ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	The null string indicates public network.
Ipv6Address	IPv6 address.	Index	Hexadecimal string, colon-separated.	N/A
Ipv6PrefixLength	IPv6 prefix length.	Index	Unsigned integer. Value range: 1 to 128.	N/A
Priority	Priority.	Index	Unsigned integer. Value range: 1 to $2^{32}-1$ .	N/A
LinkType	Type of the link.	N/A	Enumeration: <ul style="list-style-type: none"><li>• 1—Real server.</li><li>• 2—Link.</li></ul>	N/A
RealServer	Real server name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
Link	Link name.	N/A	String, case-insensitive. Length: 1 to 63 characters.	N/A
RTT	Roundtrip time of the proximity probe.	N/A	Unsigned integer. Value range: 0 to 86400000. Unit: millisecond	N/A
TTL	Time to live of the proximity probe.	N/A	Unsigned integer. Value range: 0 to 256.	N/A

## LB/Specifications

This table contains information about the LB function specification.

## XML structure

<LB>

```

<Specifications>
  <SupportHotbackup></SupportHotbackup>
  <SupportSLB></SupportSLB>
  <SupportLBControllerType></SupportLBControllerType>
  <SupportCachePolicy></SupportCachePolicy> </Specifications>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	Specifications
Table type	Single-instance table
Row name	N/A
Restrictions	Only LB function specification can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SupportHotbackup	Hot backup function is supported or not.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Supported.</li> <li>false—Not supported.</li> </ul>	N/A
SupportSLB	SLB function is supported or not	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Supported.</li> <li>false—Not supported.</li> </ul>	N/A
SupportLBControllerType	Controller function is supported or not	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Supported.</li> <li>false—Not supported.</li> </ul>	N/A
SupportCachePolicy	Cache policy function is supported or not	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Supported.</li> <li>false—Not supported.</li> </ul>	N/A

## LB/ALG

This table contains information about ALG.

## XML structure

```
<LB>
```

```

<ALG>
  <DnsEnable></DnsEnable>
  <FtpEnable></FtpEnable>
  <H323Enable></H323Enable>
  <IcmpEnable></IcmpEnable>

</ProximityStats>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	ProximityStats
Table type	Multi-instance table
Row name	ProximityStat
Restrictions	Only proximity can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
VRF	VRF name.	Index	String. Length: 0 to 31 characters.	The null string indicates public network.
TotalCount	The number of total proximity entries.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
Ipv4Count	The number of IPv4 proximity entries.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
Ipv6Count	The number of IPv6 proximity entries.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A

# LB/LimitPolicies

This table contains information about limit policies.

## XML structure

```
<LB>
  <LimitPolicies>
    <LimitPolicy>
      <Name></Name>
      <Description></Description>
    </LimitPolicy>
  </LimitPolicies>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	LimitPolicies
Table type	Multi-instance table
Row name	LimitPolicy
Restrictions	Only limit policy can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the limit policy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description information for the policy.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.

# LB/LimitRules

This table contains information about limit policy rules.

## XML structure

```
<LB>
  <LimitRules>
    <LimitRule>
```

```

<Name></Name>
<ID></ID>
<AclVersion></AclVersion>
<AclNum></AclNum>
<AclName></AclName>
<PerDestination></PerDestination>
<PerSource></PerSource>
<PerService></PerService>
<ThresholdHigh></ThresholdHigh>
<ThresholdLow></ThresholdLow>
</LimitRule>
</LimitRules>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	LimitRules
Table type	Multi-instance table
Row name	LimitRule
Restrictions	Only limit policy rule can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the limit policy.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ID	ID of the limit policy rule.	Index	Unsigned integer. Value range: 1 to 65535.	N/A
AclVersion	Version of ACL	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4.</li> <li>2—IPv6.</li> </ul>	N/A
AclNum	ACL number.	N/A	Unsigned integer. Value range: 2000 to 3999.	AclNum and AclName are mutual exclusive and only one of them can be set in a single message.
AclName	Name of the ACL.	N/A	String, case-insensitive. Length: 1 to 63 characters.	AclNum and AclName are mutual exclusive and only one of them can be set in a single message.
PerDestination	Enable the per-destination connection	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	limit.		<ul style="list-style-type: none"> <li>1—Enable.</li> </ul>	
PerSource	Enable the per-source connection limit.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
PerService	Enable the per-service connection limit.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
ThresholdHigh	High threshold of the connections.	N/A	Unsigned integer. Value range: 1 to $2^{32}-1$ .	ThresholdHigh must be greater or equal than ThresholdLow.
ThresholdLow	Low threshold of the connections.	N/A	Unsigned integer. Value range: 1 to $2^{32}-1$ .	ThresholdHigh must be greater or equal than ThresholdLow.

## LB/Links

This table contains information about link.

## XML structure

## Table description

Item	Description
Feature name	LB
Table name	Links
Table type	Multi-instance table
Row name	Link
Restrictions	Only link can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the link.	Index	String, case-insensitive.  Length: 1 to 63 characters.	N/A
Description	Description of the link.	N/A	String.  Length: 0 to 127 characters.	The null string indicates the label is not configured.
RouterType	The type of router.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Configure.</li> <li>1—Auto.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RouterInterface	Name of the router interface.	N/A	String. Case insensitive. Length: 1 to 47 characters.	N/A
RouterIPv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1.  Loopback addresses, multicast addresses, broadcast addresses are not supported, and address such as 0.x.x.x are not supported either.
RouterIPv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2.  Loopback addresses, multicast addresses and link local addresses are not supported.
Weight	Weight of the link.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
Priority	Priority of the link.	N/A	Unsigned integer. Value range: 1 to 8.	N/A
Cost	The cost of link bandwidth.	NA	Unsigned integer. Value range: 0 to 10240.	N/A
LinkGroup	Name of the link group.	N/A	String, case-insensitive. Length: 0 to 63 characters.	The null string indicates the label is not configured.
Shutdown	Shutdown state for the link.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Not configured.</li> <li>1—Shutdown.</li> <li>2—Slow-shutdown.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ProbeSuccessCriteria	Probe success criteria for the real server.	N/A	Unsigned integer.  Value range: 0 to $2^{32}-1$ .  By default, the value is 0 which indicates that probe success criteria is all.	N/A
MaxConnectionLimit	Maximum connections limit number.	N/A	Unsigned integer.  Value range: 0 to $2^{32}-1$ .	N/A
RateLimitConnection	Maximum connections rate limit number.	N/A	Unsigned integer.  Value range: 0 to $2^{32}-1$ .  Unit: cps.	N/A
RateLimitBandwidth	Maximum bandwidth rate limit number.	N/A	Unsigned integer.  Value range: 0 to $2^{32}-1$ .  Unit: KB/s.	N/A
InRateLimitBandwidth	Inbound maximum bandwidth rate limit number.	N/A	Unsigned integer.  Value range: 0 to $2^{32}-1$ .  Unit: KB/s.	N/A
OutRateLimitBandwidth	Outbound maximum bandwidth rate limit number.	N/A	Unsigned integer.  Value range: 0 to $2^{32}-1$ .  Unit: KB/s.	N/A
BandwidthBusyRatio	Total bandwidth busy ratio.	N/A	Unsigned integer.  Value range: 1 to 100.  By default, the value	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			is 70.	
InBandwidthBusyRatio	Inbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 70.	N/A
OutBandwidthBusyRatio	Outbound bandwidth busy ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 70.	N/A
BandwidthBusyRecoverRatio	Total bound bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery rate.	N/A
InBandwidthBusyRecoverRatio	Inbound bandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery rate.	N/A
OutBandwidthBusyRecoverRatio	Outbandwidth busy recovery ratio.	N/A	Unsigned integer. Value range: 1 to 100. By default, the value is 60. The busy rate must be greater than or equal to the recovery rate.	N/A
MaxBandwidth	Max bandwidth.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Unit: KB/s.	
InMaxBandwidth	Max inbound bandwidth.	N/A	Unsigned integer.  Value range: 0 to $2^{32}-1$ .  Unit: KB/s.	N/A
OutMaxBandwidth	Max outbound bandwidth.	N/A	Unsigned integer.  Value range: 0 to $2^{32}-1$ .  Unit: KB/s.	N/A
State	State of the link.	N/A	Enumeration:  <ul style="list-style-type: none"> <li>• 0—Unavailable.</li> <li>• 1—Available.</li> <li>• 2—Slow-shutdown.</li> <li>• 3—Shutdown.</li> <li>• 4—Probe-failed.</li> <li>• 5—Standby.</li> <li>• 6—Ramp.</li> <li>• 8—Busy.</li> <li>• 9—Unknown.</li> </ul>	N/A
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates public network.
InheritVPN	Inherit the VPN.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—Disable inherit the VPN</li> <li>• 1—Enable inherit the VPN.</li> </ul>	N/A

## LB/LinkProbes

This table contains information about link probe that only uses NQA template.

### XML structure

```
<LB>
  <LinkProbes>
```

```

<LinkProbe>
  <Link></Link>
  <Probe></Probe>
  <State></State>
</LinkProbe>
</LinkProbes>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	LinkProbes
Table type	Multi-instance table
Row name	LinkProbe
Restrictions	Only Link probe can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Link	Name of the link.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Probe	Probe method for the link.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
State	State of the real server probe.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Not exist.</li> <li>1—Success.</li> <li>2—Failed.</li> <li>3—In the process.</li> </ul>	N/A

## LB/LinkStats

This table contains stat information about link.

## XML structure

```

```

## Table description

Item	Description
Feature name	LB
Table name	LinkStats
Table type	Multi-instance table
Row name	LinkStat
Restrictions	Only stats of link can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the link.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
CPUID	ID of the CPU on the card.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
TotalConnections	Total connections that the link received.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
ActiveConnections	Active connections that the link received.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
MaxConnections	Max connections that the link received.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
ConnectionsPerSec	Connections per second that the link received.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps.	N/A
MaxConnectionPerSec	Max connections per second that the link received.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps.	N/A
DownstreamPKTs	Number of packets that the link received from device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
UpstreamPKTs	Number of packets that the link sent.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
DroppedPackets	Number of packets that the link dropped.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
DownstreamTraffic	Number of bytes that the link received from device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ . Unit: Byte.	N/A
UpstreamTraffic	Number of bytes that the link sent.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ . Unit: Byte.	N/A
Bandwidth	Bandwidth of the link.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
MaxBandwidth	Max bandwidth of	N/A	Unsigned integer. Value range: 0 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	the link.		$2^{32}-1$ . Unit: KB/s.	
InBandwidth	Inbound Bandwidth of the link.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
OutBandwidth	Outbound Bandwidth of the link.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
InMaxBandwidth	Inbound Max bandwidth of the link.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
OutMaxBandwidth	Outbound Max bandwidth of the link.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A

## LB/LinkOutInterfaces

This table contains out-interface rate stat information about link.

### XML structure

```

<LB>
  <LinkOutInterfaces>

## Table description

Item	Description
Feature name	LB
Table name	LinkGroups
Table type	Multi-instance table
Row name	LinkGroup
Restrictions	Only link group can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the link group.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Description	Description of the link group.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Predictor	Predictor algorithm for LB to select a link to forward packet.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—Round-robin.</li> <li>• 1—Random.</li> <li>• 2—Least-connection.</li> <li>• 3—Hash source address.</li> <li>• 4—Hash source port.</li> <li>• 5—Hash destination address.</li> <li>• 6—Bandwidth.</li> <li>• 7—Inbound bandwidth.</li> <li>• 8—Outbound bandwidth.</li> <li>• 9—Max bandwidth.</li> <li>• 10—Max inbound bandwidth.</li> <li>• 11—Max Outbound</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			bandwidth.	
HashIpv4PrefixLength	Length of IPv4 address mask for hash algorithm.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
HashIpv6PrefixLength	Length of IPv6 address prefix for hash algorithm.	N/A	Unsigned integer. Value range: 0 to 128.	N/A
SelectLinkMinNumber	Minimum number of the active link in the link group.	N/A	Unsigned integer. Value range: 1 to 1000.	N/A
SelectLinkMaxNumber	Maximum number of the active link in the link group.	N/A	Unsigned integer. Value range: 1 to 1000.	N/A
SlowOnlineEnable	Enable the link group slow online.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
SlowOnlineStandbyTime	Standby time of the slow online.	N/A	Unsigned integer. Value range: 0 to 600. Unit: second.	N/A
SlowOnlineRampUpTime	Ramp up time of the slow online.	N/A	Unsigned integer. Value range: 3 to 600. Unit: second.	N/A
Transparent	Disable NAT for the server farm.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
ActivateLower	The status of main link group will be changed from in use to backup when the ratio of the available links in main link group becomes smaller than this value.	N/A	Unsigned integer. Value range: 1 to 99.	N/A
ActivateUpper	The status of main link group will be changed from backup to in use when the ratio of the available links in main link group reaches		Unsigned integer. Value range: 1 to 99.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	or over this value.			
SNATPool	SNAT pool for the link group.	N/A	String, case-insensitive. Length: 0 to 63 characters.	N/A
FailAction	Specify the action that the LB takes with respect to connections if any link fails in a link group.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Keep.</li> <li>1—Reset.</li> <li>2—Reschedule.</li> </ul>	N/A
ProbeSuccessCriteria	The condition that link is available through probes.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
TotalLink	Total number of links in the link group.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
ActiveLink	Active number of links in the link group.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
State	State of the link group.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Unavailable.</li> <li>1—Available.</li> </ul>	N/A
ProximityEnabled	Enable the proximity.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A

## LB/LinkGroupProbes

This table contains information about Link Group Probe that only uses NQA template.

### XML structure

```

<LB>
  <LinkGroupProbes>
    <LinkGroupProbe>
      <LinkGroup></LinkGroup>
      <Probe></Probe>
    </LinkGroupProbe>
  </LinkGroupProbes>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	LinkGroupProbes
Table type	Multi-instance table
Row name	LinkGroupProbe
Restrictions	Only link group probe can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LinkGroup	Name of the link group.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
Probe	Probe method for the link group.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A

## LB/LinkGroupStats

This table contains stat information about link group.

## XML structure

```
<LB>
  <LinkGroupStats>
    <LinkGroupStat>
      <Name></Name>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
      <CPUID></CPUID>
      <TotalConnections></TotalConnections>
      <ActiveConnections></ActiveConnections>
      <ConnectionsPerSec></ConnectionsPerSec>
      <DownstreamPKTs></DownstreamPKTs>
      <UpstreamPKTs></UpstreamPKTs>
      <DroppedPackets></DroppedPackets>
      <DownstreamTraffic></DownstreamTraffic>
      <UpstreamTraffic></UpstreamTraffic>
      <Bandwidth></Bandwidth>
    </LinkGroupStat>
  </LinkGroupStats>
```

</LB>

## Table description

Item	Description
Feature name	LB
Table name	LinkGroupStats
Table type	Multi-instance table
Row name	LinkGroupStat
Restrictions	Only stats of link group can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the link group.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
TotalConnections	Total connections that the link group received.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
ActiveConnections	Active connections that the link group received.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
ConnectionsPerSec	Connections per second that the link group received.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps.	N/A
DownstreamPKTs	Number of packets that the link group received from device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
UpstreamP	Number of packets that	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
KTs	the link group sent.		Value range: 0 to $2^{64}-1$ .	
DroppedPackets	Number of packets that the link group dropped.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
DownstreamTraffic	Number of bytes that the link group received from device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ . Unit: Byte.	N/A
UpstreamTraffic	Number of bytes that the link group sent.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ . Unit: Byte.	N/A
Bandwidth	Bandwidth of the link group.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A

## LB/Regions

This table contains information about region.

## XML structure

```

<LB>
  <Regions>
    <Region>
      <Name></Name>
    </Region>
  </Regions>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	Regions
Table type	Multi-instance table
Row name	Region
Restrictions	Only region can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the link.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A

## LB/RegionISPs

This table contains information about region ISP.

## XML structure

```
<LB>
  <RegionISPs>
    <RegionISP>
      <Region></Region>
      <ISP></ISP>
    </RegionISP>
  </RegionISPs>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	RegionISPs
Table type	Multi-instance table
Row name	RegionISP
Restrictions	Only Region ISP can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Region	Name of the region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ISP	ISP for the region.	Index	String, case-insensitive. Length: 1 to 63	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters.	

## LB/TopologyRegions

This table contains information about topology region.

### XML structure

```

<LB>
  <TopologyRegions>
    <TopologyRegion>
      <RegionName></RegionName>
      <Ipv4Address></Ipv4Address>
      <Ipv4MaskLength></Ipv4MaskLength>
      <Ipv6Address></Ipv6Address>
      <Ipv6PrefixLength></Ipv6PrefixLength>
      <Weight></Weight>
    </TopologyRegion>
  </TopologyRegions>
</LB>

```

### Table description

Item	Description
Feature name	LB
Table name	TopologyRegions
Table type	Multi-instance table
Row name	TopologyRegion
Restrictions	Only TopologyRegion can be gotten by this table.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RegionName	Name of the topology region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4	Example: 1.1.1.1.

Column name	Column description	Column type	Data type and restrictions	Remarks
			address is specified.	
Ipv4MaskLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	N/A
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2.
Ipv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	N/A
Weight	Weight of the topology region.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.

## LB/TopologyRegionIPv4s

This table contains information about an IPv4 topology region.

### XML structure

```

<LB>
  <TopologyRegionIPv4s>
    <TopologyRegionIPv4>
      <RegionName></RegionName>
      <IPv4Address></IPv4Address>
      <IPv4MaskLength></IPv4MaskLength>
      <Weight></Weight>
    </TopologyRegionIPv4>
  </TopologyRegionIPv4s>
</LB>

```

### Table description

Item	Description
Feature name	LB
Table name	TopologyRegionIPv4s
Table type	Multi-instance table
Row name	TopologyRegion
Restrictions	Only TopologyRegionIPv4 can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RegionName	Name of the topology region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPv4Addresses	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1.
IPv4MaskLength	IPv4 mask length.	N/A	Unsigned integer. Value range: 0 to 32. By default, the value is 32.	N/A
Weight	Weight of the topology region.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.

## LB/TopologyRegionIPv6s

This table contains information about an IPv6 topology region.

## XML structure

```
<LB>
  <TopologyRegionIPv6s>
    <TopologyRegionIPv6>
      <RegionName></RegionName>
      <IPv6Address></IPv6Address>
      <IPv6PrefixLength></IPv6PrefixLength>
      <Weight></Weight>
    </TopologyRegionIPv6>
  </TopologyRegionIPv6s>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	TopologyRegionIPv6s
Table type	Multi-instance table

Row name	TopologyRegion
Restrictions	Only TopologyRegionIPv6 can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RegionName	Name of the topology region.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
IPv6Addresses	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2.
IPv6PrefixLength	IPv6 prefix length.	N/A	Unsigned integer. Value range: 0 to 128. By default, the value is 128.	N/A
Weight	Weight of the topology region.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	A larger value means a higher weight.

## LB/DNSListeners

This table contains information about a DNS listener.

## XML structure

```

<LB>
  <DNSListeners>
    <DNSListener>
      <Name></Name>
      <VRF></VRF>
      <Ipv4Address></Ipv4Address>
      <Ipv6Address></Ipv6Address>
      <PortNumber></PortNumber>
      <IPv6PortNumber></IPv6PortNumber>
      <ServiceEnable></ServiceEnable>
      <Fallback></Fallback>
    </DNSListener>
  </DNSListeners>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	DNSListeners
Table type	Multi-instance table
Row name	DNSListener
Restrictions	Only DNS Listener can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS listener.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates public network.
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation. By default, no IPv4 address is specified.	Example: 1.1.1.1. Loopback addresses, multicast addresses and broadcast addresses are not supported, and addresses such as 0.x.x.x are not supported either.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated. By default, no IPv6 address is specified.	Example: 2::2. Loopback addresses, multicast addresses and link local addresses are not supported.
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 1 to 65535. By default, the value is 53.	N/A
IPv6PortNumber	Number of IPv6 port.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
ServiceEnable	Enable the DNS listener.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Disable.</li><li>1—Enable.</li></ul>	N/A
Fallback	Fallback action.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—No-response.</li><li>1—Reject.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>2—Dns proxy.</li> </ul>	

## LB/DNSListenerStats

This table contains stat information about DNS listener.

### XML structure

```

<LB>
  <DNSListenerStats>
    <DNSListenerStat>
      <Name></Name>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
      <CPUID></CPUID>
      <ReceivedRequests></ReceivedRequests>
      <ReceivedValidRequests></ReceivedValidRequests>
      <UnrespondedRequests></UnrespondedRequests>
      <RejectedRequests></RejectedRequests>
    </DNSListenerStat>
  </DNSListenerStats>
</LB>

```

### Table description

Item	Description
Feature name	LB
Table name	DNSListenerStats
Table type	Multi-instance table
Row name	DNSListenerStat
Restrictions	Only stats of DNS listener can be gotten by this table.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS listener.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
ChassisID	ID of the device that	Index	Unsigned integer. Value range: 0 to 255.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	holds the card.			
SlotID	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
ReceivedRequests	Number of requests that the DNS listener received from device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
ReceivedValidRequests	Number of valid requests that the DNS listener received from device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
UnrespondedRequests	Number of unresponded requests that the DNS listener received from device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
RejectedRequests	Number of rejected requests that the DNS listener received from device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A

## LB/DNSListenerTypeStats

This table contains different type stat information about DNS listener.

### XML structure

```

<LB>
  <DNSListenerTypeStats>
    <DNSListenerTypeStat>
      <Name></Name>
      <Type></Type>
      <ChassisID></ChassisID>
      <SlotID></SlotID>

### Table description

Item	Description
Feature name	LB
Table name	DNSServers
Table type	Multi-instance table
Row name	DNSServer
Restrictions	Only DNS server can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the real server.	N/A	String. Length: 1 to 127 characters.	The null string indicates the label is not configured.
AutoAllocAddress	Automatic allocable address for DNS server. Include IPv4 address and IPv6 address.	N/A	Numeration: <ul style="list-style-type: none"> <li>0—Disable.</li> <li>1—Enable.</li> </ul>	N/A
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
PortNumber	Number of port.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DNSServerPool	Name of the DNS server pool.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
Link	Name of the link.	N/A	String, case-insensitive. Length: 1 to 63 characters.	The null string indicates the label is not configured.
Weight	Weight of the DNS server.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
Priority	Priority of the DNS server.	N/A	Unsigned integer. Value range: 1 to 8.	N/A
ProbeSuccessCriteria	Probe success criteria for the DNS server.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
State	State of the DNS server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Unavailable.</li> <li>1—Available.</li> <li>2—Probe-failed.</li> <li>3—Busy.</li> <li>4—Unknow.</li> </ul>	N/A

# LB/DNSServerProbes

This table contains information about DNS server probe that only uses NQA template.

## XML structure

```
<LB>
  <DNSServerProbes>
    <DNSServerProbe>
      <DNSServer></DNSServer>
      <Probe></Probe>
      <State></State>
    </DNSServerProbe>
  </DNSServerProbes>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	DNSServerProbes
Table type	Multi-instance table
Row name	DNSServerProbe
Restrictions	Only DNS server probe can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DNSServer	Name of the DNS server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Probe	Probe method for the DNS server.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
State	State of the DNS server probe.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Not exist.</li><li>1—Success.</li><li>2—Failed.</li><li>3—In the process.</li></ul>	N/A

# LB/DNSServerStats

This table contains stat information about DNS server.

## XML structure

```
<LB>
  <DNSServerStats>
    <DNSServerStat>
      <Name></Name>
      <ChassisID></ChassisID>
      <SlotID></SlotID>
      <CPUID></CPUID>
      <ReceivedRequests></ReceivedRequests>
      <DroppedRequests></DroppedRequests>
      <ReceivedResponses></ReceivedResponses>
      <DroppedResponses></DroppedResponses>
      <SentResponses></SentResponses>
    </DNSServerStat>
  </DNSServerStats>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	DNSServerStats
Table type	Multi-instance table
Row name	DNSServerStat
Restrictions	Only stats of DNS server can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS server.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
ReceivedRequests	Number of DNS requests	N/A	Unsigned integer. Value range: 0 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	that the DNS server has received.		$2^{64}-1$ .	
DroppedRequests	Number of DNS requests that the DNS server has dropped.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
ReceivedResponses	Number of DNS responses that the DNS server has received.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
DroppedResponses	Number of DNS responses that the DNS server has dropped.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
SentResponses	Number of DNS responses that the DNS server has sent.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A

## LB/DNSServerPools

This table contains information about DNS server pool.

### XML structure

```

<LB>
  <DNSServerPools>
    <DNSServerPool>
      <Name></Name>
      <Description></Description>
      <Predictor></Predictor>
      <HashIpv4PrefixLength></HashIpv4PrefixLength>

      <SelectServerMinNumber></SelectServerMinNumber>
      <SelectServerMaxNumber></SelectServerMaxNumber>
      <ProbeSuccessCriteria></ProbeSuccessCriteria>
      <TotalDNSServer></TotalDNSServer>
      <ActiveDNSServer></ActiveDNSServer>
      <State></State>
    </DNSServerPool>
  </DNSServerPools>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	DNSServerPools
Table type	Multi-instance table
Row name	DNSServerPool
Restrictions	Only DNS server pool can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the DNS server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the DNS server pool.	N/A	String. Length: 1 to 127 characters.	The null string indicates the label is not configured.
Predictor	Predictor algorithm for LB to select a DNS server to serve a DNS request.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Round-robin (default).</li> <li>1—Random.</li> <li>2—Bandwidth.</li> <li>3—Inbound bandwidth.</li> <li>4—Outbound bandwidth.</li> <li>5—Max bandwidth.</li> <li>6—Max inbound bandwidth.</li> <li>7—Max outbound bandwidth.</li> <li>8—Hash source address.</li> <li>9—Hash source port.</li> <li>10—Hash destination address.</li> </ul>	N/A
HashIpv4PrefixLength	Length of IPv4 address mask for hash algorithm.	N/A	Unsigned integer. Value range: 0 to 32.	N/A
HashIpv6PrefixLength	Length of IPv6 address prefix	N/A	Unsigned integer. Value range: 0 to 128.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	for hash algorithm.			
SelectServerMinNumber	Minimum number of the active real server in the server farm.	N/A	Unsigned integer. Value range: 1 to 1000.	N/A
SelectServerMaxNumber	Maximum number of the active real server in the server farm.	N/A	Unsigned integer. Value range: 1 to 1000.	N/A
ProbeSuccessCriteria	The condition that real server is available through probes.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
TotalDNSServer	Total number of DNS servers in the DNS server pool.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
ActiveDNSServer	Active number of DNS servers in the DNS server pool.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
State	State of the DNS server pool.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Unavailable.</li> <li>1—Available.</li> </ul>	N/A

## LB/DNSServerPoolProbes

This table contains information about DNS server pool probe that only uses NQA template.

### XML structure

```

```

## Table description

Item	Description
Feature name	LB
Table name	ServerFarmMembers
Table type	Multi-instance table
Row name	ServerFarmMember
Restrictions	Only server farm member can be configured by this table.

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerFarm	Name of the server farm.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
RealServer	Name of the server farm member.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
PortNumber	Number of port.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Description	Description of the server farm member.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Weight	Weight of the server farm member.	N/A	Unsigned integer. Value range: 1 to 255.	N/A
Priority	Priority of the server farm member.	N/A	Unsigned integer. Value range: 1 to 8.	N/A
Shutdown	Shutdown state for the server farm member.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Not configured.</li> <li>1—Shutdown.</li> <li>2—Slow-shutdown.</li> </ul>	N/A
MaxConnectionLimit	Maximum connections limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
RateLimitConnection	Maximum connections rate limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps.	N/A
RateLimitHTTPRequest	Maximum HTTP request rate limit.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: qps.	N/A
ProbeSuccessCriteria	Probe success criteria for the server farm member.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
State	State of the server farm member.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Unavailable.</li> <li>1—Available.</li> <li>2—</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Slow-shutdown. <ul style="list-style-type: none"> <li>• 3—Shutdown.</li> <li>• 4—Probe-failed.</li> <li>• 5—Standby.</li> <li>• 6—Ramp.</li> <li>• 8—Busy.</li> <li>• 9—Unknown.</li> <li>• 10—Auto-shutdown</li> </ul>	
Ipv4Address	IPv4 address.	N/A	String. Dotted decimal notation.	Example: 1.1.1.1.
Ipv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.	Example: 2::2.
VRF	VRF name	N/A	String, case-insensitive. Length: 0 to 31 characters.	The null string indicates public network.
ProbeList	Probe method list for the server farm member.	Data structure	Members include: <ul style="list-style-type: none"> <li>• Probe.</li> <li>• ProbeState.</li> </ul>	N/A
Probe	Probe method for the server farm member.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
NQADefaultPortEnable	Enable detection using the default port of the NQA template.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—Disable (default).</li> <li>• 1—Enable.</li> </ul>	N/A
ProbeState	State of the server farm member probe.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—Not exist.</li> <li>• 1—Success.</li> <li>• 2—Failed.</li> <li>• 3—In the process.</li> </ul>	N/A

Row name	LinkGroupMember
Restrictions	Only link group member can be configured by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LinkGroup	Name of the link group.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Link	Name of the link group member.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Description	Description of the link group	N/A	String.	The null string indicates the label is

Column name	Column description	Column type	Data type and restrictions	Remarks
	member.		Length: 0 to 127 characters.	not configured.
Weight	Weight of the link group member.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 100.	N/A
Priority	Priority of the link group member.	N/A	Unsigned integer. Value range: 1 to 8. By default, the value is 4.	N/A
Shutdown	Shutdown state for the link group member.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—Not configured (default).</li> <li>• 1—Shutdown.</li> <li>• 2—Slow-shutdown.</li> </ul>	N/A
MaxConnectionLimit	Maximum connections limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 0 which indicates no preset limit.	N/A
RateLimitConnection	Maximum connections rate limit number.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps. By default, the value is 0 which indicates no preset limit.	N/A
ProbeSuccessCriteria	Probe success criteria for the link group member.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . By default, the value is 0 which indicates that probe success criteria is all.	N/A
State	State of the link group member.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—Unavailable.</li> <li>• 1—Available.</li> <li>• 2—Slow-shutdown.</li> <li>• 3—Shutdown.</li> <li>• 4—Probe-failed.</li> <li>• 5—Standby.</li> <li>• 6—Ramp.</li> <li>• 8—Busy.</li> <li>• 9—Unknown.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RouterType	Type of router	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Configure</li> <li>1—Auto</li> </ul>	N/A
RouterInterface	Name of the interface	N/A	String. case-insensitive. Length: 1 to 47 characters. By default, no interface name is specified.	This column can be configured only when the type is Auto (1).
RouterIpv4Address	IPv4 address.	N/A	String.  Dotted decimal notation.  By default, no IPv4 address is specified.	Example: 1.1.1.1.  Loopback addresses, multicast addresses, broadcast addresses are not supported, and address such as 0.x.x.x are not supported either. If the router interface is configured,the IPV4 is not supported.
RouterIpv6Address	IPv6 address.	N/A	Hexadecimal string, colon-separated.  By default, no IPv6 address is specified.	Example: 2::2.  Loopback addresses, multicast addresses and link local addresses are not supported. If the router interface is configured,the IPV6 is not supported.
VRF	VRF name.	N/A	String, Length: 0 to 31 characters. By default, no VRF is specified.	The null string indicates public network.
ProbeList	Probe method list for the link group member.	Data structure	Members include: <ul style="list-style-type: none"> <li>Probe.</li> <li>ProbeState.</li> </ul>	N/A
Probe	Probe method for the link group member.	N/A	String, case-insensitive. Length: 1 to 32 characters.	N/A
ProbeState	State of the link group member probe.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Not exist.</li> <li>1—Success.</li> <li>2—Failed.</li> <li>3—In the process.</li> </ul>	N/A

## Table description

Item	Description
Feature name	LB
Table name	ServerFarmMemberStats
Table type	Multi-instance table
Row name	ServerFarmMemberStat
Restrictions	Only stats of server farm member can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerFarm	Name of the server farm.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
RealServer	Name of the server farm member.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
PortNumber	Number of port.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
TotalConnections	Total connections that the server farm member received.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
ActiveConnections	Active connections	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	that the server farm member received.		Value range: 0 to $2^{32}-1$ .	
MaxConnections	Max connections that the server farm member received.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
ConnectionsPerSec	Connections per second that the server farm member received.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps.	N/A
MaxConnectionPerSec	Max connections per second that the server farm member received.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: cps.	N/A
ServerSidePKTIn	Number of packets that the server farm member received from device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
ServerSidePKTOut	Number of packets that the server farm member sent.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
DroppedPackets	Number of packets that the server farm member dropped.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
ServerSideBytesIn	Number of bytes that the server farm member received from device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ . Unit: Byte.	N/A
ServerSideBytesOut	Number of bytes that the server farm member sent.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ . Unit: Byte.	N/A
Bandwidth	Bandwidth of the server farm member.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
MaxBandwidth	Max bandwidth of the server farm member.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ReceivedRequests	Number of requests that the server farm member received from device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
DroppedRequests	Number of requests that the server farm member dropped.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
SentResponses	Number of responses that the server farm member sent to device.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
DroppedResponses	Number of responses that the server farm member dropped.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
InBandwidth	Inbound Bandwidth of the server farm member.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
OutBandwidth	Outbound Bandwidth of the server farm member.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
InMaxBandwidth	Inbound Max bandwidth of the server farm member.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
OutMaxBandwidth	Outbound Max bandwidth of the server farm member.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ . Unit: KB/s.	N/A
RstPackets	RST packets	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
MaxRstPackets	Maximum number of RST packets	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
RstProtectRetryTimes	RST protection times	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
MaxRstProtectRetryTimes	Maximum RST protection times	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ZeroWindowPackets	Zero-window packets	N/A	Unsigned integer. Value range: 0 to 100. Unit: %	N/A
MaxZeroWindowPackets	Maximum number of zero-window packets	N/A	Unsigned integer. Value range: 0 to 100. Unit: %	N/A
ZeroWindowProtectRetryTimes	Zero-window protection times	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
MaxZeroWindowProtectRetryTimes	Maximum zero-window protection times	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
AbnormalURLTimes	Times of abnormal URLs	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
MaxAbnormalURLTimes	Maximum times of abnormal URLs	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A

Row name	DNSServerPoolMemberStat
Restrictions	Only stats of DNS server pool member can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DNSServerPool	Name of the DNS server pool.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
DNSServer	Name of the DNS server pool member.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
PortNumber	Number of port.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
ChassisID	ID of the device that holds the card.	Index	Unsigned integer. Value range: 0 to 255.	N/A
SlotID	Member ID of the card on device.	Index	Unsigned integer. Value range: 0 to 255.	N/A
CPUID	ID of the CPU on the card.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
ReceivedRequests	Number of DNS requests that the DNS server pool member has received.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
DroppedRequests	Number of DNS requests that the DNS server pool member has dropped.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
ReceivedResponses	Number of DNS responses that	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	the DNS server pool member has received.			
DroppedResponses	Number of DNS responses that the DNS server pool member has dropped.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A
SentResponses	Number of DNS responses that the DNS server pool member has sent.	N/A	Unsigned integer. Value range: 0 to $2^{64}-1$ .	N/A

## LB/SnatArpInterfaces

This table contains information about SNAT interfaces.

### XML structure

```

<LB>
  <SnatArpInterfaces>
    <SnatArpInterface>
      <SnatName></SnatName>
      <IfList>
        <IfIndex></IfIndex>
      </IfList>
    </SnatArpInterface>
  </SnatArpInterfaces>
</LB>

```

### Table description

Item	Description
Feature name	LB
Table name	SnatArpInterfaces
Table type	Multi-instance table
Row name	SnatArpInterface
Restrictions	Only SNAT interfaces can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SnatName	Name of the SNAT pool.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
IfList	Interface index list	Data structure	Members include: <ul style="list-style-type: none"><li>IfIndex.</li></ul>	N/A
IfIndex	Interface index	N/A	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

## LB/VServerArpInterfaces

This table contains information about virtual server interfaces.

## XML structure

```
<LB>
  <VServerArpInterfaces>
    <VServerArpInterface>
      <VServerName></VServerName>
      <IfList>
        <IfIndex></IfIndex>
      </IfList>
    </VServerArpInterface>

</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	VServerArpInterfaces
Table type	Multi-instance table
Row name	VServerArpInterface
Restrictions	Only virtual server interfaces can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VServerName	Name of the virtual server.	Index	String, case-insensitive. Length: 0 to 63 characters.	N/A
IfList	Interface index list	Data structure	Members include: <ul style="list-style-type: none"><li>IfIndex.</li></ul>	N/A
IfIndex	Interface index	N/A	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

## LB/ProbeTemplate

This table contains information about probe template that is used for proximity.

## XML structure

```
<LB>
  <ProbeTemplates>
    <ProbeTemplate>
      <Name></Name>
      <Description></Description>
      <Type></Type>
      <Frequency></Frequency>
      <Timeout></Timeout>
    </ProbeTemplate>
  </ProbeTemplates>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	ProbeTemplate
Table type	Multi-instance table
Row name	N/A
Restrictions	Only probe template can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the probe template.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Description	Description information for the RST probe template.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Type	Type of the probe template .	N/A	Enumeration: <ul style="list-style-type: none"><li>0—ICMP.</li></ul>	N/A
Frequency	Frequency of the probe template.	N/A	Unsigned integer. Value range: 5 to 604800. Unit: second.	N/A
Timeout	Timeout time of the probe template.	N/A	Unsigned integer. Value range: 1 to 60. Unit: second.	N/A

## LB/ISPWhoisMntners

This table contains information about ISP maintainer objects.

### XML structure

```
<LB>
  <ISPWhoisMntners>
    <ISPWhoisMntner>
      <ISPName></ISPName>
      <WhoisMntner></WhoisMntner>
      <Origin></Origin>
    </ISPWhoisMntner>
  </ISPWhoisMntners>
</LB>
```

### Table description

Item	Description
Feature name	LB
Table name	ISPWhoisMntners
Table type	Multi-instance table

Row name	ISPWhoisMntner
Restrictions	Only ISP whois maintainer objects can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ISPName	Name of the ISP.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
WhoisMntner	Name of the whois maintainer object.	Index	String, case-sensitive. Length: 1 to 63 characters.	N/A
Origin	Origin of ISP whois maintainer object.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—Import.</li> <li>• 2—Manual.</li> <li>• 3—Manual and import.</li> </ul>	N/A

## LB/ISPUpdate

This table contains information about ISP update.

## XML structure

```

<LB>
  <ISPUpdate>
    <Enable></Enable>
    <Frequency></Frequency>
    <Type></Type>
    <Domain></Domain>
    <Ipv4Address></Ipv4Address>
    <SuccessUpdateTime></SuccessUpdateTime>
    <UpdateTime></UpdateTime>
    <UpdateCount></UpdateCount>
    <UpdateResult></UpdateResult>
  </ISPUpdate>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	ISPUdate
Table type	Single-instance table
Row name	N/A
Restrictions	Only ISP update can be configured by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Enable ISP update.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Disable.</li><li>1—Enable.</li></ul>	N/A
Frequency	Frequency of ISP update.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Per-day.</li><li>1—Per-week.</li><li>2—Per-month.</li></ul>	N/A
Type	Type of the whois server.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Domain.</li><li>1—IPv4 address.</li></ul>	N/A
Domain	Domain of the maintainer object.	N/A	String, case-insensitive. Length: 1 to 253 characters.	The null string indicates the label is not configured.
Ipv4Address	Address of the maintainer object.	N/A	String. Dotted decimal notation.	The null string indicates the label is not configured.
SuccessUpdateTime	Last successful update time.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
UpdateTime	Last update time.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
UpdateCount	Update count.	N/A	Unsigned integer. Value range: 0 to $2^{32}-1$ .	N/A
UpdateResult	Result of ISP update.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Success.</li><li>1—Connection error.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>2—Connection abort.</li> <li>3—DNS error.</li> <li>4—Initial.</li> </ul>	

## LB/DNSCachesGlobalCfg

This table contains information about DNS global configuration.

### XML structure

```
<LB>
  <DNSCachesGlobalCfg>
    <Timeout></Timeout>
  </DNSCachesGlobalCfg>
</LB>
```

### Table description

Item	Description
Feature name	LB
Table name	DNSCachesCfg
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Timeout	Aging time of DNS cache.	Index	Unsigned integer. Value range: 1 to 1440. Unit: minute	N/A

## LB/RSTProbeTemplate

This table contains information about RST probe template.

### XML structure

```
<LB>
```

```

<RSTProbeTemplates>
  <RSTProbeTemplate>
    <Name></Name>
    <Description></Description>
    <TimeInterval></TimeInterval>
    <PacketLimit></PacketLimit>

    <BusyTimeout></BusyTimeout>
    <RetryTimes></RetryTimes>
  </RSTProbeTemplate>
</RSTProbeTemplates>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	RSTProbeTemplates
Table type	Multi-instance table
Row name	RSTProbeTemplate
Restrictions	Only RST probe template can be configured by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the RST probe template.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Description	Description information for the RST probe template.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
TimeInterval	Monitor time interval.	N/A	Unsigned integer. Value range: 5 to 255. By default, the value is 10. Unit: second.	N/A
PacketLimit	Packet limit of RST probe template.	N/A	Unsigned integer: Value range: 1 to 4294967295. By default, the value is 1000000.	N/A.
ProtectAction	Protect action of RST probe template.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Busy</li> </ul>	N/A.

Column name	Column description	Column type	Data type and restrictions	Remarks
			(default). • 1—Auto-shutdown.	
BusyTimeout	Busy time of real server.	N/A	Unsigned integer. Value range: 5 to 3600. By default, the value is 30. Unit: second.	N/A.
RetryTimes	Busy protection times.	N/A	Unsigned integer. Value range: 0 to 255. By default, the value is 0.	N/A.

## LB/ZeroWindowProbeTemplate

This table contains information about Zero Window probe template.

### XML structure

```

<LB>
  <ZeroWindowProbeTemplates>
    <ZeroWindowProbeTemplate>
      <Name></Name>
      <Description></Description>
      <TimeInterval></TimeInterval>

Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the probe template.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Description	Description information for the probe template.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
Type	Type of the probe template.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—ICMP.</li></ul>	When a probe template is created, the column must be specified.
Frequency	Frequency of the probe template.	N/A	Unsigned integer. Value range: 1 to 604800. Unit: second. By default, the value is 300s.	N/A
Timeout	Timeout time of the probe template.	N/A	Unsigned integer. Value range: 1 to 60. Unit: second. By default, the value is 3s.	N/A

## LB/HTTPPassiveProbeTemplate

This table contains information about an HTTP passive probe template.

## XML structure

```
<LB>
  <HTTPPassiveProbeTemplates>
    <HTTPPassiveProbeTemplate>
      <Name></Name>
      <Description></Description>
      <MonitorInterval></MonitorInterval>
      <URLThreshold></URLThreshold>
      <Timeout></Timeout>
      <URLList>
        <CheckUrl></CheckUrl>
      </URLList>
      <StatusCodeList>
        <StatusCode></StatusCode>
      </StatusCodeList>
    </HTTPPassiveProbeTemplate>
  </HTTPPassiveProbeTemplates>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	HTTPPassiveProbeTemplates
Table type	Multi-instance table
Row name	HTTPPassiveProbeTemplate
Restrictions	Only HTTP passive probe template can be configured by this table.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the HTTP passive probe template.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Description	Description information for the HTTP passive probe template.	N/A	String. Length: 0 to 127 characters.	The null string indicates the label is not configured.
MonitorInterval	Monitor time interval.	N/A	Unsigned integer. Value range: 1 to 5.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			By default, the value is 1. Unit: second.	
URLThreshold	URL threshold of the HTTP passive probe template.	N/A	Unsigned integer: Value range: 1 to 4294967295. By default, the value is 10000.	N/A.
Timeout	Response timeout of the HTTP passive probe template.	N/A	Unsigned integer. Value range: 1 to 255. By default, the value is 5. Unit: second.	N/A
URLList	URL list for the HTTP passive probe template.	Data structure	Members include: URL.	N/A
CheckUrl	URL for the HTTP passive probe template.	N/A	String. Length: 1 to 255 characters.	A URL list can contain a maximum of 10 URLs.
StatusCodeList	Status code list for the HTTP passive probe template.	Data structure	Members include: StatusCode.	N/A
StatusCode	Status code for the HTTP passive probe template.	N/A	Unsigned integer.	A status code list can contain a maximum of 10 status codes.

## LB/HTTPStatsParameterObjectGroups

This table contains information about object group of HTTP statistics parameter.

### XML structure

```

<LB>
  <HTTPStatsParameterObjectGroups>
    <HTTPStatsParameterObjectGroup>
      <ParameterName></ParameterName>
      <ObjectGroupName></ObjectGroupName>
    </HTTPStatsParameterObjectGroup>
  </HTTPStatsParameterObjectGroups>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	HTTPStatsParameterObjectGroups
Table type	Multi-instance table
Row name	HTTPStatsParameterObjectGroup
Restrictions	Only object group of HTTP statistics parameter can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Name of the parameter.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
ObjectGroupName	Name of the object group.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A

## LB/HTTPStatsParameterNodes

This table contains information about HTTP statistics parameter node.

## XML structure

```
<LB>
  <HTTPStatsParameterNodes>
    <HTTPStatsParameterNode>
      <ParameterName></ParameterName>
      <NodeName></NodeName>
      <Description></Description>
      <RuleCount></RuleCount>
    </HTTPStatsParameterNode>
  </HTTPStatsParameterNodes>
</LB>
```

## Table description

Item	Description
Feature name	LB
Table name	HTTPStatsParameterNodes

Table type	Multi-instance table
Row name	HTTPStatsParameterNode
Restrictions	Only HTTP statistics parameter node can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Name of the parameter.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
NodeName	Name of the node.	Index	String. Length: 1 to 63 characters.	N/A
Description	Description of the node profile.	N/A	String. Length: 0 to 127 characters.	N/A
RuleCount	Rule counts of the node.	N/A	Unsigned integer. Value range: 0 to 256.	N/A

## LB/HTTPStatsParameterNodeRules

This table contains information about rule of HTTP statistics parameter node.

## XML structure

```

<LB>
  <HTTPStatsParameterNodeRules>
    <HTTPStatsParameterNodeRule>
      <ParameterName></ParameterName>
      <NodeName></NodeName>
      <ID></ID>
      <Type></Type>
      <URL></URL>
    </HTTPStatsParameterNodeRule>
  </HTTPStatsParameterNodeRules>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	HTTPStatsParameterNodeRules
Table type	Multi-instance table
Row name	HTTPStatsParameterNodeRule

Restrictions	Only rule of HTTP statistics parameter node can be gotten by this table.
--------------	--

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Name of the parameter.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
NodeName	Name of the node.	Index	String. Length: 1 to 63 characters.	N/A
ID	ID of the statistics match rule.	Index	Unsigned integer. Value range: 1 to 256.	N/A
Type	Type of the statistics match rule.	N/A	Enumeration: • 0—URL.	N/A
URL	Regular expression used to match URLs.	N/A	String. Length: 1 to 255 characters.	This column can only be gotten when the Type is URL(0).

## LB/HTTPStatsParameterNodeRuleLists

This table contains batching information about match rules of HTTP statistics parameter node.

## XML structure

```

<LB>
  <HTTPStatsParameterNodeRuleLists>
    <HTTPStatsParameterNodeRuleList>
      <ParameterName></ParameterName>
      <NodeName></NodeName>
      <RuleList>
        <ID></ID>
        <Type></Type>
        <URL></URL>
      </RuleList>
    </HTTPStatsParameterNodeRuleList>
  </HTTPStatsParameterNodeRuleLists>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	HTTPStatsParameterNodeRuleLists
Table type	Multi-instance table
Row name	HTTPStatsParameterNodeRuleList
Restrictions	Only rule of HTTP statistics parameter node can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ParameterName	Name of the parameter.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
NodeName	Name of the node.	Index	String. Length: 1 to 63 characters.	N/A
RuleList	List of rule.	Data structure	Members include: <ul style="list-style-type: none"><li>ID</li><li>Type</li><li>URL</li></ul>	N/A
ID	ID of the statistics match rule.	N/A	Unsigned integer. Value range: 1 to 256.	N/A
Type	Type of the statistics match rule.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—URL.</li></ul>	N/A
URL	Regular expression used to match URLs.	N/A	String. Length: 1 to 255 characters.	This column can only be gotten when the Type is URL(0).

## LB/TCPParameterOptions

This table contains information about TCP options.

## XML structure

```
<LB>
  <TCPParameterOptions>
    <TCPParameterOption>
```

```

    <Parameter></Parameter>
    <Number></Number>
    <Type></Type>
    <ValueType></ValueType>
  </TCPParameterOption>
</TCPParameterOptions>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	TCPParameterOptions
Table type	Multi-instance table
Row name	TCPParameterOption
Restrictions	Only TCP parameter option can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Parameter	Name of the parameter.	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
Number	Number of the TCP option.	Index	Unsigned integer. Value range: 2 to 254.	N/A
Type	Type of the option process.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Option Remove.</li> <li>1—Option Insert.</li> </ul>	N/A
ValueType	Type of the insert value.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None.</li> <li>1—Src addr.</li> </ul>	0 indicates the label is not configured.

## LB/VRRPInfo

This table contains information about VRRP configuration.

## XML structure

```

<LB>
  <VRRPInfos>
    <VRRPInfo>
      <VrrpID></VrrpID>
    </VRRPInfo>
  </VRRPInfos>
</LB>

```

```

    <IfIndex></IfIndex>
    <Status></Status>
  </VRRPInfo>
</VRRPInfos>
</LB>

```

## Table description

Item	Description
Feature name	LB
Table name	VRRPInfos
Table type	Multi-instance table
Row name	VRRPInfo
Restrictions	Only VRRP information can be gotten by this table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrrplD	Identifier of the virtual router.	Index	Unsigned integer. Value range: 1 to 255.	N/A
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Status	Status of the VRRP.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Standby.</li> <li>1—Active.</li> </ul>	N/A

## ServerFarmMemberStatus event

This event is used to report server farm member status information.

### XML structure for event subscription

```
<ServerFarmMemberStatusEvent>
  <ServerFarmMember>
    <ServerFarm></ServerFarm>
    <RealServer></RealServer>
    <PortNumber></PortNumber>
  </ServerFarmMember>
</ServerFarmMemberStatusEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>LB</stream>
    <filter type="subtree">
      <ServerFarmMemberStatusEvent xmlns="http://www.h3c.com/netconf/event:1.0/LB:1.0">
        <ServerFarmMember>
          <ServerFarm></ServerFarm>
          <RealServer></RealServer>
          <PortNumber></PortNumber>
        </ServerFarmMember>
      </ServerFarmMemberStatusEvent>
    </filter>
  </create-subscription>
</rpc>
```

### Table description

Item	Description
Event stream name	MemberStatus
Event name	ServerFarmMemberStatusEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/LB:1.0
Support for extended query	No

### Columns

Column name	Column description	Data type and restrictions	Support for extended queries
ServerFarm	Name of the server farm.	String, case insensitive. Length: 1 to 63 characters.	No

Column name	Column description	Data type and restrictions	Support for extended queries
RealServer	Name of the server farm member.	String, case insensitive. Length: 1 to 63 characters.	No
PortNumber	Number of the port.	Unsigned integer. Value range: 0 to 65535.	No

## XML structure for event report

```

<ServerFarmMemberStatusEvent>
  <ServerFarmMember>
    <ServerFarm></ServerFarm>
    <RealServer></RealServer>
    <PortNumber></PortNumber>
    <State></State>
  </ServerFarmMember>
</ServerFarmMemberStatusEvent>

```

### Example:

```

<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <ServerFarmMemberStatusEvent xmlns="http://www.h3c.com/netconf/event:1.0/LB:1.0">
    <ServerFarmMember>
      <ServerFarm></ServerFarm>
      <RealServer></RealServer>
      <PortNumber></PortNumber>
      <State></State>
    </ServerFarmMember>
  </ServerFarmMemberStatusEvent>
</notification>

```

## Columns

Column name	Column description	Data type and restrictions	Support for extended queries
ServerFarm	Name of the server farm.	String, case insensitive. Length: 1 to 63 characters.	No
RealServer	Name of the server farm member.	String, case insensitive. Length: 1 to 63 characters.	No
PortNumber	Number of the port.	Unsigned integer. Value range: 0 to 65535.	No
State	State of the server farm member.	Enumeration: <ul style="list-style-type: none"> <li>0—Unavailable.</li> <li>1—Available.</li> <li>2—Slow-shutdown.</li> <li>3—Shutdown.</li> <li>4—Probe-failed.</li> <li>5—Standby.</li> </ul>	No

Column name	Column description	Data type and restrictions	Support for extended queries
		<ul style="list-style-type: none"> <li>6—Ramp.</li> <li>8—Busy.</li> <li>9—Unknown.</li> <li>10—Auto-shutdown</li> </ul>	

## LinkGroupMemberStatus event

This event is used to report link group member status information.

### XML structure for event subscription

```
<LinkGroupMemberStatusEvent>
  <LinkGroupMember>
    <LinkGroup></LinkGroup>
    <Link></Link>
  </LinkGroupMember>
</LinkGroupMemberStatusEvent>
```

#### Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>LB</stream>
    <filter type="subtree">
      <LinkGroupMemberStatusEvent xmlns="http://www.h3c.com/netconf/event:1.0/LB:1.0">
        <LinkGroupMember>
          <LinkGroup></LinkGroup>
          <Link></Link>
        </LinkGroupMember>
      </LinkGroupMemberStatusEvent>
    </filter>
  </create-subscription>
</rpc>
```

#### Table description

Item	Description
Event stream name	MemberStatus
Event name	LinkGroupMemberStatusEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/LB:1.0
Support for extended query	No

## Columns

Column name	Column description	Data type and restrictions	Support for extended queries
LinkGroup	Name of the link group.	String, case insensitive. Length: 1 to 63 characters.	No
Link	Name of the link group member.	String, case insensitive. Length: 1 to 63 characters.	No

## XML structure for event report

```

<LinkGroupMemberStatusEvent>
  <LinkGroupMember>
    <LinkGroup></LinkGroup>
    <Link></Link>
    <State></State>
  </LinkGroupMember>
</LinkGroupMemberStatusEvent>

```

### Example:

```

<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <LinkGroupMemberStatusEvent xmlns="http://www.h3c.com/netconf/event:1.0/LB:1.0">

      <LinkGroup></LinkGroup>
      <Link></Link>
      <State></State>
    </LinkGroupMember>
  </LinkGroupMemberStatusEvent>
</notification>

```

## Columns

Column name	Column description	Data type and restrictions	Support for extended queries
LinkGroup	Name of the link group.	String, case insensitive. Length: 1 to 63 characters.	No
Link	Name of the link group member.	String, case insensitive. Length: 1 to 63 characters.	No
State	State of the link group member.	Enumeration: <ul style="list-style-type: none"> <li>0—Unavailable.</li> <li>1—Available.</li> <li>2—Slow-shutdown.</li> <li>3—Shutdown.</li> <li>4—Probe-failed.</li> <li>5—Standby.</li> <li>6—Ramp.</li> <li>8—Busy.</li> <li>9—Unknown.</li> </ul>	No

Column name	Column description	Data type and restrictions	Support for extended queries
		<ul style="list-style-type: none"> <li>10—Auto-shutdown</li> </ul>	

## DNSServerPoolMemberStatus event

This event is used to report DNS server pool member status information.

### XML structure for event subscription

```
<DNSServerPoolMemberStatusEvent>
  <DNSServerPoolMember>
    <DNSServerPool></DNSServerPool>
    <DNSServer></DNSServer>
    <PortNumber></PortNumber>
  </DNSServerPoolMember>
</DNSServerPoolMemberStatusEvent>
```

#### Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>LB</stream>
    <filter type="subtree">
      <DNSServerPoolMemberStatusEvent
        xmlns="http://www.h3c.com/netconf/event:1.0/LB:1.0">
        <DNSServerPoolMember>
          <DNSServerPool></DNSServerPool>
          <DNSServer></DNSServer>
          <PortNumber></PortNumber>
        </DNSServerPoolMember>
      </DNSServerPoolMemberStatusEvent>
    </filter>
  </create-subscription>
</rpc>
```

#### Table description

Item	Description
Event stream name	MemberStatus
Event name	DNSServerPoolMemberStatusEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/LB:1.0
Support for extended query	No

## Columns

Column name	Column description	Data type and restrictions	Support for extended queries
DNSServerPool	Name of the DNS server pool.	String, case insensitive. Length: 1 to 63 characters.	No
DNSServer	Name of the DNS server pool member.	String, case insensitive. Length: 1 to 63 characters.	No
PortNumber	Number of the port.	Unsigned integer. Value range: 0 to 65535.	No

## XML structure for event report

```

<DNSServerPoolMemberStatusEvent>
  <DNSServerPoolMember>
    <DNSServerPool></DNSServerPool>
    <DNSServer></DNSServer >
    <PortNumber></PortNumber>

# LBSTATS

## LBSTATS/URLStatsCharts

This table contains URL statistical information about an HTTP virtual server.

### XML structure

```
<LBSTATS>
  <URLStatsCharts>
    <URLStatsChart>
      <UserID></UserID>
      <RowNum></RowNum>
      <FilterType></FilterType>
      <VirtualServerName></VirtualServerName>
      <NodeName></NodeName>
      <Visitor></Visitor>
      <VisitCounts></VisitCounts>
      <TotalCounts></TotalCounts>
      <RowCounts></RowCounts>
      <TimeFilter>
        <StartTime></StartTime>
        <EndTime></EndTime>
      </TimeFilter>
    </URLStatsChart>
  </URLStatsCharts>
</LBSTATS>
```

### Table description

Item	Description
Feature name	LBSTATS
Table name	URLStatsCharts
Table type	Multi-instance table
Row name	URLStatsChart
Restrictions	Only URL statistics can be gotten by this table.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserID	ID of user who gets the	Index	Unsigned integer. Value range: 0 to $2^{32}$ -	The first time you get data, you must specify user ID 0. A user ID other

Column name	Column description	Column type	Data type and restrictions	Remarks
	information by this table.		1.	than 0 is returned and can be used in consequent get-bulk operation before it expires.
RowNum	The sequence number of current row in all rows that exist.	Index	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
FilterType	The kind of statistical information required.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—information of virtual servers.</li> <li>1—information of nodes for specified virtual server.</li> <li>2—information of visitors for specified node and virtual server.</li> </ul>	FilterType must be specified.
VirtualServerName	Name of virtual server.	N/A	String. Length: 0 to 63 characters.	VirtualServerName must be specified when FilterType value is 1 or 2.
NodeName	Representation of the URL visited.	N/A	String. Length: 0 to 63 characters.	<ul style="list-style-type: none"> <li>NodeName must be null when FilterType value is 0 or 1.</li> <li>NodeName must be specified when FilterType value is 2.</li> </ul>
Visitor	Representation of the URL visitor address.	N/A	String. Length: 0 to 46 characters.	N/A
VisitCounts	Visit counts of the current row.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
TotalCounts	Total visit counts of the whole table.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
RowCounts	Total rows that exist.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
TimeFilter	The time range within which the statistical information is gotten.	Data structure	Members include: <ul style="list-style-type: none"> <li>StartTime</li> <li>EndTime</li> </ul>	N/A
StartTime	Start time.	N/A	DateTime. Format: YYYY-MM-DDTHH:M M:SS.	StartTime must be specified.

Column name	Column description	Column type	Data type and restrictions	Remarks
EndTime	End time.	N/A	DateTime. Format: YYYY-MM-DDTHH:M M:SS.	<ul style="list-style-type: none"> <li>EndTime must be specified.</li> <li>EndTime must be later than the StartTime.</li> </ul>

## LBSTATS/URLStatsTops

This table contains information about top N visited URLs for an HTTP virtual server.

### XML structure

```

<LBSTATS>
  <URLStatsTops>
    <URLStatsTop>
      <UserID></UserID>
      <RowNum></RowNum>
      <TopNumber></TopNumber>
      <FilterType></FilterType>
      <VirtualServerName></VirtualServerName>
      <NodeName></NodeName>
      <Visitor></Visitor>
      <VisitCounts></VisitCounts>
      <TotalCounts></TotalCounts>
      <RowCounts></RowCounts>
      <TimeFilter>
        <StartTime></StartTime>
        <EndTime></EndTime>
      </TimeFilter>
    </URLStatsTop>
  </URLStatsTops>
</LBSTATS>

```

### Table description

Item	Description
Feature name	LBSTATS
Table name	URLStatsTops
Table type	Multi-instance table
Row name	URLStatsTop
Restrictions	Only URL top statistics can be gotten by this table, and only get operation is supported.

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserID	ID of user who gets the information by this table.	Index	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	The first time you get data, you must specify user ID 0. A user ID other than 0 is returned and can be used in consequent get-bulk operation before it expires.
RowNum	The sequence number of current row in all rows that exist.	Index	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
TopNumber	The number of tops required.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
FilterType	The kind of statistical information required.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—information of virtual servers.</li> <li>1—information of nodes for specified virtual server.</li> <li>2—information of visitors for specified node and virtual server.</li> </ul>	FilterType must be specified.
VirtualServerName	Name of virtual server.	N/A	String. Length: 0 to 63 characters.	VirtualServerName must be specified when FilterType value is 1 or 2.
NodeName	Representation of the URL visited.	N/A	String. Length: 0 to 63 characters.	<ul style="list-style-type: none"> <li>NodeName must be null when FilterType value is 0 or 1.</li> <li>NodeName must be specified when FilterType value is 2.</li> </ul>

## Ldap/Schemes

LDAP scheme information table.

### XML structure

```
<Ldap>
  <Schemes>
    <Scheme>
      <SchemeName></SchemeName>
      <ServerName></ServerName>
      <MapInstanceName></MapInstanceName>
    </Scheme>
  </Schemes>
</Ldap>
```

### Table description

Item	Description
Feature name	Ldap
Table name	Schemes
Table type	Multi-instance table
Row name	Scheme
Restrictions	A maximum of 16 LDAP schemes are supported.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions
SchemeName	LDAP scheme name.	Index	String, case-insensitive. Length: 1 to 32 characters.
ServerName	LDAP authentication server name.	N/A	String, case-insensitive. Length: 1 to 64 characters.
MapInstanceName	LDAP attribute map name.	N/A	String, case-insensitive. Length: 1 to 31 characters.

# Ldap/Servers

LDAP server information table.

## XML structure

```
<Ldap>
  <Servers>
    <Server>
      <ServerName></ServerName>
      <VRF></VRF>
      <IpType></IpType>
      <Host></Host>
      <Port></Port>
      <TimeOut></TimeOut>
      <ProtocolVersion></ProtocolVersion>
      <LoginDn></LoginDn>
      <LoginPassword></LoginPassword>
      <SearchScope></SearchScope>
      <SearchBaseDn></SearchBaseDn>
      <UserParas>
        <NameType></NameType>
        <NameFormat></NameFormat>
        <NameAttribute></NameAttribute>
        <ObjClassName></ObjClassName>
      </UserParas>
      <GroupFilter></GroupFilter>
    </Server>
  </Servers>
</Ldap>
```

## Table description

Item	Description
Feature name	Ldap
Table name	Servers
Table type	Multi-instance table
Row name	Server
Restrictions	A maximum of 16 LDAP servers are supported.

Support for row creation and deletion	Yes
---------------------------------------	-----

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	LDAP server name.	Index	String, case-insensitive. Length: 1 to 64 characters.	N/A
VRF	The VPN to which the LDAP server belongs.	N/A	String, case-sensitive. Length: 1 to 31 characters.	The value in this column is valid when both the IpType and Host values are available. If either the IpType value or the Host value is unavailable, the system reports an error.
IpType	Type of the LDAP server address.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> <li>2—FQDN.</li> </ul>	The value 2 for IpType is not supported currently. The value in this column is valid only when the Host value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Host	LDAP server.	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. FQDN: String of 1 to 255 characters.	If the IpType value is 0, this column represents the IPv4 address of the server. If the IpType value is 1, this column represents the IPv6 address of the server. The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Port	TCP port number of the LDAP server.	N/A	Unsigned integer. Value range: 1 to 65535.	Default: 389. The value in this column is valid when both the IpType and Host values are available. If either the IpType value or the Host value is unavailable, the system reports an error.
TimeOut	LDAP server	N/A	Unsigned integer.	Default: 10 seconds.

Column name	Column description	Column type	Data type and restrictions	Remarks
	timeout period, the maximum time that the device waits for an LDAP response.		Value range: 5 to 20, in seconds.	
ProtocolVersion	LDAP protocol version.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 2—LDAPv2.</li> <li>• 3—LDAPv3.</li> </ul>	Default: 3.
LoginDn	Administrator DN.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
LoginPassword	Administrator password.	N/A	String. Length: 1 to 128 characters.	N/A
SearchScope	User search scope.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—All subdirectories of the base DN.</li> <li>• 1—Next lower level of subdirectories under the base DN.</li> </ul>	Default: 0.
SearchBaseDn	User search base DN.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
UserParas	LDAP user attributes.	Data structure	Members include: <ul style="list-style-type: none"> <li>• NameType.</li> <li>• NameFormat.</li> <li>• NameAttribute.</li> <li>• ObjClassName.</li> </ul>	N/A
NameType	User name attribute type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—The value in the NameAttribute column.</li> <li>• 2—The common name.</li> <li>• 3—The user ID.</li> </ul>	Default: 2.
NameFormat	Format of user names to be sent to LDAP servers.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—with-domain.</li> <li>• 1—without-domain.</li> </ul>	Default: 1
NameAttribute	The value that represents a type of user name attribute.	N/A	String, case-insensitive. Length: 1 to 64 characters.	<p>This column is created only when the value of the NameType column is 1. If this column doesn't appear when the NameType value is 1, the system reports an error.</p> <p>The NameAttribute column must be deleted together with the NameType column. However, the NameType column can be deleted without the NameAttribute column.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
ObjClassName	User object class.	N/A	String, case-insensitive. Length: 1 to 64 characters.	N/A
GroupFilter	Filter condition for exporting user groups.	N/A	String, case-insensitive. Length: 1 to 127 characters.	Default: "(objectclass=group)"

## Ldap/AttributeMaps

LDAP attribute map information table.

