

<DHCPSP6>
  <DHCPSP6Interface>
    <Interface>
      <IfIndex></IfIndex>
      <LearnMaxNum></LearnMaxNum>
      <RateLimitNum></RateLimitNum>
      <CheckRequestMessage></CheckRequestMessage>
      <BindingRecord></BindingRecord>
      <Trust></Trust>
    </Interface>
  </DHCPSP6Interface>
</DHCPSP6>

```

### Table description

Item	Description
Feature name	DHCPSP6
Table name	DHCPSP6Interface
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interfaceS-channel interface/S-channel aggregate

	interface
--	-----------

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
LearnMaxNum	The maximum number of DHCP snooping entries for an interface to learn	N/A	Unsigned integer. Value range: 0 to 4294967295.	No limit as default. 0 means No limit.
RateLimitNum	The maximum rate for an interface to receive DHCP packets, in Kbps	N/A	Unsigned integer.	The value range depends on the device model.
BindingRecord	Whether enable the interface to record DHCP snooping entry or not	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true.</b></li> <li><b>false</b>(default)</li> </ul>	N/A
CheckRequestMessage	Whether enable the interface to check request message in DHCP packets or not	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true.</b></li> <li><b>false</b>(default)</li> </ul>	N/A
Trust	Whether configurate an interface to be trusted or not	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true.</b></li> <li><b>false</b>(default)</li> </ul>	N/A

## DHCPSP6/DHCPSP6OptionInterfaceID

This table contains IPv6 DHCP snooping option 18 DUID configuration information.

## XML structure

```
<DHCPSP6>
  <DHCPSP6OptionInterfaceID>
    <InterfaceID>
      <IfIndex></IfIndex>
      <VLANID></VLANID>
      <InterfaceID></InterfaceID>
    </InterfaceID>
  </DHCPSP6OptionInterfaceID>
</DHCPSP6>
```

## Table description

Item	Description
Feature name	DHCPSP6
Table name	DHCPSP6OptionInterfaceID
Table type	Multi-instance table
Row name	InterfaceID
Restrictions	This table supports only Layer 2 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 2 interfaces are supported.
VLANID	VLAN ID	Index	Unsigned integer. Value range: 0 to 4094.	0 means don't specify the VLAN.
InterfaceID	Option18 DUID string	N/A	String, case-insensitive. Length: 1 to 128 characters.	N/A

## DHCPSP6/DHCPSP6OptionRemoteID

This table contains IPv6 DHCP snooping option 37 DUID configuration information.

## XML structure

```
<DHCPSP6>
  <DHCPSP6OptionRemoteID>
    <RemoteID>
      <IfIndex></IfIndex>
      <VLANID></VLANID>
      <RemoteID></RemoteID>
    </RemoteID>
  </DHCPSP6OptionRemoteID>
</DHCPSP6>
```

## Table description

Item	Description
Feature name	DHCPSP6
Table name	DHCPSP6OptionRemoteID
Table type	Multi-instance table
Row name	RemoteID
Restrictions	This table supports only Layer 2 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Only Layer 2 interfaces are supported.
VLANID	VLAN ID	Index	Unsigned integer. Value range: 0 to 4094.	0 means don't specify the VLAN.
RemoteID	Option37 DUID string	N/A	String, case-insensitive. Length: 1 to 128 characters.	N/A

## DHCPSP6/DHCPSP6OptionEnable

This table contains IPv6 DHCP snooping option 82 configuration information.

## XML structure

```
<DHCPSP6>
  <DHCPSP6OptionEnable>
    <OptionEnable>
      <IfIndex></IfIndex>
      <InterfaceIDEnable></InterfaceIDEnable>
      <RemoteIDEnable></RemoteIDEnable>
    </OptionEnable>
  </DHCPSP6OptionEnable>
</DHCPSP6>
```

## Table description

Item	Description
Feature name	DHCPSP6
Table name	DHCPSP6OptionEnable
Table type	Multi-instance table
Row name	OptionEnable
Restrictions	This table supports only Layer 2 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Unsigned integer.
InterfaceIDEnable	Enable the DHCP snooping to support InterfaceID	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Enabled.</li><li>• <b>false</b>—Disabled (default).</li></ul>
RemoteIDEnable	Enable the DHCP snooping to support RemoteID	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Enabled.</li><li>• <b>false</b>—Disabled (default).</li></ul>

## DHCPSP6/DHCPSP6Binding

This table contains IPv6 DHCP snooping entries information.

## XML structure

```
<DHCPSP6>
  <DHCPSP6Binding>
    <Binding>
      <Ipv6Address></Ipv6Address>
      <VLANID></VLANID>
      <SVLANID></SVLANID>
      <MacAddress></MacAddress>
      <Lease></Lease>
      <IfIndex></IfIndex>
    </Binding>
  </DHCPSP6Binding>
</DHCPSP6>
```

## Table description

Item	Description
Feature name	DHCPSP6
Table name	DHCPSP6Binding
Table type	Multi-instance table
Row name	Binding
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Ipv6Address	IPv6 address	Index	String, dotted decimal notation.
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.
SVLANID	Second VLAN ID	Index	Unsigned integer. Value range: 1 to 4094 and 65535. 65535 means no SVLANID.
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.

Column name	Column description	Column type	Data type and restrictions
Lease	Left Lease time	N/A	Unsigned integer.
IfIndex	Interface index	N/A	Unsigned integer.

## DHCPSP6/DHCPSP6Config

This table contains IPv6 DHCP snooping configuration information.

### XML structure

```
<DHCPSP6>
  <DHCPSP6Config>
    <DHCPSP6Enable></DHCPSP6Enable>
  </DHCPSP6Config>
</DHCPSP6>
```

### Table description

Item	Description
Feature name	DHCPSP6
Table name	DHCPSP6Config
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
DHCPSP6Enable	Enable DHCP snooping	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true.</b></li> <li><b>false</b>(default)</li> </ul>

## DHCPSP6/DHCPSP6Specification

This table contains DHCP snooping specification information.

## XML structure

```
<DHCPSP6>
  <DHCPSP6Specification>
    <RateLimitMinNum></RateLimitMinNum>
    <RateLimitMaxNum></RateLimitMaxNum>
  </DHCPSP6Specification>
</DHCPSP6>
```

## Table description

Item	Description
Feature name	DHCPSP6
Table name	DHCPSP6Specification
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RateLimitMinNum	The minimum rate number can be configured	N/A	Unsigned integer.	N/A
RateLimitMaxNum	The maximum rate number can be configured	N/A	Unsigned integer.	0 means that rate limit isn't supported.

# Diagnostic

## Diagnostic/CPUHistory

This table contains usage information about the logical CPUs.

### XML structure

```
<Diagnostic>
  <CPUHistory>
    <CPU>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <MoniterEnable></MoniterEnable>
      <HistroyCycleInSecond></HistroyCycleInSecond>
      <CPUUsageLimit></CPUUsageLimit>
    </CPU>
  </CPUHistory>
</Diagnostic>
```

### Table description

Item	Description
Feature name	Diagnostic
Table name	CPUHistory
Table type	Multi-instance table
Row name	CPU
Restrictions	Available only for logical CPUs
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Index	Unsigned integer. Value range: 0 to 65535.

Column name	Column description	Column type	Data type and restrictions
CPUID	ID of the CPU	Index	Unsigned integer. Value range: 0 to 65535.
MoniterEnable	CPU monitoring usage	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Disabled.</li> <li>2—Enabled.</li> </ul>
HistoryCycleInSecond	CPU sampling interval in seconds	N/A	Enumeration: <ul style="list-style-type: none"> <li>5—5 seconds.</li> <li>60—60 seconds.</li> <li>300—300 seconds.</li> </ul>
CPUUsageLimit	CPU threshold (%)	N/A	Unsigned integer. Value range: 0 to 100.

## Diagnostic/CPUAlert

This table contains usage alarm settings for logical CPUs.

### XML structure

```

<Diagnostic>
  <CPUAlert>
    <Alert>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <MinorThreshold></MinorThreshold >
      <WarningThreshold></WarningThreshold>
      <RecoveryThreshold></RecoveryThreshold>
    </Alert>
  </CPUAlert>
</Diagnostic>

```

### Table description

Item	Description
Feature name	Diagnostic
Table name	CPUAlert
Table type	Multi-instance table
Row name	Alert
Restrictions	Available only for logical CPUs
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	ID of the CPU.	Index	Unsigned integer. Value range: 0 to 65535.
MinorThreshold	CPU usage minor threshold (%)	N/A	Unsigned integer. Value range: 1 to 100.
WarningThreshold	CPU usage severe alarm threshold (%)	N/A	Unsigned integer Value range: 1 to 100
RecoveryThreshold	CPU usage recovery threshold (%)	N/A	Unsigned integer Value range: 0 to 99

## Diagnostic/MemoryAlert

This table contains free-memory alarm settings.

### XML structure

```
<Diagnostic>
  <MemoryAlert>
    <Alert>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <Unit></Unit>
      <MinorThreshold></MinorThreshold>
      <SevereThreshold></SevereThreshold>
      <CriticalThreshold></CriticalThreshold>
      <NormalThreshold></NormalThreshold>
      <EarlyWarningThreshold></EarlyWarningThreshold>
      <SecureThreshold></SecureThreshold>
    </Alert>
  </MemoryAlert>
</Diagnostic>
```

## Table description

Item	Description
Feature name	Diagnostic
Table name	MemoryAlert
Table type	Multi-instance table
Row name	Alert
Restrictions	For a create or replace operation, all non-index columns are required. For a delete, remove, or replace operation, you must specify all non-index columns or leave all non-index columns unspecified.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Member ID of the member device where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	ID of the CPU.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Unit	Unit of the threshold	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>MB</b></li> <li><b>Percentage</b></li> </ul>	N/A
MinorThreshold	Minor insufficient-free-memory threshold	N/A	Unsigned integer. Value range: 0 to 100 if the unit is percentage.	Setting this threshold to 0 disables the minor alarm feature
SevereThreshold	Severe insufficient-free-memory threshold	N/A	Unsigned integer. Value range: 0 to 100 if the unit is percentage.	Setting this threshold to 0 disables the severe alarm feature.
CriticalThreshold	Critical insufficient-free-memory threshold	N/A	Unsigned integer. Value range: 0 to 100 if the unit is percentage.	Setting this threshold to 0 disables the critical alarm feature.

Column name	Column description	Column type	Data type and restrictions	Remarks
NormalThreshold	Normal free-memory state threshold	N/A	Unsigned integer. Value range: 0 to 100 if the unit is percentage.	N/A
EarlyWarningThreshold	Early-warning threshold for insufficient-free-memory condition	N/A	Unsigned integer. Value range: 0 to 100 if the unit is percentage.	Setting this threshold to 0 disables the early warning feature.
SecureThreshold	Early-warning-removed threshold for insufficient-free-memory condition	N/A	Unsigned integer. Value range: 0 to 100 if the unit is percentage.	N/A

## Diagnostic/CoreAlert

This table contains usage alarm settings for logical Cores.

### XML structure