### XML structure

```

<Ldap>
  <AttributeMaps>
    <AttributeMap>
      <MapName></MapName>
      <LdapAttrName></LdapAttrName>
      <Prefix></Prefix>
      <Delimiter></Delimiter>
      <AaaAttrType></AaaAttrType>
    </AttributeMap>
  </AttributeMaps>
</Ldap>

```

### Table description

Item	Description
Feature name	Ldap
Table name	AttributeMaps
Table type	Multi-instance table
Row name	AttributeMap
Restrictions	A maximum of 16 LDAP attribute maps are supported.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
MapName	LDAP attribute map name.	Index	String, case-insensitive. Length: 1 to 31 characters.
LdapAttrName	LDAP attribute name.	Index	String, case-insensitive. Length: 1 to 63 characters.
Prefix	LDAP attribute prefix.	N/A	String, case-insensitive. Length: 0 to 7 characters.
Delimiter	LDAP attribute delimiter.	N/A	String, case-insensitive. Length: 0 to 1 characters.
AaaAttrType	AAA attribute type.	N/A	Enumeration: <ul style="list-style-type: none"><li>• 1—user-group.</li><li>• 2—user-profile.</li></ul>

```

## Table description

Item	Description
Feature name	Ldap
Table name	Servers
Table type	Multi-instance table
Row name	Server
Restrictions	A maximum of 16 LDAP servers are supported.

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServerName	LDAP server name.	Index	String, case-insensitive. Length: 1 to 64 characters.	N/A
VRF	The VPN to which the LDAP server belongs.	N/A	String, case-sensitive. Length: 1 to 31 characters.	The value in this column is valid when both the IpType and Host values are available. If either the IpType value or the Host value is unavailable, the system reports an error.
IpType	Type of the LDAP server address.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> <li>2—FQDN.</li> </ul>	The value 2 for IpType is not supported currently. The value in this column is valid only when the Host value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Host	LDAP server.	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. FQDN: String of 1 to 255 characters.	If the IpType value is 0, this column represents the IPv4 address of the server. If the IpType value is 1, this column represents the IPv6 address of the server. The value in this column is valid only when the IpType value is available. If either the IpType value or the Host value is unavailable, the system reports an error.
Port	TCP port number of the LDAP server.	N/A	Unsigned integer. Value range: 1 to 65535.	Default: 389. The value in this column is valid only when both the IpType and Host values are available. When the server IP address is unavailable, the port number is not displayed.
TimeOut	LDAP server timeout period, the maximum time that the device waits for	N/A	Unsigned integer. Value range: 5 to 20, in seconds.	Default: 10 seconds.

Column name	Column description	Column type	Data type and restrictions	Remarks
	an LDAP response.			
ProtocolVersion	LDAP protocol version.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 2—LDAPv2.</li> <li>• 3—LDAPv3.</li> </ul>	Default: 3.
LoginDn	Administrator DN.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
SearchScope	User search scope.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—All subdirectories of the base DN.</li> <li>• 1—Next lower level of subdirectories under the base DN.</li> </ul>	Default: 0.
SearchBaseDn	User search base DN.	N/A	String, case-insensitive. Length: 1 to 255 characters.	N/A
UserParas	LDAP user attributes.	Data structure	Members include: <ul style="list-style-type: none"> <li>• NameType.</li> <li>• NameFormat.</li> <li>• NameAttribute.</li> <li>• ObjClassName.</li> </ul>	N/A
NameType	User name attribute type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—The value in the NameAttribute column.</li> <li>• 2—The common name.</li> <li>• 3—The user ID.</li> </ul>	Default: 2.
NameFormat	Format of user names to be sent to LDAP servers.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—with-domain.</li> <li>• 1—without domain.</li> </ul>	Default: 1.
NameAttribute	The value that represents a type of user name attribute.	N/A	String, case-insensitive. Length: 1 to 64 characters.	This column is created only when the value of the NameType column is 1. If this column doesn't appear when the NameType value is 1, the system reports an error.  The NameAttribute column must be deleted together with the NameType column. However, the NameType column can be deleted without the NameAttribute column.
ObjClassName	User object class.	N/A	String, case-insensitive. Length: 1 to 64 characters.	N/A
GroupFilter	Filter condition for exporting user groups.	N/A	String, case-insensitive. Length: 1 to 127 characters.	Default: "(objectclass=group)"

# Ldap/AttributeMaps

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DeviceNode	Position information of the device Node.	Data structure	Members include: <ul style="list-style-type: none"> <li>• <b>Chassis.</b></li> <li>• <b>Slot.</b></li> <li>• <b>CPUID.</b></li> </ul>	N/A
Chassis	ID of the member where the entity resides. Specifies the member ID of an IRF member device. (Distributed devices—In IRF mode.)	Index	Unsigned integer. Value range: 0 to 65535.	N/A.
Slot	Slot number of the entity. Specifies the slot number of an MPU. (Distributed devices—In standalone mode.) Specifies the member ID of an IRF member device. (Centralized IRF devices.)	Index	Unsigned integer. Value range: 0 to 65535.	If there is no slot number, return 65535. When the InstallType of License/Systems is 2, the Slot is the member of local active MPU.
CPUID	CPU ID.	Index	Unsigned integer. Value range: 0 to 65535.	If there is no CPU number, return 65535. When the InstallType of License/systems is 2 or 3, the CPUID is 65535.
SerialNumber	The serial number of the device.	N/A	String. Length: 1 to 255 characters.	N/A
DeviceIDType	The types of device ID.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—invalid.</li> <li>• <b>2</b>—keyString.</li> <li>• <b>3</b>—file.</li> </ul>	N/A
DeviceID	A string represents the device ID.	N/A	String. Length: 1 to 255 characters.	If the value of DeviceIDType is 1, DeviceID does not exist.  If the value of DeviceIDType is 3, DeviceID is the file name with the full path.
HardwareInfo	The information of the hardware.	N/A	String. Length: 1 to 255 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Max	The max number of licenses that can be installed in device.	N/A	Unsigned integer.	N/A
Used	The number of installed licenses.	N/A	Unsigned integer.	N/A
Recyclable	The number of recyclable licenses.	N/A	Unsigned integer.	N/A
InstallType	The install-Type of license.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—invalid.</li> <li>• 2—installInChassis.</li> <li>• 3—installInSlot.</li> <li>• 4—installInCPU.</li> </ul>	N/A
ActivationFileStoragePath	The storage path of the installed license files.	N/A	String. Length: 1 to 255 characters.	N/A

## License/Summaries

This table contains the summary information of installed license.

## Table description

Item	Description
Feature name	License
Table name	Summaries
Table type	Multi-instance table
Row name	Summary
Restrictions	Installed group and uninstalled group are related with license state, and the members in installed group are mutual exclusion.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DeviceNode	Position information of the device Node.	Data structure	Members include: <ul style="list-style-type: none"> <li><b>Chassis.</b></li> <li><b>Slot.</b></li> <li><b>CPUID.</b></li> </ul>	N/A
Chassis	ID of the member where the entity resides. Specifies the member ID of an IRF member device. (Distributed devices–In IRF mode.)	Index	Unsigned integer. Value range: 0 to 65535.	N/A.
Slot	Slot number of the entity. Specifies the slot number of an MPU. (Distributed devices–In	Index	Unsigned integer. Value range: 0 to 65535.	If there is no slot number, return 65535. When the InstallType of License/Systems is 2, the Slot is the member of local active MPU.

Column name	Column description	Column type	Data type and restrictions	Remarks
	standalone mode.) Specifies the member ID of an IRF member device. (Centralized IRF devices.)			
CPUID	CPU ID.	Index	Unsigned integer. Value range: 0 to 65535.	If there is no CPU number, return 65535. When the InstallType of License/systems is 2 or 3, the CPUID is 65535.
Index	License index.	Index	Unsigned integer.	After the compression operation, the uninstalled license index will be deleted; and the installed license index will remain unchanged.
Feature	The name of feature which have licensed.	N/A	String. Length: 0 to 1024 characters.	Here multiple feature names can be displayed with spaces as delimiters.
ProductDescr	The description of product BOM in activation file.	N/A	String. Length: 1 to 1024 characters.	N/A
FileDescr	The description of file in a license.	N/A	String. Length: 1 to 1024 characters.	N/A
State	The state of an installed license.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—invalid.</li> <li>2—inuse.</li> <li>3—usable.</li> <li>4—expired.</li> <li>5—uninstalled.</li> <li>6—unusable.</li> </ul>	N/A
Installed	N/A	Data structure	Members include: <ul style="list-style-type: none"> <li>ActivationFile.</li> <li>ActivationKey.</li> <li>LicenseKey.</li> </ul>	N/A
ActivationFile	Name of an installed activation file, with device name and file name.	N/A	String. Length: 1 to 255 characters.	N/A
ActivationKey	The activation key which has been installed.	N/A	String. Length: 1 to 254 characters. Format: XXXX-XXXX-...-XXXX.	N/A
LicenseKey	The license key which has been installed.	N/A	String. Length: 1 to 255 characters. Format: Every group is made	Due to historical reasons, the length of the authorization code for each group is not

Column name	Column description	Column type	Data type and restrictions	Remarks
			up of several characters, and during the groups use "-" as a delimiter.,	uniform.
Uninstalled	N/A	Data structure	Members include: <ul style="list-style-type: none"> <li>UninstActivationFile.</li> <li>UninstActivationKey.</li> </ul>	Only after uninstalling, the membership information in this group can be read.
UninstActivationFile	Name of an uninstalled activation file, with device name and file name.	N/A	String. Length: 1 to 255 characters.	N/A
UninstActivationKey	The activation key which has been uninstalled.	N/A	String. Length: 1 to 254 characters. Format: XXXX-XXXX-...-XXXX.	N/A
Type	License type by validity period.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—unknown.</li> <li>2—permanent.</li> <li>3—daysRestricted.</li> <li>4—trialDaysRestricted.</li> <li>5—dateRestricted.</li> <li>6—trialDateRestricted.</li> <li>7—countRestricted.</li> <li>8—trialCountRestricted.</li> </ul>	N/A
InstalledTime	Time when the license was installed.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	N/A
UninstalledTime	The time when the license was uninstalled.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	Only after uninstalling, it can be read.
DaysLeft	Remaining days of the license.	N/A	Unsigned integer.	When the value of Type is 3 or 4, this column is effective.
DaysLeftWarning	Whether the license will be expired.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>True</b></li> <li><b>false</b></li> </ul>	When the left days are below 10%, the value of this column is true.
ValidityStart	Start date for a date restricted license.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	When the value of Type is 5 or 6, this column is effective.
ValidityEnd	End date for a date restricted license.	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS.	When the value of Type is 5 or 6, this column is effective. But if there is no time limit authorization, this column does not exist value.
ExpiredDays	The number of passed days after a license has been	N/A	Unsigned integer.	Only when the value of state is 4, this column is meaningful.

Column name	Column description	Column type	Data type and restrictions	Remarks
	expired.			
Count	The effective number of License.	N/A	Unsigned integer.	When the value of Type is 7 or 8, this column is effective.

## License/Features

This table contains information about the features.

## XML structure

```

<License>
  <Features>
    <Feature>
      <DeviceNode>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
      </DeviceNode>
      <Name></Name>
      <State></State>
    </Feature>
  </Features>
</License>

```

## Table description

# LICMGR

## LICMGR/Switch

This table contains state information about the lawful interception feature.

### XML structure

```
<LICMGR>
  <Switch>
    <Switch></Switch>
  </Switch>
</LICMGR>
```

### Table description

Item	Description
Feature name	LICMGR
Table name	Switch
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions
Switch	State of the lawful interception feature	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Enable.</li><li>• <b>false</b>—Disabled.</li></ul>

## LICMGR/INEID

This table contains the INE ID.

### XML structure

```
<LICMGR>
  <INEID>
    <ID></ID>
  </INEID>
</LICMGR>
```

## Table description

Item	Description
Feature name	LICMGR
Table name	INEID
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
ID	INE ID	N/A	String, case sensitive. Length: 1 to 32 characters.

## LICMGR/LICID

This table contains the LIC ID.

## XML structure

```
<LICMGR>
  <LICID>
    <ID></ID>
  </LICID>
</LICMGR>
```

## Table description

Item	Description
Feature name	LICMGR
Table name	LICID
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
ID	LIC ID	N/A	String, case sensitive. Length: 1 to 32 characters.

## LICMGR/Bandwidth

This table contains X3 interface bandwidth information.

## XML structure

```
<LICMGR>
  <Bandwidth>
    <Bandwidth></Bandwidth>
  </Bandwidth>
</LICMGR>
```

## Table description

Item	Description
Feature name	LICMGR
Table name	Bandwidth
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
Bandwidth	X3 interface bandwidth	N/A	Unsigned integer. Value range: 8 to 1000000, in kbps.

## LICMGR/Key

This table contains lawful interception key information.

## XML structure

```
<LICMGR>
  <Key>
```

```

<Key>
  <Type></Type>
  <KI></KI>
  <Password></Password>
  <SqnGroup></SqnGroup>
</Key>
</Key>
</LICMGR>

```

## Table description

Item	Description
Feature name	LICMGR
Table name	Key
Table type	Multi-instance table
Row name	Key
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
Type	Interface type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—X1.</li> <li>2—X2.</li> </ul>
KI	Key ID	N/A	String, case sensitive. Length: 16 characters.
Password	Password	N/A	String, case sensitive. Length: 16 characters.
SqnGroup	Sequence number group	N/A	Unsigned integer. Value range: 2 to 4294967295.

## LICMGR/X1Timer

This table contains information about the X1 no-message timer.

## XML structure

```

<LICMGR>
  <X1Timer>
    <NoMessage></NoMessage>
  </X1Timer>
</LICMGR>

```

## Table description

Item	Description
Feature name	LICMGR
Table name	X1Timer
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
NoMessage	No-message timer.	N/A	Unsigned integer. Value range: 180 to 1000, in seconds.

## LICMGR/X2Timer

This table contains information about X2 timers.

## XML structure

```
<LICMGR>
  <X2Timer>
    <KeepAlive></KeepAlive>
    <Normal></Normal>
  </X2Timer>
</LICMGR>
```

## Table description

Item	Description
Feature name	LICMGR
Table name	X2Timer
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
KeepAlive	Keepalive timer	N/A	Unsigned integer. Value range: 180 to 1000, in seconds.
Normal	Normal timer	N/A	Unsigned integer. Value range: 1 to 30, in seconds.

## LICMGR/X3Timer

This table contains information about X3 timers.

## XML structure

```
<LICMGR>
  <X3Timer>
    <Timer>
      <ConnectionID></ConnectionID>
      <KeepAlive></KeepAlive>
      <Normal></Normal>
      <Retry></Retry>
    </Timer>
  </X3Timer>
</LICMGR>
```

## Table description

Item	Description
Feature name	LICMGR
Table name	X3Timer
Table type	Multi-instance table
Row name	Timer
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
ConnectionID	X3 connection ID	Index	Unsigned integer. Value range: 0 to 31.

Column name	Column description	Column type	Data type and restrictions
KeepAlive	Keepalive timer	N/A	Unsigned integer. Value range: 180 to 1000, in seconds.
Normal	Normal timer	N/A	Unsigned integer. Value range: 1 to 30, in seconds.
Retry	Retry timer	N/A	Unsigned integer. Value range: 1 to 1000, in seconds.

## LICMGR/X3Service

This table contains X3 service chassis and slot information.

### XML structure

```

<LICMGR>
  <X3Service>
    <Chassis></Chassis>
    <Slot></Slot>
  </X3Service>
</LICMGR>

```

### Table description

Item	Description
Feature name	LICMGR
Table name	X3Service
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	Chassis number	N/A	Unsigned integer. Value range: 0 to 65534.
Slot	Slot number	N/A	Unsigned integer. Value range: 0 to 65534.

# LICMGR/X1Connection

This table contains information about the X1 connection.

## XML structure

```
<LICMGR>
  <X1Connection>
    <LICIPAddress></LICIPAddress>
    <LICIPv6Address></LICIPv6Address>
    <LocalIPAddress></LocalIPAddress>
    <LocalIPv6Address></LocalIPv6Address>
    <LocalPort></LocalPort>
  </X1Connection>
</LICMGR>
```

## Table description

Item	Description
Feature name	LICMGR
Table name	X1Connection
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LICIPAddress	LIC IPv4 address	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column cannot be configured together with the LICIPv6Address column.
LICIPv6Address	LIC IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column cannot be configured together with the LICIPAddress column.
LocalIPAddress	Local IPv4 address	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column cannot be configured together with the LocalIPv6Address column.

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalIPv6Address	Local IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column cannot be configured together with the LocalIPAddress column.
LocalPort	Local port	N/A	Unsigned integer. Value range: 1 to 65535.	Required.

## LICMGR/X2Connection

This table contains information about the X2 connection.

### XML structure

```

<LICMGR>
  <X2Connection>
    <LICIPAddress></LICIPAddress>
    <LICIPv6Address></LICIPv6Address>
    <LICPort></LICPort>
    <LocalIPAddress></LocalIPAddress>
    <LocalIPv6Address></LocalIPv6Address>
    <LocalPort></LocalPort>
  </X2Connection>
</LICMGR>

```

### Table description

Item	Description
Feature name	LICMGR
Table name	X2Connection
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LICIPAddress	LIC IPv4 address	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column cannot be configured together with the LICIPv6Address column.

Column name	Column description	Column type	Data type and restrictions	Remarks
LICIPv6Address	LIC IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column cannot be configured together with the LICIPAddress column.
LICPort	LIC port	N/A	Unsigned integer. Value range: 1 to 65535.	Required.
LocalIPAddress	Local IPv4 address	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column cannot be configured together with the LICIPv6Address column.
LocalIPv6Address	Local IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column cannot be configured together with the LICIPAddress column.
LocalPort	Local port	N/A	Unsigned integer. Value range: 1 to 65535.	Required.

## LICMGR/X3Connection

This table contains information about X3 connections.

### XML structure

```

<LICMGR>
  <X3Connection>
    <Connection>
      <ConnectionID></ConnectionID>
      <LICIPAddress></LICIPAddress>
      <LICIPv6Address></LICIPv6Address>
      <LICPort></LICPort>
      <LocalIPAddress></LocalIPAddress>
      <LocalIPv6Address></LocalIPv6Address>
      <LocalPort></LocalPort>
    </Connection>
  </X3Connection>
</LICMGR>

```

### Table description

Item	Description
Feature name	LICMGR
Table name	X3Connection
Table type	Multi-instance table
Row name	Connection

Item	Description
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ConnectionID	X3 connection ID	Index	Unsigned integer. Value range: 0 to 31.	N/A
LICIPAddress	LIC IPv4 address	N/A	String, dotted decimal notation.	Example: 1.1.1.1. This column cannot be configured together with the LICIPv6Address column.
LICIPv6Address	LIC IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. This column cannot be configured together with the LICIPAddress column.

Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ID	INE ID	N/A	String, case sensitive. Length: 1 to 32 characters.

## LICMGR/LICID

This table contains the LIC ID.

## XML structure

```
<LICMGR>  
  <LICID>  
    <ID></ID>  
  </LICID>  
</LICMGR>
```

## Table description

Item	Description
Feature name	LICMGR
Table name	LICID
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ID	LIC ID	N/A	String, case sensitive. Length: 1 to 32 characters.

# LICMGR/Bandwidth

This table contains X3 interface bandwidth information.

## XML structure

```
<LICMGR>
  <Bandwidth>
    <Bandwidth></Bandwidth>
  </Bandwidth>
</LICMGR>
```

## Table description

Item	Description
Feature name	LICMGR
Table name	Bandwidth
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Bandwidth	X3 interface bandwidth	N/A	Unsigned integer. Value range: 8 to 1000000, in kbps.

# LICMGR/Key

This table contains lawful interception key information.

## XML structure

```
<LICMGR>
  <Key>
    <Key>
      <Type></Type>
      <KI></KI>
      <Password></Password>
      <SqnGroup></SqnGroup>
    </Key>
  </Key>
</LICMGR>
```

</LICMGR>

## Table description

Item	Description
Feature name	LICMGR
Table name	Key
Table type	Multi-instance table
Row name	Key
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Type	Interface type	Index	Enumeration: <ul style="list-style-type: none"><li>• 1—X1.</li><li>• 2—X2.</li></ul>
KI	Key ID	N/A	String, case sensitive. Length: 16 characters.
KIConfig	Whether the key ID is configured	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>true</b>—Key ID is configured.</li><li>• <b>false</b>—Key ID is not configured.</li></ul>
Password	Password	N/A	String, case sensitive. Length: 16 characters.
PasswordConfig	Whether the password is configured	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Password is configured.</li><li>• <b>false</b>—Password is not configured.</li></ul>
SqnGroup	Sequence number group	N/A	Unsigned integer. Value range: 2 to 4294967295.

## LICMGR/X1Timer

This table contains information about the X1 no-message timer.

## XML structure

```
<LICMGR>
  <X1Timer>
    <NoMessage></NoMessage>
  </X1Timer>
</LICMGR>
```

## Table description

Item	Description
Feature name	LICMGR
Table name	X1Timer
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
NoMessage	No-message timer.	N/A	Unsigned integer. Value range: 180 to 1000, in seconds.

## LICMGR/X2Timer

This table contains information about X2 timers.

## XML structure

```
<LICMGR>
  <X2Timer>
    <KeepAlive></KeepAlive>
    <Normal></Normal>
  </X2Timer>
</LICMGR>
```

## Table description

Item	Description
Feature name	LICMGR
Table name	X2Timer
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
KeepAlive	Keepalive timer	N/A	Unsigned integer. Value range: 180 to 1000, in seconds.
Normal	Normal timer	N/A	Unsigned integer. Value range: 1 to 30, in seconds.

## LICMGR/X3Timer

This table contains information about X3 timers.

## XML structure

```
<LICMGR>
  <X3Timer>
    <Timer>
      <ConnectionID></ConnectionID>
      <KeepAlive></KeepAlive>
      <Normal></Normal>
      <Retry></Retry>
    </Timer>
  </X3Timer>
</LICMGR>
```

## Table description

Item	Description
Feature name	LICMGR
Table name	X3Timer
Table type	Mutil-instance table
Row name	Timer
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ConnectionID	X3 connection ID	Index	Unsigned integer. Value range: 0 to 31.
KeepAlive	Keepalive timer	N/A	Unsigned integer. Value range: 180 to 1000, in

Column name	Column description	Column type	Data type and restrictions
			seconds.
Normal	Normal timer	N/A	Unsigned integer. Value range: 1 to 30, in seconds.
Retry	Retry timer	N/A	Unsigned integer. Value range: 1 to 1000, in seconds.

## LICMGR/X3Service

This table contains X3 service chassis and slot information.

### XML structure

```

<LICMGR>
  <X3Service>
    <Chassis></Chassis>
    <Slot></Slot>
  </X3Service>
</LICMGR>

```

### Table description

Item	Description
Feature name	LICMGR
Table name	X3Service
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
Chassis	Chassis number	N/A	Unsigned integer. Value range: 0 to 65534.
Slot	Slot number	N/A	Unsigned integer. Value range: 0 to 65534.

## LICMGR/X1Connection

This table contains information about the X1 connection.

## XML structure

```
<LICMGR>
  <X1Connection>
    <LICIPAddress></LICIPAddress>
    <LICIPv6Address></LICIPv6Address>
    <LocalIPAddress></LocalIPAddress>
    <LocalIPv6Address></LocalIPv6Address>
    <LocalPort></LocalPort>
    <ConnectState></ConnectState>
  </X1Connection>
</LICMGR>
```

## Table description

Item	Description
Feature name	LICMGR
Table name	X1Connection
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
LICIPAddress	LIC IPv4 address	N/A	String, dotted decimal notation.
LICIPv6Address	LIC IPv6 address	N/A	String, hexadecimal notation.
LocalIPAddress	Local IPv4 address	N/A	String, dotted decimal notation.
LocalIPv6Address	Local IPv6 address	N/A	String, hexadecimal notation.
LocalPort	Local port	N/A	Unsigned integer. Value range: 1 to 65535.
ConnectState	State of the TCP connection.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Connected.</li><li>• <b>false</b>—No connected.</li></ul>

## LICMGR/X2Connection

This table contains information about the X2 connection.

## XML structure

```
<LICMGR>
```

```

<X2Connection>
  <LICIPAddress></LICIPAddress>
  <LICIPv6Address></LICIPv6Address>
  <LICPort></LICPort>
  <LocalIPAddress></LocalIPAddress>
  <LocalIPv6Address></LocalIPv6Address>
  <LocalPort></LocalPort>
</X2Connection>
</LICMGR>

```

## Table description

Item	Description
Feature name	LICMGR
Table name	X2Connection
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
LICIPAddress	LIC IPv4 address	N/A	String, dotted decimal notation.
LICIPv6Address	LIC IPv6 address	N/A	String, hexadecimal notation.
LICPort	LIC port	N/A	Unsigned integer. Value range: 1 to 65535.
LocalIPAddress	Local IPv4 address	N/A	String, dotted decimal notation.
LocalIPv6Address	Local IPv6 address	N/A	String, hexadecimal notation.
LocalPort	Local port	N/A	Unsigned integer. Value range: 1 to 65535.

## LICMGR/X3Connection

This table contains information about X3 connections.

## XML structure

```

<LICMGR>
  <X3Connection>
    <Connection>
      <ConnectionID></ConnectionID>
      <LICIPAddress></LICIPAddress>

```

```

    <LICIPv6Address></LICIPv6Address>
    <LICPort></LICPort>
    <LocalIPAddress></LocalIPAddress>
    <LocalIPv6Address></LocalIPv6Address>
    <LocalPort></LocalPort>
  </Connection>
</X3Connection>
</LICMGR>

```

## Table description

Item	Description
Feature name	LICMGR
Table name	X3Connection
Table type	Multi-instance table
Row name	Connection
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ConnectionID	X3 connection ID	Index	Unsigned integer. Value range: 0 to 31.
LICIPAddress	LIC IPv4 address	N/A	String, dotted decimal notation
LICIPv6Address	LIC IPv6 address	N/A	String, hexadecimal notation.
LICPort	LIC port	N/A	Unsigned integer. Value range: 1 to 65535.
LocalIPAddress	Local IPv4 address	N/A	String, dotted decimal notation.
LocalIPv6Address	Local IPv6 address	N/A	String, hexadecimal notation.
LocalPort	Local port	N/A	Unsigned integer. Value range: 1 to 65535.

## LICMGR/PacketsStatistics

This table contains lawful interception packet statistics.

## XML structure

```

<LICMGR>
  <PacketsStatistics>
    <Statistic>
      <Type></Type>
    </Statistic>
  </PacketsStatistics>
</LICMGR>

```

```

    <PacketsIn></PacketsIn>
    <PacketsOut></PacketsOut>
    <BytesIn></BytesIn>

# LLDP

## LLDP/GlobalStatus

This table contains LLDP global status information.

### XML structure

```
<LLDP>
  <GlobalStatus>
    <Enable></Enable>
    <CDP></CDP>
    <TxInterval></TxInterval>
    <FastInterval></FastInterval>
    <ReInitDelay></ReInitDelay>
    <NotifyInterval></NotifyInterval>
    <Mode></Mode>
    <MaxCredit></MaxCredit>
    <HoldMult></HoldMult>
    <FastCount></FastCount>
    <RxTimeout></RxTimeout>
  </GlobalStatus>
</LLDP>
```

### Table description

Item	Description
Feature name	LLDP
Table name	GlobalStatus
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions
Enable	Whether to enable LLDP globally.	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enable.</li><li><b>false</b>—Disable.</li></ul>

Column name	Column description	Column type	Data type and restrictions
CDP	Whether to enable CDP.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable.</li> </ul>
TxInterval	Transmission interval for LLDP frames.	N/A	Unsigned integer. Value range: 5 to 32768. Unit: second.
FastInterval	Fast transmission interval for LLDP frames.	N/A	Unsigned integer. Value range: 1 to 3600. Unit: second.
ReInitDelay	Re-initialization delay.	N/A	Unsigned integer. Value range: 1 to 10. Unit: second.
NotifyInterval	Notification interval for traps.	N/A	Unsigned integer. Value range: 5 to 3600. Unit: second.
Mode	Bridge mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Customer bridge mode.</li> <li><b>1</b>—Service bridge mode.</li> </ul>
MaxCredit	Token bucket size for sending LLDP frames.	N/A	Unsigned integer. Value range: 1 to 100.
HoldMult	TTL multiplier.	N/A	Unsigned integer. Value range: 2 to 10.
FastCount	Number of LLDP frames transmitted within a fast transmission interval.	N/A	Unsigned integer. Value range: 1 to 8.
RxTimeout	Set the timeout for receiving LLDPDUs.	N/A	Unsigned integer. Value range: 0, 30 to 32768. Unit: second.

## LLDP/Interfaces

This table contains LLDP interface information.

## XML structure

```

<LLDP>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Enable></Enable>
      <CDP></CDP>
    </Interface>
  </Interfaces>
</LLDP>

```

```

    <MEDTopoChange></MEDTopoChange>
  </Interface>
</Interfaces>
</LLDP>

```

## Table description

Item	Description
Feature name	LLDP
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	In certain versions, this column supports interface name-to-index conversion. See the product xsd before use. See Table 1 for the format.
Enable	Whether to enable the interface.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable.</li> </ul>	
CDP	Whether to enable CDP compatibility.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable. CDP packets can be transmitted and received.</li> <li><b>false</b>—Disable.</li> </ul>	
MEDTopoChange	Whether to enable LLDP-MED trapping.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable.</li> </ul>	

**Table 1 Interface operation status**

Value	Operation status	Remarks
1	Single interface index	<IfIndex>1</IfIndex>
2	Single interface	<IfIndex>GigabitEthernet 0/0/2</IfIndex>

	name	
3	Multiple interface names	<IfIndex>GigabitEthernet 0/0/2 to GigabitEthernet 0/0/3, GigabitEthernet 1/0/2 to GigabitEthernet 1/0/3, serial0/0/2</IfIndex>
4	Interface range name	<IfIndex>RangeName</IfIndex>
5	Mixture of interface range name and interface names	<IfIndex>RangeName ,GigabitEthernet 0/0/2 to GigabitEthernet 0/0/3, GigabitEthernet 1/0/2 to GigabitEthernet 1/0/3, serial0/0/2</IfIndex>

## LLDP/IfAgents

This table contains LLDP interface agent information.

### XML structure

```

<LLDP>
  <IfAgents>
    <IfAgent>
      <IfIndex></IfIndex>
      <AgentID></AgentID>
      <AdminStatus>
        <Tx></Tx>
        <Rx></Rx>
      </AdminStatus>
      <CheckChangeInterval></CheckChangeInterval>
      <Encap></Encap>
      <AddressFormat></AddressFormat>
      <RemoteChange></RemoteChange>
    </IfAgent>
  </IfAgents>
</LLDP>

```

### Table description

Item	Description
Feature name	LLDP
Table name	IfAgents
Table type	Multi-instance table
Row name	IfAgent
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Unsigned integer.
AgentID	LLDP agent ID.	Index	Enumeration: <ul style="list-style-type: none"><li>• 1—Nearest bridge agent.</li><li>• 2—Nearest non-TPMR agent.</li><li>• 3—Nearest customer agent.</li></ul>
AdminStatus	LLDP operating mode of the interface.	Data structure	Members include: <ul style="list-style-type: none"><li>• Tx.</li><li>• Rx.</li></ul>
Tx	Whether to enable the LLDP agent to only send LLDP frames.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Enable.</li><li>• <b>false</b>—Disable.</li></ul>
Rx	Whether to enable the LLDP agent to only receive LLDP frames.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Enable.</li><li>• <b>false</b>—Disable.</li></ul>
CheckChangeInterval	LLDP polling interval.	N/A	Unsigned integer. Value range: 1 to 30. Unit: second.
Encap	LLDP frame format.	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—Ethernet II encapsulation.</li><li>• 1—SNAP encapsulation.</li></ul>
AddressFormat	Management address format.	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—Number.</li><li>• 1—String.</li></ul>
RemoteChange	Whether to enable LLDP trapping.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Enable.</li><li>• <b>false</b>—Disable.</li></ul>

## Table description

Item	Description
Feature name	LLDP
Table name	TLVSelects
Table type	Multi-instance table
Row name	TLV
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Unsigned integer.
AgentID	LLDP agent ID.	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Nearest bridge agent.</li> <li>2—Nearest non-TPMR agent.</li> <li>3—Nearest customer agent.</li> </ul>
PortDesc	Whether to transmit port description TLVs.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Yes.</li> <li>false—No.</li> </ul>
SysName	Whether to transmit system name TLVs.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Yes.</li> <li>false—No.</li> </ul>
SysDesc	Whether to transmit system description TLVs.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Yes.</li> <li>false—No.</li> </ul>
SysCap	Whether to transmit system capability TLVs.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Yes.</li> <li>false—No.</li> </ul>
ManageAddress	Management address TLV information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SubType.</li> <li>AddressValue.</li> <li>Enable.</li> </ul>
SubType	SubType of the management address.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4.</li> <li>2—IPv6.</li> </ul>
Address	Management address.	N/A	Base64 Binary. Length: 1 to 31 octets. The format of data depends on the management address subtype.
Enable	Whether to transmit management address TLVs.		Boolean: <ul style="list-style-type: none"> <li>true—Yes.</li> <li>false—No.</li> </ul>
PVID	Whether to transmit port VLAN ID TLVs.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Yes.</li> <li>false—No.</li> </ul>
ProtocolVLAN	Port and protocol VLAN ID TLV information.	Data structure	Members include: <ul style="list-style-type: none"> <li>VLANID.</li> <li>Enable.</li> </ul>
VLANID	VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.

Column name	Column description	Column type	Data type and restrictions
Enable	Whether to transmit port and protocol VLAN ID TLVs.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Yes.</li> <li>• <b>false</b>—No.</li> </ul>
VLANName	VLAN name TLV information.	Data structure	Members include: <ul style="list-style-type: none"> <li>• VLANID.</li> <li>• Enable.</li> </ul>
VLANID	VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.
Enable	Whether to transmit VLAN name TLVs.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Yes.</li> <li>• <b>false</b>—No.</li> </ul>
DCBX	Whether to transmit DCBX TLVs.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Yes.</li> <li>• <b>false</b>—No.</li> </ul>
LinkAgg	Whether to transmit link aggregation TLVs.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Yes.</li> <li>• <b>false</b>—No.</li> </ul>
ManageVLAN	Management VLAN TLV information.	Data structure	Members include: <ul style="list-style-type: none"> <li>• VLANID.</li> <li>• Enable.</li> </ul>
VLANID	VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.
Enable	Whether to transmit management VLAN TLVs.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Yes.</li> <li>• <b>false</b>—No.</li> </ul>
EVB	Whether to transmit EVB TLVs.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Yes.</li> <li>• <b>false</b>—No.</li> </ul>
QCN	Whether to transmit QCN TLVs.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Yes.</li> <li>• <b>false</b>—No.</li> </ul>
MACPHY	Whether to transmit MAC/PHY configuration/status TLVs.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Yes.</li> <li>• <b>false</b>—No.</li> </ul>
Power	Whether to transmit power via MDI TLVs.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Yes.</li> <li>• <b>false</b>—No.</li> </ul>
MaxFrame	Whether to transmit max frame size TLVs.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Yes.</li> <li>• <b>false</b>—No.</li> </ul>
MEDCapability	Whether to transmit MED capability TLVs.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Yes.</li> <li>• <b>false</b>—No.</li> </ul>

Column name	Column description	Column type	Data type and restrictions
NetworkPolicy	Whether to transmit network policy TLVs.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes.</li> <li><b>false</b>—No.</li> </ul>
ExtPower	Whether to transmit extended power via MDI TLVs.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes.</li> <li><b>false</b>—No.</li> </ul>
Inventory	Whether to transmit inventory TLVs.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes.</li> <li><b>false</b>—No.</li> </ul>

## LLDP/ELINumbers

This table contains information about LLDP emergency location identification numbers.

### XML structure

```

<LLDP>
  <ELINumbers>
    <ELIN>
      <IfIndex></IfIndex>
      <ELINumber></ELINumber>
      <Enable></Enable>
    </ELIN>
  </ELINumbers>
</LLDP>

```

### Table description

Item	Description
Feature name	LLDP
Table name	ELINumbers
Table type	Multi-instance table
Row name	ELIN
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	In certain versions, this column supports interface name-to-index conversion. See the product xsd before use. See Table 1 for the format.
ELINumber	Emergency location identification number.	N/A	Numeric String. Length: 10 to 25 characters.	
Enable	Whether to transmit location ID TLVs.	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Yes.</li><li><b>false</b>—No.</li></ul>	

## LLDP/CivicAddresses

This table contains information about LLDP civic addresses.

## XML structure

```
<LLDP>
  <CivicAddresses>
    <CivicAddress>
      <IfIndex></IfIndex>
      <DeviceType></DeviceType>
      <CountryCode></CountryCode>
      <CA>          <!-- Repeatable -->
        <Type></Type>
        <Value></Value>
      </CA>
      <Enable></Enable>
    </CivicAddress>
  </CivicAddresses>
</LLDP>
```

## Table description

Item	Description
Feature name	LLDP
Table name	CivicAddresses
Table type	Multi-instance table
Row name	CivicAddress

Restrictions	The sequence of column attributes must be consistent with the table's definition.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	In certain versions, this column supports interface name-to-index conversion. See the product xsd before use. See Table 1 for the format.
DeviceType	Device type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—DHCP Server.</li> <li>1—Network device.</li> <li>2—MED endpoint.</li> </ul>	
CountryCode	Country code.	N/A	String. Length: 2 characters. Letters in the string should be uppercased.	
CA	Civic address information.	Data structure	Members include: <ul style="list-style-type: none"> <li>Type.</li> <li>Value.</li> </ul>	
Type	Civic address type.	N/A	Unsigned integer. Value range: 0 to 255.	
Value	Civic address.	N/A	String. Length: 1 to 250 characters.	
Enable	Whether to transmit location ID TLVs.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Yes.</li> <li>false—No.</li> </ul>

# LLDP

## LLDP/LLDPNeighbors

This table contains LLDP neighbor information.

### XML structure

```
<LLDP>
  <LLDPNeighbors>
    <LLDPNeighbor>
      <TimeMark></TimeMark>
      <IfIndex></IfIndex>
      <NeighborIndex></NeighborIndex>
      <SystemName></SystemName>
      <ChassisId></ChassisId>
      <PortId></PortId>
    </LLDPNeighbor>
  </LLDPNeighbors>
</LLDP>
```

### Table description

Item	Description
Feature name	LLDP
Table name	LLDPNeighbors
Table type	Multi-instance table
Row name	LLDPNeighbor
Restrictions	This table supports only Ethernet interfaces that support LLDP.

### Columns

Column name	Column description	Column type	Data type and restrictions
TimeMark	Time mark	Index	Unsigned integer. Length: 32 bits.
IfIndex	Interface index	Index	Unsigned integer. Length: 32 bits.
NeighborIndex	Neighbor index	Index	Unsigned integer. Length: 32 bits.
SystemName	System name	N/A	String. Length: 0 to 255 characters.

ChassisId	Chassis name	N/A	String. Length: 0 to 255 characters.
PortId	Neighbor port name	N/A	String. Length: 0 to 255 characters.

## LLDP/CDPNeighbors

This table contains CDP neighbor information.

### XML structure

```
<LLDP>
  <CDPNeighbors>
    <CDPNeighbor>
      <TimeMark></TimeMark>
      <IfIndex></IfIndex>
      <NeighborIndex></NeighborIndex>
      <ChassisId></ChassisId>
      <PortId></PortId>
      <ManageAddress></ManageAddress>
      <SoftwareVersion></SoftwareVersion>
      <PlatformVersion></PlatformVersion>
      <Duplex></Duplex>
      <TTL></TTL>
    </CDPNeighbor>
  </CDPNeighbors>
</LLDP>
```

### Table description

Item	Description
Feature name	LLDP
Table name	CDPNeighbors
Table type	Multi-instance table
Row name	CDPNeighbor
Restrictions	This table supports only Ethernet interfaces that support CDP.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TimeMark	Time mark	Index	Unsigned integer. Length: 32 bits.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer. Length: 32 bits.	N/A
NeighborIndex	Neighbor index	Index	Unsigned integer. Length: 32 bits.	N/A
ChassisId	Chassis name	N/A	String. Length: 0 to 255 characters.	N/A
PortId	Port name	N/A	String. Length: 0 to 255 characters.	N/A
ManageAddress	Management address	N/A	String. Length: 0 to 31 characters.	Only IPv4 addresses are supported.
SoftwareVersion	Software version	N/A	String. Length: 0 to 255 characters.	N/A
PlatformVersion	Platform version	N/A	String. Length: 0 to 255 characters.	N/A
Duplex	Duplex type	N/A	Unsigned integer. Length: 8 bits. Enumeration: <ul style="list-style-type: none"> <li>0—Half duplex.</li> <li>1—Full duplex.</li> <li>Others—Unknown.</li> </ul>	N/A
TTL	Time to live	N/A	Unsigned integer. Length: 8 bits.	N/A

## LLDP/GlobalStatus

This table contains LLDP global status information.

### XML structure

```

<LLDP>
  <GlobalStatus>
    <Enable></Enable>
    <CDP></CDP>
    <TxInterval></TxInterval>
    <FastInterval></FastInterval>
    <ReInitDelay></ReInitDelay>
    <NotifyInterval></NotifyInterval>
    <Mode></Mode>
    <MaxCredit></MaxCredit>
  </GlobalStatus>
</LLDP>

```

```

<HoldMult></HoldMult>
<FastCount></FastCount>
<RxTimeout></RxTimeout>
<ChassisID>
  <SubType></SubType>
  <ID></ID>
</ChassisID>
<SystemName></SystemName>
<SystemDesc></SystemDesc>
<DeviceClass></DeviceClass>
</GlobalStatus>
</LLDP>

```

## Table description

Item	Description
Feature name	LLDP
Table name	GlobalStatus
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Enable	Whether LLDP is enabled globally.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
CDP	Whether CDP is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
TxInterval	Transmission interval for LLDP frames.	N/A	Unsigned integer. Value range: 5 to 32768. Unit: second.
FastInterval	Fast transmission interval for LLDP frames.	N/A	Unsigned integer. Value range: 1 to 3600. Unit: second.
ReInitDelay	Re-initialization delay.	N/A	Unsigned integer. Value range: 1 to 10. Unit: second.
NotifyInterval	Notification interval for traps.	N/A	Unsigned integer. Value range: 5 to 3600. Unit: second.

Column name	Column description	Column type	Data type and restrictions
Mode	Bridge mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Customer bridge mode.</li> <li>1—Service bridge mode.</li> </ul>
MaxCredit	Token bucket size for sending LLDP frames.	N/A	Unsigned integer. Value range: 1 to 100.
HoldMult	TTL multiplier.	N/A	Unsigned integer. Value range: 2 to 10.
FastCount	Number of fast transmitted LLDP frames.	N/A	Unsigned integer. Value range: 1 to 8.
RxTimeout	Set the timeout for receiving LLDPDUs.	N/A	Unsigned integer. Value range: 0, 30 to 32768. Unit: second.
ChassisID	Chassis identifier information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SubType.</li> <li>ID.</li> </ul>
SubType	Chassis ID subtype.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Reserved.</li> <li>1—Chassis component.</li> <li>2—Interface alias.</li> <li>3—Port component.</li> <li>4—MAC address.</li> <li>5—Network address.</li> <li>6—Interface name.</li> <li>7—Locally assigned.</li> </ul>
ID	Chassis ID.	N/A	Base64 Binary. Length: 1 to 255 octets. The format of data depends on the chassis ID subtype.
SystemName	System name.	N/A	String. Length: 0 to 255 characters.
SystemDesc	System description.	N/A	String. Length: 0 to 255 characters.
DeviceClass	MED device class.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Class I.</li> <li>2—Class II.</li> <li>3—Class III.</li> <li>4—Connectivity device.</li> </ul>

## LLDP/SysCaps

批注 [w07301-1]: Need confirmed by product.

This table contains LLDP system capability information.

## XML structure

```
<LLDP>
  <SysCaps>
    <Support>
      <Other></Other>
      <Repeater></Repeater>
      <Bridge></Bridge>
      <WLANAccessPoint></WLANAccessPoint>
      <Router></Router>
      <Telephone></Telephone>
      <DocsisCableDevice></DocsisCableDevice>
      <StationOnly></StationOnly>
      <CustomerBridge></CustomerBridge>
      <ServiceBridge></ServiceBridge>
      <TPMR></TPMR>
    </Support>
    <Enable>
      <Other></Other>
      <Repeater></Repeater>

Item	Description
Feature name	LLDP
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Unsigned integer. Length: 32 bits.
Enable	Whether the interface is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
CDP	Whether CDP compatibility is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled. CDP packets can be transmitted and received.</li> <li><b>false</b>—Disabled.</li> </ul>
MEDTopoChange	Whether LLDP-MED trapping is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>

## LLDP/IfAgents

This table contains LLDP interface agent information.

## XML structure

```

    </IfAgent>
  </IfAgents>
</LLDP>

```

## Table description

Item	Description
Feature name	LLDP
Table name	IfAgents
Table type	Multi-instance table
Row name	IfAgent
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Unsigned integer. Length: 32 bits.
AgentID	LLDP agent ID.	Index	Enumeration: <ul style="list-style-type: none"><li>• <b>1</b>—Nearest bridge agent.</li><li>• <b>2</b>—Nearest non-TPMR agent.</li><li>• <b>3</b>—Nearest customer agent.</li></ul>
AdminStatus	LLDP operating mode of the interface.	Data structure	Members include: <ul style="list-style-type: none"><li>• Tx.</li><li>• Rx.</li></ul>
Tx	Whether an LLDP interface agent can only send LLDP frames.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Yes.</li><li>• <b>false</b>—No.</li></ul>
Rx	Whether an LLDP interface agent can only receive LLDP frames.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Yes.</li><li>• <b>false</b>—No.</li></ul>
CheckChangeInterval	LLDP polling interval.	N/A	Unsigned integer. Value range: 0 to 30. Unit: second.
Encap	LLDP frame format.	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Ethernet II encapsulation.</li><li>• <b>1</b>—SNAP encapsulation.</li></ul>
AddressFormat	Management address format.	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Number.</li><li>• <b>1</b>—String.</li></ul>
RemoteChange	Whether LLDP trapping is enabled.	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Enabled.</li><li>• <b>false</b>—Disabled.</li></ul>
LLDPNbNum	Total number of LLDP neighbors on the interface.	N/A	Unsigned integer. Length: 32 bits.

Column name	Column description	Column type	Data type and restrictions
CDPNbNum	Total number of CDP neighbors on the interface.	N/A	Unsigned integer. Length: 32 bits.
MEDNbNum	Total number of MED neighbors on the interface.	N/A	Unsigned integer. Length: 32 bits.
OptionalTLVNum	Total number of optional TLVs in the most recently transmitted LLDP frame.	N/A	Unsigned integer. Length: 32 bits.
UnknownTLVNum	Total number of unknown TLVs received in all LLDP frames.		Unsigned integer. Length: 32 bits.

## LLDP/TLVSelects

批注 [w07301-2]: Need confirmed by product

This table contains LLDP TLV transmitting status information.

## Table description

Item	Description
Feature name	LLDP
Table name	TLVSelects
Table type	Multi-instance table
Row name	TLV
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Unsigned integer. Length: 32 bits.
AgentID	LLDP agent ID.	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Nearest bridge agent.</li> <li>2—Nearest non-TPMR agent.</li> <li>3—Nearest customer agent.</li> </ul>
PortDesc	Whether the transmission of port description TLVs is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul>
SysName	Whether the transmission of system name TLVs is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul>

Column name	Column description	Column type	Data type and restrictions
SysDesc	Whether the transmission of system description TLVs is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
SysCap	Whether the transmission of system capability TLVs is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
ManageAddress	Management address TLV information.	Data structure	Members include: <ul style="list-style-type: none"> <li>SubType.</li> <li>AddressValue.</li> <li>Enable.</li> </ul>
SubType	Subtype of the management address.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—IPv4.</li> <li><b>2</b>—IPv6.</li> </ul>
Address	Management address.	N/A	Base64 Binary. Length: 1 to 31 octets. The format of data depends on the management address subtype.
Enable	Whether the transmission of management address TLVs is enabled.		Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
PVID	Whether the transmission of port VLAN ID TLVs is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
ProtocolVLAN	Port and protocol VLAN ID TLV information.	Data structure	Members include: <ul style="list-style-type: none"> <li>VLANID.</li> <li>Enable.</li> </ul>
VLANID	VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.
Enable	Whether the transmission of port and protocol VLAN ID TLVs is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
VLANName	VLAN name TLV information.	Data structure	Members include: <ul style="list-style-type: none"> <li>VLANID.</li> <li>Enable.</li> </ul>
VLANID	VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.
Enable	Whether the transmission of VLAN name TLVs is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>

Column name	Column description	Column type	Data type and restrictions
DCBX	Whether the transmission of DCBX TLVs is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
LinkAgg	Whether the transmission of link aggregation TLVs is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
ManageVLAN	Management VLAN TLV information.	Data structure	Members include: <ul style="list-style-type: none"> <li>VLANID.</li> <li>Enable.</li> </ul>
VLANID	VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.
Enable	Whether the transmission of management VLAN TLVs is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
EVB	Whether the transmission of EVB TLVs is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
QCN	Whether the transmission of QCN TLVs is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
MACPHY	Whether the transmission of MAC/PHY configuration/status TLVs is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
Power	Whether the transmission of power via MDI TLVs is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
MaxFrame	Whether the transmission of max frame size TLVs is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
MEDCapability	Whether the transmission of MED capability TLVs is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
NetworkPolicy	Whether the transmission of network policy TLVs is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
ExtPower	Whether the transmission of extended power via MDI TLVs is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>

Column name	Column description	Column type	Data type and restrictions
Inventory	Whether the transmission of inventory TLVs is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>

## LLDP/ELINumbers

This table contains information about LLDP emergency location identification numbers.

### XML structure

```

<LLDP>
  <ELINumbers>

## Table description

Item	Description
Feature name	LLDP
Table name	LocalDot1Infos
Table type	Multi-instance table
Row name	Dot1Info
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index.	Index	Unsigned integer. Length: 32 bits.
PVID	Neighbor interface PVID.	N/A	Unsigned integer. Value range: 1 to 4094.
PortProtocolVLAN	Protocol VLAN information.	Data structure	Members include: <ul style="list-style-type: none"> <li>VLANID.</li> <li>Support.</li> <li>Enable.</li> </ul>
VLANID	Protocol VLAN ID.	N/A	Unsigned integer. Value range: 0 to 4094.
Support	Whether protocol VLAN is supported.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Supported.</li> <li><b>false</b>—Not supported.</li> </ul>
Enable	Whether protocol VLAN is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
VLANName	VLAN name information.	Data structure	Members include: <ul style="list-style-type: none"> <li>VLANID.</li> <li>Name.</li> </ul>
VLANID	VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.
Name	VLAN name.	N/A	String. Length: 0 to 32 characters.
ManageVLAN	Management VLAN ID.	N/A	Unsigned integer. Value range: 0 to 4094.
ProtocolID	Protocol ID.	N/A	Base64 Binary. Length: 1 to 255 octets. The format of data depends on the protocol.

Column name	Column description	Column type	Data type and restrictions
LinkAgg	Link aggregation information.	Data structure	Members include: <ul style="list-style-type: none"> <li>Support.</li> <li>Enable.</li> <li>PortIndex.</li> </ul>
Support	Whether link aggregation is supported.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Supported.</li> <li><b>false</b>—Not supported.</li> </ul>
Enable	Whether link aggregation is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
PortIndex	Member port ID.	N/A	Unsigned integer. Length: 32 bits.
VIDUsage	VID usage digest.	N/A	Base64 Binary. Length: 4 octets.

## LLDP/LocalDot3Infos

This table contains the IEEE 802.3 organizationally specific information about local interfaces.

# LLDP event stream

LLDP event stream description.

## NeighborEvent event

This event is used to report LLDP neighbor change information.

## XML structure for event subscription

```
<NeighborEvent>
</NeighborEvent>

Example:
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>LLDP</stream>
    <filter type="subtree">
      <NeighborEvent xmlns="http://www.h3c.com/netconf/event:1.0/LLDP:1.0">
      </NeighborEvent>
    </filter>
  </create-subscription>
</rpc>
```

### Table description

Item	Description
Event stream name	LLDP
Event name	NeighborEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/LLDP:1.0
Support for extended query	No

## XML structure for event report

```
<NeighborEvent>
  <IfName></IfName>
  <AgentID></AgentID>
  <NeighborChassisId ></NeighborChassisId>
  <NeighborPortId></NeighborPortId>
  <Neighborevent></Neighborevent>
</NeighborEvent>

Example:
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2016-07-21T09:10:51</eventTime>
  <NeighborEvent xmlns="http://www.h3c.com/netconf/event:1.0/LLDP:1.0">
```

```

<IfName>GigabitEthernet0/0/4</IfName>
<AgentID>1</AgentID>
<NeighborChassisId>7002-c2bf-0200</NeighborChassisId>
<NeighborPortId>GigabitEthernet0/0/4</NeighborPortId>
<Neighborevent>1</Neighborevent>
</NeighborEvent>
</notification>

```

	authentication is performed for a login user.			
Motd	The greeting banner to be displayed before the legal banner appears.	N/A	String. Length: 2 to 2002 characters.	
Shell	The banner to be displayed before a non-modem dial-in user accesses user view.	N/A	String. Length: 2 to 2002 characters.	

## Login/Class/Classes

The authentication configuration information for users on each type of line class.

### XML structure

```

<Login>
  <Class>
    <Classes>
      <Class>
        <ClassType></ClassType>
        <AuthMode></AuthMode>
        <ProtocolIn></ProtocolIn>
      </Class>
    </Classes>
  </Class>
</Login>

```

### Table description

Item	Description
Feature name	Login
Table name	Classes
Table type	Multi-instance table
Row name	Class
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClassType	User line class type.	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Console.</li> <li>2—TTY.</li> <li>3—AUX.</li> <li>4—VTY.</li> </ul>	The supported line class type depends on the device model.
AuthMode	Authentication mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—None.</li> <li>1—Password.</li> <li>2—Scheme.</li> </ul>	<p>In FIPS mode, the authentication mode must be scheme.</p> <p>The following default settings apply:</p> <ul style="list-style-type: none"> <li>In non-FIPS mode: <ul style="list-style-type: none"> <li>Password authentication is enabled for AUX and VTY lines.</li> <li>Authentication is disabled for console and TTY lines.</li> <li>If the device has an AUX port and does not have a console port, authentication is disabled for the AUX line.</li> </ul> </li> <li>In FIPS mode, scheme authentication is enabled.</li> </ul> <p><b>! IMPORTANT:</b></p> <p>If the ProtocolIn value is 0, do not remove, delete, or replace this column. A violation will cause the system to report an error.</p>
ProtocolIn	Supported protocols. # Login/Specification

Login configuration specification table.

Login configuration capacity differs on different device models.

- Whether the AuthMode column in the tables Login/Class/Classes and Login/Line/Lines can support the none or password authentication mode.
- Whether the ProtocolIn column in the tables Login/Class/Classes and Login/Line/Lines can support Telnet or PAD.

## XML structure

```
<Login>
  <Specification>
    <AuthMode>
      <NoneAuth></NoneAuth>
      <PasswordAuth></PasswordAuth>
    </AuthMode>
    <ProtocolIn>
      <Telnet></Telnet>
      <Pad></Pad>
    </ProtocolIn>
  </Specification>
</Login>
```

## Table description

Item	Description
Feature name	Login
Table name	Specification
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AuthMode	Supported authentication modes.	Data structure	Members include: <ul style="list-style-type: none"><li>• NoneAuth.</li><li>• PasswordAuth.</li></ul>	N/A
NoneAuth	Whether to support the none authentication mode.	N/A	Boolean: <ul style="list-style-type: none"><li>• true.</li><li>• false.</li></ul>	In non-FIPS mode, the none and password authentication modes are supported.

Column name	Column description	Column type	Data type and restrictions	Remarks
PasswordAuth	Whether to support the password authentication mode.	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	In FIPS mode, the none and password authentication modes are not supported.
ProtocolIn	Supported protocols.	Data structure	Members include: <ul style="list-style-type: none"> <li>Telnet.</li> <li>Pad.</li> </ul>

# LPDT

## LPDT/SetPortLoopMode

This table provides configuration of the loop protection action on a port of a PEX in an IRF 3.1 system. This table is for internal users only.

### XML structure

```
<LPDT>
  <SetPortLoopMode>
    <IfIndex></IfIndex>
    <Block></Block>
    <NoLearning></NoLearning>
    <Confirm></Confirm>
  </SetPortLoopMode>
</LPDT>
```

### Table description

Item	Description
Feature name	LPDT
Table name	SetPortLoopMode
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	N/A
Block	Whether to block the looped port	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Unblock.</li><li>1—Block.</li></ul>	N/A
NoLearning	Action to take when a frame with an unknown source MAC address is received	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Forward.</li><li>1—Disable MAC address learning.</li><li>2—Drop.</li></ul>	N/A
Confirm	Check code	N/A	String. Length: 1 to 20 characters.	Fixed at <b>lpdt action for 1br</b> .

## LPDT/Base

This table provides global loop detection configuration.

### XML structure

```
<LPDT>
  <Base>
    <DetectVlanList></DetectVlanList>
    <DetectedAction></DetectedAction>
  </Base>
</LPDT>
```

### Table description

Item	Description
Feature name	LPDT
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global functions.
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DetectVlanList	VLANs to be enabled with loop detection	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit. You can sign the flag like "< DetectVlanList base:incremental="true ">". If the value is true, the VLAN list will be added or removed. Otherwise, it is the final result.
DetectedAction	Action to take on an interface where a loop is detected	N/A	Enumeration: <ul style="list-style-type: none"><li>0—No action.</li><li>1—Shut down.</li></ul>	N/A

# LPDT event stream

LPDT event stream description.

## IfLoopbackedEvent event

This event is used to report interface loop detection events.

## XML structure for event subscription

```
<IfLoopbackedEvent>
</IfLoopbackedEvent>
```

Example:

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>LPDT</stream>
    <filter type="subtree">
      <IfLoopbackedEvent xmlns="http://www.h3c.com/netconf/event:1.0/LPDT:1.0">
      </IfLoopbackedEvent>
    </filter>
  </create-subscription>
</rpc>
```

### Table description

Item	Description
Event stream name	LPDT
Event name	IfLoopbackedEvent
Event namespace	http://www.h3c.com/netconf/event:1.0/LPDT:1.0
Support for extended query	No

## XML structure for event report

```
<IfLoopbackedEvent>
  <IfLoopbacked>
    <IfName></IfName>
    <LoopStatus></LoopStatus>
    <APSerialID></APSerialID>
  </IfLoopbacked>
</IfLoopbackedEvent>
```

Example:

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2018-11-13T14:22:21</eventTime>
  <IfLoopbackedEvent xmlns="http://www.h3c.com/netconf/event:1.0/LPDT:1.0">
```

```

<IfLoopbacked>
  <IfName>GigabitEthernet0/0/3</IfName>
  <LoopStatus>2</LoopStatus>
  <APSerialID>219801A17C817200001</APSerialID>
</IfLoopbacked>
</IfLoopbackedEvent>
</notification>

```

### Table description

Column name	Column description	Data type and restrictions	Remarks
IfName	Interface name	String. Length: 0 to 47 characters.	N/A
LoopStatus	Loop recovery status	Enumeration: <ul style="list-style-type: none"> <li>1—A loop exists.</li> <li>2—A loop has been removed.</li> </ul>	N/A
APSerialID	AP serial ID	String. Length: 0 to 63 characters.	This column is not displayed if the device is not an AP.

## IfVlanLoopbackedEvent event

This event is used to report VLAN loop detection events.

### XML structure for event subscription

```

<IfVlanLoopbackedEvent>
</IfVlanLoopbackedEvent>

```

#### Example:

```

<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0"
xmlns:xs="http://www.h3c.com/netconf/base:1.0">
  <create-subscription xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
    <stream>LPDT</stream>
    <filter type="subtree">
      <IfVlanLoopbackedEvent xmlns="http://www.h3c.com/netconf/event:1.0/LPDT:1.0">
        </IfVlanLoopbackedEvent>
      </filter>
    </create-subscription>
  </rpc>

```

### Table description

Item	Description

## MAC/MacClearByVLAN

This table is used to clear MAC address entries according to VLAN ID.

### XML structure

```
<MAC>
  <MacClearByVLAN>
    <ClearByVLAN>
      <Status></Status>
      <VLANID></VLANID>
    </ClearByVLAN>
  </MacClearByVLAN>
</MAC>
```

### Table description

Item	Description
Feature name	MAC
Table name	MacClearByVLAN
Table type	Multi-instance table
Row name	ClearByVLAN
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Status of the MAC address entry	Index	Enumeration: <ul style="list-style-type: none"><li>• 2—Learned.</li><li>• 3—Static.</li><li>• 4—Blackhole.</li><li>• 5—Multiport.</li><li>• 6—Multicast.</li></ul>	If you do not specify this column, all status is set.
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A

## MAC/MacClearByPortIndex

This table is used to clear MAC address entries according to port index.

## XML structure

```
<MAC>
  <MacClearByPortIndex>
    <ClearByPortIndex>
      <Status></Status>
      <PortIndex></PortIndex>
    </ClearByPortIndex>
  </MacClearByPortIndex>
</MAC>
```

## Table description

Item	Description
Feature name	MAC
Table name	MacClearByPortIndex
Table type	Multi-instance table
Row name	ClearByPortIndex
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Status of the MAC address entry	Index	Enumeration: <ul style="list-style-type: none"><li>2—Learned.</li><li>3—Static.</li></ul>	If you do not specify this column, all status is set.
PortIndex	Port index	Index	Unsigned integer.	N/A

## MAC/MacClearByStatus

This table is used to clear MAC address entries according to status.

## XML structure

```
<MAC>
  <MacClearByStatus>
    <ClearByStatus>
      <Status></Status>
    </ClearByStatus>
  </MacClearByStatus>
</MAC>
```

## Table description

Item	Description
Feature name	MAC
Table name	MacClearByStatus
Table type	Multi-instance table
Row name	ClearByStatus
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Status of the MAC address entry	Index	Enumeration: <ul style="list-style-type: none"><li>5—Multiport.</li><li>6—Multicast.</li></ul>	If you do not specify this column, all status is set.

## MAC/MacDelLearnMac

This table is used to delete a learned MAC address entry according to MAC address and VLAN ID.

## XML structure

```
<MAC>
  <MacDelLearnMac>
    <DelLearnMac>
      <VLANID></VLANID>
      <MacAddress></MacAddress>
    </DelLearnMac>
  </MacDelLearnMac>
</MAC>
```

## Table description

Item	Description
Feature name	MAC
Table name	MacDelLearnMac
Table type	Multi-instance table
Row name	DelLearnMac
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
MacAddress	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

# MAC

## MAC/MacUnicastTable

This table contains unicast MAC address table information.

### XML structure

```
<MAC>
  <MacUnicastTable>
    <Unicast>
      <VLANID></VLANID>
      <MacAddress></MacAddress>
      <PortIndex></PortIndex>
      <Status></Status>
    </Unicast>
  </MacUnicastTable>
</MAC>
```

### Table description

Item	Description
Feature name	MAC
Table name	MacUnicastTable
Table type	Multi-instance table
Row name	Unicast
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
MacAddress	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
PortIndex	Port index	N/A	Unsigned integer.	Required when Status is Learned or Static. It must not be specified when Status is Blackhole.

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Status of the MAC address entry	N/A	Enumeration: <ul style="list-style-type: none"> <li>2—Learned.</li> <li>3—Static.</li> <li>4—Blackhole.</li> </ul>	N/A

## MAC/MacGroupTable

This table contains multiport MAC address table information.

### XML structure

```

<MAC>
  <MacGroupTable>
    <Group>
      <VLANID></VLANID>
      <MacAddress></MacAddress>
      <Status></Status>
      <PortList></PortList>
    </Group>
  </MacGroupTable>
</MAC>

```

### Table description

Item	Description
Feature name	MAC
Table name	MacGroupTable
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
MacAddress	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Status of the MAC address entry	N/A	Enumeration: <ul style="list-style-type: none"> <li>5—Multiport.</li> <li>6—Multicast.</li> </ul>	N/A
PortList	Port list of the MAC address	N/A	Base64 string.	<p>Bitmap of ports. the string length depends on the device port number.</p> <p>Supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface.</p> <p>Each bit represents a port. The left-most bit represents the port with the smallest port index 1 and the right-most bit represents the port with the biggest port index. If a bit is set, the port represented by the bit is included in the port set. Otherwise, the port isn't included.</p>

## MAC/MacAging

This table contains the information of aging time for dynamic MAC address entries.

### XML structure

```

<MAC>
  <MacAging>
    <AgingTime></AgingTime>
  </MacAging>
</MAC>

```

### Table description

Item	Description
Feature name	MAC
Table name	MacAging
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AgingTime	Aging time for dynamic MAC address entries	N/A	Unsigned integer. Value range: 0, AgingTimeMin to AgingTimeMax seconds.	The default is 300 seconds. 0 means not aging dynamic MAC address entries. Values of AgingTimeMin and AgingTimeMax depend on the device model.

## MAC/MacPort

This table contains the information of MAC learning on an interface.

## XML structure

```
<MAC>
  <MacPort>
    <PortLearn>
      <PortIndex></PortIndex>
      <LearnEnable></LearnEnable>
      <LearnMaxNum></LearnMaxNum>
      <PortForwardingEnable></PortForwardingEnable>
    </PortLearn>
  </MacPort>
</MAC>
```

## Table description

Item	Description
Feature name	MAC
Table name	MacPort
Table type	Multi-instance table
Row name	PortLearn
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface S-channel interface/S-channel aggregate interface
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortIndex	Port index	Index	Unsigned integer.	In some versions, the interface name is supported. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
LearnEnable	Whether the MAC address learning function is enable	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>(default)</li> <li><b>false</b></li> </ul>	N/A
LearnMaxNum	MAC learning limit on an interface	N/A	Unsigned integer. Value range: 0 to PortLearnMaxNumLimit.	Supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface. 0 means the interface is disabled from learning MAC address. The value of PortLearnMaxNumLimit depends on the device model. The default setting varies by device model.
PortForwardingEnable	Forwards frames with unknown source MAC addresses after the number of learned MAC addresses reaches the upper limit.  Whether the PortForwarding function is enable	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b> (default)</li> <li><b>false</b></li> </ul>	Supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface.

## MAC/MacVLAN

This table contains the information of MAC learning for a VLAN.

## XML structure

```

<MAC>
  <MacVLAN>
    <VLANLearn>
      <VLANID></VLANID>
    
```

```

    <LearnEnable></LearnEnable>
    <LearnMaxNum></LearnMaxNum>
    <VLANForwardingEnable></VLANForwardingEnable>
  </VLANLearn>
</MacVLAN>
</MAC>

```

## Table description

Item	Description
Feature name	MAC
Table name	MacVLAN
Table type	Multi-instance table
Row name	VLANLearn
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
LearnEnable	Whether the MAC address learning function is enable	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>(default)</li> <li><b>false</b></li> </ul>	N/A
LearnMaxNum	MAC learning limit for a VLAN	N/A	Unsigned integer. Value range: 0 to VLANLearnMaxNumLimit.	0 means the VLAN is not allowed to learn MAC addresses. The value of VLANLearnMaxNumLimit depends on the device model. The default setting varies by device model.
VLANForwardingEnable	Forwards frames with unknown source MAC addresses after the number of learned MAC addresses reaches the upper limit. Whether the PortForwarding function is enable	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>(default)</li> <li><b>false</b></li> </ul>	N/A

# MAC/MacFwdSrcCheck

This table contains the information of source-mac check.

## XML structure

```
<MAC>
  <MacFwdSrcCheck>
    <FwdSrcCheck>
      <IfIndex></IfIndex>
      <FwdSrcCheckEnable></FwdSrcCheckEnable>
    </FwdSrcCheck>
  </MacFwdSrcCheck>
</MAC>
```

## Table description

Item	Description
Feature name	MAC
Table name	MacFwdSrcCheck
Table type	Multi-instance table
Row name	FwdSrcCheck
Restrictions	This table supports interface types: Layer 2 Ethernet interface Layer 3 Ethernet interface/subinterface
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	IfIndex ID	Index	Unsigned integer.	In some versions, the interface name is supported. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
FwdSrcCheckEnable	Source MAC address checking	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled (default).</li><li><b>false</b>—Disabled.</li></ul>	N/A

# MAC/MacPortConfig

This table contains the information of MAC config on an interface.

## XML structure

```
<MAC>
  <MacPortConfig>
    <PortConfig>
      <IfIndex></IfIndex>
      <PortBridgeEnable></PortBridgeEnable>
    </PortConfig>
  </MacPortConfig>
</MAC>
```

## Table description

Item	Description
Feature name	MAC
Table name	MacPortConfig
Table type	Multi-instance table
Row name	PortConfig
Restrictions	This table supports interface types: Layer 2 Ethernet interface
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Port index	Index	Unsigned integer.	In some versions, the interface name is supported. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
PortBridgeEnable	Whether the MAC address bridge function is enable	N/A	Boolean: <ul style="list-style-type: none"><li><b>false</b> (default)</li><li><b>true</b></li></ul>	N/A

# MAC/SRVs

This table contains information about service instances of Layer 2 Ethernet interfaces.

## XML structure

```
<MAC>
  <SRVs>
    <SRV>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <LrnPriority></LrnPriority>
    </SRV>
  </SRVs>
</MAC>
```

## Table description

Item	Description
Feature name	MAC
Table name	SRVs
Table type	Multi-instance table
Row name	SRV
Restrictions	This table supports only Layer 2 Ethernet interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	In some versions, the interface name is supported. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
SrvID	Service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A
LrnPriority	Priority type of MAC address learning	N/A	Enumeration: <ul style="list-style-type: none"><li>1—high</li><li>2—low</li></ul>	N/A

# MAC

## MAC/MacUnicastTable

This table contains unicast MAC address table information.

### XML structure

```
<MAC>
  <MacUnicastTable>
    <Unicast>
      <VLANID></VLANID>
      <MacAddress></MacAddress>
      <PortIndex></PortIndex>
      <NickName></NickName>
      <Status></Status>
      <Aging></Aging>
    </Unicast>
  </MacUnicastTable>
</MAC>
```

### Table description

Item	Description
Feature name	MAC
Table name	MacUnicastTable
Table type	Multi-instance table
Row name	Unicast
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
MacAddress	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
PortIndex	Port index	N/A	Unsigned integer.	N/A
NickName	RB through which packets leave the TRILL network	N/A	Hexadecimal string of 16-bit number	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Status of the MAC address entry	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Other.</li> <li>• <b>1</b>—Security.</li> <li>• <b>2</b>—Learned.</li> <li>• <b>3</b>—Static.</li> <li>• <b>4</b>—Blackhole.</li> </ul>	N/A
Aging	Aging time	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—The entry is aging.</li> <li>• <b>false</b>—The entry does not age.</li> </ul>	N/A

## MAC/MacGroupTable

This table contains multiport MAC address table information.

### XML structure

```

<MAC>
  <MacGroupTable>
    <Group>
      <VLANID></VLANID>
      <MacAddress></MacAddress>
      <Status></Status>
      <PortList></PortList>
    </Group>
  </MacGroupTable>
</MAC>

```

### Table description

Item	Description
Feature name	MAC
Table name	MacGroupTable
Table type	Multi-instance table
Row name	Group
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
MacAddress	MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
Status	Status of the MAC address entry	N/A	Enumeration: <ul style="list-style-type: none"><li>• 5—Multiport.</li><li>• 6—Multicast.</li></ul>	N/A
PortList	Port list of the MAC address	N/A	Base64 string.	Bitmap of ports.

## MAC/MacAging

This table contains the information of aging time for dynamic MAC address entries.

## XML structure

```
<MAC>
  <MacAging>
    <AgingTimeMin></AgingTimeMin>
    <AgingTimeMax></AgingTimeMax>
    <AgingTime></AgingTime>
  </MacAging>
</MAC>
```

## Table description

Item	Description
Feature name	MAC
Table name	MacAging
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AgingTimeMin	Lower limit of the aging time	N/A	Unsigned integer.	<b>N/A</b>
AgingTimeMax	Upper limit of the aging time	N/A	Unsigned integer.	N/A
AgingTime	Aging time for dynamic MAC address entries	N/A	Unsigned integer. Value range: 0, AgingTimeMin to AgingTimeMax seconds.	The default is 300 seconds. 0 means not aging dynamic MAC address entries. Values of AgingTimeMin and AgingTimeMax depend on the device model.

## MAC/MacPort

This table contains the information of MAC learning on an interface.

### XML structure

```

<MAC>
  <MacPort>
    <PortLearn>
      <PortIndex></PortIndex>
      <LearnEnable></LearnEnable>
      <LearnMaxNum></LearnMaxNum>
      <PortForwardingEnable></PortForwardingEnable>
    </PortLearn>
  </MacPort>
</MAC>

```

### Table description

Item	Description
Feature name	MAC
Table name	MacPort
Table type	Multi-instance table
Row name	PortLearn
Restrictions	This table supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface S-channel interface/S-channel aggregate interface

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PortIndex	Port index	Index	Unsigned integer.	N/A
LearnEnable	MAC address learning	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled (default).</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
LearnMaxNum	MAC learning limit on an interface	N/A	Unsigned integer. Value range: 0 to PortLearnMaxNumLimit.	Supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface. 0 means the interface is disabled from learning MAC address. The value of PortLearnMaxNumLimit depends on the device model. The default setting varies by device model.
PortForwardingEnable	Forwards frames with unknown source MAC addresses after the number of learned MAC addresses reaches the upper limit	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled (default).</li> <li><b>false</b>—Disabled.</li> </ul>	Supports interface types: Layer 2 Ethernet interface/Layer 2 aggregate interface.

## MAC/MacVLAN

This table contains the information of MAC learning for a VLAN.

## XML structure

```

<MAC>
  <MacVLAN>
    <VLANLearn>
      <VLANID></VLANID>
      <LearnEnable></LearnEnable>
      <LearnMaxNum></LearnMaxNum>
      <VLANForwardingEnable></VLANForwardingEnable>
    </VLANLearn>
  </MacVLAN>
</MAC>

```

## Table description

Item	Description
Feature name	MAC
Table name	MacVLAN
Table type	Multi-instance table
Row name	VLANLearn
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
LearnEnable	MAC address learning	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled(default).</li><li><b>false</b>—Disabled.</li></ul>	N/A
LearnMaxNum	MAC learning limit for a VLAN	N/A	Unsigned integer. Value range: 0 to VLANLearnMaxNumLimit.	0 means the VLAN is not allowed to learn MAC addresses. The value of VLANLearnMaxNumLimit depends on the device model. The default setting varies by device model.
VLANForwardingEnable	Forwards frames with unknown source MAC addresses after the number of learned MAC addresses reaches the upper limit	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled(default).</li><li><b>false</b>—Disabled.</li></ul>	N/A

## MAC/MacSpecification

This table contains MAC specifications information.

## XML structure

```
<MAC>
  <MacSpecification>
    <SupportMacGroup></SupportMacGroup>
    <SupportMacVLANLearnLimit></SupportMacVLANLearnLimit>
```

```

    <PortLearnMaxNumLimit></PortLearnMaxNumLimit>
    <VLANLearnMaxNumLimit></VLANLearnMaxNumLimit>
    <SupportPortBridgeEnable></SupportPortBridgeEnable>
  </MacSpecification>
</MAC>

```

## Table description

Item	Description
Feature name	MAC
Table name	MacSpecification
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
SupportMacGroup	Supports for multiport MAC addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Support.</li> <li><b>false</b>—Not support.</li> </ul>
SupportMacVLANLearnLimit	Supports for configuring the MAC learning limit for a VLAN.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Support.</li> <li><b>false</b>—Not support.</li> </ul>
PortLearnMaxNumLimit	Upper limit of the maximum number for the MAC learning limit on an interface.	N/A	Unsigned integer.
VLANLearnMaxNumLimit	Upper limit of the maximum number for the MAC learning limit for a VLAN.	N/A	Unsigned integer.
SupportPortBridgeEnable	Supports for bridge function.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Support.</li> <li><b>false</b>—Not support.</li> </ul>

## MAC/MacFwdSrcCheck

This table contains the information of source-mac check.

## XML structure

```
<MAC>
```

```

<MacFwdSrcCheck>
  <FwdSrcCheck>
    <IfIndex></IfIndex>
    <FwdSrcCheckEnable></FwdSrcCheckEnable>
  </FwdSrcCheck>
</MacFwdSrcCheck>
</MAC>

```

## Table description

Item	Description
Feature name	MAC
Table name	MacFwdSrcCheck
Table type	Multi-instance table
Row name	FwdSrcCheck
Restrictions	This table supports interface types: Layer 2 Ethernet interface Layer 3 Ethernet interface/subinterface

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	IfIndex ID	Index	Unsigned integer.	N/A
FwdSrcCheckEnable	Source MAC address checking	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled (default).</li> <li><b>false</b>—Disabled.</li> </ul>	N/A

## MAC/MacPortConfig

This table contains the information of MAC config on an interface.

## XML structure

```

<MAC>
  <MacPortConfig>
    <PortConfig>
      <IfIndex></IfIndex>
      <PortBridgeEnable></PortBridgeEnable>
    </PortConfig>
  </MacPortConfig>
</MAC>

```

## Table description

Item	Description
Feature name	MAC
Table name	MacPortConfig
Table type	Multi-instance table
Row name	PortConfig
Restrictions	This table supports interface types: Layer 2 Ethernet interface
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Port index	Index	Unsigned integer.	N/A
PortBridgeEnable	Whether the MAC address bridge function is enable	N/A	Boolean: <ul style="list-style-type: none"><li><b>false</b> (default)</li><li><b>true</b></li></ul>	N/A

## MAC/SRVs

This table contains information about service instances of Layer 2 Ethernet interfaces.

## XML structure

```
<MAC>
  <SRVs>
    <SRV>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <LrnPriority></LrnPriority>
    </SRV>
  </SRVs>
</MAC>
```

## Table description

Item	Description
Feature name	MAC
Table name	SRVs
Table type	Multi-instance table

Row name	SRV
Restrictions	This table supports only Layer 2 Ethernet interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	In some versions, the interface name is supported. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
SrvID	Service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A
LrnPriority	Priority type of MAC address learning	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1—high</b></li> <li>• <b>2—low</b></li> </ul>	N/A

# MACA

## MACA/ClearAllStatistics

This table clears MAC authentication statistics for all interfaces.

### XML structure

```
<MACA>
  <ClearAllStatistics>
    <Clear></Clear>
  </ClearAllStatistics>
</MACA>
```

### Table description

Item	Description
Feature name	MACA
Table name	ClearAllStatistics
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
Clear	Clears MAC authentication statistics for all interfaces.	N/A	This column must be empty.

## MACA/ClearInterStatistics

This table clears MAC authentication statistics for an interface.

### XML structure

```
<MACA>
  <ClearInterStatistics>
    <Interface>
      <IfIndex></IfIndex>
    </Interface>
  </ClearInterStatistics>
</MACA>
```

```

    <Clear></Clear>
  </Interface>
</ClearInterStatistics>
</MACA>

```

## Table description

Item	Description
Feature name	MACA
Table name	ClearInterStatistics
Table type	Multi-instance table
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Resets the interface's statistics .	Index	Unsigned integer.
Clear	Clears the interface's statistics.	N/A	This column must be empty.

## MACA/ResetGVLANUser

This table removes all MAC authentication users from the guest VLAN on an interface.

## XML structure

```

<MACA>
  <ResetGVLANUser>
    <Interface>
      <IfIndex></IfIndex>
      <ResetAll></ResetAll>
    </Interface>
  </ResetGVLANUser>
</MACA>

```

## Table description

Item	Description
Feature name	MACA
Table name	ResetGVLANUser
Table type	Multi-instance table
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Specifies an interface.	Index	Unsigned integer.
ResetAll	Removes all MAC authentication users from the guest VLAN on the interface.	N/A	This column must be empty.

## MACA/ResetOneGVLANUser

This table removes the specified MAC authentication user from the guest VLAN on an interface.

## XML structure

```
<MACA>
  <ResetOneGVLANUser>
    <Interface>
      <IfIndex></IfIndex>
      <UserMAC></UserMAC>
      <Reset></Reset>
    </Interface>
  </ResetOneGVLANUser>
</MACA>
```

## Table description

Item	Description
Feature name	MACA
Table name	ResetOneGVLANUser
Table type	Multi-instance table

Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Specifies an interface.	Index	Unsigned integer.
UserMAC	Specifies a user by its MAC address.	Index	MAC address.
Reset	Removes the specified user from the guest VLAN on the interface.	N/A	This column must be empty.

## MACA/ResetCVLANUser

This table removes all MAC authentication users from the critical VLAN on an interface.

## XML structure

```

<MACA>
  <ResetCVLANUser>
    <Interface>
      <IfIndex></IfIndex>
      <ResetAll></ResetAll>
    </Interface>
  </ResetCVLANUser>
</MACA>

```

## Table description

Item	Description
Feature name	MACA
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
Enable	Status of MAC authentication	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled(default).</li> </ul>
AuthDelayInterval	Value for MAC authentication delay timer	N/A	Unsigned integer. Value range: 1 to 180 seconds. Default: Not configured.
MaxUser	Maximum number of users on this interface	N/A	Unsigned integer. Value range:1 to 4294967295. Default: 4294967295.
ReauthUnreachableMode	Status of users when the AAA server is not available for MAC reauthentication	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Offline(default).</li> <li><b>2</b>—Online.</li> </ul>
MultiVLAN	Allows authenticated users in multiple VLANs on this interface	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Single VLAN(default).</li> <li><b>1</b>—Multiple VLAN.</li> </ul>
CriticalVLAN	VLAN for users that have failed MAC authentication because of unreachable	N/A	Unsigned integer. Value range: 1 to 4094.

Column name	Column description	Column type	Data type and restrictions
	servers		Default: Not configured.
GuestVLAN	VLAN for users that have failed MAC authentication because of any reason other than unreachable servers	N/A	Unsigned integer. Value range: 1 to 4094. Default: Not configured.
CriticalVSI	VSI for users that have failed MAC authentication because of unreachable servers	Data structure	Members include: <ul style="list-style-type: none"> <li>VSIName.</li> <li>UrlUserLogoff.</li> </ul>
VSIName	Critical VSI name	N/A	String. Length: 1 to 31 characters.
UrlUserLogoff	Whether to log off users that have been assigned authorization URLs on the port when the first user is assigned to the critical VSI	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Keeps the users online (default).</li> <li><b>1</b>—Logs off the users.</li> </ul>
GuestVSI	VSI for users that have failed MAC authentication because of any reason other than unreachable servers	N/A	String. Length: 1 to 31 characters.
Carry	Settings for the feature of including user IP addresses in MAC authentication requests	Data structure	Members include: <ul style="list-style-type: none"> <li>UserIP.</li> <li>ACLNumber.</li> </ul>
UserIP	Whether to include user IP addresses in MAC authentication requests	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Include.</li> <li><b>false</b>—Exclude.</li> </ul>
ACLNumber	ACL used to filter source IP addresses that can or cannot trigger MAC authentication	N/A	Unsigned integer. Value range: 2000 to 2999. Default: 0 (no ACL is specified to filter source IP addresses).
Domain	Authentication domain of users on the interface	N/A	String. Length: 1 to 255 characters. Default: No authentication domain is specified for MAC authentication users. The system default authentication domain is used.

## MACA/OfflineDetectTimers

This table contains the parameters for configuring MAC authentication offline detection on a per-user basis.

### XML structure

```
<MACA>
  <OfflineDetectTimers>
```

```

<OfflineDetectTimer>
  <MacAddr></MacAddr>
  <Timer></Timer>
  <CheckSnooping></CheckSnooping>
</OfflineDetectTimer>
</OfflineDetectTimers>
</MACA>

```

## Table description

Item	Description
Feature name	MACA
Table name	OfflineDetectTimers
Table type	Multi-instance table
Row name	OfflineDetectTimer
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddr	User MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	N/A
Timer	User offline detect timer	N/A	Unsigned integer. Value range: 60 to 2147483647 seconds. 0: Skips offline detection for the specified user.	N/A
CheckSnooping	Whether to use the ARP snooping or ND snooping table to determine the offline state of the user	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true.</b></li> <li><b>false</b></li> </ul>	<ul style="list-style-type: none"> <li>If the ARP snooping or ND snooping table is used, the device searches the ARP snooping or ND snooping table before it checks for traffic from the user within the detection interval. If a matching ARP snooping or ND snooping entry is found, the device resets the offline detect timer and the user stays online. If the offline detect timer expires because the device has not found a matching snooping entry for the user or received traffic from the user, the device disconnects the user.</li> <li>If the ARP or ND snooping table is not used, the device disconnects the user if it has not</li> </ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
				received traffic from that user before the offline detect timer expires.

# MACA

## MACA/Common

This table contains information about MAC authentication global parameters.

### XML structure

```
<MACA>
  <Common>
    <Enable></Enable>
    <Domain></Domain>
    <UserNameFormat></UserNameFormat>
    <UserName></UserName>
    <IdleInterval></IdleInterval>
    <QuietInterval></QuietInterval>
    <ServerInterval></ServerInterval>
    <OnlineUserNum></OnlineUserNum>
    <SilentMACNum></SilentMACNum>
  </Common>
</MACA>
```

### Table description

Item	Description
Feature name	MACA
Table name	Common
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
Enable	Global MAC authentication status	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled.</li><li><b>false</b>—Disabled.</li></ul>
Domain	Authentication domain of the user	N/A	String. Length: 1 to 255 characters.
UserNameFormat	Username format	N/A	Enumeration: <ul style="list-style-type: none"><li><b>1</b>—Fixed.</li><li><b>2</b>—Individual MAC address.</li></ul>

Column name	Column description	Column type	Data type and restrictions
UserName	Fixed username of the device	N/A	String. Length: 1 to 55 characters.
IdleInterval	Value for the offline detect timer	N/A	Unsigned integer. Value range: 60 to 2147483647 seconds.
QuietInterval	Value for the quiet timer	N/A	Unsigned integer. Value range: 1 to 3600 seconds.
ServerInterval	Value for the server timeout timer	N/A	Unsigned integer. Value range: 100 to 300 seconds.
OnlineUserNum	Current online user count	N/A	Unsigned integer.
SilentMACNum	Current silent MAC count	N/A	Unsigned integer.

## MACA/SilentMAC

This table contains silent MAC information of MAC authentication.

### XML structure

```

<MACA>
  <SilentMACs>
    <SilentMAC>
      <MAC></MAC>
      <VLANID></VLANID>
      <IfIndex></IfIndex>
    </SilentMAC>
  </SilentMACs>
</MACA>

```

### Table description

Item	Description
Feature name	MACA
Table name	SilentMACs
Table type	Multi-instance table
Row name	SilentMAC
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
MAC	Silent MAC address	Index	MAC address.
VLANID	From which VLAN the MAC tries to logs on	Index	Unsigned integer. Value range: 1 to 4094.
IfIndex	Interface index	Index	Unsigned integer.

## MACA/Interfaces

This table contains MAC authentication information on interfaces.

## XML structure

```
<MACA>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Enable></Enable>
      <AuthDelayEnable></AuthDelayEnable>
      <AuthDelayInterval></AuthDelayInterval>
      <MaxUser></MaxUser>
      <ReauthUnreachableMode></ReauthUnreachableMode>
      <MultiVLAN></MultiVLAN>
      <CriticalVLAN></CriticalVLAN>
      <GuestVLAN></GuestVLAN>
      <CriticalVSI>
        <VSIName></VSIName>
        <UrlUserLogoff></UrlUserLogoff>
      </CriticalVSI>
      <GuestVSI></GuestVSI>
      <Carry>
        <UserIP></UserIP>
        <ACLNumber></ACLNumber>
      </Carry>
      <OnlineUserNum></OnlineUserNum>
      <Domain></Domain>
    </Interface>
  </Interfaces>
</MACA>
```

## Table description

Item	Description
Feature name	MACA

Item	Description
Table name	Interfaces
Table type	Multi-instance table
Row name	interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
Enable	Status of MAC authentication	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
AuthDelayEnable	Status of MAC authentication delay	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>
AuthDelayInterval	Value for MAC authentication delay timer	N/A	Unsigned integer Value range: 1 to 180 seconds.
MaxUser	Maximum number of users on this interface	N/A	Unsigned integer. Value range: 1 to 4294967295.
ReauthUnreachableMode	Status of users when the AAA server is not available for MAC reauthentication	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Offline.</li> <li><b>2</b>—Online.</li> </ul>
MultiVLAN	Allows authenticated users in multiple VLANs on this interface	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Single VLAN.</li> <li><b>1</b>—Multiple VLAN.</li> </ul>
CriticalVLAN	VLAN for users that have failed MAC authentication because of unreachable servers	N/A	Unsigned integer. Value range: 1 to 4094.
GuestVLAN	VLAN for users that have failed MAC authentication because of any reason other than unreachable servers	N/A	Unsigned integer. Value range: 1 to 4094.
CriticalVSI	VSI for users that have failed MAC authentication because of unreachable servers	Data structure	Members include: <ul style="list-style-type: none"> <li>VSIName.</li> <li>UrlUserLogoff.</li> </ul>
VSIName	Critical VSI name	N/A	String. Length: 1 to 31 characters.

Column name	Column description	Column type	Data type and restrictions
UrlUserLogoff	Whether to log off users that have been assigned authorization URLs on the port when the first user is assigned to the critical VSI	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Keeps the users online.</li> <li>• <b>1</b>—Logs off the users.</li> </ul>
GuestVSI	VSI for users that have failed MAC authentication because of any reason other than unreachable servers	N/A	String. Length: 1 to 31 characters.
Carry	Settings for the feature of including user IP addresses in MAC authentication requests	Data structure	Members include: <ul style="list-style-type: none"> <li>• UserIP.</li> <li>• ACLNumber.</li> </ul>
UserIP	Whether to include user IP addresses in MAC authentication requests	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Include.</li> <li>• <b>false</b>—Exclude.</li> </ul>
ACLNumber	ACL used to filter source IP addresses that can or cannot trigger MAC authentication	N/A	Unsigned integer. Value range: 2000 to 2999. Default: 0 (no ACL is specified to filter source IP addresses).
OnlineUserNum	Current online user count on the interface	N/A	Unsigned integer.
Domain	Authentication domain of users on the interface	N/A	String. Length: 1 to 255 characters. Default: No authentication domain is specified for MAC authentication users. The system default authentication domain is used.

## MACA/InterfaceUsers

This table displays MAC authentication user information.

### XML structure

```

<MACA>
  <InterfaceUsers>
    <InterfaceUser>
      <IfIndex></IfIndex>
      <UserMAC></UserMAC>
      <Name></Name>
      <Domain></Domain>
      <InitialVLAN></InitialVLAN>
      <AuthzVLAN></AuthzVLAN>
      <AuthzACLGroup></AuthzACLGroup>
      <AuthzUserProfile></AuthzUserProfile>
    </InterfaceUser>
  </InterfaceUsers>
</MACA>

```

```

    <TermAction></TermAction>
    <TimeoutPeriod></TimeoutPeriod>
    <LogonTime></LogonTime>
    <OnlineDuration></OnlineDuration>
  </InterfaceUser>
</InterfaceUsers>
</MACA>

```

## Table description

Item	Description
Feature name	MACA
Table name	InterfaceUsers
Table type	Multi-instance table
Row name	InterfaceUser
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
IfIndex	Interface index	Index	Unsigned integer.
UserMAC	MAC address of the user on the interface	Index	MAC address.
Name	Username of the user	N/A	String. Length: 1 to 253 characters.
Domain	ISP domain used for MAC authentication	N/A	String. Length: 1 to 255 characters.
InitialVLAN	VLAN to which the user belongs before MAC authentication	N/A	Unsigned integer. Value range: 1 to 4094.
AuthzVLAN	VLAN authorized to the authenticated user	N/A	Unsigned integer. Value range: 1 to 4094.
AuthzACLGroup	ACL authorized to the authenticated user	N/A	Unsigned integer.
AuthzUserProfile	User profile authorized to the authenticated user	N/A	String.
TermAction	Action attribute assigned by the AAA server when the session timeout timer expires	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Default.</li> <li>1—Radius-request.</li> </ul>
TimeoutPeriod	Value for the AAA server-assigned session timeout timer	N/A	Unsigned integer

Column name	Column description	Column type	Data type and restrictions
LogonTime	Time at which the user logs into the device	N/A	String. Format: YYYY-MM-DD HH:MM:SS.
OnlineDuration	Online duration of the user	N/A	Unsigned integer.

## MACA/OfflineDetectTimers

This table contains the parameters for configuring MAC authentication offline detection on a per-user basis.

### XML structure

```
<MACA>
  <OfflineDetectTimers>
    <OfflineDetectTimer>
      <MacAddr></MacAddr>
      <Timer></Timer>
      <CheckSnooping></CheckSnooping>
    </OfflineDetectTimer>
  </OfflineDetectTimers>
</MACA>
```

### Table description

Item	Description
Feature name	MACA
Table name	OfflineDetectTimers
Table type	Multi-instance table
Row name	OfflineDetectTimer
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MacAddr	User MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated.	N/A
Timer	User offline detect timer	N/A	Unsigned integer. Value range: 60 to 2147483647 seconds.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			0: Skips offline detection for the specified user.	
CheckSnooping	Whether to use the ARP snooping or ND snooping table to determine the offline state of the user	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true.</b></li> <li><b>false</b></li> </ul>	<ul style="list-style-type: none"> <li>If the ARP snooping or ND snooping table is used, the device searches the ARP snooping or ND snooping table before it checks for traffic from the user within the detection interval. If a matching ARP snooping or ND snooping entry is found, the device resets the offline detect timer and the user stays online. If the offline detect timer expires because the device has not found a matching snooping entry for the user or received traffic from the user, the device disconnects the user.</li> <li>If the ARP or ND snooping table is not used, the device disconnects the user if it has not received traffic from that user before the offline detect timer expires.</li> </ul>

# MDC

## MDC/Contexts

This table is used to configure MDCs for a device and show MDC's state.

### XML structure

```
<MDC>
  <Contexts>
    <Context>
      <MDCID></MDCID>
      <Name></Name>
      <State></State>
    </Context>
  </Contexts>
</MDC>
```

### Table description

Item	Description
Feature name	MDC
Table name	Contexts
Table type	Multi-instance table
Row name	Context
Restrictions	Only support default MDC.
Support for row creation and deletion	YES

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model. 0 means the system assigns the lowest ID number among the available IDs to the MDC.
Name	Full name of an MDC	N/A	String. Length: 1 to 15 characters.	N/A
State	State of the MDC	N/A	Enumeration:	Start—Start the

Column name	Column description	Column type	Data type and restrictions	Remarks
			1: start 2: stop	MDC. stop—Stop the MDC.

## MDC/Resources/Disks

This table contains disk information.

### XML structure

```

<MDC>
  <Resources>
    <Disks>
      <Disk>
        <MDCID></MDCID>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
        <ReservedRatio></ReservedRatio>
        <QuotaRatio></QuotaRatio>
      </Disk>
    </Disks>
  </Resources>
</MDC>

```

### Table description

Item	Description
Feature name	MDC
Table name	Disks
Table type	Multi-instance table
Row name	Disk
Restrictions	Only support default MDC.
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model.

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Chassis number of disk resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of disk resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of disk resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
ReservedRatio	reserve resources of disk( %)	N/A	Unsigned integer. Value range: 0 to 100.	Not support yet.
QuotaRatio	The total limit resources of disk(%)	N/A	Positive integer. Value range: 1 to 100.	The default value is 100.

## MDC/Resources/Memories

This table contains memory information.

### XML structure

```

<MDC>
  <Resources>
    <Memories>
      <Memory>
        <MDCID></MDCID>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
        <ReservedRatio></ReservedRatio>
        <QuotaRatio></QuotaRatio>
      </Memory>
    </Memories>
  </Resources>
</MDC>

```

### Table description

Item	Description
Feature name	MDC
Table name	Memories
Table type	Multi-instance table
Row name	Memory

Restrictions	Only support default MDC.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model.
Chassis	Chassis number of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
ReservedRatio	reserve resources of memory(%)	N/A	Unsigned integer. Value range: 0 to 100.	Not support yet.
QuotaRatio	The total limit resources of memory(%)	N/A	Unsigned integer. Value range: 1 to 100.	The default value is 100.

## MDC/Resources/CPU

This table contains cpu information.

## XML structure

```

<MDC>
  <Resources>
    <CPUs>
      <CPU>
        <MDCID></MDCID>
        <Weight></Weight>
      </CPU>
    </CPUs>
  </Resources>
</MDC>

```

## Table description

Item	Description
Feature name	MDC

Table name	CPUs
Table type	Multi-instance table
Row name	CPU
Restrictions	Only support default MDC.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model.
Weight	CPU weight-maximum of available resources of CPU(weight)	N/A	Positive integer. Value range:1-10	Limit maximum of cpu resource. Default:Each MDC has a CPU weight of 10.

## MDC/LocationEntitys

This table contains location state.

## XML structure

```

<MDC>
  <Locations>
    <Location>
      <MDCID></MDCID>
      <Chassis></Chassis>
      <Slot></Slot>
      <State></State>
    </Location>
  </Locations>
</MDC>

```

## Table description

Item	Description
Feature name	MDC
Table name	Locations
Table type	Multi-instance table
Row name	Location
Restrictions	Only support default MDC.Blade controllers must be located by

	BladeControllerTeam table.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model.
Chassis	Chassis number of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
State	Configure State of location	N/A	Enumeration: 1: location 2: undo location	Location: Authorize the MDC to use the interface cards. Default: All interface cards of the device belong to the default MDC.

## MDC/LocationBladeControllerTeam

This table contains location state of BladeControllerTeam.

## XML structure

```

<MDC>
  <LocationBladeControllerTeams>
    <LocationBladeControllerTeam>
      <MDCID></MDCID>
      <BladeControllerTeam></BladeControllerTeam>
      <State></State>
    </LocationBladeControllerTeam>
  </LocationBladeControllerTeams>
</MDC>

```

## Table description

Item	Description
Feature name	MDC
Table name	LocationBladeControllerTeams
Table type	Multi-instance table
Row name	LocationBladeControllerTeam
Restrictions	Only support default MDC.

Support for row creation and deletion	No
---------------------------------------	----

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model.
BladeControllerTeam	BladeControllerTeam ID	Index	Unsigned integer. Value range: 1 to 256.	N/A
State	Configure State of location	N/A	Enumeration: 1: location 2: undo location	Location: Authorize the MDC to use the resource of BladeControllerTeams. Default: All BladeControllerTeams of the device belong to the default MDC.

## MDC/AllocationIdentities

This table contains physical interface.

## XML structure

```

<MDC>
  <Allocations>
    <Allocation>
      <MDCID></MDCID>
      <InterfaceList></InterfaceList>
    </Allocation>
  </Allocations>
</MDC>

```

## Table description

Item	Description
Feature name	MDC
Table name	Allocations
Table type	Multi-instance table
Row name	Allocation
Restrictions	Only support default MDC.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC ID of interface	N/A	Unsigned integer.	The value range depends on the device model.
InterfaceList	List of interfaces	N/A	String.	<p>Different interfaces combinations(a single interface or interface list)are separated by comma',';interface lists are separated by ' to '(There is a space on both sides of the word 'to').</p> <p>reference:  GigabitEthernet4/5/0/1 to  GigabitEthernet4/5/0/24 ,  GigabitEthernet4/5/0/48</p>

# MDC

## MDC/Contexts

This table contains MDC's status.

### XML structure

```
<MDC>
  <Contexts>
    <Context>
      <MDCID></MDCID>
      <Name></Name>
      <State></State>
      <Status></Status>
    </Context>
  </Contexts>
</MDC>
```

### Table description

Item	Description
Feature name	MDC
Table name	Contexts
Table type	Multi-instance table
Row name	Context
Restrictions	Default MDC can query information of all MDCs. Non-default MDC can only query the current MDC change without

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model.
Name	Full name of an MDC	N/A	String. Length: 1 to 15 characters.	N/A
State	State of the MDC	N/A	Enumeration: 1: start 2: stop	start—Start the MDC. stop—Stop the MDC.
Status	Status of the	N/A	Enumeration:	<ul style="list-style-type: none"><li>inactive—The MDC is</li></ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
	MDC		<ul style="list-style-type: none"> <li>1: inactive</li> <li>2: starting</li> <li>3: active</li> <li>4: stopping</li> <li>5: updating</li> </ul>	<p>stopped or not started yet.</p> <ul style="list-style-type: none"> <li>starting—The device is executing the mdc start command to start the MDC.</li> <li>active—The MDC is operating correctly.</li> <li>stopping—The device is executing the undo mdc start command to stop the MDC.</li> <li>updating—The MDC is updating.</li> </ul>

## MDC/Resources/Disks

This table contains disk information.

### XML structure

```

<MDC>
  <Resources>
    <Disks>
      <Disk>
        <MDCID></MDCID>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
        <Partition></Partition>
        <Reserved></Reserved>
        <Quota></Quota>
        <Used></Used>
        <Available></Available>
        <ReservedRatio></ReservedRatio>
        <QuotaRatio></QuotaRatio>
      </Disk>
    </Disks>
  </Resources>
</MDC>

```

## Table description

Item	Description
Feature name	MDC
Table name	Disks
Table type	Multi-instance table
Row name	Disk
Restrictions	Default MDC can query information of all MDCs. Non-default MDC can only query the current MDC's information.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model.
Chassis	Chassis number of disk resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of disk resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of disk resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Partition	Instance name of disk resource	Index	String. Length: 1 to 31 characters.	N/A
Reserved	reserve resources of disk (KB)	N/A	Unsigned integer.	Limit minimum of disk resource. 0 means the MDC doesn't have reserve resource of disk.
Quota	The total limit resources of disk (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.	Limit maximum of disk resource.
Used	Current usage of disk resources (KB)	N/A	Unsigned integer.	N/A
Available	Current available resources of disk(KB)	N/A	Unsigned integer.	The minimum between(Quota-Used) and idle resource of disk.
ReservedRatio	reserve resources of disk( %)	N/A	Unsigned integer. Value range: 0 to 100.	Not support yet.
QuotaRatio	The total limit resources of disk(%)	N/A	Positive integer. Value range: 1 to 100.	N/A

# MDC/Resources/Memories

This table contains memory information.

## XML structure

```
<MDC>
  <Resources>
    <Memories>
      <Memory>
        <MDCID></MDCID>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
        <Reserved></Reserved>
        <Quota></Quota>
        <Used></Used>
        <Available></Available>
        <ReservedRatio></ReservedRatio>
        <QuotaRatio></QuotaRatio>
      </Memory>
    </Memories>
  </Resources>
</MDC>
```

## Table description

Item	Description
Feature name	MDC
Table name	Memories
Table type	Multi-instance table
Row name	Memory
Restrictions	Default MDC can query information of all MDCs. Non-default MDC can only query the current MDC's information.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model.
Chassis	Chassis number of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Slot	Slot number of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of memory resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Reserved	reserve resources of memory (KB)	N/A	Unsigned integer.	Limit minimum of disk resource. 0 means the MDC doesn't have reserve resource of memory.
Quota	The total limit resources of memory (KB)	N/A	Unsigned integer. Value range: 0 to 4294967295.	Limit maximum of disk resource.
Used	Current usage of memory resources (KB)	N/A	Unsigned integer.	N/A
Available	Current available resources of memory(KB)	N/A	Unsigned integer.	The minimum between(Quota-Used)and idle resource of disk.
ReservedRatio	reserve resources of memory(%)	N/A	Unsigned integer. Value range: 0 to 100.	Not support yet.
QuotaRatio	The total limit resources of memory(%)	N/A	Unsigned integer. Value range: 1 to 100.	N/A

## MDC/Resources/CPU

This table contains cpu information.

### XML structure

```

<MDC>
  <Resources>
    <CPUs>
      <CPU>
        <MDCID></MDCID>
        <Chassis></Chassis>
        <Slot></Slot>
        <CPUID></CPUID>
        <Weight></Weight>
        <Usage></Usage>
      </CPU>
    </CPUs>
  </Resources>
</MDC>

```

## Table description

Item	Description
Feature name	MDC
Table name	CPUs
Table type	Multi-instance table
Row name	CPU
Restrictions	Default MDC can query information of all MDCs. Non-default MDC can only query the current MDC's information.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model.
Chassis	Chassis number of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Weight	CPU weight-maximum of available resources of CPU (weight)	N/A	Positive integer.	Limit maximum of cpu resource. Default:Each MDC has a CPU weight of 10.
Usage	Current usage of CPUresources (%)	N/A	Unsigned integer. Value range: 0 to 100.	N/A

## MDC/LocationEntitys

This table contains location state.

## XML structure

```
<MDC>
  <LocationEntitys>
    <LocationEntity>
      <MDCID></MDCID>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
      <State></State>
```

```

    </LocationEntity>
  </LocationEntitys>
</MDC>

```

## Table description

Item	Description
Feature name	MDC
Table name	LocationEntitys
Table type	Multi-instance table
Row name	LocationEntity
Restrictions	Information of BladeControllerTeam table will be changed to c-s-c and display in LocationEntitys table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model.
Chassis	Chassis number of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	CPU ID of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
State	Configure State of location	N/A	Enumeration: 1: location 2: undo location	Location:Authorize the MDC to use the interface cards. Default: All interface cards of the device belong to the default MDC.

## MDC/AllocationIdentities

This table contains physical interface.

## XML structure

```

<MDC>
  <AllocationIdentities>
    <AllocationIdentity>
      <PhysicalIndex></PhysicalIndex>
    </AllocationIdentity>
  </AllocationIdentities>
</MDC>

```

```

    <IfName></IfName>
    <AllocationIdentity></AllocationIdentity>
  </AllocationIdentity>
</AllocationIdentities>
</MDC>

```

## Table description

Item	Description
Feature name	MDC
Table name	AllocationIdentities
Table type	Multi-instance table
Row name	AllocationIdentity
Restrictions	Default MDC can query information of all interface group. Non-default MDC can only query the current MDC's interface group.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PhysicalIndex	Entity index of an interface	Index	Unsigned integer.	N/A
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
AllocationIdentity	Group Identifier	N/A	String. Length: 1 to 255 characters.	The interfaces in a group must be assigned to the same MDC at the same time or removed from an MDC at the same time.

## MDC/InterfaceAllocations

This table contains MDC of interface.

## XML structure

```

<MDC>
  <InterfaceAllocations>
    <InterfaceAllocation>
      <PhysicalIndex></PhysicalIndex>
      <IfName></IfName>
      <MDCID></MDCID>
    </InterfaceAllocation>
  </InterfaceAllocations>

```

</MDC>

## Table description

Item	Description
Feature name	MDC
Table name	InterfaceAllocations
Table type	Multi-instance table
Row name	InterfaceAllocation
Restrictions	Default MDC can query information of all interface. Non-default MDC can only query the current MDC's interface.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PhysicalIndex	Entity index of an interface	Index	Unsigned integer.	N/A
IfName	Full name of an interface	N/A	String. Length: 2 to 47 characters.	N/A
MDCID	MDC ID of interface	N/A	Unsigned integer.	The value range depends on the device model.

## MDC/Allocations

This table contains physical interface.

## XML structure

```
<MDC>
  <Allocations>
    <Allocation>
      <MDCID></MDCID>
      <InterfaceList></InterfaceList>
    </Allocation>
  </Allocations>
</MDC>
```

## Table description

Item	Description
Feature name	MDC
Table name	Allocations

Table type	Multi-instance table
Row name	Allocation
Restrictions	Only support default MDC.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC ID of interface	N/A	Unsigned integer.	The value range depends on the device model.
InterfaceList	List of interfaces	N/A	String. Length: 1 to 32767 characters.	Different interfaces combinations(a single interface or interface list)are separated by comma',';interface lists are separated by ' to '(There is a space on both sides of the word 'to').  reference: GigabitEthernet4/5/0/1 to GigabitEthernet4/5/0/24 , GigabitEthernet4/5/0/48

## MDC/Locations

This table contains location state.

## XML structure

```

<MDC>
  <Locations>
    <Location>
      <MDCID></MDCID>
      <Chassis></Chassis>
      <Slot></Slot>
      <State></State>
    </Location>
  </Locations>
</MDC>

```

## Table description

Item	Description
Feature name	MDC
Table name	Locations
Table type	Multi-instance table

Row name	Location
Restrictions	Only support default MDC. Blade controllers must be located by BladeControllerTeam table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model.
Chassis	Chassis number of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot number of CPU resource	Index	Unsigned integer. Value range: 0 to 65535.	N/A
State	Configure State of location	N/A	Enumeration: 1: location 2: undo location	Location: Authorize the MDC to use the interface cards.

## MDC/LocationBladeControllerTeam

This table contains location state of BladeControllerTeam.

## XML structure

```

<MDC>
  <LocationBladeControllerTeams>
    <LocationBladeControllerTeam>
      <MDCID></MDCID>
      <BladeControllerTeam></BladeControllerTeam>
      <State></State>
    </LocationBladeControllerTeam>
  </LocationBladeControllerTeams>
</MDC>

```

## Table description

Item	Description
Feature name	MDC
Table name	LocationBladeControllerTeams
Table type	Multi-instance table
Row name	LocationBladeControllerTeam
Restrictions	Only support default MDC.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MDCID	MDC index	Index	Unsigned integer.	The value range depends on the device model.
BladeControllerTeam	BladeControllerTeam ID	Index	Unsigned integer. Value range: 1 to 256.	N/A
State	Configure State of location	N/A	Enumeration: 1: location 2: undo location	Location: Authorize the MDC to use the resource of BladeControllerTeams.

# MDC

## MDC/Contexts

Message	Explanation
Please install the license for the MDC feature first. MDC特性没有可用的license。	The license is invalid during executing create or start MDC operations. Please check the license's validity and install. 创建 MDC 或者启动 MDC 时没有安装 license，或者 license 无效。
Number of MDCs exceeded the limit. 操作失败，MDC个数超过最大限额。	During executing MDC creation, The MDC numbers exceeded the limit. 创建MDC时，MDC个数已经超过系统限制个数，不能继续创建了。
The MDC is not authorized to use this slot. MDC没有进驻该板。	The MDC is not authorized to use this slot, so that it cannot set or require this slot memory resource. MDC 没有进驻改板，无法设置和查询 memory 资源
Not enough resources available. 资源不足导致操作失败。	Memory space is not enough to operating start a MDC. 启动MDC时，各资源申请内存资源不足导致失败。
Restoring MDC configuration. Please try again later. MDC正在恢复配置，请稍后重试。	Set operations is forbidden, when MDC is not start over. 当MDC还没有配置恢复完成是，不允许设置相关的操作。
The MDC is busy. Please try again later. MDC正在忙，请稍后重试。	It cannot start or stop the MDC, due to the MDC is starting or stopping. 该MDC正在启动或者停止，不能再进行启动或者停止操作。
The MDC name and ID must identify the same MDC. 输入的MDC名称有误，请输入与ID对应的名称。	The MDC name and ID must identify the same MDC. 输入MDC名称错误，与MDC id不匹配。
Invalid MDC ID or MDC name. 输入的MDC ID或者名称无效。	Invalid MDC ID or MDC name. 输入的MDC ID或者名称无效。
The default MDC can't be deleted. 不允许删除缺省MDC。	The default MDC can't be deleted. 不允许删除缺省MDC。
Not enough resources available. 资源不足，创建MDC失败。	Not enough resources available. 资源不足，创建MDC失败。

## MDC/Resources/Disks

Message	Explanation
Not enough disk space available. 磁盘资源不足。	It has not enough disk space, please check the disk space. 限制MDC磁盘使用率时，磁盘空间不足，请检查。
The MDC is not authorized to use this slot. MDC没有进驻该板。	The MDC is not authorized to use this slot, so that it cannot set or require this slot disk resource. MDC没有进驻改板，无法设置和查询disk资源

Not enough resources available. 资源不足导致操作失败。	Malloc memory to operating this table is failed. 申请内存资源失败。
Restoring MDC configuration. Please try again later. MDC正在恢复配置，请稍后重试。	Set operations is forbidden, when MDC is not start over. 当MDC还没有配置恢复完成是，不允许设置相关的操作。

## MDC/Resources/Memories

Message	Explanation
Not enough resources available. 资源不足导致操作失败。	Malloc memory to operating this table is failed. 申请内存资源失败。
Restoring MDC configuration. Please try again later. MDC正在恢复配置，请稍后重试。	Set operations is forbidden, when MDC is not start over. 当MDC还没有配置恢复完成是，不允许设置相关的操作。

## MDC/Resources/CPUUs

Message	Explanation
Not enough resources available. 资源不足导致操作失败。	Malloc memory to operating this table is failed. 申请内存资源失败。
Restoring MDC configuration. Please try again later. MDC正在恢复配置，请稍后重试。	Set operations is forbidden, when MDC is not start over. 当MDC还没有配置恢复完成是，不允许设置相关的操作。

## MDC/Locations

Message	Explanation
Not enough resources available. 资源不足导致操作失败。	During executing location operation, it may fail and return error message: " Not enough resources available. ". The reasons may be exceeding the mdc number limit, lack of memory space or disk space in this slot,. Location单板失败时会返回资源不足，包括当前单板mdc个数，内存不足和磁盘资源不足等情况。
Operation failed. There are IRF physical ports. 存在IRF物理端口，不允许MDC退出接口板。	The IRF devices will be devided, If MDC exiting the IO board which has IRF physics ports. 当MDC在接口板上存在IRF的物理端口，不允许该MDC undo location接口板，否则会导致堆叠分裂。
Restoring MDC configuration. Please try again	Set operations is forbidden, when MDC is not start over.

later. MDC正在恢复配置，请稍后重试。	当MDC还没有配置恢复完成是，不允许设置相关的操作。
The MDC is busy. Please try again later. MDC正在忙，请稍后重试。	It cannot location the MDC, due to the MDC is starting or stopping. 该MDC正在启动或者停止，不能再进行location操作。
Not enough hardware resources available. 硬件资源不足导致操作失败。	This slot is lack of hardware resources. 单板的内存不足或者其他问题。

## MDC/AllocationIdentities

Message	Explanation
Some interfaces group have not include all of its interface. 接口组未包含全部的接口，分配失败。	Some interfaces group have not include all of its interface. 接口组未包含全部的接口，分配失败。
Some type of interfaces can not be allocated to an MDC exclusively. 接口列表中包含不能独占分配的接口。	Some type of interfaces can not be allocated to an MDC exclusively. 接口列表中包含不能独占分配的接口。
Some interfaces are duplicated. 接口列表中包含重复的接口名。	The MDC alloc interfaces failed. MDC 分配接口失败
Some interfaces are invalid. 存在不合法接口。	Some interfaces are invalid. 存在不合法接口。

# MGROUP

## MGROUP/Groups

This table contains information about mirroring groups.

### XML structure

```
<MGROUP>
  <Groups>
    <Group>
      <ID></ID>
      <Type></Type>
      <Sampler></Sampler>
    </Group>
  </Groups>
</MGROUP>
```

### Table description

Item	Description
Feature name	MGROUP
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer Value range: 1 to256	The range of mirroring group ID depends on the device model.
Type	Mirroring group type.	N/A	Enumeration: <ul style="list-style-type: none"><li>1—Local.</li><li>2—Remote-source.</li><li>3—Remote-destination.</li></ul>	Required. Can not change the type if the mirroring group has been created.
Sampler	References the sampler to limit the volume of traffic to be mirrored.	N/A	String, case-sensitive. Length: 1 to 31 characters.	Can not change this item if the mirroring group has been created. Support for this option depends on the device

Column name	Column description	Column type	Data type and restrictions	Remarks
				model.

## MGROUP/MonitorPort

This table contains information about monitor port of mirroring groups.

### XML structure

```

<MGROUP>
  <MonitorPort>
    <Group>
      <ID></ID>
      <Port></Port>
      <IP>
        <DestIP></DestIP>
        <SrcIP></SrcIP>
        <DSCP></DSCP>
        <VLAN></VLAN>
        <VRF></VRF>
      </IP>
      <Mac></Mac>
    </Group>
  </MonitorPort>
</MGROUP>

```

### Table description

Item	Description
Feature name	MGROUP
Table name	MonitorPort
Table type	Multi-instance table
Row name	Group
Restrictions	When the type of mirroring group is local or remote destination, monitor port can be configured.
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer. Value range: 1 to256.	The range of mirroring group ID depends on the device model.

Column name	Column description	Column type	Data type and restrictions	Remarks
Port	Index of monitor port.	N/A	Unsigned integer.	Required.  Can not change the port if the monitor port has been created.
IP	Specify IP for mirroring to interface	Data structure	Members include: <ul style="list-style-type: none"> <li>• <b>DestIP.</b></li> <li>• <b>SrcIP.</b></li> <li>• <b>DSCP.</b></li> <li>• <b>VLAN.</b></li> <li>• <b>VRF.</b></li> </ul>	DestIP and SrcIP must both be specified.  DSCP, VLAN and VRF can be optionally specified when DestIP and SrcIP are configured.
DestIP	Destination IP address	N/A	String, dotted decimal notation.	Example: 10.153.93.54.
SrcIP	Source IP address	N/A	String, dotted decimal notation.	Example: 10.153.93.60.
DSCP	DSCP value	N/A	Unsigned integer. Value range: 0 to 63.	N/A
VLAN	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VRF	VRF instance name	N/A	String. Length: 1 to 31 characters.	N/A
Mac	Specify destination MAC for mirroring to interface	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

## MGROUP/ReflectorPort

This table contains information about reflector port of mirroring groups.

### XML structure

```

<MGROUP>
  <ReflectorPort>
    <Group>
      <ID></ID>
      <Port></Port>
    </Group>
  </ReflectorPort>
</MGROUP>

```

## Table description

Item	Description
Feature name	MGROUP
Table name	ReflectorPort
Table type	Multi-instance table
Row name	Group
Restrictions	When the type of mirroring group is remote source, reflector port can be configured.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer. Value range: 1 to256.	The range of mirroring group ID depends on the device model.
Port	Index of reflector port.	N/A	Unsigned integer.	Required.  Can not change the port if the reflector port has been created.

## MGROUP/EgressPort

This table contains information about egress port of mirroring groups.

## XML structure

```
<MGROUP>
  <EgressPort>
    <Group>
      <ID></ID>
      <Port></Port>
    </Group>
  </EgressPort>
</MGROUP>
```

## Table description

Item	Description
Feature name	MGROUP
Table name	EgressPort

Table type	Multi-instance table
Row name	Group
Restrictions	When the type of mirroring group is remote source, egress port can be configured.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer. Value range: 1 to256.	The range of mirroring group ID depends on the device model.
Port	Index of egress port.	N/A	Unsigned integer.	Required.  Can not change the port if the egress port has been created.

## MGROUP/ProbeVlan

This table contains information about remote probe VLAN of mirroring groups.

## XML structure

```

<MGROUP>
  <ProbeVlan>
    <Group>
      <ID></ID>
      <VlanID></VlanID>
    </Group>
  </ProbeVlan>
</MGROUP>

```

## Table description

Item	Description
Feature name	MGROUP
Table name	ProbeVlan
Table type	Multi-instance table
Row name	Group
Restrictions	When the type of mirroring group is remote source or remote destination, remote probe VLAN can be configured.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer. Value range: 1 to 256.	The range of mirroring group ID depends on the device model.
VlanID	Probe VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.	Required.  Can not change the vlan if the probe vlan has been created.

## MGROUP/SourcePorts

This table contains information about source ports of the mirroring group.

## XML structure

```
<MGROUP>
  <SourcePorts>
    <SourcePort>
      <ID></ID>
      <IfIndex></IfIndex>
      <Direction></Direction>
    </SourcePort>
  </SourcePorts>
</MGROUP>
```

## Table description

Item	Description
Feature name	MGROUP
Table name	SourcePorts
Table type	Multi-instance table
Row name	SourcePort
Restrictions	When the type of mirroring group is remote source or local, source port can be configured.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer. Value range: 1 to256.	The range of mirroring group ID depends on the device model.
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
Direction	Direction of source port.	N/A	Enumeration: <ul style="list-style-type: none"><li>• 1—Inbound.</li><li>• 2—Outbound.</li><li>• 3—Both.</li></ul>	Required

# MGROUP

## MGROUP/Groups

This table contains information about mirroring groups.

### XML structure

```
<MGROUP>
  <Groups>
    <Group>
      <ID></ID>
      <Type></Type>
      <Sampler></Sampler>
      <Status></Status>
    </Group>
  </Groups>
</MGROUP>
```

### Table description

Item	Description
Feature name	MGROUP
Table name	Groups
Table type	Multi-instance table
Row name	Group
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer Value range: 1 to256.	The range of mirroring group ID depends on the device model.
Type	Mirroring group type.	N/A	Enumeration: <ul style="list-style-type: none"><li>• 1—Local.</li><li>• 2—Remote-source.</li><li>• 3—Remote-destination.</li></ul>	N/A
Sampler	References the sampler to limit the volume of traffic to be mirrored.	N/A	String, case-sensitive. Length: 1 to 31 characters.	Support for this option depends on the device model.

Column name	Column description	Column type	Data type and restrictions	Remarks
Status	Mirroring group status.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Incomplete.</li> <li>2—Active.</li> </ul>	N/A

## MGROUP/MonitorPort

This table contains information about monitor port of mirroring groups.

### XML structure

```

<MGROUP>
  <MonitorPort>
    <Group>
      <ID></ID>
      <Port></Port>
      <IP>
        <DestIP></DestIP>
        <SrcIP></SrcIP>
        <DSCP></DSCP>
        <VLAN></VLAN>
        <VRF></VRF>
      </IP>
      <Mac></Mac>
    </Group>
  </MonitorPort>
</MGROUP>

```

### Table description

Item	Description
Feature name	MGROUP
Table name	MonitorPort
Table type	Multi-instance table
Row name	Group
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer Value range: 1 to256.	The range of mirroring group ID depends on the

Column name	Column description	Column type	Data type and restrictions	Remarks
				device model.
Port	Index of monitor port.	N/A	Unsigned integer.	N/A
IP	Specify IP for mirroring to interface	Data structure	Members include: <ul style="list-style-type: none"> <li>• <b>DestIP.</b></li> <li>• <b>SrcIP.</b></li> <li>• <b>DSCP.</b></li> <li>• <b>VLAN.</b></li> <li>• <b>VRF.</b></li> </ul>	DestIP and SrcIP must both be specified. DSCP, VLAN and VRF can be optionally specified when DestIP and SrcIP are configured.
DestIP	Destination IP address	N/A	String, dotted decimal notation.	Example: 10.153.93.54.
SrcIP	Source IP address	N/A	String, dotted decimal notation.	Example: 10.153.93.60.
DSCP	DSCP value	N/A	Unsigned integer. Value range: 0 to 63.	N/A
VLAN	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VRF	VRF instance name	N/A	String. Length: 1 to 31 characters.	N/A
Mac	Specify destination MAC for mirroring to interface	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.

## MGROUP/ReflectorPort

This table contains information about reflector port of mirroring groups.

### XML structure

```

<MGROUP>
  <ReflectorPort>
    <Group>
      <ID></ID>
      <Port></Port>
    </Group>
  </ReflectorPort>
</MGROUP>

```

### Table description

Item	Description
Feature name	MGROUP

Table name	ReflectorPort
Table type	Multi-instance table
Row name	Group
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer Value range: 1 to256.	The range of mirroring group ID depends on the device model.
Port	Index of reflector port.	N/A	Unsigned integer.	N/A

## MGROUP/EgressPort

This table contains information about egress port of mirroring groups.

## XML structure

```

<MGROUP>
  <EgressPort>
    <Group>
      <ID></ID>
      <Port></Port>
    </Group>
  </EgressPort>
</MGROUP>

```

## Table description

Item	Description
Feature name	MGROUP
Table name	EgressPort
Table type	Multi-instance table
Row name	Group
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer Value range: 1 to256.	The range of mirroring group ID depends on the device model.
Port	Index of egress port.	N/A	Unsigned integer.	N/A

## MGROUP/ProbeVlan

This table contains information about remote probe VLAN of mirroring groups.

## XML structure

```
<MGROUP>
  <ProbeVlan>
    <Group>
      <ID></ID>
      <VlanID></VlanID>
    </Group>
  </ProbeVlan>
</MGROUP>
```

## Table description

Item	Description
Feature name	MGROUP
Table name	ProbeVlan
Table type	Multi-instance table
Row name	Group
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer Value range: 1 to256.	The range of mirroring group ID depends on the device model.
VlanID	Probe VLAN ID.	N/A	Unsigned integer. Value range: 1 to 4094.	N/A

# MGROUP/SourcePorts

This table contains information about source ports of the mirroring group.

## XML structure

```
<MGROUP>
  <SourcePorts>
    <SourcePort>
      <ID></ID>
      <IfIndex></IfIndex>
      <Direction></Direction>
    </SourcePort>
  </SourcePorts>
</MGROUP>
```

## Table description

Item	Description
Feature name	MGROUP
Table name	SourcePorts
Table type	Multi-instance table
Row name	SourcePort
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Mirroring group ID.	Index	Unsigned integer Value range: 1 to256.	The range of mirroring group ID depends on the device model.
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
Direction	Direction of source port.	N/A	Enumeration: <ul style="list-style-type: none"><li>1—Inbound.</li><li>2—Outbound.</li><li>3—Both.</li></ul>	N/A

# MGROUP/Capabilities

This table contains capability information about mirroring group.

## XML structure

```
<MGROUP>
  <Capabilities>
    <MaxGroupNum></MaxGroupNum>
    <SourceType></SourceType>
    <VlanTagMode></VlanTagMode>
    <MultiMonitor></MultiMonitor>
    <Sampler></Sampler>
    <MultiMonitorInOneGroup></MultiMonitorInOneGroup>
  </Capabilities>
</MGROUP>
```

## Table description

Item	Description
Feature name	MGROUP
Table name	Capabilities
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxGroupNum	Max mirroring group number.	N/A	Unsigned integer	The range of mirroring group ID depends on the device model.
SourceType	Mirroring group source type.	N/A	Each bit represents a type as follows: 1—VLAN inbound 2—VLAN outbound 4—CPU inbound 8—CPU outbound	N/A
VlanTagMode	The VLAN tag on the message of the remote source mirroring group.	N/A	Each bit represents a type as follows: 1—Reflector 2—Egress 4—Reflector inner	N/A
MultiMonitor	Whether one port can be the	N/A	Boolean: true—Support	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	source port of multiple mirroring groups.		false—Not support	
Sampler	The mirroring group type which support sampler.	N/A	Each bit represents a type as follows: 1—Local 2—Source 4—Remote destination	N/A
MultiMonitorInOneGroup	Whether one mirroring group supports multiple monitor ports.	N/A	Boolean: true—Support • false—Not support	N/A

# MLDSnooping

## MLDSnooping/Configuration

This table contains global MLD snooping information.

### XML structure

```
<MLDSnooping>
  <Configuration>
    <Enabled></Enabled>
  </Configuration>
</MLDSnooping>
```

### Table description

Item	Description
Feature name	MLDSnooping
Table name	Configuration
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions
Enabled	Set MLD snooping state globally.	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>disable</b>(default)</li><li>• <b>enable</b></li></ul>

## MLDSnooping/VLANs

This table contains the MLD snooping information for VLANs.

### XML structure

```
<MLDSnooping>
  <VLANs>
    <VLAN>
      <VLANID></VLANID>
    </VLAN>
  </VLANs>
</MLDSnooping>
```

```

<Enabled></Enabled>
<Version></Version>
<DropUnknown></DropUnknown>
<Querier></Querier>
<QueryInterval></QueryInterval>
<GeneralQuerySourceAddr></GeneralQuerySourceAddr>
<SpecialQuerySourceAddr></SpecialQuerySourceAddr>
<ReportSourceAddr></ReportSourceAddr>
<DoneSourceAddr></DoneSourceAddr>
<Proxy></Proxy>
<QuerierElection></QuerierElection>
</VLAN>
</VLANs>
</MLDSnooping>

```

## Table description

Item	Description
Feature name	MLDSnooping
Table name	VLANs
Table type	Multi-instance table
Row name	VLAN
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID.	Index	Unsigned integer. Value range: 1 to 4094.	N/A
Enabled	Set MLD snooping state for specified VLAN.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>disable</b>(default)</li> <li><b>enable</b></li> </ul>	N/A
Version	Specify the MLD snooping version for specified VLAN.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>(default)</li> <li><b>2</b></li> </ul>	N/A
DropUnknown	Set MLD snooping dropping unknown for specified VLAN.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>disable</b>(default)</li> <li><b>enable</b></li> </ul>	N/A
Querier	Set MLD snooping querier for specified	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>disable</b>(default)</li> <li><b>enable</b></li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	VLAN.			
QueryInterval	Specify MLD snooping general query interval for specified VLAN.	N/A	Unsigned integer. Value range: 2 to 31744.	N/A
GeneralQuerySourceAddr	Specify the source IPv6 address of MLD general queries for specified VLAN.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
SpecialQuerySourceAddr	Specify the source IPv6 address for MLD group-specific queries for specified VLAN.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
ReportSourceAddr	Specify the source IPv6 address of MLD reports for the specified VLAN.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
DoneSourceAddr	Specify the source IPv6 address for MLD done messages for the specified VLAN.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
Proxy	Enable MLD snooping proxy for the specified VLAN.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>disable</b>(default)</li> <li>• <b>enable</b></li> </ul>	N/A
QuerierElection	Enable MLD snooping querier election for the specified VLAN.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>disable</b>(default)</li> <li>• <b>enable</b></li> </ul>	N/A

## MLDSnooping/VSI

This table contains the MLD snooping information for VSIs.

### XML structure

```

<MLDSnooping>
  <VSIs>
    <VSI>
      <VsiName></VsiName>
      <Enabled></Enabled>
      <Version></Version>
      <DropUnknown></DropUnknown>
      <Querier></Querier>
    </VSI>
  </VSIs>
</MLDSnooping>

```

```

<QueryInterval></QueryInterval>
<GeneralQuerySourceAddr></GeneralQuerySourceAddr>
<SpecialQuerySourceAddr></SpecialQuerySourceAddr>
<ReportSourceAddr></ReportSourceAddr>
<DoneSourceAddr></DoneSourceAddr>
<Proxy></Proxy>
<QuerierElection></QuerierElection>
</VSI>
</VSIs>
</MLDSnooping>

```

## Table description

Item	Description
Feature name	MLDSnooping
Table name	VSIs
Table type	Multi-instance table
Row name	VSI
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name.	Index	String. Length: 1 to 31 characters.	N/A
Enabled	Enable MLD snooping for the specified VSI.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>disable</b>(default)</li> <li><b>enable</b></li> </ul>	N/A
Version	Specify the MLD snooping version for the specified VSI.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>(default)</li> <li><b>2</b></li> </ul>	N/A
DropUnknown	Enable MLD snooping dropping unknown IPv6 multicast data for the specified VSI.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>disable</b>(default)</li> <li><b>enable</b></li> </ul>	N/A
Querier	Enable the MLD snooping querier for the specified VSI.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>disable</b>(default)</li> <li><b>enable</b></li> </ul>	N/A
QueryInterval	Set the MLD snooping general query interval for	N/A	Unsigned integer. Value range: 2 to 31744.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	the specified VSI.			
GeneralQuerySourceAddr	Specify the source IPv6 address of MLD general queries for the specified VSI.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
SpecialQuerySourceAddr	Specify the source IPv6 address for MLD multicast-address-specific queries for the specified VSI.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
ReportSourceAddr	Specify the source IPv6 address of MLD reports for the specified VSI.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
DoneSourceAddr	Specify the source IPv6 address for MLD done messages for the specified VSI.	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1.
Proxy	Enable MLD snooping proxy for the specified VSI.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>disable</b>(default)</li> <li>• <b>enable</b></li> </ul>	N/A
QuerierElection	Enable MLD snooping querier election for the specified VSI.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>disable</b>(default)</li> <li>• <b>enable</b></li> </ul>	N/A

## MLDSnooping/FastLeavePorts

This table contains the MLD snooping fast leave information on ports.

### XML structure

```

<MLDSnooping>
  <FastLeavePorts>
    <Interface>
      <IfIndex></IfIndex>
      <FastLeaveVlanList></FastLeaveVlanList>
    </Interface>
  </FastLeavePorts>
</MLDSnooping>

```

## Table description

Item	Description
Feature name	MLDSnooping
Table name	FastLeavePorts
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
FastLeaveVlanList	Set MLD snooping fast leave for VLANs on a port.	N/A	VLAN list.	Example: 1,2,3,5-8,10-20.

## MLDSnooping/GroupLimitPorts

This table contains the MLD snooping group limit information on ports.

## XML structure

```
<MLDSnooping>
  <GroupLimitPorts>
    <Interface>
      <IfIndex></IfIndex>
      <Limit></Limit>
      <GroupLimitVlanList></GroupLimitVlanList>
    </Interface>
  </GroupLimitPorts>
</MLDSnooping>
```

## Table description

Item	Description
Feature name	MLDSnooping
Table name	GroupLimitPorts
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Limit	Sets the maximum number of multicast groups that a port can join.	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
GroupLimitVlanList	Set MLD snooping group limit for VLANs on a port.	N/A	VLAN list.	You must specify this column when the operation is merge, create or replace. You can't specify this column when the operation is delete or remove.  Example: 1,2,3,5-8,10-20.

Enabled	Enable MLD snooping for the specified VSI.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>disable</b></li> <li><b>enable</b></li> </ul>	N/A
Version	Specify the MLD snooping version for the specified VSI.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b></li> <li><b>2</b></li> </ul>	N/A
DropUnknown	Enable MLD snooping dropping unknown IPv6 multicast data for the specified VSI.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>disable</b></li> <li><b>enable</b></li> </ul>	N/A
Querier	Enable the MLD snooping querier for the specified VSI.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>disable</b></li> <li><b>enable</b></li> </ul>	N/A
QueryInterval	Set the MLD snooping general query interval for the specified VSI.	N/A	Unsigned integer. Value range: 2 to 31744.	N/A
GeneralQuerierSourceAddr	Specify the source IPv6 address of MLD	N/A	Hexadecimal string, colon-separated.	Example: FE80:1::1:1.

Column name	Column description	Column type	Data type and restrictions	Remarks
	general queries for the specified VSI.			
SpecialQuery SourceAddr	Specify the source IPv6 address for MLD multicast-address-specific queries for the specified VSI.	N/A	Hexadecimal string, colon-separated.	Example: FE80:1::1:1.
ReportSource Addr	Specify the source IPv6 address of MLD reports for the specified VSI.	N/A	Hexadecimal string, colon-separated.	Example: FE80:1::1:1.
DoneSourceAddr	Specify the source IPv6 address for MLD done messages for the specified VSI.	N/A	Hexadecimal string, colon-separated.	Example: FE80:1::1:1.
Proxy	Enable MLD snooping proxy for the specified VSI.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>disable</b></li> <li>• <b>enable</b></li> </ul>	N/A
QuerierElection	Enable MLD snooping querier election for the specified VSI.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>disable</b></li> <li>• <b>enable</b></li> </ul>	N/A

## MLDSnooping/FastLeavePorts

This table contains the MLD snooping fast leave information on ports.

### XML structure

```

<MLDSnooping>
  <FastLeavePorts>
    <Interface>
      <IfIndex></IfIndex>
      <FastLeaveVlanList></FastLeaveVlanList>
    </Interface>
  </FastLeavePorts>
</MLDSnooping>

```

### Table description

Item	Description
Feature name	MLDSnooping

Item	Description
Table name	FastLeavePorts
Table type	Multi-instance table
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
FastLeaveVlanList	Set MLD snooping fast leave for VLANs on a port.	N/A	VLAN list.	Example: 1,2,3,5-8,10-20.

## MLDSnooping/GroupLimitPorts

This table contains the MLD snooping group limit information on ports.

## XML structure

```

<MLDSnooping>
  <GroupLimitPorts>
    <Interface>
      <IfIndex></IfIndex>
      <Limit></Limit>
      <GroupLimitVlanList></GroupLimitVlanList>
    </Interface>
  </GroupLimitPorts>
</MLDSnooping>

```

## Table description

Item	Description
Feature name	MLDSnooping
Table name	GroupLimitPorts
Table type	Multi-instance table

Item	Description
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Limit	Sets the maximum number of multicast groups that a port can join.	Index	Unsigned integer. Value range: 0 to 4294967295.	N/A
GroupLimitVlanList	Set MLD snooping group limit for VLANs on a port.	N/A	VLAN list.	Example: 1,2,3,5-8,10-20.

## MLDSnooping/IPv6Layer2MulticastGroups

This table contains information about Layer 2 IPv6 multicast groups for VLANs.

## XML structure

```

<MLDSnooping>
  <IPv6Layer2MulticastGroups>
    <VLAN>
      <VLANID></VLANID>
      <GroupAddr></GroupAddr>
      <SourceAddr></SourceAddr>
      <IfIndex></IfIndex>
      <PortAttribute></PortAttribute>
    </VLAN>
  </IPv6Layer2MulticastGroups>
</MLDSnooping>

```

## Table description

Item	Description
Feature name	MLDSnooping
Table name	IPv6Layer2MulticastGroups
Table type	Multi-instance table
Row name	VLAN
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID.	Index	Unsigned integer. Value range: 1 to 4094.	N/A
GroupIpAddr	IPv6 multicast address.	Index	Hexadecimal string, colon-separated.	N/A
SourcelpAddr	IPv6 address.	Index	Hexadecimal string, colon-separated.	N/A
IfIndex	Interface IfIndex.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
PortAttribute	Port attribute.	N/A	Each bit represents a port attribute. Values: <ul style="list-style-type: none"> <li>1—Learned from MLD packets.</li> <li>2—Learned from MLD packets with Exclude filter mode.</li> <li>4—Configured statically.</li> <li>8—Learned from IPv6 PIM packets.</li> <li>16—Obtained from the kernel.</li> <li>32—Learned from (*, *) entries.</li> <li>64—Learned from (*, G) entries.</li> <li>128—Processed successfully.</li> <li>256—Failed to being processed.</li> <li>512—TRILL port that floods IPv6 multicast</li> </ul>	Examples: <ul style="list-style-type: none"> <li>129—means a port learned from MLD packets and processed successfully.</li> <li>136—means a port learned from IPv6 PIM packets and processed successfully.</li> </ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
			data after the topology changes in VLAN.	

## MLDSnooping/VsiIPv6Layer2MulticastGroups

This table contains information about Layer 2 IPv6 multicast groups for VSIs.

### XML structure

```

<MLDSnooping>
  <VsiIPv6Layer2MulticastGroups>
    <VSI>
      <VsiName></VsiName>
      <GroupAddr></GroupAddr>
      <SourceAddr></SourceAddr>
      <LinkID></LinkID>
      <PortAttribute></PortAttribute>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
    </VSI>
  </VsiIPv6Layer2MulticastGroups>
</MLDSnooping>

```

### Table description

Item	Description
Feature name	MLDSnooping
Table name	VsiIPv6Layer2MulticastGroups
Table type	Multi-instance table
Row name	VSI
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name.	Index	String. Length: 1 to 31 characters.	N/A
GroupAddr	IPv6 multicast address.	Index	Hexadecimal string, colon-separated.	N/A
SourceAddr	IPv6 address.	Index	Hexadecimal string, colon-separated.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
LinkID	Link ID.	Index	Unsigned integer.	N/A
PortAttribute	Port attribute.	N/A	<p>Each bit represents a port attribute.</p> <p>Values:</p> <ul style="list-style-type: none"> <li>1—Learned from MLD packets.</li> <li>2—Learned from MLD packets with Exclude filter mode.</li> <li>8—Learned from IPv6 PIM packets.</li> <li>16—Obtained from the kernel.</li> <li>32—Learned from (*, *) entries.</li> <li>64—Learned from (*, G) entries.</li> <li>128—Processed successfully.</li> <li>256—Failed to being processed.</li> <li>512—TRILL port that floods IPv6 multicast data after the topology changes in VLAN.</li> <li>1024—Learned from EVPN BGP route.</li> <li>2048—Port in Exclude filter-mode and learned from EVPN BGP route.</li> </ul>	<p>Examples:</p> <ul style="list-style-type: none"> <li>129—means a port learned from MLD packets and processed successfully.</li> <li>1152—means a port learned from EVPN BGP route and processed successfully.</li> </ul>
IfIndex	Interface index.	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
SrvID	Ethernet service instance ID.	N/A	<p>Unsigned integer.</p> <p>Value range: 0 to 4096.</p>	The value is 0 if the interface is not a Layer 2 Ethernet interface.

# MLDSnooping

## MLDSnooping/Configuration

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。
MLD snooping is disabling globally. 全局MLD snooping正在去使能。	During executing set operation to enable global MLD snooping, MLD snooping is disabling globally. 使能全局MLD snooping时，全局MLD snooping正在去使能。

## MLDSnooping/VLANs

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。
MLD snooping drop-unknown is enabled globally. 全局MLD snooping已配置drop-unknown。	During executing set operation to enable drop-unknown for this VLAN, MLD snooping drop-unknown is enabled globally. 使能VLAN内drop-unknown时，全局drop-unknown已经使能。
MLD snooping is disabled on the VLAN. VLAN未使能MLD snooping。	During executing set operation for this VLAN, MLD snooping is disabled on the VLAN. 对该VLAN进行设置时，VLAN未使能MLD snooping。
MLD snooping is disabled globally. 全局MLD snooping未使能。	During executing set operation for this VLAN, MLD snooping is disabled globally. 对该VLAN进行设置时，全局MLD snooping未使能。
Invalid source address of general queries. 通用查询报文源IP地址错误。	During executing set operation for GeneralQuerySourceAddr of this VLAN, the value of GeneralQuerySourceAddr is invalid. 对该VLAN内GeneralQuerySourceAddr进行设置时，GeneralQuerySourceAddr值错误。
Invalid source address of group-specific queries. 特定组查询报文源IP地址错误。	During executing set operation for SpecialQuerySourceAddr of this VLAN, the value of SpecialQuerySourceAddr is invalid. 对该VLAN内SpecialQuerySourceAddr进行设置时，SpecialQuerySourceAddr值错误。
Invalid source address of reports. Report报文源IP地址错误。	During executing set operation for ReportSourceAddr of this VLAN, the value of ReportSourceAddr is invalid. 对该VLAN内ReportSourceAddr进行设置时，ReportSourceAddr值错误。
Invalid source address of done messages. Done报文源IP地址错误。	During executing set operation for DoneSourceAddr of this VLAN, the value of DoneSourceAddr is invalid. 对该VLAN内DoneSourceAddr进行设置时，DoneSourceAddr值错误。

# MLDSnooping/VSI

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。
MLD snooping drop-unknown is enabled globally. 全局MLD snooping已配置drop-unknown。	During executing set operation to enable drop-unknown for this VSI, MLD snooping drop-unknown is enabled globally. 使能VSI内drop-unknown时，全局drop-unknown已经使能。
MLD snooping is disabled on the VSI. VSI未使能MLD snooping。	During executing set operation for this VSI, MLD snooping is disabled on the VSI. 对该VSI进行设置时，VSI未使能MLD snooping。
MLD snooping is disabled globally. 全局MLD snooping未使能。	During executing set operation for this VSI, MLD snooping is disabled globally. 对该VSI进行设置时，全局MLD snooping未使能。
Invalid source address of general queries. 通用查询报文源IP地址错误。	During executing set operation for GeneralQuerySourceAddr of this VSI, the value of GeneralQuerySourceAddr is invalid. 对该VSI内GeneralQuerySourceAddr进行设置时，GeneralQuerySourceAddr值错误。
Invalid source address of group-specific queries. 特定组查询报文源IP地址错误。	During executing set operation for SpecialQuerySourceAddr of this VSI, the value of SpecialQuerySourceAddr is invalid. 对该VSI内SpecialQuerySourceAddr进行设置时，SpecialQuerySourceAddr值错误。
Invalid source address of reports. Report报文源IP地址错误。	During executing set operation for ReportSourceAddr of this VSI, the value of ReportSourceAddr is invalid. 对该VSI内ReportSourceAddr进行设置时，ReportSourceAddr值错误。
Invalid source address of done messages. Done报文源IP地址错误。	During executing set operation for DoneSourceAddr of this VSI, the value of DoneSourceAddr is invalid. 对该VSI内DoneSourceAddr进行设置时，DoneSourceAddr值错误。

# MLDSnooping/FastLeavePorts

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get或者set操作时，守护进程收到了错误的消息类型。
MLD snooping is disabled globally. 全局MLD snooping未使能。	During executing set operation, MLD snooping is disabled globally. 对该表进行配置时，全局 MLD snooping 未使能。

## MLDSnooping/GroupLimitPorts

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。
MLD snooping is disabled globally. 全局MLD snooping未使能。	During executing set operation, MLD snooping is disabled globally. 对该表进行配置时，全局 MLD snooping 未使能。
The configuration doesn't meet the requirements. 当前配置不符合配置要求。	GroupLimitVLANList can't be removed alone, and should be removed together with Limit. GroupLimitVLANList不能单独删除，需要和Limit一起删除。

## MLDSnooping/Ipv6Layer2MulticastGroups

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。

## MLDSnooping/ VSIIPv6Layer2MulticastGroups

Message	Explanation
Invalid message type. 配置消息错误。	During executing get or set operation, daemon receives invalid message type. Get 或者 set 操作时，守护进程收到了错误的消息类型。

</ModuleProxy>

```

### Table description

Item	Description
Feature name	ModuleProxy
Table name	HistoryStatistics
Table type	Multi-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	The Index of interface.	Index	Unsigned Integer. Value range: 0 to 65535.	N/A
Name	The name of interface.	N/A	String, lowercase. Length: 2 to 47 characters.	If this column contains uppercase character, it will be converted to lowercase automatically.
InPkts	Enter the number of packets in the direction.	N/A	Unsigned Integer. Value range: 0 to $2^{64} - 1$ .	N/A
OutPkts	The number of packets in the direction.	N/A	Unsigned Integer. Value range: 0 to $2^{64} - 1$ .	N/A
InOctets	Enter the bytes of packets in the direction.	N/A	Unsigned Integer. Value range: 0 to $2^{64} - 1$ .	N/A
OutOctets	The bytes of packets in the direction.	N/A	Unsigned Integer. Value range: 0 to $2^{64} - 1$ .	N/A
RecordTime	The date of the record flow.	N/A	Format: YYYY-MM-DD. Value range: 1970-01-01 to 2100-12-31.	N/A

## ModuleProxy/HistoryStatistics/AP

This table contains AP information of history statistics.

### XML structure

```
<ModuleProxy>
  <HistoryStatistics>
    <APs>
      <AP>
        <Name></Name>
        <InPkts></InPkts>
        <OutPkts></OutPkts>
        <InOctets></InOctets>
        <OutOctets></OutOctets>
        <RecordTime></RecordTime>
```

```

        </AP>
    </APs>
</HistoryStatistics>
</ModuleProxy>

```

## Table description

Item	Description
Feature name	ModuleProxy
Table name	HistoryStatistics
Table type	Multi-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP name.	Index	String, lowercase. Length: 1 to 64 characters.	If this column contains uppercase character, it will be converted to lowercase automatically.
InPkts	Enter the number of packets in the direction.	N/A	Unsigned Integer. Value range: 0 to $2^{64} - 1$ .	N/A
OutPkts	The number of packets in the direction.	N/A	Unsigned Integer. Value range: 0 to $2^{64} - 1$ .	N/A
InOctets	The number of packets in the direction.	N/A	Unsigned Integer. Value range: 0 to $2^{64} - 1$ .	N/A
OutOctets	The bytes of packets in the direction.	N/A	Unsigned Integer. Value range: 0 to $2^{64} - 1$ .	N/A
RecordTime	The date of the record flow.	N/A	Format: YYYY-MM-DD. Value range: 1970-01-01 to 2100-12-31.	N/A

# ModuleProxy/APStatistics

This table contains statistics information of AP.

## XML structure

```
<ModuleProxy>
  <APStatistics>
    <AP>
      <Name></Name>
      <InPkts></InPkts>
      <OutPkts></OutPkts>
      <InOctets></InOctets>
      <OutOctets></OutOctets>
    </AP>
  </APStatistics>
</ModuleProxy>
```

## Table description

Item	Description
Feature name	ModuleProxy
Table name	APStatistics
Table type	Multi-instance table
Row name	AP
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	AP name.	Index	String, lowercase. Length: 1 to 64 characters.	If this column contains uppercase character, it will be converted to lowercase automatically.
InPkts	Enter the number of packets in the direction.	N/A	Unsigned Integer. Value range: 0 to $2^{64} - 1$ .	N/A
OutPkts	The number of packets in the direction.	N/A	Unsigned Integer. Value range: 0 to $2^{64} - 1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
InOctets	The number of packets in the direction.	N/A	Unsigned Integer. Value range: 0 to $2^{64} - 1$ .	N/A
OutOctets	The bytes of packets in the direction.	N/A	Unsigned Integer. Value range: 0 to $2^{64} - 1$ .	N/A

## ModuleProxy/ContainerPort

This table contains container information.

### XML structure

```

<ModuleProxy>
  <ContainerPort>
    <Container>
      <Name></Name>
      <PoeIndex></PoeIndex>
      <PoePortInfo></PoePortInfo>
    </Container>
  </ContainerPort>
</ModuleProxy>

```

### Table description

Item	Description
Feature name	ModuleProxy
Table name	ContainerPort
Table type	Multi-instance table
Row name	Container
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Container name.	Index	String, lowercase. Length: 1 to 64 characters.	If this column contains uppercase characters, it will be converted to lowercase automatically.
PoeIndex	Port of the container.	N/A	Unsigned short.	N/A
PoePortInfo	PoE information.	N/A	String. Length: 1 to 255 characters.	N/A

# MPLS

## MPLS/Base

This table contains global MPLS information.

### XML structure

```
<MPLS>
  <Base>
    <LSRID></LSRID>
    <CBTSStatInterval></CBTSStatInterval>
  </Base>
</MPLS>
```

### Table description

Item	Description
Feature name	MPLS
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global configurations.
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LSRID	The LSR ID.	N/A	String, dotted decimal notation.	N/A
CBTSStatInterval	CBTS statistics collection interval in seconds	N/A	Unsigned short. Value range: 5~65535. The default value is 5.	N/A

## MPLS/Interfaces

This table contains MPLS interface information.

### XML structure

```
<MPLS>
  <Interfaces>
    <Interface>
```

```

    <IfIndex></IfIndex>
    <Enable></Enable>
  </Interface>
</Interfaces>
</MPLS>

```

## Table description

Item	Description
Feature name	MPLS
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	Applicable to only L3 interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Enable	Enable MPLS	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled(default).</li> </ul>	N/A

## MPLS/TunnelPolicies

This table contains Tunnel policy information.

## XML structure

```

<MPLS>
  <TunnelPolicies>
    <TunnelPolicy>

```

```

    <PolicyName></PolicyName>
    <Default></Default>
    <Sequence>
        <Strict></Strict>
        <PrefLspType></PrefLspType>
        <LoadBalancingNum></LoadBalancingNum>
    </Sequence>
</TunnelPolicy>
</TunnelPolicies>
</MPLS>

```

## Table description

Item	Description
Feature name	MPLS
Table name	TunnelPolicies
Table type	Multi-instance table
Row name	TunnelPolicy
Restrictions	N/A
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the tunnel policy	Index	String. Length: 1 to 19 characters.	N/A
Default	The default tunnel policy	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled(default).</li> </ul>	N/A
Sequence	Tunnel selection setting	N/A	Members include: <ul style="list-style-type: none"> <li>PrefLspType.</li> <li>LoadBalancingNum.</li> </ul>	The members of PrefLspType and LoadBalancingNum must be specified.
Strict	Using only one type of tunnels for load balancing	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled(default).</li> </ul>	N/A
PrefLspType	Preferred tunnel type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—LSP.</li> <li>1—GRE.</li> <li>2—CR-LSP.</li> <li>3—SR-LSP.</li> </ul>	Up to 4 repeats are allowed for PrefLspType. Support for GRE depends on the device model.
LoadBalancingNum	Number of tunnels for load balancing	N/A	Unsigned integer. The value range varies by	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			device model.	

## MPLS/PreferredTunnelPolicies

This table contains preferred tunnel information in a tunnel policy.

### XML structure

```

<MPLS>
  <PreferredTunnelPolicies>
    <PreferredTunnelPolicy>
      <PolicyName></PolicyName>
      <TunnelType></TunnelType>
      <TunnelID></TunnelID>
    </PreferredTunnelPolicy>
  </PreferredTunnelPolicies>
</MPLS>

```

### Table description

Item	Description
Feature name	MPLS
Table name	PreferredTunnelPolicies
Table type	Multi-instance table
Row name	PreferredTunnelPolicy
Restrictions	N/A
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of tunnel policy	Index	String. Length: 1 to 19 characters.	N/A
TunnelType	Preferred tunnel type.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—TUNNEL.</li> <li>1—TUNNEL-BUNDLE.</li> </ul>	N/A
TunnelID	Tunnel ID.	Index	Unsigned integer.	N/A

## MPLS/TunnelMbdfs

This table contains MBFD Tunnel interface information.

# XML structure

```
<MPLS>
  <TunnelMbfs>
    <TunnelMbfd>
      <TunnelID></TunnelID>
      <Enable></Enable>
      <LocalDiscriminator></LocalDiscriminator>
      <RemoteDiscriminator></RemoteDiscriminator>
      <Echo></Echo>
      <Template></Template>
      <BackupTemplate></BackupTemplate>
    </TunnelMbfd>
  </TunnelMbfs>
</MPLS>
```

## Table description

Item	Description
Feature name	MPLS
Table name	TunnelMbfs
Table type	Multi-instance table
Row name	TunnelMbfd
Restrictions	Applicable to only MPLS TE tunnel interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID.	Index	Unsigned integer.	N/A
Enable	Enable MBFD	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled.</li><li><b>false</b>—Disabled(default).</li></ul>	N/A
LocalDiscriminator	Local discriminator of the MBFD session	N/A	Unsigned integer.	The value range varies by device model.
RemoteDiscriminator	Remote discriminator of the MBFD session	N/A	Unsigned integer. Value range: 1 to 4294967295.	
Template	The MBFD parameter of main LSP	N/A	String. Length: 1 to 63 characters.	When has no BackupTemplate, the template also apply to backup

Column name	Column description	Column type	Data type and restrictions	Remarks
				LSP.
BackupTemplate	The MBFD parameter of backup LSP	N/A	String. Length: 1 to 63 characters.	N/A

## MPLS/StaticEgressLSPs

This table contains static egress LSP information.

### XML structure

```

<MPLS>
  <StaticEgressLSPs>
    <StaticEgressLSP>
      <LSPName></LSPName>
      <InLabel></InLabel>
    </StaticEgressLSP>
  </StaticEgressLSPs>
</MPLS>

```

### Table description

Item	Description
Feature name	MPLS
Table name	StaticEgressLSPs
Table type	Multi-instance table
Row name	StaticEgressLSP
Restrictions	This table supports only global configurations.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LSPName	Name of static LSP.	Index	String. Length: 1 to 15 characters..	N/A
InLabel	LSP incoming label	N/A	Unsigned integer. The value range varies by device model.	No modification.

# MPLS/StaticIngressLSPs

This table contains static ingress LSP information.

## XML structure

```
<MPLS>
  <StaticIngressLSPs>
    <StaticIngressLSP>
      <LSPName></LSPName>
      <OutLabel></OutLabel>
      <DestAddress></DestAddress>
      <DestWildcardMask></DestWildcardMask>
      <NextHop></NextHop>
      <OutIfIndex></OutIfIndex>
    </StaticIngressLSP>
  </StaticIngressLSPs>
</MPLS>
```

## Table description

Item	Description
Feature name	MPLS
Table name	StaticIngressLSPs
Table type	Multi-instance table
Row name	StaticIngressLSP
Restrictions	This table supports only global configurations.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LSPName	Name of static LSP.	Index	String. Length: 1 to 15 characters..	N/A
OutLabel	LSP outgoing label	N/A	Unsigned integer.	This column must be specified.
DestAddress	IPv4 LSP destination address	N/A	String, dotted decimal notation.	The member of DestWildcardMask must also be specified.
DestWildcardMask	<b>Mask of the</b> IPv4 LSP destination address	N/A	String, dotted decimal notation.	The member of DestAddress must also be specified.
NextHop	LSP next hop address	N/A	String, dotted decimal notation.	One and only one of this column

Column name	Column description	Column type	Data type and restrictions	Remarks
				and OutIfIndex must be specified.
				One and only one of this column or NextHop must be specified.
				Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
OutIfIndex	LSP outgoing interface index	N/A	Unsigned integer.	

## MPLS/StaticTransitLSPs

This table contains static transit LSP information.

### XML structure

```

<MPLS>
  <StaticTransitLSPs>
    <StaticTransitLSP>
      <LSPName></LSPName>
      <InLabel></InLabel>
      <OutLabel></OutLabel>
      <NextHop></NextHop>
      <OutIfIndex></OutIfIndex>
    </StaticTransitLSP>
  </StaticTransitLSPs>
</MPLS>

```

### Table description

Item	Description
Feature name	MPLS
Table name	StaticTransitLSPs
Table type	Multi-instance table
Row name	StaticTransitLSP
Restrictions	This table supports only global configurations.

Support for row creation and deletion	Yes
---------------------------------------	-----

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LSPName	Name of static LSP.	Index	String. Length: 1 to 15 characters..	N/A
InLabel	LSP incoming label	N/A	Unsigned integer.	This column must be specified.
OutLabel	LSP outgoing label	N/A	Unsigned integer.	This column must be specified.
NextHop	LSP next hop address	N/A	String, dotted decimal notation.	One and only one of this column and OutIfIndex must be specified.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
OutIfIndex	LSP outgoing interface index	N/A	Unsigned integer.	

## MPLS/StaticSRLSPs

This table contains static segment routing LSP information.

### XML structure

```

<MPLS>
  <StaticSRLSPs>
    <StaticSRLSP>
      <LSPName></LSPName>
      <OutLabel></OutLabel>
    </StaticSRLSP>
  </StaticSRLSPs>
</MPLS>

```

## Table description

Item	Description
Feature name	MPLS
Table name	StaticSRLSPs
Table type	Multi-instance table
Row name	StaticSRLSP
Restrictions	This table supports only global configurations.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LSPName	Name of static segment routing LSP.	Index	String. Length: 1 to 15 characters.	N/A
OutLabel	LSP outgoing label	N/A	Unsigned integer.	This column must be specified, and allow repeat.

## MPLS/StaticSRAdjacencies

This table contains static segment routing adjacency information.

## XML structure

```
<MPLS>
  <StaticSRAdjacencies>
    <StaticSRAdjacency>
      <AdjName></AdjName>
      <InLabel></InLabel>
      <NextHop></NextHop>
      <OutIfIndex></OutIfIndex>
    </StaticSRAdjacency>
  </StaticSRAdjacencies>
</MPLS>
```

## Table description

Item	Description
Feature name	MPLS
Table name	StaticSRAdjacencies

Table type	Multi-instance table
Row name	StaticSRAdjacency
Restrictions	This table supports only global configurations.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdjName	Name of static segment routing adjacency.	Index	String. Length: 1 to 15 characters.	N/A
InLabel	Adjacency incoming label	N/A	Unsigned integer.	This column must be specified.
NextHop	Adjacency next hop address	N/A	String, dotted decimal notation.	One and only one of this column and OutIfIndex must be specified.
OutIfIndex	Adjacency outgoing interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

## MPLS/StaticSRPrefixs

This table contains static segment routing prefix information.

## XML structure

```

<MPLS>
  <StaticSRPrefixs>
    <StaticSRPrefix>
      <PrefixName></PrefixName>
      <DestAddress></DestAddress>
      <DestMask></DestMask>
      <InLabel></InLabel>
      <NextHop></NextHop>
      <OutIfIndex></OutIfIndex>
      <OutLabel></OutLabel>
    </StaticSRPrefix>
  </StaticSRPrefixs>
</MPLS>

```

```

    </StaticSRPrefix>
  </StaticSRPrefixs>
</MPLS>

```

## Table description

Item	Description
Feature name	MPLS
Table name	StaticSRPrefixs
Table type	Multi-instance table
Row name	StaticSRPrefix
Restrictions	This table supports only global configurations.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PrefixName	Name of static segment routing prefix.	Index	String. Length: 1 to 15 characters.	N/A
DestAddress	IPv4 prefix destination address	Index	String, dotted decimal notation.	N/A
DestMask	Prefix destination address mask	Index	Unsigned integer.	N/A
InLabel	Prefix incoming label	Index	Unsigned integer.	This column must be specified.
NextHop	Prefix next hop address	Index	String, dotted decimal notation.	One and only one of this column and OutIfIndex must be specified.  One and only one of this column and NextHop must be specified.
OutIfIndex	Prefix outgoing interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
OutLabel	Prefix outgoing label	N/A	Unsigned integer.	This column must be specified, and

Column name	Column description	Column type	Data type and restrictions	Remarks
				allow repeat.

## MPLS/MPLSVRF

This table contains MPLS VRF information.

### XML structure