```

<Diagnostic>
  <CoreAlert>
    <Alert>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <CoreID></CoreID>
      <CoreThreshold></CoreThreshold>
      <CoreMinorThreshold></CoreMinorThreshold>
      <CoreRecoveryThreshold></CoreRecoveryThreshold>
    </Alert>
  </CoreAlert>
</Diagnostic>

```

### Table description

Item	Description
Feature name	Diagnostic
Table name	CoreAlert
Table type	Multi-instance table
Row name	Alert
Restrictions	Available only for logical Cores
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the card	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	ID of the CPU.	Index	Unsigned integer. Value range: 0 to 65535.
CoreID	ID of the Core	Index	Unsigned integer. Value range: 0 to 65535.
CoreThreshold	CPU usage threshold (%)	N/A	Unsigned integer Value range: 2 to 100
CoreMinorThreshold	CPU core usage minor threshold (%)	N/A	Unsigned integer Value range: 1 to 99
CoreRecoveryThreshold	CPU core usage recovery threshold (%)	N/A	Unsigned integer Value range: 0 to 98

## Diagnostic/Configuration

This table contains the global settings of the diagnostic module.

### XML structure

```
<Diagnostic>
  <Configuration>
    <MonitorDiskUsageInterval></MonitorDiskUsageInterval>
  </Configuration>
</Diagnostic>
```

### Table description

Item	Description
Feature name	Diagnostic
Table name	Configuration

Item	Description
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
MonitorDiskUsageInterval	Disk usage monitoring interval in seconds.	N/A	Unsigned integer. Value range: 5 to 1800. Default: 300.

## Diagnostic/DiskAlert

This table contains disk usage alarm settings.

## XML structure

```

<Diagnostic>
  <DiskAlert>
    <Alert>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <DiskName></DiskName>
      <Threshold></Threshold>
    </Alert>
  </DiskAlert>
</Diagnostic>

```

## Table description

# Diagnostic

## Diagnostic/CPUHistory

This table contains usage information about the logical CPUs.

### XML structure

```
<Diagnostic>
  <CPUHistory>
    <CPU>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <CPUUsage></CPUUsage>
      <Last1mUsage></Last1mUsage>
      <Last5mUsage></Last5mUsage>
      <MoniterEnable></MoniterEnable>
      <HistroyCycleInSecond></HistroyCycleInSecond>
      <CPUUsageLimit></CPUUsageLimit>
      <CPUHistory></CPUHistory>
    </CPU>
  </CPUHistory>
</Diagnostic>
```

### Table description

Item	Description
Feature name	Diagnostic
Table name	CPUHistory
Table type	Multi-instance table
Row name	CPU
Restrictions	Available only for logical CPUs

### Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Index	Unsigned integer. Value range: 0 to 65535.

Column name	Column description	Column type	Data type and restrictions
CPUID	ID of the CPU.	Index	Unsigned integer. Value range: 0 to 65535.
CPUUsage	CPU usage (%)	N/A	Unsigned integer. Value range: 0 to 100.
Last1mUsage	Usage in the most recent 1-minute interval (%)	N/A	Unsigned integer. Value range: 0 to 100.
Last5mUsage	Usage in the most recent 5-minute interval (%)	N/A	Unsigned integer. Value range: 0 to 100.
MonitorEnabled	CPU usage monitoring	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Disabled.</li> <li>2—Enabled.</li> </ul>
HistoryCycleInSecond	CPU usage sampling interval in seconds	N/A	Enumeration: <ul style="list-style-type: none"> <li>5—5 seconds.</li> <li>60—60 seconds.</li> <li>300—300 seconds.</li> </ul>
CPUUsageLimit	CPU usage threshold (%)	N/A	Unsigned integer. Value range: 0 to 100.
CPUHistory	Historical CPU usage statistics	N/A	String of up to 60 integers. Each integer represents the CPU usage in a CPU usage sampling interval. Length: 0 to 304 characters. Format: HH,HH,HH,HH,HH,HH

## Diagnostic/ProcessesCPUHistory

This table contains historical CPU usage statistics by process ID.

### XML structure

```

<Diagnostic>
  <ProcessesCPUHistory>
    <Process>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <ProcessJobID></ProcessJobID>
      <ProcessName></ProcessName>
      <CPUHistoryProcess></CPUHistoryProcess>
    </Process>
  </ProcessesCPUHistory>
</Diagnostic>

```

## Table description

Item	Description
Feature name	Diagnostic
Table name	ProcessesCPUHistory
Table type	Multi-instance table
Row name	Process
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	ID of the CPU.	Index	Unsigned integer. Value range: 0 to 65535.
ProcessJobID	Process ID	Index	Unsigned integer. Value range: 1 to 2147483647
ProcessName	Process name	N/A	String. Length: 0 to 128 characters.
CPUHistoryProcess	Historical CPU usage statistics by process ID	N/A	String of up to 60 integers. Each integer represents the CPU usage in a CPU usage sampling interval. Length: 0 to 304 characters. Format: HH,HH,HH,HH,HH,HH

## Diagnostic/CPUUsage(currently not available)

This table contains usage information about the logical CPUs.

## XML structure

```
<Diagnostic>
  <CPUUsage>
    <CPU>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
```

```

    <CPUUsage></CPUUsage>
  <Core>
    <CoreID></CoreID>
    <CPUUsage></CPUUsage>
    <Idle></Idle>
    <User></User>
    <Kernel></Kernel>
    <Interrupt></Interrupt>
  </Core>
</CPU>
</CPUUsage>
</Diagnostic>

```

## Table description

Item	Description
Feature name	Diagnostic
Table name	CPUUsage
Table type	Multi-instance table
Row name	CPU
Restrictions	Available only for logical CPUs

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Member ID of the member device where the entity resides.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	ID of the CPU.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUUsage	CPU usage (%)	N/A	Unsigned integer. Value range: 0 to 100.	N/A
Core	CPUInfo of core	Data structure	Members include: <ul style="list-style-type: none"> <li>CoreID</li> <li>CPUUsage</li> <li>Idle</li> <li>User</li> <li>Kernel</li> <li>Interrupt</li> </ul>	Contain all core of the cpu.
CoreID	ID of the core	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 0 to 65535.	
CPUUsage	Core usage (%)	N/A	Double. Value range: 0 to 100. Formats: %.2f	Accurate to the second decimal place. Example: 12.34
Idle	CPU idle time ratio (%)	N/A	Double. Value range: 0 to 100. Formats: %.2f	Accurate to the second decimal place. Example: 12.34
User	Ratio of time for processes in user mode to total CPU time (%)	N/A	Double. Value range: 0 to 100. Formats: %.2f	Accurate to the second decimal place. Example: 12.34
Kernel	Ratio of time for processes in kernel mode to total CPU time (%)	N/A	Double. Value range: 0 to 100. Formats: %.2f	Accurate to the second decimal place. Example: 12.34
Interrupt	Ratio of time for interrupts to total CPU time (%)	N/A	Double. Value range: 0 to 100. Formats: %.2f	Accurate to the second decimal place. Example: 12.34

## Diagnostic/ProcessesCPU(currently not available)

This table contains CPU usage information for processes.

### XML structure

```

<Diagnostic>
  <ProcessesCPU>
    <Process>
      <Chassis></Chassis>
      <Slot></Slot>

      <JobID></JobID>
      <Name></Name>
      <CPUUsage></CPUUsage>
      <Priority></Priority>
      <State></State>
      <FDs></FDs>
      <Memory></Memory>
      <RunTime></RunTime>
    </Process>
  </ProcessesCPU>

```

</Diagnostic>

## Table description

Item	Description
Feature name	Diagnostic
Table name	ProcessesCPU
Table type	Multi-instance table
Row name	Process
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Member ID of the member device where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	ID of the CPU.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
JobID	Job ID	Index	Unsigned integer. Value range: 1 to 2147483647	N/A
Name	Process name	N/A	String. Length: 0 to 255 characters.	N/A
CPUUsage	CPU usage of the process	N/A	Double. Value range: 0 to 100. Formats: %.2f	N/A
Priority	Thread priority	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
State	Status of the process	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>R</b>—Running.</li><li>• <b>S</b>—Sleeping.</li><li>• <b>T</b>—Traced or stopped.</li><li>• <b>D</b>—Uninterruptible sleep.</li><li>• <b>Z</b>—Zombie.</li></ul>	N/A
FDs	File descriptions for the process	N/A	Unsigned integer. Value range: 0 to 4294967295.	N/A
Memory	Process memory space	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	(KB)		Value range: 0 to 4294967295.	
RunTime	Running time of the process	N/A	String. Formats: <ul style="list-style-type: none"> <li>HH:MM:SS Runtime &lt; 100h</li> <li>HHh Runtime &gt;= 100h</li> </ul>	N/A

## Diagnostic/CPUAlert

This table contains cpu usage alarm information about the logical CPUs.

### XML structure

```

<Diagnostic>
  <CPUAlert>
    <Alert>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <MinorThreshold></MinorThreshold>
      <WarningThreshold></WarningThreshold>
      <RecoveryThreshold></RecoveryThreshold>
      <CurrentState></CurrentState>
    </Alert>
  </CPUAlert>
</Diagnostic>

```

### Table description

Item	Description
Feature name	Diagnostic
Table name	CPUAlert
Table type	Multi-instance table

```

## Table description

Item	Description
Feature name	Diagnostic
Table name	Memories
Table type	Multi-instance table
Row name	Memory
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	ID of the CPU	Index	Unsigned integer. Value range: 0 to 65535.
Total	Total memory size (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.
Used	Used memory space (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.
Free	Free memory space (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.
FreeRatio	Free memory ratio (%)	N/A	Double. Value range: 0 to 100. Formats: %.1f
Buffers	Memory space used for buffers (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.
Cached	Memory space used for cache	N/A	Unsigned integer. Value range: 0 to 4294967295.

Column name	Column description	Column type	Data type and restrictions
	(KB)		
CommitLimit	Memory space currently available for allocation (KB)	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
CommittedAS	Memory space allocated by processes (KB)	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
VmallocTotal	Total allocated virtual memory space (KB)	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
VmallocUsed	Used virtual memory space (KB)	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
VmallocChunk	Free virtual memory space (KB)	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .
SwapTotal	Total memory space used for swapping (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.
SwapFree	Free memory space dedicated for swapping (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.
LowTotal	Total low-memory size (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.
LowFree	Free low-memory space (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.
HighTotal	Total high-memory size (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.
HighFree	Free high-memory space (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.

## Diagnostic/ProcessesMemory (currently not available)

This table contains memory information about the Processes.