```

<MPLS>
  <MPLSVRFs>
    <MPLSVRF>
      <VRF></VRF>
      <Statistics></Statistics>
    </MPLSVRF>
  </MPLSVRFs>
</MPLS>

```

### Table description

Item	Description
Feature name	MPLS
Table name	MPLSVRFs
Table type	Multi-instance table
Row name	MPLSVRF
Restrictions	N/A
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
Statistics	Whether statistics is enabled for the VRF	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled(default).</li> </ul>	Support for this column depends on the device model.

# MPLS

## MPLS/Base

This table contains global MPLS information.

### XML structure

```
<MPLS>
  <Base>
    <LSRID></LSRID>
    <StaticLabelMax></StaticLabelMax>
    <SupportGRE></SupportGRE>
    <SupportStaticSR></SupportStaticSR>
    <SRMaxLabelDepth></SRMaxLabelDepth>
    <CBTSSStatInterval></CBTSSStatInterval>
  </Base>
</MPLS>
```

### Table description

Item	Description
Feature name	MPLS
Table name	Base
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global configurations.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LSRID	The LSR ID	N/A	String, dotted decimal notation.	N/A
StaticLabelMax	The max label value for static lsp	N/A	Unsigned integer	N/A
SupportGRE	Whether GRE feature is supported	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Supported.</li><li><b>false</b>—<b>Not supported.</b></li></ul>	N/A
SupportStaticSR	Whether static segment routing with MPLS feature is supported	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Supported.</li><li><b>false</b>—<b>Not supported.</b></li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SRMaxLabel Depth	The max. label stack depths for segment routing with MPLS	N/A	<ul style="list-style-type: none"> <li>Unsigned integer</li> </ul>	N/A
CBTSSStat Interval	The CBTS statistics collection interval in seconds	N/A	Unsigned short. Value range: 5~65535	Unit of time is second.

## MPLS/Interfaces

This table contains MPLS interface information.

### XML structure

```

<MPLS>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </Interface>
  </Interfaces>
</MPLS>

```

### Table description

Item	Description
Feature name	MPLS
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	Applicable to only L3 interfaces.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about

Column name	Column description	Column type	Data type and restrictions	Remarks
				IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Enable	Enable MPLS	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled(default).</li> </ul>	N/A

## MPLS/TunnelPolicies

This table contains Tunnel policy information.

### XML structure

```

<MPLS>
  <TunnelPolicies>
    <TunnelPolicy>
      <PolicyName></PolicyName>
      <Default></Default>
      <Sequence>
        <Strict></Strict>
        <PrefLspType></PrefLspType>
        <LoadBalancingNum></LoadBalancingNum>
      </Sequence>
    </TunnelPolicy>
  </TunnelPolicies>
</MPLS>

```

### Table description

Item	Description
Feature name	MPLS
Table name	TunnelPolicies
Table type	Multi-instance table
Row name	TunnelPolicy
Restrictions	N/A

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the	Index	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	tunnel policy		Length: 1 to 19 characters..	
Default	The default tunnel policy	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
Sequence	Tunnel selection setting	N/A	Member include: <ul style="list-style-type: none"> <li>PrefLspType.</li> <li>LoadBalancingNum.</li> </ul>	N/A
Strict	Using only one type of tunnels for load balancing	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
PrefLspType	Preferred tunnel type	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—LSP.</li> <li>1—GRE.</li> <li>2—CR-LSP.</li> <li>3—SR-LSP.</li> </ul>	Up to 4 repeats are allowed for PrefLspType. Support for GRE depends on the device model.
LoadBalancingNum	Number of tunnels for Load balancing	N/A	Unsigned integer. The value range varies by device model.	N/A

## MPLS/PreferredTunnelPolicies

This table contains preferred tunnel information in a tunnel policy.

### XML structure

```

<MPLS>
  <PreferredTunnelPolicies>
    <PreferredTunnelPolicy>
      <PolicyName></PolicyName>
      <TunnelType></TunnelType>
      <TunnelID></TunnelID>
      <PriorityLevel></PriorityLevel>
    </PreferredTunnelPolicy>
  </PreferredTunnelPolicies>
</MPLS>

```

### Table description

Item	Description
Feature name	MPLS
Table name	PreferredTunnelPolicies
Table type	Multi-instance table
Row name	PreferredTunnelPolicy

Restrictions	N/A
--------------	-----

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of tunnel policy	Index	String. Length: 1 to 19 characters.	N/A
TunnelType	Preferred tunnel type.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—TUNNEL.</li> <li>1—TUNNEL-BUNDLE.</li> </ul>	N/A
TunnelID	Tunnel ID.	Index	Unsigned integer.	N/A
PriorityLevel	Priority level of preferred tunnel.	N/A	Unsigned integer.	A smaller number has a higher priority.

## MPLS/LabelRanges

This table contains MPLS label ranges information.

## XML structure

```

<MPLS>
  <LabelRanges>
    <ProtocolType></ProtocolType>
    <MinLabel></MinLabel>
    <MaxLabel></MaxLabel>
  </LabelRanges>
</MPLS>

```

## Table description

Item	Description
Feature name	MPLS
Table name	LabelRanges
Table type	Single-instance table
Row name	None
Restrictions	This table supports only global configurations
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProtocolType	Protocol Type.	N/A	Enumeration: <ul style="list-style-type: none"><li>0—STATIC.</li></ul>	N/A
MinLabel	The minimum label of the range.	N/A	Unsigned integer. <ul style="list-style-type: none"><li>The value range varies by device model.</li></ul>	N/A
MaxLabel	The maximum label of the range.	N/A	Unsigned integer. <ul style="list-style-type: none"><li>The value range varies by device model.</li></ul>	N/A

## MPLS/LabelSegments

This table contains MPLS label segments information.

## XML structure

```
<MPLS>
  <LabelSegments>
    <LabelSegment>
      <ProtocolType></ProtocolType>
      <MinLabel></MinLabel>
      <MaxLabel></MaxLabel>
    </LabelSegment>
  </LabelSegments>
</MPLS>
```

## Table description

Item	Description
Feature name	MPLS
Table name	LabelSegments
Table type	Multi-instance table
Row name	LabelSegment
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProtocolType	Protocol Type.	Index	Enumeration: <ul style="list-style-type: none"><li>0—STATIC.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>1—EGRESS.</li> <li>2—DYNAMIC</li> <li>3—L3VPN</li> <li>4—VPWS</li> <li>5—VPLS</li> <li>6—SRGB</li> </ul>	
MinLabel	The minimum label of the range.	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>The value range varies by device model.</li> </ul>	N/A
MaxLabel	The maximum label of the range.	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>The value range varies by device model.</li> </ul>	N/A

## MPLS/TunnelMbfd

This table contains MBFD Tunnel interface information.

### XML structure

```

<MPLS>
  <TunnelMbfd>
    <TunnelMbfd>
      <TunnelID></TunnelID>
      <Enable></Enable>
      <LocalDiscriminator></LocalDiscriminator>
      <RemoteDiscriminator></RemoteDiscriminator>
      <Echo></Echo>
      <Template></Template>
      <BackupTemplate></BackupTemplate>
    </TunnelMbfd>
  </TunnelMbfd>
</MPLS>

```

### Table description

Item	Description
Feature name	MPLS
Table name	TunnelMbfd
Table type	Multi-instance table
Row name	TunnelMbfd
Restrictions	Applicable to only MPLS TE tunnel interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID.	Index	Unsigned integer.	N/A
Enable	Enable MBFD	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
LocalDiscriminator	Local discriminator of the MBFD session	N/A	Unsigned integer.	The value range varies by device model.
RemoteDiscriminator	Remote discriminator of the MBFD session	N/A	Unsigned integer. Value range: 1 to 4294967295.	N/A
Echo	Echo style of MBFD	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
Template	MBFD session parameter template for the primary LSP	N/A	String. Length: 1 to 63 characters.	This template also applies to the backup LSP if no template is specified for the backup LSP.
BackupTemplate	MBFD session parameter template for the backup LSP	N/A	String. Length: 1 to 63 characters.	N/A

## MPLS/StaticEgressLSPs

This table contains static egress LSP information.

### XML structure

```

<MPLS>
  <StaticEgressLSPs>
    <StaticEgressLSP>
      <LSPName></LSPName>
      <InLabel></InLabel>
    </StaticEgressLSP>
  </StaticEgressLSPs>
</MPLS>

```

## Table description

Item	Description
Feature name	MPLS
Table name	StaticEgressLSPs
Table type	Multi-instance table
Row name	StaticEgressLSP
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LSPName	Name of static LSP.	Index	String. Length: 1 to 15 characters..	N/A
InLabel	LSP incoming label	N/A	Unsigned integer. The value range varies by device model.	N/A

## MPLS/StaticIngressLSPs

This table contains static ingress LSP information.

## XML structure

```
<MPLS>
  <StaticIngressLSPs>
    <StaticIngressLSP>
      <LSPName></LSPName>
      <OutLabel></OutLabel>
      <DestAddress></DestAddress>
      <DestWildcardMask></DestWildcardMask>
      <NextHop></NextHop>
      <OutIfIndex></OutIfIndex>
    </StaticIngressLSP>
  </StaticIngressLSPs>
</MPLS>
```

## Table description

Item	Description
Feature name	MPLS
Table name	StaticIngressLSPs

Table type	Multi-instance table
Row name	StaticIngressLSP
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LSPName	Name of static LSP.	Index	String. Length: 1 to 15 characters..	N/A
OutLabel	LSP outgoing label	N/A	Unsigned integer.	N/A
DestAddress	IPv4 LSP destination address	N/A	String, dotted decimal notation.	The member of DestWildcardMask must also be specified.
DestWildcardMask	Mask of the IPv4 LSP destination address	N/A	String, dotted decimal notation.	The member of DestAddress must also be specified.
NextHop	LSP next hop address	N/A	String, dotted decimal notation.	N/A
OutIfIndex	LSP outgoing interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

## MPLS/StaticTransitLSPs

This table contains static transit LSP information.

## XML structure

```

<MPLS>
  <StaticTransitLSPs>
    <StaticTransitLSP>
      <LSPName></LSPName>
      <InLabel></InLabel>
      <OutLabel></OutLabel>
      <NextHop></NextHop>
      <OutIfIndex></OutIfIndex>

```

```

    </StaticTransitLSP>
  </StaticTransitLSPs>
</MPLS>

```

## Table description

Item	Description
Feature name	MPLS
Table name	StaticTransitLSPs
Table type	Multi-instance table
Row name	StaticTransitLSP
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LSPName	Name of static LSP.	Index	String. Length: 1 to 15 characters..	N/A
InLabel	LSP incoming label	N/A	Unsigned integer.	N/A
OutLabel	LSP outgoing label	N/A	Unsigned integer.	N/A
NextHop	LSP next hop address	N/A	String, dotted decimal notation.	N/A
OutIfIndex	LSP outgoing interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

## MPLS/StaticSRLSPs

This table contains static segment routing LSP information.

## XML structure

```

<MPLS>
  <StaticSRLSPs>

```

```

<StaticSRLSP>
  <LSPName></LSPName>
  <OutLabel></OutLabel>
</StaticSRLSP>
</StaticSRLSPs>
</MPLS>

```

## Table description

Item	Description
Feature name	MPLS
Table name	StaticSRLSPs
Table type	Multi-instance table
Row name	StaticSRLSP
Restrictions	This table supports only global configurations.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LSPName	Name of static segment routing LSP.	Index	String. Length: 1 to 15 characters.	N/A
OutLabel	LSP outgoing label	N/A	Unsigned integer.	This column must be specified, and allow repeat.

## MPLS/StaticSRAdjacencies

This table contains static segment routing adjacency information.

## XML structure

```

<MPLS>
  <StaticSRAdjacencies>
    <StaticSRAdjacency>
      <AdjName></AdjName>
      <InLabel></InLabel>
      <NextHop></NextHop>
      <OutIfIndex></OutIfIndex>
    </StaticSRAdjacency>
  </StaticSRAdjacencies>
</MPLS>

```

## Table description

Item	Description
Feature name	MPLS
Table name	StaticSRAdjacencies
Table type	Multi-instance table
Row name	StaticSRAdjacency
Restrictions	This table supports only global configurations.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdjName	Name of static segment routing adjacency.	Index	String. Length: 1 to 15 characters.	N/A
InLabel	Adjacency incoming label	N/A	Unsigned integer.	This column must be specified.
NextHop	Adjacency next hop address	N/A	String, dotted decimal notation.	One and only one of this column and OutIfIndex must be specified.  One and only one of this column and NextHop must be specified.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
OutIfIndex	Adjacency outgoing interface index	N/A	Unsigned integer.	

## MPLS/StaticSRPrefixs

This table contains static segment routing prefix information.

## XML structure

<MPLS>

```

<StaticSRPrefixs>
  <StaticSRPrefix>
    <PrefixName></PrefixName>
    <DestAddress></DestAddress>
    <DestMask></DestMask>
    <InLabel></InLabel>
    <NextHop></NextHop>
    <OutIfIndex></OutIfIndex>
    <OutLabel></OutLabel>
  </StaticSRPrefix>
</StaticSRPrefixs>
</MPLS>

```

## Table description

Item	Description
Feature name	MPLS
Table name	StaticSRPrefixs
Table type	Multi-instance table
Row name	StaticSRPrefix
Restrictions	This table supports only global configurations.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PrefixName	Name of static segment routing Prefix.	Index	String. Length: 1 to 15 characters.	N/A
DestAddress	IPv4 prefix destination address	Index	String, dotted decimal notation.	N/A
DestMask	Prefix destination address mask	Index	Unsigned integer.	N/A
InLabel	Prefix incoming label	Index	Unsigned integer.	This column must be specified.
NextHop	Prefix next hop address	Index	String, dotted decimal notation.	One and only one of this column and OutIfIndex must be specified.
OutIfIndex	Prefix outgoing interface index	Index	Unsigned integer.	One and only one of this column or NextHop must be specified. Some versions support interface name. For relevant information, see

Column name	Column description	Column type	Data type and restrictions	Remarks
				the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
OutLabel	Prefix outgoing label	N/A	Unsigned integer.	This column must be specified, and allow repeat.

## MPLS/IPv4LSP

This table contains IPv4 LSP information.

### XML structure

```

<MPLS>
  <IPv4LSP>
    <LSP>
      <Protocol></Protocol>
      <VrfIndex></VrfIndex>
      <Ipv4Prefix>

  </IPv4LSP>

```

## Table description

Item	Description
Feature name	MPLS
Table name	IPv4LSP
Table type	Multi-instance table
Row name	LSP
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Protocol	LSP protocol type	Index	Enumeration: <ul style="list-style-type: none"> <li>• 0—Unknown.</li> <li>• 1—Static LSP.</li> <li>• 2—Static CRLSP.</li> <li>• 3—LDP.</li> <li>• 4—RSVP.</li> <li>• 5—MP-BGP.</li> <li>• 6—ISIS.</li> <li>• 7—OSPF.</li> </ul>	N/A
VrfIndex	Index of the VRF to which an IPv4 LSP belongs	Index	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product. For information about VrfIndex, see "Appendix" in L3vpn NETCONF XML API Data Reference.
Ipv4Prefix	IPv4 LSP prefix	Index, data structure	Members include: <ul style="list-style-type: none"> <li>• Ipv4Address.</li> <li>• Ipv4PrefixLenth.</li> </ul>	N/A
Ipv4Address	IPv4 LSP prefix address	Index	String, dotted decimal notation.	N/A
Ipv4PrefixLenth	IPv4 LSP prefix length	Index	Unsigned integer. Value range: 1 to 32.	N/A
LSRType	LSR type	Index	Enumeration: <ul style="list-style-type: none"> <li>• 0—Ingress.</li> <li>• 1—Transit.</li> <li>• 2—Egress.</li> </ul>	N/A
ID	LSP ID	Index	Unsigned integer. Value range: 0 to 255.	An LSP can have one row for inbound information, and multiple rows for outbound

Column name	Column description	Column type	Data type and restrictions	Remarks
				information. Each row has an ID. <ul style="list-style-type: none"> <li>Inbound ID: 0.</li> <li>Outbound ID: 1 to 255.</li> </ul>
InfoType	LSP information type	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Inbound information.</li> <li><b>1</b>—Outbound information.</li> </ul>	N/A
InLabel	LSP incoming label	N/A	Unsigned integer.	LSP inbound information contains this column.
OutLabel	LSP outgoing label	N/A	Unsigned integer.	LSP outbound information contains this column.
OutIfIndex	LSP outgoing interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .  LSP outbound information contains outgoing interface and next hop, or it contains NHLFE ID.
NextHop	LSP next hop address	N/A	String, dotted decimal notation.	LSP outbound information contains outgoing interface and next hop, or it contains NHLFE ID.
NHLFEID	NHLFE ID	N/A	Unsigned integer.	LSP outbound information contains outgoing interface and next hop, or it contains NHLFE ID.
BackupOutLabel	Backup LSP outgoing label	N/A	Unsigned integer.	Backup LSP outbound information contains this column.
BackupOutIfIndex	Backup LSP outgoing interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .  Backup LSP outbound

Column name	Column description	Column type	Data type and restrictions	Remarks
				information contains outgoing interface and next hop, or it contains NHLFE ID.
BackupNextHop	Backup LSP next hop address	N/A	String, dotted decimal notation.	Backup LSP outbound information contains outgoing interface and next hop, or it contains NHLFE ID.
BackupNHLFEID	Backup NHLFE ID	N/A	Unsigned integer.	Backup LSP outbound information contains outgoing interface and next hop, or it contains NHLFE ID.
Octets	Number of octets	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
HCOctets	Number of high order octets	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
Packets	Number of packets	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
Errors	Number of error packets	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
Discards	Number of discarded packets	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A

## MPLS/TEv4LSP

This table contains IPv4 MPLS TE LSP information.

### XML structure

Item	Description
Feature name	MPLS
Table name	StaticLSP
Table type	Multi-instance table

Row name	LSP
Restrictions	This table contains LSP information on the transit node and egress node. Static LSP information on the ingress node is stored in the IPv4LSP table. Static CRLSP information on the ingress node is stored in the TEv4LSP table.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Protocol	LSP protocol type	Index	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Unknown.</li> <li>• <b>1</b>—Static LSP.</li> <li>• <b>2</b>—Static CRLSP.</li> <li>• <b>3</b>—LDP.</li> <li>• <b>4</b>—RSVP.</li> <li>• <b>5</b>—MP-BGP.</li> </ul>	N/A
LspIndex	Static LSP index	Index	Unsigned integer. Length: 32 bits.	Typically, this column represents static LSP incoming label.
LSRType	LSR type	Index	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Ingress.</li> <li>• <b>1</b>—Transit.</li> <li>• <b>2</b>—Egress.</li> </ul>	N/A
ID	LSP ID	Index	Unsigned integer. Value range: 0 to 255.	An LSP can have one row for inbound information, and multiple rows for outbound information. Each row has an ID. <ul style="list-style-type: none"> <li>• Inbound ID: 0.</li> <li>• Outbound ID: 1 to 255.</li> </ul>
InfoType	LSP information type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Inbound information.</li> <li>• <b>1</b>—Outbound information.</li> </ul>	N/A
InLabel	LSP incoming label	N/A	Unsigned integer.	LSP inbound information contains this column.
OutLabel	LSP outgoing label	N/A	Unsigned integer.	LSP outbound information contains this column.
OutIfIndex	LSP outgoing interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in

Column name	Column description	Column type	Data type and restrictions	Remarks
				<i>Ifmgr NETCONF XML API Configuration Reference.</i> LSP outbound information contains outgoing interface and next hop, or it contains NHLFE ID.
NextHop	LSP next hop address	N/A	String, dotted decimal notation.	LSP outbound information contains outgoing interface and next hop, or it contains NHLFE ID.
NHLFEID	NHLFE ID	N/A	Unsigned integer.	LSP outbound information contains outgoing interface and next hop, or it contains NHLFE ID.
BackupOutLabel	Backup LSP outgoing label	N/A	Unsigned integer.	Backup LSP outbound information contains this column.
BackupOutIfIndex	Backup LSP outgoing interface index	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in <i>Ifmgr NETCONF XML API Configuration Reference.</i> Backup LSP outbound information contains outgoing interface and next hop, or it contains NHLFE ID.
BackupNextHop	Backup LSP next hop address	N/A	String, dotted decimal notation.	Backup LSP outbound information contains outgoing interface and next hop, or it contains NHLFE ID.
BackupNHLFEID	Backup NHLFE ID	N/A	Unsigned integer.	Backup LSP outbound information contains outgoing interface and next hop, or it contains NHLFE ID.
Octets	Number of octets	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
HCOctets	Number of high order octets	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
Packets	Number of packets	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			1.	
Errors	Number of error packets	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
Discards	Number of discarded packets	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A

## MPLS/MPLSVRF

This table contains MPLS VRF information.

### XML structure

```

<MPLS>
  <MPLSVRFs>
    <MPLSVRF>
      <VRF></VRF>
      <Statistics></Statistics>
    </MPLSVRF>
  </MPLSVRFs>
</MPLS>

```

### Table description

Item	Description
Feature name	MPLS
Table name	MPLSVRFs
Table type	Multi-instance table
Row name	MPLSVRF
Restrictions	N/A

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VRF	VRF name.	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
Statistics	Whether statistics is enabled for the VRF	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enabled.</li> <li>false—Disabled.</li> </ul>	N/A

# MPLS/TE Tunnel Statistics

This table contains TE tunnel statistics information.

## XML structure

```
<MPLS>
  <TETunnelStatistics>
    <TETunnelStatistic>
      <TunnelID></TunnelID>
      <ServiceClass></ServiceClass>
      <Octets></Octets>
      <HCOctets></HCOctets>
      <Packets></Packets>
      <Errors></Errors>
      <Discards></Discards>
      <Systime></Systime>
    </TETunnelStatistic>
  </TETunnelStatistics>
</MPLS>
```

## Table description

Item	Description
Feature name	MPLS
Table name	TETunnelStatistics
Table type	Multi-instance table
Row name	TETunnelStatistics
Restrictions	This table contains TE tunnel statistics information.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelID	Tunnel ID	Index	Unsigned integer.	The tunnel interface number
ServiceClass	The service class statistics of the MPLS TE tunnel interface.	Index	Unsigned integer. The value range varies by device model.	When service class no set, get all statistics of the TE tunnel.
Octets	Number of octets	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
HCOctets	Number of high order octets	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			1.	
Packets	Number of packets	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
Errors	Number of error packets	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
Discards	Number of discarded packets	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
Systime	Time that elapsed after the device started up, in milliseconds	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A

## MPLS/TunnelForwarding

This table contains tunnel forwarding information.

### XML structure

```

<MPLS>
  <TunnelForwardings>
    <TunnelForwarding>
      <TunnelNum></TunnelNum>
      <OutInfo>
        <ID></ID>
        <OutIfName></OutIfName>
        <NextHop></NextHop>
        <OutLabel></OutLabel>
        <Active></Active>
      </OutInfo>
      <BackupOutIfName></BackupOutIfName>
      <BackupNextHop></BackupNextHop>
      <BackupOutLabel></BackupOutLabel>
      <BackupActive></BackupActive>
    </TunnelForwarding>
  </TunnelForwardings>
</MPLS>

```

### Table description

Item	Description
Feature name	MPLS
Table name	TunnelForwardings

Table type	Multi-instance table
Row name	TunnelForwarding
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TunnelNum	Tunnel number	Index	Unsigned integer.	N/A
OutInfo	Outbound information	Data structure	Members include: <ul style="list-style-type: none"> <li>ID.</li> <li>OutIfName.</li> <li>NextHop.</li> <li>OutLabel.</li> <li>Active.</li> </ul>	N/A
ID	Out information ID	N/A	Unsigned integer. Value range: 0 to 2.	N/A
OutIfName	Outgoing interface name	N/A	String.	Outbound information contains this column.
NextHop	Next hop address	N/A	String, dotted decimal notation.	Outbound information contains this column.
OutLabel	Outgoing label	N/A	Unsigned integer.	Outbound information contains this column.
Active	State of forwarding information	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
BackupOutIfName	Backup outgoing interface name	N/A	String.	Backup outbound information contains this column.
BackupNextHop	Backup next hop address	N/A	String, dotted decimal notation.	Backup outbound information contains this column.
BackupOutLabel	Backup outgoing label	N/A	Unsigned integer.	Backup outbound information contains this column.
BackupActive	State of the backup forwarding information	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A

## MPLS/ILMForwarding

This table contains ILM forwarding information.

## XML structure

<MPLS>

```

<ILMForwardings>
<ILMForwarding>
  <Label></Label>
  <OutInfo>
    <ID></ID>
    <OutIfName></OutIfName>
    <NextHop></NextHop>
    <OutLabel></OutLabel>
    <Active></Active>
  </OutInfo>
  <BackupOutIfName></BackupOutIfName>
  <BackupNextHop></BackupNextHop>
  <BackupOutLabel></BackupOutLabel>
  <BackupActive></BackupActive>
</ILMForwarding>
</ILMForwardings>
</MPLS>

```

## Table description

Item	Description
Feature name	MPLS
Table name	ILMForwardings
Table type	Multi-instance table
Row name	ILMForwarding
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Label	Label index	Index	Unsigned integer.	N/A
OutInfo	Outbound information	Data structure	Members include: <ul style="list-style-type: none"> <li>ID.</li> <li>OutIfName.</li> <li>NextHop.</li> <li>OutLabel.</li> <li>Active.</li> </ul>	N/A
ID	Out Information ID	N/A	Unsigned integer. Value range: 0 to 2.	N/A
OutIfName	Outgoing interface name	N/A	String.	Outbound information contains this column.
NextHop	Next hop address	N/A	String, dotted decimal notation.	Outbound information contains this column.
OutLabel	Outgoing label	N/A	Unsigned integer.	Outbound information

Column name	Column description	Column type	Data type and restrictions	Remarks
				contains this column.
Active	State of forwarding information	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Enabled.</li> <li>• <b>false</b>—Disabled.</li> </ul>	N/A
BackupOutIfName	Backup outgoing interface name	N/A	String.	Backup outbound information contains this column.
BackupNextHop	Backup next hop address	N/A	String, dotted decimal notation.	Backup outbound information contains this column.
BackupOutLabel	Backup outgoing label	N/A	Unsigned integer.	Backup outbound information contains this column.
BackupActive	State of the backup forwarding information	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Enabled.</li> <li>• <b>false</b>—Disabled.</li> </ul>	N/A

# Comware 7 LSM NETCONF XML API Error Message Reference

## MPLS/IPV4\_LSP

Message	Explanation
The feature LSM has not been enabled. LSM进程未启动。	Please start LSM service before getting MPLS/IPV4_LSP table information. 请在获取IPV4_LSP表之前启动LSM进程。
Not support Segment Routing Prefix. 不支持Segment Routing Prefix。	The device must support Segment Routing Prefix first. 设备须首先支持Segment Routing Prefix。
The incoming label is already in use. 入标签已被占用。	The incoming label configured must not be in use. 配置的入标签不能已被占用。

## MPLS/TEV4\_LSP

Message	Explanation
The feature LSM has not been enabled. LSM进程未启动。	Please start LSM service before getting MPLS/TEV4_LSP table information. 请在获取TEV4_LSP表之前启动LSM进程。
The incoming label is already in use. 入标签已被占用。	The incoming label configured must not be in use. 配置的入标签不能已被占用。
Not support Segment Routing Prefix. 不支持Segment Routing Prefix。	The device must support Segment Routing Prefix first. 设备须首先支持Segment Routing Prefix。

## MPLS/STATIC\_LSP

Message	Explanation
The feature LSM has not been enabled. LSM进程未启动。	Please start LSM service before getting MPLS/Static_LSP table information. 请在获取Static_LSP表之前启动LSM进程。
The incoming label is already in use. 入标签已被占用。	The incoming label configured must not be in use. 配置的入标签不能已被占用。
Not support Segment Routing Prefix. 不支持Segment Routing Prefix。	The device must support Segment Routing Prefix first. 设备须首先支持Segment Routing Prefix。

## MPLS/Base

Message	Explanation
The feature LSM has not been enabled. LSM进程未启动。	Please start LSM service before getting MPLS/Base table information. 请在获取Base表之前启动LSM进程。

## MPLS/Interfaces

Message	Explanation
The feature LSM has not been enabled. LSM进程未启动。	Please start LSM service before getting MPLS/Interfaces table information. 请在获取Interfaces表之前启动LSM进程。

## MPLS /TunnelPolicies

Message	Explanation
The feature LSM has not been enabled. LSM进程未启动。	Please start LSM service before getting MPLS/TunnelPolicies table information. 请在获取TunnelPolicies表之前启动LSM进程。
Both the tunnel selection order and the number of tunnels for load balancing are required. 请配置配置隧道的选择顺序和负载分担的隧道数目。	Please configure the tunnel selection order and the number of tunnels for load balancing at the same time. 请同时配置隧道的选择顺序和负载分担的隧道数目。
Can't specify duplicate tunnel types for tunnel selection. 隧道类型的优先级顺序不允许出现重复类型。	Tunnel types for tunnel selection must be unique. 隧道类型的优先级顺序必须唯一。
无效的隧道/捆绑隧道 ID The TunnelID is invalid.	The tunnel that preferred path configured must be valid. 优选隧道引用的隧道必须是有效的。
The PolicyName is invalid. 无效的隧道/捆绑隧道 名称。	The PolicyName length must be between 0 to 20. 隧道名称有效长度范围必须在0-20。
The TunnelType is invalid.无效的隧道/捆绑隧道类型	The TunnelType must be tunnel or tunnel-bundle. 隧道类型必须是tunnel 或者tunnel-bundle。

## MPLS/StaticEgressLSPs

Message	Explanation
The feature SLSP has not been enabled. SLSP进程未启动。	Please start SLSP service before getting MPLS/StaticEgressLSPs table information. 请在获取StaticEgressLSPs表之前启动SLSP进程。

The static LSP already exists. 该静态LSP已存在。	The LSP name must be unique. LSP名称必须唯一。
The incoming label is already in use. 入标签已被占用。	The incoming label configured must not be in use. 配置的入标签不能被占用。

## MPLS/StaticIngressLSPs

Message	Explanation
The feature SLSP has not been enabled. SLSP进程未启动。	Please start SLSP service before getting MPLS/StaticIngressLSPs table information. 请在获取StaticIngressLSPs表之前启动SLSP进程。
The static LSP already exists. 该静态LSP已存在。	The LSP name must be unique. LSP名称必须唯一。
The incoming label is already in use. 入标签已被占用。	The incoming label configured must not be in use. 配置的入标签不能被占用。

## MPLS/StaticTransitLSPs

Message	Explanation
The feature SLSP has not been enabled. SLSP进程未启动。	Please start SLSP service before getting MPLS/StaticTransitLSPs table information. 请在获取StaticTransitLSPs表之前启动SLSP进程。
The static LSP already exists. 该静态LSP已存在。	The LSP name must be unique. LSP名称必须唯一。
The incoming label is already in use. 入标签已被占用。	The incoming label configured must not be in use. 配置的入标签不能被占用。

## MPLS/StaticSRLSPs

Message	Explanation
Not support Static Segment Routing. 不支持Static Segment Routing。	The device must support Static Segment Routing first. 设备须首先支持Segment Routing Prefix。
The feature SLSP has not been enabled. SLSP进程未启动。	Please start SLSP service before getting MPLS/StaticSRLSPs table information. 请在获取StaticSRLSPs表之前启动SLSP进程。
The static LSP already exists. 该静态LSP已存在。	The LSP name must be unique. LSP名称必须唯一。
The static SRLSP already exists. 该静态SRLSP已存在。	The SRLSP name must be unique. SRLSP名称必须唯一。
The depth of the out label stack is out of the range.	The depth of the out label stack must be in the specified range.

标签栈深度超出规定范围。	标签栈的深度必须在设备定制范围内。
The null label must be configured on the outermost layer. 空标签只能配置在最外层。	The implicit null label 3 and explicit null label 0 must be configured on the outermost layer. 隐式空标签3和显示空标签0必须配置在最外层。

## MPLS/StaticSRAdjacencies

Message	Explanation
The feature SLSP has not been enabled. SLSP进程未启动。	Please start SLSP service before getting MPLS/StaticSRAdjacencies table information. 请在获取StaticSRAdjacencies表之前启动SLSP进程。
The static LSP already exists. 该静态LSP已存在。	The LSP name must be unique. LSP名称必须唯一。
The static SRLSP already exists. 该静态SRLSP已存在。	The SRLSP name must be unique. SRLSP名称必须唯一。
The depth of the out label stack is out of the range. 标签栈深度超出规定范围。	The depth of the out label stack must be in the specified range. 标签栈的深度必须在设备定制范围内。

## MPLS/StaticSRPrefixs

Message	Explanation
The feature SLSP has not been enabled. SLSP进程未启动。	Please start SLSP service before getting MPLS/StaticSRPrefixs table information. 请在获取StaticSRPrefixs表之前启动SLSP进程。
The static LSP already exists. 该静态LSP已存在。	The LSP name must be unique. LSP名称必须唯一。
The static SRLSP already exists. 该静态SRLSP已存在。	The SRLSP name must be unique. SRLSP名称必须唯一。
The depth of the out label stack is out of the range. 标签栈深度超出规定范围。	The depth of the out label stack must be in the specified range. 标签栈的深度必须在设备定制范围内。
Prefix segments that share the same name must be configured with the same destination IP address. 同名的配置必须配置相同的地址。	The destination of the same prefix segment must be unique. 相同静态Prefix Segment路径的地址必须唯一。
Can't create a prefix segment to both transit node and egress node. 同一静态Prefix Segment不能既是中间节点又是尾节点。	Can't create a prefix segment to both transit node and egress node. 不能配置同一静态Prefix Segment既是中间节点又是尾节点。

Prefix segments configured with the same destination IP address must use the same name. 相同目的地址必须配置相同的名字。	Prefix segments configured with the same destination IP address must use the same name. 相同的地址必须配置相同的名字。
Prefix segments that share the same name must be configured with the same incoming label. 同名的配置必须配置相同的入标签。	Prefix segments that use the same name must use the same incoming label. 配置静态Prefix Segment时，同名的配置必须配置相同的入标签
The destination IP address doesn't match the name of the prefix segment. 删除静态Prefix Segment时，如果携带目的地址必须同配置保持一致。	The destination address specified when you delete a prefix segment must be the same as the destination address specified when the prefix segment was created. 删除静态Prefix Segment时，如果携带目的地址必须同配置保持一致。
The incoming label doesn't match the name of the prefix segment. 删除静态Prefix Segment时，如果携带入标签必须同配置保持一致。	The incoming label specified when you delete a prefix path must be the same as the incoming label specified when the prefix segment was created. 删除静态Prefix Segment时，如果携带入标签必须同配置保持一致。
Not support Static Segment Routing. 不支持Static Segment Routing。	The device must support Static Segment Routing first. 设备须首先支持Static Segment Routing。
The null label must be configured on the outermost layer. 空标签只能配置在最外层。	The implicit null label 3 and explicit null label 0 must be configured on the outermost layer. 隐式空标签3和显示空标签0必须配置在最外层。
Not support Segment Routing Prefix. 不支持Segment Routing Prefix。	The device must support Segment Routing Prefix first. 设备须首先支持Segment Routing Prefix。

## MPLS/TunnelMbfd

Message	Explanation
Number of MPLS BFDs has reached the upper limit. BFD已经满规格了。	Number of MPLS BFDs must be smaller than or equal to the upper limit. MPLS BFD的数量必须小于或等于满规格的数量。
Not support MPLS BFD. 不支持MPLS BFD。	The product must support MPLS BFD first when getting MPLS/TunnelMbfd table information. 获取MPLS BFD表的信息时，产品必须首先支持MPLS BFD。
The MPLS BFD feature has not been enabled. MPLS BFD还没使能。	Please start MPLS BFD service before getting MPLS/TunnelMbfd table information. 请获取MPLS BFD表之前先启动MPLS BFD进程。

## MPLS/PreferredTunnelPolicies

Message	Explanation
The TunnelID is invalid.	The tunnel configured as the preferred path must be valid.

无效的隧道/捆绑隧道 ID	优选隧道引用的隧道必须是有效的。
The PolicyName is invalid. 无效的隧道/捆绑隧道名称。	The PolicyName length must be between 0 to 20. 隧道名称有效长度范围必须在0-20。
The TunnelType is invalid. 无效的隧道/捆绑隧道类型	The TunnelType must be tunnel or tunnel-bundle. 隧道类型必须是tunnel或者tunnel-bundle。

## MPLS/MPLSVRF

Message	Explanation
MPLS VPN statistics not supported. 不支持MPLS VPN统计功能。	To get MPLS/MPLS VRF table information of the product, the product must support MPLS VPN statistics. 获取MPLS VRF表的信息时，产品必须首先支持MPLS VPN统计功能。

# MQC

## MQC/ClearGlobalStatistic

This table is used to clear statistics of a global QoS policy.

### XML structure

```
<MQC>
  <ClearGlobalStatistic>
    <Application>
      <Direction></Direction>
      <Clear></Clear>
      <PolicyType></PolicyType>
    </Application>
  </ClearGlobalStatistic>
</MQC>
```

### Table description

Item	Description
Feature name	MQC
Table name	ClearGlobalStatistic
Table type	Multi-instance table
Row name	Application
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Direction	Application direction	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Inbound.</li><li>1—Outbound.</li></ul>	If you do not specify this column, All directions are cleared.
Clear	Clear global policy statistics	N/A	This column must be empty	Required.
PolicyType	Policy type	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Common policy.</li><li>1—Remarking policy.</li><li>2—Accounting policy.</li><li>3—Mirroring policy.</li></ul>	If you do not specify this column, common policies are cleared.

# MQC/ClearVlanStatistic

This table is used to clear statistics of the QoS policy applied in VLAN.

## XML structure

```
<MQC>
  <ClearVlanStatistic>
    <Application>
      <VLANID></VLANID>
      <Direction></Direction>
      <Clear></Clear>
    </Application>
  </ClearVlanStatistic>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	ClearVlanStatistic
Table type	Multi-instance table
Row name	Application
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	If you do not specify this column, All VLANs are cleared.
Direction	Application direction	N/A	Enumeration: <ul style="list-style-type: none"><li>0—Inbound.</li><li>1—Outbound.</li></ul>	If you do not specify this column, All directions are cleared.
Clear	Clear VLAN policy statistics	N/A	This column must be empty	Required.

# MQC

## MQC/Classifiers

This table contains information about classifiers.

### XML structure

```
<MQC>
  <Classifiers>
    <Classifier>
      <Name></Name>
      <Operator></Operator>
      <Description></Description>
    </Classifier>
  </Classifiers>
</MQC>
```

### Table description

Item	Description
Feature name	MQC
Table name	Classifiers
Table type	Multi-instance table
Row name	Classifier
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Traffic classifier name	Index	String. Length: 1 to 31 characters.	N/A
Operator	Match operator of the traffic classifier	N/A	Enumeration: <ul style="list-style-type: none"><li>1—And.</li><li>2—Or.</li></ul>	When the <b>Operator</b> column is <b>1</b> , the traffic classifier matches the packets that match all its match criteria.  When the <b>Operator</b> column is <b>2</b> , the traffic classifier matches the packets that match any of its match criteria.  If this column is not

Column name	Column description	Column type	Data type and restrictions	Remarks
				configured, the default value is 1.
Description	Traffic classifier description.	N/A	String. Length: 1 to 127 characters.	N/A

## MQC/Behaviors

This table contains information about behavior.

### XML structure

```

<MQC>
  <Behaviors>
    <Behavior>
      <Name></Name>
    </Behavior>
  </Behaviors>
</MQC>

```

### Table description

Item	Description
Feature name	MQC
Table name	Behaviors
Table type	Multi-instance table
Row name	Behavior
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A

## MQC/Policies

This table contains information about policy.

## XML structure

```
<MQC>
  <Policies>
    <Policy>
      <Name></Name>
      <Type></Type>
    </Policy>
  </Policies>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Policy name	Index	String. Length: 1 to 31 characters.	N/A
Type	Policy type	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Common policy (default).</li><li>• <b>1</b>—Remarking policy.</li><li>• <b>2</b>—Accounting policy.</li><li>• <b>3</b>—Mirroring policy.</li></ul>	This column cannot be modified.

## MQC/CBMaps

This table contains information about classifier-behavior association.

## XML structure

```
<MQC>
  <CBMaps>
    <CBMap>
      <PolicyName></PolicyName>
      <ClassifierName></ClassifierName>
```

```

    <BehaviorName></BehaviorName>
    <Mode></Mode>
    <InsertBeforeClassifierName></InsertBeforeClassifierName>
  </CBMap>
</CBMaps>
</MQC>

```

## Table description

Item	Description
Feature name	MQC
Table name	CBMaps
Table type	Multi-instance table
Row name	CBMap
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Policy name	Index	String. Length: 1 to 31 characters.	N/A
ClassifierName	Traffic classifier name	Index	String. Length: 1 to 31 characters.	N/A
BehaviorName	Traffic behavior name	N/A	String. Length: 1 to 31 characters.	Required.
Mode	Mode of the classifier-behavior association	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—None.</li> <li><b>2</b>—Qppb.</li> <li><b>16</b>—Dcbx.</li> </ul>	Required. When the <b>Mode</b> column is <b>0</b> , there is no restriction on the classifier-behavior association. When the <b>Mode</b> column is <b>2</b> , the classifier-behavior association applies only to QPPB. When the <b>Mode</b> column is <b>16</b> , the classifier-behavior association applies only to the Data Center Bridging Exchange Protocol (DCBX).
InsertBeforeClassifierName	Insert the new traffic class before an existing traffic class.	N/A	String. Length: 1 to 31 characters	N/A

# MQC/Rules

This table contains information about rule.

## XML structure

```
<MQC>
  <Rules>
    <Rule>
      <ClassName></ClassName>
      <RuleID></RuleID>
      <Not></Not>

```

## Table description

Item	Description
Feature name	MQC

Table name	Rules
Table type	Multi-instance table
Row name	Rule
Restrictions	Only one match column can be configured once, Rule cannot be modified by ID. The <b>delete/remove</b> operation can only carry the ClassName and RuleID columns.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClassName	Traffic classifier name	Index	String. Length: 1 to 31 characters.	N/A
RuleID	ID of the rule	Index	Unsigned integer	When the operation type of the message is <b>create</b> , <b>RuleID</b> can be configured as 4294967295 or the <b>NextRuleID</b> of the <b>Classifiers</b> table.
Not	Whether the rule is used as an unsuccessful match criterion	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes.</li> <li><b>false</b>—No.</li> </ul>	Required.
PktType	Packet type to be matched.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Any.</li> <li><b>2</b>—IP.</li> <li><b>3</b>—IPv6.</li> <li><b>4</b>—Arp.</li> <li><b>5</b>—Bt.</li> <li><b>6</b>—Bridge.</li> <li><b>7</b>—Route.</li> </ul>	<p>When the <b>PktType</b> column is <b>1</b>, the rule matches all packets.</p> <p>When the <b>PktType</b> column is <b>2</b>, the rule matches IPv4 packets.</p> <p>When the <b>PktType</b> column is <b>3</b>, the rule matches IPv6 packets.</p> <p>When the <b>PktType</b> column is <b>4</b>, the rule matches ARP packets.</p> <p>When the <b>PktType</b> column is <b>5</b>, the rule matches BitTorrent packets.</p> <p>When the <b>PktType</b> column is <b>6</b>, the rule matches Layer 2 forwarded packets.</p> <p>When the <b>PktType</b> column is <b>7</b>, the rule matches Layer 3 forwarded packets.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
Acl	Match ACL	Data structure	Members include: <ul style="list-style-type: none"> <li>• <b>IPv4Acl.</b></li> <li>• <b>IPv6Acl.</b></li> <li>• <b>Inner.</b></li> </ul>	IPv4Acl and IPv6Acl cannot be specified together. For information about how to configure, see "Appendix."
IPv4Acl	Match IPv4 ACL.	N/A	<ul style="list-style-type: none"> <li>• <b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li> <li>• <b>ACL number:</b> An unsigned integer in the range of 2000 to 5999.</li> </ul>	An ACL name must start with an English letter and cannot be <b>all</b> .
IPv6Acl	Match IPv6 ACL.	N/A	<ul style="list-style-type: none"> <li>• <b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li> <li>• <b>ACL number:</b> An unsigned integer in the range of 2000 to 3999.</li> </ul>	An ACL name must start with an English letter and cannot be <b>all</b> .
Inner	Match inner ACL.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Conform.</li> <li>• <b>false</b>—Not conform.</li> </ul>	Matches the entries that describe the inner flags of a packet in an ACL.
MACAcl	Match MAC ACL.	N/A	<ul style="list-style-type: none"> <li>• <b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li> <li>• <b>ACL number:</b> An unsigned integer in the range of 4000 to 4999.</li> </ul>	An ACL name must start with an English letter and cannot be <b>all</b> .
UserAcl	Match User ACL.	N/A	<ul style="list-style-type: none"> <li>• <b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li> <li>• <b>ACL number:</b> An unsigned integer in the range of 5000 to 5999.</li> </ul>	An ACL name must start with an English letter and cannot be <b>all</b> .
IPv4Acl	Match IPv4 ACL.	N/A	<ul style="list-style-type: none"> <li>• <b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li> <li>• <b>ACL number:</b> An unsigned integer in the range of 2000 to 5999.</li> </ul>	An ACL name must start with an English letter and cannot be <b>all</b> . This column and Acl cannot be specified together. For information about how to configure, see "Appendix."
IPv6Acl	Match IPv6 ACL.	N/A	<ul style="list-style-type: none"> <li>• <b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li> <li>• <b>ACL number:</b> An unsigned integer in the range of 2000 to 3999.</li> </ul>	An ACL name must start with an English letter and cannot be <b>all</b> . This column and Acl cannot be specified together. For information about how

Column name	Column description	Column type	Data type and restrictions	Remarks
				to configure, see "Appendix."
SrcMac	Match a source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
DestMac	Match a destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
ServiceVLANID	Match the service provider VLAN ID.	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string must not end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. you can specify up to 10 VLAN IDs or VLAN ID ranges.
CustomerVLANID	Match the customer VLAN ID.	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string must not end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. you can specify up to 10 VLAN IDs or VLAN ID ranges.
ServiceDot1p	Match the 802.1p priority of the service provider network.	N/A	Unsigned integer. Value range: 0 to 7.	You can specify up to 8 <b>ServiceDot1p</b> for a rule
CustomerDot1p	Match the 802.1p priority of the customer network.	N/A	Unsigned integer. Value range: 0 to 7.	You can specify up to 8 <b>CustomerDot1p</b> for a rule
Exp	Match MPLS EXP value.	N/A	Unsigned integer. Value range: 0 to 7.	You can specify up to 8 <b>Exp</b> for a rule
InnerExp	Match inner MPLS EXP value.	N/A	Unsigned integer. Value range: 0 to 7.	You can specify up to 8 <b>InnerExp</b> for a rule
IPPrecedence	Match IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	You can specify up to 8 <b>IPPrecedence</b> for a rule
LocalPrecedence	Match local precedence.	N/A	Unsigned integer. Value range: 0 to 7.	You can specify up to 8 <b>LocalPrecedence</b> for a rule

Column name	Column description	Column type	Data type and restrictions	Remarks
Dscp	Match DSCP values.	N/A	Unsigned integer. Value range: 0 to 63.	You can specify up to 63 <b>Dscp</b> for a rule
DropPriority	Match drop precedence.	N/A	Unsigned integer. Value range: 0 to 2.	You can specify up to 3 <b>DropPriority</b> for a rule
QoSLocalID	Match local QoS ID.	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
MplsLabel	Match MPLS label.	N/A	Unsigned integer. Value range: 0 to 1048575.	You can specify up to 8 <b>MplsLabel</b> for a rule
InnerMplsLabel	Match inner MPLS label.	N/A	Unsigned integer. Value range: 0 to 1048575.	You can specify up to 8 <b>InnerMplsLabel</b> for a rule
PktLength	Match packet length.	Data structure	Members include: <ul style="list-style-type: none"> <li><b>Min.</b></li> <li><b>Max.</b></li> </ul>	N/A
Min	The minimum packet length in bytes.	N/A	Unsigned integer. Value range: 1 to 65535.	<b>Min</b> cannot be bigger than <b>Max</b> .
Max	The maximum packet length in bytes.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
MplsLabelRange	Match MPLS label range.	Data structure	Members include: <ul style="list-style-type: none"> <li><b>LabelStart.</b></li> <li><b>LabelEnd.</b></li> </ul>	The two members must both be specified.
LabelStart	Start Label Value.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
LabelEnd	End Label Value.	N/A	Unsigned integer. Value range: 0 to 1048575.	<b>LabelEnd</b> must be bigger than <b>LabelStart</b> .
InnerMplsLabelRange	Match inner MPLS label range.	Data structure	Members include: <ul style="list-style-type: none"> <li><b>InnerLabelStart.</b></li> <li><b>InnerLabelEnd.</b></li> </ul>	The two members must both be specified.
InnerLabelStart	Start Label Value.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
InnerLabelEnd	End Label Value.	N/A	Unsigned integer. Value range: 0 to 1048575.	<b>InnerLabelEnd</b> must be bigger than <b>InnerLabelStart</b> .
RTPPort	Match RTP protocol port range.	Data structure	Members include: <ul style="list-style-type: none"> <li><b>PortStart.</b></li> <li><b>PortEnd.</b></li> </ul>	The two members must both be specified.
PortStart	Start RTP port number	N/A	Unsigned integer.	<b>PortStart</b> cannot be bigger than <b>PortEnd</b> .

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 2000 to 65535.	
PortEnd	End RTP port number	N/A	Unsigned integer. Value range: 2000 to 65535.	N/A
Application	Match application layer protocol.	N/A	String, case-insensitive. Length: 1 to 63 characters.	APR/Applications/Application/AppName.
ApplicationGroup	Match application group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	APR/AppGroups/GroupInfo/GroupName.
Vxlan	Match vxlan ID.	N/A	Unsigned integer. Value range: 0 to 16777215.	It must be empty when the VxlanAny column is <b>true</b> .
VxlanAny	Match any vxlan ID.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Conform.</li> <li><b>false</b>—Not conform.</li> </ul>	The Vxlan column must be specified when the VxlanAny column is <b>false</b> .
TunnelID	Match tunnel ID.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
VLANTag	Match VLAN tagging mode	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—None.</li> <li><b>2</b>—Single-tagged.</li> <li><b>4</b>—Double-tagged.</li> </ul>	N/A
TunnelDscpList	Match tunnel DSCP values.	Data structure	Members include: <ul style="list-style-type: none"> <li><b>TunnelDscp</b>.</li> </ul>	N/A
TunnelDscp	Match tunnel DSCP values.	N/A	Unsigned integer. Value range: 0 to 63.	You can specify up to 8 <b>Dscp</b> for a rule
IFA	Inband Flow Analyzer	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—tcp.</li> <li><b>2</b>—udp.</li> </ul>	N/A
OutBoundInterface	Match output interface	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Mpls	Mpls type	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—l2.</li> <li><b>2</b>—l3.</li> </ul>	N/A
Nvgre	Match NVGRE.	N/A	Hexadecimal string. Length: 4 to 6 characters. Value range: 1000 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			FFFFFFE.	
NvgreAny	Match any NVGRE ID	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Conform.</li> <li><b>false</b>—Not conform.</li> </ul>	The Nvgre column must be specified when the NvgreAny column is <b>false</b> .

## MQC/Remark

This table contains information about marking action.

## XML structure

```

<MQC>
  <Remark>
    <Action>
      <BehaviorName></BehaviorName>
      <Type></Type>
      <Color></Color>

</MQC>

```

## Table description

Item	Description
Feature name	MQC
Table name	Redirect
Table type	Multi-instance table
Row name	Action
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
Type	Type of redirect	Index	Enumeration: <ul style="list-style-type: none"> <li>1—CPU.</li> <li>2—Interface.</li> <li>3—VSI.</li> <li>4—FailoverGroup.</li> <li>6—Nexthop</li> <li>7—MonitorGroup</li> </ul>	When the <b>Type</b> column is <b>1</b> , redirect traffic to CPU. When the <b>Type</b> column is <b>2</b> , redirect traffic to an interface. When the <b>Type</b> column is <b>3</b> , redirect traffic to a virtual station interface. When the <b>Type</b> column is <b>4</b> , redirect traffic to a failover group. When the <b>Type</b> column is <b>6</b> , redirect traffic to nexthop. When the <b>Type</b> column is

Column name	Column description	Column type	Data type and restrictions	Remarks
				<b>7</b> , redirect traffic to monitor group.
IfIndex	Interface index	Index	Unsigned integer.	The value of this column is valid if <b>Type</b> is <b>2</b> . Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
TrackOap	Enable the traffic redirecting action to collaborate with OAP	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable.</li> </ul>	The value of this column is valid if <b>Type</b> is <b>2</b> .
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	The value of this column is valid if <b>Type</b> is <b>2</b> .
VSI	Name of VSI	N/A	String. Length: 1 to 31 characters.	Required when the <b>Type</b> column is <b>3</b> .
Nexthop	Nexthop	N/A	N/A	N/A
VRF	VRF instance name	N/A	String. Length: 0 to 31 characters.	The value of this column is valid if <b>Type</b> is <b>6</b> .
IPAddr	Nexthop ip address	N/A	String, dotted decimal notation. Or Hexadecimal string, colon-separated. Length: 1 to 46 characters.	The value of this column is valid if <b>Type</b> is <b>6</b> . For example, 1.1.1.1, or 1:1::1:1.
IPAddrBackup	Nexthop ip address	N/A	String, dotted decimal notation. Or Hexadecimal string, colon-separated. Length: 1 to 46 characters.	The value of this column is valid if <b>Type</b> is <b>6</b> . For example, 1.1.1.1, or 1:1::1:1.
Track	Track	N/A	Unsigned integer. Value range: 1 to 1024.	The value of this column is valid if <b>Type</b> is <b>6</b> .
TrackBackup	Track	N/A	Unsigned integer. Value range: 1 to 1024.	The value of this column is valid if <b>Type</b> is <b>6</b> .
FailoverGroup	Failover group	Data structure	Members include: <ul style="list-style-type: none"> <li>GroupName.</li> <li>Channel.</li> </ul>	N/A
GroupName	Failover group name	N/A	String. Length: 1 to 63 characters.	The value of this column is valid if <b>Type</b> is <b>4</b> .
Channel	Channel	N/A	Unsigned integer. Value range: 0 to 1.	The value of this column is valid if <b>Type</b> is <b>4</b> . Some versions don't

Column name	Column description	Column type	Data type and restrictions	Remarks
				support this column. For relevant information, see the XSD document of your product.
MonitorGroup ID	Monitor group ID.	N/A	Unsigned integer.	N/A

## MQC/Filter

This table contains information about filtering action.

## XML structure

```

<MQC>
  <Filter>

BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
Type	Type of mirror	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Interface.</li> <li>2—CPU.</li> <li>3—VLAN.</li> <li>4—Slot.</li> <li>5—Local.</li> <li>6—GRPC.</li> <li>7—IFA.</li> </ul>	When the <b>Type</b> column is <b>1</b> , mirror to an interface. When the <b>Type</b> column is <b>2</b> , mirror to CPU. When the <b>Type</b> column is <b>3</b> , mirror to VLAN. When the <b>Type</b> column is <b>4</b> , traffic is mirrored to a board. When the <b>Type</b> column is <b>5</b> , traffic is mirrored to the board on which the mirrored traffic is received or sent out. When the <b>Type</b> column is <b>6</b> , traffic is mirrored to GRPC. When the <b>Type</b> column is <b>7</b> , traffic is mirrored to inband flow analyzer processor.
IfIndex	Interface index	Index	Unsigned integer.	The value of this column is valid if <b>Type</b> is 1. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr

Column name	Column description	Column type	Data type and restrictions	Remarks
				NETCONF XML API Configuration Reference.
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	The value of this column is valid if <b>Type</b> is 3.
IP	Specify IP for mirroring to interface with GRE format	Data structure	Members include: <ul style="list-style-type: none"> <li>• DestIP</li> <li>• SrcIP</li> <li>• DSCP</li> <li>• VLAN</li> <li>• VRF</li> </ul>	DestIP and SrcIP must both be specified.  DSCP, VLAN and VRF can be optionally specified when DestIP and SrcIP are configured.  This structure is valid and optional if Type is 1.
DestIP	Destination IP address	N/A	String, dotted decimal notation.	Example: 10.153.93.54.
SrcIP	Source IP address	N/A	String, dotted decimal notation.	Example: 10.153.93.60.
DSCP	DSCP value	N/A	Unsigned integer. Value range: 0 to 63.	N/A
VLAN	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VRF	VRF instance name	N/A	String. Length: 1 to 31 characters.	N/A
Mac	Specify destination MAC for mirroring to interface	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.  The value of this column is valid and optional if <b>Type</b> is 1.
Board	Specify Board for mirroring to a board.	Data structure	Members include: <ul style="list-style-type: none"> <li>• Chassis</li> <li>• Slot</li> <li>• BackupChassis</li> <li>• BackupSlot</li> </ul>	If the device is a distributed device in standalone mode or a centralized IRF device, the slot must be specified. If the device supports mirroring packets to a backup slot, the BackupSlot can be specified.  If the device is a distributed device in IRF mode, the chassis and slot must both be specified. If the device supports mirroring packets to a backup slot, the BackupChassis and BackupSlot can be specified.  This structure is valid and optional if <b>Type</b> is 4.
Chassis	Chassis number	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 0 to 65535	
Slot	Slot number	N/A	Unsigned integer. Value range: 0 to 65535	N/A
BackupChassis	Backup chassis number	N/A	Unsigned integer. Value range: 0 to 65535	N/A
BackupSlot	Backup slot number	N/A	Unsigned integer. Value range: 0 to 65535	N/A
SamplerName	Sampler name	N/A	String. Length: 1 to 31 characters.	The value of this column depends on the device model. The value of this column is valid and optional if <b>Type</b> is 1, 4, 5 or 7.
Truncation	Truncation packets	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Conform.</li> <li><b>false</b>—Not conform.</li> </ul>	The value of this column is valid if <b>Type</b> is 1.
EncapType	Specify encapsulation type for mirrored packet	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—VLAN encapsulation.</li> </ul>	The value of this column is valid if <b>Type</b> is 7.

## MQC/MirrorDynamicIF

This table contains information about mirroring packets to a dynamic interface, which is found by IP address.

### XML structure

```

<MQC>
  <MirrorDynamicIF>
    <Action>
      <BehaviorName></BehaviorName>
      <DestIP></DestIP>
      <SrcIP></SrcIP>
      <DSCP></DSCP>
      <VLAN></VLAN>
      <VRF></VRF>
      <Mac></Mac>
      <SamplerName></SamplerName>
      <Truncation></Truncation>
    </Action>
  </MirrorDynamicIF>
</MQC>

```

## Table description

Item	Description
Feature name	MQC
Table name	MirrorDynamicIF
Table type	Multi-instance table
Row name	Action
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
DestIP	Destination IP address	Index	String, dotted decimal notation.	Example: 10.153.93.54.
SrcIP	Source IP address	Index	String, dotted decimal notation.	Example: 10.153.93.60.
DSCP	DSCP value	N/A	Unsigned integer. Value range: 0 to 63.	N/A
VLAN	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VRF	VRF instance name	N/A	String. Length: 1 to 31 characters.	N/A
Mac	Specify destination MAC	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
SamplerName	Sampler name	N/A	String. Length: 1 to 31 characters.	The value of this column depends on the device model.
Truncation	Truncation packets	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Conform.</li><li><b>false</b>—Not conform.</li></ul>	N/A

## MQC/GlobalPolicy

This table contains information about global QoS policies.

## XML structure

<MQC>

```

<GlobalPolicy>
  <Application>
    <Direction></Direction>
    <PolicyName></PolicyName>
  </Application>
</GlobalPolicy>
</MQC>

```

## Table description

Item	Description
Feature name	MQC
Table name	GlobalPolicy
Table type	Multi-instance table
Row name	Application
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Direction	Application direction	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Inbound.</li> <li>1—Outbound.</li> </ul>	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	Required.

## MQC/VlanPolicy

This table contains information about QoS policies applied to VLANs.

## XML structure

```

<MQC>
  <VlanPolicy>
    <Application>
      <VLANID></VLANID>
      <Direction></Direction>
      <PolicyName></PolicyName>
    </Application>
  </VlanPolicy>
</MQC>

```

## Table description

Item	Description
Feature name	MQC
Table name	VlanPolicy
Table type	Multi-instance table
Row name	Application
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
Direction	Application direction	Index	Enumeration: <ul style="list-style-type: none"><li>• 0—Inbound.</li><li>• 1—Outbound.</li></ul>	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	Required.

## MQC/InterfacePolicy

This table contains information about QoS policies applied to interfaces.

## XML structure

```
<MQC>
  <InterfacePolicy>
    <Application>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <PolicyName></PolicyName>
      <Mode></Mode>
    </Application>
  </InterfacePolicy>
</MQC>
```

## Table description

Item	Description
Feature name	MQC

Table name	InterfacePolicy
Table type	Multi-instance table
Row name	Application
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Direction	Application direction	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Inbound.</li> <li>1—Outbound.</li> </ul>	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	Required.
Mode	Mode of policies applied to interfaces.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—extension.</li> <li>2—inner-match.</li> </ul>	When the <b>Direction</b> column is 0, configure the Mode. Mode cannot be modified .

## MQC/IfPolicyEnhance

This table contains information about QoS policies applied to interfaces in enhanced mode.

## XML structure

```

<MQC>
  <IfPolicyEnhance>
    <Application>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <PolicyName></PolicyName>
    </Application>
  </IfPolicyEnhance>
</MQC>

```

## Table description

Item	Description
Feature name	MQC
Table name	IfPolicyEnhance
Table type	Multi-instance table
Row name	Application
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Direction	Application direction	Index	Enumeration: <ul style="list-style-type: none"><li>0—Inbound.</li><li>1—Outbound.</li></ul>	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	Required.

## MQC/GlobalPolicyEnhance

This table contains information about global QoS policies in enhanced mode.

## XML structure

```
<MQC>
  <GlobalPolicyEnhance>
    <Application>
      <Direction></Direction>
      <PolicyName></PolicyName>
    </Application>
  </GlobalPolicyEnhance>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	GlobalPolicyEnhance
Table type	Multi-instance table
Row name	Application
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Direction	Application direction	Index	Enumeration: <ul style="list-style-type: none"><li>• 0—Inbound.</li><li>• 1—Outbound.</li></ul>	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	Required.

## MQC/Account

This table contains information about accounting action.

## XML structure

```
<MQC>
  <Account>
    <Action>
      <BehaviorName></BehaviorName>
      <Byte></Byte>
      <Packet></Packet>
    </Action>
  </Account>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	Account
Table type	Multi-instance table

Row name	Action
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
Byte	Accounting in bytes	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Conform.</li> <li><b>false</b>—Not conform.</li> </ul>	N/A
Packet	Accounting in packets	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Conform.</li> <li><b>false</b>—Not conform.</li> </ul>	N/A

## MQC/PostClassify

This table contains information about processing QoS after other modules in the outbound direction of an interface.

## XML structure

```

<MQC>
  <PostClassify>
    <Application>
      <IfIndex></IfIndex>
      <enable></enable>
    </Application>
  </PostClassify>
</MQC>

```

## Table description

Item	Description
Feature name	MQC
Table name	PostClassify
Table type	Multi-instance table
Row name	Application
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
lflIndex	Interface index	Index	Unsigned integer.	Some version support interface name. For relevant information, see the XSD document of your product. For information about lflIndex, see “Appendix” in lfmgr NETCONF XML API Configuration Reference.
enable	Enable	column	Boolean <ul style="list-style-type: none"><li>true—Conform.</li><li>false—Not conform.</li></ul>	N/A

## MQC/GlobalCategoryPolicy

This table contains information about QoS policies of the specified types applied globally.

## XML structure

```
<MQC>
  <GlobalCategoryPolicy>
    <Application>
      <Direction></Direction>
      <PolicyType></PolicyType>
      <PolicyName></PolicyName>
      <PreOrder></PreOrder>
    </Application>
  </GlobalCategoryPolicy>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	GlobalCategoryPolicy
Table type	Multi-instance table
Row name	Application
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Direction	Application direction	Index	Enumeration: <ul style="list-style-type: none"><li>0—Inbound.</li><li>1—Outbound.</li></ul>	N/A
PolicyType	Policy type	Index	Enumeration: <ul style="list-style-type: none"><li>0—Common policy (default).</li><li>1—Remarking policy.</li><li>2—Accounting policy.</li><li>3—Mirroring policy.</li></ul>	N/A
PolicyName	Policy name	Index	String. Length: 1 to 31 characters.	N/A
PreOrder	Application priority	N/A	Unsigned integer. Default: 0.	A greater value indicates a higher matching priority. The value range can be customized for devices. This column cannot be modified.

## MQC/InterfaceCategoryPolicy

This table contains information about QoS policies of the specified types applied to interfaces.

## XML structure

```
<MQC>
  <InterfaceCategoryPolicy>
    <Application>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <PolicyType></PolicyType>
      <PolicyName></PolicyName>
      <PreOrder></PreOrder>
    </Application>
  </InterfaceCategoryPolicy>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	InterfaceCategoryPolicy
Table type	Multi-instance table

Item	Description
Row name	Application
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Direction	Application direction	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Inbound.</li> <li>1—Outbound.</li> </ul>	N/A
PolicyType	Policy type	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Common policy (default).</li> <li>1—Remarking policy.</li> <li>2—Accounting policy.</li> <li>3—Mirroring policy.</li> </ul>	N/A
PolicyName	Policy name	Index	String. Length: 1 to 31 characters.	N/A
PreOrder	Application priority	N/A	Unsigned integer. Default: 0.	A greater value indicates a higher matching priority. The value range can be customized for devices. This column cannot be modified.

## MQC/Telemetry

This table contains information about inband telemetry.

## XML structure

```

<MQC>
  <Telemetry>
    <DeviceID></DeviceID>

```

```

<Collector>
  <SrcIP></SrcIP>
  <DstIP></DstIP>
  <SrcPort></SrcPort>
  <DstPort></DstPort>
  <VLANID></VLANID>
</Collector>
</Telemetry>
</MQC>

```

## Table description

Item	Description
Feature name	MQC
Table name	Telemetry
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DeviceID	Device address	N/A	String, dotted decimal notation.	Example: 10.153.93.60.
Collector	Telemetry collector	N/A	Members include: <ul style="list-style-type: none"> <li>SrcIP</li> <li>DstIP</li> <li>SrcPort</li> <li>DstPort</li> <li>VLANID</li> </ul>	You must specify the SrcIP, DstIP, SrcPort and DstPort when you remove or delete the telemetry collector.  You must specify the SrcIP, DstIP, SrcPort and DstPort when you replace the telemetry collector, or when you merge or create the telemetry collector that does not exist.
SrcIP	Source IP address	N/A	String, dotted decimal notation.	Example: 10.153.93.60.
DstIP	Destination IP address	N/A	String, dotted decimal notation.	Example: 10.153.93.54.
SrcPort	Source port	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPort	Destination port	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
VLANID	VLAN ID	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 1 to 4094.	

## MQC/TelemetryRoles

This table contains information about inband telemetry role.

### XML structure

```

<MQC>
  <TelemetryRoles>
    <TelemetryRole>
      <IfIndex></IfIndex>
      <Role></Role>
    </TelemetryRole>
  </TelemetryRoles>
</MQC>

```

### Table description

Item	Description
Feature name	MQC
Table name	TelemetryRoles
Table type	Multi-instance table
Row name	TelemetryRole
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Role	Telemetry role	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Ingress.</li> <li>2—Transit.</li> <li>3—Egress</li> </ul>	N/A

# MQC/TelemetryLoopbacks

This table contains information about inband telemetry loopback interfaces.

## XML structure

```
<MQC>
  <TelemetryLoopbacks>
    <TelemetryLoopback>
      <IfIndex></IfIndex>
      <Loopback></Loopback>
    </TelemetryLoopback>
  </TelemetryLoopbacks>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	TelemetryLoopbacks
Table type	Multi-instance table
Row name	TelemetryLoopback
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Loopback	Telemetry loopback	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Conform.</li><li><b>false</b>—Not conform.</li></ul>	N/A

# MQC/TelemetryGlobalEnable

This table contains information about inband telemetry status.

## XML structure

```
<MQC>
  <TelemetryGlobalEnable>
```

```

    <Enable></Enable>
  </TelemetryGlobalEnable>
</MQC>

```

## Table description

Item	Description
Feature name	MQC
Table name	TelemetryGlobalEnable
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	no

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Enable	Whether to enable IFA	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable(default).</li> <li><b>false</b>—Disable.</li> </ul>	N/A

## MQC/TelemetryAction

This table contains information about inband telemetry actions.

## XML structure

```

<MQC>
  <TelemetryActions>
    <TelemetryAction>
      <IfIndex></IfIndex>
      <IFAIId></IFAIId>
      <Match>
        <AclType></AclType>
        <Acl></Acl>
        <Loopback></Loopback>
      </Match>
      <Action>
        <Md></Md>
        <Mirror></Mirror>
        <SamplerName></SamplerName>
        <Drop></Drop>
      </Action>
    </TelemetryAction>
  </TelemetryActions>
</MQC>

```

```

    </TelemetryActions>
</MQC>

```

## Table description

Item	Description
Feature name	MQC
Table name	TelemetryActions
Table type	Multi-instance table
Row name	TelemetryAction
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
IFAIId	IFA action ID	Index	Unsigned integer. Value range: 1 to 65535.	N/A
Match	Telemetry match	N/A	Members include: <ul style="list-style-type: none"> <li>• AclType</li> <li>• Acl</li> <li>• Loopback</li> </ul>	N/A
AclType	ACL type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—IPv4Acl.</li> <li>• 2—IPv6Acl.</li> <li>• 3—MACAcl.</li> <li>• 4—UserAcl.</li> </ul>	You must specify the Acl when you specify the AclType.
Acl	ACL name or ACL number.	N/A	<ul style="list-style-type: none"> <li>• <b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li> <li>• <b>ACL number:</b> An unsigned integer in the range based on AclType.</li> </ul>	An ACL name must start with an English letter and cannot be <b>all</b> . You must specify the AclType when you specify the Acl.
Loopback	Telemetry loopback	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Conform.</li> <li>• <b>false</b>—Not conform.</li> </ul>	If this column is not configured, the default value is <b>false</b> .

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Telemetry action	N/A	Members include: <ul style="list-style-type: none"> <li>Md</li> <li>Mirror</li> <li>SamplerName</li> <li>Drop</li> </ul>	You must specify one member at least.
Md	Add metadata	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Conform.</li> <li><b>false</b>—Not conform.</li> </ul>	If this column is not configured, the default value is <b>false</b> .
Mirror	Mirror packets	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Conform.</li> <li><b>false</b>—Not conform.</li> </ul>	If this column is not configured, the default value is <b>false</b> .
SamplerName	Sampler name	N/A	String. Length: 1 to 31 characters.	You must specify the Mirror when you specify the SamplerName.
Drop	Drop original packets	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Conform.</li> <li><b>false</b>—Not conform.</li> </ul>	If this column is not configured, the default value is <b>false</b> .

## MQC/OverheadLayer

This table contains information about processing QoS in which overhead layer type of packet considered.

### XML structure

```

<MQC>
  <OverheadLayer>
    <Application>
      <Layer></Layer>
    </Application>
  </OverheadLayer>
</MQC>

```

### Table description

Item	Description
Feature name	MQC
Table name	OverheadLayer
Table type	Multi-instance table
Row name	Application
Restrictions	None

Support for row creation and deletion	No
---------------------------------------	----

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Layer	Type of overhead layer	column	Enumeration: <ul style="list-style-type: none"> <li>1—Link.</li> <li>2—Physics.</li> </ul>	N/A

## MQC/SysTruncation

This table contains information about global truncation.

## XML structure

```

<MQC>
  <SysTruncation>
    <TruncationLen></TruncationLen>
  </SysTruncation>
</MQC>

```

## Table description

Item	Description
Feature name	MQC
Table name	SysTruncation
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TruncationLen	Truncation length.	column	Unsigned integer.	The value depends on device.

## MQC/MonitorGroup

This table contains information about monitor group.

## XML structure

```
<MQC>
  <MonitorGroup>
    <Group>
      <GroupID></GroupID>
    </Group>
  </MonitorGroup>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	MonitorGroup
Table type	Multi -instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	Monitor group id.	Index	Unsigned integer.	The value depends on device.

## MQC/MonitorPort

This table contains information about monitor groups applied to interfaces.

## XML structure

```
<MQC>
  <MonitorPort>
    <MonitorPort>
      <GroupID></GroupID>
      <IfIndex></IfIndex>
    </MonitorPort>
  </MonitorPort>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	MonitorPort
Table type	Multi -instance table
Row name	MonitorPort
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	Monitor group id.	Index	Unsigned integer.	The value depends on device.
IfIndex	Interface index.	Index	Unsigned integer.	N/A

## MQC/Strip

This table contains information about strip.

## XML structure

```
<MQC>
  <Strip>
    <Strip>
      <BehaviorName></BehaviorName>
      <Type></Type>
      <OffsetValue></OffsetValue>
      <HeadLength></HeadLength>
      <DstMACAddr></DstMACAddr>
      <SrcMACAddr></SrcMACAddr>
      <VlanID></VlanID>
      <Dot1p></Dot1p>
      <EthTypeID></EthTypeID>
    </Strip>
  </Strip>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	Strip
Table type	Multi -instance table
Row name	Strip
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name.	Index	String. Length: 1 to 31 characters.	N/A
Type	Strip type.	column	Enumeration: <ul style="list-style-type: none"> <li>0—strip header.</li> <li>1—top-most-vlan.</li> <li>2—position I2.</li> <li>3—position I3.</li> <li>4—position I4.</li> <li>5—vxlan.</li> <li>6—nvgre.</li> <li>7—gre.</li> </ul>	Required.
OffsetValue	Strip offset value.	column	Unsigned integer.	The value depends on device.
HeadLength	Length of a GRE header	column	Unsigned integer Value range: 4 to 16.	The value depends on user configuration. The value of this column is valid if the type is gre.
DstMACAddr	Destination MAC address	column	Six groups of two hexadecimal digits, hyphen-separated.	DstMACAddr, SrcMACAddr, and EthTypeID must be added together. The value of this column is valid if the type is gre.
SrcMACAddr	Source MAC address	column	Six groups of two hexadecimal digits, hyphen-separated.	DstMACAddr, SrcMACAddr, and EthTypeID must be added together. The value of this column is valid if the type is gre.
VlanID	VLAN tag ID	column	Unsigned integer. Value range: 1 to 4094.	The value of this column is valid if the type is gre.

Column name	Column description	Column type	Data type and restrictions	Remarks
Dot1p	802.1p CoS	column	Unsigned integer. Value range: 0 to 7.	The value of this column is valid if the type is gre.
EthTypeID	Ethernet type ID	column	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	The value of this column is valid if the type is gre.

## MQC/Nest

This table contains information about nest.

## XML structure

```

<MQC>
  <Nest>
    <Nest>
      <BehaviorName></BehaviorName>
      <VlanID></VlanID>
      <Dot1p></Dot1p>
    </Nest>
  </Nest>
</MQC>

```

## Table description

Item	Description
Feature name	MQC
Table name	Nest
Table type	Multi -instance table
Row name	Nest
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name.	Index	String. Length: 1 to 31 characters.	N/A
VlanID	Vlan id.	column	Unsigned integer. Value range: 1 to 4094.	Required.