### XML structure

```

<Diagnostic>

      <CriticalThreshold></CriticalThreshold>
      <NormalThreshold></NormalThreshold>
      <EarlyWarningThreshold></EarlyWarningThreshold>
      <SecureThreshold></SecureThreshold>
      <CurrentState></CurrentState>
    </Alert>
  </MemoryAlert>
</Diagnostic>

```

## Table description

Item	Description
Feature name	Diagnostic
Table name	MemoryAlert
Table type	Multi-instance table
Row name	Alert
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Member ID of the member device where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	ID of the CPU.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Unit	Unit for memory thresholds	N/A	Enumeration: <ul style="list-style-type: none"> <li>• MB</li> <li>• Percentage</li> </ul>	N/A
MinorThreshold	Minor insufficient-free-memory threshold	N/A	Unsigned integer. When unit is percentage, value range: 0 to 100.	Setting this threshold to 0 disables the minor alarm feature.
SevereThreshold	Severe insufficient-free-memory threshold	N/A	Unsigned integer. When unit is percentage, value range: 0 to 100.	Setting this threshold to 0 disables the severe alarm feature.
CriticalThreshold	Critical insufficient-free-memory threshold	N/A	Unsigned integer. When unit is percentage, value range: 0 to 100.	Setting this threshold to 0 disables the critical alarm feature.

Column name	Column description	Column type	Data type and restrictions	Remarks
NormalThreshold	Normal free-memory state threshold	N/A	Unsigned integer. When unit is percentage, value range: 0 to 100.	N/A
EarlyWarningThreshold	Early-warning threshold for insufficient-free-memory condition	N/A	Unsigned integer. When unit is percentage, value range: 0 to 100.	Setting this threshold to 0 disables the early warning feature.
SecureThreshold	Early-warning-removed threshold for insufficient-free-memory condition	N/A	Unsigned integer. When unit is percentage, value range: 0 to 100.	N/A
CurrentState	Current memory alarm status	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>Minor</b></li> <li>• <b>Severe</b></li> <li>• <b>Critical</b></li> <li>• <b>Normal</b></li> <li>• <b>EarlyWarning</b></li> <li>• <b>Secure</b></li> </ul>	N/A

## Diagnostic/CoreAlert

This table contains core alarm settings and status information.

### XML structure

```

<Diagnostic>

Row name	Alert
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the card	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	ID of the CPU.	Index	Unsigned integer. Value range: 0 to 65535.
CoreID	ID of the Core	Index	Unsigned integer. Value range: 0 to 65535.
CoreThreshold	Core usage Threshold (%)	N/A	Unsigned integer. Value range: 2 to 100 Default: 4294967295
Current5SUsage	Core usage in the most recent 5-second interval (%)	N/A	Unsigned integer. Value range: 0 to 100
Current1MUsage	Core usage in the most recent 12 five-second interval (%)	N/A	Unsigned integer. Value range: 0 to 100
Current5MUsage	Core usage in the most recent 60 five-second interval (%)	N/A	Unsigned integer. Value range: 0 to 100

Column name	Column description	Column type	Data type and restrictions
LastState	Previous core alarm status	N/A	Enumeration: <ul style="list-style-type: none"> <li>Normal</li> <li>Warning</li> </ul>
CoreMinorThreshold	Core usage minor threshold (%)	N/A	Unsigned integer. Value range: 1 to 99 Default: 4294967295
CoreRecoveryThreshold	Core usage recovery threshold (%)	N/A	Unsigned integer. Value range: 0 to 98 Default: 4294967295

## Diagnostic/CPUGroups

This table contains usage information about the logical CPU groups.

### XML structure

```

<Diagnostic>
  <CPUGroups>
    <CPUGroup>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <GroupID></GroupID>
      <GroupName></GroupName>
      <CPUUsage></CPUUsage>
      <Last1mUsage></Last1mUsage>
      <Last5mUsage></Last5mUsage>
    </CPUGroup>
  </CPUGroups>
</Diagnostic>

```

### Table description

Item	Description
Feature name	Diagnostic
Table name	CPUGroups
Table type	Multi-instance table
Row name	CPUGroup
Restrictions	Available only for logical CPU groups

## Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	Member ID of the member device where the entity resides	Index	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node	Index	Unsigned integer. Value range: 0 to 65535.
CPUID	ID of the CPU.	Index	Unsigned integer. Value range: 0 to 65535.
GroupID	ID of CPU group	Index	Unsigned integer. Value range: 0 to 65535. For example: 0 means control plane, 1 means data plane
GroupName	Name of CPU group	N/A	String. Length: 1 to 64 characters.
CPUUsage	Usage in the most recent 5-second interval (%) for the specified plane	N/A	Unsigned integer. Value range: 0 to 100.
Last1mUsage	Usage in the most recent 1-minute interval (%) for the specified plane	N/A	Unsigned integer. Value range: 0 to 100.
Last5mUsage	Usage in the most recent 5-minute interval (%) for the specified plane	N/A	Unsigned integer. Value range: 0 to 100.

## Diagnostic/Configuration

## Columns

Column name	Column description	Data type and restrictions	Remarks
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the device node	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	ID of the CPU.	Unsigned integer. Value range: 0 to 65535.	N/A
Description	CPU event description.	Enumeration: <ul style="list-style-type: none"><li>• CPU_THRESHOLD</li><li>• CPU_THRESHOLD_RECOVERY</li><li>• CPU_MINOR_THRESHOLD</li><li>• CPU_MINOR_RECOVER</li></ul>	N/A
CPUUsage	CPU usage (%)	Unsigned integer. Value range: 0 to 100.	N/A
Core	CPUInfo of core	Members include: <ul style="list-style-type: none"><li>• CoreID</li><li>• CPUUsage</li><li>• Idle</li><li>• User</li><li>• Kernel</li><li>• Interrupt</li></ul>	N/A
CoreID	Core ID	Unsigned integer. Value range: 0 to 65535.	N/A
CPUUsage	Core CPU usage (%)	Double. Value range: 0 to 100. Formats: %.2f	Accurate to the second decimal place. Example: 12.34
Idle	CPU idle time ratio(%)	Double. Value range: 0 to 100. Formats: %.2f	Accurate to the second decimal place. Example: 12.34
User	Ratio of the time of processes executing in user mode to CPU total time(%)	Double. Value range: 0 to 100. Formats: %.2f	Accurate to the second decimal place. Example: 12.34
Kernel	Ratio of the time of processes executing in kernel mode to CPU total time (%)	Double. Value range: 0 to 100. Formats: %.2f	Accurate to the second decimal place. Example: 12.34
Interrupt	Ratio of the time of interrupt to total cpu	Double. Value range: 0 to 100.	Accurate to the second decimal place.

Column name	Column description	Data type and restrictions	Remarks
	time.	Formats: %.2f	Example: 12.34
Process	CPUInfo of process	Members include: <ul style="list-style-type: none"> <li>• JobID</li> <li>• PID</li> <li>• Name</li> <li>• CPUUsage</li> <li>• Priority</li> <li>• State</li> <li>• FDs</li> <li>• Memory</li> <li>• RunTime</li> </ul>	N/A
JobID	Job ID	Unsigned integer. Value range: 1 to 2147483647.	N/A
PID	Process ID	Unsigned integer. Value range: 1 to 2147483647.	N/A
Name	Process name	String. Length: 1 to 255 characters.	Only report the top 10 cpusage processes.
CPUUsage	CPUUsage of Process	Double. Value range: 0 to 100. Formats: %.2f	N/A
Priority	Process priority	Unsigned integer. Value range: 0 to 65535.	N/A
State	Running state of process	Enumeration: <ul style="list-style-type: none"> <li>• <b>R</b>—Running.</li> <li>• <b>S</b>—Sleeping.</li> <li>• <b>T</b>—Traced or stopped.</li> <li>• <b>D</b>—Uninterruptible sleep.</li> <li>• <b>Z</b>—Zombie.</li> </ul>	N/A
FDs	File descriptions of process	Unsigned integer. Value range: 0 to 4294967295.	N/A
Memory	Size of the process memory space(KB)	Unsigned integer. Value range: 0 to 4294967295.	N/A
RunTime	Runtime of process	String. Formats: <ul style="list-style-type: none"> <li>• HH:MM:SS Runtime &lt; 100h</li> <li>• HHh Runtime &gt;= 100h</li> </ul>	N/A

## MemoryEvent event

## Columns

Column name	Column description	Data type and restrictions	Remarks
Chassis	Member ID of the member device where the entity resides	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of the card	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	ID of the CPU.	Unsigned integer. Value range: 0 to 65535.	N/A
CoreID	ID of the Core.	Unsigned integer. Value range: 0 to 65535.	N/A
CoreUsage	Core usage (%)	Unsigned integer. Value range: 0 to 100.	In last 30 minutes the core usage
CpuLast5sUsage	The core on CPU usage (%)	Double. Value range:0 to 100. Formats:	In last 5 seconds the CPU usage.

Column name	Column description	Data type and restrictions	Remarks
		%.2f	
CpuLast1m Usage	The core on CPU usage (%)	Double. Value range:0 to 100. Formats: %.2f	In last 1 minute the CPU usage.
CpuLast5m Usage	The core on CPU usage (%)	Double. Value range:0 to 100. Formats: %.2f	In last 5 minutes the CPU usage.
CoreThreshold	Core usage threshold	Unsigned integer. Value range: 2 to 100. Default: 4294967295.	N/A
Process	High-core processes usage	Members include: <ul style="list-style-type: none"> <li>• Name</li> <li>• CPU</li> <li>• JobID</li> <li>• PID</li> <li>• InLast5sUsage</li> <li>• InLast1mUsage</li> <li>• InLast5mUsage</li> <li>• State</li> <li>• Memory</li> </ul>	Only the top high-core usage processes are reported
Name	Process name	String. Length: 1 to 255 characters.	N/A
CPU	Core that held one of the top high-core usage processes when the high-core usage alarm was issued	Unsigned integer. Value range: 0 to 65535.	N/A
JobID	Job ID	Unsigned integer. Value range: 1 to 2147483647.	N/A
PID	Process ID	Unsigned integer. Value range: 1 to 2147483647.	N/A
PPID	Parent process ID	Unsigned integer. Value range: 1 to 2147483647.	N/A
InLast5sUsage	Usage in the most recent 5-second interval (%)	Double. Value range: 0 to 100. Formats: %.1f	N/A
InLast1mUsage	Usage in the most recent 1-minute interval (%)	Double. Value range: 0 to 100. Formats: %.1f	N/A
InLast5mUsage	Usage in the most recent 5-minute interval	Double.	N/A

Column name	Column description	Data type and restrictions	Remarks
	(%)	Value range: 0 to 100. Formats: %.1f	
State	Running state of process	Enumeration: <ul style="list-style-type: none"> <li>• <b>R</b>—Running.</li> <li>• <b>S</b>—Sleeping.</li> <li>• <b>T</b>—Traced or stopped.</li> <li>• <b>D</b>—Uninterruptible sleep.</li> <li>• <b>Z</b>—Zombie.</li> </ul>	N/A
Memory	Size of the process memory space(KB)	Unsigned integer. Value range: 0 to 4294967295.	N/A
EventType	Core event type.	String: <ul style="list-style-type: none"> <li>• <b>CORE_SEVERE_THRESHOLD</b>—A severe CPU core usage alarm occurred.</li> <li>• <b>CORE_SEVERE_RECOVERY</b>—A severe CPU core usage alarm was removed.</li> <li>• <b>CORE_MINOR_THRESHOLD</b>—A minor CPU core usage alarm occurred.</li> <li>• <b>CORE_MINOR_RECOVERY</b>—A minor CPU core usage alarm was removed.</li> </ul>	N/A
CoreMinorThreshold	Core usage minor threshold	Unsigned integer. Value range: 1 to 99. Default: 4294967295.	N/A
CoreRecoveryThreshold	Core usage recovery threshold	Unsigned integer. Value range: 0 to 98. Default: 4294967295.	N/A

## DiskEvent event

This event is used to report disk alarm information.

## XML structure for event subscription

```

<DiskEvent>
  <Disk>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
    <DiskName></DiskName>
  </Disk>
</DiskEvent>

```

Example:

```

<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>Diagnostic</stream>
    <filter type="subtree">
      <DiskEvent xmlns="http://www.h3c.com/netconf/event:1.0/Diagnostic:1.0">
        <Disk>
          <Chassis>0</Chassis>
          <Slot>0</Slot>
          <CPUID>0</CPUID>
          <DiskName>flash</DiskName>
        </Disk>
      </DiskEvent>
    </filter>
  </create-subscription>
</rpc>

```

## Table description

Item	Description
Event stream name	Diagnostic
Event name	DiskEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/Diagnostic:1.0
Support for extended query	No

## Columns

Column name	Column description	Data type and restrictions	Support for extended queries
Chassis	Member ID of the member device where the entity resides.	Unsigned integer. Value range: 0 to 65535.	No
Slot	Slot number of the device node.	Unsigned integer. Value range: 0 to 65535.	No
CPUID	CPU Identification.	Unsigned integer. Value range: 0 to 65535.	No
DiskName	Disk name.	String. Length: 1 to 64 characters.	

## XML structure for event report

```

<DiskEvent>
  <Disk>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
    <DiskName></DiskName>
    <Threshold></Threshold>
  </Disk>
</DiskEvent>

```

```

    <CurrentUsage></CurrentUsage>
  </Disk>
</DiskEvent>

```

#### Example:

```

<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <DiskEvent xmlns="http://www.h3c.com/netconf/event:1.0/Diagnostic:1.0">
    <Disk>
      <Chassis>0</Chassis>
      <Slot><0/Slot>
      <CPUID>0</CPUID>
      <DiskName>flash</DiskName>
      <Threshold>80</Threshold>
      <CurrentUsage>45.55</CurrentUsage>
    </Disk>
  </DiskEvent>
</notification>

```

#### Columns

Column name	Column description	Data type and restrictions
Chassis	Member ID of the member device where the entity resides.	Unsigned integer. Value range: 0 to 65535.
Slot	Slot number of the device node.	Unsigned integer. Value range: 0 to 65535.
CPUID	CPU Identification.	Unsigned integer. Value range: 0 to 65535.
DiskName	Disk name.	String. Length: 1 to 64 characters.
Threshold	Disk usage threshold (%).	Unsigned integer. Value range: 1 to 100.
CurrentUsage	Current disk usage (%).	Double. Value range: 0.00 to 100.00.

## DIM/BlockParameters

This table contains block parameters.

### XML structure

```
<DIM>
  <BlockParameters>
    <BlockParameter>
      <ParameterName></ParameterName>
      <Denyperiod></Denyperiod>
    </BlockParameter>
  </BlockParameters>
</DIM>
```

### Table description

Item	Description
Feature name	DIM
Table name	BlockParameters
Table type	Multi-instance table
Row name	BlockParameter
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Parameter name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Denyperiod	Deny period	N/A	Unsigned integer. Value range: 1 to 86400s	Default is 1800s

## DIM/CaptureParameters

This table contains capture parameters.

## XML structure

```
<DIM>
  <CaptureParameters>
    <CaptureParameter>
      <ParameterName></ParameterName>
      <CaptureMax></CaptureMax>
      <CaptureExceedURL></CaptureExceedURL>
      <StartTime></StartTime>
    </CaptureParameter>
  </CaptureParameters>
</DIM>
```

## Table description

Item	Description
Feature name	DIM
Table name	CaptureParameters
Table type	Multi-instance table
Row name	CaptureParameter
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Parameter name	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
CaptureMax	Max space for captured packets	N/A	Unsigned integer. Value range: 0 to 1024	Default is 512 Kbytes
CaptureExceedURL	The URL while the packets size exceeds the max space, they will be sent to	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
StartTime	Time when the system sends the packets	N/A	Time. Format: HH:MM:SS	Default is 01:00:00

## DIM/LoggingParameters

This table contains logging parameters.

## XML structure

```
<DIM>
  <LoggingParameters>
    <LoggingParameter>
      <ParameterName></ParameterName>

Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProxyAddress	Proxy server	N/A	String, case-insensitive	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	address		Length: 3 to 63 characters.	
ProxyPort	Proxy server port	N/A	Unsigned integer: Value range: 1 to 65535.	N/A
UserName	Proxy username	N/A	String, case-insensitive Length: 1 to 31 characters.	N/A
PassWord	Proxy password	N/A	String, case-sensitive Length: 1 to 31 characters.	N/A

## DIM/DimFileUncompress

This table contains the maximum length of file uncompressing.

### XML structure

```
<DIM>
  <DimFileUncompress>
    <Size></Size>
  </DimFileUncompress>
</DIM>
```

### Table description

Item	Description
Feature name	DIM
Table name	DimFileUncompress
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Size	Maximum size that can be uncompressed	N/A	Unsigned integer. Value range: 1 to 200MB.	N/A

## DIM/DeviceInfo

This table contains the device node where main dpid running on.

## XML structure

```
<DIM>
  <DeviceInfo>
    <ModuleName></ModuleName>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
  </DeviceInfo>
</DIM>
```

## Table description

Item	Description
Feature name	DIM
Table name	DeviceInfo
Table type	Multi-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ModuleName	The name of current module.	Index	String. Length: 1 to 63 characters..	N/A
Chassis	Chassis of a node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot of a node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	Cpu id of a node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

## DNS/DNSHost

This table contains DNS host configuration information.

### XML structure

```
<DNS>
  <DNSHost>
    <Host>
      <VRF></VRF>
      <HostName></HostName>
      <Type></Type>
      <QueryType></QueryType>
      <Result></Result>
    </Host>
  </DNSHost>
</DNS>
```

### Table description

Item	Description
Feature name	DNS
Table name	DNSHost
Table type	Multi-instance table
Row name	Host
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case sensitive. Length: 1 to 31 characters.	If the DNS host is on the public network, the length of characters is 0.
HostName	Host name	Index	String, case insensitive. Length: 1 to 253 characters.	It can include letters, digits, hyphens (-), underscores (_), and dots (.).

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Domain name-to-IP address mapping type	Index	Enumeration: • 1—Static.	N/A
QueryType	Query type	Index	Enumeration: • 1—A. • 2—AAAA.	A type A query resolves a domain name to the mapped IPv4 address. A type AAAA query resolves a domain name to the mapped IPv6 address.
Result	Replied result	N/A	String, case insensitive. Length: 1 to 45 characters.	Required. An IPv4 address as QueryType is A, an IPv6 address as QueryType is AAAA.

## DNS/DNSServer

This table contains DNS server configuration information.

### XML structure

```

<DNS>
  <DNSServer>
    <Server>
      <VRF></VRF>
      <Type></Type>
      <AddressType></AddressType>
      <IpAddress></IpAddress>
      <IfIndex></IfIndex>
    </Server>
  </DNSServer>
</DNS>

```

### Table description

Item	Description
Feature name	DNS
Table name	DNSServer
Table type	Multi-instance table
Row name	Server
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case sensitive. Length: 1 to 31 characters.	If the DNS server is on the public network, the length of characters is 0.
Type	DNS server type	Index	Enumeration: • 1—Static.	N/A
AddressType	Type of the DNS server IP address	Index	Enumeration: • 1—IPv4. • 2—IPv6.	N/A
IpAddress	IP address of the DNS server	Index	String, case insensitive. Length: 1 to 45 characters.	IPv4 address string as AddressType is IPv4, IPv6 address string as AddressType is IPv6.
IfIndex	Output interface Index	Index	Unsigned integer.	Must and can only be specified when the IPv6 address of the DNS server is a link-local address.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.

## DNS/DNSDomain

This table contains domain name suffix configuration information.

## XML structure

```

<DNS>
  <DNSDomain>
    <Domain>
      <VRF></VRF>
      <Type></Type>
      <DomainName></DomainName>
    </Domain>
  </DNSDomain>
</DNS>

```

## Table description

Item	Description
Feature name	DNS
Table name	DNSDomain
Table type	Multi-instance table
Row name	Domain
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case sensitive. Length: 1 to 31 characters.	If the domain name suffix is on the public network, the length of characters is 0.
Type	Domain name suffix type	Index	Enumeration: <ul style="list-style-type: none"><li>1—Static.</li></ul>	N/A
DomainName	Domain name suffix	Index	String, case insensitive. Length: 1 to 253 characters.	It is a dot-separated, case-insensitive string that can include letters, digits, hyphens (-), underscores (_), and dots (.) (for example, aabbcc.com). The domain name suffix can include at most 253 characters, and each separated string includes no more than 63 characters.

## DNS/DNSConfig

This table contains DNS configuration information.

## XML structure

```
<DNS>
  <DNSConfig>
    <DNSProxyEnable></DNSProxyEnable>
    <DNSDSCP></DNSDSCP>
    <DNSDSCP6></DNSDSCP6>
  </DNSConfig>
</DNS>
```

## Table description

Item	Description
Feature name	DNS
Table name	DNSConfig
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DNSProxyEnable	Whether the function of DNS proxy is enabled	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b></li><li><b>false</b>(default)</li></ul>	Support for this function depends on the device model.
DNSDSCP	DSCP value for DNS packets sent by a DNS client or DNS proxy	N/A	Unsigned integer. Value range: 0 to 63. Default: 0.	N/A
DNSDSCP6	DSCP value for IPv6 DNS packets sent by an IPv6 DNS client or DNS proxy	N/A	Unsigned integer. Value range: 0 to 63. Default: 0.	N/A

## DNS/DNSIfServer

This table contains DNS server of interface information.