Column name	Column description	Column type	Data type and restrictions	Remarks
Dot1p	802.1p COS.	column	Unsigned integer. Value range: 0 to 7.	N/A

## MQC/BehaviorTruncation

This table contains information about truncation of behavior.

### XML structure

```

<MQC>
  <BehaviorTruncation>
    <Truncation>
      <BehaviorName></BehaviorName>
      <Truncation></Truncation>
    </Truncation>
  </BehaviorTruncation>
</MQC>

```

### Table description

Item	Description
Feature name	MQC
Table name	BehaviorTruncation
Table type	Multi -instance table
Row name	Truncation
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name.	Index	String. Length: 1 to 31 characters.	N/A
Truncation	Whether to truncation.	column	Boolean <ul style="list-style-type: none"> <li>true—Truncation.</li> <li>false—Not truncation.</li> </ul>	Required.

## MQC/TimeStamp

This table contains information about time stamp.

## XML structure

```
<MQC>
  <TimeStamp>
    <TimeStamp>
      <BehaviorName></BehaviorName>
      <DstMACAddr></DstMACAddr>
      <SrcMACAddr></SrcMACAddr>
      <EthType></EthType>
    </TimeStamp>
  </TimeStamp>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	TimeStamp
Table type	Multi -instance table
Row name	TimeStamp
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name.	Index	String. Length: 1 to 31 characters.	N/A
DstMACAddr	Destination MAC address.	column	Six groups of two hexadecimal digits, hyphen-separated..	DstMACAddr, SrcMACAddr and EthType must be add together and required.
SrcMACAddr	Source MAC address.	column	Six groups of two hexadecimal digits, hyphen-separated..	Required.
EthType	Ethtype id of timestamp.	column	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF..	Required.

## MQC/VSI Policy

This table contains information about QoS policies applied to VSI.

## XML structure

```
<MQC>
  <VSIPolicy>
    <Application>
      <VSI></VSI>
      <Direction></Direction>
      <PolicyName></PolicyName>
    </Application>
  </VSIPolicy>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	VSIPolicy
Table type	Multi-instance table
Row name	Application
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VSI	Name of VSI	index	String. Length: 1 to 31 characters.	N/A
Direction	Application direction	Index	Enumeration: <ul style="list-style-type: none"><li>• 0—Inbound.</li><li>• 1—Outbound.</li></ul>	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	N/A

## MQC/AccountInterfacePolicy

This table contains information about QoS accounting policies applied to interfaces.

## XML structure

```
<MQC>
  <AccountInterfacePolicy>
    <Application>
      <IfIndex></IfIndex>
    </Application>
  </AccountInterfacePolicy>
</MQC>
```

```

    <Direction></Direction>
    <PolicyName></PolicyName>
    <Mode></Mode>
  </Application>
</AccountInterfacePolicy>
</MQC>

```

## Table description

Item	Description
Feature name	MQC
Table name	AccountInterfacePolicy
Table type	Multi-instance table
Row name	Application
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
Direction	Application direction	Index	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Inbound.</li> <li><b>1</b>—Outbound.</li> </ul>	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	Required.
Mode	Mode of policies applied to interfaces.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—extension.</li> <li><b>2</b>—inner-match.</li> </ul>	When the <b>Direction</b> column is <b>0</b> , configure the Mode.Mode cannot be modified .

## MQC/RemarkInterfacePolicy

This table contains information about QoS remarking policies applied to interfaces.

## XML structure

```

<MQC>
  <RemarkInterfacePolicy>
    <Application>
      <IfIndex></IfIndex>
    </Application>
  </RemarkInterfacePolicy>
</MQC>

```

```

    <Direction></Direction>
    <PolicyName></PolicyName>
    <Mode></Mode>
  </Application>
</RemarkInterfacePolicy>
</MQC>

```

## Table description

Item	Description
Feature name	MQC
Table name	RemarkInterfacePolicy
Table type	Multi-instance table
Row name	Application
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
Direction	Application direction	Index	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Inbound.</li> <li><b>1</b>—Outbound.</li> </ul>	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	Required.
Mode	Mode of policies applied to interfaces.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—extension.</li> <li><b>2</b>—inner-match.</li> </ul>	When the <b>Direction</b> column is <b>0</b> , configure the Mode.Mode cannot be modified .

## MQC/TapInterfacePolicy

This table contains information about QoS tap policies applied to interfaces.

## XML structure

```

<MQC>
  <TapInterfacePolicy>
    <Application>
      <IfIndex></IfIndex>
    </Application>
  </TapInterfacePolicy>
</MQC>

```

```

        <Direction></Direction>
        <PolicyName></PolicyName>
        <Mode></Mode>
    </Application>
</TapInterfacePolicy>
</MQC>

```

## Table description

Item	Description
Feature name	MQC
Table name	TapInterfacePolicy
Table type	Multi-instance table
Row name	Application
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
Direction	Application direction	Index	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Inbound.</li> <li><b>1</b>—Outbound.</li> </ul>	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	Required.
Mode	Mode of policies applied to interfaces.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—extension.</li> <li><b>2</b>—inner-match.</li> </ul>	When the <b>Direction</b> column is <b>0</b> , configure the Mode.Mode cannot be modified .

## Appendix

This section describes how to configure an ACL rule and an inner ACL rule.

- There are two methods of configuring an ACL rule:
  - Use the ACL group method.

```

<MQC>
  <Rules>
    <Rule>
      <ClassName>class</ClassName>
      <RuleID>0</RuleID>
    </Rule>
  </Rules>
</MQC>

```

```

    <Not>false</Not>
    <Acl>
      <IPv4Acl>3000</IPv4Acl>
      <Inner>false</Inner>
    </Acl>
  </Rule>
</Rules>
</MQC>

```

- o Use the IPv4 ACL node method.

```

<MQC>
  <Rules>
    <Rule>
      <ClassName>class</ClassName>
      <RuleID>0</RuleID>
      <Not>false</Not>
      <IPv4Acl>3000</IPv4Acl>
    </Rule>
  </Rules>
</MQC>

```

- Configure an inner ACL rule.

```

<MQC>
  <Rules>
    <Rule>
      <ClassName>class</ClassName>
      <RuleID>0</RuleID>
      <Not>false</Not>
      <Acl>
        <IPv4Acl>3000</IPv4Acl>
        <Inner>true</Inner>
      </Acl>
    </Rule>
  </Rules>
</MQC>

```

# MQC

## MQC/GlobalRunInfo

This table contains global operation status information.

### XML structure

```
<MQC>
  <GlobalRunInfo>
    <ProcessingStatus></ProcessingStatus>
  </GlobalRunInfo>
</MQC>
```

### Table description

Item	Description
Feature name	MQC
Table name	GlobalRunInfo
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ProcessingStatus	Global operation status	N/A	Enumeration: <ul style="list-style-type: none"><li>1—Idle.</li><li>2—Busy.</li></ul>	N/A

## MQC/AppRunInfo

This table contains policy application information.

### XML structure

```
<MQC>
  <AppRunInfo>
    <AppRunInfoEntry>
      <AppType></AppType>
      <AppMainIndex></AppMainIndex>
    </AppRunInfoEntry>
  </AppRunInfo>
</MQC>
```

```

    <AppSubIndex></AppSubIndex>
    <AppDirection></AppDirection>
    <AppPolicyName></AppPolicyName>
    <ApplyStatus></ApplyStatus>
  </AppRunInfoEntry>
</AppRunInfo>
</MQC>

```

## Table description

Item	Description
Feature name	MQC
Table name	AppRunInfo
Table type	Multi-instance table
Row name	AppRunInfoEntry
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppType	Application type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Interface.</li> <li>2—VLAN.</li> <li>3—Global.</li> <li>4—COPP.</li> </ul>	N/A
AppMainIndex	Primary index of the application	Index	Unsigned integer.	<p>The value depends on the AppType column:</p> <ul style="list-style-type: none"> <li>Interface index if AppType is 1. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.</li> <li>VLAN ID in the range of 1 to 4094 if AppType is 2.</li> <li>0 if AppType is 3.</li> <li>Member ID (0 for a standalone device) if AppType is 4.</li> </ul>
AppSubIndex	Secondary index	Index	Unsigned integer.	The value depends on

Column name	Column description	Column type	Data type and restrictions	Remarks
	of the application			the AppType column: <ul style="list-style-type: none"> <li>Slot number of the card if AppType is <b>4</b>.</li> <li><b>0</b> is AppType is not <b>4</b>.</li> </ul>
AppDirection	Application direction	Index	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Inbound.</li> <li><b>2</b>—Outbound.</li> </ul>	N/A
AppPolicyName	Policy name	N/A	String. Length: 0 to 31 characters.	N/A
ApplyStatus	Application status	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Succeeded.</li> <li><b>2</b>—Succeeded partly.</li> </ul>	If some class-behavior associations in the policy are applied successfully but some are not, the value of this column is <b>2</b> .

## MQC/CBRunInfo

This table contains class-behavior association operation information.

## XML structure

```

<MQC>
  <CBRunInfo>
    <CBRunInfoEntry>
      <AppType></AppType>
      <AppMainIndex></AppMainIndex>
      <AppSubIndex></AppSubIndex>
      <AppDirection></AppDirection>
      <CBMapIndex></CBMapIndex>
      <ClassName></ClassName>
      <BehaviorName></BehaviorName>
      <CBApplyStatus></CBApplyStatus>
    </CBRunInfoEntry>
  </CBRunInfo>
</MQC>

```

## Table description

Item	Description
Feature name	MQC
Table name	CBRunInfo
Table type	Multi-instance table

Item	Description
Row name	CBRunInfoEntry
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppType	Application type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Interface.</li> <li>2—VLAN.</li> <li>3—Global.</li> <li>4—COPP.</li> </ul>	N/A
AppMainIndex	Primary index of the application	Index	Unsigned integer.	The value depends on the AppType column: <ul style="list-style-type: none"> <li>Interface index if AppType is <b>1</b>. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.</li> <li>VLAN ID in the range of 1 to 4094 if AppType is <b>2</b>.</li> <li><b>0</b> if AppType is <b>3</b>.</li> <li>Member ID (0 for a standalone device) if AppType is <b>4</b>.</li> </ul>
AppSubIndex	Secondary index of the application	Index	Unsigned integer.	The value depends on the AppType column: <ul style="list-style-type: none"> <li>Slot number of the card if AppType is <b>4</b>.</li> <li><b>0</b> is AppType is not <b>4</b>.</li> </ul>
AppDirection	Application direction	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Inbound.</li> <li>2—Outbound.</li> </ul>	N/A
CBMapIndex	Class-behavior association index	Index	Unsigned integer.	N/A
ClassName	Traffic class name	N/A	String. Length: 0 to 31 characters.	
BehaviorName	Traffic behavior name	N/A	String. Length: 0 to 31 characters.	

Column name	Column description	Column type	Data type and restrictions	Remarks
CBApplStatus	Class-behavior association application status	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Succeeded.</li> <li>2—Failed.</li> <li>3—Succeeded partly.</li> </ul>	If a class-behavior association fails to applied on a card when the policy is applied globally or to a VLAN, the value of this field is 3.

## MQC/AccountRunInfo

This table contains traffic statistics information.

### XML structure

```

<MQC>
  <AccountRunInfo>
    <AccountRunInfoEntry>
      <AppType></AppType>
      <AppMainIndex></AppMainIndex>
      <AppSubIndex></AppSubIndex>
      <AppDirection></AppDirection>
      <CBMapIndex></CBMapIndex>
      <AccountPkts></AccountPkts>
      <AccountBytes></AccountBytes>

IPv4ACI	Match IPv4 ACL.	N/A	<ul style="list-style-type: none"> <li><b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li> <li><b>ACL number:</b> An unsigned integer in the range of 2000 to 5999.</li> </ul>	An ACL name must start with an English letter and cannot be <b>all</b> .
IPv6ACI	Match IPv6 ACL.	N/A	<ul style="list-style-type: none"> <li><b>ACL name:</b> Case-insensitive string of 1 to 63 characters.</li> <li><b>ACL number:</b> An unsigned integer in the range of 2000 to 3999.</li> </ul>	An ACL name must start with an English letter and cannot be <b>all</b> .
SrcMac	Match a source MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
DestMac	Match a destination MAC address.	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
ServiceVLANID	Match the service provider VLAN ID.	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			range. The string must not end with a comma or hyphen, or include any whitespace characters.	
CustomerVLANID	Match the customer VLAN ID.	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string must not end with a comma or hyphen, or include any whitespace characters.	N/A
ServiceDot1p	Match the 802.1p priority of the service provider network.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
CustomerDot1p	Match the 802.1p priority of the customer network.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
Exp	Match MPLS EXP value.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
InnerExp	Match inner MPLS EXP value.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
IPPrecedence	Match IP precedence.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
LocalPrecedence	Match local precedence.	N/A	Unsigned integer. Value range: 0 to 7.	N/A
Dscp	Match DSCP values.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
DropPriority	Match drop precedence.	N/A	Unsigned integer. Value range: 0 to 2.	N/A
QoSLocalID	Match local QoS ID.	N/A	Unsigned integer. Value range: 1 to 4095.	N/A
MplsLabel	Match MPLS label.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
InnerMplsLabel	Match inner MPLS label.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
PktLength	Match packet length.	Data structure	Members include: <ul style="list-style-type: none"> <li>• <b>Min.</b></li> <li>• <b>Max.</b></li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Min	The minimum packet length in bytes.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
Max	The maximum packet length in bytes.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
MplsLabelRange	Match MPLS label range.	Data structure	Members include: <ul style="list-style-type: none"> <li><b>LabelStart.</b></li> <li><b>LabelEnd.</b></li> </ul>	N/A
LabelStart	Start Label Value.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
LabelEnd	End Label Value.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
InnerMplsLabelRange	Match inner MPLS label range.	Data structure	Members include: <ul style="list-style-type: none"> <li><b>InnerLabelStart.</b></li> <li><b>InnerLabelEnd.</b></li> </ul>	N/A
InnerLabelStart	Start Label Value.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
InnerLabelEnd	End Label Value.	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
RTPPort	Match RTP protocol port range.	Data structure	Members include: <ul style="list-style-type: none"> <li><b>PortStart.</b></li> <li><b>PortEnd.</b></li> </ul>	N/A
PortStart	Start RTP port number	N/A	Unsigned integer. Value range: 2000 to 65535.	N/A
PortEnd	End RTP port number	N/A	Unsigned integer. Value range: 2000 to 65535.	N/A
Application	Match application layer protocol.	N/A	String, case-insensitive. Length: 1 to 63 characters.	APR/Applications/Application/AppName.
ApplicationGroup	Match application group.	N/A	String, case-insensitive. Length: 1 to 63 characters.	APR/AppGroups/GroupInfo/GroupName.
Vxlan	Match vxlan ID.	N/A	Unsigned integer. Value range: 0 to 16777215.	N/A
VxlanAny	Match any vxlan ID.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Conform.</li> <li><b>false</b>—Not conform.</li> </ul>	N/A
TunnelID	Match tunnel ID.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
VLANTag	Match VLAN tagging mode	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—None.</li> <li><b>2</b>—Single-tagged.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li><b>4</b>—Double-tagged.</li> </ul>	
TunnelDscpList	Match Tunnel DSCP values.	Data structure	Members include: <ul style="list-style-type: none"> <li><b>TunnelDscp</b>.</li> </ul>	N/A
TunnelDscp	Match Tunnel DSCP values.	N/A	Unsigned integer. Value range: 0 to 63.	N/A
IFA	Inband Flow Analyzer	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—tcp.</li> <li><b>2</b>—udp.</li> </ul>	N/A
OutBoundInterface	Match output interface	N/A	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Mpls	Mpls type	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—I2.</li> <li><b>2</b>—I3.</li> </ul>	N/A
Nvgre	Match NVGRE.	N/A	Hexadecimal string. Length: 4 to 6 characters. Value range: 1000 to FFFFE.	N/A
NvgreAny	Match any NVGRE ID	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Conform.</li> <li><b>false</b>—Not conform.</li> </ul>	The Nvgre column must be specified when the NvgreAny column is <b>false</b> .

## Table description

Item	Description
Feature name	MQC
Table name	Redirect
Table type	Multi-instance table
Row name	Action
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
Type	Type of redirect	Index	Enumeration: <ul style="list-style-type: none"><li>1—CPU.</li><li>2—Interface.</li></ul>	When the <b>Type</b> column is <b>1</b> , redirect traffic to CPU. When the <b>Type</b> column is

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>3—VSI.</li> <li>4—FailoverGroup.</li> <li>6—Nexthop</li> <li>7—MonitorGroup</li> </ul>	<p>2, redirect traffic to an interface.</p> <p>When the <b>Type</b> column is 3, redirect traffic to a virtual station interface.</p> <p>When the <b>Type</b> column is 4, redirect traffic to a failover group.</p> <p>When the <b>Type</b> column is 6, redirect traffic to nexthop.</p> <p>When the <b>Type</b> column is 7, redirect traffic to monitor group.</p>
IfIndex	Interface index	Index	Unsigned integer.	The value of this column is valid only when the <b>Type</b> column is 2. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
TrackOap	Enable the traffic redirecting action to collaborate with OAP	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Enable.</li> <li>false—Disable.</li> </ul>	The value of this column is valid only when the <b>Type</b> column is 2.
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	The value of this column is valid only when the <b>Type</b> column is 2.
VSI	Name of VSI	N/A	String. Length: 1 to 31 characters.	Required and valid only when the <b>Type</b> column is 3.
Nexthop	Nexthop	N/A	N/A	N/A
VRF	VRF instance name	N/A	String. Length: 0 to 31 characters.	The value of this column is valid if <b>Type</b> is 6.
IPAddr	Nexthop ip address	N/A	String, dotted decimal notation. Or Hexadecimal string, colon-separated. Length: 1 to 46 characters.	The value of this column is valid if <b>Type</b> is 6. For example, 1.1.1.1, or 1:1::1:1.
IPAddrBackup	Nexthop ip address	N/A	String, dotted decimal notation. Or Hexadecimal string, colon-separated. Length: 1 to 46 characters.	The value of this column is valid if <b>Type</b> is 6. For example, 1.1.1.1, or 1:1::1:1.
Track	Track	N/A	Unsigned integer. Value range: 1 to 1024.	The value of this column is valid if <b>Type</b> is 6.
TrackBackup	Track	N/A	Unsigned integer.	The value of this column

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 1 to 1024.	is valid if <b>Type</b> is <b>6</b> .
FailoverGroup	Failover group	Data structure	Members include: <ul style="list-style-type: none"> <li>GroupName.</li> <li>Channel.</li> </ul>	N/A
GroupName	Failover group name	N/A	String. Length: 1 to 63 characters.	The value of this column is valid if <b>Type</b> is <b>4</b> .
Channel	Channel	N/A	Unsigned integer. Value range: 0 to 1.	The value of this column is valid if <b>Type</b> is <b>4</b> . Some versions don't support this column. For relevant information, see the XSD document of your product.
MonitorGroupID	Monitor group ID.	N/A	Unsigned integer.	N/A

## Table description

Item	Description
Feature name	MQC
Table name	Mirror
Table type	Multi-instance table
Row name	Action
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
Type	Type of mirror	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Interface.</li> <li>2—CPU.</li> <li>3—VLAN.</li> <li>4—Slot.</li> <li>5—Local.</li> <li>6—GRPC.</li> <li>7—IFA.</li> </ul>	<p>When the <b>Type</b> column is <b>1</b>, mirror to an interface.</p> <p>When the <b>Type</b> column is <b>2</b>, mirror to CPU.</p> <p>When the <b>Type</b> column is <b>3</b>, mirror to VLAN.</p> <p>When the <b>Type</b> column is <b>4</b>, traffic is mirrored to a board.</p> <p>When the <b>Type</b> column is <b>5</b>, traffic is mirrored to the board on which the mirrored traffic is received or sent out.</p> <p>When the <b>Type</b> column is <b>6</b>, traffic is mirrored to GRPC.</p> <p>When the <b>Type</b> column is <b>7</b>, traffic is mirrored to inband flow analyzer processor.</p>
IfIndex	Interface index	Index	Unsigned integer.	The value of this column is valid if <b>Type</b> is <b>1</b> . Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	The value of this column is valid if <b>Type</b> is <b>3</b> .
IP	Specify IP for mirroring to interface with GRE format	Data structure	Members include: <ul style="list-style-type: none"> <li>• DestIP</li> <li>• SrcIP</li> <li>• DSCP</li> <li>• VLAN</li> <li>• VRF</li> </ul>	DestIP and SrcIP must both be specified. DSCP, VLAN and VRF can be optionally specified when DestIP and SrcIP are configured. This structure is valid and optional if Type is 1.
DestIP	Destination IP address	N/A	String, dotted decimal notation.	Example: 10.153.93.54.
SrcIP	Source IP address	N/A	String, dotted decimal notation.	Example: 10.153.93.60.
DSCP	DSCP value	N/A	Unsigned integer. Value range: 0 to 63.	N/A
VLAN	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VRF	VRF instance name	N/A	String. Length: 1 to 31 characters.	N/A
Mac	Specify destination MAC for mirroring to interface	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0. The value of this column is valid and optional if <b>Type</b> is <b>1</b> .
Board	Specify Board for mirroring to a board.	Data structure	Members include: <ul style="list-style-type: none"> <li>• Chassis</li> <li>• Slot</li> <li>• BackupChassis</li> <li>• BackupSlot</li> </ul>	If the device is a distributed device in standalone mode or a centralized IRF device, the slot must be specified. If the device supports mirroring packets to a backup slot, the BackupSlot can be specified. If the device is a distributed device in IRF mode, the chassis and slot must both be specified. If the device supports mirroring packets to a backup slot, the BackupChassis and BackupSlot can be specified. This structure is valid and optional if <b>Type</b> is <b>4</b> .
Chassis	Chassis number	N/A	Unsigned integer. Value range: 0 to 65535	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Slot	Slot number	N/A	Unsigned integer. Value range: 0 to 65535	N/A
BackupChassis	Backup chassis number	N/A	Unsigned integer. Value range: 0 to 65535	N/A
BackupSlot	Backup slot number	N/A	Unsigned integer. Value range: 0 to 65535	N/A
SamplerName	Sampler name	N/A	String. Length: 1 to 31 characters.	The value of this column depends on the device model. The value of this column is valid and optional if <b>Type</b> is 1, 4, 5 or 7.
Truncation	Truncation packets	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Conform.</li> <li><b>false</b>—Not conform.</li> </ul>	The value of this column is valid if <b>Type</b> is 1.
EncapType	Specify encapsulation type for mirrored packet	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—VXLAN encapsulation.</li> </ul>	The value of this column is valid if <b>Type</b> is 7.

## MQC/MirrorDynamicIF

This table contains information about mirroring packets to a dynamic interface, which is found by IP address.

### XML structure

```

<MQC>
  <MirrorDynamicIF>
    <Action>
      <BehaviorName></BehaviorName>
      <DestIP></DestIP>
      <SrcIP></SrcIP>
      <DSCP></DSCP>
      <VLAN></VLAN>
      <VRF></VRF>
      <Mac></Mac>
      <SamplerName></SamplerName>
      <Truncation></Truncation>
      <DynamicIfIndex></DynamicIfIndex>
    </Action>
  </MirrorDynamicIF>
</MQC>

```

## Table description

Item	Description
Feature name	MQC
Table name	MirrorDynamicIF
Table type	Multi-instance table
Row name	Action
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
DestIP	Destination IP address	Index	String, dotted decimal notation.	Example: 10.153.93.54.
SrcIP	Source IP address	Index	String, dotted decimal notation.	Example: 10.153.93.60.
DSCP	DSCP value	N/A	Unsigned integer. Value range: 0 to 63.	N/A
VLAN	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
VRF	VRF instance name	N/A	String. Length: 1 to 31 characters.	N/A
Mac	Specify destination MAC	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Example: 00-0c-af-e3-5d-c0.
SamplerName	Sampler name	N/A	String. Length: 1 to 31 characters.	The value of this column depends on the device model.
Truncation	Truncation packets	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Conform.</li> <li><b>false</b>—Not conform.</li> </ul>	N/A
DynamicIfIndex	Dynamic interface index	N/A	Unsigned integer.	The interface found by destination IP address. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.

# MQC/Filter

This table contains information about filtering action.

## XML structure

```
<MQC>
  <Filter>
    <Action>
      <BehaviorName></BehaviorName>
      <Type></Type>
    </Action>

## MQC/GTS

This table contains information about GTS actions.

### XML structure

```

<MQC>
  <GTS>
    <Action>
      <BehaviorName></BehaviorName>
      <BandwidthUnit></BandwidthUnit>
      <CIR></CIR>
      <CBS></CBS>
      <EBS></EBS>
      <PIR></PIR>
      <QueueLength></QueueLength>
    </Action>
  </GTS>
</MQC>

```

### Table description

Item	Description
Feature name	MQC
Table name	GTS
Table type	Multi-instance table
Row name	Action
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name	Index	String. Length: 1 to 31 characters.	N/A
BandwidthUnit	Bandwidth unit	N/A	Enumeration: <ul style="list-style-type: none"><li>2—kbps.</li><li>3—percent.</li></ul>	N/A
CIR	Committed information rate	N/A	Unsigned integer.	N/A
CBS	Committed burst size	N/A	Unsigned integer.	N/A
EBS	Excess burst size	N/A	Unsigned integer.	N/A
PIR	Peak information rate	N/A	Unsigned integer.	N/A
QueueLength	Queue length	N/A	Unsigned integer.	N/A

## MQC/ReservedBandwidth

This table contains information about the maximum reserved bandwidth as a percentage of available bandwidth.

## XML structure

```
<MQC>
  <ReservedBandwidth>
    <Interface>
      <IfIndex></IfIndex>
      <Pct></Pct>
    </Interface>
  </ReservedBandwidth>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	ReservedBandwidth
Table type	Multi-instance table
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Pct	Specify the percentage of available bandwidth to be reserved	N/A	Unsigned integer	N/A

## MQC/GlobalPolicy

This table contains information about global QoS policies.

## XML structure

```
<MQC>
  <GlobalPolicy>
    <Application>
      <Direction></Direction>
      <PolicyName></PolicyName>
      <Status></Status>
    </Application>
  </GlobalPolicy>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	GlobalPolicy
Table type	Multi-instance table
Row name	Application
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Direction	Application direction	Index	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Inbound.</li><li>• <b>1</b>—Outbound.</li></ul>	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	N/A
Status	Application status	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>1</b>—Succeeded.</li><li>• <b>2</b>—Failed.</li><li>• <b>3</b>—Succeeded partly.</li></ul>	If some class-behavior associations in the policy are applied successfully but some are not, the value of this column is <b>3</b> .

## MQC/VlanPolicy

This table contains information about QoS policies applied to VLANs.

## XML structure

```
<MQC>
  <VlanPolicy>
    <Application>
      <VLANID></VLANID>
      <Direction></Direction>
      <PolicyName></PolicyName>
      <Status></Status>
    </Application>
  </VlanPolicy>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	VlanPolicy
Table type	Multi-instance table
Row name	Application
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VALNID	VLAN ID	Index	Unsigned integer. Value range: 1 to 4094.	N/A
Direction	Application direction	Index	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Inbound.</li><li>• <b>1</b>—Outbound.</li></ul>	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	N/A
Status	Application status	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>1</b>—Succeeded.</li><li>• <b>2</b>—Failed.</li><li>• <b>3</b>—Succeeded partly.</li></ul>	If some class-behavior associations in the policy are applied successfully but some are not, the value of this column is <b>3</b> .

## MQC/InterfacePolicy

This table contains information about QoS policies applied to interfaces.

## XML structure

```
<MQC>
  <InterfacePolicy>
    <Application>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <PolicyName></PolicyName>
      <Status></Status>
      <Mode></Mode>
    </Application>
  </InterfacePolicy>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	InterfacePolicy
Table type	Multi-instance table
Row name	Application

Item	Description
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Direction	Application direction	Index	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Inbound.</li> <li>• <b>1</b>—Outbound.</li> </ul>	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	N/A
Status	Application status	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—Succeeded.</li> <li>• <b>2</b>—Failed.</li> <li>• <b>3</b>—Succeeded partly.</li> </ul>	If some class-behavior associations in the policy are applied successfully but some are not, the value of this column is <b>3</b> .
Mode	Mode of policies applied to interfaces.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—extension.</li> <li>• <b>2</b>—inner-match.</li> </ul>	When the <b>Direction</b> column is <b>0</b> , configure the Mode. Mode cannot be modified .

## MQC/IfPolicyCBMap

This table contains information about class-behavior associations running information applied to interfaces.

## MQC/Telemetry

This table contains information about inband telemetry.

## XML structure

```
<MQC>
  <Telemetry>
    <DeviceID></DeviceID>
    <Collector>
      <SrcIP></SrcIP>
      <DstIP></DstIP>
      <SrcPort></SrcPort>
      <DstPort></DstPort>
      <VLANID></VLANID>
    </Collector>
  </Telemetry>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	Telemetry
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DeviceID	Device IP address	N/A	String, dotted decimal notation.	Example: 10.153.93.60.
Collector	Telemetry collector	N/A	Members include: <ul style="list-style-type: none"><li>• SrcIP</li><li>• DstIP</li><li>• SrcPort</li><li>• DstPort</li><li>• VLANID</li></ul>	You must specify the SrcIP, DstIP, SrcPort and DstPort when you remove or delete the telemetry collector.  You must specify the SrcIP, DstIP, SrcPort and DstPort when you replace the telemetry collector, or when you merge or create the telemetry collector that does not exist.
SrcIP	Source IP address	N/A	String, dotted decimal notation.	Example: 10.153.93.60.

DstIP	Destination IP address	N/A	String, dotted decimal notation.	Example: 10.153.93.54.
SrcPort	Source port	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
DstPort	Destination port	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A

## MQC/TelemetryRoles

This table contains information about inband telemetry roles.

### XML structure

```
<MQC>
  <TelemetryRoles>
    <TelemetryRole>
      <IfIndex></IfIndex>
      <Role></Role>
    </TelemetryRole>
  </TelemetryRoles>
</MQC>
```

### Table description

Item	Description
Feature name	MQC
Table name	TelemetryRoles
Table type	Multi-instance table
Row name	TelemetryRole
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Role	Telemetry role	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Ingress.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>2—Transit.</li> <li>3—Egress</li> </ul>	

## MQC/TelemetryLoopbacks

This table contains information about inband telemetry loopback interfaces.

### XML structure

```

<MQC>
  <TelemetryLoopbacks>
    <TelemetryLoopback>
      <IfIndex></IfIndex>
      <Loopback></Loopback>
    </TelemetryLoopback>
  </TelemetryLoopbacks>
</MQC>

```

### Table description

Item	Description
Feature name	MQC
Table name	TelemetryLoopbacks
Table type	Multi-instance table
Row name	TelemetryLoopback
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	<ul style="list-style-type: none"> <li>Unsigned integer.</li> </ul>	For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Loopback	Telemetry loopback	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Conform.</li> <li><b>false</b>—Not conform.</li> </ul>	N/A

## MQC/TelemetryGlobalEnable

This table contains information about inband telemetry status.

## XML structure

```
<MQC>
  <TelemetryGlobalEnable>
    <Enable></Enable>
  </TelemetryGlobalEnable>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	TelemetryGlobalEnable
Table type	Single-instance table
Row name	None
Restrictions	None

## MQC/SysTruncation

This table contains information about global truncation.

## XML structure

```
<MQC>
  <SysTruncation>
    <TruncationLen></TruncationLen>
  </SysTruncation>
</MQC>
```

## Table description

Item	Description
Feature name	MQC

Table name	SysTruncation
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
TruncationLen	Truncation length.	column	Unsigned integer.	The value depends on device.

## MQC/SysTruncationCapa

This table contains information about global truncation capability.

## XML structure

```
<MQC>
  <SysTruncationCapa>
    <Min></Min>
    <Max></Max>
  </SysTruncationCapa>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	SysTruncationCapa
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Min	Min truncation length.	column	Unsigned integer.	The value depends on device.
Max	Max truncation length.	column	Unsigned integer.	The value depends on device.

# MQC/MonitorGroup

This table contains information about monitor group.

## XML structure

```
<MQC>
  <MonitorGroup>
    <Group>
      <GroupID></GroupID>
    </Group>
  </MonitorGroup>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	MonitorGroup
Table type	Multi -instance table
Row name	Group
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	Monitor group id.	Index	Unsigned integer.	The value depends on device.

# MQC/MonitorGroupCapa

This table contains information about monitor group capability.

## XML structure

```
<MQC>
  <MonitorGroupCapa>
    <MaxGroupID></MaxGroupID>
  </MonitorGroupCapa>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	MonitorGroupCapa
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxGroupID	Max monitor group id.	N/A	Unsigned integer.	The value depends on device.

## MQC/MonitorPort

This table contains information about monitor groups applied to interfaces.

## XML structure

```
<MQC>
  <MonitorPort>
    <MonitorPort>
      <GroupID></GroupID>
      <IfIndex></IfIndex>
    </MonitorPort>
  </MonitorPort>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	MonitorPort
Table type	Multi -instance table
Row name	MonitorPort
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupID	Monitor group id.	Index	Unsigned integer.	The value depends on device.
IfIndex	Interface index.	Index	Unsigned integer.	N/A

## MQC/Strip

This table contains information about strip.

## XML structure

```
<MQC>
  <Strip>
    <Strip>
      <BehaviorName></BehaviorName>
      <Type></Type>
      <OffsetValue></OffsetValue>
      <HeadLength></HeadLength>
      <DstMACAddr></DstMACAddr>
      <SrcMACAddr></SrcMACAddr>
      <VlanID></VlanID>
      <Dot1p></Dot1p>
      <EthTypeID></EthTypeID>
    </Strip>
  </Strip>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	Strip
Table type	Multi -instance table
Row name	Strip
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name.	Index	String. Length: 1 to 31 characters.	N/A
Type	Strip type.	column	Enumeration: <ul style="list-style-type: none"> <li>• 0—strip header.</li> <li>• 1—top-most-vlan.</li> <li>• 2—position I2.</li> <li>• 3—position I3.</li> <li>• 4—position I4.</li> <li>• 5—vxlan.</li> <li>• 6—nvgre.</li> <li>• 7—gre.</li> </ul>	Required.
OffSetValue	Strip offset value.	column	Unsigned integer.	The value depends on device.
HeadLength	Length of a GRE header	column	Unsigned integer. Value range: 4 to 16.	The value depends on user configuration. The value of this column is valid if the type is gre.
DstMACAddr	Destination MAC address	column	Six groups of two hexadecimal digits, hyphen-separated.	DstMACAddr, SrcMACAddr, and EthTypeID must be added together. The value of this column is valid if the type is gre.
SrcMACAddr	Source MAC address	column	Six groups of two hexadecimal digits, hyphen-separated.	DstMACAddr, SrcMACAddr, and EthTypeID must be added together. The value of this column is valid if the type is gre.
VlanID	VLAN tag ID	column	Unsigned integer. Value range: 1 to 4094.	The value of this column is valid if the type is gre.
Dot1p	802.1p CoS	column	Unsigned integer. Value range: 0 to 7.	The value of this column is valid if the type is gre.
EthTypeID	Ethernet type ID	column	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF.	The value of this column is valid if the type is gre.

## MQC/StripCapa

This table contains information about strip capability.

## XML structure

```
<MQC>
  <StripCapa>
    <Min></Min>
    <Max></Max>
  </StripCapa>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	StripCapa
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Min	Min strip offsetvalue.	column	Unsigned integer.	The value depends on device.
Max	Max strip offset value.	column	Unsigned integer.	The value depends on device.

## MQC/Nest

This table contains information about nest.

## XML structure

```
<MQC>
  <Nest>
    <Nest>
      <BehaviorName></BehaviorName>
      <VlanID></VlanID>
      <Dot1p></Dot1p>
    </Nest>
  </Nest>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	Nest
Table type	Multi -instance table
Row name	Nest
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name.	Index	String. Length: 1 to 31 characters.	N/A
VlanID	Vlan id.	column	Unsigned integer. Value range: 1 to 4094.	N/A
Dot1p	802.1p COS.	column	Unsigned integer. Value range: 0 to 7.	N/A

## MQC/BehaviorTruncation

This table contains information about truncation of behavior.

## XML structure

```
<MQC>
  <BehaviorTruncation>
    <Truncation>
      <BehaviorName></BehaviorName>
      <Truncation></Truncation>
    </Truncation>
  </BehaviorTruncation>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	BehaviorTruncation
Table type	Multi -instance table
Row name	Truncation

Restrictions	None
--------------	------

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior name.	Index	String. Length: 1 to 31 characters.	N/A
Truncation	Whether to truncation.	column	Boolean <ul style="list-style-type: none"> <li>true—Truncation.</li> <li>false—Not truncation.</li> </ul>	N/A

## MQC/TimeStamp

This table contains information about time stamp.

## XML structure

```

<MQC>
  <TimeStamp>
    <TimeStamp>
      <BehaviorName></BehaviorName>
      <DstMACAddr></DstMACAddr>
      <SrcMACAddr></SrcMACAddr>
      <EthType></EthType>
    </TimeStamp>
  </TimeStamp>
</MQC>

```

## Table description

Item	Description
Feature name	MQC
Table name	TimeStamp
Table type	Multi -instance table
Row name	TimeStamp
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
BehaviorName	Traffic behavior	Index	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	name.		Length: 1 to 31 characters.	
DstMACAddr	Destination MAC address.	column	Six groups of two hexadecimal digits, hyphen-separated..	DstMACAddr, SrcMACAddr and EthType must be add together.
SrcMACAddr	Source MAC address.	column	Six groups of two hexadecimal digits, hyphen-separated..	N/A
EthType	Ethtype id of timestamp.	column	Hexadecimal string. Length: 1 to 4 characters. Value range: 0 to FFFF..	N/A

## MQC/VSIPolicy

This table contains information about QoS policies applied to VSIs.

### XML structure

```

<MQC>
  <VSIPolicy>
    <Application>
      <VSI></VSI>
      <Direction></Direction>
      <PolicyName></PolicyName>
      <Status></Status>
    </Application>
  </VSIPolicy>
</MQC>

```

### Table description

Item	Description
Feature name	MQC
Table name	VSIPolicy
Table type	Multi-instance table
Row name	Application
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VSI	Name of a VSI	Index	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 31 characters.	
Direction	Application direction	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Inbound.</li> <li>1—Outbound.</li> </ul>	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	N/A
Status	Application status	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Succeeded.</li> <li>2—Failed.</li> <li>3—Succeeded partly.</li> </ul>	If some class-behavior associations in the policy are applied successfully but some are not, the value of this column is 3.

## MQC/VSIPolicyCBMap

This table contains information about class-behavior associations running information applied to VSIs.

### XML structure

```

<MQC>
  <VSIPolicyCBMap>
    <VSI>
      <VSI></VSI>
      <Direction></Direction>
      <ClassName></ClassName>
      <BehaviorName></BehaviorName>
      <Mode></Mode>
      <Status></Status>
      <MatchedPackets></MatchedPackets>
      <MatchedBytes></MatchedBytes>
    </VSI>
  </VSIPolicyCBMap>
</MQC>

```

### Table description

Item	Description
Feature name	MQC
Table name	VSIPolicyCBMap
Table type	Multi-instance table
Row name	VSI
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VSI	Name of a VSI	Index	String. Length: 1 to 31 characters.	N/A
Direction	Application direction	Index	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Inbound.</li> <li>• <b>1</b>—Outbound.</li> </ul>	N/A
ClassName	Traffic class name	Index	String. Length: 1 to 31 characters.	N/A
BehaviorName	Traffic behavior name	N/A	String. Length: 1 to 31 characters.	N/A
Mode	Mode of the class-behavior association	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—None.</li> <li>• <b>2</b>—Qppb.</li> <li>• <b>16</b>—Dcbx.</li> </ul>	<p>When the <b>Mode</b> column is <b>0</b>, there is no restriction on the classifier-behavior association.</p> <p>When the <b>Mode</b> column is <b>2</b>, the classifier-behavior association applies only to QPPB.</p> <p>When the <b>Mode</b> column is <b>16</b>, the classifier-behavior association applies only to the Data Center Bridging Exchange Protocol (DCBX).</p>
Status	Application status	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—Succeeded.</li> <li>• <b>2</b>—Failed.</li> </ul>	N/A
MatchedPackets	Matched packets	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	The soft switch device does not support.
MatchedBytes	Matched bytes	N/A	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	The soft switch device does not support.

## MQC/AccountInterfacePolicy

This table contains information about QoS accounting policies applied to interfaces.

## XML structure

```
<MQC>
  <AccountInterfacePolicy>
    <Application>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <PolicyName></PolicyName>
      <Mode></Mode>
    </Application>
  </AccountInterfacePolicy>
</MQC>
```

## Table description

Item	Description
Feature name	MQC
Table name	AccountInterfacePolicy
Table type	Multi-instance table
Row name	Application
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product.
Direction	Application direction	Index	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Inbound.</li><li>• <b>1</b>—Outbound.</li></ul>	N/A
PolicyName	Policy name	N/A	String. Length: 1 to 31 characters.	Required.
Mode	Mode of policies applied to interfaces.	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>1</b>—extension.</li><li>• <b>2</b>—inner-match.</li></ul>	When the <b>Direction</b> column is <b>0</b> , configure the Mode.

## MQC/RemarkInterfacePolicy

This table contains information about QoS remarking policies applied to interfaces.

## XML structure

```
<MQC>
  <RemarkInterfacePolicy>
    <Application>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <PolicyName></PolicyName>

## MQC

Message	Explanation
System-defined classifiers can't be modified or deleted. 系统预定义的类不能被修改或删除。	System-defined classifiers can't be modified or deleted. 不能修改、删除系统预定义的流分类。
System-defined behaviors can't be modified or deleted. 系统预定义的流行为不能被修改或删除。	System-defined behaviors can't be modified or deleted. 不能修改、删除系统预定义的流行为。
System-defined policies can't be modified or deleted. 系统预定义的策略不能被修改或删除。	System-defined policies can't be modified or deleted. 不能修改、删除系统预定义的QoS策略。
Maximum number of classifiers already reached. 类的配置数已达到最大值。	Maximum number of classifiers already reached, can't create. 流分类的配置数目达到上限，不能再创建。
Maximum number of match criteria already reached. 规则的配置数已达到最大值。	Maximum number of match criteria already reached, can't create. 匹配数据包规则的配置数目达到上限，不能再创建。
Maximum number of QoS policies already reached. 策略的配置数已达到最大值。	Maximum number of QoS policies already reached can't create. QoS策略的配置数目达到上限，不能再创建。
Can't delete the policy because it has been applied. 该策略已经被应用，无法删除。	Can't delete the policy because it has been applied. QoS策略已经被应用，不能删除该QoS策略。
The QoS policy doesn't exist. 该策略不存在。	The QoS policy doesn't exist. QoS策略不存在。
The classifier is being used by a QoS policy. 该类正在被策略使用。	The classifier is being used by a QoS policy. 流分类被QoS策略使用时，不能删除。
Maximum number of behaviors already reached. 流行为的配置数已达到最大值。	Maximum number of behaviors already reached can't create. 流行为的配置数目达到上限，不能再创建。
The behavior is being used by a QoS policy. 该流行为正在被策略使用。	The behavior is being used by a QoS policy can't delete. 流行为被QoS策略使用时，不能删除。
Another QoS policy has already been applied. Please view the current configuration. 已经应用了其他策略，请查看当前配置。	Another QoS policy has already been applied can apply. Please view the current configuration. 不能在已经应用了QoS策略的对象下再应用QoS策略。
Maximum number of classifiers allowed in one QoS policy already reached. 策略下所配的类的数目已达到最大值。	Maximum number of classifiers allowed in one QoS policy already reached can't create. QoS策略下的流分类数量达到上限，不能再应用。
The QoS policy has already been applied. Please view the current configuration. 该策略已经应用，请查看当前配置。	The QoS policy has already been applied can repeat apply. Please view the current configuration. 不能重复应用QoS策略。
The classifier is being used by another classifier. 该类正被其他类使用。	The classifier is being used by another classifier can't create. 被流分类引用的流分类不允许删除。

Marking dot1p is not supported. 不支持重标记到dot1p。	Marking dot1p is not supported. 某些应用对象不支持重标记到dot1p动作。
Marking dot1p can be applied only in the outbound direction. 重标记到dot1p只能被应用到出方向。	Marking dot1p can be applied only in the outbound direction. 重标记到dot1p只能被应用到出方向。
Marking ATM CLP is supported only on ATM PVCs. 重标记到ATM CLP只支持应用到ATM PVC上。	Marking ATM CLP is supported only on ATM PVCs. 重标记到ATM CLP只支持应用到ATM PVC上。
Marking ATM CLP can be applied only in the outbound direction. 重标记到ATM CLP只能被应用到出方向。	Marking ATM CLP can be applied only in the outbound direction. 重标记到ATM CLP只能被应用到出方向。
The traffic class associated with the traffic behavior already exists. classifier指定的类已存在。	The traffic class associated with the traffic behavior already exists can use insert-before mode. 不能对已应用的流分类指定 <b>insert-before</b> 模式。
The traffic class specified after the insert-before keyword doesn't exist. insert-before指定的类不存在。	The traffic class specified after the insert-before keyword doesn't exist. insert-before指定的类不存在。
Marking service class can be applied only in the inbound direction. 重标记到Service Class只能被应用到入方向。	Marking service class can be applied only in the inbound direction. 重标记到Service Class只能被应用到入方向。
MPLS label value range error. MPLS标签的范围配置有误。	MPLS label value range error. label-value1 should small than label-value2 匹配MPLS标签规则时， <i>label-value1</i> 的值必须小于 <i>label-value2</i> 的值。
The start port can't be greater than the end port. 起始端口号不能比结束端口号大。	The start RTP port can't be greater than the end RTP port. 匹配RTP协议端口规则时，起始RTP端口号必须小于结束RTP端口号。
The minimum packet length can't be greater than the maximum packet length. 报文的最小长度不能大于最大长度。	The minimum packet length can't be greater than the maximum packet length when if-match packet length. 匹配报文长度规则时，报文的最小长度不能大于最大长度。
The classifier doesn't exist. 该类不存在。	The classifier doesn't exist, create rule failed. 添加流分类规则时，若流分类不存在，添加失败。
The behavior doesn't exist. 该流行为不存在。	The behavior doesn't exist, create action failed. 添加流行为动作时，若流行为不存在，添加失败。
A QoS policy can be applied only to the inbound direction of an interface if a behavior in the QoS policy contains the remark tunnel-dscp command. 当QoS策略的流行为中配置了remark tunnel-dscp时，该策略只能应用到接口入方向。	A QoS policy can be applied only to the inbound direction of an interface if a behavior in the QoS policy contains the remark tunnel-dscp command. 当QoS策略的流行为中配置了remark tunnel-dscp时，该策略只能应用到接口入方向。
The remark tunnel-dscp command and the remark dscp or remark ip-precedence command are mutually exclusive in a behavior. 同一个流行为中，如果已配置remark dscp命令或remark ip-precedence命令，则不允许再配置remark tunnel-dscp命令，反之亦然。	The remark tunnel-dscp command and the remark dscp or remark ip-precedence command are mutually exclusive in a behavior. 同一个流行为中，如果已配置remark dscp命令或remark ip-precedence命令，则不允许再配置remark tunnel-dscp命令，反之亦然。
The policy name has been used by another type of policy.	The policy name has been used by another type of policy, create policy failed.

这个策略名称已被其他类型策略使用。	创建策略时，若名称已被其他类型策略使用，创建失败。
Another QoS policy of the same type has already been applied. Please view the current configuration. 已经应用了相同类型的其他策略，请查看当前配置。	Another QoS policy of the same type has already been applied. Please view the current configuration. 已经应用了相同类型的其他策略，请查看当前配置。
The preorder for the applied QoS policy cannot be dynamically modified. 应用策略的匹配优先级不能动态修改。	The preorder for the applied QoS policy cannot be dynamically modified. 应用策略的匹配优先级不能动态修改。
The QoS policy type cannot be dynamically modified. QoS策略类型不支持动态修改。	The QoS policy type cannot be dynamically modified. QoS策略类型不支持动态修改。
Failed to apply the QoS policy, because the preorder value has been specified for another QoS policy that is applied to the same direction of the interface. QoS策略应用失败，同一方向应用不同QoS策略时不能配置相同的preorder-value。	Failed to apply the QoS policy, because the preorder value has been specified for another QoS policy that is applied to the same direction of the interface. QoS策略应用失败，同一方向应用不同QoS策略时不能配置相同的preorder-value。
Failed to apply the QoS policy, because the preorder value has been specified for another QoS policy that is applied to the same direction globally. QoS策略应用失败，同一方向应用不同QoS策略时不能配置相同的preorder-value。	Failed to apply the QoS policy, because the preorder value has been specified for another QoS policy that is applied to the same direction globally. QoS策略应用失败，同一方向应用不同QoS策略时不能配置相同的preorder-value。
The operation is not supported, because the interface belongs to an aggregation group. 设备不支持对加入聚合组的接口执行本操作。	The operation is not supported, because the interface belongs to an aggregation group. 设备不支持对加入聚合组的接口执行应用QoS策略操作。

## NAT/ResetNatStaticLoadBalance

Re-balance the load of static NAT on multiple CPUs

### XML structure

```
<NAT>
  <ResetNatStaticLoadBalance>
    <Reset></Reset>
  </ResetNatStaticLoadBalance>
</NAT>
```

### Table description

Item	Description
Feature name	NAT
Table name	ResetNatStaticLoadBalance
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Data type and restrictions
Reset	Re-balance the load of static NAT.	This column must be empty.

## NAT/ResetNatDynamicLoadBalance

Re-balance the load of dynamic NAT on multiple CPUs

### XML structure

```
<NAT>
  <ResetNatDynamicLoadBalance>
    <Dynamic>
      <AddrGroupNumber></AddrGroupNumber>
      <Reset></Reset>
    </Dynamic>
  </ResetNatDynamicLoadBalance>
</NAT>
```

```

    </ResetNatDynamicLoadBalance>
</NAT>

```

## Table description

Item	Description
Feature name	NAT
Table name	ResetNatDynamicLoadBalance
Table type	Single-instance table
Row name	Dynamic
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Reset	Re-balance the load of dynamic NAT.	N/A	This column must be empty.
AddrGroupNumber	NAT address group number	Index	Unsigned integer. Value range: 0 to 65535.

## NAT/ResetInboundStaticCount

This table contains information about one-to-one or net-to-net mappings for inbound static NAT.

## XML structure

```

<NAT>
  <ResetInboundStaticCount>
    <Mapping>
      <GlobalInfo>
        <GlobalVRF></GlobalVRF>
        <StartIpv4Address></StartIpv4Address>
        <EndIpv4Address></EndIpv4Address>
        <GlobalObjGrp></GlobalObjGrp>
      </GlobalInfo>
      <LocalInfo>
        <LocalVRF></LocalVRF>
        <Ipv4Address></Ipv4Address>

        <LocalObjGrp></LocalObjGrp>
      </LocalInfo>
    </Mapping>
  </ResetInboundStaticCount>
</NAT>

```

## Table description

Item	Description
Feature name	NAT
Table name	ResetInboundStaticCount
Table type	Single-instance table
Row name	Mapping
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalInfo	External network address pool information	Data structure.	Members include: <ul style="list-style-type: none"> <li>GlobalVRF.</li> <li>StartIpv4Address.</li> <li>EndIpv4Address.</li> <li>GlobalObjGrp</li> </ul>	EndIpv4Address is optional when configure one-to-one mapping for inbound static NAT.
GlobalVRF	VRF of external address pool	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this parameter.
StartIpv4Address	Start IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.1. The StartIpv4Address cannot be greater than the EndIpv4Address. If they are the same, the external address pool has only one address. The external address pool can contain a maximum of 255 addresses.
EndIpv4Address	End IPv4 address of the external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.6.
GlobalObjGrp	Object group of external address pool	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A
LocalInfo	Internal network address information	Data structure.	Members include: <ul style="list-style-type: none"> <li>LocalVRF.</li> <li>Ipv4Address.</li> <li>Ipv4PrefixLength.</li> <li>LocalObjGrp</li> </ul>	N/A
LocalVRF	VRF of internal address	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this parameter.

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4Address	An internal network address	Index	String, dotted decimal notation.	Example: 1.1.1.1.
Ipv4PrefixLength	The prefix length of the internal network address	Index	Unsigned integer. Value range: 8 to 32.	Value 32 indicates one-to-one mapping for inbound static NAT.
LocalObjGrp	Object group of internal address pool	Index	String, case-sensitive. Length: 1 to 31 characters.	N/A

## NAT/ResetOutboundStaticCount

This table contains information about one-to-one or net-to-net mappings for outbound static NAT.

### XML structure

```

<NAT>
  <ResetOutboundStaticCount>
    <Mapping>
      <LocalInfo>
        <LocalVRF></LocalVRF>
        <StartIpv4Address></StartIpv4Address>
        <EndIpv4Address></EndIpv4Address>
        <LocalObjGrp></LocalObjGrp>
      </LocalInfo>
      <GlobalInfo>
        <GlobalVRF></GlobalVRF>
        <Ipv4Address></Ipv4Address>
        <Ipv4PrefixLength></Ipv4PrefixLength>
        <GlobalObjGrp></GlobalObjGrp>
      </GlobalInfo>
    </Mapping>
  </ResetOutboundStaticCount>
</NAT>

```

### Table description

Item	Description
Feature name	NAT
Table name	ResetOutboundStaticCount
Table type	Single-instance table

Column name	Column description	Column type	Data type and restrictions	Remarks
				IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
ACLNumber	ACL number	Index	Unsigned integer. Value range: 2000 to 3999.	<p>If you do not specify any ACL, NAT translates all packets, else translates the packets which matches the ACL.</p> <p>Outbound dynamic NAT rules with ACLs configured on an interface takes precedence over those without ACLs. An outbound dynamic NAT rule with a high ACL number takes effect over that with a low ACL number.</p> <p>An ACL can be used by only one outbound dynamic NAT rule on an interface.</p> <p>This column can be null.</p>

## NAT/ResetServerCount

This table contains information about mappings between the IP address and port of internal servers to NAT address and port for the internal servers.

### XML structure

```

<NAT>
  <ResetServerCount>
    <Interface>
      <IfIndex></IfIndex>
      <ProtocolType></ProtocolType>
      <GlobalInfo>
        <GlobalVRF></GlobalVRF>
        <GlobalStartIpv4Address></GlobalStartIpv4Address>
        <GlobalEndIpv4Address></GlobalEndIpv4Address>
        <GlobalStartPortNumber></GlobalStartPortNumber>
        <GlobalEndPortNumber></GlobalEndPortNumber>
        <GlobalIfIndex></GlobalIfIndex>
      </GlobalInfo>
    </Interface>
  </ResetServerCount>
</NAT>

```

## Table description

Item	Description
Feature name	NAT
Table name	ResetServerCount
Table type	Single-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index or interface name	N/A	String, case-sensitive. Length: 1 to 99 characters.	This column can only be the index of local VA, global VA or Layer 3 interfaces except loopback, NULL, FC, FCB and encrypt interfaces.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
ProtocolType	Protocol type	Index	Unsigned integer. Value range: 1 to 255.	If the protocol is not TCP or UDP, NAT Server is configured without port information.
GlobalInfo	External network information	Data structure.	Members include: <ul style="list-style-type: none"> <li>GlobalVRF.</li> <li>GlobalStartIpv4Address.</li> <li>GlobalEndIpv4Address.</li> <li>GlobalStartPortNumber.</li> <li>GlobalEndPortNumber.</li> <li>GlobalIfIndex.</li> </ul>	The mapping between the protocol type, external address, and external port number must be unique for an internal server on an interface.
GlobalVRF	VRF of external network	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this option.
GlobalStartIpv4Address	Start IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.1.  The GlobalStartIpv4Address cannot be greater

Column name	Column description	Column type	Data type and restrictions	Remarks
				<p>than the GlobalEndIpv4Address. If they are the same, the external address pool has only one address.</p> <p>The external address pool can contain a maximum of 255 addresses.</p> <p>This index can be null.</p>
GlobalEndIpv4Address	End IPv4 address of an external address pool	Index	String, dotted decimal notation.	<p>Example: 1.1.1.6.</p> <p>This index can be null.</p>
GlobalStartPortNumber	Start port of an external port number range	Index	Unsigned integer. Value range: 1 to 65535.	<p>The GlobalStartPortNumber cannot be greater than the GlobalEndPortNumber. If they are the same, the external port number range has only one port.</p> <p>The external port number range can include a maximum of 255 ports.</p> <p>This index can be null.</p>
GlobalEndPortNumber	End port of an external port number range	Index	Unsigned integer. Value range: 1 to 65535.	This index can be null.
GlobalIfIndex	External interface index or interface name, The IP address of the interface is used as the NAT address for the internal server.	N/A	String, case-sensitive. Length: 1 to 99 characters.	<p>Only loopback interfaces and " IfIndex " are supported. Some versions support interface name. For relevant information,</p> <p>The IP address of the interface is used as the NAT address. Easy IP is used.</p> <p>If the IP address of an interface used by Easy IP changes and conflicts with the IP address of an internal server not using Easy IP, the Easy IP configuration becomes invalid. If the conflicted address is modified to an unconflicted address or the internal server configuration without Easy IP is removed, the Easy IP configuration</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
				takes effect. This index can be null.

## NAT/ResetOutboundPortBlockCount

This table contains the port block groups applied to the outbound direction of the interfaces.

### XML structure

```

<NAT>
  <ResetOutboundPortBlockCount>
    <Interface>
      <IfIndex></IfIndex>
      <GroupNumber></GroupNumber>
    </Interface>
  </ResetOutboundPortBlockCount>
</NAT>

```

### Table description

Item	Description
Feature name	NAT
Table name	ResetOutboundPortBlockCount
Table type	Single-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index or interface name	N/A	String. case-sensitive. Length: 1 to 99 characters.	This column can only be the index of local VA, global VA or Layer 3 interfaces except loopback, NULL, FC, FCB and encrypt interfaces.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about

Column name	Column description	Column type	Data type and restrictions	Remarks
				IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
GroupNumber	NAT port block group number.	Index	Unsigned integer. Value range: 0 to 65535.	You can apply multiple port block groups to one interface.  After you apply a port block group to an interface, the system automatically computes the IP-to-port block mappings and creates entries for them. When a private IP address accesses the public network, the private IP address is translated to the mapped public IP address and the ports are translated to ports in the mapped port block.

## NAT/PolicyRuleMove

Move the policy rules of order.

### XML structure

```

<NAT>
  <PolicyRuleMove>
    <Rule>
      <SrcRuleName></SrcRuleName>
      <DstRuleName></DstRuleName>
      <Direction></Direction>
    </Rule>
  </PolicyRuleMove>
</NAT>

```

### Table description

Item	Description
Feature name	NAT
Table name	PolicyRuleMove
Table type	Muilt-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcRuleName	source policy rule	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
DstRuleName	destination policy rule	Index	String, case insensitive. Length: 1 to 63 characters.	This column can be null.
Direction	Move the rule to before or after the objective rule	Index	Boolean: <ul style="list-style-type: none"><li>true—YES</li><li>false—NO(default).</li></ul>	If the direction is false and the DstRuleName is null, the srcRuleName is moved to the front  If the direction is true and the DstRuleName is null, the srcRuleName is moved to the end.

## NAT/ResetPolicyRuleCount

This table contains NAT policy information.

## XML structure

```
<NAT>
  <ResetPolicyRuleCount>
    <Rule>
      <RuleName></RuleName>
    </Rule>
  </ResetPolicyRuleCount>
</NAT>
```

## Table description

Item	Description
Feature name	NAT
Table name	ResetPolicyRuleCount
Table type	Single-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleName	Name of the NAT policy rule	Index	String, case insensitive. Length: 1 to 63 characters.	N/A

## NAT/ResetObjServerCount

This table contains the object server NAT rules on interfaces.

## XML structure

```
<NAT>
  <ResetObjServerCount>
    <Rule>
      <RuleName></RuleName>
    </Rule>
  </ResetObjServerCount>
</NAT>
```

## Table description

Item	Description
Feature name	NAT
Table name	ResetObjServerCount
Table type	Single-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleName	Name of the NAT Object Server	Index	String, case insensitive. Length: 1 to 63 characters.	N/A

## NAT/CreateServer

This table contains information about mappings between the private IP address and port of internal servers to NAT address and port for the internal servers.

## XML structure

```
<NAT>
  <CreateServer>
    <Interface>
      <IfIndex></IfIndex>
      <ProtocolType></ProtocolType>
      <GlobalInfo>
        <GlobalVRF></GlobalVRF>
        <GlobalStartIpv4Address></GlobalStartIpv4Address>
        <GlobalEndIpv4Address></GlobalEndIpv4Address>
        <GlobalStartPortNumber></GlobalStartPortNumber>
        <GlobalEndPortNumber></GlobalEndPortNumber>
        <GlobalIfIndex></GlobalIfIndex>
      </GlobalInfo>
      <LocalInfo>
        <LocalVRF></LocalVRF>
        <LocalStartIpv4Address></LocalStartIpv4Address>
        <LocalEndIpv4Address></LocalEndIpv4Address>
        <LocalStartPortNumber></LocalStartPortNumber>
        <LocalEndPortNumber></LocalEndPortNumber>
      </LocalInfo>
    </Interface>
  </CreateServer>
</NAT>
```

## Table description

Item	Description
Feature name	NAT
Table name	CreateServer
Table type	Multi-instance table
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interfaces.

Column name	Column description	Column type	Data type and restrictions	Remarks
ProtocolType	Protocol type	Index	Unsigned integer. Value range: 1 to 255.	If the protocol is not TCP or UDP, NAT Server is configured without port information.
GlobalInfo	External network information	Data structure.	Members include: <ul style="list-style-type: none"> <li>GlobalVRF.</li> <li>GlobalStartIpv4Address.</li> <li>GlobalEndIpv4Address.</li> <li>GlobalStartPortNumber.</li> <li>GlobalEndPortNumber.</li> <li>GlobalIfIndex.</li> </ul>	The mapping between the protocol type, external address, and external port number must be unique for an internal server on an interface.
GlobalVRF	VRF of external network	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this option.
GlobalStartIpv4Address	Start IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.1. The GlobalStartIpv4Addresses cannot be greater than the GlobalEndIpv4Address. If they are the same, the external address pool has only one address. The external address pool can contain a maximum of 255 addresses. This index can be null.
GlobalEndIpv4Address	End IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.6. This index can be null.
GlobalStartPortNumber	Start port of an external port number range	Index	Unsigned integer. Value range: 1 to 65535.	The GlobalStartPortNumber cannot be greater than the GlobalEndPortNumber. If they are the same, the external port number range has only one port. The external port number range can include a maximum of 255 ports. This index can be null.
GlobalEndPortNumber	End port of an external port number range	Index	Unsigned integer. Value range: 1 to 65535.	This index can be null.
GlobalIfIndex	External interface index.	Index	Unsigned integer.	Only loopback interfaces and "IfIndex"

Column name	Column description	Column type	Data type and restrictions	Remarks
	The IP address of the interface is used as the NAT address of the internal server.			<p>are supported.</p> <p>If the eIP address of the interface is used as the NAT address, Easy IP is used.</p> <p>If the IP address of an interface used by Easy IP changes and conflicts with the IP address of an internal server not using Easy IP, the Easy IP configuration becomes invalid. If the conflicted address is modified to an unconflicting address or the internal server configuration without Easy IP is removed, the Easy IP configuration takes effect.</p> <p>This index can be null.</p>
LocalInfo	Internal network address information	Data structure.	<p>Members include:</p> <ul style="list-style-type: none"> <li>LocalVRF.</li> <li>LocalStartIpv4Address.</li> <li>LocalEndIpv4Address.</li> <li>LocalStartPortNumber.</li> <li>LocalEndPortNumber.</li> <li>LocalSrvGroupNumber.</li> </ul>	The number of addresses in the range must match that of the external port number range.
LocalVRF	VRF of internal address	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this option.
LocalStartIpv4Address	Start IPv4 address of the internal address pool	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
LocalEndIpv4Address	End IPv4 address of the internal address pool	N/A	String, dotted decimal notation.	Example: 1.1.1.6.
LocalStartPortNumber	Start port of an internal port number range	N/A	Unsigned integer. Value range: 1 to 65535.	<p>The <i>LocalStartPortNumber</i> cannot be greater than the <i>LocalEndPortNumber</i>. If they are the same, the internal port number range has only one port.</p> <p>The internal port number range can include a maximum of 255 ports.</p>
LocalEndPort	End port number	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Number	of an internal port range		Value range: 1 to 65535.	

## NAT/DeleteServer

This table contains information about mappings between the private IP address and port of internal servers to NAT address and port for the internal servers.

## XML structure

```

<NAT>
  <DeleteServer>
    <Interface>
      <IfIndex></IfIndex>
      <ProtocolType></ProtocolType>
      <GlobalInfo>
        <GlobalVRF></GlobalVRF>

The GlobalStartIpv4Address cannot be greater than the GlobalEndIpv4Address. If they are the same, the external address pool has only one address. The external address pool can contain a maximum of 255 addresses. This index can be null.
GlobalEndIpv4Address	End IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.6. This index can be null.
GlobalStartPortNumber	Start port of an external port number range	Index	Unsigned integer. Value range: 1 to 65535.	The GlobalStartPortNumber cannot be greater than the GlobalEndPortNumber. If they are the same, the external port number range has only one port. The external port number range can include a maximum of 255 ports. This index can be null.
GlobalEndPortNumber	End port of an external port	Index	Unsigned integer.	This index can be null.

Column name	Column description	Column type	Data type and restrictions	Remarks
	number range		Value range: 1 to 65535.	
GlobalIfIndex	External interface index, The IP address of the interface is used as the NAT address for the internal server.	Index	Unsigned integer.	<p>Only loopback interfaces and " IfIndex " are supported.</p> <p>The IP address of the interface is used as the NAT address. Easy IP is used.</p> <p>If the IP address of an interface used by Easy IP changes and conflicts with the IP address of an internal server not using Easy IP, the Easy IP configuration becomes invalid. If the conflicted address is modified to an unconflicted address or the internal server configuration without Easy IP is removed, the Easy IP configuration takes effect.</p> <p>This index can be null.</p>

## NAT/CreateOutbound

This table contains the outbound dynamic NAT rules on interfaces.

### XML structure

```

<NAT>
  <CreateOutbound>
    <Interface>
      <IfIndex></IfIndex>
      <ACLNumber></ACLNumber>
      <VRF></VRF>
    </Interface>
  </CreateOutbound>
</NAT>

```

### Table description

Item	Description
Feature name	NAT
Table name	CreateOutbound
Table type	Multi-instance table

Item	Description
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
ACLNumber	ACL number	Index	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	NAT translates the packets that match the ACL. If you do not specify any ACL, NAT translates all packets. Outbound dynamic NAT rules with ACLs configured on an interface takes precedence over those without ACLs. An outbound dynamic NAT rule with a high ACL number takes effect over that with a low ACL number. An ACL can be used by only one outbound dynamic NAT rule on an interface. This column can be null.
VRF	VRF	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify addresses in the public network, do not use this option.

## NAT/DeleteOutbound

This table contains the outbound dynamic NAT rules on interfaces.

## XML structure

```

<NAT>
  <DeleteOutbound>
    <Interface>
      <IfIndex></IfIndex>
      <ACLNumber></ACLNumber>

```

```

    </Interface>
  </DeleteOutbound>
</NAT>

```

## Table description

# NAT

## NAT/AddrGroups

This table contains information about NAT address groups.

### XML structure

```
<NAT>
  <AddrGroups>
    <AddrGroup>
      <GroupNumber></GroupNumber>
      <VRID></VRID>
      <PortBlockSize></PortBlockSize>
      <ExtendedBlockNumber></ExtendedBlockNumber>
      <StartPort></StartPort>
      <EndPort></EndPort>
    </AddrGroup>
  </AddrGroups>
</NAT>
```

### Table description

Item	Description
Feature name	NAT
Table name	AddrGroups
Table type	Multi-instance table
Row name	AddrGroup
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT address group number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
VRID	Identifier of the virtual router	N/A	Unsigned integer. Value range: 1 to 255.	Master/backup mode: No VRRP keyword is required. Load sharing method: Under normal

Column name	Column description	Column type	Data type and restrictions	Remarks
				<p>circumstances, there is no need to configure VRRP keywords. The system automatically binds the backup group with the smallest VRID on the same network segment as the virtual IP address and NAT address pool address, so that traffic is transmitted on the active device in the backup group.</p> <p>When multiple VRRP backup groups exist at the same time, you can configure the VRRP keyword to explicitly guide the traffic flow to be transmitted on the active device in the specified VRRP backup group.</p>
PortBlockSize	The number of ports included in a port block.	N/A	Unsigned integer. Value range: 1 to 65535.	<p>To configure dynamic NAT444, you must configure port block for the referenced NAT address group.</p> <p>With dynamic NAT444 configured, when a private IP address initiates a connection to the public network, the NAT444 gateway assigns it a public IP address and a port block, and creates an entry for the mapping. For subsequent connections from the private IP address, the NAT444 gateway translates the private IP address to the mapped public IP address and the ports to ports in the mapped port block.</p> <p>In a NAT address group, the port block size cannot be larger than the number of ports in the port range.</p> <p>Configure this item before configuring <i>ExtendedBlockNumber</i>, deleting this item also deletes <i>ExtendedBlockNumber</i>.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
ExtendedBlockNumber	The number of extended port blocks.	N/A	Unsigned integer. Value range: 1 to 5.	With this parameter specified, when a private IP address accesses the public network, but the ports in the mapped port block are all occupied, the NAT gateway extends port blocks for the private IP address.  A user can contain up to <i>ExtendedBlockNumber+1</i> port blocks at the same time.  If you want to configure this you must first configure the <i>PortBlocksize</i> .
StartPort	Start port of the port range.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 1.	Set <i>StartPort</i> and <i>EndPort</i> to their default values to define a default port range.  The <i>StartPort</i> cannot be greater than the <i>EndPort</i> .  The number of ports in a port range cannot be smaller than the port block size.
EndPort	End port of the port range.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 65535.	N/A

## NAT/AddrGroupMembers

This table contains information about the NAT address group members.

### XML structure

```

<NAT>
  <AddrGroupMembers>
    <GroupMember>
      <GroupNumber></GroupNumber>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </GroupMember>
  </AddrGroupMembers>
</NAT>

```

## Table description

Item	Description
Feature name	NAT
Table name	AddrGroupMembers
Table type	Multi-instance table
Row name	GroupMember
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT address group number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
StartIpv4Address	Start IPv4 address of the address group member	Index	String, dotted decimal notation.	Example: 1.1.1.1. The <i>StartIpv4Address</i> cannot be greater than the <i>EndIpv4Address</i> . If they are the same, the group member has only one IP address. The IP addresses of address members on the device must not overlap. The source address in a packet destined for an external network is translated into an address in one of group members.
EndIpv4Address	End IPv4 address of the address group member	Index	String, dotted decimal notation.	Example: 1.1.1.6.

## NAT/InboundDynamicRules

This table contains the inbound dynamic NAT rules on interfaces.