## XML structure

```
<DNS>
  <DNSIfServer>
    <Server>
      <IfIndex></IfIndex>
      <VRF></VRF>
      <Type></Type>
      <AddressType></AddressType>
      <IpAddress></IpAddress>
      <IfIndexOut></IfIndexOut>
    </Server>
  </DNSIfServer>
</DNS>
```

## Table description

Item	Description
Feature name	DNS
Table name	DNSIfServer
Table type	Multi-instance table
Row name	Server
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
VRF	VRF instance name	Index	String, case sensitive. Length: 1 to 31 characters.	If the DNS server is on the public network, the length of characters is 0.
Type	DNS server type	Index	Enumeration: • 1—Static.	N/A
AddressType	Type of the DNS server IP address	Index	Enumeration: • 1—IPv4.	N/A
IpAddress	IP address of the DNS server	Index	String, case insensitive. Length: 1 to 45 characters.	IPv4 address string as AddressType is IPv4, IPv6 address string as AddressType is IPv6.
IfIndexOut	Output interface Index	Index	Unsigned integer.	Must and can only be specified when the IPv6 address of the DNS server is a link-local address.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.

## DNS/DNSHost

This table contains DNS host information.

### XML structure

```
<DNS>
  <DNSHost>
    <Host>
      <VRF></VRF>
      <HostName></HostName>
      <Type></Type>
      <QueryType></QueryType>
      <AgeTime></AgeTime>
      <Result></Result>
    </Host>
  </DNSHost>
</DNS>
```

### Table description

Item	Description
Feature name	DNS
Table name	DNSHost
Table type	Multi-instance table
Row name	Host
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case sensitive. Length: 1 to 31 characters.	If the DNS host is on the public network, the length of characters is 0.
HostName	Host name	Index	String, case insensitive. Length: 1 to 253 characters.	It can include letters, digits, hyphens (-), underscores (_), and dots (.).

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Domain name-to-IP address mapping type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Static.</li> <li>2—Dynamic.</li> </ul>	N/A
QueryType	Query type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—A.</li> <li>2—AAAA.</li> </ul>	A type A query resolves a domain name to the mapped IPv4 address. A type AAAA query resolves a domain name to the mapped IPv6 address.
AgeTime	Time in seconds that a mapping can be stored in the cache.	N/A	Unsigned integer. Value range: 1 to 65535 seconds.	No aging time for a static mapping.
Result	Replied result	N/A	String, case insensitive.	IPv4 address string as QueryType is A, IPv6 address string as QueryType is AAAA. Seperated by space if there are multiple addresses. Example: 1.1.1.1 2.2.2.2 3.3.3.3. 1::1 2::2 3::3.

## DNS/DNSServer

This table contains DNS server information.

### XML structure

```

<DNS>
  <DNSServer>
    <Server>
      <VRF></VRF>
      <Type></Type>
      <AddressType></AddressType>
      <IpAddress></IpAddress>
      <IfIndex></IfIndex>
      <Priority></Priority>
    </Server>
  </DNSServer>
</DNS>

```

## Table description

Item	Description
Feature name	DNS
Table name	DNSServer
Table type	Multi-instance table
Row name	Server
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case sensitive. Length: 1 to 31 characters.	If the DNS server is on the public network, the length of characters is 0.
Type	DNS server type	Index	Enumeration: <ul style="list-style-type: none"><li>1—Static.</li><li>2—Dynamic.</li></ul>	N/A
AddressType	Type of the DNS server IP address	Index	Enumeration: <ul style="list-style-type: none"><li>1—IPv4.</li><li>2—IPv6.</li></ul>	N/A
IpAddress	IP address of the DNS server	Index	String, case insensitive. Length: 1 to 45 characters.	IPv4 address string as AddressType is IPv4, IPv6 address string as AddressType is IPv6.
IfIndex	Output interface Index	Index	Unsigned integer.	Equal 0 if AddressType is 1 or the IpAddress is not a link-local address.
Priority	Priority of DNS server	N/A	Unsigned integer. Value range: 0 to 5.	The lower the value, the greater the priority. The priority indicates query sequence when resolving a domain name.

## DNS/DNSDomain

This table contains domain name suffix information.

## XML structure

```
<DNS>
  <DNSDomain>
    <Domain>
      <VRF></VRF>
```

```

    <Type></Type>
    <DomainName></DomainName>
    <Priority></Priority>
  </Domain>
</DNSDomain>
</DNS>

```

## Table description

Item	Description
Feature name	DNS
Table name	DNSDomain
Table type	Multi-instance table
Row name	Domain
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF instance name	Index	String, case sensitive. Length: 1 to 31 characters.	If the domain name suffix is on the public network, the length of characters is 0.
Type	Domain name suffix type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Static.</li> <li>2—Dynamic.</li> </ul>	N/A
DomainName	Domain name suffix	Index	String, case insensitive. Length: 1 to 253 characters.	It is a dot-separated, case-insensitive string that can include letters, digits, hyphens (-), underscores (_), and dots (.) (for example, aabbcc.com). The domain name suffix can include at most 253 characters, and each separated string includes no more than 63 characters.
Priority	Priority of domain name suffix	N/A	Unsigned integer. Value range: 0 to 15.	The lower the value, the greater the priority. The priority indicates query sequence when resolving a domain name.

# DNS/DNSConfig

This table contains DNS configuration information.

## XML structure

```
<DNS>
  <DNSConfig>
    <DNSProxyEnable></DNSProxyEnable>
    <DNSDSCP></DNSDSCP>
    <DNSDSCP6></DNSDSCP6>
  </DNSConfig>
</DNS>
```

## Table description

Item	Description
Feature name	DNS
Table name	DNSConfig
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DNSProxyEnable	Whether the function of DNS proxy is enabled	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b></li><li><b>False</b></li></ul>	Support for this function depends on the device model.
DNSDSCP	DSCP value for DNS packets sent by a DNS client or DNS proxy	N/A	Unsigned integer. Value range: 0 to 63.	N/A
DNSDSCP6	DSCP value for IPv6 DNS packets sent by an IPv6 DNS client or DNS proxy	N/A	Unsigned integer. Value range: 0 to 63.	N/A

# DNS/DNSSpecification

This table contains DNS specification information.

## XML structure

```
<DNS>
  <DNSSpecification>
    <SupportDNSProxy></SupportDNSProxy>
  </DNSSpecification>
</DNS>
```

## Table description

Item	Description
Feature name	DNS
Table name	DNSSpecification
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SupportDNS Proxy	Whether the function of DNS proxy is supported.	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b></li><li><b>false</b></li></ul>	N/A

## DNS/DNSIfServer

This table contains DNS server of interface information.

## XML structure

```
<DNS>
  <DNSIfServer>
    <Server>
      <IfIndex></IfIndex>
      <VRF></VRF>

# Domain

## Domain/Domains

Domain status table.

### XML structure

```
<Domain>
  <Domains>
    <Domain>
      <DomainName></DomainName>
      <State></State>
    </Domain>
  </Domains>
</Domain>
```

### Table description

Item	Description
Feature name	Domain
Table name	Domains
Table type	Multi-instance table
Row name	Domain
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
DomainName	Domain name	Index	String, case-insensitive. Length: 1 to 255 characters.
State	Status of the domain	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—Block.</li><li>• 1—Active.</li></ul>

## Domain/ResetUserRecords

This table clears user online or offline records.

### XML structure

```
<Domain>
```

```

<ResetUserRecords>
  <RecordType></RecordType>
</ResetUserRecords>
</Domain>

```

## Table description

Item	Description
Feature name	Domain
Table name	ResetUserRecords
Table type	Single-instance table
Row name	ResetUserRecord
Restrictions	None

# Domain

## Domain/GlobalConfig

Global domain configuration information table.

### XML structure

```
<Domain>
  <GlobalConfig>
    <DefaultDomain></DefaultDomain>
    <IfUnknownDomain></IfUnknownDomain>
  </GlobalConfig>
</Domain>
```

### Table description

Item	Description
Feature name	Domain
Table name	GlobalConfig
Table type	Single-instance table
Row name	None
Restrictions	A maximum of 16 domains can be created.
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DefaultDomain	Default domain	N/A	String, case-insensitive. Length: 1 to 255 characters.	By default, the default domain is the predefined domain named system.
IfUnknownDomain	ISP domain that accommodates users assigned to nonexistent domains	N/A	String, case-insensitive. Length: 1 to 255 characters. The domain name can't contain the following characters: \   / : * ? " < > @	N/A

## Domain/SessionLimit

The maximum number of concurrent users that can log on to the device through the specified method.

# XML structure