## XML structure

## Table description

Item	Description
Feature name	NAT
Table name	InboundDynamicRules
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
ACLNumber	ACL number	Index	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	An ACL can be used by only one inbound dynamic NAT rule on an interface.
AddrGroupNumber	NAT address group number	N/A	Unsigned integer. Value range: 0 to 65535.	An address group cannot be used by both the nat inbound and nat outbound configuration. It cannot be used by the

Column name	Column description	Column type	Data type and restrictions	Remarks
				nat inbound configuration in both PAT and NO-PAT modes.  This column is affirmatively chosen item.
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify addresses in the public network, do not use this option.
NoPAT	Whether performs only IP address translation.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default).</li> </ul>	PAT supports only TCP, UDP, and ICMP query packets. For an ICMP packet, the ICMP ID is used as its source port number.
Reversible	Whether translates the destination address of a packet that originates from internal hosts to the external host if the packet is permitted by ACL reverse matching in NO-PAT mode.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default).</li> </ul>	NAT translates the destination IP address of the packets of a connection originating from an internal host to the NAT address based on the existing NO-PAT entry.  This column can only be configured in NO-PAT mode.
AutoAddRoute	Whether adds a route to the NAT address when address translation is performed for a packet.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default).</li> </ul>	The output interface is the NAT interface and the next-hop is the source address before translation. If you do not specify this keyword, you must manually add the route. It is recommended that you specify this keyword.  This column can only be configured in NO-PAT mode.
RuleName	Name of the dynamic mapping	N/A	String, case sensitive. Length: 1 to 63 characters.	The name is optional. Make sure the rule name is unique. The name cannot contain a forward slash (/), backslash (\), vertical bar ( ), quotation mark ("), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).
RulePriority	Priority of the dynamic	N/A	Unsigned integer. Value range: 0 to	The smaller the value, the higher the mapping

Column name	Column description	Column type	Data type and restrictions	Remarks
	mapping		2147483647.	priority. If you do not assign a value, the priority is lowest.
Counting	Whether open the switch of matching the inbound dynamic NAT rule statistics	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default)</li> </ul>	N/A

## NAT/OutboundDynamicRules

This table contains the outbound dynamic NAT rules on interfaces.

```

## Table description

Item	Description
Feature name	NAT
Table name	ServerOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
ProtocolType	Protocol type	Index	Unsigned integer. Value range: 1 to 255.	If the protocol is not TCP or UDP, NAT Server is configured without port information.
GlobalInfo	External network information	Data structure.	Members include: <ul style="list-style-type: none"> <li>GlobalVRF.</li> <li>GlobalStartIpv4Address.</li> <li>GlobalEndIpv4Address.</li> <li>GlobalStartPortNumber.</li> <li>GlobalEndPortNumber.</li> <li>GlobalIfIndex.</li> </ul>	The mapping between the protocol type, external address, and external port number must be unique for an internal server on an interface.
GlobalVRF	VRF of external network	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this option.
GlobalStartIpv4Address	Start IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.1. The GlobalStartIpv4Address cannot be greater than the GlobalEndIpv4Address. If they are the same, the external address pool has only one address. The external address pool can contain a maximum of 255 addresses. This index can be null.
GlobalEndIpv4Address	End IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.6. This index can be null.
GlobalStartPortNumber	Start port of an external port number range	Index	Unsigned integer. Value range: 1 to 65535.	The GlobalStartPortNumber cannot be greater than the GlobalEndPortNumber. If they are the same, the external port number range has only one port. The external port number range can include a maximum of 255 ports.

Column name	Column description	Column type	Data type and restrictions	Remarks
				This index can be null.
GlobalEndPortNumber	End port of an external port number range	Index	Unsigned integer. Value range: 1 to 65535.	This index can be null.
GlobalIfIndex	External interface index, The IP address of the interface is used as the NAT address for the internal server.	Index	Unsigned integer.	Only loopback interfaces and " IfIndex " are supported. The IP address of the interface is used as the NAT address. Easy IP is used. If the IP address of an interface used by Easy IP changes and conflicts with the IP address of an internal server not using Easy IP, the Easy IP configuration becomes invalid. If the conflicted address is modified to an unconflicted address or the internal server configuration without Easy IP is removed, the Easy IP configuration takes effect. This index can be null.
LocalInfo	Internal network address information	Data structure.	Members include: <ul style="list-style-type: none"> <li>LocalVRF.</li> <li>LocalStartIpv4Address.</li> <li>LocalEndIpv4Address.</li> <li>LocalStartPortNumber.</li> <li>LocalEndPortNumber.</li> <li>LocalSrvGroupNumber.</li> </ul>	The number of addresses in the range must match that of the external port number range.
LocalVRF	VRF of internal address	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this option.
LocalStartIpv4Address	Start IPv4 address of the internal address pool	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
LocalEndIpv4Address	End IPv4 address of the internal address pool	N/A	String, dotted decimal notation.	Example: 1.1.1.6.
LocalStartPortNumber	Start port of an internal port number range	N/A	Unsigned integer. Value range: 1 to 65535.	The <i>LocalStartPortNumber</i> cannot be greater than the <i>LocalEndPortNumber</i> . If they are the same, the internal port number range has only one port.

Column name	Column description	Column type	Data type and restrictions	Remarks
				The internal port number range can include a maximum of 255 ports.
LocalEndPort Number	End port of an internal port number range	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
LocalSrvGroupNumber	The internal server group to which the internal server belongs.	N/A	Unsigned integer. Value range: 0 to 65535.	With this parameter, the load sharing NAT Server feature is configured. Support for the value range depends on the device model.
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	If you specify an ACL, only packets permitted by the ACL can be translated by using the mapping. Support for this parameter depends on the device model.
Reversible	Whether reverse address translation is supported.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default)</li> </ul>	Reverse address translation applies to connections actively initiated by internal hosts to the external host. It uses existing mappings to translate the destination address for packets of these connections if the packets are permitted by ACL reverse matching.
VRID	Identifier of the virtual router	N/A	Unsigned integer. Value range: 1 to 255.	Because the system automatically binds the NAT server on the same address segment to the VRRP backup group with the smallest VRID, in the active/standby backup mode, you do not need to manually configure the VRRP backup group to bind to the NAT server.  In dual-system hot backup with load balancing, if the address of the NAT server and the address of the VRRP backup group are on the same network segment, manually configure the binding between the NAT server and the VRRP.

Column name	Column description	Column type	Data type and restrictions	Remarks
Description	Rule description	N/A	String, case sensitive. Length: 1 to 63 characters.	N/A
Counting	Whether open the switch of matching the NAT server statistics	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default)</li> </ul>	N/A
RuleName	Name of the NAT Server	N/A	String, case insensitive. Length:1 to 63 characters.	N/A
RulePriority	Priority of the server mapping	N/A	Unsigned integer. Value range: 0 to 2147483647.	The smaller the value, the higher the mapping priority. If you do not assign a value, the priority is the lowest.

The following table describes the address-port mappings between an external network and an internal network for NAT Server. The mappings which is not listed is not supported and will be treated as configuration conflict.

**Noun explanation:**

**Consecutive external addresses:** *GlobalEndIpv4Address* is greater than *GlobalStartIpv4Address*.

**Single external address:** *GlobalEndIpv4Address* is equal to *GlobalStartIpv4Address*, or *GlobalEndIpv4Address* is null.

**Consecutive external ports:** *GlobalEndPortNumber* is greater than *GlobalStartPortNumber*.

**Single external port:** *GlobalEndPortNumber* is equal to *GlobalStartPortNumber*, or *GlobalEndPortNumber* is null.

**Consecutive internal addresses:** *LocalEndIpv4Address* is greater than *LocalStartIpv4Address*.

**Single internal address:** *LocalEndIpv4Address* is equal to *LocalStartIpv4Address*, or *LocalEndIpv4Address* is null.

**Consecutive internal ports:** *LocalEndPortNumber* is greater than *LocalStartPortNumber*.

**Single internal port:** *LocalEndPortNumber* is equal to *LocalStartPortNumber*, or *LocalEndPortNumber* is null.

External network	Internal network
An external address	An internal address.
An external address and an external port number	An internal address and an internal port number.
An external address and <i>N</i> consecutive external port numbers	An internal address and an internal port number.
	<i>N</i> consecutive internal addresses and an internal port number.
	An internal address and <i>N</i> consecutive internal port numbers.
<i>N</i> consecutive external addresses	An internal address.
	<i>N</i> consecutive internal addresses.
<i>N</i> consecutive external addresses and an external port number	An internal address and an internal port number.

External network	Internal network
	<i>N</i> consecutive external addresses and an internal port number.
	An internal address and <i>N</i> consecutive internal port numbers.
An external address and an external port number	
An external address and <i>N</i> consecutive external port numbers	An internal server group.
<i>N</i> consecutive external addresses and an external port number	

## NAT/PortBlockGroups

This table contains the information about NAT port block groups.

### XML structure

```

<NAT>
  <PortBlockGroups>
    <Group>
      <GroupNumber></GroupNumber>
      <VRID></VRID>
      <PortBlockSize></PortBlockSize>
      <GlobalStartPort></GlobalStartPort>
      <GlobalEndPort></GlobalEndPort>
    </Group>
  </PortBlockGroups>
</NAT>

```

### Table description

Item	Description
Feature name	NAT
Table name	PortBlockGroups
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT port block group number.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
VRID	Identifier of the virtual router	N/A	Unsigned integer. Value range: 1 to 255.	<p>Master/Backup mode: No VRRP keyword is required.</p> <p>Load sharing method: Under normal circumstances, there is no need to configure VRRP keywords. The system automatically binds the backup group with the smallest VRID on the same network segment as the virtual IP address and NAT port group address so that the traffic is transmitted on the active device in the backup group.</p> <p>When multiple VRRP backup groups exist at the same time, you can configure the VRRP keyword to explicitly guide the traffic flow to be transmitted on the active device in the specified VRRP backup group.</p>
PortBlockSize	The number of ports included in a port block.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 256.	When you set a port block size, give consideration to the number of private IP addresses, the number of public IP addresses, and the port range. The port block size cannot be larger than the number of ports in the port range.
GlobalStartPort	Start port of the port range.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 1.	<p>Set <i>GlobalStartPort</i> and <i>GlobalEndPort</i> to their default values to define a default port range.</p> <p>The <i>GlobalStartPort</i> cannot be greater than the <i>GlobalEndPort</i>.</p> <p>The port range must include all ports that the public IP addresses use for address translation.</p> <p>The number of ports in</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
				a port range cannot be smaller than the port block size.
GlobalEndPort	End port of the port range.	N/A	Unsigned integer. Value range: 1 to 65535. Default: 65535.	N/A

## NAT/PortBlockGroupLocalMembers

This table contains the information of private IP address members in NAT port block groups.

### XML structure

```

<NAT>
  <PortBlockGroupLocalMembers>
    <LocalMember>
      <GroupNumber></GroupNumber>
      <VRF></VRF>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </LocalMember>
  </PortBlockGroupLocalMembers>
</NAT>

```

### Table description

Item	Description
Feature name	NAT
Table name	PortBlockGroupLocalMembers
Table type	Multi-instance table
Row name	LocalMember
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT port block group number.	Index	Unsigned integer. Value range: 0 to 65535.	You can specify multiple private IP address members in a port block group, but

Column name	Column description	Column type	Data type and restrictions	Remarks
				they cannot overlap. Private IP address members in different port block groups can overlap. For static NAT444, in a port block group, the number of private IP addresses cannot be larger than the number of assignable port blocks. Otherwise, some private IP addresses cannot obtain port blocks.
VRF	VRF to which the private IP address member belong.	Index	String, case-sensitive. Length: 1 to 31 characters.	Do not specify this parameter if the private IP address member does not belong to any VPN.
StartIpv4Address	Start IPv4 address of the private IP address member.	Index	String, dotted decimal notation.	Example: 1.1.1.1.
EndIpv4Address	End IPv4 address of the private IP address member.	Index	String, dotted decimal notation.	Example: 1.1.1.6. The end IP address cannot be smaller than the start IP address. If the start and end IP addresses are the same, you specifies only one private IP address.

## NAT/PortBlockGroupGlobalMembers

This table contains the information of public IP address members in NAT port block groups.

### XML structure

```

<NAT>
  <PortBlockGroupGlobalMembers>
    <GlobalMember>
      <GroupName></GroupName>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </GlobalMember>
  </PortBlockGroupGlobalMembers>
</NAT>

```

## Table description

Item	Description
Feature name	NAT
Table name	PortBlockGroupGlobalMembers
Table type	Multi-instance table
Row name	GlobalMember
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT port block group number.	Index	Unsigned integer. Value range: 0 to 65535.	<p>You can specify multiple public IP address members in a port block group, but they cannot overlap.</p> <p>Public IP address members in different port block groups can overlap. But the port ranges for overlapped members in different port block groups cannot overlap.</p> <p>The number of port blocks that a public IP address can assign is determined by dividing the number of ports in its port range by the port block size.</p>
StartIpv4Address	Start IPv4 address of the public IP address member.	Index	String, dotted decimal notation.	Example: 1.1.1.1.
EndIpv4Address	End IPv4 address of the public IP address member.	Index	String, dotted decimal notation.	<p>Example: 1.1.1.6.</p> <p>The end IP address cannot be smaller than the start IP address. If the start and end IP addresses are the same, you specifies only one public IP address.</p>

# NAT/OutboundPortBlockOnInterfaces

This table contains the port block groups applied to the outbound direction of the interfaces.

## XML structure

```
<NAT>
  <OutboundPortBlockOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <GroupNumber></GroupNumber>
      <Counting></Counting>
    </Interface>
  </OutboundPortBlockOnInterfaces>
</NAT>
```

## Table description

Item	Description
Feature name	NAT
Table name	OutboundPortBlockOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
GroupNumber	NAT port block group number.	Index	Unsigned integer. Value range: 0 to 65535.	You can apply multiple port block groups to one interface. After you apply a port block group to an interface, the system automatically computes the IP-to-port block mappings and creates entries for them. When

Column name	Column description	Column type	Data type and restrictions	Remarks
				a private IP address accesses the public network, the private IP address is translated to the mapped public IP address and the ports are translated to ports in the mapped port block.
Counting	Whether open the switch of matching the NAT portblock group statistics	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default).</li> </ul>	N/A

## NAT/DNSMappings

This table contains the mappings about the domain name of an internal server to the public IP address, public port number, and protocol type of the server.

### XML structure

```

<NAT>
  <DNSMappings>
    <MapInfo>
      <Domain></Domain>
      <Protocol></Protocol>
      <Ipv4Address></Ipv4Address>
      <IfIndex></IfIndex>
      <PortNumber></PortNumber>
    </MapInfo>
  </DNSMappings>
</NAT>

```

### Table description

Item	Description
Feature name	NAT
Table name	DNSMappings
Table type	Multi-instance table
Row name	MapInfo
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The domain name of an internal server.	Index	String, case-sensitive. Length: 1 to 253 characters.	A domain name is a dot-separated that can include letters, digits, hyphens (-), underscores (_), and dots (.) (for example, aabbcc.com). The domain name suffix can contain at most 253 characters, and each separated string contains no more than 63 characters.
Protocol	The type of the protocol used by the internal server.	N/A	Enumeration: <ul style="list-style-type: none"> <li>6—TCP.</li> <li>17—UDP.</li> </ul>	This column is affirmatively chosen item.
Ipv4Address	The public IP address used by the internal server to provide services to the external network.	N/A	String, dotted decimal notation.	Example: 1.1.1.6. The Ipv4Address and IfIndex are two configuration modes, only one mode must be configured.
IfIndex	Interface index	N/A	Unsigned integer.	Enables Easy IP to use the IP address of the interface specified by its index as the public address of the internal server. Only loopback interfaces are supported.
PortNumber	The public port number used by the internal server to provide services to the external network.	N/A	Unsigned integer. Value range: 1 to 65535.	This column is affirmatively chosen item.

## NAT/ALG

This table contains the protocols for which NAT with ALG is enabled.

## XML structure

```

<NAT>
  <ALG>
    <ALGInfo>
      <AppID></AppID>

```

```

    <EnableALG></EnableALG>
  </ALGInfo>
</ALG>
</NAT>

```

## Table description

Item	Description
Feature name	NAT
Table name	ALG
Table type	Multi-instance table
Row name	ALGInfo
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppID	Protocol ID for which NAT with ALG is enabled.	Index	Unsigned integer. Value range: 0 to 14. <ul style="list-style-type: none"> <li>0—DNS</li> <li>1—FTP.</li> <li>2—ICMP-ERROR</li> <li>3—H.323</li> <li>4—SIP</li> <li>5—TFTP</li> <li>6—RTSP</li> <li>7—SQLNET</li> <li>8—XDMCP</li> <li>9—ILS</li> <li>10—MGCP</li> <li>11—NBT</li> <li>12—PPTP</li> <li>13—RSH</li> <li>14—SCCP</li> </ul>	Use ALG with NAT to translate the payload information to ensure the establishment of data connections. NAT translates IP address and port information in packet headers, and ALG processes the fields in application layer payloads. The packet payloads of some protocols might contain IP address or port information for connection establishment. If this information is not translated, problems might occur. For example, an FTP application involves both data connection and control connection. The data connection establishment dynamically depends on the payload information for the control connection.
EnableALG	Whether enable NAT with ALG.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default).</li> </ul>	N/A

# NAT/EIM

This table is about the mapping behavior mode for PAT.

## XML structure

```
<NAT>
  <EIM>
    <EnableEIM></EnableEIM>
    <ACLNumber></ACLNumber>
  </EIM>
</NAT>
```

## Table description

Item	Description
Feature name	NAT
Table name	EIM
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EnableEIM	Whether enable <b>Endpoint-Independent Mapping</b> (EIM).	N/A	Boolean: <ul style="list-style-type: none"><li>true—YES</li><li>false—NO(default).</li></ul>	<ul style="list-style-type: none"><li>•<b>Endpoint-Independent Mapping</b>—EIM uses the same IP and port mapping for packets from the same source and port to any destination IP and port. An EIM entry is generated to record the IP and port mapping. This behavior allows packets from any external host to access the internal user by using the NAT address and port. This behavior facilitates communication among hosts that connect to different NAT gateways.</li><li>•<b>Address and</b></li></ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
				<p><b>Port-Dependent Mapping</b>—Uses different IP and port mappings for packets with the same source IP and port to different destination IP addresses and ports. This behavior does not allow packets from an external host to be sent to any NAT address and port unless the internal host has previously sent a packet of the same protocol to that external host. This behavior is secure but inconvenient for communication among hosts connecting to different NAT gateways.</p> <p>This configuration takes effect only on outbound PAT. Address and Port-Dependent Mapping always applies to inbound PAT.</p>
ACLNumber	ACL number	N/A	<p>Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.</p>	<p>Applies the NAT mapping behavior to packets that are permitted by the ACL. If no ACL is specified, the Endpoint-Independent Mapping applies to all packets.</p> <p>This field is available only when <i>EnableEIM</i> is set to true.</p>

## NAT/HairpinOnInterfaces

This table contains the interfaces where hairpin is enabled.

### XML structure

```

<NAT>
  <HairpinOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <EnableHairpin></EnableHairpin>
    </Interface>
  </HairpinOnInterfaces>

```

</NAT>

## Table description

Item	Description
Feature name	NAT
Table name	HairpinOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
EnableHairpin	Whether enable hairpin on the interface	N/A	Boolean: <ul style="list-style-type: none"><li>true—YES</li><li>false—NO(default).</li></ul>	NAT hairpin allows internal hosts behind the same NAT device to access each other only after they use the NAT addresses. NAT hairpin functions on the interface that connects the internal network and translates the source and destination IP addresses of a packet on the interface. NAT hairpin typically operates with NAT Server, outbound dynamic NAT, or outbound static NAT.

## NAT/LogRule

This table contains NAT log configurations.

## XML structure

```
<NAT>
  <LogRule>
```

```

<GlobalLog>
  <EnableGlobalLog></EnableGlobalLog>
  <ACLNumber></ACLNumber>
</GlobalLog>
<EnableFlowBeginLog></EnableFlowBeginLog>
<EnableFlowEndLog></EnableFlowEndLog>
<ActiveFlowLog>
  <EnableActiveFlowLog></EnableActiveFlowLog>
  <Interval></Interval>
</ActiveFlowLog>
<EnablePortBlockAssignLog></EnablePortBlockAssignLog>
<EnablePortBlockWithDrawLog></EnablePortBlockWithDrawLog>
<EnableAlarmLog></EnableAlarmLog>
</LogRule>
</NAT>

```

## Table description

Item	Description
Feature name	NAT
Table name	LogRule
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalLog	Global log configuration.	Data structure.	Members include: <ul style="list-style-type: none"> <li>EnableGlobalLog.</li> <li>ACLNumber.</li> </ul>	N/A
EnableGlobalLog	Whether enable the NAT logging function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default).</li> </ul>	Other column takes effect only after you enable NAT logging.
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	If an ACL is specified, this command logs NAT flows that match the permit statements in the ACL. If no ACL is specified, this configuration logs all NATed data flows. This field is available only when

Column name	Column description	Column type	Data type and restrictions	Remarks
				<i>EnableGlobalLog</i> is set to true.
EnableFlowBeginLog	Whether enable logging for NAT session establishment events.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default).</li> </ul>	When a NAT session is established, this function outputs a NAT log.
EnableFlowEndLog	Whether enable logging for NAT session removal events.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default).</li> </ul>	N/A
ActiveFlowLog	Active flow log configuration.	Data structure.	Members include: <ul style="list-style-type: none"> <li>EnableActiveFlowLog.</li> <li>Interval.</li> </ul>	N/A
EnableActiveFlowLog	Whether enable logging for active NAT flows.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default).</li> </ul>	Configure this column must also configure the <i>Interval</i> .
Interval	The interval for logging active NAT flows ( minutes).	N/A	Unsigned integer. Value range: 10 to 20.	Configure <i>EnableActiveFlowLog</i> to true to configure this item.
EnablePortBlockAssignLog	Whether enable logging for port block assigning.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default).</li> </ul>	N/A
EnablePortBlockWithdrawLog	Whether enable logging for port block withdrawing.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default).</li> </ul>	N/A
EnableAlarmLog	Whether enable logging for alarm.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default).</li> </ul>	N/A

## NAT/HotBackup

This table contains NAT hot backuping configurations.

### XML structure

```

<NAT>
  <HotBackup>
    <EnablePortBlock></EnablePortBlock>
  </HotBackup>
</NAT>

```

## Table description

Item	Description
Feature name	NAT
Table name	HotBackup
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EnablePortBlock	Whether enable hot backuping for port block.	N/A	Boolean: <ul style="list-style-type: none"><li>true—YES</li><li>false—NO(default)</li></ul>	N/A

## NAT/StaticLoadBalance

This table contains NAT static load balance configurations.

## XML structure

```
<NAT>
  <StaticLoadBalance>
    <EnableStaticLoadBalance></EnableStaticLoadBalance>
  </StaticLoadBalance>
</NAT>
```

## Table description

Item	Description
Feature name	NAT
Table name	StaticLoadBalance
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StaticLoadBalance	Whether enable load balance function for nat static configure.	N/A	Boolean: <ul style="list-style-type: none"><li>true—YES</li><li>false—NO(default).</li></ul>	N/A

## NAT/ReplyRedirectOnInterfaces

This table contains the interfaces where redirect reply-route is enabled.

## XML structure

```
<NAT>
  <ReplyRedirectOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <EnableReplyRedirect></EnableReplyRedirect >
    </Interface>
  </ReplyRedirectOnInterfaces >
</NAT>
```

## Table description

Item	Description
Feature name	NAT
Table name	ReplyRedirectOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	<ul style="list-style-type: none"><li>Unsigned integer.</li></ul>	This column can only be the index of local VA, global VA or Layer 3 interfaces except loopback, NULL, FC, FCB and encrypt interfaces.

Column name	Column description	Column type	Data type and restrictions	Remarks
				Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
EnableReply Redirect	Whether enable redirect reply-route on the interface	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default).</li> </ul>	N/A

## NAT/NATPolicy

This table contains informations about NAT policy.

### XML structure

```

<NAT>
  <NatPolicy>
    <Policy></Policy>
  </NatPolicy>
</NAT>

```

### Table description

Item	Description
Feature name	NAT
Table name	NatPolicy
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

    <PortPreserved></PortPreserved>
    <Disable></Disable>
    <Counting></Counting>
  </Rule>
</PolicyRuleMembers>
</NAT>

```

## Table description

Item	Description
Feature name	NAT
Table name	PolicyRuleMembers
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleName	Name of the NAT policy	Index	String. case insensitive. Length:1 to 63 characters.	N/A
Description	Rule description	N/A	String.case-sensitive. Length: 1 to 63 characters.	N/A
OutboundInterface	Interface index or interface name	N/A	String.case-sensitive. Length: 1 to 99 characters.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Action on packets matching the rule	N/A	Enumeration 0—NO-PAT 1—PAT. 2—EasyIp 3—NO-Nat.	You cannot specify an action when you remove or delete a rule . You must specify an action when you replace a rule.or when you merge or create a rule that does not exist. The address of the interface will be used when you chose the EasyIp. Choose NO-Nat when Perform no address translation.
AddrGroupNumber	NAT address group number	N/A	Unsigned integer. Value range: 0 to 65535	When you choose the EasyIP mode,The value of the column must be invalid. An address group cannot be used by both the nat inbound and nat outbound configuration. It cannot be used by the nat outbound configuration in both PAT and NO-PAT modes.
AddrGroupName	NAT address group name	N/A	String.case-sensitive. Length: 1 to 63 characters.	Both AddrGroupName and AddrNumber has been configured, the AddrGroupName will be used.
Reversible	Whether translates the destination address of a packet that originates from internal hosts to the external host if the packet is permitted by ACL reverse matching.	N/A	Boolean: • true—YES • false—NO(default).	Support for this keyword depends on the device model.  This column can only be configured in NO-PAT mode.
PortPreserved	Whether tries to preserve port number for PAT.	N/A	Boolean: • true—YES • false—NO(default).	This column can only be configured in PAT mode and EasyIP mode.
Disable	Disable the rule.	N/A	Boolean: • true—YES • false—NO(default)	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Counting	Enabling status of NAT policy match counting	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default)</li> </ul>	N/A

## NAT/PolicyRuleMemberSrcObj

This table contains information about the NAT policy rule source object-group.

### XML structure

```

<NAT>
  <PolicyRuleMemberSrcObj>
    <Rule>
      <RuleName></RuleName>
      <SrcObjGrpList>
        <SrcIpObj></SrcIpObj>
      </SrcObjGrpList>
    </Rule>
  </PolicyRuleMemberSrcObj>
</NAT>

```

### Table description

Item	Description

      <RulePriority></RulePriority>
    </Interface>
  </DestinationNatOnInterfaces>
</NAT>
```

## Table description

Item	Description
Feature name	NAT
Table name	DestinationNatOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except

Column name	Column description	Column type	Data type and restrictions	Remarks
				loopback, NULL, FC, FCB and encrypt interface.
ACLNumber	ACL number	index	Unsigned integer. Value range: 2000 to 3999	N/A
LocalInfo	Internal network address information	Data structure	Members include: <ul style="list-style-type: none"> <li>LocalVRF</li> <li>LocalIpv4Address</li> <li>LocalPortNumber</li> </ul>	N/A
LocalVRF	VRF of internal address	N/A	String. case-sensitive Length: 1 to 31 characters.	N/A
LocalIpv4Address	IPv4 address of the internal address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
LocalPortNumber	An internal port number	N/A	Unsigned integer. Value range: 1 to 65535	N/A
VRID	Identifier of the virtual router	N/A	Unsigned integer. Value range: 1 to 255.	Because the system automatically binds the NAT server on the same address segment to the VRRP backup group with the smallest VRID, in the active/standby backup mode, you do not need to manually configure the VRRP backup group to bind to the NAT server.  In dual-system hot backup with load balancing, if the address of the NAT server and the address of the VRRP backup group are on the same network segment, manually configure the binding between the NAT server and the VRRP.
Disable	Disable the rule.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default).</li> </ul>	N/A
Description	Rule description	N/A	String.case-sensitive. Length: 1 to 63 characters.	N/A
RuleName	Name of the NAT acl server	N/A	String. case insensitive. Length:1 to 63 characters.	N/A
RulePriority	Priority of the server mapping	N/A	Unsigned integer. Value range: 0 to 2147483647.	The smaller the value, the higher the mapping priority. If you do not

Column name	Column description	Column type	Data type and restrictions	Remarks
				assign a value, the priority is the lowest.

## NAT/ObjServer

This table contains information about the NAT object server.

### XML structure

  <ObjServer>
    <Rule>
      <RuleName></RuleName>
      <IfIndex></IfIndex>
      <DstObjGrpList>
        <DstObjGrp></DstObjGrp>
      </DstObjGrpList>
      <SrvObjGrpList>
        <SrvObjGrp></SrvObjGrp>
      </SrvObjGrpList>
      <Action></Action>
      <LocalInfo>
        <LocalIP></LocalIP>
        <LocalPort></LocalPort>
      </LocalInfo>
      <VRID></VRID>
      <Disable></Disable>
      <Counting></Counting>
    </Rule>
  </ObjServer>
</NAT>

```

### Table description

Item	Description
Feature name	NAT
Table name	ObjServer
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleName	Name of the NAT object server	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IfIndex	Interface index or interface name	N/A	String, case-sensitive. Length: 1 to 99 characters.	This column can only be the index of local VA, global VA or Layer 3 interfaces except loopback, NULL, FC, FCB and encrypt interfaces.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
DstObjGrpList	Destination object group	Data structure	Members include: DstObjGrp	N/A
DstObjGrp	Name of the destination object group	N/A	String, case insensitive. Length: 1 to 31 characters.	The column is repeatable. The maximum is 5.
SrvObjGrpList	Service object group	Data structure	Members include: SrvObjGrp	N/A
SrvObjGrp	Service object group	N/A	String, case insensitive. Length: 1 to 31 characters.	The column is repeatable. The maximum is 1.
Action	Action on packets matching the rule	N/A	Enumeration 0—net-to-single.	You cannot specify an action when you remove or delete a rule. You must specify an action when you replace a rule, or when you merge or create a rule that does not exist.
LocalInfo	Internal network address information	Data structure	Members include: • LocalIP LocalPort	N/A
LocalIP	IPv4 address of the internal address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
LocalPort	Internal port number	N/A	Unsigned integer. Value range: 1 to 65535	N/A
VRID	Identifier of the virtual router	N/A	Unsigned integer. Value range: 1 to 255.	Because the system automatically binds the NAT server on the

Column name	Column description	Column type	Data type and restrictions	Remarks
				<p>same address segment to the VRRP backup group with the smallest VRID, in the active/standby backup mode, you do not need to manually configure the VRRP backup group to bind to the NAT server.</p> <p>In dual-system hot backup with load balancing, if the address of the NAT server and the address of the VRRP backup group are on the same network segment, manually configure the binding between the NAT server and the VRRP.</p>
Disable	Disable the rule.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default)</li> </ul>	N/A
Counting	Whether enabling counting NAT obj server statistics	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO(default)</li> </ul>	N/A

# NAT

## NAT/AddrGroups

This table contains information about NAT address groups.

### XML structure

```
<NAT>
  <AddrGroups>
    <AddrGroup>
      <GroupNumber></GroupNumber>
      <VRID></VRID>
      <PortBlockSize></PortBlockSize>
      <ExtendedBlockNumber></ExtendedBlockNumber>
      <StartPort></StartPort>
      <EndPort></EndPort>
    </AddrGroup>
  </AddrGroups>
</NAT>
```

### Table description

Item	Description
Feature name	NAT
Table name	AddrGroups
Table type	Multi-instance table
Row name	AddrGroup
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT address group number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
VRID	Identifier of the virtual router	N/A	Unsigned integer. Value range: 1 to 255.	<ul style="list-style-type: none"><li>Master/backup mode: No VRRP keyword is required.</li><li>Load sharing method:</li></ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
				<p>Under normal circumstances, there is no need to configure VRRP keywords. The system automatically binds the backup group with the smallest VRID on the same network segment as the virtual IP address and NAT address pool address, so that traffic is transmitted on the active device in the backup group.</p> <p>When multiple VRRP backup groups exist at the same time, you can configure the VRRP keyword to explicitly guide the flow of traffic and enable traffic to be transmitted on the active device in the specified VRRP backup group.</p>
PortBlockSize	The number of ports included in a port block.	N/A	Unsigned integer. Value range: 1 to 65535.	<p>To configure dynamic NAT444, you must configure port block for the referenced NAT address group.</p> <p>With dynamic NAT444 configured, when a private IP address initiates a connection to the public network, the NAT444 gateway assigns it a public IP address and a port block, and creates an entry for the mapping. For subsequent connections from the private IP address, the NAT444 gateway translates the private IP address to the mapped public IP address and the ports to ports in the mapped port block.</p> <p>In a NAT address group, the port block size cannot be larger than the number of ports in the port range.</p> <p>Configure this item before configuring <i>ExtendedBlockNumber</i>, deleting this item also deletes</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
				<i>ExtendedBlockNumber</i> .
ExtendedBlockNumber	The number of extended port blocks.	N/A	Unsigned integer. Value range: 1 to 5.	With this parameter specified, when a private IP address accesses the public network, but the ports in the mapped port block are all occupied, the NAT gateway extends port blocks for the private IP address. A user can contain up to <i>ExtendedBlockNumber</i> +1 port blocks at the same time. If you want to configure this you must first configure the <i>PortBlocksize</i> .
StartPort	Start port of the port range.	N/A	Unsigned integer. Value range: 1 to 65535.	Set <i>StartPort</i> and <i>EndPort</i> to their default values to define a default port range. The <i>StartPort</i> cannot be greater than the <i>EndPort</i> . The number of ports in a port range cannot be smaller than the port block size.
EndPort	End port of the port range.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A

## NAT/AddrGroupMembers

This table contains information about the NAT address group members.

### XML structure

```

<NAT>
  <AddrGroupMembers>
    <GroupMember>
      <GroupNumber></GroupNumber>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </GroupMember>
  </AddrGroupMembers>
</NAT>

```

## Table description

Item	Description
Feature name	NAT
Table name	AddrGroupMembers
Table type	Multi-instance table
Row name	GroupMember
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT address group number	Index	Unsigned integer. Value range: 0 to 65535.	N/A
StartIpv4Address	Start IPv4 address of the address group member	Index	String, dotted decimal notation.	Example: 1.1.1.1. The <i>StartIpv4Address</i> cannot be greater than the <i>EndIpv4Address</i> . If they are the same, the group member has only one IP address. The IP addresses of address members on the device must not overlap. The source address in a packet destined for an external network is translated into an address in one of group members.
EndIpv4Address	End IPv4 address of the address group member	Index	String, dotted decimal notation.	Example: 1.1.1.6.

## NAT/AddrPoolAlloc

This table contains address pool allocation information about the NAT address pool.

## XML structure

```
<NAT>
  <AddrPoolAlloc>
    <AddrBlock>
      <AddrPoolName></AddrPoolName>
```

```

    <VxLanID></VxLanID>
    <DPAAddress></DPAAddress>
    <StartIpv4Address></StartIpv4Address>
    <EndIpv4Address></EndIpv4Address>
  </AddrBlock>
</AddrPoolAlloc>
</NAT>

```

## Table description

Item	Description
Feature name	NAT
Table name	AddrPoolAlloc
Table type	Multi-instance table
Row name	AddrBlock
Restrictions	None

## Columns

	Column description	Column type	Data type and restrictions	Remarks
AddrPoolName	NAT address pool name	Index	String, case-sensitive. Length:1 to31characters.	N/A
VxLanID	VXLAN ID	Index	Unsigned integer, Value range: 0-16777215.	N/A
DPAAddress	DP address	Index	String, dotted decimal notation.	Example: 11.1.1.2.
StartIpv4Address	Start IPv4 address of the dynamic address block	Index	String, dotted decimal notation.	<p>Example: 1.1.1.1.</p> <p>The <i>StartIpv4Address</i> cannot be greater than the <i>EndIpv4Address</i>. If they are same, the block member has only one IP address.</p> <p>The IP addresses of address members on the device must not overlap.</p> <p>The source address in</p>

	Column description	Column type	Data type and restrictions	Remarks
				a packet destined for an external network is translated into an address in one of block members.
EndIpv4Address	End IPv4 address of the dynamic address block		String, dotted decimal notation.	Example: 1.1.1.6.

## NAT/InboundDynamicRules

This table contains the inbound dynamic NAT rules on interfaces.

### XML structure

```

<NAT>
  <InboundDynamicRules>
    <Interface>
      <IfIndex></IfIndex>
      <ACLNumber></ACLNumber>
      <AddrGroupNumber></AddrGroupNumber>
      <VRF></VRF>
      <NoPAT></NoPAT>
      <Reversible></Reversible>
      <AutoAddRoute></AutoAddRoute>
      <RuleName></RuleName>
      <RulePriority></RulePriority>
      <MatchingCount></MatchingCount>
      <Counting></Counting>
    </Interface>
  </InboundDynamicRules>
</NAT>

```

### Table description

Item	Description
Feature name	NAT

Item	Description
Table name	InboundDynamicRules
Table type	Multi-instance table
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
ACLNumber	ACL number	Index	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	An ACL can be used by only one inbound dynamic NAT rule on an interface.
AddrGroupNumber	NAT address group number	N/A	Unsigned integer. Value range: 0 to 65535.	An address group cannot be used by both the NAT inbound and NAT outbound configuration. It cannot be used by the NAT inbound configuration in both PAT and NO-PAT modes.  This column is affirmatively chosen item.
VRF	VRF.	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify addresses in the public network, do not use this option.
NoPAT	Whether performs only IP address translation.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	PAT supports only TCP, UDP, and ICMP query packets. For an ICMP packet, the ICMP ID is used as its source port number.
Reversible	Whether translates the destination address of a packet that originates from internal hosts to the external host if the packet is permitted by	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	NAT translates the destination IP address of the packets of a connection originating from an internal host to the NAT address based on the existing NO-PAT entry.  This column can only

Column name	Column description	Column type	Data type and restrictions	Remarks
	ACL reverse matching in NO-PAT mode.			be configured in NO-PAT mode.
AutoAddRoute	Whether adds a route to the NAT address when address translation is performed for a packet.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	The output interface is the NAT interface and the next-hop is the source address before translation. If you do not specify this keyword, you must manually add the route. It is recommended that you specify this keyword.  This column can only be configured in NO-PAT mode.
RuleName	Name of the dynamic mapping	N/A	String, case sensitive. Length: 1 to 63 characters.	The name is optional. Make sure the rule name is unique. The name cannot contain a forward slash (/), backslash (\), vertical bar ( ), quotation mark ("), colon (:), asterisk (*), question mark (?), left angle bracket (<), right angle bracket (>), or an at sign (@).
RulePriority	Priority of the dynamic mapping	N/A	Unsigned integer. Value range: 0 to 2147483647.	The smaller the value, the higher the mapping priority. If you do not assign a value, the priority is lowest.
MatchingCount	Number of packets matching the inbound dynamic NAT rule.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
Counting	Whether open the switch of matching the inbound dynamic NAT rule statistics	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	N/A

## NAT/OutboundDynamicRules

This table contains the outbound dynamic NAT rules on interfaces.

### XML structure

```
<NAT>
  <OutboundDynamicRules>
```

```

<Interface>
  <IfIndex></IfIndex>
  <ACLNumber></ACLNumber>
  <AddrGroupNumber></AddrGroupNumber>

Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except

Column name	Column description	Column type	Data type and restrictions	Remarks
				loopback, NULL, FC, FCB and encrypt interface.
ProtocolType	Protocol type	Index	Unsigned integer. Value range: 1 to 255.	If the protocol is not TCP or UDP, NAT Server is configured without port information.
GlobalInfo	External network information	Data structure.	Members include: <ul style="list-style-type: none"> <li>GlobalVRF.</li> <li>GlobalStartIpv4Address.</li> <li>GlobalEndIpv4Address.</li> <li>GlobalStartPortNumber.</li> <li>GlobalEndPortNumber.</li> <li>GlobalIfIndex.</li> </ul>	The mapping between the protocol type, external address, and external port number must be unique for an internal server on an interface.
GlobalVRF	VRF of external network	Index	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this option.
GlobalStartIpv4Address	Start IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.1. The GlobalStartIpv4Address cannot be greater than the GlobalEndIpv4Address. If they are the same, the external address pool has only one address. The external address pool can contain a maximum of 255 addresses. This index can be null.
GlobalEndIpv4Address	End IPv4 address of an external address pool	Index	String, dotted decimal notation.	Example: 1.1.1.6. This index can be null.
GlobalStartPortNumber	Start port of an external port number range	Index	Unsigned integer. Value range: 1 to 65535.	The GlobalStartPortNumber cannot be greater than the GlobalEndPortNumber. If they are the same, the external port number range has only one port. The external port number range can include a maximum of 255 ports. This index can be null.
GlobalEndPortNumber	End port of an external port number range	Index	Unsigned integer. Value range: 1 to 65535.	This index can be null.

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalIfIndex	External interface index, The IP address of the interface is used as the NAT address for the internal server.	Index	Unsigned integer.	<p>Only loopback interfaces and " IfIndex " are supported.</p> <p>The IP address of the interface is used as the NAT address. Easy IP is used.</p> <p>If the IP address of an interface used by Easy IP changes and conflicts with the IP address of an internal server not using Easy IP, the Easy IP configuration becomes invalid. If the conflicted address is modified to an unconflicted address or the internal server configuration without Easy IP is removed, the Easy IP configuration takes effect.</p> <p>This index can be null.</p>
LocalInfo	Internal network address information	Data structure.	<p>Members include:</p> <ul style="list-style-type: none"> <li>LocalVRF.</li> <li>LocalStartIpv4Address.</li> <li>LocalEndIpv4Address.</li> <li>LocalStartPortNumber.</li> <li>LocalEndPortNumber.</li> <li>LocalSrvGroupNumber.</li> </ul>	The number of addresses in the range must match that of the external port number range.
LocalVRF	VRF of internal address	N/A	String, case-sensitive. Length: 1 to 31 characters.	To specify a public IP address, do not use this option.
LocalStartIpv4Address	Start IPv4 address of the internal address pool	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
LocalEndIpv4Address	End IPv4 address of the internal address pool	N/A	String, dotted decimal notation.	Example: 1.1.1.6.
LocalStartPortNumber	Start port of an internal port number range	N/A	Unsigned integer. Value range: 1 to 65535.	<p>The <i>LocalStartPortNumber</i> cannot be greater than the <i>LocalEndPortNumber</i>. If they are the same, the internal port number range has only one port.</p> <p>The internal port number range can include a maximum of 255 ports.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
LocalEndPort Number	End port of an internal port number range	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
LocalSrvGroupNumber	The internal server group to which the internal server belongs.	N/A	Unsigned integer. Value range: 0 to 65535.	With this parameter, the load sharing NAT Server feature is configured. Support for the value range depends on the device model.
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	If you specify an ACL, only packets permitted by the ACL can be translated by using the mapping. Support for this parameter depends on the device model.
Reversible	Whether reverse address translation is supported.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES.</li> <li>false—NO.</li> </ul>	Reverse address translation applies to connections actively initiated by internal hosts to the external host. It uses existing mappings to translate the destination address for packets of these connections if the packets are permitted by ACL reverse matching.
VRID	Identifier of the virtual router	N/A	Unsigned integer. Value range: 1 to 255.	Because the system automatically binds the NAT server on the same address segment to the VRRP backup group with the smallest VRID, in the active/standby backup mode, you do not need to manually configure the VRRP backup group to bind to the NAT server. In dual-system hot backup with load balancing, if the address of the NAT server and the address of the VRRP backup group are on the same network segment, manually configure the binding between the NAT server and the VRRP.
Description	Rule description	N/A	String, case sensitive.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 63 characters.	
MatchingCount	Number of packets matching the NAT server	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
Counting	Whether open the switch of matching the NAT server statistics	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	N/A
RuleName	Name of the NAT server	N/A	String, case insensitive. Length: 1 to 63 characters.	N/A
RulePriority	Priority of the server mapping	N/A	Unsigned integer. Value range: 0 to 2147483647.	The smaller the value, the higher the mapping priority. If you do not assign a value, the priority is the lowest.
WhetherPersistConfig	Whether to save the configuration	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	N/A

The following table describes the address-port mappings between an external network and an internal network for NAT Server. The mappings which is not listed is not supported and will be treated as configuration conflict.

#### Noun explanation:

**Consecutive external addresses:** *GlobalEndIpv4Address* is greater than *GlobalStartIpv4Address*.

**Single external address:** *GlobalEndIpv4Address* is equal to *GlobalStartIpv4Address*, or *GlobalEndIpv4Address* is null.

**Consecutive external ports:** *GlobalEndPortNumber* is greater than *GlobalStartPortNumber*.

**Single external port:** *GlobalEndPortNumber* is equal to *GlobalStartPortNumber*, or *GlobalEndPortNumber* is null.

**Consecutive internal addresses:** *LocalEndIpv4Address* is greater than *LocalStartIpv4Address*.

**Single internal address:** *LocalEndIpv4Address* is equal to *LocalStartIpv4Address*, or *LocalEndIpv4Address* is null.

**Consecutive internal ports:** *LocalEndPortNumber* is greater than *LocalStartPortNumber*.

**Single internal port:** *LocalEndPortNumber* is equal to *LocalStartPortNumber*, or *LocalEndPortNumber* is null.

External network	Internal network
An external address	An internal address.
An external address and an external port number	An internal address and an internal port number.
An external address and <i>N</i> consecutive external port numbers	An internal address and an internal port number. <i>N</i> consecutive internal addresses and an internal port number.

External network	Internal network
	An internal address and <i>N</i> consecutive internal port numbers.
<i>N</i> consecutive external addresses	An internal address. <i>N</i> consecutive internal addresses.
	An internal address and an internal port number.
<i>N</i> consecutive external addresses and an external port number	<i>N</i> consecutive external addresses and an internal port number. An internal address and <i>N</i> consecutive internal port numbers.
An external address and an external port number	
An external address and <i>N</i> consecutive external port numbers	An internal server group.
<i>N</i> consecutive external addresses and an external port number	

## NAT/PortBlockGroups

This table contains the information about NAT port block groups.

### XML structure

```

<NAT>
  <PortBlockGroups>
    <Group>
      <GroupNumber></GroupNumber>
      <VRID></VRID>
      <PortBlockSize></PortBlockSize>
      <GlobalStartPort></GlobalStartPort>
      <GlobalEndPort></GlobalEndPort>
    </Group>
  </PortBlockGroups>
</NAT>

```

### Table description

Item	Description
Feature name	NAT
Table name	PortBlockGroups
Table type	Multi-instance table
Row name	Group

Item	Description
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT port block group number.	Index	Unsigned integer. Value range: 0 to 65535.	N/A
VRID	Identifier of the virtual router	N/A	Unsigned integer. Value range: 1 to 255.	<ul style="list-style-type: none"> <li>Master/Backup mode: No VRRP keyword is required.</li> <li>Load sharing method: Under normal circumstances, there is no need to configure VRRP keywords. The system automatically binds the backup group with the smallest VRID on the same network segment as the virtual IP address and NAT port group address so that the traffic is transmitted on the active device in the backup group.</li> <li>When multiple VRRP backup groups exist at the same time, you can configure the VRRP keyword to explicitly guide the flow of traffic and enable traffic to be transmitted on the active device in the specified VRRP backup group.</li> </ul>
PortBlockSize	The number of ports included in a port block.	N/A	Unsigned integer. Value range: 1 to 65535.	When you set a port block size, give consideration to the number of private IP addresses, the number of public IP addresses, and the port range. The port block size cannot be larger than the number of ports in the port range.
GlobalStartPort	Start port of the port range.	N/A	Unsigned integer. Value range: 1 to 65535.	Set <i>GlobalStartPort</i> and <i>GlobalEndPort</i> to their default values to define a default port

				<p>range.</p> <p>The <i>GlobalStartPort</i> cannot be greater than the <i>GlobalEndPort</i>.</p> <p>The port range must include all ports that the public IP addresses use for address translation.</p> <p>The number of ports in a port range cannot be smaller than the port block size.</p>
GlobalEndPort	End port of the port range.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A

## NAT/PortBlockGroupLocalMembers

This table contains the information of private IP address members in NAT port block groups.

### XML structure

```

<NAT>
  <PortBlockGroupLocalMembers>
    <LocalMember>
      <GroupNumber></GroupNumber>
      <VRF></VRF>
      <StartIpv4Address></StartIpv4Address>
      <EndIpv4Address></EndIpv4Address>
    </LocalMember>
  </PortBlockGroupLocalMembers>
</NAT>

```

### Table description

Item	Description
Feature name	NAT
Table name	PortBlockGroupLocalMembers
Table type	Multi-instance table
Row name	LocalMember
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT port block group number	Index	Unsigned integer. Value range: 0 to 65535.	You can specify multiple private IP address members in a port block group, but they cannot overlap.  Private IP address members in different port block groups can overlap.  For static NAT444, in a port block group, the number of private IP addresses cannot be larger than the number of assignable port blocks. Otherwise, some private IP addresses cannot obtain port blocks.
VRF	VRF to which the private IP address member belong	Index	String, case-sensitive. Length: 1 to 31 characters.	Do not specify this parameter if the private IP address member does not belong to any VPN.
StartIpv4Address	Start IPv4 address of the private IP address member	Index	String, dotted decimal notation.	Example: 1.1.1.1.
EndIpv4Address	End IPv4 address of the private IP address member	Index	String, dotted decimal notation.	Example: 1.1.1.6.  The end IP address cannot be smaller than the start IP address. If the start and end IP addresses are the same, you specifies only one private IP address.

## NAT/PortBlockGroupGlobalMembers

This table contains the informations of public IP address members in NAT port block groups.

## XML structure

```

<NAT>
  <PortBlockGroupGlobalMembers>
    <GlobalMember>
      <GroupNumber></GroupNumber>

    </GlobalMember>
  </PortBlockGroupGlobalMembers>
</NAT>

```

## Table description

Item	Description
Feature name	NAT
Table name	PortBlockGroupGlobalMembers
Table type	Multi-instance table
Row name	GlobalMember
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GroupNumber	NAT port block group number.	Index	Unsigned integer. Value range: 0 to 65535.	<p>You can specify multiple public IP address members in a port block group, but they cannot overlap.</p> <p>Public IP address members in different port block groups can overlap. But the port ranges for overlapped members in different port block groups cannot overlap.</p> <p>The number of port blocks that a public IP address can assign is determined by dividing the number of ports in its port range by the port block size.</p>
StartIpv4Address	Start IPv4 address of the public IP address member.	Index	String, dotted decimal notation.	Example: 1.1.1.1.
EndIpv4Address	End IPv4 address of the public IP address member.	Index	String, dotted decimal notation.	<p>Example: 1.1.1.6.</p> <p>The end IP address cannot be smaller than the start IP address. If the start and end IP addresses are the same, you specifies only one public IP address.</p>

# NAT/OutboundPortBlockOnInterfaces

This table contains the port block groups applied to the outbound direction of the interfaces.

## XML structure

```
<NAT>
  <OutboundPortBlockOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <GroupNumber></GroupNumber>
      <MatchingCount></MatchingCount>
      <Counting></Counting>
    </Interface>
  </OutboundPortBlockOnInterfaces>
</NAT>
```

## Table description

Item	Description
Feature name	NAT
Table name	OutboundPortBlockOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
GroupNumber	NAT port block group number.	Index	Unsigned integer. Value range: 0 to 65535.	You can apply multiple port block groups to one interface.  After you apply a port block group to an interface, the system automatically computes the IP-to-port block mappings and creates entries for them. When a private IP address

				accesses the public network, the private IP address is translated to the mapped public IP address and the ports are translated to ports in the mapped port block.
MatchingCount	Number of packets matching the NAT portblock group.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
Counting	Whether open the switch of matching the NAT portblock group statistics	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	N/A

## NAT/DNSMappings

This table contains the mappings about the domain name of an internal server to the public IP address, public port number, and protocol type of the server.

### XML structure

```

<NAT>
  <DNSMappings>
    <MapInfo>
      <Domain></Domain>
      <Protocol></Protocol>
      <Ipv4Address></Ipv4Address>
      <IfIndex></IfIndex>
      <PortNumber></PortNumber>
    </MapInfo>
  </DNSMappings>
</NAT>

```

### Table description

Item	Description
Feature name	NAT
Table name	DNSMappings
Table type	Multi-instance table
Row name	MapInfo
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Domain	The domain name of an internal server.	Index	String, case-sensitive. Length: 1 to 253 characters.	A domain name is a dot-separated that can include letters, digits, hyphens (-), underscores (_), and dots (.) (for example, aabbcc.com). The domain name suffix can contain at most 253 characters, and each separated string contains no more than 63 characters.
Protocol	The type of the protocol used by the internal server.	N/A	Enumeration: <ul style="list-style-type: none"><li>6—TCP.</li><li>17—UDP.</li></ul>	This column is affirmatively chosen item.
Ipv4Address	The public IP address used by the internal server to provide services to the external network.	N/A	String, dotted decimal notation.	Example: 1.1.1.6. The Ipv4Address and IfIndex are two configuration modes, only one mode must be configured.
IfIndex	Interface index	N/A	Unsigned integer.	Enables Easy IP to use the IP address of the interface specified by its index as the public address of the internal server. Only loopback interfaces are supported.
PortNumber	The public port number used by the internal server to provide services to the external network.	N/A	Unsigned integer. Value range: 1 to 65535.	This column is affirmatively chosen item.

## NAT/ALG

This table contains the protocols for which NAT with ALG is enabled.

## XML structure

```
<NAT>
  <ALG>
    <ALGInfo>
      <AppID></AppID>
```

```

    <AppName></AppName>
    <EnableALG></EnableALG>
  </ALGInfo>
</ALG>
</NAT>

```

## Table description

Item	Description
Feature name	NAT
Table name	ALG
Table type	Multi-instance table
Row name	ALGInfo
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AppID	Protocol ID for which NAT with ALG is enabled.	Index	Unsigned integer. Value range: 0 to 14. <ul style="list-style-type: none"> <li>0—DNS</li> <li>1—FTP.</li> <li>2—ICMP-ERROR</li> <li>3—H.323</li> <li>4—SIP</li> <li>5—TFTP</li> <li>6—RTSP</li> <li>7—SQLNET</li> <li>8—XDMCP</li> <li>9—ILS</li> <li>10—MGCP</li> <li>11—NBT</li> <li>12—PPTP</li> <li>13—RSH</li> <li>14—SCCP</li> </ul>	Use ALG with NAT to translate the payload information to ensure the establishment of data connections. NAT translates IP address and port information in packet headers, and ALG processes the fields in application layer payloads. The packet payloads of some protocols might contain IP address or port information for connection establishment. If this information is not translated, problems might occur. For example, an FTP application involves both data connection and control connection. The data connection establishment dynamically depends on the payload information for the control connection.
AppName	Protocol name for which NAT with ALG is enabled.	N/A	String, Case-insensitive. Length: 1 to 63 characters.	N/A

EnableALG	Whether enable NAT with ALG.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	N/A
-----------	------------------------------	-----	--	-----

## NAT/EIM

This table is about the mapping behavior mode for PAT.

## XML structure

```

<NAT>
  <EIM>
    <EnableEIM></EnableEIM>
    <ACLNumber></ACLNumber>
  </EIM>
</NAT>

```

## Table description

Item	Description
Feature name	NAT
Table name	EIM
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
EnableEIM	Whether enable <b>Endpoint-Independent Mapping</b> (EIM).	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	<ul style="list-style-type: none"> <li><b>Endpoint-Independent Mapping</b>—EIM uses the same IP and port mapping for packets from the same source and port to any destination IP and port. An EIM entry is generated to record the IP and port mapping. This behavior allows packets from any external host to access the internal user by using the NAT address and port. This behavior facilitates communication among</li> </ul>

				<p>hosts that connect to different NAT gateways.</p> <p>•<b>Address and Port-Dependent Mapping</b>—Uses different IP and port mappings for packets with the same source IP and port to different destination IP addresses and ports. This behavior does not allow packets from an external host to be sent to any NAT address and port unless the internal host has previously sent a packet of the same protocol to that external host. This behavior is secure but inconvenient for communication among hosts connecting to different NAT gateways.</p> <p>This configuration takes effect only on outbound PAT. Address and Port-Dependent Mapping always applies to inbound PAT.</p>
ACLNumber	ACL number	N/A	<p>Unsigned integer. Value range: 2000 to 3999.</p> <p>OR</p> <p>String, case-sensitive. Length: 1 to 63 characters.</p>	<p>Applies the NAT mapping behavior to packets that are permitted by the ACL. If no ACL is specified, the Endpoint-Independent Mapping applies to all packets.</p> <p>This field is available only when <i>EnableEIM</i> is set to true.</p>

## NAT/HairpinOnInterfaces

This table contains the interfaces where hairpin is enabled.

### XML structure

```

<NAT>
  <HairpinOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <EnableHairpin></EnableHairpin>
    </Interface>
  </HairpinOnInterfaces>
</NAT>

```

```

    </Interface>
  </HairpinOnInterfaces>
</NAT>

```

## Table description

Item	Description
Feature name	NAT
Table name	HairpinOnInterfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
EnableHairpin	Whether enable hairpin on the interface	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	NAT hairpin allows internal hosts behind the same NAT device to access each other only after they use the NAT addresses. NAT hairpin functions on the interface that connects the internal network and translates the source and destination IP addresses of a packet on the interface.  NAT hairpin typically operates with NAT Server, outbound dynamic NAT, or outbound static NAT.

## NAT/LogRule

This table contains NAT log configurations.

## XML structure

```
<NAT>
```

```

<LogRule>
  <GlobalLog>
    <EnableGlobalLog></EnableGlobalLog>
    <ACLNumber></ACLNumber>
  </GlobalLog>
  <EnableFlowBeginLog></EnableFlowBeginLog>
  <EnableFlowEndLog></EnableFlowEndLog>
  <ActiveFlowLog>
    <EnableActiveFlowLog></EnableActiveFlowLog>
    <Interval></Interval>
  </ActiveFlowLog>
  <EnablePortBlockAssignLog></EnablePortBlockAssignLog>
  <EnablePortBlockWithDrawLog></EnablePortBlockWithDrawLog>
  <EnableAlarmLog></EnableAlarmLog>
</LogRule>
</NAT>

```

## Table description

Item	Description
Feature name	NAT
Table name	LogRule
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
GlobalLog	Global log configuration.	Data structure.	Members include: <ul style="list-style-type: none"> <li>EnableGlobalLog.</li> <li>ACLNumber.</li> </ul>	N/A
EnableGlobalLog	Whether enable the NAT logging function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	Other column takes effect only after you enable NAT logging.
ACLNumber	ACL number	N/A	Unsigned integer. Value range: 2000 to 3999. OR String, case-sensitive. Length: 1 to 63 characters.	If an ACL is specified, this command logs NAT flows that match the permit statements in the ACL. If no ACL is specified, this configuration logs all NATed data flows. This field is available only when

				<i>EnableGlobalLog</i> is set to true.
EnableFlowBeginLog	Whether enable logging for NAT session establishment events.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO</li> </ul>	When a NAT session is established, this function outputs a NAT log.
EnableFlowEndLog	Whether enable logging for NAT session removal events.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	N/A
ActiveFlowLog	Active flow log configuration.	Data structure.	Members include: <ul style="list-style-type: none"> <li>EnableActiveFlowLog.</li> <li>Interval.</li> </ul>	N/A
EnableActiveFlowLog	Whether enable logging for active NAT flows.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	Configure this column must also configure the <i>Interval</i> .
Interval	The interval for logging active NAT flows ( minutes).	N/A	Unsigned integer. Value range: 10 to 20.	Configure <i>EnableActiveFlowLog</i> to true to configure this item.
EnablePortBlockAssignLog	Whether enable logging for port block assigning.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	N/A
EnablePortBlockWithdrawLog	Whether enable logging for port block withdrawing.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	N/A
EnableAlarmLog	Whether enable logging for alarm.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	N/A

## NAT/HotBackup

This table contains NAT hot backuping configurations.

### XML structure

```

<NAT>
  <HotBackup>
    <EnablePortBlock></EnablePortBlock>
  </HotBackup>
</NAT>

```

### Table description

Item	Description

</NAT>
```

## Table description

Item	Description
Feature name	NAT
Table name	PolicyRuleMembers
Table type	Multi-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description		Data type and restrictions	Remarks
RuleName	Name of the NAT policy rule	Index	String. case insensitive. Length:1 to 63 characters.	N/A
Description	Rule description	N/A	String. case-sensitive. Length: 1 to 63 characters.	N/A
OutboundInterface	Interface index or interface name	N/A	String. case-sensitive. Length: 1 to 99 characters.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
SrcObjGrpList	Source object group of the policy rule	Data structure	Members include: <ul style="list-style-type: none"> <li>SrclpObjGroup.</li> </ul>	N/A
SrclpObjGroup	Name of the Source IP object group	N/A	String. case insensitive. Length: 1 to 31 characters.	N/A
DstObjGrpList	Destination object group of the policy rule	Data structure	Members include: <ul style="list-style-type: none"> <li>DstlpObjGroup.</li> </ul>	N/A
DstlpObjGroup	Name of the Destination IP object group	N/A	String. case insensitive. Length: 1 to 31 characters.	N/A

Column name	Column description		Data type and restrictions	Remarks
SrvObjGrpList	Service object group of the policy rule	Data structure	Members include: <ul style="list-style-type: none"> <li>ServiceIpObjGroup.</li> </ul>	N/A
ServiceObjGroup	Name of the Service object group	N/A	String. case insensitive.. Length: 1 to 31 characters.	N/A
Action	Action on packets matching the rule	N/A	Enumeration: 0—NO-PAT. 1—PAT. 2—EasyIP. 3—NO-Nat.	You cannot specify an action when you remove or delete a rule . You must specify an action when you replace a rule.or when you merge or create a rule that does not exist. The address of the interface will be used when you chose the EasyIp. Choose NO-Nat when Perform no address translation.
AddrGroupNumber	NAT address group number	N/A	Unsigned integer. Value range: 0 to 65535.	When you choose the EasyIP mode,The value of the column must be invalid. An address group cannot be used by both the nat inbound and nat outbound configuration. It cannot be used by the nat outbound configuration in both PAT and NO-PAT modes.
AddrGroupName	NAT address group name	N/A	String.case-sensitive. Length: 1 to 63 characters.	N/A
Reversible	Whether translates the destination address of a packet that originates from internal hosts to the external host if the packet is permitted by ACL reverse matching.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	Support for this keyword depends on the device model.  This column can only be configured in NO-PAT mode.

Column name	Column description		Data type and restrictions	Remarks
PortPreserved	Whether tries to preserve port number for PAT.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	This column can only be configured in PAT mode and EasyIP mode.
Disable	Disable the rule.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	N/A
Counting	Enabling stauts of NAT policy match counting	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	N/A
MatchingCount	Number of packets matching the NAT policy.	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A

## NAT/PolicyRuleMemberSrcObj

This table contains information about the NAT policy rule source object-group.

### XML structure

```

<NAT>
  <PolicyRuleMemberSrcObj>
    <Rule>
      <RuleName></RuleName>

RuleName	Name of the NAT policy rule	Index	String. case insensitive. Length:1 to 63 characters.	N/A
DstObjGrpList	Policy rule destination object group	Data structure	Members include: <ul style="list-style-type: none"><li>DstIpObj.</li></ul>	N/A
DstIpObj	Name of the Destination IP object group	N/A	String. case insensitive. Length: 1 to 31 characters.	N/A

## NAT/PolicyRuleMemberSrvObj

This table contains information about the NAT policy rule service object-group.

## XML structure

```
<NAT>
  <PolicyRuleMemberSrvObj>
    <Rule>
      <RuleName></RuleName>
      <SrvObjGrpList>
        <SrvObj></SrvObj>
      </SrvObjGrpList>
    </Rule>
  </PolicyRuleMemberSrcObj>
</NAT>
```

## Table description

Item	Description
Feature name	NAT
Table name	PolicyRuleMemberSrvObj
Table type	Multi-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleName	Name of the NAT policy rule	Index	String. case insensitive. Length:1 to 63 characters.	N/A
SrvObjGrpList	Policy rule service object group	Data structure	Members include: <ul style="list-style-type: none"> <li>SrvObj.</li> </ul>	N/A
SrvObj	Name of the Service object group	N/A	String. case insensitive. Length: 1 to 31 characters.	N/A

## NAT/DestinationNatOnInterfaces

This table contains information about the NAT acl server.

## XML structure

```

<NAT>
  <DestinationNatOnInterfaces>
    <Interface>
      <IfIndex></IfIndex>
      <ACLNumber></ACLNumber>
      <LocalInfo>
        <LocalVRF></LocalVRF>
        <LocalIpv4Address></LocalIpv4Address>
        <LocalPortNumber></LocalPortNumber>
      </LocalInfo>
      <Action></Action>
      <VRID></VRID>
      <Disable></Disable>
      <Description></Description>
      <RuleName></RuleName>
      <RulePriority></RulePriority>
    </Interface>
  </DestinationNatOnInterfaces>
</NAT>

```

## Table description

Item	Description
Feature name	NAT
Table name	DestinationNatOnInterfaces

Item	Description
Table type	Multi-instance table
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	index	Unsigned integer.	This column can only be the index of local VA, global VA or 3 layer interface except loopback, NULL, FC, FCB and encrypt interface.
ACLNumber	ACL number	index	Unsigned integer. Value range: 2000 to 3999	N/A
LocalInfo	Internal network address information	Data structure	Members include: <ul style="list-style-type: none"> <li>LocalVRF.</li> <li>LocalIpv4Address.</li> <li>LocalIpv4Address..</li> </ul>	N/A
LocalVRF	VRF of internal address	N/A	String. case-sensitive Length: 1 to 31 characters.	N/A
LocalIpv4Address	IPv4 address of the internal address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
LocalPortNumber	An internal port number	N/A	Unsigned integer. Value range: 1 to 65535	N/A
VRID	Identifier of the virtual router	N/A	Unsigned integer. Value range: 1 to 255.	<p>Because the system automatically binds the NAT server on the same address segment to the VRRP backup group with the smallest VRID, in the active/standby backup mode, you do not need to manually configure the VRRP backup group to bind to the NAT server.</p> <p>In dual-system hot backup with load balancing, if the address of the NAT server and the address of the VRRP backup group are on the same network segment, manually configure the binding between the</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
				NAT server and the VRRP.
Disable	Disable the rule.	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	N/A
Description	Rule description	N/A	String.case-sensitive. Length: 1 to 63 characters.	N/A
RuleName	Name of the NAT ACLserver	N/A	String, case insensitive. Length:1 to 63 characters.	N/A
RulePriority	Priority of the server mapping	N/A	Unsigned integer. Value range: 0 to 2147483647.	The smaller the value, the higher the mapping priority. If you do not assign a value, the priority is the lowest.

## NAT/ObjServer

This table contains information about the NAT object server.

### XML structure

```

<NAT>
  <ObjServer>
    <Rule>
      <RuleName></RuleName>
      <IfIndex></IfIndex>
      <DstObjGrpList>
        <DstObjGrp></DstObjGrp>
      </DstObjGrpList>
      <SrvObjGrpList>
        <SrvObjGrp></SrvObjGrp>
      </SrvObjGrpList>
      <Action></Action>
      <LocalInfo>
        <LocalIP></LocalIP>
        <LocalPort></LocalPort>
      </LocalInfo>
      <VRID></VRID>
      <Disable></Disable>
      <Counting></Counting>
      <MatchingCount></MatchingCount>
      <TotalCount></TotalCount>
    </Rule>
  </ObjServer>
</NAT>

```

```

    </ObjServer>
  </NAT>

```

## Table description

Item	Description
Feature name	NAT
Table name	ObjServer
Table type	Multi-instance table
Row name	Rule
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RuleName	Name of the NAT object server	Index	String, case insensitive. Length: 1 to 63 characters.	N/A
IfIndex	Interface index or interface name	N/A	String, case-sensitive.Length: 1 to 99 characters.	This column can only be the index of local VA, global VA or Layer 3 interfaces except loopback, NULL, FC, FCB and encrypt interfaces.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
DstObjGrpList	Destination object group in the rule	Data structure	Members include: • DstObjGrp.	N/A
DstObjGrp	Name of the destination object group	N/A	String, case insensitive. Length: 1 to 31 characters	The column is repeatable. The maximum is 5.
SrvObjGrpList	Service object group in the rule	Data structure	Members include: • SrvObjGrp.	N/A
SrvObjGrp	Name of the service object group	N/A	String, case insensitive. Length: 1 to 31 characters.	The column is repeatable. The maximum is 1.

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Action on packets matching the rule	N/A	Enumeration 0—net-to-single.	You cannot specify an action when you remove or delete a rule . You must specify an action when you replace a rule.or when you merge or create a rule that does not exist.
LocalInfo	Internal network address information	Data structure	Members include: <ul style="list-style-type: none"> <li>LocalIP.</li> <li>LocalPort.</li> </ul>	N/A
LocalIP	IPv4 address of the internal address	N/A	String, dotted decimal notation.	Example: 1.1.1.1.
LocalPort	Internal port	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
VRID	Identifier of the virtual router	N/A	Unsigned integer. Value range: 1 to 255.	Because the system automatically binds the NAT server on the same address segment to the VRRP backup group with the smallest VRID, in the active/standby backup mode, you do not need to manually configure the VRRP backup group to bind to the NAT server.  In dual-system hot backup with load balancing, if the address of the NAT server and the address of the VRRP backup group are on the same network segment, manually configure the binding between the NAT server and the VRRP.
Disable	Disable the rule	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> <li>false—NO.</li> </ul>	N/A
TotalCount	Total number of the NAT object server rule	N/A	Unsigned integer.	The number of query result or total number of the server configurations.
MatchingCount	Number of packets matching obj server	N/A	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
Counting	Whether enabling	N/A	Boolean: <ul style="list-style-type: none"> <li>true—YES</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	counting NAT obj server statistics		<ul style="list-style-type: none"> <li>false—NO.</li> </ul>

# Comware 7 NAT NETCONF XML API Error Message Reference

## NAT/InboundDynamicRules

Message	Explanation
The address group is already used by outbound dynamic NAT. 指定的地址组已经被出方向动态NAT引用。	An address group could not be used by outbound or inbound at the same time. 同一个地址池不能同时被inbound和outbound所引用。
The address group is already used by inbound PAT. 指定的地址组已经被入方向PAT模式的动态NAT引用。	An address group could not be used by PAT or NO-PAT at the same time. 同一个地址池不能同时被PAT和NO-PAT所引用。
The address group is already used by inbound NO-PAT. 指定的地址组已经被入方向NO-PAT模式的动态NAT引用。	An address group could not be used by PAT or NO-PAT at the same time. 同一个地址池不能同时被PAT和NO-PAT所引用。
An address group is required. 地址组为必选配置项。	This message means address group not be configured. 这个提示说明地址组没有被配置。
This device doesn't support inbound dynamic NAT rules. 当前设备不支持入方向动态NAT。	This message means device doesn't support inbound dynamic NAT rules. 这个提示说明当前设备不支持入方向动态NAT。

## NAT/OutboundDynamicRules

Message	Explanation
The address group is already used by outbound dynamic NAT. 指定的地址组已经被出方向动态NAT引用。	An address group could not be used by outbound or inbound at the same time. 同一个地址池不能同时被inbound和outbound所引用。
The address group is already used by inbound PAT. 指定的地址组已经被入方向PAT模式的动态NAT引用。	An address group could not be used by PAT or NO-PAT at the same time. 同一个地址池不能同时被PAT和NO-PAT所引用。
The address group is already used by inbound NO-PAT. 指定的地址组已经被入方向NO-PAT模式的动态NAT引用。	An address group could not be used by PAT or NO-PAT at the same time. 同一个地址池不能同时被PAT和NO-PAT所引用。
Only one outbound dynamic NAT rule can be configured for the same flow on the interface. 配置的出方向动态NAT与接口已有配置冲突。	Same ACL has been configured for another outbound dynamic NAT rules on this interface. 当前接口下已经存在另一条ACL相同的出方向NAT规则。
PAT doesn't support reverse address translation. PAT模式的NAT不能配置反向地址转换。	PAT mode doesn't support reverse address translation. PAT模式下不支持反向地址转换。

NO-PAT doesn't support port number preservation. NO-PAT模式的NAT不能配置端口保持功能。	NO-PAT mode doesn't support port number preservation. NO-PAT模式下不支持端口保持功能。
NO-PAT doesn't support Easy IP. Easy IP方式下不能配置NO-PAT模式。	Easy IP and NO-PAT are mutually exclusive. Easy IP和NO-PAT是互斥的。
NO-PAT for outbound NAT is invalid when the EIM mode with 3-tuple entries has been configured on the device. EIM模式下，NO-PAT方式的动态地址转换配置不生效。	NO-PAT entries cannot be created in EIM mode. 在EIM模式下，将无法建立NO-PAT表项。

## NAT/ServerOnInterfaces

Message	Explanation
The public address and port configuration overlaps with existing public address and port configuration on the interface. 指定的外网信息与接口上的已有外网信息配置重叠。	The public address and port already configured by another nat server rules. 同一个接口下已经存在该公网信息的NAT内部服务器配置。
End public address can't be smaller than start public address. 指定的外网结束地址不能小于起始地址。	Global end address could not less than global start address. 公网结束地址不能小于起始地址。
End public port number can't be smaller than start public port number. 指定的外网结束端口不能小于起始端口。	Global end port number could not less than global start port number. 公网结束端口不能小于起始端口。
End private address can't be smaller than start private address. 指定的内网结束地址不能小于起始地址。	Local end address could not less than local start address. 私网结束地址不能小于起始地址。
End private port number can't be smaller than start private port number. 指定的内网结束端口不能小于起始端口。	Local end port number could not less than local start port number. 私网结束端口不能小于起始端口。
Number of addresses in the public IP address range exceeded the limit. 指定的外网地址范围大小超过系统允许的最大值。	Difference between global end address and global start address is greater than 255. 公网结束地址和起始地址之差超过255。
Number of ports in the public port range exceeded the limit. 指定的外网端口范围大小超过系统允许的最大值。	Difference between global end port number and global start port number is greater than 255. 公网结束端口和起始端口之差超过255。
Number of IP addresses is not equal to number of ports. 指定的地址范围与端口范围的大小不一致。	Total global IP numbers must be equal to total local port numbers. 公网地址总数需要和私网可用端口总数相等。
Number of public ports is not equal to number of private ports. 指定的外网端口范围与内网端口范围的大小不一致。	The global port range size must be equal to local port range size. 公网端口范围大小和私网端口范围大小必须一致
Number of public IP addresses is not equal to number of private IP addresses. 指定的外网地址范围与内网地址范围的大小不一	The global IP range size must be equal to local IP range size. 公网地址范围大小和私网地址范围大小必须一致

致。	
The private address configuration overlaps with existing private address configuration. 指定的内网地址与已有内网地址配置重叠。	The local address overlaps with existing configuration. 指定的私网地址与已配置的私网地址重叠。
Please configure both or neither of the private and public ports. 内网端口与外网端口必须同时配置，或者都不配置。	Global port number and local port number must be configured at the same time or not. 公网端口和私网端口同时配置或者同时不配置。
Please specify either public IP addresses or an interface connected to the external network. 外网地址和外网接口必须且只能配置其中一个。	Nat server could specify global adress or an interface as parameter,but only one of them can be configured. 内部服务器可以指定流量的接口或者公网地址作为规则参数，但是只能指定其中一个。
Port numbers can only be configured for TCP or UDP. 只有TCP和UDP协议可以配置端口号。	If the protocol is not TCP or UDP, NAT Server is configured without port information (include global port and local port). 不是TCP或者UDP协议时，不能配置公网端口和私网端口。
Please specify either an internal server group or private IP addresses. 内网地址和内部服务器组必须且只能配置其中一个。	Nat server could specify server group or local address as parameter,but only one of them can be configured. 内部服务器可以指定内部服务器组或者私网地址作为规则参数，但是只能指定其中一个。
Public addresses and public ports can't both be consecutive. 外网地址和外网端口不能同时配置为连续形式。	The continuous global IP and continuous global port could not be configured at the same time. 公网地址和公网端口不能同时配置为连续形式。
Private addresses and private ports can't both be consecutive. 内网地址和内网端口不能同时配置为连续形式。	The continuous local IP and continuous local port could not be configured at the same time. 私网地址和私网端口不能同时配置为连续形式。
Internal server group must be specified with public ports, rather than private ports. 配置内部服务器组的同时必须配置外网端口，但不能同时配置内网端口。	Local server group must be specified with global ports, rather than private ports. 配置内部服务器组的同时必须配置外网端口，但不能同时配置内网端口。
The public address and port configuration conflicts with the private address and port configuration. 外网信息与内网信息冲突。	Global address and ports cannot overlaps with local address and ports. 公网信息和私网信息不能重叠。
End address must be configured together with start address. 配置结束地址必须同时配置起始地址。	If end address have been configured, start address cannot be empty. 配置了结束地址，起始地址就不能为空。
End port must be configured together with start port. 配置结束端口必须同时配置起始端口。	If end ports have been configured, start ports cannot be empty. 配置了结束端口，起始端口就不能为空。

## NAT/InboundStaticMappings

Message	Explanation
End public address can't be smaller than start public address. 指定的外网结束地址不能小于外网起始地址。	Global end address could not less than global start address. 公网结束地址不能小于起始地址。
Number of addresses in the public IP address range exceeded the limit.	Difference between global end address and global start address is greater than 255.

指定的外网地址范围大小超过系统允许的最大值。	公网结束地址和起始地址之差超过255。
Invalid end public address. The end public address can't be greater than 255. 指定的外网结束地址错误，外网结束地址不能大于255。	Global end address and start address must be at the same network segment(mask less than 24). 公网结束地址和起始地址必须在同一网段（掩码小于24）
Public IP addresses are already used by another inbound static NAT mapping. 指定的外网地址已经被其他入方向静态NAT表项引用。	The global address overlaps with existing NAT inbound configuration. 指定的公网地址与已配置的NAT inbound公网地址重叠。
Private IP addresses are already used by another inbound static NAT mapping. 指定的内网地址已经被其他入方向静态NAT表项引用。	The local address overlaps with existing NAT inbound configuration. 指定的私网地址与已配置的NAT inbound公网地址重叠。
This device does not support inbound static NAT rules. 当前设备不支持入方向静态NAT。	This device doesn't support NAT static inbound. 当前设备不支持入方向静态NAT。

## NAT/ OutboundStaticMappings

Message	Explanation
End private address can't be smaller than start private address. 指定的内网结束地址不能小于内网起始地址。	Local end address could not less than local start address. 私网结束地址不能小于起始地址。
Number of addresses in the private address range exceeded the limit. 指定的内网地址范围大小超过系统允许的最大值。	Difference between local end address and local start address is greater than 255. 私网结束地址和起始地址之差超过255。
Invalid end private address. The end private address can't be greater than 255. 指定的内网结束地址错误，内网结束地址不能大于255。	Local end address and start address must be at the same network segment(mask less than 24). 私网结束地址和起始地址必须在同一网段（掩码小于24）
Public IP addresses are already used by another outbound static NAT mapping. 指定的外网地址已经被其他出方向静态NAT表项引用。	The global address overlaps with existing NAT outbound configuration. 指定的公网地址与已配置的NAT outbound公网地址重叠。
Private IP addresses are already used by another outbound static NAT mapping. 指定的内网地址已经被其他出方向静态NAT表项引用。	The local address overlaps with existing NAT outbound configuration. 指定的私网地址与已配置的NAT outbound公网地址重叠。
An ACL is required for reverse address translation. 配置反向地址转时必须指定ACL。	An ACL is required for reversible configured as true. Reversible配置为True时，必须配置ACL规则。

# NAT/AddrGroupMembers

Message	Explanation
End address can't be smaller than start address. 指定的结束地址不能小于起始地址。	End address could not less than start address. 结束地址不能小于起始地址。
Number of addresses in the IP address range exceeded the limit. 地址组成员中的IP地址数已经达到最大值。	Difference between end address and start address is greater than 255. 地址组成员的结束地址和起始地址之差超过255。
The address range overlaps with an existing address range in the same address group. 指定的地址组成员与已有的地址组成员配置重叠。	The address overlaps with existing address at the same address group. 配置的地址与本地地址组中已配置的地址重叠。
The address range overlaps with an existing address range in another address group. 指定的地址组成员与其他地址组中的成员配置重叠。	The address overlaps with existing address at another address group. 配置的地址与其他地址组中已配置的地址重叠。

# NAT/AddrGroups

Message	Explanation
End port number can't be smaller than start port number. 指定的结束端口不能小于起始端口。	End port number can't be smaller than start port number. 指定的结束端口不能小于起始端口。
Port block size can't be greater than number of ports in the port range. 指定的端口块大小值不能大于公网IP地址端口范围。	Port block size can't be greater than port range. 端口块大小不能大于公网地址的端口范围。
The address range overlaps with an existing address range in the same address group. 指定的地址组成员与已有的地址组成员配置重叠。	The address overlaps with existing address at the same address group. 配置的地址与本地地址组中已配置的地址重叠。
The address range overlaps with an existing address range in another address group. 指定的地址组成员与其他地址组中的成员配置重叠。	The address overlaps with existing address at another address group. 配置的地址与其他地址组中已配置的地址重叠。

# NAT/ PortBlockGroupLocalMembers

Message	Explanation
End address can't be smaller than start address. 指定的结束地址不能小于起始地址。	End address could not less than start address. 结束地址不能小于起始地址。
The private address range overlaps with an existing private address range in the same address group. 指定的内网地址与已有内网地址配置重叠。	The local address overlaps with existing local address. 配置的私网地址与已配置的地址重叠。

# NAT/PortBlockGroupGlobalMembers

Message	Explanation
End address can't be smaller than start address. 指定的结束地址不能小于起始地址。	End address could not less than start address. 结束地址不能小于起始地址。
The public address range overlaps with an existing public address range in the same address group. 指定的公网地址成员与已有公网地址成员配置重叠。	The global address overlaps with existing local address. 配置的公网地址与已配置的地址重叠。
Maximum number of addresses in the public IP address range already reached. 端口块组中公网地址成员的数目已经达到最大值。	Difference between end address and start address is greater than 255. 公网地址的结束地址和起始地址之差超过255。

# NAT/HotBackup

Message	Explanation
This device doesn't support nat portblock sync switch. 当前设备不支持更改温备开关。	Not allow to change nat portblock sync switch. 不允许操作温备开关。

## NBAR/SignatureAutoUpgradeNow

This table contains the information of APR signatures auto upgrading at once.

### XML structure

```
<NBAR>
  <SignatureAutoUpgradeNow>
    <AutoUpgradeNow></AutoUpgradeNow>
  </SignatureAutoUpgradeNow>
</NBAR>
```

### Table description

Item	Description
Feature name	NBAR
Table name	SignatureAutoUpgradeNow
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AutoUpgradeNow	Update APR signature database immediately	N/A	N/A	This column must be empty.

## NBAR/SignatureManualUpgrading

This table contains the information of APR signatures manual upgrade.

### XML structure

```
<NBAR>
  <SignatureManualUpgrading>
    <URL></URL>
  </SignatureManualUpgrading>
</NBAR>
```

## Table description

Item	Description
Feature name	NBAR
Table name	SignatureManualUpgrading
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
URL	URL of the upgrade signature file	N/A	String: case-insensitive When the file is remote, Length: 1 to 255 characters. When the file is local, Length: 1 to 127 characters.	URL

## NBAR/SignatureRollback

This table contains the information of APR signatures rollback.

## XML structure

```
<NBAR>
  <SignatureRollback>
    <Rollback></Rollback>
  </SignatureRollback>
</NBAR>
```

## Table description

Item	Description
Feature name	NBAR
Table name	SignatureRollback
Table type	Single-instance table
Row name	None

## NBAR/SignatureManualUpgrading

Message	Explanation
Operation failed because no valid license could be found. 操作失败：没有找到有效的license。	The manual updating of the signature library fails because there is no valid license. 手动升级特征库时，没有license，升级失败。
The signature file is updating. Please try later. 特征库正在升级，请稍后再试。	The signature library is being updated. You can perform another update when this update is completed. 还有特征库正在升级，需等升级处理完才可以进行下一次升级。
Cannot do this operation because of memory alert. 由于内存门限不能执行此操作。	The device is in the memory threshold state and cannot be upgraded. 设备此时处于内存门限状态，不能进行升级
Operation failed because not enough storage space was available. 操作失败：设备空间不足。	Upgrade fails due to insufficient storage space for devices. 由于设备的存储空间不足，导致升级失败。
Operation failed because not enough memory was available. 操作失败：设备内存不足。	The upgrade failed due to insufficient memory on the devices. 由于设备的内存不足，导致升级失败。
Operation failed because signature file was invalid. 操作失败：无效的特征库文件。	The upgrade failed due to invalid signature file. 由于特征库文件无效，导致升级失败。

## NBAR/SignatureAutoUpgradeNow

Message	Explanation
The signature file is updating. Please try later. 特征库正在升级，请稍后再试。	The signature library is being updated. You can perform another update when this update is completed. 还有特征库正在升级，需等升级处理完才可以进行下一次升级。
Operation failed because no valid license could be found. 操作失败：没有找到有效的license。	When manual updating of the signature library fails because there is no license. 手动升级特征库时，没有license，升级失败。

<p>The signature version is latest, No update is needed.</p> <p>特征库已是最新版本，不需要进行升级。</p>	<p>Automatic upgrade is to upgrade the signature library to the latest version released on the official website. If it is the latest version, no upgrade is needed.</p> <p>自动升级是将特征库升级到官网发布的最新版本，如果已经是最新版本就不需要再升级了。</p>
<p>Cannot do this operation because of memory alert.</p> <p>由于内存门限不能执行此操作。</p>	<p>The device is in the memory threshold state and cannot be upgraded.</p> <p>设备此时处于内存门限状态，不能进行升级</p>
<p>Operation failed because not enough storage space was available.</p> <p>操作失败：设备空间不足。</p>	<p>Upgrade fails due to insufficient storage space for devices.</p> <p>由于设备的存储空间不足，导致升级失败。</p>
<p>Operation failed because not enough memory was available.</p> <p>操作失败：设备内存不足。</p>	<p>The upgrade failed due to insufficient memory on the devices.</p> <p>由于设备的内存不足，导致升级失败。</p>
<p>Operation failed because a connection to the signature library server could not be established.</p> <p>操作失败：连接特征库服务器失败。</p>	<p>The connection to <a href="http://www.h3c.com/">http://www.h3c.com/</a> failed. For a successful upgrade, the device must connect to <a href="http://www.h3c.com/">http://www.h3c.com/</a> to get the signature library files.</p> <p>需要连接<a href="http://www.h3c.com/">http://www.h3c.com/</a>网站获取特征库文件才能升级成功，连接<a href="http://www.h3c.com/">http://www.h3c.com/</a>失败。</p>

## NBAR/SignatureRollback

Message	Explanation
<p>Operation failed because no valid license can be found..</p> <p>操作失败：没有找到有效的license。</p>	<p>When manual updating of the signature library fails because there is no license.</p> <p>手动升级特征库时，没有license，升级失败。</p>
<p>The signature file is updating. Please try later.</p> <p>特征库正在升级，请稍后再试。</p>	<p>The signature library is being updated. You can perform another update when this update is completed.</p> <p>还有特征库正在升级，需等升级处理完才可以进行下一次升级。</p>
<p>Cannot do this operation because of memory alert.</p> <p>由于内存门限不能执行此操作。</p>	<p>The device is in the memory threshold state and cannot be upgraded.</p> <p>设备此时处于内存门限状态，不能进行升级</p>
<p>Operation failed because not enough storage space was available.</p> <p>操作失败：设备空间不足。</p>	<p>Upgrade fails due to insufficient storage space for devices.</p> <p>由于设备的存储空间不足，导致升级失败。</p>

Operation failed because not enough memory was available. 操作失败：设备内存不足。	The upgrade failed due to insufficient memory on the devices. 由于设备的内存不足，导致升级失败。
Operation failed because signature file was invalid. 操作失败：无效的特征库文件。	The upgrade failed due to invalid signature file. 由于特征库文件无效，导致升级失败。

## NBAR/SignatureAutoUpgrading

Message	Explanation
The signature file is updating. Please try later. 特征库正在升级，请稍后再试。	The signature library is being updated. You can perform another update when this update is completed. 还有特征库正在升级，需等升级处理完才可以进行下一次升级。

## NBAR/ UserApp

Message	Explanation
Maximum number of user-defined applications already reached. 自定义应用的个数已达上限。	Adding user-defined applications fails because the maximum number of applications has been reached. 由于应用个数达到上限，新增自定义应用失败。

## NBAR/ Usersig

Message	Explanation
Maximum number of NBAR signatures already reached. 自定义特征的个数已达上限。	Adding NBAR signature fails because the maximum number of NBAR signatures has been reached. 由于自定义特征个数达到上限，新增自定义特征失败。

## NBAR/ MatchContents

Message	Explanation
Maximum number of NBAR signature contents already reached. 自定义检查项的个数已达上限。	Adding NBAR signature applications fails because the maximum number of NBAR signature applications has been reached. 由于自定义检查项个数达到上限，新增检查项失败。

# ND

## ND/NDTable

This table contains information about neighbor entries.

### XML structure

```
<ND>
  <NDTable>
    <NDEntry>
      <IfIndex></IfIndex>
      <Ipv6Address></Ipv6Address>
      <MacAddress></MacAddress>
      <VLANID></VLANID>
      <PortIndex></PortIndex>
      <VrfIndex></VrfIndex>
    </NDEntry>
  </NDTable>
</ND>
```

### Table description

Item	Description
Feature name	ND
Table name	NDTable
Table type	Multi-instance table
Row name	NDEntry
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported. If the specified interface is a VLAN interface, the VLAN ID corresponding to the interface must be consistent with the value of the VLANID column. Some versions support

Column name	Column description	Column type	Data type and restrictions	Remarks
				interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	N/A
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	Required.
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	It must be configured together with the PortIndex column.
PortIndex	Port index	N/A	Unsigned integer.	It must be configured together with the VLANID column. The port specified by PortIndex must belong to the VLAN specified by VLANID.
VrfIndex	Index of the VRF	N/A	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product. Required. 0 means public network.

## ND/NDLearnLimit

This table contains the information of maximum number of dynamic neighbor entries that an interface can learn.

## XML structure

```

<ND>
  <NDLearnLimit>
    <LearnLimit>
      <IfIndex></IfIndex>
      <LearnMaxNum></LearnMaxNum>
    </LearnLimit>
  </NDLearnLimit>
</ND>

```

## Table description

Item	Description
Feature name	ND
Table name	NDLearnLimit
Table type	Multi-instance table
Row name	LearnLimit
Restrictions	This table supports interface types: Layer 2/Layer 3 interface Layer 2/Layer 3 aggregate interface S-channel interface/S-channel aggregate interface
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
LearnMaxNum	The maximum number of dynamic neighbor entries that an interface can learn	N/A	Unsigned integer. Value range: 1 to LearnMaxNumLimit.	The value of LearnMaxNumLimit depends on the device model.  The default setting varies with device models.

## ND/NDInterface

This table contains neighbor interface information.

## XML structure

```
<ND>
  <NDInterface>
    <Interface>
      <IfIndex></IfIndex>
      <DADAttempts></DADAttempts>
      <ModeUNI></ModeUNI>
    </Interface>
```

```
</NDInterface>
</ND>
```

## Table description

Item	Description
Feature name	ND
Table name	NDInterface
Table type	Multi-instance table
Row name	Interface
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
DADAttempts	The number of attempts to send an NS message for DAD	N/A	Unsigned integer. Value range: 0 to 600. Default: 1.	0 means DAD is disabled. Only Layer 3 interfaces are supported.
ModeUNI	Configure a port as a customer-side port true: Customer-side port false: Network-side port	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default)</li> </ul>	Whether the ModeUNI is supported depends on the device model. Only VLAN interfaces are supported.

## ND/NDConfig

This table contains neighbor configuration information.

## XML structure

```
<ND>
  <NDConfig>
    <StaleAging></StaleAging>
    <LinkLocalMinimize></LinkLocalMinimize>
    <HopLimit></HopLimit>
    <StaleAgingUnit></StaleAgingUnit>
  </NDConfig>
</ND>
```

## Table description

Item	Description
Feature name	ND
Table name	NDConfig
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StaleAging	The aging time for ND entries in stale state	N/A	Unsigned integer. Value range: 1 to 1440 minutes. or 60 to 86400 seconds Default: 240 minutes.	The aging time must config together with aging time value
LinkLocalMinimize	Whether minimize link-local ND entries or not	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b></li><li><b>false</b> (default)</li></ul>	N/A
HopLimit	The Hop Limit field in the IPv6 header	N/A	Unsigned integer. Value range: 1 to 255. Default: 64.	If the device advertises the hop limit in RA messages, all RA message receivers receiving the RA message fill the value into the Hop Limit field of IPv6 packets to be sent.
StaleAgingUnit	Aging time value type for ND entries in stale state	N/A	Enumeration: <ul style="list-style-type: none"><li><b>0</b>—Aging in minutes.</li><li><b>1</b>—Aging in seconds</li></ul>	The aging time value type must config together with aging time.

# ND/NDRA

This table contains information about neighbor RA.

## XML structure

```
<ND>
  <NDRA>
    <RA>
      <IfIndex></IfIndex>
      <RAHalt></RAHalt>
      <MaxInterval></MaxInterval>
      <MinInterval></MinInterval>
      <NoAdvLinkMTU></NoAdvLinkMTU>
      <HopLimitUnspecified></HopLimitUnspecified>
      <ManagedAddressFlag></ManagedAddressFlag>
      <OtherFlag></OtherFlag>
      <RouterLifetime></RouterLifetime>
      <NSRetransTimer></NSRetransTimer>
      <RouterPreference></RouterPreference>
      <NudReachableTime></NudReachableTime>
    </RA>
  </NDRA>
</ND>
```

## Table description

Item	Description
Feature name	ND
Table name	NDRA
Table type	Multi-instance table
Row name	RA
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For

Column name	Column description	Column type	Data type and restrictions	Remarks
				information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
RAHalt	Whether suppress an interface from advertising RA message or not	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b> (default)</li> <li>• <b>false</b>—Disabled.</li> </ul>	N/A
MaxInterval	The maximum interval for advertising RA messages	N/A	Unsigned integer. Value range: 4 to 1800 seconds. Default: 600 seconds.	It must be configured together with the MinInterval column.
MinInterval	The minimum interval for advertising RA messages	N/A	Unsigned integer. Value range: 3 to three-fourths of the MaxInterval. Default: 200 seconds.	It must be configured together with the MaxInterval column.
NoAdvLinkMTU	Whether turn off the MTU option in RA messages or not	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b> (default)</li> </ul>	N/A
HopLimitUnspecified	Whether specify unlimited hops in RA messages or not	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b> (default)</li> </ul>	N/A
ManagedAddressFlag	Whether set the managed address flag to 1 or not	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b> (default)</li> </ul>	N/A
OtherFlag	Whether set the other flag to 1 or not	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b> (default)</li> </ul>	N/A
RouterLifetime	The router lifetime in RA messages	N/A	Unsigned integer. Value range: 0 to 9000 seconds. Default: 1800 seconds.	0 means the router does not serve as the default router
NSRetransTimer	The interval for retransmitting an NS message	N/A	Unsigned integer. Value range: 1000 to 4294967295 milliseconds. Default: 1000 milliseconds.	N/A
RouterPreference	The router preference in RA messages	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—High.</li> <li>• <b>2</b>—Low.</li> <li>• <b>3</b>—Medium (default).</li> </ul>	N/A
NudReachableTime	The neighbor reachable time on	N/A	Unsigned integer. Value range: 1 to	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	an interface		3600000 milliseconds. Default: 30000 milliseconds.	

## ND/NDRAPrefix

This table contains information about neighbor RA prefix.

### XML structure

```

<ND>
  <NDRAPrefix>
    <RAPrefix>
      <IfIndex></IfIndex>
      <Ipv6Prefix>
        <Ipv6Address></Ipv6Address>
        <Ipv6PrefixLength></Ipv6PrefixLength>
      </Ipv6Prefix>
      <ValidLifetime></ValidLifetime>
      <PreferredLifetime></PreferredLifetime>
      <NoAutoConfig></NoAutoConfig>
      <OffLink></OffLink>
      <NoAdvertise></NoAdvertise>
    </RAPrefix>
  </NDRAPrefix>
</ND>

```

### Table description

Item	Description
Feature name	ND
Table name	NDRAPrefix
Table type	Multi-instance table
Row name	RAPrefix
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces

Column name	Column description	Column type	Data type and restrictions	Remarks
				are supported. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
Ipv6Prefix	Ipv6Prefix	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv6Address</li> <li>Ipv6PrefixLength</li> </ul>	N/A
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	It must be configured as valid IPv6 prefix.
Ipv6PrefixLength	Length of the IPv6 prefix	Index	Unsigned integer. Value range: 1 to 128.	N/A
ValidLifetime	The valid lifetime of a prefix	N/A	Unsigned integer. Value range: 0 to 4294967295 seconds.	When NoAutoConfig or Offlink is configured, it must be configured. When it is not configured, it is the default value.
PreferredLifetime	The preferred lifetime of a prefix used for stateless autoconfiguration	N/A	Unsigned integer. Value range: 0 to 4294967295 seconds.	When NoAutoConfig or Offlink is configured, it must be configured. When it is not configured, it is the default value..
NoAutoConfig	Whether the function of not to be used for stateless autoconfiguration is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default)</li> </ul>	When NoAdvertise is configured, it can't be configured.
OffLink	Whether the function of the address with the prefix is not directly reachable on the link is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default)</li> </ul>	When NoAdvertise is configured, it can't be configured.
NoAdvertise	Whether not advertising the prefix specified in the command is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	When it is configured, the lifetime can't be configured, and the lifetime is the default value.

## ND/NDProxy

This table contains information about neighbor proxy.

## XML structure

```
<ND>
  <NDProxy>
    <Proxy>
      <IfIndex></IfIndex>
      <ProxyEnable></ProxyEnable>
      <LocalProxyEnable></LocalProxyEnable>
    </Proxy>
  </NDProxy>
</ND>
```

## Table description

Item	Description
Feature name	ND
Table name	NDProxy
Table type	Multi-instance table
Row name	Proxy
Restrictions	This table supports interface types: VLAN interface Layer 3 Ethernet interface/ Layer 3 Ethernet subinterface
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
ProxyEnable	Whether the function of common ND proxy is enabled	N/A	Boolean: <ul style="list-style-type: none"><li>true</li><li>false (default)</li></ul>	N/A
LocalProxyEnable	Whether the function of local ND proxy is enabled	N/A	Boolean: <ul style="list-style-type: none"><li>true</li><li>false (default)</li></ul>	N/A

# ND/NDStaleAgingTime

This table contains aging time configuration for ND entries in stale state.

## XML structure

```
<ND>
  <NDStaleAgingTime>
    <StaleAgingTime>
      <IfIndex></IfIndex>
      <AgingTime></AgingTime>
      <StaleAgingUnit></StaleAgingUnit>
    </StaleAgingTime>
  </NDStaleAgingTime>
</ND>
```

## Table description

Item	Description
Feature name	ND
Table name	NDStaleAgingTime

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 31 characters.	
DetectionEnable	Whether ND detection is enabled for the VSI	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A

## ND/NDVsiDetectionTrust

This table contains ND trusted AC configuration information for Ethernet service instances.

### XML structure

```

<ND>
  <NDVsiDetectionTrust>
    <SRV>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <TrustEnable></TrustEnable>
    </SRV>
  </NDVsiDetectionTrust>
</ND>

```

### Table description

Item	Description
Feature name	ND
Table name	NDVsiDetectionTrust
Table type	Multi-instance table
Row name	SRV
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration

Column name	Column description	Column type	Data type and restrictions	Remarks
				Reference.
SrvID	Ethernet service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A
TrustEnable	Whether the Ethernet service instance is configured as an ND trusted AC	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes.</li> <li><b>false</b>—No.</li> </ul>	N/A

## ND/NDSrcmacAtkDetec

This table contains information about ND source MAC attack detection.

### XML structure

```

<ND>
  <NDSrcmacAtkDetec>
    <SrcmacMode></SrcmacMode>
    <SrcmacThreshold></SrcmacThreshold>
  </NDSrcmacAtkDetec>
</ND>

```

### Table description

Item	Description
Feature name	ND
Table name	NDSrcmacAtkDetec
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcmacMode	Enabling status of common ND proxy	N/A	Unsigned integer. <ul style="list-style-type: none"> <li><b>0</b>---None.</li> <li><b>1</b>---Filter.</li> <li><b>2</b>---Monitor.</li> </ul>	N/A
SrcmacThreshold	Threshold for ND source MAC attack detection	N/A	Unsigned integer. Value range: 1 to 5000. Default: 30.	N/A

# ND/NDIfAtkSuppression

This table contains information about ND interface suppression.

## XML structure

```
<ND>
  <NDIfAtkSuppression>
    <Enable></Enable>
    <Threshold></Threshold>
  </NDIfAtkSuppression>
</ND>
```

# ND

## ND/NDTable

This table contains information about neighbor entries.

### XML structure

```
<ND>
  <NDTable>
    <NDEntry>
      <IfIndex></IfIndex>
      <Ipv6Address></Ipv6Address>
      <MacAddress></MacAddress>
      <VLANID></VLANID>
      <PortIndex></PortIndex>
      <VrfIndex></VrfIndex>
      <Type></Type>
      <State></State>
      <AgeTime></AgeTime>
    </NDEntry>
  </NDTable>
</ND>
```

### Table description

Item	Description
Feature name	ND
Table name	NDTable
Table type	Multi-instance table
Row name	NDEntry
Restrictions	This table supports only Layer 3 interfaces.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported.
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	N/A
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	N/A
PortIndex	Port index	N/A	Unsigned integer.	N/A
VrfIndex	Index of the VRF	N/A	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product. 0 means public network
Type	Neighbor information type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Invalid static.</li> <li>2—Static.</li> <li>3—Dynamic.</li> <li>4—OpenFlow.</li> <li>5—Rule.</li> </ul>	N/A
State	State of a neighbor	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—INCMP.</li> <li>2—REACH.</li> <li>3—STALE.</li> <li>4—DELAY.</li> <li>5—PROBE.</li> </ul>	N/A
AgeTime	The elapsed time	N/A	Unsigned integer.	N/A

## ND/NDLearnLimit

This table contains the information of maximum number of dynamic neighbor entries that an interface can learn.

## XML structure

```

<ND>
  <NDLearnLimit>
    <LearnLimit>
      <IfIndex></IfIndex>
      <LearnMaxNum></LearnMaxNum>
    </LearnLimit>
  </NDLearnLimit>
</ND>

```

## Table description

Item	Description
Feature name	ND
Table name	NDLearnLimit
Table type	Multi-instance table
Row name	LearnLimit
Restrictions	This table supports interface types: Layer 2/Layer 3 interface Layer 2/Layer 3 aggregate interface S-channel interface/S-channel aggregate interface

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface Index	Index	Unsigned integer.	N/A
LearnMaxNum	The maximum number of dynamic neighbor entries that an interface can learn	N/A	Unsigned integer. Value range: 1 to LearnMaxNumLimit.	The value of LearnMaxNumLimit depends on the device model.

## ND/NDInterface

This table contains neighbor interface information.

## XML structure

```
<ND>
  <NDInterface>
    <Interface>
      <IfIndex></IfIndex>
      <DADAttempts></DADAttempts>
      <ModeUNI></ModeUNI>
    </Interface>
  </NDInterface>
</ND>
```

## Table description

Item	Description
Feature name	ND
Table name	NDInterface

Item	Description
Table type	Multi-instance table
Row name	Interface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
DADAttempts	The number of attempts to send an NS message for DAD	N/A	Unsigned integer. Value range: 0 to 600.	0 means DAD is disabled. Only Layer 3 interfaces are supported.
ModeUNI	Configure a port as a customer-side port true: Customer-side port false:Network-side port	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	Only VLAN interfaces are supported

## ND/NDConfig

This table contains neighbor configuration information.

## XML structure

```

<ND>
  <NDConfig>
    <StaleAging></StaleAging>
    <LinkLocalMinimize></LinkLocalMinimize>
    <HopLimit></HopLimit>
    <StaleAgingUnit></StaleAgingUnit>
  </NDConfig>
</ND>

```

## Table description

Item	Description
Feature name	ND
Table name	NDConfig
Table type	Single-instance table

Item	Description
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
StaleAging	The aging time for ND entries in stale state	N/A	Unsigned integer. Value range: 1 to 1440 minutes. or 60 to 86400 seconds	N/A
LinkLocalMinimize	Whether minimize link-local ND entries or not	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
HopLimit	The Hop Limit field in the IPv6 header	N/A	Unsigned integer. Value range: 1 to 255.	If the device advertises the hop limit in RA messages, all RA message receivers receiving the RA message fill the value into the Hop Limit field of IPv6 packets to be sent.
StaleAgingUnit	Aging time value type for ND entries in stale state	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Aging in minutes.</li> <li><b>1</b>—Aging in seconds..</li> </ul>	N/A

## ND/NDRA

This table contains information about neighbor RA.

## XML structure

```

<ND>
  <NDRA>
    <RA>
      <IfIndex></IfIndex>
      <RAHalt></RAHalt>
      <MaxInterval></MaxInterval>
      <MinInterval></MinInterval>
      <NoAdvLinkMTU></NoAdvLinkMTU>
      <HopLimitUnspecified></HopLimitUnspecified>
      <ManagedAddressFlag></ManagedAddressFlag>
      <OtherFlag></OtherFlag>
      <RouterLifetime></RouterLifetime>
      <NSRetransTimer></NSRetransTimer>
    </RA>
  </NDRA>
</ND>

```

```

    <RouterPreference></RouterPreference>
    <NudReachableTime></NudReachableTime>
  </RA>
</NDRA>
</ND>

```

## Table description

Item	Description
Feature name	ND
Table name	NDRA
Table type	Multi-instance table
Row name	RA
Restrictions	This table supports only Layer 3 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported.
RAHalt	Whether suppress an interface from advertising RA message or not	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
MaxInterval	The maximum interval for advertising RA messages	N/A	Unsigned integer. Value range: 4 to 1800 seconds.	N/A
MinInterval	The minimum interval for advertising RA messages	N/A	Unsigned integer. Value range: 3 to three-fourths of the MaxInterval.	N/A
NoAdvLinkMTU	Whether turn off the MTU option in RA messages or not	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
HopLimitUnspecified	Whether specify unlimited hops in RA messages or not	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
ManagedAddressFlag	Whether set the managed address flag to 1 or not	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true.</b></li> <li><b>False</b></li> </ul>	N/A
OtherFlag	Whether set the other flag to 1 or not	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b> (default).</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
RouterLifetime	The router lifetime in RA messages	N/A	Unsigned integer. Value range: 0 to 9000 seconds.	0 means the router does not serve as the default router
NSRetransTimer	The interval for retransmitting an NS message	N/A	Unsigned integer. Value range: 1000 to 4294967295 milliseconds.	N/A
RouterPreference	The router preference in RA messages	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—High.</li> <li>2—Low.</li> <li>3—Medium.</li> </ul>	N/A
NudReachableTime	The neighbor reachable time on an interface	N/A	Unsigned integer. Value range: 1 to 3600000 milliseconds.	N/A

## ND/NDRAPrefix

This table contains information about neighbor RA prefix.

### XML structure

```

<ND>
  <NDRAPrefix>
    <RAPrefix>
      <IfIndex></IfIndex>
      <Ipv6Prefix>
        <Ipv6Address></Ipv6Address>
        <Ipv6PrefixLength></Ipv6PrefixLength>
      </Ipv6Prefix>
      <ValidLifetime></ValidLifetime>
      <PreferredLifetime></PreferredLifetime>
      <NoAutoConfig></NoAutoConfig>
      <OffLink></OffLink>
      <NoAdvertise></NoAdvertise>
    </RAPrefix>
  </NDRAPrefix>
</ND>

```

### Table description

Item	Description
Feature name	ND
Table name	NDRAPrefix
Table type	Multi-instance table

Item	Description
Row name	RAPrefix
Restrictions	This table supports only Layer 3 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported.
Ipv6Prefix	Ipv6Prefix	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv6Address</li> <li>Ipv6PrefixLength</li> </ul>	N/A
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	N/A
Ipv6PrefixLength	Length of the IPv6 prefix	Index	Unsigned integer. Value range: 1 to 128.	N/A
ValidLifetime	The valid lifetime of a prefix	N/A	Unsigned integer. Value range: 0 to 4294967295 seconds.	N/A
PreferredLifetime	The preferred lifetime of a prefix used for stateless autoconfiguration	N/A	Unsigned integer. Value range: 0 to 4294967295 seconds.	N/A
NoAutoConfig	Whether the function of not to be used for stateless autoconfiguration is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
OffLink	Whether the function of the address with the prefix is not directly reachable on the link is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A
NoAdvertise	Whether not advertising the prefix specified in the command is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b></li> <li><b>false</b></li> </ul>	N/A

## ND/NDProxy

This table contains information about neighbor proxy.

## XML structure

```
<ND>
  <NDProxy>
    <Proxy>
      <IfIndex></IfIndex>
      <ProxyEnable></ProxyEnable>
      <LocalProxyEnable></LocalProxyEnable>
    </Proxy>
  </NDProxy>
</ND>
```

## Table description

Item	Description
Feature name	ND
Table name	NDProxy
Table type	Multi-instance table
Row name	Proxy
Restrictions	This table supports interface types: VLAN interface Layer 3 Ethernet interface/ Layer 3 Ethernet subinterface

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	N/A
ProxyEnable	Whether the function of common ND proxy is enabled	N/A	Boolean: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>	N/A
LocalProxyEnable	Whether the function of local ND proxy is enabled	N/A	Boolean: <ul style="list-style-type: none"><li>true</li><li>false.</li></ul>	N/A

## ND/NDSpecification

This table contains ND specification information.

## XML structure

```
<ND>
  <NDSpecification>
    <LearnMaxNumLimit></LearnMaxNumLimit>
```

```

    <SupportModeUNI></SupportModeUNI>
  </NDSpecification>
</ND>

```

## Table description

Item	Description
Feature name	ND
Table name	NDSpecification
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
LearnMaxNumLimit	Set the maximum number of dynamic neighbor entries that the interface can learn	N/A	Unsigned integer.
SupportModeUNI	Whether support for configuring a port as a customer-side port or not	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>

## ND/NDStaleAgingTime

This table contains aging time configuration information for ND entries in stale state.

## XML structure

```

<ND>
  <NDStaleAgingTime>
    <StaleAgingTime>
      <IfIndex></IfIndex>
      <AgingTime></AgingTime>
      <StaleAgingUnit></StaleAgingUnit>
    </StaleAgingTime>
  </NDStaleAgingTime>
</ND>

```

## Table description

Item	Description
Feature name	ND
Table name	NDStaleAgingTime
Table type	Multi-instance table
Row name	StaleAgingTime
Restrictions	This table supports only Layer 3 interfaces.

## Columns

	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported.
AgingTime	Aging time for ND entries in stale state	N/A	Unsigned integer. Value range: 1 to 1440 minutes or 60 to 86400 seconds	N/A
StaleAgingUnit	Aging time value type for ND entries in stale state	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Aging in minutes.</li><li>• <b>1</b>—Aging in seconds.</li></ul>	N/A

## ND/NDVsiSnooping

This table contains ND snooping configuration information for VSIs.

## XML structure

```
<ND>
  <NDVsiSnooping>
    <VsiSnooping>
      <VsiName></VsiName>
      <SnoopingGlobalEnable></SnoopingGlobalEnable>
      <SnoopingLinklocalEnable></SnoopingLinklocalEnable>
```

```

    </VsiSnooping>
  </NDVsiSnooping>
</ND>

```

## Table description

Item	Description
Feature name	ND
Table name	NDVsiSnooping
Table type	Multi-instance table
Row name	VsiSnooping
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
SnoopingGlobalEnable	Whether ND global snooping is enabled for the VSI	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A
SnoopingLinkLocalEnable	Whether ND link-local snooping is enabled for the VSI	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>	N/A

## ND/NDVsiDetection

This table contains ND detection configuration information for VSIs.

## XML structure

```

<ND>
  <NDVsiDetection>
    <VsiDetection>
      <VsiName></VsiName>
      <DetectionEnable></DetectionEnable>
    </VsiDetection>
  </NDVsiDetection>
</ND>

```

## Table description

Item	Description
Feature name	ND
Table name	NDVsiDetection
Table type	Multi-instance table
Row name	VsiDetection
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String. Length: 1 to 31 characters.	N/A
DetectionEnable	Whether ND detection is enabled for the VSI	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled.</li><li><b>false</b>—Disabled.</li></ul>	N/A

## ND/NDVsiDetectionTrust

This table contains ND trusted AC configuration information for Ethernet service instances.

## XML structure

```
<ND>
  <NDVsiDetectionTrust>
    <SRV>
      <IfIndex></IfIndex>
      <SrvID></SrvID>
      <TrustEnable></TrustEnable>
    </SRV>
  </NDVsiDetectionTrust>
</ND>
```

## Table description

Item	Description
Feature name	ND
Table name	NDVsiDetectionTrust
Table type	Multi-instance table
Row name	SRV
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
SrvID	Ethernet service instance ID	Index	Unsigned integer. Value range: 1 to 4096.	N/A
TrustEnable	Whether the Ethernet service instance is configured as an ND trusted AC	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Yes.</li><li>• <b>false</b>—No.</li></ul>	N/A

## ND/NDSrcmacAtkDetec

This table contains information about ND source MAC attack detection.

## XML structure

```
<ND>
  <NDSrcmacAtkDetec>
    <SrcmacMode></SrcmacMode>
    <SrcmacThreshold></SrcmacThreshold>
  </NDSrcmacAtkDetec>

## ND

### ND/NDTable

This table contains information about neighbor entries.

### Properties

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported. If the specified interface is a VLAN interface, the VLAN ID corresponding to the interface must be consistent with the value in the VLANID column.
Ipv6Address	IPv6 address	Index	Hexadecimal string, colon-separated.	N/A
MacAddress	MAC address	N/A	Six groups of two hexadecimal digits, hyphen-separated.	N/A
VLANID	VLAN ID	N/A	Unsigned integer. Value range: 1 to 4094.	It must be configured together with the PortIndex column.
PortIndex	Port index	N/A	Unsigned integer.	It must be configured together with the VLANID column.

Column name	Column description	Column type	Data type and restrictions	Remarks
				The port specified by the PortIndex column must belong to the VLAN specified by the VLANID column.
VrfIndex	Index of the VRF	N/A	Unsigned integer.	Some versions support VRF names. For more information, see the XSD document of your product. Required. 0 represents the public network.
Type	Neighbor type	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Invalid static.</li> <li>2—Static.</li> <li>3—Dynamic.</li> <li>4—OpenFlow.</li> <li>5—Rule.</li> </ul>	N/A
State	Neighbor status	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—INCOMP.</li> <li>2—REACH.</li> <li>3—STALE.</li> <li>4—DELAY.</li> <li>5—PROBE.</li> </ul>	N/A
AgeTime	Neighbor entry aging time.	N/A	Unsigned integer.	N/A

## Example

Example 1: Get information about neighbor entries.

### JSON Request

```
GET /api/v1/ND/NDTable?index=IfIndex%3D17416%3BIpv6Address%3D1%3A%3A23
```

### JSON Response

200 OK

```
{
  "IfIndex": 17416,
  "Ipv6Address": "1::23",
  "MacAddress": "00-00-00-01-00-02",
  "VLANID": 1,
  "PortIndex": 7,
  "VrfIndex": 0,
  "Type": 1,
```

```
"State": 2
}
```

Example 2: Add a neighbor entry.

#### **JSON Request**

POST /api/v1/ND/NDTable

```
{
  "IfIndex": 17416,
  "Ipv6Address": "1::23",
  "MacAddress": "00-00-00-01-00-03",
  "VLANID": 1,
  "PortIndex": 7,
  "VrfIndex": 0
}
```

#### **JSON Response**

201 Created

Example 3: Modify a neighbor entry.

#### **JSON Request**

PUT /api/v1/ND/NDTable?index=IfIndex%3D17416%3BIpv6Address%3D1%3A%3A23

```
{
  "IfIndex": 17416,
  "Ipv6Address": "1::23",
  "MacAddress": "00-00-00-01-00-03",
  "VLANID": 1,
  "PortIndex": 7,
  "VrfIndex": 0
}
```

#### **JSON Response**

204 No Content

Example 4: Delete a neighbor entry.

### JSON Request

DELETE /api/v1/ND/NDTable?index=IfIndex%3D17416%3BIPv6Address%3D1%3A%3A23

### JSON Response

204 No Content

## ND/NDLearnLimit

This table contains the information about the maximum number of dynamic neighbor entries that an interface can learn.

### Properties

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface names. For more information, see the XSD document of your product. For information about IfIndex, see IfMgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
LearnMaxNum	Maximum number of dynamic neighbor entries that an interface can learn	N/A	Unsigned integer. Value range: 1 to LearnMaxNumLimit.	The value of LearnMaxNumLimit depends on the device model.  The default setting varies by device model.

### Example

Example 1: Get information about the maximum number of dynamic neighbor entries that an interface can learn.

### JSON Request

GET /api/v1/ND/NDLearnLimit?index=IfIndex%3D17416

### JSON Response

200 OK

```
{  
  "IfIndex": 17416,  
  "LearnMaxNum": 2048  
}
```

Example 2: Set the maximum number of dynamic neighbor entries that an interface can learn.

#### **JSON Request**

POST /api/v1/ND/NDLearnLimit

```
{  
  "IfIndex": 17416,  
  "LearnMaxNum": 2048  
}
```

#### **JSON Response**

201 Created

Example 3: Change the maximum number of dynamic neighbor entries that an interface can learn.

#### **JSON Request**

PUT /api/v1/ND/NDLearnLimit?index=IfIndex%3D17416

```
{  
  "IfIndex": 17416,  
  "LearnMaxNum": 2048  
}
```

#### **JSON Response**

204 No Content

Example 4: Restore the default setting for the maximum number of dynamic neighbor entries that an interface can learn.

#### **JSON Request**

DELETE /api/v1/ND/NDLearnLimit?index=IfIndex%3D17416

#### **JSON Response**

204 No Content

## ND/NDInterface

This table contains neighbor interface information.

# Properties

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface names. For more information, see the XSD document of your product. For information about IfIndex, see <i>IfMgr in Ifmgr NETCONF XML API Configuration Reference</i> .
DADAttempts	Number of attempts to send an NS message for DAD	N/A	Unsigned integer. Value range: 0 to 600. Default: 1.	0 means that DAD is disabled. Only Layer 3 interfaces are supported.
ModeUNI	Whether the port is configured as a customer-side port	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Customer-side port.</li><li><b>false</b> (default)—Network-side port.</li></ul>	Support for this column depends on the device model. Only VLAN interfaces are supported.

## Example

Example 1: Get neighbor interface information.

### JSON Request

```
GET /api/v1/ND/NDInterface?index=IfIndex%3D17416
```

### JSON Response

200 OK

```
{
  "IfIndex": 17416,
  "DADAttempts": 2
}
```

Example 2: Configure neighbor interface settings.

### JSON Request

```
POST /api/v1/ND/NDInterface
```

```
{
  "IfIndex": 17416,
  "DADAttempts": 2
}
```

```
}
```

### JSON Response

201 Created

Example 3: Modify neighbor interface settings.

### JSON Request

PUT /api/v1/ND/NDInterface?index=IfIndex%3D17416

```
{  
  "IfIndex": 17416,  
  "DADAttempts": 2  
}
```

### JSON Response

204 No Content

Example 4: Restore the default neighbor interface settings.

### JSON Request

DELETE /api/v1/ND/NDInterface?index=IfIndex%3D17416

### JSON Response

204 No Content

## ND/NDConfig

This table contains neighbor configuration information.

## Properties

Column name	Column description	Column type	Data type and restrictions	Remarks
StaleAging	Aging timer for ND entries in stale state	N/A	Unsigned integer. Value range: 1 to 1440 minutes. or 60 to 86400 seconds.	The aging time must be configured together with aging time value type
LinkLocalMini	Whether link-local ND	N/A	Boolean:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
mize	entries are minimized		<ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	
HopLimit	Hop Limit field in the IPv6 header	N/A	Unsigned integer. Value range: 1 to 255.	If the device advertises the hop limit in RA messages, all RA message receivers receiving the RA message fill the value into the Hop Limit field of IPv6 packets to be sent.
StaleAgingUnit	Aging time value type for ND entries in stale state	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Aging in minutes.</li> <li>1—Aging in seconds.</li> </ul>	The aging time value type must be configured together with the aging time.

## Example

Example 1: Get neighbor configuration information.

### JSON Request

GET /api/v1/ND/NDConfig

### JSON Response

200 OK

```
{
  "StaleAging" : "100",
  "LinkLocalMinimize" : "false",
  "HopLimit" : "255"
}
```

Example 2: Modify the neighbor configuration.

### JSON Request

PUT /api/v1/ND/NDConfig

```
{
  "StaleAging" : "1000",
  "LinkLocalMinimize" : "true",
  "HopLimit" : "255"
}
```

### JSON Response

204 No Content

Example 3: Restore the default neighbor settings.

#### JSON Request

DELETE /api/v1/ND/NDConfig

#### JSON Response

204 No Content

## ND/NDRA

This table contains information about RA message settings.

### Properties

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported.  Some versions support interface names. For more information, see the XSD document of your product. For information about IfIndex, see IfMgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
RAHalt	Whether the interface is suppressed from advertising RA messages	N/A	Boolean: <ul style="list-style-type: none"><li>true (default).</li><li>false—Disabled.</li></ul>	N/A
MaxInterval	Maximum interval for advertising RA messages	N/A	Unsigned integer. Value range: 4 to 1800 seconds. Default: 600 seconds.	It must be configured together with the MinInterval column.
MinInterval	Minimum interval for advertising RA messages	N/A	Unsigned integer. Value range: 3 to three-fourths of the MaxInterval. Default: 200 seconds.	It must be configured together with the MaxInterval column.
NoAdvLinkMTU	Whether the MTU option in RA messages is turned off	N/A	Boolean: <ul style="list-style-type: none"><li>true.</li><li>false (default).</li></ul>	N/A
HopLimitUnspecified	Whether unlimited hops is specified in RA	N/A	Boolean: <ul style="list-style-type: none"><li>true.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	messages		<ul style="list-style-type: none"> <li>false (default).</li> </ul>	
ManagedAddressFlag	Whether the managed address flag is set to 1	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false (default).</li> </ul>	N/A
OtherFlag	Whether the other flag is set to 1	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false (default).</li> </ul>	N/A
RouterLifetime	Router lifetime in RA messages	N/A	Unsigned integer. Value range: 0 to 9000 seconds. Default: 1800 seconds.	0 means that the router does not serve as the default router
NSRetransTimer	Interval for retransmitting an NS message	N/A	Unsigned integer. Value range: 1000 to 4294967295 milliseconds. Default: 1000 milliseconds.	N/A
RouterPreference	Router preference in RA messages	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—High.</li> <li>2—Low.</li> <li>3—Medium (default).</li> </ul>	N/A
NudReachableTime	Neighbor reachable time on an interface	N/A	Unsigned integer. Value range: 1 to 3600000 milliseconds. Default: 30000 milliseconds.	N/A

## Example

Example 1: Get RA message settings.

### JSON Request

GET /api/v1/ND/NDRA?index=IfIndex%3D5

### JSON Response

200 OK

```
{
  "IfIndex" : "10",
  "RAHalt" : "true",
  "MaxInterval" : "600",
  "MinInterval" : "200",
  "NoAdvLinkMTU" : "false",
  "HopLimitUnspecified" : "false",
  "ManagedAddressFlag" : "false",
  "OtherFlag" : "false",
```

```
"RouterLifetime" : "1800",  
"NSRetransTimer" : "1000",  
"RouterPreference" : "3",  
"NudReachableTime" : "30000"  
}
```

Example 2: Configure RA message settings.

#### **JSON Request**

POST /api/v1/ND/NDRA

```
{  
  "IfIndex" : "10",  
  "RAHalt" : "false",  
  "MaxInterval" : "1000",  
  "MinInterval" : "100",  
  "NoAdvLinkMTU" : "true",  
  "HopLimitUnspecified" : "true",  
  "ManagedAddressFlag" : "true",  
  "OtherFlag" : "true",  
  "RouterLifetime" : "2000",  
  "NSRetransTimer" : "10000",  
  "RouterPreference" : "2",  
  "NudReachableTime" : "100000"  
}
```

#### **JSON Response**

201 Created

Example 3: Modify RA message settings.

#### **JSON Request**

PUT /api/v1/ND/NDRA?index=IfIndex%3D10

```
{  
  "IfIndex" : "10",  
  "RAHalt" : "false",  
  "MaxInterval" : "1000",  
  "MinInterval" : "100",  
}
```

```

"NoAdvLinkMTU" : "true",
"HopLimitUnspecified" : "true",
"ManagedAddressFlag" : "true",
"OtherFlag" : "true",
"RouterLifetime" : "2000",
"NSRetransTimer" : "10000",
"RouterPreference" : "2",
"NudReachableTime" : "100000"
}

```

### JSON Response

204 No Content

Example 4: Restore the default RA message settings.

### JSON Request

DELETE /api/v1/ND/NDRA?index=IfIndex%3D10

### JSON Response

204 No Content

## ND/NDRAPrefix

This table contains information about IPv6 prefix settings.

## Properties

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported.  Some versions support interface names. For more information, see the XSD document of your product. For information about IfIndex, see IfMgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Ipv6Prefix	IPv6 prefix	Data structure	Members include: <ul style="list-style-type: none"> <li>Ipv6Address</li> <li>Ipv6PrefixLength</li> </ul>	N/A
Ipv6Address	IPv6 address	Index	Hexadecimal string,	It must be a valid IPv6

Column name	Column description	Column type	Data type and restrictions	Remarks
	prefix		colon-separated.	address prefix.
Ipv6PrefixLength	Prefix length	Index	Unsigned integer. Value range: 1 to 128.	N/A
ValidLifetime	Valid lifetime of the prefix	N/A	Unsigned integer. Value range: 0 to 4294967295 seconds.	When NoAutoConfig or Offlink is configured, it must be configured. When it is not configured, it is the default value.
PreferredLifetime	Preferred lifetime of the prefix used for stateless autoconfiguration	N/A	Unsigned integer. Value range: 0 to 4294967295 seconds.	When NoAutoConfig or Offlink is configured, it must be configured. When it is not configured, it is the default value.
NoAutoConfig	Whether the prefix is not used for stateless autoconfiguration	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false (default).</li> </ul>	When NoAdvertise is configured, it can't be configured.
OffLink	Whether the IPv6 address with the prefix is not directly reachable on the link	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false (default).</li> </ul>	When NoAdvertise is configured, it can't be configured.
NoAdvertise	Whether the prefix specified in this command is not advertised	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false</li> </ul>	When it is configured, the lifetime can't be configured, and the lifetime is the default value.

## Example

Example 1: Get IPv6 prefix settings.

### JSON Request

GET /api/v1/ND/NDRAPrefix

### JSON Response

200 OK

```
{
  "NDRAPrefix": [
    {
      "IfIndex": 258,
      "Ipv6Prefix": {
        "Ipv6Address": "23::",
        "Ipv6PrefixLength": 64
      }
    }
  ]
}
```

```
"ValidLifetime": 2592000,  
"PreferredLifetime": 604800,  
"NoAutoConfig": false,  
"OffLink": false  
}}}
```

Example 2: Add an IPv6 prefix.

#### **JSON Request**

POST /api/v1/ND/NDRAPrefix

```
{  
  "IfIndex": 258,  
  "Ipv6Prefix":  
  {  
    "Ipv6Address": "23::",  
    "Ipv6PrefixLength": 64  
  },  
  "ValidLifetime": 20000,  
  "PreferredLifetime": 6000,  
  "NoAutoConfig": false,  
  "OffLink": false  
}
```

#### **JSON Response**

201 Created

Example 3: Modify an IPv6 prefix.

#### **JSON Request**

PUT /api/v1/ND/NDRAPrefix?index=IfIndex%3D258

```
{  
  "IfIndex": 258,  
  "Ipv6Prefix":  
  {  
    "Ipv6Address": "23::",  
    "Ipv6PrefixLength": 64  
  },  
}
```

```

"ValidLifetime": 20000,
"PreferredLifetime": 6000,
"NoAutoConfig": false,
"OffLink": false
}

```

### JSON Response

204 No Content

Example 4: Delete an IPv6 prefix.

### JSON Request

DELETE /api/v1/ND/NDRAPrefix?index=IfIndex%3D258

### JSON Response

204 No Content

## ND/NDProxy

This table contains information about neighbor proxy settings.

## Properties

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface names. For more information, see the XSD document of your product. For information about IfIndex, see IfMgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
ProxyEnable	Whether common ND proxy is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false (default).</li> </ul>	N/A
LocalProxyEnable	Whether local ND proxy is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false (default).</li> </ul>	N/A

## Example

Example 1: Get ND proxy settings.

**JSON Request**

GET /api/v1/ND/NDProxy?index=IfIndex%3D258

**JSON Response**

200 OK

```
{  
  "IfIndex": 258,  
  "ProxyEnable": false,  
  "LocalProxyEnable": false  
}
```

Example 2: Configure ND proxy.

**JSON Request**

POST /api/v1/ND/NDProxy

```
{  
  "IfIndex": 258,  
  "ProxyEnable": true,  
  "LocalProxyEnable": true  
}
```

**JSON Response**

201 Created

Example 3: Modify ND proxy settings.

**JSON Request**

PUT /api/v1/ND/NDProxy?index=IfIndex%3D10

```
{  
  "IfIndex": 258,  
  "ProxyEnable": true,  
  "LocalProxyEnable": true  
}
```

**JSON Response**

204 No Content

Example 4: Restore the default ND proxy settings.

**JSON Request**

DELETE /api/v1/ND/NDProxy?index=IfIndex%3D10

**JSON Response**

204 No Content

## ND/NDSpecification

This table contains ND specification information.

### Properties

Column name	Column description	Column type	Data type and restrictions
LearnMaxNumLimit	Maximum number of dynamic neighbor entries that an interface can learn	N/A	Unsigned integer.
SupportModeUNI	Support for configuring a port as a customer-side port	N/A	Boolean: <ul style="list-style-type: none"><li>• true.</li><li>• false.</li></ul>

### Example

Example 1: Get ND specification information.

**JSON Request**

GET /api/v1/ND/NDSpecification

**JSON Response**

200 OK

```
{  
  "LearnMaxNumLimit" : "4096",  
  "SupportModeUNI" : "true"  
}
```

## ND/NDStaleAgingTime

This table contains aging time configuration information for ND entries in stale state.

# Properties

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Only Layer 3 interfaces are supported.
AgingTime	Aging time for ND entries in stale state	N/A	Unsigned integer. Value range: 1 to 1440 minutes. or 60 to 86400 seconds	The aging time must be configured together with aging time value type.
StaleAgingUnit	Aging time value type for ND entries in stale state	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—Aging in minutes.</li><li>• 1—Aging in seconds.</li></ul>	The aging time value type must be configured together with the aging time.

## Example

Example 1: Get ND table aging time configuration information.

### JSON Request

GET /api/v1/ND/NDStaleAgingTime

### JSON Response

200 OK

```
{
  "IfIndex" : "1024",
  "AgingTime" : "100",
  "StaleAgingUnit" : "0"
}
```

Example 2: Configure ND aging time.

### JSON Request

POST /api/v1/ND/NDStaleAgingTime

```
{
  "IfIndex" : "1024",
  "AgingTime" : "100",
  "StaleAgingUnit" : "0"
}
```

### JSON Response

201 Created

Example 3: Modify the aging time of ND entries in stale state by interface.

**JSON Request**

PUT /api/v1/ND/NDStaleAgingTime?index=IfIndex%3D1024

```
{  
  "IfIndex" : "1024" ,  
  "AgingTime" : "100",  
  "StaleAgingUnit" : "1"  
}
```

**JSON Response**

204 No Content

Example 4: Restore the default aging time of ND entries in stale state.

**JSON Request**

DELETE /api/v1/ND/NDStaleAgingTime?index=IfIndex%3D1024

**JSON Response**

204 No Content

Message	Explanation
Invalid value. 非法输入值。	Invalid value. NETCONF处理通用错误，设置操作的值不符合模块要求。
Can't issue the configuration because of configuration conflict. 当前配置与系统已有配置冲突。	Can't issue the configuration because of configuration conflict. NETCONF处理通用错误，设置操作的配置与系统现有配置冲突。
Configuration already exists. 配置已存在。	Configuration already exists. NETCONF处理通用错误，Create操作时，要创建的配置已存在。
Configuration target does not exist. 配置对象不存在。	Configuration target does not exist. NETCONF处理通用错误，SET的对象不存在。
Configuration does not exist. 配置不存在。	Configuration does not exist, delete operation failed. NETCONF处理通用错误，Delete操作，要删除的配置不存在。
The configuration not supported on the specified target. 指定配置对象不支持对应配置。	The configuration not supported on the specified target. NETCONF处理通用错误，当前对象不支持此配置。例如：在一个只支持二层接口的表里面，用户下发了一个三层接口来进行设置操作。
The session does not have the privilege to process the request. 权限不足，不能执行本次操作。	The session does not have the privilege to process the request. NETCONF处理通用错误，当前用户对当前对象没有RBAC权限。
Resources are insufficient for processing the request. 系统资源不足，请求无法完成。	Resources are insufficient for processing the request. NETCONF处理通用错误，系统资源不足，不能完成本次操作。比如配置资源已经达到了系统规格上限。
The system does not support this operation. 系统不支持当前操作。	The system does not support this operation. NETCONF处理通用错误，不支持当前操作。
Operation failed. 操作失败。	Operation failed. NETCONF处理通用错误，上面所述场景之外的错误。
Expecting element '%s': '%s' under element '%s'.	Expecting element ' <i>path</i> '. Schema一般错误，必须的元素缺失,其xpath路径为 <i>path</i>
The element '%s' should have an attribute '%s'.	The element ' <i>a</i> ' should have an attribute ' <i>b</i> '. Schema一般错误，元素 <i>a</i> 必须的属性 <i>b</i> 缺失
The value of element '%s' is invalid. %s	The value of element ' <i>a</i> ' is invalid. <i>Reason</i> Schema一般错误，元素的 <i>a</i> 值无效，具体原因是： <i>reason</i> 。
The value of attribute '%s' for element '%s' is invalid. %s	The value of attribute ' <i>a</i> ' for element ' <i>b</i> ' is invalid. <i>Reason</i> Schema一般错误，元素 <i>b</i> 的属性 <i>a</i> 的值无效，具体原因是： <i>reason</i> 。
The number of occurrences of element '%s/%s' is invalid.	The number of occurrences of element '%s/%s' is invalid. Schema一般错误，元素出现的次数不正确。
Unexpected element '%s': '%s' under element '%s'.	Unexpected element '%s'.

	Schema一般错误，意外出现一个元素。
Unexpected attribute '%s':'%s' of element '%s'.	Unexpected attribute '%s' of element '%s'. Schema一般错误，意外出现一个属性。
The child elements of '%s' are invalid.	The child elements of '%s' are invalid. Schema一般错误，指定位置元素下的子元素出现次数不正确。
Element '%s' can not have a textual child element.	Element '%s' can not have a textual child element. Schema一般错误，元素%s不能出现文本。
Element '%s' can not have a child element.	Element '%s' can not have a child element. Schema一般错误，元素%s不能出现子节点。
%%.%%lus is an invalid value of %%%s type value.	value is an invalid value of type type value. Schema一般错误，元素或者属性的值不是一个有效的XSD类型的值
%s cannot be empty.	%s cannot be empty. Schema一般错误，元素不能为空
The value does not match the regular expression.	The value does not match the regular expression. Schema一般错误，元素值和xsd定义的正则表达式不匹配。
The value does not match the enumeration.	The value does not match the enumeration. Schema一般错误，元素值和xsd定义的enumeration枚举值不匹配。
The length must be equal to %s.	The length must be equal to %s. Schema一般错误，元素长度和xsd定义的长度不相等。
The total digit length must be equal to %s.	The total digit length must be equal to %s. Schema一般错误，元素的数字总长度和xsd定义的长度不相等。
The length must be less than or equal to %s.	The length must be less than or equal to maxLength. Schema一般错误，元素的长度大于xsd定义的maxLength最大长度时。
The length must be greater than or equal to %s.	The length must be greater than or equal to minLength. Schema一般错误，元素的长度小于xsd定义的minLength最小长度时。
The value must be less than %s.	The value must be less than maxExclusive. Schema一般错误，元素的值大于等于xsd定义的最大Exclusive最大值时。
The value must be greater than %s.	The value must be greater than minExclusive. Schema一般错误，元素的值小于等于xsd定义的最小Exclusive最小值时。
The value must be less than or equal to %s.	The value must be less than or equal to maxInclusive. Schema一般错误，元素的值大于xsd定义的最大Inclusive最大值时。
The value must be greater than or equal to %s.	The value must be greater than or equal to minInclusive. Schema一般错误，元素的值小于xsd定义的最小Inclusive最小值时。

# NETSHARE

## NETSHARE/FreezeIP

This table is used to freeze IP addresses.

### XML structure

```
<NETSHARE>
  <FreezeIP>
    <IPAddress></IPAddress>
    <VrfName></VrfName>
    <Freezetime></Freezetime>
  </FreezeIP>
</NETSHARE>
```

### Table description

Item	Description
Feature name	NETSHARE
Table name	FreezeIP
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPAddress	IP address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. Length: 1 to 46 characters.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfName	VRF name	N/A	String: case-insensitive. Length: 1 to 31.	N/A
Freezetime	Freezing time	N/A	Unsigned integer. Unit: Minute. Value range: 5 to 720.	N/A

## NETSHARE/UnfreezeIP

This table is used to unfreeze IP addresses.

### XML structure

```

<NETSHARE>
  <UnfreezeIP>
    <IPAddress></IPAddress>
    <VrfName></VrfName>
  </UnfreezeIP>
</NETSHARE>

```

### Table description

Item	Description
Feature name	NETSHARE
Table name	UnfreezeIP
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPAddress	IP address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. Length: 1 to 46 characters.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
VrfName	VRF name	N/A	String: case-insensitive. Length: 1 to 31.	N/A

# NETSHARE

## NETSHARE/Policies

This table contains netshare control policy information.

### XML structure

```
<NETSHARE>
  <Policies>
    <Policy>
      <PolicyName></PolicyName>
      <PolicyDescription></PolicyDescription>
      <Enable></Enable>
      <IPIDtrailsw></IPIDtrailsw>
      <IPtmmaxnum></IPtmmaxnum>
      <Action></Action>
      <Freezetime></Freezetime>
      <Logging></Logging>
    </Policy>
  </Policies>
</NETSHARE>
```

### Table description

Item	Description
Feature name	NETSHARE
Table name	Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
PolicyName	Name of the netshare control policy	Index	String, case-insensitive. Length: 1 to 63 characters.	N/A
PolicyDescription	Description of the policy	N/A	String: case-sensitive. Length: 1 to 127 characters.	N/A
Enable	Enabling status of the policy	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	The default value is true.
IPIDtrailsw	Enabling status of IPID Trail	N/A	Boolean: <ul style="list-style-type: none"> <li>false</li> <li>true</li> </ul>	The default value is false.
IPtmmaxnum	Max number of terminals for each IP	N/A	Unsigned integer: Value range: 1 to 15.	N/A
Action	Action for shared IP addresses with excessive terminals	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—permit.</li> <li>1—freeze.</li> </ul>	N/A
Freezetime	Freezing time	N/A	Unsigned integer. Unit: Minute. Value range: 5 to 720.	N/A
Logging	Log the event that a shared IP address has excessive terminals	N/A	Boolean: <ul style="list-style-type: none"> <li>false</li> <li>true</li> </ul>	The default value is false.

## NETSHARE/PolicyJsonOptions

This table contains the match criteria information in the netshare control policy.

## XML structure

```
<NETSHARE>
  <PolicyJsonOptions>
    <OptionJson>
      <PolicyJsonName></PolicyJsonName>
      <OptionJsonType></OptionJsonType>
      <OptionJsonValue></OptionJsonValue>
    </OptionJson>
  </PolicyJsonOptions>
</NETSHARE>
```

## Table description

Item	Description
Feature name	NETSHARE
Table name	PolicyJsonOptions
Table type	Multi-instance table
Row name	Option
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
PolicyJsonName	Name of the netshare control policy	Index	String: case-insensitive. Length: 1 to 63 characters.
OptionJsonType	Type of the criteria in the policy	Index	Enumeration: <ul style="list-style-type: none"><li>1—SourceZones.</li><li>2—DestZones.</li><li>3—SourceAddressSetsIPV4.</li><li>4—SourceAddressSetsIPV6.</li><li>5—DestAddressSetsIPV4.</li><li>6—DestAddressSetsIPV6.</li><li>7—Users.</li></ul>

Column name	Column description	Column type	Data type and restrictions
			<ul style="list-style-type: none"> <li>8—UserGroups.</li> </ul>
OptionJsonValue	Match criteria content	Index	String, case-insensitive. Length: 1 to 65535.

      <DataType></DataType>
      <Mask></Mask>
      <VrfName></VrfName>
      <IPAddress></IPAddress>
      <Status></Status>
      <User></User>
      <TerminalNum></TerminalNum>
      <Policyname></Policyname>
      <RemainingTime></RemainingTime>
    </StatusInfors>
  </ShareStatusInfors>
</NETSHARE>
```

## Table description

Item	Description
Feature name	NETSHARE
Table name	ShareStatusInfors
Table type	Multi-instance table
Row name	StatusInfors
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Chassis	Chassis ID	Index	Unsigned integer. Value range: 0 to 65534.	N/A
Slot	Slot ID	Index	Unsigned integer. Value range: 0 to 65534.	N/A
CpuID	CPU ID	Index	Unsigned integer. Value range: 0 to 7.	N/A
TotalCount	Total count	Index	Unsigned integer. Value range: 1 to $2^{32} - 1$ .	N/A
PositionOnNode	Sequence number of the netshare control information after which the operation starts	Index	Unsigned integer. Value range: 1 to $2^{32} - 1$ .	N/A
DataType	Type of the filter keyword	Index	Unsigned integer. Value range: 0 to $2^{32} - 1$ .	N/A
Mask	Mask value of node	Index	Unsigned integer. Value range: 0 to $2^{64} - 1$ .	N/A
VrfName	VRF name	N/A	String: case-insensitive. Length: 1 to 31.	N/A
IPAddress	Source IP address	N/A	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated. Length: 1 to 46 characters.	IPv4 example: 1.1.1.1. IPv6 example: 1:2:3:4:5:6:7:8.
Status	Status of the shared IP address	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—invalid.</li> <li>1—frozen.</li> <li>2—unfrozen.</li> </ul>	N/A
User	Username suffixed with	N/A	String: case-insensitive.	N/A

	domain name		Length: 1 to 311	
TerminalNum	Number of terminals	N/A	Unsigned integer. Value range: 1 to 15.	N/A
Policyname	Policy name	N/A	String: case-insensitive. Length: 1 to 63 characters.	N/A
RemainingTime	Remaining freezing time	N/A	Unsigned integer. Unit: Minute. Value range: 0 to 720.	When the status is unfrozen, the remaining time is 0.

# Netshare

## Netshare/Policy

Message	Explanation
Can't create new NetShare control policy because only one NetShare control policy can be created. 最多可以配置一个共享上网管理策略。	Currently the NetShare module allows only one policy to be created. 目前共享上网模块仅允许配置一个策略。
The policy name already exists. 策略名称已存在。	The policy name is being used by another policy. 当前配置的策略名称已存在。
The specified policy does not exist. 策略不存在。	The policy does not exist. 要操作的策略已不存在。

## Netshare/Policy/Option

Message	Explanation
Maximum number of source IP addresses already reached. 配置的源IP地址数量超过上限。	The number of source IP address referenced by the policy has exceeded the upper limit. The maximum number is 1024. 策略引用的源IP地址数量已超过上限，上限数量为1024。
Maximum number of destination IP addresses already reached. 配置的目的地IP地址数量超过上限。	The number of destination IP address referenced by the policy has exceeded the upper limit. The maximum number is 1024. 策略引用的目的地IP地址数量已超过上限，上限数量为1024。
Maximum number of source security zones already reached. 配置的源安全域数量超过上限。	The number of source security zones referenced by the policy has exceeded the upper limit. The maximum number is 1024. 策略引用的源安全域数量已超过上限，上限数量为1024。
Maximum number of destination security zones already reached. 配置的目的地安全域数量超过上限。	The number of destination security zones referenced by the policy has exceeded the upper limit. The maximum number is 1024. 策略引用的目的地安全域数量已超过上限，上限数量为1024。
Maximum number of users already reached. 配置的用户数量超过上限。	The number of users referenced by the policy has exceeded the upper limit. The maximum number is 1024. 策略引用的用户数量已超过上限，上限数量为1024。
Maximum number of user groups already reached. 配置的用户组数量超过上限。	The number of user groups referenced by the policy has exceeded the upper limit. The maximum number is 1024. 策略引用的用户组数量已超过上限，上限数量为1024。
The specified VPN instance does not exist. VPN实例不存在。	The VPN instance does not exist. VPN实例不存在。

## Netshare/Freeze

Message	Explanation
The IP address is frozen.	The specified IP address is frozen.

IP地址已经被冻结。	想要操作的IP地址已经被冻结
------------	----------------

## Netshare/UnFreeze

Message	Explanation
The IP address is not frozen. 指定的IP地址未被冻结。	The specified IP address is unfrozen. 想要操作的IP地址已经被解冻。

## Netshare/ShareStatusInfor

Message	Explanation
The IP address is not on the shared IP address list. 共享状态列表中不存在该IP地址。	The specified IP address does not exist in the shared status list. 想要操作的IP地址不存在在共享列表中。

# NETSTREAM4

## NETSTREAM4/NS4Enable

This table contains information about enabling NetStream on an interface.

### XML structure

```
<NETSTREAM4>
  <NS4Enable>
    <InterfaceEnable>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </InterfaceEnable>
  </NS4Enable>
</NETSTREAM4>
```

### Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Enable
Table type	Multi-instance table
Row name	InterfaceEnable
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Enable	Traffic direction	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Disable</li><li>• <b>1</b>—Enables NetStream for incoming traffic.</li><li>• <b>2</b>—Enables NetStream</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			for outgoing traffic. <ul style="list-style-type: none"> <li>3—Enables NetStream for incoming and outgoing traffic.</li> </ul>	

## NETSTREAM4/NS4Sampler

This table contains information about enabling NetStream sampling on an interface.

### XML structure

```

<NETSTREAM4>
  <NS4Sampler>
    <InterfaceSampler>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <SamplerName></SamplerName>
    </InterfaceSampler>
  </NS4Sampler>
</NETSTREAM4>

```

### Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Sampler
Table type	Multi-instance table
Row name	InterfaceSampler
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in <i>Ifmgr NETCONF XML API Configuration Reference</i> .

Column name	Column description	Column type	Data type and restrictions	Remarks
Direction	Traffic direction	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Incoming traffic.</li> <li>2—Outgoing traffic.</li> </ul>	N/A
SamplerName	Sampler name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A

## NETSTREAM4/NS4Filter

This table contains information about enabling NetStream filtering an interface.

### XML structure

```

<NETSTREAM4>
  <NS4Filter>
    <InterfaceFilter>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <AclNumber></AclNumber>
    </InterfaceFilter>
  </NS4Filter>
</NETSTREAM4>

```

### Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Filter
Table type	Multi-instance table
Row name	InterfaceFilter
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex,

Column name	Column description	Column type	Data type and restrictions	Remarks
				see "Appendix" in Ifmgr NETCONF XML API Configuration Reference.
Direction	Traffic direction	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Incoming traffic.</li> <li>2—Outgoing traffic.</li> </ul>	N/A
AcINumber	IPv4 ACL number	N/A	Unsigned integer. For an IPv4 basic ACL, the value range is 2000 to 2999. For an IPv4 advanced ACL, the value range is 3000 to 3999.	NetStream filtering uses an ACL to identify target packets.  If you want to collect data for specific flows, use the ACL permit statements to identify the flows. NetStream collects data only for these flows.  If you do not want to collect data for specific flows, use the ACL deny statements to identify the flows. NetStream does not collect data for these flows.

## NETSTREAM4/NS4V9RefreshTime

This table contains information about the refresh rate of time for the NetStream version 9 template.

### XML structure

```

<NETSTREAM4>
  <NS4V9RefreshTime>
    <Time></Time>
  </NS4V9RefreshTime>
</NETSTREAM4>

```

### Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4V9RefreshTime
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
Time	Interval at which the template is sent	N/A	Unsigned integer. The value range is 1 to 3600 minutes. The default time-based refresh interval is 30 minutes.

## NETSTREAM4/NS4V9RefreshPacket

This table contains information about the refresh rate of packet for the NetStream version 9 template.

## XML structure

```
<NETSTREAM4>
  <NS4V9RefreshPacket>
    <Packet></Packet>
  </NS4V9RefreshPacket>
</NETSTREAM4>
```

## Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4V9RefreshPacket
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
Packet	Number of packets that are sent before the template is sent	N/A	Unsigned integer. The value range is 1 to 600. The default packet count-based refresh rate is 20 packets.

## NETSTREAM4/NS4Host

This table contains the information about the destination host to which the IPv4 NetStream exports.

## XML structure

```
<NETSTREAM4>
  <NS4Host>
    <Host>
      <VrfIndex></VrfIndex>
      <IP></IP>
      <UDPPort></UDPPort>
    </Host>
  </NS4Host>
</NETSTREAM4>
```

## Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Host
Table type	Multi-instance table
Row name	Host
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Index of the VRF	Index	Unsigned integer. Value range: 0 to 65535	When vrfIndex is 0, it indicates the host is on public network. This supports name index.
IP	IP address of the host	Index	String, dotted decimal notation.	N/A
UDPPort	UDP port of the host	N/A	Unsigned integer. Value range: 0 to 65535. Default: 0.	N/A

## NETSTREAM4/NS4Source

This table contains the information about the source interface for NetStream data to be sent to NetStream servers.

## XML structure

```
<NETSTREAM4>
  <NS4Source>
    <IfIndex></IfIndex>
  </NS4Source>
</NETSTREAM4>
```

## Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Source
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Source interface index	N/A	Unsigned integer.	This supports name index.

## NETSTREAM4/NS4ActiveTime

This table contains the information about the aging time of active flows.

## XML structure

```
<NETSTREAM4>
  <NS4ActiveTime>
    <ActiveTime></ActiveTime>
  </NS4ActiveTime>
</NETSTREAM4>
```

## Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4ActiveTime
Table type	Single-instance table

Item	Description
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
ActiveTime	Aging time of active flows	N/A	Unsigned integer. Value range: 1 to 60 minutes. Default: 30 minutes.

## NETSTREAM4/NS4InActiveTime

This table contains the information about the aging time of inactive flows.

## XML structure

```

<NETSTREAM4>
  <NS4InActiveTime>
    <InActiveTime></InActiveTime>
  </NS4InActiveTime>
</NETSTREAM4>

```

## Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4InActiveTime
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
InActiveTime	Aging time of inactive flows	N/A	Unsigned integer. Value range: 10 to 600 seconds. Default: 30 seconds.

# NETSTREAM4/NS4MaxEntry

This table contains the information about the upper limit on IPv4 NetStream entries.

## XML structure

```
<NETSTREAM4>
  <NS4MaxEntry>
    <MaxEntry></MaxEntry>
    <Action></Action>
  </NS4MaxEntry>
</NETSTREAM4>
```

## Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4MaxEntry
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxEntry	Maximum number of IP NetStream entries can be cached	N/A	Unsigned integer. Default: User-defined value	N/A.
Action	Processing method when the upper limit is reached	N/A	Boolean: <ul style="list-style-type: none"><li>true—Ages out the oldest entries when the upper limit is reached.</li><li>false (default)—Disables creation of a new entry when the upper limit is reached.</li></ul>	N/A

# NETSTREAM4/NS4Version

This table contains information about the version that IPv4 NetStream uses to export data.

## XML structure

```
<NETSTREAM4>
  <NS4Version>
    <Version></Version>
    <As></As>
    <Nexthop></Nexthop>
  </NS4Version>
</NETSTREAM4>
```

## Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4MaxEntry
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
Version	Version format	N/A	Enumeration: <ul style="list-style-type: none"><li>• 5</li><li>• 9 (default)</li><li>• 10</li></ul>
As	Autonomous system	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—peer-as (default)</li><li>• 1—origin-as</li></ul>
Nexthop	BGP nexthop	N/A	Boolean: <ul style="list-style-type: none"><li>• true</li><li>• false (default)</li></ul>

## NETSTREAM4/NS4Rate

This table contains information about the export rate.

## XML structure

```
<NETSTREAM4>
  <NS4Rate>
    <Rate></Rate>
  </NS4Rate>
```

</NETSTREAM4>

## Table description

Item	Description
Feature name	NETSTREAM4
Table name	NETSTREAM4Rate
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
Rate	Export rate	N/A	Unsigned integer. Value range: 0 to 1000. Default: 0.

## NETSTREAM4/NS4Aging

This table contains information about IPv4 NetStream periodical aging and TCP FIN- and RST-triggered aging.

## XML structure

```
<NETSTREAM4>
  <NS4Aging>
    <AgingEnable></AgingEnable>
  </NS4Aging>
</NETSTREAM4>
```

## Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Aging
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions
AgingEnable	Enabling status of periodical aging, TCP FIN and RST-triggered aging.	N/A	Boolean: <ul style="list-style-type: none"><li>true (default).</li><li>false.</li></ul>

## NETSTREAM4/NS4IPSECRawPacket

This table contains information about NetStream for outgoing packets before/after IPsec encapsulation.

## XML structure

```
<NETSTREAM4>
  <NS4IPSECRawPacket>
    <IPSECRawPacket>
      <IfIndex></IfIndex>
      <RawPacketEnable></RawPacketEnable>
    </IPSECRawPacket>
  </NS4IPSECRawPacket>
</NETSTREAM4>
```

## Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4IPSECRawPacket
Table type	Single-instance table
Row name	IPSECRawPacket
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in Ifmgr NETCONF XML API Configuration

Column name	Column description	Column type	Data type and restrictions	Remarks
				Reference.
RawPacketEnable	Enabling status of NetStream for outgoing packets before IPsec encapsulation	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled (default).</li> </ul>	By default, NetStream is enabled for outgoing IPsec encapsulated packets.

## NETSTREAM4/NS4MPLSCollection

This table contains information about MPLS-aware IPv4 NetStream.

### XML structure

```

<NETSTREAM4>
  <NS4MPLSCollection>
    <LabelPosition1></LabelPosition1>
    <LabelPosition2></LabelPosition2>
    <LabelPosition3></LabelPosition3>
    <NoIPFieldsEnable></NoIPFieldsEnable>
  </NS4MPLSCollection>
</NETSTREAM4>

```

### Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4MPLSCollection
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LabelPositions1	Position of the first label in the label stack	N/A	Enumeration: <ul style="list-style-type: none"> <li>0</li> <li>1</li> <li>2</li> <li>3</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>• 4</li> <li>• 5</li> <li>• 6</li> </ul>	
LabelPositions2	Position of the second label in the label stack	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0</li> <li>• 1</li> <li>• 2</li> <li>• 3</li> <li>• 4</li> <li>• 5</li> <li>• 6</li> </ul>	N/A
LabelPositions3	Position of the third label in the label stack	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0.</li> <li>• 1</li> <li>• 2</li> <li>• 3</li> <li>• 4</li> <li>• 5</li> <li>• 6</li> </ul>	N/A
NoIPFieldsEnable	Specifies not to count IP fields.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true.</li> <li>• false (default).</li> </ul>	N/A

# NETSTREAM4

## NETSTREAM4/NS4Enable

This table contains information about enabling NetStream on an interface.

### XML structure