```
<Domain>
  <SessionLimit>
    <Ftp></Ftp>
    <Telnet></Telnet>
    <Http></Http>
    <Ssh></Ssh>
    <Https></Https>
  </SessionLimit>
</Domain>
```

## Table description

Item	Description
Feature name	Domain
Table name	SessionLimit
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ftp	Maximum number of concurrent FTP users	N/A	Unsigned integer. Value range: 1 to 64.	Default: 32. <ul style="list-style-type: none"><li>In non-FIPS mode, the value for this column can take effect.</li><li>In FIPS mode, this column is ignored.</li></ul>
Telnet	Maximum number of concurrent Telnet users	N/A	Unsigned integer. Value range: 1 to 32.	Default: 32. <ul style="list-style-type: none"><li>In non-FIPS mode, the value for this column can take effect.</li><li>In FIPS mode, this column is ignored.</li></ul>
Http	Maximum number of concurrent HTTP users	N/A	Unsigned integer. Value range: 1 to 64.	Default: 32. <ul style="list-style-type: none"><li>In non-FIPS mode, the value for this column can take effect.</li><li>In FIPS mode, this column is ignored.</li></ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
Ssh	Maximum number of concurrent SSH users	N/A	Unsigned integer. Value range: 1 to 32.	Default: 32.
Https	Maximum number of concurrent HTTPS users	N/A	Unsigned integer. Value range: 1 to 64.	Default: 32.

## Domain/Domains

Basic domain information table.

### XML structure

## Table description

Item	Description
Feature name	Domain
Table name	Domains
Table type	Multi-instance table
Row name	Domain
Restrictions	A maximum of 16 domains can be created. The domain named system is predefined and can't be deleted.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name can't contain the following characters: \   / : * ? " < > @	A predefined domain named system exists.
SessTimeIncludIdle	Whether to include the idle cut period or user online detection period in the user online duration to be sent to the server	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—The idle cut period or user online detection period is included in the user online duration to be sent to the server.</li> <li><b>false</b>—The idle cut period or user online detection period is excluded from the user online duration to be sent to the server.</li> </ul>	Default: false. Only portal users support the user online detection period.
AcctStartFailAction	Access control for users that encounter accounting-start failures	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Allows the users to stay online.</li> <li><b>1</b>—Logs off the users.</li> </ul>	Default: 0.
AcctUpdateFail	Configuration for users that encounter accounting-update failures	Data structure	Members include: <ul style="list-style-type: none"> <li>MaxTimes.</li> <li>AcctUpdateFailAction.</li> </ul>	N/A
MaxTimes	Maximum number of consecutive accounting-updat	N/A	Unsigned integer. Value range: 1 to 255.	Default: 1.

	e failures allowed for each user			
AcctUpdateFailAction	Access control for users that encounter accounting-update failures	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Allows the users to stay online.</li> <li>1—Logs off the users.</li> </ul>	Default: 0.
ServiceType	Service type of the domain	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—High-Speed Internet (HSI) service.</li> <li>1—Set Top Box (STB) service.</li> <li>2—Voice over IP (VoIP) service.</li> </ul>	Default: 0.
AccessLimit	Maximum number of concurrent access users	N/A	Unsigned integer. Value range: 1 to 2147483647.	N/A
UserAddrType	User address type of the domain	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—public-ipv4.</li> <li>1—private-ipv4.</li> <li>2—public-ds.</li> <li>3—private-ds.</li> <li>4—ds-lite.</li> <li>5—ipv6.</li> <li>6—nat64.</li> </ul>	N/A
AuthorAttrs	Authorization attributes	Data structure	Members include: <ul style="list-style-type: none"> <li>IdleTime.</li> <li>IdleFlow.</li> <li>ProfileName.</li> <li>IpPoolName.</li> <li>Ipv6PoolName.</li> <li>Ipv6Address.</li> <li>Ipv6PrefixLength.</li> <li>PrimDnsIppaddr.</li> <li>PrimDnsIpv6addr.</li> <li>SecDnsIppaddr.</li> <li>SecDnsIpv6addr.</li> <li>PortalUrl.</li> <li>VRF.</li> <li>IgmpMaxAccessNum.</li> <li>MldMaxAccessNum.</li> <li>SessTimeOut.</li> </ul>	N/A
IdleTime	Idle timeout period	N/A	Unsigned integer. Value range: 1 to 600, in minutes.	N/A
IdleFlow	The minimum traffic that must be generated in the idle timeout period	N/A	Unsigned integer. Value range: 1 to 10240000, in bytes.	Default: 10240 bytes.
ProfileName	User profile	N/A	String, case-sensitive.	Valid characters include letters, digits, and

	name		Length: 1 to 31 characters.	underscores (_). The name must start with a letter and must be unique.
IpPoolName	IPv4 address pool name	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
Ipv6PoolName	IPv6 address pool name	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
Ipv6Address	IPv6 address for specifying the prefix	N/A	Hexadecimal string, colon-separated.	For example, 2001:12::22:33.
Ipv6PrefixLength	IPv6 prefix length	N/A	Unsigned integer. Value range: 1 to 128.	N/A
PrimDnsIpaddr	IPv4 address of the primary DNS server	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 10.1.1.1.
PrimDnsIpv6addr	IPv6 address of the primary DNS server	N/A	IPv6: Hexadecimal string.	IPv6 example: 2001:12::22:33.
SecDnsIpaddr	IPv4 address of the secondary DNS server	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 10.1.1.1.
SecDnsIpv6addr	IPv6 address of the secondary DNS server	N/A	IPv6: Hexadecimal string.	IPv6 example: 2001:12::22:33.
PortalUrl	Portal redirect URL	N/A	String, case-sensitive. Length: 1 to 255 characters.	N/A
VRF	VPN instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
IgmpMaxAccessNum	The maximum number of IGMP groups that an IPv4 user can join concurrently	N/A	Unsigned integer. Value range: 1 to 64.	Default: 4.
MldMaxAccessNum	The maximum number of MLD groups that an IPv6 user can join concurrently	N/A	Unsigned integer. Value range: 1 to 64.	Default: 4.
SessTimeOut	Session timeout timer	N/A	Unsigned integer. Value range: 1 to 4294967295.	Users are logged off when the session timeout timer expires for the users.
InboundUserPriority	Inbound user priority	N/A	Unsigned integer. Value range: 0 to 7.	N/A
OutboundUserPriority	Outbound user priority	N/A	Unsigned integer. Value range: 0 to 7.	N/A

## Domain/Schemes

Domain scheme table.

## XML structure

```
<Domain>
  <Schemes>
    <Scheme>
      <DomainName></DomainName>
      <AaaType></AaaType>
      <AccessType></AccessType>
      <SchemeList></SchemeList>
      <SchemeNameList></SchemeNameList>
    </Scheme>
  </Schemes>
</Domain>
```

## Table description

Item	Description
Feature name	Domain
Table name	Schemes
Table type	Multi-instance table
Row name	Scheme
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters.	N/A
AaaType	AAA type	Index	Enumeration: <ul style="list-style-type: none"><li>• 0—Authentication.</li><li>• 4—Authorization.</li><li>• 5—Accounting.</li></ul>	There are some restrictions among the column AccessType, the column AaaType, and the column SchemeList. Those restrictions will be described in the Restrictions section below the table.
AccessType	Access type	Index	Enumeration: <ul style="list-style-type: none"><li>• 0—Login.</li><li>• 1—Super.</li><li>• 2—Command.</li><li>• 3—LAN access.</li><li>• 4—PPP.</li><li>• 5—Default.</li><li>• 6—Portal.</li><li>• 7—IKE.</li><li>• 8—IPoE.</li><li>• 9—SSL VPN.</li></ul>	

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>• <b>10</b>—ADVPN.</li> </ul>	
SchemeList	AAA method types	N/A	<p>String.</p> <p>Length: 1 to 9 characters, using the format of 1-2-4.</p> <p>The hyphen (-) is used to separate the digits that represent different AAA methods, including:</p> <ul style="list-style-type: none"> <li>• <b>1</b>—HWTACACS.</li> <li>• <b>2</b>—RADIUS.</li> <li>• <b>3</b>—LDAP.</li> <li>• <b>4</b>—Local.</li> <li>• <b>5</b>—None.</li> </ul> <p>The string 1-2-4 indicates that HWTACACS is specified as the primary authentication, authorization, or accounting method. If the HWTACACS method fails, the RADIUS method applies. If the RADIUS method fails, the local method applies.</p>	
SchemeNameList	Scheme name list	N/A	<p>String, case-insensitive.</p> <p>Length: 0 to 68 characters, may contain 0 to 2 scheme names.</p> <p>Every scheme name contains two parts: Scheme name length and scheme name string.</p> <p>The scheme name is in the format of xxmm.....mm.</p> <ul style="list-style-type: none"> <li>• The xx argument represents the scheme name length. Use two digits to set the scheme name length.</li> <li>• The mm.....mm argument represents the scheme name string. The string is 1 to 32 characters.</li> </ul> <p>For example:</p> <ul style="list-style-type: none"> <li>• The string 08abcdefgh represents a scheme whose name is abcdefgh and whose name length is 8 characters.</li> <li>• The string 10testtestte04test represents two schemes. One scheme is named as testtestte and the name length is 10 characters. The other scheme is named as test and the</li> </ul>	If this column is not available, no schemes are specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
			name length is 4 characters.	

#### Restrictions:

- The letter Y indicates that a specific access type supports a specific method for authentication, authorization, or accounting.
- You can specify one primary method and multiple backup methods for authentication, authorization, or accounting. An AAA method with a lower level can be the backup of another method that has a higher level. The following list arranges the methods from high level to low level:
  - RADIUS, TACACS, and LDAP.
  - Local.
  - None.

Among the highest-level methods, the RADIUS method and TACACS method can be the backup of each other.

- In FIPS mode, all access types can't use the none method for authentication, authorization, or accounting.

AAA method (level) Access type +AAA type		RADIUS (3)	TACACS (3)	LDAP (3)	Local (2)	None (1)
Default	Authentication	Y	Y	Y	Y	Y
	Authorization	Y	Y		Y	Y
	Accounting	Y	Y		Y	Y
Login	Authentication	Y	Y	Y	Y	Y
	Authorization	Y	Y		Y	Y
	Accounting	Y	Y		Y	Y
Super	Authentication	Y	Y			
Command	Authorization		Y		Y	Y
	Accounting		Y			
LAN access (MAC authentication or 802.1X)	Authentication	Y		Y	Y	Y
	Authorization	Y			Y	Y
	Accounting	Y			Y	Y
PPP	Authentication	Y	Y		Y	Y
	Authorization	Y	Y		Y	Y
	Accounting	Y	Y		Y	Y
Portal	Authentication	Y		Y	Y	Y
	Authorization	Y			Y	Y
	Accounting	Y			Y	Y
IKE	Authentication	Y			Y	Y

IPoE	Authentication	Y			Y	Y
	Authorization	Y			Y	Y
	Accounting	Y			Y	Y
SSL VPN	Authentication	Y		Y	Y	Y
	Authorization	Y		Y	Y	Y
	Accounting	Y			Y	Y
ADVPN	Authentication	Y			Y	Y
	Authorization	Y			Y	Y
	Accounting	Y			Y	Y

## Domain/BroadcastSchemes

RADIUS broadcast scheme table for a domain.

### XML structure

```

<Domain>
  <BroadcastSchemes>
    <BroadcastScheme>
      <DomainName></DomainName>
      <AccessType></AccessType>
      <SchemeName></SchemeName>
    </BroadcastScheme>
  </BroadcastSchemes>
</Domain>

```

### Table description

Item	Description
Feature name	Domain
Table name	BroadcastSchemes
Table type	Multi-instance table
Row name	BroadcastScheme
Restrictions	Configure this table only for domains that have been configured RADIUS accounting.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name	Index	String, case-insensitive. Length: 1 to 255 characters. The name can't contain the following characters: \   / : * ? " < > @	N/A
AccessType	Access type	Index	Enumeration: <ul style="list-style-type: none"><li>• 3—LAN access.</li><li>• 4—PPP.</li><li>• 6—Portal.</li><li>• 8—IPoE.</li></ul>	At present, only one RADIUS broadcast scheme is supported for a domain.
SchemeName	RADIUS scheme name	Index	String. Length: 1 to 32 characters.	

## Domain/EnableAbnormalOfflineRecords

This table controls the enabling status of the user abnormal offline recording feature.

## XML structure

```
<Domain>
  <EnableAbnormalOfflineRecords>
    <Enable></Enable>
  </EnableAbnormalOfflineRecords>
</Domain>
```

## Table description

Item	Description

    <DefaultDomain></DefaultDomain>
    <IfUnknownDomain></IfUnknownDomain>
  </GlobalConfig>
</Domain>
```

### Table description

Item	Description
Feature name	Domain
Table name	GlobalConfig
Table type	Single-instance table
Row name	None
Restrictions	A maximum of 16 domains can be created.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DefaultDomain	Default domain.	N/A	String, case-insensitive. Length: 1 to 255 characters.	By default, the default domain is the predefined domain named system.
IfUnknownDomain	ISP domain that accommodates users assigned to nonexistent domains.	N/A	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain the following characters: \   / : * ? " < > @	N/A

## Domain/SessionLimit

The maximum number of concurrent users that can log on to the device through the specific method.

# XML structure

```
<Domain>
  <SessionLimit>
    <Ftp></Ftp>
    <Telnet></Telnet>
    <Http></Http>
    <Ssh></Ssh>
    <Https></Https>
  </SessionLimit>
</Domain>
```

## Table description

Item	Description
Feature name	Domain
Table name	SessionLimit
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ftp	Maximum number of concurrent FTP users	N/A	Unsigned integer. Value range: 1 to 64.	Default: 32. <ul style="list-style-type: none"><li>In non-FIPS mode, the value for this column can take effect.</li><li>In FIPS mode, this column is ignored.</li></ul>
Telnet	Maximum number of concurrent Telnet users	N/A	Unsigned integer. Value range: 1 to 32.	Default: 32. <ul style="list-style-type: none"><li>In non-FIPS mode, the value for this column can take effect.</li><li>In FIPS mode, this column is ignored.</li></ul>
Http	Maximum number of concurrent HTTP users	N/A	Unsigned integer. Value range: 1 to 64.	Default: 32. <ul style="list-style-type: none"><li>In non-FIPS mode, the value for this column can take effect.</li><li>In FIPS mode, this column is ignored.</li></ul>
Ssh	Maximum number of concurrent SSH	N/A	Unsigned integer. Value range: 1 to 32.	Default: 32.

Column name	Column description	Column type	Data type and restrictions	Remarks
	users			
Https	Maximum number of concurrent HTTPS users	N/A	Unsigned integer. Value range: 1 to 64.	Default: 32.

## Table description

Item	Description
Feature name	Domain
Table name	Domains
Table type	Multi-instance table
Row name	Domain
Restrictions	A maximum of 16 domains can be created. The domain named system is predefined and cannot be deleted.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name	Index	String, case-insensitive. Length: 1 to 255 characters. The domain name cannot contain the following characters: \   / : * ? " < > @	A predefined domain named system exists.
SessTimeIncludle	Whether to include the idle cut period or user online detection period in the user online duration to be sent to the server	N/A	Boolean: <ul style="list-style-type: none"> <li>true—The idle cut period or user online detection period is included in the user online duration to be sent to the server.</li> <li>false—The idle cut period or user online detection period is excluded from the user online duration to be sent to the server.</li> </ul>	Default: false. Only portal users support the user online detection period.
State	Status of the domain	N/A	Boolean: <ul style="list-style-type: none"> <li><b>0</b>—Blocked.</li> <li><b>1</b>—Active.</li> </ul>	Default: 1.
AcctStartFailAction	Access control for users that encounter accounting-start failures	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Allows the users to stay online.</li> <li><b>1</b>—Logs off the users.</li> </ul>	Default: 0.
AcctUpdateFail	Configuration for users that encounter accounting-update failures	Data structure	Members include: <ul style="list-style-type: none"> <li>MaxTimes.</li> <li>AcctUpdateFailAction.</li> </ul>	N/A
MaxTimes	Maximum number of consecutive accounting-updat	N/A	Unsigned integer. Value range: 1 to 255.	Default: 1.

Column name	Column description	Column type	Data type and restrictions	Remarks
	e failures allowed for each user			
AcctUpdateFailAction	Access control for users that encounter accounting-update failures	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Allows the users to stay online.</li> <li>1—Logs off the users.</li> </ul>	Default: 0.
ServiceType	Service type of the domain	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—High-Speed Internet (HSI) service.</li> <li>1—Set Top Box (STB) service.</li> <li>2—Voice over IP (VoIP) service.</li> </ul>	Default: 0.
AccessLimit	Maximum number of concurrent access users	N/A	Unsigned integer. Value range: 1 to 2147483647.	N/A
UserAddrType	User address type of the domain	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—public-ipv4.</li> <li>1—private-ipv4.</li> <li>2—public-ds.</li> <li>3—private-ds.</li> <li>4—ds-lite.</li> <li>5—ipv6.</li> <li>6—nat64.</li> </ul>	N/A
AuthorAttrs	Authorization attributes	Data structure	Members include: <ul style="list-style-type: none"> <li>IdleTime.</li> <li>IdleFlow.</li> <li>ProfileName.</li> <li>IpPoolName.</li> <li>Ipv6PoolName.</li> <li>Ipv6Address.</li> <li>Ipv6PrefixLength.</li> <li>PrimDnsIpaddr.</li> <li>PrimDnsIpv6addr.</li> <li>SecDnsIpaddr.</li> <li>SecDnsIpv6addr.</li> <li>PortalUrl.</li> <li>VRF.</li> <li>IgmpMaxAccessNum.</li> <li>MldMaxAccessNum.</li> <li>SessTimeOut.</li> </ul>	N/A
IdleTime	Idle timeout period	N/A	Unsigned integer. Value range: 1 to 600, in minutes.	N/A
IdleFlow	The minimum traffic that must be generated in the idle timeout	N/A	Unsigned integer. Value range: 1 to 10240000, in bytes.	Default: 10240 bytes.

Column name	Column description	Column type	Data type and restrictions	Remarks
	period			
ProfileName	User profile name	N/A	String, case-sensitive. Length: 1 to 31 characters.	Valid characters include letters, digits, and underscores (_). The name must start with a letter and must be unique.
IpPoolName	IPv4 address pool name	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
Ipv6PoolName	IPv6 address pool name	N/A	String, case-sensitive. Length: 1 to 63 characters.	N/A
Ipv6Address	IPv6 address for specifying the prefix	N/A	Hexadecimal string, colon-separated.	For example, 2001:12::22:33.
Ipv6PrefixLength	IPv6 prefix length	N/A	Unsigned integer. Value range: 1 to 128.	N/A
PrimDnsIpaddr	IPv4 address of the primary DNS server	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1.
PrimDnsIpv6addr	IPv6 address of the primary DNS server	N/A	IPv6: Hexadecimal string.	IPv6 example: 1:2:3:4:5:6:7:8.
SecDnsIpaddr	IPv4 address of the secondary DNS server	N/A	IPv4: String, dotted decimal notation.	IPv4 example: 1.1.1.1.
SecDnsIpv6addr	IPv6 address of the secondary DNS server	N/A	IPv6: Hexadecimal string.	IPv6 example: 1:2:3:4:5:6:7:8.
PortalUrl	Portal redirect URL	N/A	String, case-sensitive. Length: 1 to 255 characters.	N/A
VRF	VPN instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
IgmpMaxAccessNum	The maximum number of IGMP groups that an IPv4 user can join concurrently	N/A	Unsigned integer. Value range: 1 to 64.	Default: 4.
MldMaxAccessNum	The maximum number of MLD groups that an IPv6 user can join concurrently	N/A	Unsigned integer. Value range: 1 to 64.	Default: 4.
SessTimeOut	The users will be offline when the time is over	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
InboundUserPriority	Inbound user priority	N/A	Unsigned integer. Value range: 0 to 7.	N/A
OutboundUse	Outbound user	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
rPriority	priority		Value range: 0 to 7.	

## Domain/Schemes

Domain scheme table.

### XML structure

```

<Domain>
  <Schemes>
    <Scheme>
      <DomainName></DomainName>
      <AaaType></AaaType>
      <AccessType></AccessType>
      <SchemeList></SchemeList>
      <SchemeNameList></SchemeNameList>
    </Scheme>
  </Schemes>
</Domain>

```

### Table description

Item	Description
Feature name	Domain
Table name	Schemes
Table type	Multi-instance table
Row name	Scheme
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters.	N/A
AaaType	AAA type.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Authentication.</li> <li>4—Authorization.</li> <li>5—Accounting.</li> </ul>	There are some restrictions among the columns AccessType, AaaType, and SchemeList. Those restrictions will be described in the Restrictions section below the table.
AccessType	Access type.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Login.</li> <li>1—Super.</li> <li>2—Command.</li> </ul>	

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>• 3—LAN access.</li> <li>• 4—PPP.</li> <li>• 5—Default.</li> <li>• 6—Portal.</li> <li>• 7—IKE.</li> <li>• 8—IPoE.</li> <li>• 9—SSL VPN.</li> <li>• 10—ADVPN.</li> </ul>	
SchemeList	AAA method types.	N/A	<p>String.</p> <p>Length: 1 to 9 characters, using the format of 1-2-4.</p> <p>A hyphen (-) is used to separate the digits that represent different AAA methods, including:</p> <ul style="list-style-type: none"> <li>• 1—HWTACACS.</li> <li>• 2—RADIUS.</li> <li>• 3—LDAP.</li> <li>• 4—Local.</li> <li>• 5—None.</li> </ul> <p>The string 1-2-4 indicates that HWTACACS is specified as the primary authentication, authorization, or accounting method. If the HWTACACS method fails, the RADIUS method applies. If the RADIUS method fails, the local method applies.</p>	
SchemeNameList	Scheme name list.	N/A	<p>String, case-insensitive.</p> <p>Length: 0 to 68 characters, which can contain 0 to 2 scheme names.</p> <p>Every scheme name contains two parts: Scheme name length and scheme name string.</p> <p>The scheme name is in the format of xxmm.....mm.</p> <ul style="list-style-type: none"> <li>• The xx argument represents the scheme name length. Use two digits to set the scheme name length.</li> <li>• The mm.....mm argument represents the scheme name string. The string is 1 to 32 characters.</li> </ul> <p>For example:</p> <ul style="list-style-type: none"> <li>• The string 08abcdefgh represents a scheme whose name is abcdefgh and whose name length is</li> </ul>	If this column is not available, no schemes are specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
			8 characters. <ul style="list-style-type: none"> <li>The string 10testtestte04test represents two schemes. One scheme is named as testtestte and the name length is 10 characters. The other scheme is named as test and the name length is 4 characters.</li> </ul>	

**Restrictions:**

- The letter Y indicates that a specific access type supports a specific method for authentication, authorization, or accounting.
- You can specify one primary method and multiple backup methods for authentication, authorization, or accounting. An AAA method with a lower level can be the backup of another method that has a higher level. The following list arranges the methods from high level to low level:
  - RADIUS, TACACS, or LDAP.
  - Local.
  - None.

Among the highest-level methods, the RADIUS method and the TACACS method can be the backup of each other.

- In FIPS mode, all access types cannot use the none method for authentication, authorization, or accounting.

AAA method (level)  Access type +AAA type		RADIUS (3)	TACACS (3)	LDAP (3)	Local (2)	None (1)
Default	Authentication	Y	Y	Y	Y	Y
	Authorization	Y	Y		Y	Y
	Accounting	Y	Y		Y	Y
Login	Authentication	Y	Y	Y	Y	Y
	Authorization	Y	Y		Y	Y
	Accounting	Y	Y		Y	Y
Super	Authentication	Y	Y			
Command	Authorization		Y		Y	Y
	Accounting		Y			
LAN access (MAC authenticat ion or 802.1X)	Authentication	Y		Y	Y	Y
	Authorization	Y			Y	Y
	Accounting	Y			Y	Y
PPP	Authentication	Y	Y		Y	Y
	Authorization	Y	Y		Y	Y
	Accounting	Y	Y		Y	Y

Portal	Authentication	Y		Y	Y	Y
	Authorization	Y			Y	Y
	Accounting	Y			Y	Y
IKE	Authentication	Y			Y	Y
IPoE	Authentication	Y			Y	Y
	Authorization	Y			Y	Y
	Accounting	Y			Y	Y
SSL VPN	Authentication	Y		Y	Y	Y
	Authorization	Y		Y	Y	Y
	Accounting	Y			Y	Y
ADVPN	Authentication	Y			Y	Y
	Authorization	Y			Y	Y
	Accounting	Y			Y	Y

## Domain/BroadcastSchemes

RADIUS broadcast scheme table for a domain.

### XML structure

```

<Domain>
  <BroadcastSchemes>
    <BroadcastScheme>
      <DomainName></DomainName>
      <AccessType></AccessType>
      <SchemeName></SchemeName>
    </BroadcastScheme>
  </BroadcastSchemes>
</Domain>

```

### Table description

Item	Description
Feature name	Domain
Table name	BroadcastSchemes
Table type	Multi-instance table
Row name	BroadcastScheme
Restrictions	Configure this table only for domains that have been configured RADIUS accounting.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DomainName	Domain name.	Index	String, case-insensitive. Length: 1 to 255 characters. The name can't contain the following characters: \   / : * ? " < > @	N/A
AccessType	Access type.	Index	Enumeration: <ul style="list-style-type: none"><li>3—LAN access.</li><li>4—PPP.</li><li>6—Portal.</li><li>8—IPoE.</li></ul>	At present, only one RADIUS broadcast scheme is supported for a domain.
SchemeName	RADIUS scheme name.	Index	String. Length: 1 to 32 characters.	

## Domain/Specification

The domain feature capability differs on different devices or on the same device in different states.

- Additional description for the table Domain/SessionLimit, including what service types are supported on the device in the current state. The device can limit the number of concurrent online users only for the service types that are supported in the current state.
- Additional description for the table Domain/Schemes. Whether the device supports the none method as the authentication, authorization, or accounting method.

## XML structure

```

UserName	Username	N/A	String, case-sensitive. Length: 1 to 253 characters.
AccessType	Access type of the user	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—PPP.</li> <li>2—IPoE.</li> <li>3—Portal.</li> <li>4—Login.</li> <li>5—LAN access.</li> </ul>
DomainName	Name of the ISP domain to which the user belongs	N/A	String, case-insensitive. Length: 1 to 255 characters.
Interface	Interface through which the user accesses the network	N/A	String, case-insensitive. Length: 1 to 47 characters.
Ip	IP address of the user	N/A	String, dotted decimal notation.
Ipv6	IPv6 address of the user	N/A	Hexadecimal string, colon-separated.
MacAddress	MAC address of the user	N/A	MAC address format: ff-ff-ff-ff-ff-ff.
OfflineReason	Reason that the user went offline	N/A	String, case-sensitive.
OnlineRequestTime	Time when the user requested to come online	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS. Value range for YYYY: 2000 to 2035. Value range for MM: 1 to 12. Value range for DD depends on the specified month. Value range for HH: 0 to 23. Value range for MM: 0 to 59. Value range for SS: 0 to 59.
Svlan	ID of the service provider network VLAN to which the user belongs	N/A	Unsigned integer. Value range: 1 to 4094.
Cvlan	ID of the customer network VLAN to which the user belongs	N/A	Unsigned integer. Value range: 1 to 4094.
Slot	Slot number	N/A	Unsigned integer. Value range: 0 to $2^{16}-1$ .
Chassis	Chassis number	N/A	Unsigned integer. Value range: 0 to $2^{16}-1$ .

# Domain/UserOnlineFailRecords

This table contains user online failure records.

## XML structure

```

Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions
Enable	Global Dot1X feature	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled</li></ul>

Column name	Column description	Column type	Data type and restrictions
			<ul style="list-style-type: none"> <li><b>false</b>—Disabled(default)</li> </ul>
AuthenMethod	Authentication Method of 802.1X	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Chap(default)</li> <li><b>2</b>—PAP</li> <li><b>3</b>—EAP</li> </ul>
DomainDelimiterAt	Delimiter "@" between username and domain name	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled(default)</li> <li><b>false</b>—Disabled</li> </ul>
DomainDelimiterSlash	Delimiter "/" between username and domain name	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled</li> <li><b>false</b>—Disabled(default)</li> </ul>
DomainDelimiterBackslash	Delimiter "\" between username and domain name	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled</li> <li><b>false</b>—Disabled(default)</li> </ul>
DomainDelimiterDot	Delimiter "." between username and domain	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled</li> <li><b>false</b>—Disabled(default)</li> </ul>
QuietEnable	Enable 802.1X quiet function	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled</li> <li><b>false</b>—Disabled(default)</li> </ul>
QuietInterval	Period value of Quiet timer	N/A	Unsigned integer Value range: 10 to 120 seconds. Default value is 60 second.
HandshakeInterval	Period value of handshake timer	N/A	Unsigned integer. Value range: 5 to 1024 seconds. Default value is 15 second.
ReauthenInterval	Period value of re-authentication timer	N/A	Unsigned integer. Value range: 60 to 7200 seconds. Default value is 3600 second.
ServerInterval	Period value of server response timer	N/A	Unsigned integer. Value range: 100 to 300 seconds. Default value is 100 second.
SupplicantInterval	Period value of supplicant response timer(other than EAP-Response/ID)	N/A	Unsigned integer. Value range: 1 to 120 seconds. Default value is 30 second.
ReqIDInterval	Period value of supplicant EAP-Response /ID timer	N/A	Unsigned integer. Value range: 1 to 120 seconds. Default value is 30 second.
RequestRetryCount	Max count of retrying to send	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
	out dot1X's Request packets		Value range: 1 to 10. Default value is 2.

## Dot1X/EAD

This table contains Dot1X's EAD feature.

## XML structure

```
<Dot1X>
  <EAD>
    <AssistEnable></AssistEnable>
    <AssistURL></AssistURL>
  </EAD>
</Dot1X>
```

## Table description

Item	Description
Feature name	Dot1X
Table name	EAD
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
AssistEnable	Enable EAD assistant function	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled</li> <li><b>false</b>—Disabled(default)</li> </ul>
AssistURL	The redirect URL used with EAD assistant function	N/A	String. Length: 1 to 64 characters.

## DOT1X/EADFreeIPs

This table contains Dot1X's EAD assistant free IP.

## XML structure

```
<Dot1X>
  <EADFreeIPs>
    <FreeIP>
      <IPv4Address></IPv4Address>
      <IPv4Mask></IPv4Mask>
    </FreeIP>
  </EADFreeIPs>
</Dot1X>
```

## Table description

Item	Description
Feature name	Dot1X
Table name	EADFreeIPs
Table type	Multi-instance table
Row name	FreeIP
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
IPv4Address	IP address used in EAD assistance feature	Index	String, dotted decimal notation.
IPv4Mask	IP address mask	Index	Ipv4Mask.

## Dot1X/Smarton

This table contains Dot1X's Smarton feature table.

## XML structure

```
<Dot1X>
  <Smarton>
    <SwitchID></SwitchID>
    <Password></Password>
    <RetryCount></RetryCount>
  </Smarton>
</Dot1X>
```

## Table description

Item	Description
Feature name	Dot1X
Table name	Smarton
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
SwitchID	Dot1x smarton switchid	N/A	String. <ul style="list-style-type: none"><li>Length: 1 to 30 characters.</li></ul>
Password	Dot1x smarton password	N/A	String. Length: 1 to 16 characters. Not return.
RetryCount	Maxium attempt count to send out Request packets with smarton notification	N/A	Unsigned integer. Value range: 1 to 10. Default value is 3.

## Dot1X/Interfaces

This table contains Dot1X interface's information .

## XML structure

```
<Dot1X>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>

      <MulticastTrigger></MulticastTrigger>
      <UnicastTrigger></UnicastTrigger>
      <HandshakeEnable></HandshakeEnable>
      <SecHandshakeEnable></SecHandshakeEnable>
      <ReauthUnreachableMode></ReauthUnreachableMode>
      <MandDomain></MandDomain>
```

```

    <MaxUser></MaxUser>
    <FailVLAN></FailVLAN>
    <CriticalVLAN></CriticalVLAN>
    <GuestVLAN></GuestVLAN>
    <FailVSI></FailVSI>
    <CriticalVSI></CriticalVSI>
    <GuestVSI></GuestVSI>
    <CriticalEapol></CriticalEapol>
  </Interface>
</Interfaces>
</Dot1X>

```

## Table description

Item	Description
Feature name	Dot1X
Table name	Interfaces
Table type	Multi-instance table
Row name	interface
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
Enable	Enable 802.1X	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled</li> <li><b>false</b>—Disabled(default)</li> </ul>
SmartonEnable	Enable Smarton feature	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled</li> <li><b>false</b>—Disabled(default)</li> </ul>
PortControl	Port control status of the interface	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—authorized-force</li> <li><b>2</b>—unauthorized-force</li> <li><b>3</b>—auto(default)</li> </ul>
PortMethod	Control Method of the interface	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Portbased</li> <li><b>2</b>—MACbased(default)</li> </ul>
ReauthenEnable	Enable periodic reauthentication feature	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled</li> <li><b>false</b>—Disabled(default)</li> </ul>
FailVLAN	VLAN for users that have failed 802.1X	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
	authentication		Value range: 1 to 4094. Default Value is not configured.
CriticalVLAN	VLAN for users that have failed 802.1X authentication because of unreachable servers	N/A	Unsigned integer. Value range: 1 to 4094. Default Value is not configured.
GuestVLAN	VLAN used before 802.1X authentication	N/A	Unsigned integer. Value range: 1 to 4094. Default Value is not configured.
FailVSI	VSI for users that have failed 802.1X authentication because of any reason other than unreachable servers	N/A	String. Length: 1 to 31 characters.
CriticalVSI	VSI for users that have failed 802.1X authentication because of unreachable servers	N/A	String. Length: 1 to 31 characters.
GuestVSI	VSI with restricted services for non-authenticated 802.1X users	N/A	String. Length: 1 to 31 characters.
CriticalEapol	Enable the device to send an EAP-Success packet to an 802.1X client when its client user is assigned to the critical VLAN or VSI on the interface	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled (default).</li> </ul>
HandshakeEnable	Enable handshake feature	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled(default)</li> <li><b>false</b>—Disabled</li> </ul>
SecHandshakeEnable	Enable secure handshake feature	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled</li> <li><b>false</b>—Disabled(default)</li> </ul>
ReauthUnreachableMode	Set user online or offline when the AAA server is not available during re-authenticating	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Offline(default)</li> <li><b>1</b>—Online</li> </ul>
MandDomain	Mandatory authentication domain on this interface	N/A	String. Length: 1 to 255 characters.
MaxUser	Maximum user number on this interface	N/A	Unsigned integer. Value range: 1 to 4294967295. Default Value is 4294967295.
MulticastTrigger	Enable multicast trigger function on the interface	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled(default)</li> <li><b>false</b>—Disabled</li> </ul>
UnicastTrigger	Enable unicast trigger function on the interface	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled</li> </ul>

Column name	Column description	Column type	Data type and restrictions
			<ul style="list-style-type: none"> <li><b>false</b>—Disabled(default)</li> </ul>