```
<NETSTREAM4>
  <NS4Enable>
    <InterfaceEnable>
      <IfIndex></IfIndex>
      <Enable></Enable>
    </InterfaceEnable>
  </NS4Enable>
</NETSTREAM4>
```

### Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Enable
Table type	Multi-instance table
Row name	InterfaceEnable
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Enable	Traffic direction	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Disable</li><li>• <b>1</b>—Enables NetStream for incoming traffic.</li><li>• <b>2</b>—Enables NetStream for outgoing traffic.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>3—Enables NetStream for incoming and outgoing traffic.</li> </ul>	

## NETSTREAM4/NS4Sampler

This table contains information about enabling NetStream sampling on an interface.

### XML structure

```

<NETSTREAM4>
  <NS4Sampler>
    <InterfaceSampler>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <SamplerName></SamplerName>
    </InterfaceSampler>
  </NS4Sampler>
</NETSTREAM4>

```

### Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Sampler
Table type	Multi-instance table
Row name	InterfaceSampler
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see "Appendix" in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
Direction	Traffic direction	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Incoming traffic.</li> <li>2—Outgoing traffic.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SamplerName	Sampler name	N/A	String, case-insensitive. Length: 1 to 31 characters.	N/A

## NETSTREAM4/NS4Filter

This table contains information about enabling NetStream filtering an interface.

### XML structure

```

<NETSTREAM4>
  <NS4Filter>
    <InterfaceFilter>
      <IfIndex></IfIndex>
      <Direction></Direction>
      <AclNumber></AclNumber>
    </InterfaceFilter>
  </NS4Filter>
</NETSTREAM4>

```

### Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Filter
Table type	Multi-instance table
Row name	InterfaceFilter
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in Ifmgr NETCONF XML API Configuration Reference.
Direction	Traffic direction	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Incoming traffic.</li> <li>2—Outgoing traffic.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
AclNumber	IPv4 ACL number.	N/A	Unsigned integer. For an IPv4 basic ACL, the value range is 2000 to 2999. For an IPv4 advanced ACL, the value range is 3000 to 3999.	NetStream filtering uses an ACL to identify target packets. If you want to collect data for specific flows, use the ACL permit statements to identify the flows. NetStream collects data only for these flows. If you do not want to collect data for specific flows, use the ACL deny statements to identify the flows. NetStream does not collect data for these flows.

## NETSTREAM4/NS4V9RefreshTime

This table contains information about the refresh rate of time for the NetStream version 9 template.

### XML structure

```

<NETSTREAM4>
  <NS4V9RefreshTime>
    <Time></Time>
  </NS4V9RefreshTime>
</NETSTREAM4>

```

### Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4V9RefreshTime
Table type	Single-instance table
Row name	None
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
Time	Interval at which the template is sent	N/A	Unsigned integer. Value range: 1 to 3600 minutes.

# NETSTREAM4/NS4V9RefreshPacket

This table contains information about the refresh rate of packet for the NetStream version 9 template.

## XML structure

```
<NETSTREAM4>
  <NS4V9RefreshPacket>
    <Packet></Packet>
  </NS4V9RefreshPacket>
</NETSTREAM4>
```

## Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4V9RefreshPacket
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Packet	Number of packets that are sent before the template is sent	N/A	Unsigned integer. Value range: 1 to 600.

# NETSTREAM4/NS4Host

This table contains the information about the destination host to which the IPv4 NetStream exports.

## XML structure

```
<NETSTREAM4>
  <NS4Host>
    <Host>
      <VrfIndex></VrfIndex>
      <IP></IP>
      <UDPPort></UDPPort>
    </Host>
  </NS4Host>
</NETSTREAM4>
```

## Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Host
Table type	Multi-instance table
Row name	Host
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VrfIndex	Index of the VRF	Index	Unsigned integer. Value range: 0 to 65535	When vrfIndex is 0, it indicates the host is on public network. This supports name index.
IP	IP address of the host	Index	String, dotted decimal notation.	N/A
UDPPort	UDP port of the host	N/A	Unsigned integer. Value range: 0 to 65535	N/A

## NETSTREAM4/NS4Source

This table contains the information about the source interface for NetStream data to be sent to NetStream servers.

## XML structure

```
<NETSTREAM4>
  <NS4Source>
    <IfIndex></IfIndex>
  </NS4Source>
</NETSTREAM4>
```

## Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Source
Table type	Single-instance table
Row name	None

Item	Description
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Source interface index	N/A	Unsigned integer	This supports name index.

## NETSTREAM4/NS4ActiveTime

This table contains the information about the aging time of active flows.

## XML structure

```
<NETSTREAM4>
  <NS4ActiveTime>
    <ActiveTime></ActiveTime>
  </NS4ActiveTime>
</NETSTREAM4>
```

## Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4ActiveTime
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
ActiveTime	The active timeout	N/A	Unsigned integer. Value range: 1 to 60 minutes. Default: 30 minutes.

## NETSTREAM4/NS4InActiveTime

This table contains the information about the aging time of inactive flows.

## XML structure

```
<NETSTREAM4>
  <NS4InActiveTime>
    <InActiveTime></InActiveTime>
  </NS4InActiveTime>
</NETSTREAM4>
```

## Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4InActiveTime
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
InActiveTime	The Inactive timeout	N/A	Unsigned integer. Value range: 10 to 600 seconds. Default: 30 seconds.

## NETSTREAM4/NS4MaxEntry

This table contains the information about the upper limit on IPv4 NetStream entries.

## XML structure

```
<NETSTREAM4>
  <NS4MaxEntry>
    <MaxEntry></MaxEntry>
    <Action></Action>
  </NS4MaxEntry>
</NETSTREAM4>
```

## Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4MaxEntry
Table type	Single-instance table

Item	Description
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
MaxEntry	The MaxEntries of ip netstream	N/A	Unsigned integer	N/A.
Action	Processing method when the upper limit is reached	N/A	Boolean: <ul style="list-style-type: none"> <li>true—Ages out the oldest entries when the upper limit is reached.</li> <li>false (default)—Disables creation of a new entry when the upper limit is reached.</li> </ul>	N/A

## NETSTREAM4/NS4Version

This table contains information about the version that IPv4 NetStream uses to export data.

## XML structure

```

<NETSTREAM4>
  <NS4Version>
    <Version></Version>
    <As></As>
    <NextHop></NextHop>
  </NS4Version>
</NETSTREAM4>

```

## Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4MaxEntry
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Version	The ip netstream version	N/A	Enumeration: <ul style="list-style-type: none"><li>• 5</li><li>• 9</li><li>• 10</li></ul>
As	The autonomous system	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—peer-as</li><li>• 1—origin-as</li></ul>
Nexthop	bgp-nexthop	N/A	Boolean: <ul style="list-style-type: none"><li>• true</li><li>• false</li></ul>

## NETSTREAM4/NS4Rate

This table contains information about the export rate.

## XML structure

```
<NETSTREAM4>
  <NS4Rate>
    <Rate></Rate>
  </NS4Rate>
</NETSTREAM4>
```

## Table description

Item	Description
Feature name	NETSTREAM4
Table name	NETSTREAM4Rate
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Rate	Export rate	N/A	Unsigned integer. Value range: 0 to 1000

# NETSTREAM4/NS4Aging

This table contains information about IPv4 NetStream periodical aging and TCP FIN- and RST-triggered aging.

## XML structure

```
<NETSTREAM4>
  <NS4Aging>
    <AgingEnable></AgingEnable>
  </NS4Aging>
</NETSTREAM4>
```

## Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4Aging
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
AgingEnable	Enabling status of periodical aging, TCP FIN and RST-triggered aging.	N/A	Boolean: <ul style="list-style-type: none"><li>true.</li><li>false.</li></ul>

# NETSTREAM4/NS4IPSECRawPacket

This table contains information about NetStream for outgoing packets before/after IPsec encapsulation.

## XML structure

```
<NETSTREAM4>
  <NS4IPSECRawPacket>
    <IPSECRawPacket>
      <IfIndex></IfIndex>
      <RawPacketEnable></RawPacketEnable>
    </IPSECRawPacket>
  </NS4IPSECRawPacket>
```

</NETSTREAM4>

## Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4IPSECRawPacket
Table type	Single-instance table
Row name	IPSECRawPacket
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index	index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see “Appendix” in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
RawPacketEnable	Enabling status of NetStream for outgoing packets before IPsec encapsulation	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Enabled.</li><li><b>false</b>—Disabled (default).</li></ul>	By default, NetStream is enabled for outgoing IPsec encapsulated packets.

## NETSTREAM4/NS4MPLSCollection

This table contains information about MPLS-aware IPv4 NetStream.

## XML structure

```
<NETSTREAM4>
  <NS4MPLSCollection>
    <LabelPosition1></LabelPosition1>
    <LabelPosition2></LabelPosition2>
    <LabelPosition3></LabelPosition3>
    <NoIPFieldsEnable></NoIPFieldsEnable>
  </NS4MPLSCollection>
</NETSTREAM4>
```

## Table description

Item	Description
Feature name	NETSTREAM4
Table name	NS4MPLSCollection
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
LabelPositions1	Position of the first label in the label stack	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0.</li><li>• 1</li><li>• 2</li><li>• 3</li><li>• 4</li><li>• 5</li><li>• 6</li></ul>	N/A
LabelPositions2	Position of the second label in the label stack	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0.</li><li>• 1</li><li>• 2.</li><li>• 3</li><li>• 4</li><li>• 5</li><li>• 6</li></ul>	N/A
LabelPositions3	position of the third label in the label stack.	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0.</li><li>• 1</li><li>• 2</li><li>• 3</li><li>• 4</li><li>• 5</li><li>• 6</li></ul>	N/A
NoIPFieldsEnable	Specifies not to count IP fields.	N/A	Boolean: <ul style="list-style-type: none"><li>• true.</li><li>• false.</li></ul>	N/A

## NETSTREAM4/NS4ExportInfo

This table contains information about the IPv4 NetStream data Export.

# XML structure

```
<NETSTREAM4>
  <NS4ExportInfo>
    <ExportInfo>
      <ExportType></ExportType>
      <Ipv4Address></Ipv4Address>
      <VrfIndex></VrfIndex>
      <UDPPort></UDPPort>
      <IfIndex></IfIndex>
      <V5ExportNum></V5ExportNum>
      <V5UDPDatagramsNum></V5UDPDatagramsNum>

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Type	Operation type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—ICMP-echo.</li> <li>• 1—UDP-echo.</li> <li>• 2—TCP.</li> <li>• 3—DLSw.</li> <li>• 4—FTP.</li> <li>• 5—DHCP.</li> <li>• 6—SNMP.</li> <li>• 7—DNS.</li> <li>• 8—HTTP.</li> <li>• 9—UDP-jitter.</li> <li>• 10—Voice.</li> <li>• 11—Path-jitter.</li> <li>• 12—UDP-tracert.</li> <li>• 13—ARP.</li> <li>• 14—IMAP.</li> <li>• 15—POP3.</li> <li>• 16—RADIUS.</li> <li>• 17—RTSP.</li> <li>• 18—SIP.</li> <li>• 19—SMTP.</li> <li>• 20—SSL.</li> <li>• 21—HTTPS.</li> <li>• 22—TCP half-open.</li> <li>• 23—Throughput.</li> <li>• 24—Latency.</li> <li>• 25—Frame-loss.</li> <li>• 26—ICMP-jitter.</li> <li>• 27—SNMP-DCA.</li> <li>• 28—WAP.</li> <li>• 29—Y1564.</li> <li>• 30—RADIUS-AC COUNT.</li> <li>• 31—Twamp Light.</li> </ul>	<p>NQA templates are not available for the following types of operations:</p> <ul style="list-style-type: none"> <li>• DLSW.</li> <li>• DHCP.</li> <li>• UDP-jitter.</li> <li>• Voice.</li> <li>• Path-jitter.</li> <li>• UDP-tracert.</li> <li>• Throughput.</li> <li>• Latency.</li> <li>• Frame-loss.</li> <li>• ICMP-jitter.</li> <li>• Y1564.</li> <li>• Twamp Light.</li> </ul> <p>You must specify an operation type when you create a template.</p> <p>You cannot specify an operation type when you remove or delete a template.</p> <p>The operation type of an NQA template cannot be modified.</p>
Description	Description of the template.	N/A	String, case-sensitive. Length: 1 to 200 characters.	By default, no description is specified for an NQA template.
Frequency	Interval in milliseconds at which the NQA operation repeats.	N/A	Unsigned integer. Value range: 0 to 604800000. Default: 5000.	If the operation is not completed when the interval expires, the next operation does not start.

Column name	Column description	Column type	Data type and restrictions	Remarks
ProbeTimeout	Probe timeout time in milliseconds.	N/A	Unsigned integer. Default: 3000.	<p>The value range for the probe timeout time varies by the <b>Type</b> column.</p> <ul style="list-style-type: none"> <li>FTP/HTTP/HTTPS/SNMP-DCA/WAP: 10 to 86400000.</li> <li>ICMP-echo/UDP-echo/TCP/SNMP/DNS/ARP/IMAP/POP3/RADIUS/RTSP/SIP/SMTP/SSL/TCP half-open/RADIUS-ACCOUNT: 10 to 3600000.</li> </ul>
TTL	TTL for probe packets.	N/A	Unsigned integer. Value range: 1 to 255. Default: 20.	The ARP operation does not support this column.
ToS	ToS value in the IP packet header of probe packets.	N/A	Unsigned integer. Value range: 0 to 255. Default: 0.	The ARP operation does not support this column.
VRF	VRF instance where the operation is performed.	N/A	String, case-sensitive. Length: 1 to 31 characters.	By default, no VRF is specified and the operation is performed on the public network.
URL	URL of the destination server.	N/A	String. Length: 1 to 255 characters.	<p>This column cannot be configured with the <b>DstIP</b> or <b>DstPort</b> column simultaneously, except for the WAP operation.</p> <p>Only the FTP, HTTP, HTTPS, RTSP, and WAP operations support this column.</p> <p>By default, no URL is specified for the destination server.</p> <p>Valid URL formats vary by the <b>Type</b> column:</p> <ul style="list-style-type: none"> <li>For FTP operations, enter the URL in one of the following formats: <ul style="list-style-type: none"> <li>ftp://host/filename</li> <li>ftp://host:port/filename</li> </ul> When performing the get operation, the <i>filename</i> argument is required.</li> <li>When performing the put operation, the <i>filename</i> argument does not take effect, even if it is specified. The file name for the put operation is determined by the <b>filename</b> command.</li> <li>For HTTP operations, enter the URL in one of the following formats: <ul style="list-style-type: none"> <li>http://host/resource</li> <li>http://host:port/resource</li> </ul> </li> </ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
				<ul style="list-style-type: none"> <li>For HTTPS operations, enter the URL in one of the following formats: <ul style="list-style-type: none"> <li>https://host/resource</li> <li>https://host:port/resource</li> </ul> </li> <li>For RTSP operations, enter the URL in one of the following formats: <ul style="list-style-type: none"> <li>rtsp://host/resource</li> <li>rtsp://host:port/resource</li> </ul> </li> <li>For WAP operations, enter the URL in one of the following formats: <ul style="list-style-type: none"> <li>http://host/resource</li> <li>http://host:port/resource</li> <li>https://host/resource</li> <li>https://host:port/resource</li> </ul> </li> </ul>
DstIP	Destination IPv4 or IPv6 address for the probe packets.	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	<p>This column cannot be configured with the <b>URL</b> column simultaneously, except for the WAP operation.</p> <p>The FTP, HTTP, HTTPS and RTSP operations do not support this column.</p> <p>By default, no destination address is specified.</p> <p>Destination IP address examples:</p> <ul style="list-style-type: none"> <li>1.1.1.1.</li> <li>1:1::1:1.</li> </ul> <p>This column and the URL column cannot both be configured.</p>
DstPort	Destination port number for the operation.	N/A	Unsigned integer. Value range: 1 to 65535.	<p>This column cannot be configured with the <b>URL</b> column simultaneously, except in the WAP operation.</p> <p>The ICMP-echo, ARP, FTP, HTTP, HTTPS, and RTSP operations do not support this column.</p> <p>The default destination port number varies by the <b>Type</b> column:</p> <ul style="list-style-type: none"> <li>UDP-echo: Not specified.</li> <li>TCP: Not specified.</li> <li>SNMP: 161.</li> <li>DNS: 53.</li> <li>IMAP: 143.</li> <li>POP3: 110.</li> <li>RADIUS: 1812.</li> <li>RTSP: 554.</li> <li>SIP: 5060 (UDP) or 5061 (TCP).</li> <li>SMTP: 25.</li> <li>SSL: Not specified.</li> </ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
				<ul style="list-style-type: none"> <li>SNMP-DCA: 161.</li> <li>WAP: 9201.</li> <li>RADIUS-ACCOUNT: 1813.</li> </ul>
SrcIP	Source IPv4 or IPv6 address for the probe packets.	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	<p>By default, no source IP address is specified.</p> <p>Source IP address examples:</p> <ul style="list-style-type: none"> <li>1.1.1.1.</li> <li>1:1::1:1.</li> </ul> <p>The source IP address must be the IP address of a local interface, and the interface must be up.</p>
SrcPort	Source port number for the operation.	N/A	Unsigned integer. Value range: 1 to 65535.	<p>Only the DNS operation supports this column.</p> <p>By default, no source port number is specified.</p>
NextHop	Next hop IP address.	N/A	String. Length: 1 to 46 characters.	<p>Only the ICMP-echo, TCP, DNS and TCP half-open operations support this column.</p> <p>Next hop IP address examples:</p> <ul style="list-style-type: none"> <li>1.1.1.1.</li> <li>1:1::1:1.</li> </ul>
TriggerPassCount	Number of consecutive successful probes to determine a successful operation event.	N/A	Unsigned integer. Value range: 1 to 15. Default: 3.	In the same table, TriggerPassCount can be configured only when TriggerPerProbe is set to false. If TriggerPassCount and TriggerPerProbe are configured in different tables, the most recent configuration takes effect.
TriggerFailCount	Number of consecutive probe failures to determine an operation failure.	N/A	Unsigned integer. Value range: 1 to 15. Default: 3.	In the same table, TriggerFailCount can be configured only when TriggerPerProbe is set to false. If TriggerFailCount and TriggerPerProbe are configured in different tables, the most recent configuration takes effect..
TriggerPerProbe	Report the result of each probe.	N/A	<p>Boolean:</p> <ul style="list-style-type: none"> <li><b>true</b>—Report the result of each probe.</li> <li><b>false</b>—Report according to TriggerPassCount and TriggerFailCount (default).</li> </ul>	<p>In the same table, TriggerPerProbe can be configured only when both TriggerPassCount and TriggerFailCount are set to false. If TriggerPerProbe and TriggerPassCount/TriggerFailCount are configured in different tables, the most recent configuration takes effect.</p> <p>Only the ICMP-echo, DNS and TCP half-open operations support this column.</p>

## NQA/IcmpEchoTemplates

This table contains information about ICMP-echo templates.

## XML structure

```
<NQA>
  <IcmpEchoTemplates>
    <IcmpEchoTemplate>
      <Name></Name>
      <DataFill></DataFill>
      <DataSize></DataSize>
      <SrcIf></SrcIf>
      <OutIf></OutIf>
    </IcmpEchoTemplate>
  </IcmpEchoTemplates>
</NQA>
```

## Table description

Item	Description
Feature name	NQA
Table name	IcmpEchoTemplates
Table type	Multi-instance table
Row name	IcmpEchoTemplate
Restrictions	The row creation and deletion of this table is along with table Templates.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
DataFill	Payload fill string for each request.	N/A	String. Length: 1 to 200 characters.	The default payload fill string is the hexadecimal string 00010203040506070809.
DataSize	Payload size in each request.	N/A	Unsigned integer. Value range: 20 to 65507. Default: 100.	N/A
SrcIf	Source interface whose primary IP address will be used as the source IP address for the requests.	N/A	String. Length: 2 to 47 characters.	By default, no source IP address is specified. The requests use the primary IP address of the outgoing interface as their source IP address.  If both the source IP address and source interface are specified,

Column name	Column description	Column type	Data type and restrictions	Remarks
				<p>the most recent configuration takes effect.</p> <p>The specified source interface must be up.</p> <p>The following types of interfaces can be configured as the source interface for the operation:</p> <ul style="list-style-type: none"> <li>• VLAN interface.</li> <li>• Layer 3 Ethernet interface.</li> <li>• Layer 3 aggregate interface.</li> <li>• EFM interface.</li> <li>• Ethernet channel interface.</li> <li>• Management interface.</li> <li>• Layer 3 redundancy interface.</li> </ul> <p>Support for interface types depends on the device model.</p>
OutIf	Output interface.	N/A	String. Length: 2 to 47 characters.	For successful operation, the specified output interface must be up.

## NQA/UdpEchoTemplates

This table contains information about UDP-echo templates.

### XML structure

Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
UserName	Login username.	N/A	String. Length: 1 to 32 characters.	By default, no login username is specified.
Password	Login password.	N/A	String. Length: 1 to 32 characters.	By default, no login password is specified.
Operation	Operation type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Get operation (default).</li> <li>2—Post operation.</li> <li>3—Raw Operation.</li> </ul>	By default, the operation type is get, which means obtaining files from the server.  In the raw operation, use the raw-request command to specify the content of the HTTP request to be sent to the server.
Version	Version	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Version1.0 (default).</li> <li>1—Version1.1.</li> </ul>	N/A
RawContent	Raw request	N/A	String.	This step is required for

Column name	Column description	Column type	Data type and restrictions	Remarks
	content.		Length: 1 to 1023 characters.	the raw operation. By default, no contents are specified. The following formats are not supported: Xq/qu/qui/quitX, XquitYaaaX, Xr/re/ret/retu/returnX or XreturnYaaaX(X represents 0 to n spaces, Y represents 1 to n spaces and aaa represents a character string without spaces.) As a best practice, do not configure the alias.
ExpectStatus	List of expected status codes.	N/A	Numeric string. It is a comma-separated list of status items. Length: 1 to 4000 characters.	For example: 200,300-400,500. By default, No expected status code is configured..
ExpectData	Data expected in responses to determine a successful operation.	Data structure	Members include: <ul style="list-style-type: none"> <li>Data.</li> <li>Offset.</li> <li>StrictFlag.</li> </ul>	By default, no expected data is specified. Both Data and Offset must be specified. For the get-config and get-bulk-config operations, all members are returned if the default setting of one member is changed.
Data	Expected response string.	N/A	String. Length: 1 to 200 characters	N/A
Offset	Offset in bytes after which the client starts to search the expected response string.	Offset in bytes after which the client starts to search for the expected string	Unsigned integer. Value range: 0 to 1000. Default: 0	N/A
StrictFlag	Whether the data is matched by exact matching method. Enabling status of the strict offset match.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled (default). If the value is set to false, the match operation follows the method defined by the offset.</li> </ul>	N/A
SslClientPolicy	SSL client policy used to access the HTTPS server	N/A	String, case-insensitive. Length: 1 to 31 characters.	Only the HTTPS operation supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
				By default, no SSL client policy is specified.
ProxyUrl	URL of the proxy server.	N/A	String. Length: 1 to 255 characters.	<p>ProxyUrl is the address of proxy server, and the client to access the server through proxy server.</p> <p>By default, no ProxyUrl is specified for the proxy server.</p> <p>Valid ProxyUrl formats vary by operations:</p> <ul style="list-style-type: none"> <li>For HTTP operations, enter the URL in one of the following formats: <ul style="list-style-type: none"> <li>http://host</li> <li>http://host:port</li> </ul> </li> <li>For HTTPS operations, enter the URL in one of the following formats: <ul style="list-style-type: none"> <li>https://host</li> <li>https://host:port</li> </ul> </li> </ul>

## NQA/ImapTemplates

This table contains information about IMAP templates.

### XML structure

## Table description

Item	Description
Feature name	NQA
Table name	SnmpDcaTemplates
Table type	Multi-instance table
Row name	SnmpDcaTemplate
Restrictions	The row creation and deletion of this table is along with table Templates.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Community	SNMP community name.	N/A	String. Length: 1 to 32 characters.	The default community name is <b>public</b> .
Version	SNMP version.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—SNMPv1 (default).</li> <li>2—SNMPv2c.</li> </ul>	N/A
AgentType	SNMP agent type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Net-Snmp (default).</li> <li>1—Windows.</li> <li>2—UserDefined.</li> </ul>	N/A
CPU	CPU usage information.	Data structure	Members include: <ul style="list-style-type: none"> <li>Threshold.</li> <li>Weight.</li> </ul>	Both Threshold and Weight must be specified. For the get-config and get-bulk-config operations, all members are returned if the default setting of one member is changed.
Threshold	CPU usage threshold.	N/A	Unsigned integer. Value range: 0 to 100. Default: 80.	N/A
Weight	CPU usage weight.	N/A	Unsigned integer. Value range: 0 to 100. Default: 3.	N/A
Memory	Memory usage information.	Data structure	Members include: <ul style="list-style-type: none"> <li>Threshold.</li> <li>Weight.</li> </ul>	Both Threshold and Weight must be specified. For the get-config and get-bulk-config operations, all members are returned if the default

Column name	Column description	Column type	Data type and restrictions	Remarks
				setting of one member is changed.
Threshold	Memory usage threshold.	N/A	Unsigned integer. Value range: 0 to 100. Default: 70.	N/A
Weight	Memory usage weight.	N/A	Unsigned integer. Value range: 0 to 100. Default: 2.	N/A
Disk	Disk usage information.	Data structure	Members include: <ul style="list-style-type: none"> <li>Threshold.</li> <li>Weight.</li> </ul>	Both Threshold and Weight must be specified. For the get-config and get-bulk-config operations, all members are returned if the default setting of one member is changed.
Threshold	Disk usage threshold.	N/A	Unsigned integer. Value range: 0 to 100. Default: 90.	N/A
Weight	Disk usage weight.	N/A	Unsigned integer. Value range: 0 to 100. Default: 4.	N/A
OID	OID information of the MIB object whose statistics the SNMP DCA operation collects.	Data structure	Members include: <ul style="list-style-type: none"> <li>OidString.</li> <li>Threshold.</li> <li>Weight.</li> </ul>	This column can appear at most 8 times in this row. By default, no OID data is specified. All the members must be specified. For the get-config and get-bulk-config operations, all members are returned if the default setting of one member is changed.
OidString	MIB subtree by its root node's OID.	N/A	Dotted numeric string. Length: 1 to 255 characters	Example for OID: 1.3.6.1.4.1.2021.11.11.0.
Threshold	Threshold.	N/A	Unsigned integer. Value range: 0 to 100.	N/A
Weight	Weight.	N/A	Unsigned integer. Value range: 0 to 100.	N/A

## NQA/WapTemplates

This table contains information about WAP templates.

## XML structure

```
<NQA>
  <WapTemplates>
    <WapTemplate>
      <Name></Name>
      <ExpectData>
        <Data></Data>
        <Offset></Offset>
        <StrictFlag></StrictFlag>
        <HexFlag></HexFlag>
      </ExpectData>
    </WapTemplate>
  </WapTemplates>
</NQA>
```

## Table description

Item	Description
Feature name	NQA
Table name	WapTemplates
Table type	Multi-instance table
Row name	WapTemplate
Restrictions	The row creation and deletion of this table is along with table Templates.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
ExpectData	Data expected in responses to determine a successful operation.	Data structure	Members include: <ul style="list-style-type: none"><li>• Data.</li><li>• Offset.</li><li>• StrictFlag.</li><li>• HexFlag.</li></ul>	By default, no expected data is specified. Both Data and Offset must be specified. For the get-config and get-bulk-config operations, all members are returned if the default setting of one member is changed.
Data	Expected response string.	N/A	String. Length: 1 to 200 characters	When HexFlag is specified, the string must be a hexadecimal string and contain an even

Column name	Column description	Column type	Data type and restrictions	Remarks
				number of characters.
Offset	Offset in bytes after which the client starts to search for the expected string.	N/A	Unsigned integer. Value range: 0 to 1000. Default: 0	N/A
StrictFlag	Whether the data is matched by exact matching method.  Enabling status of the strict offset match.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled (default). If the value is set to false, the match operation follows the method defined by the offset.</li> </ul>	N/A
HexFlag	Whether the data is a hexadecimal string.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—The data is a hexadecimal string.</li> <li><b>false</b>—The data is a general string (default).</li> </ul>	N/A

## NQA/TcpHalfOpenTemplates

This table contains information about TCP half-open templates.

### XML structure

```

<NQA>
  <TcpHalfOpenTemplates>
    <TcpHalfOpenTemplate>
      <Name></Name>
      <PortDetectEnable></PortDetectEnable>
      <OutIf></OutIf>
    </TcpHalfOpenTemplate>
  </TcpHalfOpenTemplates>
</NQA>

```

### Table description

Item	Description

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdminName	Administrator name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
OperationTag	Operation tag	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Type	Operation type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—ICMP-echo</li> <li>• 1—UDP-echo</li> <li>• 2—TCP</li> <li>• 3—DLSw</li> <li>• 4—FTP</li> <li>• 5—DHCP</li> <li>• 6—SNMP</li> <li>• 7—DNS</li> <li>• 8—HTTP</li> <li>• 9—UDP-jitter</li> <li>• 10—VOICE</li> <li>• 11—Path-jitter</li> <li>• 12—UDP-tracert</li> <li>• 13—ARP</li> <li>• 14—IMAP</li> <li>• 15—POP3</li> <li>• 16—Radius</li> <li>• 17—RTSP</li> <li>• 18—SIP</li> </ul>	Type ICMP-echo, ICMP-jitter and UDP-jitter are supported. You must specify a type when you create an entry that does not exist. You cannot specify a type when you remove or delete an entry. The type cannot be modified.

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>• 19—SMTP</li> <li>• 20—SSL</li> <li>• 21—HTTPS</li> <li>• 22—TCP Half-open</li> <li>• 23—Throughput</li> <li>• 24—Latency</li> <li>• 25—Frame-Loss</li> <li>• 26—ICMP-jitter</li> <li>• 27—SNMP-DCA</li> <li>• 28—WAP</li> <li>• 29—Y1564</li> <li>• 30—RADIUS-ACCOUNT</li> <li>• 31—Twamp Light</li> </ul>	
Description	Entry description	N/A	String, case-sensitive. Length: 1 to 200 characters.	By default, no description is specified for an entry.
DstIP	Destination IPv4 or IPv6 address for the probe packets	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	<p>This column and the URL column cannot be both configured.</p> <p>The type FTP, HTTP, HTTPS and RTSP types do not support this column.</p> <p>Type ICMP-echo and UDP-jitter support IPv6 address.</p> <p>By default, no destination address is specified.</p> <p>IPv4 example: 1.1.1.1.</p> <p>IPv6 example: 1:1::1:1.</p>
DstPort	Destination port number for the operation	N/A	Unsigned integer. Value range: 1 to 65535.	<p>The type ICMP-echo, ICMP-Jitter and FTP do not support this column.</p> <p>The default value of destination port depend on the Type column.</p> <ul style="list-style-type: none"> <li>• UDP-echo: none.</li> <li>• TCP: none.</li> <li>• SNMP: 161.</li> <li>• DNS: 53.</li> <li>• IMAP: 143.</li> <li>• POP3: 110.</li> </ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
				<ul style="list-style-type: none"> <li>Radius: 1812.</li> <li>RTSP: 554.</li> <li>SIP: 5060(UDP) or 5061(TCP).</li> <li>SMTP: 25.</li> <li>SSL: none.</li> <li>UDP-jitter:none.</li> </ul>
Frequency	Probe interval in milliseconds	N/A	Unsigned integer. Value range: 0 to 604800000.	<p>The default value of probe interval depend on the Type column.</p> <ul style="list-style-type: none"> <li>Voice/Path-jitter : 60000.</li> <li>ICMP-echo/TC P/UDP-echo/D HCP/DLSw/DN S/FTP/HTTP/S NMP/UDP-trace rt/ICMP-jitter/UDP-jitter: 0.</li> </ul>
HistoryEnable	Whether to enable the saving of history records	N/A	<p>EnableState:</p> <ul style="list-style-type: none"> <li><b>enable</b>—Enable the saving of history records.</li> <li><b>disable</b>—Disable the saving of history records.</li> </ul>	<p>The default state depend on the Type column.</p> <ul style="list-style-type: none"> <li>UDP-tracert: enable.</li> <li>ICMP-echo/TC P/UDP-echo/D HCP/DLSw/DN S/FTP/HTTP/S NMP: disable.</li> </ul>
HistoryHoldTime	History records lifetime in minutes	N/A	Unsigned integer. Value range: 1 to 1440.	The default value is 120.
HistoryNumber	Maximum number of history records that can be saved	N/A	Unsigned integer. Value range: 0 to 50.	The default value is 50.
NextHop	Next hop IPv4 or IPv6 address	N/A	String. Length: 1 to 46 characters.	<p>Only the type ICMP-echo support this column.</p> <p>IPv4 example: 1.1.1.1.</p> <p>IPv6 example: 1:1::1:1.</p>
ProbeCount	Probe times per operation	N/A	Unsigned integer. Value range: 1 to 15.	<p>The default value of probe count depend on the Type column.</p> <ul style="list-style-type: none"> <li>UDP-tracert: 3.</li> <li>ICMP-echo/TC P/UDP-echo/D HCP/DLSw/DN S/FTP/HTTP/S NMP/</li> </ul>

Column name	Column description	Column type	Data type and restrictions	Remarks
				<p>ICMP-jitter/UDP-jitter: 1.</p> <p>The value ranges of probe count depend on the Type column.</p> <ul style="list-style-type: none"> <li>• UDP-tracert: 1 to 10.</li> <li>• ICMP-echo/TCP/UDP-echo/DHCP/DLSw/DNS//FTP/HTTP/SNMP/ICMP-jitter/UDP-jitter: 1 to 15.</li> </ul>
ProbeTimeout	Probe timeout time in milliseconds	N/A	Unsigned integer. Default: 3000.	<p>The value ranges of probe timeout depends on the Type column.</p> <ul style="list-style-type: none"> <li>• FTP/HTTP/HTTPS: 10 to 86400000.</li> <li>• ICMP-echo/UDP-echo/TCP/SNMP/DNS/ARP/IMAP/POP3/RADIUS/RTSP/SIP/SMTP/SSL/TCP Half-open: 10 to 3600000.</li> </ul>
BypassRoute Enable	Whether to enable the routing table bypass feature to test the connectivity to the direct destination	N/A	<p>EnableState:</p> <ul style="list-style-type: none"> <li>• <b>enable</b>—Enable the routing table bypass feature.</li> <li>• <b>disable</b>—Disable the routing table bypass feature.</li> </ul>	The default state is disable.
SrcIP	Source IPv4 or IPv6 address for the probe packets	N/A	String, dotted decimal notation. Or Hexadecimal string, colon-separated. Length: 1 to 46 characters.	<p>Type ICMP-echo and UDP-jitter support IPv6 address.</p> <p>By default, no source address is specified.</p> <p>IPv4 example: 1.1.1.1.</p> <p>IPv6 example: 1::1:1.</p> <p>The source IPv4 or IPv6 address must be the IPv4 or IPv6 address of a local interface, and the interface must be up.</p>

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcPort	Source port number for the operation	N/A	Unsigned integer. Value range: 1 to 65535.	Type ICMP-echo, DHCP, DLSW, DNS, ICMP-jitter, Path-jitter, TCP, FTP and HTTP do not support this column. The default source port number varies by operation type: <ul style="list-style-type: none"> <li>Frame-loss/Throughput/Latency: 49184</li> <li>Udp-echo/Snmp/UDP-tracert/UDP-jitter/Voice: none</li> </ul>
StatHoldTime	Statistics groups hold time in minutes	N/A	Unsigned integer. Value range: 1 to 1440.	The default value is 120.
StatInterval	Statistics collection interval in minutes	N/A	Unsigned integer. Value range: 1 to 35791394.	The default value is 60.
StatMaxGroup	Maximum number of statistics groups	N/A	Unsigned integer. Value range: 0 to 100.	The default value is 2.
TTL	Destination port number for the operation	N/A	Unsigned integer. Value range: 1 to 255.	Type ARP does not support this column. The default value of TTL depend on the Type column. <ul style="list-style-type: none"> <li>UDP-tracert: 30.</li> <li>ICMP-echo/TCP/UDP-echo/DHCP/DLSw/DNS/FTP/HTTP/SNMP/ICMP-jitter/UDP-jitter: 20.</li> </ul>
ToS	ToS value in the IP packet header of probe packets	N/A	Unsigned integer. Value range: 0 to 255. Default: 0.	Type ARP does not support this column.
VRF	VRF instance where the operation is performed	N/A	String, case-sensitive. Length: 0 to 31 characters.	By default, no VRF is specified and the operation is performed on the public network.
URL	URL of the destination server	N/A	String. Length: 1 to 255 characters.	This column and the DstIP, DstPort column cannot be configured simultaneously. Only the types of FTP, HTTP, HTTPS

Column name	Column description	Column type	Data type and restrictions	Remarks
				<p>and RTSP support this column.</p> <p>By default, no URL is specified for the destination server.</p> <p>The formats of URL depend on the Type column.</p> <ul style="list-style-type: none"> <li>• FTP</li> </ul> <p>Enter the URL in one of the following formats:</p> <p>ftp://host/filename</p> <p>ftp://host:port/filename</p> <p>When performing the get operation, the file name is required.</p> <p>When performing the put operation, the filename argument does not take effect, even if it is specified. The file name for the put operation is determined by the FileName column.</p> <ul style="list-style-type: none"> <li>• HTTP</li> </ul> <p>Enter the URL in one of the following formats:</p> <p>http://host/resource</p> <p>http://host:port/resource</p> <ul style="list-style-type: none"> <li>• HTTPS</li> </ul> <p>Enter the URL in one of the following formats:</p> <p>https://host/resource</p> <p>https://host:port/resource</p> <ul style="list-style-type: none"> <li>• RTSP</li> </ul> <p>Enter the URL in one of the following formats:</p> <p>rtsp://host/resource</p> <p>rtsp://host:port/resource</p>

# NQA/IcmpEchoEntries

This table contains information about ICMP-Echo entries.

## XML structure

```
<NQA>
  <IcmpEchoEntries>
    <IcmpEchoEntry>
      <AdminName></AdminName>

Item	Description
Feature name	NQA
Table name	Templates
Table type	Multi-instance table
Row name	Template
Restrictions	None

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Type	Operation type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—ICMP-echo.</li> <li>• 1—UDP-echo.</li> <li>• 2—TCP.</li> <li>• 3—DLSw</li> <li>• 4—FTP.</li> <li>• 5—DHCP</li> <li>• 6—SNMP.</li> <li>• 7—DNS.</li> <li>• 8—HTTP.</li> <li>• 9—UDP-jitter</li> <li>• 10—Voice</li> <li>• 11—Path-jitter</li> <li>• 12—UDP-tracert</li> <li>• 13—ARP.</li> <li>• 14—IMAP.</li> <li>• 15—POP3.</li> <li>• 16—RADIUS.</li> <li>• 17—RTSP.</li> <li>• 18—SIP.</li> <li>• 19—SMTP.</li> <li>• 20—SSL.</li> <li>• 21—HTTPS.</li> <li>• 22—TCP Half-open.</li> <li>• 23—Throughput.</li> <li>• 24—Latency.</li> <li>• 25—Frame-loss.</li> <li>• 26—ICMP-jitter.</li> <li>• 27—SNMP-DCA.</li> <li>• 28—WAP.</li> <li>• 29—Y1564.</li> <li>• 30—RADIUS-ACC OUNT.</li> <li>• 31—Twamp Light.</li> </ul>	NQA templates are not available for the following types of operations: <ul style="list-style-type: none"> <li>• DLSW.</li> <li>• DHCP.</li> <li>• UDP-jitter.</li> <li>• Voice.</li> <li>• Path-jitter.</li> <li>• UDP-tracert.</li> <li>• Throughput.</li> <li>• Latency.</li> <li>• Frame-loss.</li> <li>• ICMP-jitter.</li> <li>• Y1564</li> <li>• Twamp Light.</li> </ul>
Description	Description of the template.	N/A	String, case-sensitive. Length: 1 to 200 characters.	N/A
Frequency	Interval in milliseconds at which the NQA operation repeats.	N/A	Unsigned integer. Value range: 0 to 604800000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ProbeTimeout	Probe timeout time in milliseconds	N/A	Unsigned integer.	<p>The value range for the probe timeout time varies by the <b>Type</b> column.</p> <ul style="list-style-type: none"> <li>FTP/HTTP/HTTPS/SNMP-DCA/WAP: 10 to 86400000.</li> <li>ICMP-echo/UDP-echo/TCP/SNMP/DNS/ARP/IMAP/POP3/RADIUS/RTSP/SIP/SMTP/SSL/TCP half-open/RADIUS-ACCOUNT: 10 to 3600000.</li> </ul>
TTL	TTL for probe packets	N/A	Unsigned integer. Value range: 1 to 255.	The ARP operation does not support this column..
ToS	ToS value in the IP packet header of probe packets	N/A	Unsigned integer. Value range: 0 to 255.	The ARP operation does not support this column.
VRF	VRF instance where the operation is performed.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
URL	URL of the destination server.	N/A	String. Length: 1 to 255 characters.	<p>This column cannot be configured with the <b>DstIP</b> or <b>DstPort</b> column simultaneously, except for the WAP operation.</p> <p>Only the FTP, HTTP, HTTPS, RTSP, and WAP operations support this column.</p>
DstIP	Destination IPv4 or IPv6 address for the probe packets.	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	<p>This column cannot be configured with the <b>URL</b> column simultaneously, except for the WAP operation.</p> <p>The FTP, HTTP, HTTPS and RTSP operations do not support this column.</p>
DstPort	Destination port number for the operation.	N/A	Unsigned integer. Value range: 1 to 65535.	<ul style="list-style-type: none"> <li>This column and the <b>URL</b> column will not be available simultaneously.</li> <li>Type ICMP-echo, ARP, FTP, HTTP, HTTPS and RTSP do not support this column.</li> </ul>
SrcIP	Source IPv4 or IPv6 address for the probe packets.	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	N/A
SrcPort	Source port number for the operation.	N/A	Unsigned integer. Value range: 1 to 65535.	Only the DNS operation supports this column.

Column name	Column description	Column type	Data type and restrictions	Remarks
NextHop	Next hop IP address	N/A	String. Length:1 to 46 characters.	Only the ICMP-echo, TCP, DNS and TCP half-open operations support this column.
TriggerPassCount	Number of consecutive successful probes to determine a successful operation event.	N/A	Unsigned integer. Value range: 1 to 15.	N/A
TriggerFailCount	Number of consecutive probe failures to determine an operation failure.	N/A	Unsigned integer. Value range: 1 to 15.	N/A
TriggerPerProbe	Report the result of each probe.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Report for each probe.</li> <li><b>false</b>—Report according to TriggerPassCount and TriggerFailCount.</li> </ul>	Only the ICMP-echo, DNS and TCP half-open operations support this column.
TestDestination	Destination of the operation.	N/A	String. Length: 1 to 255 characters.	The value can be either of the following: <ul style="list-style-type: none"> <li>Destination IP address.</li> <li>Destination IP address and port number.</li> <li>Destination URL.</li> </ul> This column is not supported currently.

## NQA/IcmpEchoTemplates

This table contains information about ICMP-echo templates.

### XML structure

```

<NQA>
  <IcmpEchoTemplates>
    <IcmpEchoTemplate>
      <Name></Name>
      <DataFill></DataFill>
      <DataSize></DataSize>
      <SrcIf></SrcIf>
      <OutIf></OutIf>
    </IcmpEchoTemplate>
  </IcmpEchoTemplates>
</NQA>

```

```
</IcmpEchoTemplates>
</NQA>
```

## Table description

Item	Description
Feature name	NQA
Table name	IcmpEchoTemplates
Table type	Multi-instance table
Row name	IcmpEchoTemplate
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Template name.	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
DataFill	Payload fill string for each reqes.	N/A	String. Length: 1 to 200 characters.	N/A
DataSize	Payload size in each request.	N/A	Unsigned integer. Value range: 20 to 65507.	N/A
SrcIf	Full name of an interface, including the interface type and number.  Source interface whose primary IP address will be used as the source IP address for the requests.	N/A	String. Length: 2 to 47 characters.	If both the source IP address and source interface are specified, the most recent configuration takes effect.
OutIf	Output interface including the interface type and number.	N/A	String, case-insensitive. Length: 2 to 47 characters.	N/A

## NQA/UdpEchoTemplates

This table contains information about UDP-echo templates.

# XML structure

```

## Table description

Item	Description
Feature name	NQA
Table name	Histories
Table type	Multi-instance table
Row name	History
Restrictions	This table is not available for frame loss, ICMP jitter, latency, path jitter, throughput, UDP jitter, or voice operations.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdminName	Administrator name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
OperationTag	Operation tag	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
HistoryRecords	N/A	Data structure	Members include: <ul style="list-style-type: none"> <li>Index.</li> <li>TTL.</li> <li>Response.</li> <li>HopIP.</li> <li>Status.</li> <li>Time.</li> </ul>	This column can appear at most 50 times in this row. The most recent operation result is displayed first.
Index	History record ID.	N/A	Unsigned integer. Value range: 1 to 4294967295.	The history records in one UDP tracer operation have the same ID.
TTL	TTL value in the probe packet.	N/A	Unsigned integer. Value range: 1 to 255.	This column is available only for the UDP tracer operation.
Response	Round-trip time for the probe packets in the operation, in milliseconds.	N/A	Unsigned integer.	N/A
HopIP	IP address of the node that sent the reply packet.	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	This column is available only for the UDP tracer operation.
Status	Operation result status.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Succeeded.</li> <li>2—Unknown error.</li> <li>3—Internal error.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>4—Timeout.</li> </ul>	
Time	Time when the operation was completed.	N/A	DateTime.	Example: 2015-09-09T14:23:24.500.

## NQA/Entries

This table contains information about NQA entries.

Row name	Entry
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdminName	Administrator name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
OperationTag	Operation tag	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
Type	Operation type	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—ICMP-echo</li> <li>• 1—UDP-echo</li> <li>• 2—TCP</li> <li>• 3—DLSw</li> <li>• 4—FTP</li> <li>• 5—DHCP</li> <li>• 6—SNMP</li> <li>• 7—DNS</li> <li>• 8—HTTP</li> <li>• 9—UDP-jitter</li> <li>• 10—VOICE</li> <li>• 11—Path-jitter</li> <li>• 12—UDP-tracert</li> <li>• 13—ARP</li> <li>• 14—IMAP</li> <li>• 15—POP3</li> <li>• 16—Radius</li> <li>• 17—RTSP</li> <li>• 18—SIP</li> <li>• 19—SMTP</li> <li>• 20—SSL</li> <li>• 21—HTTPS</li> <li>• 22—TCP Half-open</li> <li>• 23—Throughput</li> <li>• 24—Latency</li> <li>• 25—Frame-Loss</li> <li>• 26—ICMP-jitter</li> <li>• 27—SNMP-DCA</li> <li>• 28—WAP</li> <li>• 29—Y1564</li> <li>• 30—RADIUS-ACCOUNT</li> </ul>	Type ICMP-echo, ICMP-jitter and UDP-jitter are supported.

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>31—Twamp Light</li> </ul>	
Description	Entry description	N/A	String, case-sensitive. Length: 1 to 200 characters.	N/A
DstIP	Destination IPv4 or IPv6 address for the probe packets	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	This column and the URL column will not be available simultaneously. The FTP, HTTP, HTTPS and RTSP types do not support this column.
DstPort	Destination port number for the operation	N/A	Unsigned integer. Value range: 1 to 65535.	This column and the URL column will not be available simultaneously. The types of ICMP-echo, ICMP-Jitter, ARP, FTP, HTTP, HTTPS and RTSP do not support this column.
Frequency	Probe interval in milliseconds	N/A	Unsigned integer. Value range: 0 to 604800000.	N/A
HistoryEnable	Whether to enable the saving of history records	N/A	EnableState: <ul style="list-style-type: none"> <li><b>enable</b>—Enable the saving of history records.</li> <li><b>disable</b>—Disable the saving of history records.</li> </ul>	Type ICMP-echo, DHCP, DLSw, DNS, FTP, HTTP, SNMP, TCP, UDP-echo, and UDP-tracert are supported.
HistoryHoldTime	History records lifetime in minutes	N/A	Unsigned integer. Value range: 1 to 1440.	N/A
HistoryNumber	Maximum number of history records that can be saved	N/A	Unsigned integer. Value range: 0 to 50.	N/A
NextHop	Next hop IPv4 or IPv6 address	N/A	String. Length: 1 to 46 characters.	Only the type ICMP-echo support this column. IPv4 example: 1.1.1.1. IPv6 example: 1:1::1:1.
ProbeCount	Probe times per operation	N/A	Unsigned integer. Value range: 1 to 15.	N/A
ProbeTimeout	Probe timeout time in	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	milliseconds			
BypassRoute Enable	Whether to enable the routing table bypass feature to test the connectivity to the direct destination	N/A	EnableState: <ul style="list-style-type: none"> <li><b>enable</b>—Enable the routing table bypass feature.</li> <li><b>disable</b>—Disable the routing table bypass feature.</li> </ul>	N/A
SrcIP	Source IPv4 or IPv6 address for the probe packets	N/A	String, dotted decimal notation. Or hexadecimal string, colon-separated. Length: 1 to 46 characters.	N/A
SrcPort	Source port number for the operation	N/A	Unsigned integer. Value range: 1 to 65535.	Type ICMP-echo, DHCP, DLSw, DNS, ICMP-jitter, Path-jitter, TCP, ARP, FTP, HTTP, HTTPS and RTSP do not support this column.
StatHoldTime	Statistics groups hold time in minutes	N/A	Unsigned integer. Value range: 1 to 1440.	N/A
StatInterval	Statistics collection interval in minutes	N/A	Unsigned integer. Value range: 1 to 35791394.	N/A
StatMaxGroup	Maximum number of statistics groups	N/A	Unsigned integer. Value range: 0 to 100.	N/A
TTL	TTL for probe packets	N/A	Unsigned integer. Value range: 1 to 255.	The type ARP does not support this column.
ToS	ToS value in the IP packet header of probe packets	N/A	Unsigned integer. Value range: 0 to 255.	The type ARP does not support this column.
VRF	VRF instance where the operation is performed	N/A	String, case-sensitive. Length: 0 to 31 characters.	N/A
URL	URL of the destination server	N/A	String. Length: 1 to 255 characters.	This column and the DstIP, DstPort column will not be available simultaneously. Only the types of FTP, HTTP, HTTPS and RTSP support this column.

# NQA/IcmpEchoEntries

This table contains information about ICMP-Echo entries.

## XML structure

```
<NQA>
  <IcmpEchoEntries>
    <IcmpEchoEntry>
      <AdminName></AdminName>
      <OperationTag></OperationTag>

</NQA>
```

## Table description

Item	Description
Feature name	NQA
Table name	Results
Table type	Multi-instance table
Row name	Result
Restrictions	This table is not available for UDP tracer, frame loss, latency, path jitter, throughput, y1654, UDP-jitter, ICMP-jitter and voice operations.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdminName	Administrator name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
OperationTag	Operation tag	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
SendTimes	Send operation	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	times			
ReceiveTimes	Receive response times	N/A	Unsigned integer.	N/A
MinRtt	Minimum round-trip time in milliseconds	N/A	Unsigned integer.	N/A
MaxRtt	Maximum round-trip time in milliseconds	N/A	Unsigned integer.	N/A
AvgRtt	Average round-trip time in milliseconds	N/A	Unsigned integer.	N/A
SquareSumRtt	Square sum of round-trip time	N/A	Unsigned integer.	N/A
LastSuccessfulTime	Time when the last successful probe was completed	N/A	DateTime.	Example: 2015-09-09T14:23:24.500.
LossRatio	Packet loss ratio	N/A	Unsigned integer.	N/A
TimeOut	Number of timeout occurrences in an operation	N/A	Unsigned integer.	N/A
Disconnect	Number of disconnections by the peer	N/A	Unsigned integer.	Only the TCP, HTTP, DLSW, and FTP operations support this column.
NoConnection	Number of failures to connect to the peer	N/A	Unsigned integer	Only the TCP, HTTP, DLSW, and FTP operations support this column.
InternalError	Number of failures due to internal errors	N/A	Unsigned integer.	N/A
OtherErrors	Failures due to other unknown errors	N/A	Unsigned integer.	N/A

## Table description

Item	Description
Feature name	NQA
Table name	JitterResults
Table type	Multi-instance table
Row name	JitterResult
Restrictions	This table is available for ICMP jitter or UDP jitter operations.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AdminName	Administrator name	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
OperationTag	Operation tag	Index	String, case-insensitive. Length: 1 to 32 characters.	N/A
SendTimes	Number of packets sent per probe	N/A	Unsigned integer.	N/A
ReceiveTimes	Number of responses per probe	N/A	Unsigned integer.	N/A
MinRtt	Minimum round-trip time in milliseconds	N/A	Unsigned integer.	N/A
MaxRtt	Maximum round-trip time in milliseconds	N/A	Unsigned integer.	N/A
AvgRtt	Average	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	round-trip time in milliseconds			
SquareSumRtt	Square sum of round-trip time	N/A	Unsigned integer.	N/A
LastReceivedTime	Last packet received time	N/A	DateTime.	Example: 2015-09-09T14:23:24.500.
LossRatio	Packet loss ratio	N/A	Unsigned integer.	N/A
Timeout	Number of timeout occurrences in an operation	N/A	Unsigned integer.	N/A
InternalError	Number of failures due to internal errors	N/A	Unsigned integer.	N/A
OtherErrors	Failures due to other errors	N/A	Unsigned integer.	N/A
OutSequenceTimes	Number of failures due to out-of-sequence packets	N/A	Unsigned integer.	N/A
ArrivedLate	Number of response packets received after a probe times out	N/A	Unsigned integer.	N/A
Jitter	N/A	Data structure	Members include: <ul style="list-style-type: none"> <li>• RttNum.</li> <li>• MinPosSD</li> <li>• MaxPosSD</li> <li>• PosNumSD</li> <li>• PosSumSD</li> <li>• PosAvgSD</li> <li>• PosSquareSumSD</li> <li>• MinNegSD</li> <li>• MaxNegSD</li> <li>• NegNumSD</li> <li>• NegSumSD</li> <li>• NegAvgSD</li> <li>• NegSquareSumSD</li> <li>• AvgSD</li> <li>• MinPosDS</li> <li>• MaxPosDS</li> <li>• PosNumDS</li> <li>• PosSumDS</li> <li>• PosSquareSumDS</li> <li>• MinNegDS</li> <li>• MaxNegDS</li> <li>• NegNumDS</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>NegSumDS</li> <li>NegAvgDS</li> <li>NegSquareSumDS</li> <li>AvgDS</li> </ul>	
RttNum	Number of response packets received	N/A	Unsigned integer.	N/A
MinPosSD	Minimum positive jitter from source to destination	N/A	Unsigned integer.	N/A
MaxPosSD	Maximum positive jitter from source to destination	N/A	Unsigned integer.	N/A
PosNumSD	Number of positive jitters from source to destination	N/A	Unsigned integer.	N/A
PosSumSD	Sum of positive jitters from source to destination	N/A	Unsigned integer.	N/A
PosAvgSD	Average positive jitters from source to destination	N/A	Unsigned integer.	N/A
PosSquareSumSD	Square sum of positive jitters from source to destination	N/A	Unsigned integer.	N/A
MinNegSD	Minimum absolute value among negative jitters from source to destination	N/A	Unsigned integer.	N/A
MaxNegSD	Maximum absolute value among negative jitters from source to destination	N/A	Unsigned integer.	N/A
NegNumSD	Number of negative jitters from source to destination	N/A	Unsigned integer.	N/A
NegSumSD	Sum of absolute values of negative jitters from source to	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	destination			
NegAvgSD	Average absolute value of negative jitters from source to destination	N/A	Unsigned integer.	N/A
NegSquareSumSD	Square sum of negative jitters from source to destination	N/A	Unsigned integer.	N/A
AvgSD	Average value of jitters from source to destination	N/A	Unsigned integer.	N/A
MinPosDS	Minimum positive jitter from destination to source	N/A	Unsigned integer.	N/A
MaxPosDS	Maximum positive jitter from destination to source	N/A	Unsigned integer.	N/A
PosNumDS	Number of positive jitters from destination to source	N/A	Unsigned integer.	N/A
PosSumDS	Sum of positive jitters from destination to source	N/A	Unsigned integer.	N/A
PosAvgDS	Average positive jitters from destination to source	N/A	Unsigned integer.	N/A
PosSquareSumDS	Square sum of positive jitters from destination to source	N/A	Unsigned integer.	N/A
MinNegDS	Minimum absolute value among negative jitters from destination to source	N/A	Unsigned integer.	N/A
MaxNegDS	Maximum absolute value	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	among negative jitters from destination to source			
NegNumDS	Number of negative jitters from destination to source	N/A	Unsigned integer.	N/A
NegSumDS	Sum of absolute values of negative jitters from destination to source	N/A	Unsigned integer.	N/A
NegSquareSumDS	Square sum of negative jitters from destination to source	N/A	Unsigned integer.	N/A
AvgDS	Average value of jitters from destination to source	N/A	Unsigned integer.	N/A
OneWay	N/A	Data structure	Members include: <ul style="list-style-type: none"> <li>MaxDelaySD</li> <li>MinDelaySD</li> <li>NumOfDelaySD</li> <li>SumOfDelaySD</li> <li>SquareSumofDelaySD</li> <li>LostPacketSD</li> <li>MaxDelayDS</li> <li>MinDelayDS</li> <li>NumOfDelayDS</li> <li>SumOfDelayDS</li> <li>SquareSumOfDelayDS</li> <li>LostPacketsDS</li> <li>UnknownLostPackets</li> </ul>	N/A
MaxDelaySD	Maximum delay from source to destination	N/A	Unsigned integer.	N/A
MinDelaySD	Minimum delay from source to destination	N/A	Unsigned integer.	N/A
NumOfDelaySD	Number of delays from source to destination	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SumOfDelaySD	Sum of delays from source to destination	N/A	Unsigned integer.	N/A
SquareSumofDelaySD	Square sum of delays from source to destination	N/A	Unsigned integer.	N/A
LostPacketSD	Number of lost packets from the source to the destination	N/A	Unsigned integer.	Only the UDP-jitter operation supports this column.
MaxDelayDS	Maximum delay from destination to source	N/A	Unsigned integer.	N/A
MinDelayDS	Minimum delay from destination to source	N/A	Unsigned integer.	N/A
NumOfDelayDS	Number of delays from destination to source	N/A	Unsigned integer.	N/A
SumOfDelayDS	Sum of delays from destination to source	N/A	Unsigned integer.	N/A
SquareSumOfDelayDS	Square sum of delays from destination to source	N/A	Unsigned integer.	N/A
LostPacketsDS	Number of lost packets from the destination to the source	N/A	Unsigned integer.	Only the UDP-jitter operation support this column.
UnknownLostPackets	Number of lost packets for unknown reasons	N/A	Unsigned integer.	N/A

## NQA/FrameLossResults

This table contains information about NQA frame loss operation result.

## NQA/TwamplightLossStats/DetailStats

This table contains detailed information about NQA Twamp Light operation result.

### XML structure

See the XML structure of NQA/TwamplightLossStats.

## Table description

Item	Description
Feature name	NQA
Table name	DetailResults
Table type	Multi-instance table
Row name	DetailResult
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Index	Index of statistics information	Index	Unsigned integer.	When the statistics of any group is invalid, only the index column will be displayed.
LossCount	Frame loss count	N/A	Unsigned integer.	N/A
LossRatio	Frame loss ratio	N/A	String. Length: 15 characters.	N/A
ErrorCount	Frame error count	N/A	Unsigned integer.	N/A
ErrorRatio	Frame error ratio	N/A	String. Length: 15 characters.	N/A

## NQA/TwamplightDelayStats

This table contains information about NQA Twamp Light operation delay statistics.

## XML structure

# NQA

## NQA/Client

Message	Explanation
The value must not be less than %d or greater than %d. 参数范围从%d至%d。	The specified probe timeout must be within the legal range. 指定的探测超时时间必须在合法的范围内。
Incomplete NQA operation parameters. Can't start the NQA operation. 必配参数不全，无法启动调度。	When starting the NQA test, the selected test parameters must be configured. 启动NQA测试的时候，必选的测试参数必须配置。
The operation time has passed. 时间已是过去。	The start time for starting the NQA test should be less than the current system time. 启动NQA测试的开始时间应小于当前系统的时间。
Can't start the operation. Please enable the NQA client first. 启动测试失败，请先开启NQA客户端。	Before starting the NQA test, you need to start the NQA client first. 在启动NQA测试前，先需要先开启NQA客户端。
Can't modify any existing schedule. 调度已启动，不可以修改。	After the NQA test is started, the scheduling parameters of the scheduling test cannot be modified. NQA测试启动后，不能修改调度测试的调度参数。
Can't modify a scheduled operation. 测试项组已启动调度，不可以修改配置。	After the test group starts the scheduling test, the configuration of the test group is not allowed to be modified. 测试组启动调度测试后，不允许对测试组的配置进行修改。
The lifetime for a recurring NQA operation can't be forever. 已配置recurring，必须配置有限的lifetime。	When the specified NQA test group is scheduled to run every day, the duration of the test cannot be unlimited. 指定NQA测试组每天都被调度运行时，测试的持续时间不能是无限的。
The lifetime for a recurring NQA operation must be less than one day. 已配置recurring，lifetime必须小于一天。	When the specified NQA test group is scheduled to run every day, the duration of the test must be the same day. 指定NQA测试组每天都被调度运行时，测试的持续时间必须小于一天。
The start time is invalid. 配置测试组启动日期，不在有效时间范围内。	The start time of the NQA startup test should be within the valid range. NQA启动测试的开始时间要在有效的范围内。
No operation type is specified. 未配置当前测试组的测试类型。	The type of the specified NQA test group must be configured when the create, merge and replace operations are performed. 当执行create、merge、replace操作时，指定的NQA测试组类型必须已经配置。
The NQA reaction parameter can't be modified. 不支持修改监测参数。	Alarm parameters that already have the same threshold number are not allowed to be modified. 已存在的相同的阈值编号的告警参数不允许修改。

ServiceType	Service type	Index	Enumeration: <ul style="list-style-type: none"><li>• 1—Global service</li><li>• 2—Audit service</li><li>• 3—Traffic service</li><li>• 4—Threat service</li><li>• 5—URLFilter service</li><li>• 6—Filefilter service</li></ul>	N/A
AutoDeleteEnable	Whether AutoDelete is enabled or not	N/A	Boolean: <ul style="list-style-type: none"><li>• true</li><li>• false</li></ul>	N/A
LimitTime	Data retention days	N/A	Unsigned integer	Default is 30 days.

Column name	Column description	Column type	Data type and restrictions	Remarks
LogLimit	Log records limit	N/A	Unsigned integer. Value range: 1 to $2^{32}-1$ .	N/A
TrendLimit	Trend records limit	N/A	Unsigned integer. Value range: 1 to $2^{32}-1$ .	N/A
DBSoftware	Database software of this service	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Sqlite</li> <li>2—Fastbit</li> </ul>	N/A

## NTOP/ReportRss

This table is used to set the report subscription configuration.

### XML structure

```

<NTOP>
  <ReportRss>
    <Rss>
      <ReportType></ReportType>
      <MailId></ MailId >
      <MailAddr></MailAddr>
    </Rss>
  </ReportRss>
</NTOP>

```

### Table description

Item	Description
Feature name	NTOP
Table name	ReportRss
Table type	Multi-instance table
Row name	Rss
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ReportType	Report type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Period report</li> <li>2—Comparison report</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>3—Intelligent report</li> <li>4—Integrated report</li> </ul>	
MailId	Mail Id	Index	Unsigned integer. Value range: 1 to 2 <sup>32</sup> -1	N/A
MailAddr	Rss mail address	N/A	String, case insensitive Length: 1 to 127 characters	N/A.

## NTOP/PersistDiskCfg

This table is used to set the persistence disk configuration.

### XML structure

```

<NTOP>
  <PersistDiskCfg>
    <DBCfg>
      <ServiceType></ServiceType>
      <ServiceDiskLimit></ServiceDiskLimit>
      <ServiceAlarmLimit></ServiceAlarmLimit>
    </DBCfg>
  </PersistDiskCfg>
</NTOP>

```

### Table description

Item	Description
Feature name	NTOP
Table name	PersistDiskCfg
Table type	Multi-instance table
Row name	DBCfg
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceAlarmLimit	Alarm limit percent.	N/A	Unsigned integer. Value range: 1 to 100	When disk usage reaches the alarm limit, the system deletes the oldest file.
ServiceType	Service type	Index	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>• 1—Global service</li> <li>• 2—Audit service</li> <li>• 3—Traffic service</li> <li>• 4—Threat service</li> <li>• 5—URLFilter service</li> <li>• 6—Filefilter service</li> </ul>	
ServiceDiskLimit	Service disk limit percent.	N/A	Unsigned integer. Value range: 1 to 100	Global service disk limit is the maximum percentage of disk occupancy. Other service disk limit is the percentage occupancy in the Global service proportion.。

# NTOP

## NTOP/TrafficLog

This table contains Traffic log information. When a session ends, a traffic log will be stored locally. This table contains these logs. If there is no hard-disk on device, only 10,000 entries can be stored, and new logs will overwrite the oldest.

### XML structure

```
<NTOP>

Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	ID of the TrafficLog	Index	Unsigned integer	N/A
UserID	User ID	Index	Unsigned integer	Used to distinguish different requests.
EndTime	End time of the session	N/A	Format: YYYY-MM-DDTHH:MM:SS	N/A
StartTime	Start time of the session	N/A	Format: YYYY-MM-DDTHH:MM:SS	N/A
ContextName	Name of the context	N/A	String, case insensitive Length: 1 to 15 characters	N/A
Protocol	Protocol	N/A	String, case insensitive Length: 1 to 31 characters	N/A
Application	Application	N/A	String, case insensitive Length: 1 to 63 characters	N/A
SecurityPolicy	Security policy	N/A	String, case insensitive Length: 1 to 63 characters	N/A
SrcZoneName	Source zone name	N/A	String, case insensitive Length: 1 to 31 characters	N/A
SrcRegion	Source region	N/A	String, case insensitive Length: 1 to 127 characters	N/A
SrcIPAddr	Source IP address	N/A	String, case insensitive Length: 1 to 46 characters	N/A
SrcPort	Source port	N/A	Unsigned integer	N/A
NATSrcIP	NAT source IP	N/A	String, case insensitive Length: 1 to 46 characters	N/A
NATSrcPort	NAT source port	N/A	Unsigned integer	N/A
User	Username	N/A	String, case insensitive	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 127 characters	
DestZoneName	Destination zone name	N/A	String, case insensitive Length: 1 to 31 characters	N/A
DestRegion	Destination region	N/A	String, case insensitive Length: 1 to 127 characters	N/A
DestIPAddr	Destination IP address	N/A	String, case insensitive Length: 1 to 46 characters	N/A
DestPort	Destination port	N/A	Unsigned integer	N/A
NATDstIP	NAT destination IP	N/A	String, case insensitive Length: 1 to 46 characters	N/A
NATDstPort	NAT destination port	N/A	Unsigned integer	N/A
Bytes	Bytes	N/A	Unsigned integer	N/A
ReplyBytes	Reply bytes	N/A	Unsigned integer	N/A
Pkts	Packets	N/A	Unsigned integer	N/A
ReplyPkts	Reply packets	N/A	Unsigned integer	N/A
SrcInterface	Source interface	N/A	String, case insensitive Length: 1 to 47 characters	N/A
DstInterface	Destination interface	N/A	String, case insensitive Length: 1 to 47 characters	N/A
SrcVrfIndex	Source VRF index	N/A	Unsigned integer	N/A
UAppSubCategory	Application category of the session	N/A	String, case insensitive Length: 1 to 63 characters	N/A

## NTOP/TrafficTop

This table is used to get the top information of TrafficLog table.

The attributes in GroupValue must match the GroupType. For example, if the group-type is SrcIP, the value in GroupValue should be:

```
<SrcIP>1.2.3.4</SrcIP>
```

Other columns in GroupValue must not exist. The ConnCounter is the number of sessions that include this IP as an initiator and BytesCounter is the number of bytes sent and received by this IP. TopNo means the BytesCounter's order in all BytesCounter values.

Item	Description
Feature name	NTOP
Table name	TrafficHistogram
Table Type	Multi-instance table
Row name	Histogram
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AnalyType	Analysis type	Index	Unsigned integer <ul style="list-style-type: none"> <li>0—Traffic flow</li> <li>1—Traffic flow rate</li> </ul>	N/A
TrafficType	Type of the traffic	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Total bytes</li> <li>1—bytes</li> <li>2—Reply bytes</li> </ul>	N/A
UserID	User ID	Index	Unsigned integer Value range: 1 to $2^{32}-1$	Used to distinguish different requests.
FilterType	Filter type	N/A	Unsigned integer <ul style="list-style-type: none"> <li>1—SrcIP</li> <li>4—Application</li> <li>8—User</li> <li>64—ContextName</li> </ul>	For example, to filter the statistics by application, set the GroupType value to 4.
FilterCondition	Filter condition	N/A	String Length: 1 to 255 characters.	N/A
TimeFilter	Query time range	Data structure	Members include: <ul style="list-style-type: none"> <li>StartTime</li> <li>EndTime</li> </ul>	N/A
StartTime	Start time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
EndTime	End time	N/A	DateTime. Format: YYYY-MM-DDTHH:MM:SS	N/A
AnalyValues	Analysis value list	Data structure	Members include: <ul style="list-style-type: none"> <li>Percent</li> <li>AnalyValue</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Percent	Percent of an analysis value	N/A	Unsigned integer Value range: 0 to 100	N/A
AnalyValue	Analysis value	Traffic or BandWidth	Unsigned integer Value range: 1 to $2^{64}-1$	N/A
ContextID	Context ID	N/A	Unsigned integer	N/A

## NTOP/TrafficDistribution

This table is used to get the traffic time distribution information.

### XML structure

```

<NTOP>
  <TrafficDistribution>
    <Distribution>
      <ContextID></ContextID>
      <FilterType></FilterType>
      <FilterCondition></FilterCondition>
      <TrafficType></TrafficType>
      <TimeRange></TimeRange>
      <TimeFilter>
        <StartTime></StartTime>
        <EndTime></EndTime>
      </TimeFilter>
      <DistributeVlaues>
        <Time></Time>
        <Bytes></Bytes>
      </DistributeVlaues>
      <UserID></UserID>
    </Distribution>
  </TrafficDistribution>
</NTOP>

```

### Table description

Item	Description
Feature name	NTOP

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserID	User ID	Index	Unsigned integer.	Used to distinguish

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 1 to $2^{32}-1$ .	different requests.
ConstantType	Type of the constant data	Index	Enumeration: <ul style="list-style-type: none"> <li>0—SrcIP</li> <li>1—Application</li> </ul>	N/A
SortType	The type of data sort	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—TotalBytes</li> <li>1—Bytes</li> <li>2—ReplyBytes</li> </ul>	
TopNumber	Display first N data	N/A	Unsigned integer Value range: 0 to 100	
ConstantValues	Constant value list	Data structure	Members include: <ul style="list-style-type: none"> <li>TotalBytes</li> <li>Bytes</li> <li>ReplyBytes</li> <li>ConstantName</li> <li>ConstantPercent</li> </ul>	N/A
TotalBytes	Total bytes	N/A	Unsigned integer. Value range: 1 to $2^{64}-1$	N/A
Bytes	Bytes	N/A	Unsigned integer Value range: 0 to $2^{64}-1$	N/A
ReplyBytes	Reply bytes	N/A	Unsigned integer Value range: 0 to $2^{64}-1$	N/A
ConstantName	The name of constant data	N/A	String. Length: 1 to 63 characters.	N/A
ConstantPercent	The percent of constant data in total data.	N/A	Unsigned integer Value range: 0 to 100	N/A
ContextID	Context ID	N/A	Unsigned integer. Value range: 1 to $2^{32}-1$	N/A
ContextName	Context name	N/A	String Length: 1 to 15 characters.	N/A

## NTOP/ReportRss

This table is used to get the report subscription configuration.

### XML structure

```

<NTOP>
  <ReportRss>
    <Rss>
      <ReportType></ReportType>
      <MailId></ MailId >
      <MailAddr></MailAddr>
    </Rss>
  </ReportRss>
</NTOP>

```

```

    </ReportRss>
</NTOP>

```

## Table description

Item	Description
Feature name	NTOP
Table name	ReportRss
Table type	Multi-instance table
Row name	Rss
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ReportType	Report type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Period report</li> <li>2—Comparison report</li> <li>3—Intelligent report</li> <li>4—Integrated report</li> </ul>	N/A
MailId	Mail Id	Index	Unsigned integer. Value range: 1 to 2 <sup>32</sup> -1	N/A
MailAddr	Mail address	N/A	String, case insensitive Length: 1 to 127 characters	N/A.

## NTOP/PersistDiskCfg

This table is used to set the persistence disk configuration.

## XML structure

```

<NTOP>
  <PersistDiskCfg>
    <DBCfg>
      <ServiceType></ServiceType>
      <ServiceUsed></ServiceUsed>
      <ServiceFree></ServiceFree>
      <ServiceDiskLimit></ServiceDiskLimit>
      <ServiceAlarmLimit></ServiceAlarmLimit>
    </DBCfg>
  </PersistDiskCfg>
</NTOP>

```

## Table description

Item	Description
Feature name	NTOP
Table name	PersistDiskCfg
Table type	Multi-instance table
Row name	DBCfg
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ServiceAlarmLimit	Alarm limit percent	N/A	Unsigned integer. Value range: 1 to 100	When disk usage reaches the alarm limit, the system deletes the oldest file.
ServiceType	Service type	Index	Enumeration: <ul style="list-style-type: none"><li>• 1—Global service</li><li>• 2—Audit service</li><li>• 3—Traffic service</li><li>• 4—Threat service</li><li>• 5—URLFilter service</li><li>• 6—Filefilter service</li></ul>	N/A
ServiceUsed	Service disk used	N/A	Unsigned integer. Value range: 1 to $2^{64}-1$ .	N/A
ServiceFree	Service disk free	N/A	Unsigned integer. Value range: 1 to $2^{64}-1$ .	N/A
ServiceDiskLimit	Service disk limit percent	N/A	Unsigned integer. Value range: 1 to 100	Global service disk limit is the maximum percentage of disk occupancy. Other service disk limit is the percentage occupancy in the Global service proportion.

## NTOP/ReportChapter

This table contains informations about report chapter name.

## XML structure

```
<NTOP>
  <ReportChapter>
    <Chapter>
```

```

    <ReportType></ReportType>
    <ChapterNo></ChapterNo>
    <ChapterNameEN></ChapterNameEN>
    <ChapterNameCN></ChapterNameCN>
  </Chapter>
</ReportChapter>
</NTOP>

```

## Table description

Item	Description
Feature name	NTOP
Table name	ReportChapter
Table type	Multi-instance table
Row name	Chapter
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ReportType	Report type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Period report</li> <li>2—Comparison report</li> <li>3—Intelligent report</li> <li>4—Integrated report</li> </ul>	N/A
ChapterNo	The number of chapter	N/A	Unsigned integer. Value range: 1 to 32	N/A
ChapterName EN	Chapter Chinese name	N/A	String, case-insensitive. Length: 1 to 63 characters.:	N/A
ChapterName CN	Chapter English name	N/A	String, case-insensitive. Length: 1 to 63 characters.:	N/A

## NTOP/SecurityScore

This table contains informations about security score.

## XML structure

```

<NTOP>
  <SecurityScore>
    <Score>
      <ScoreType></ScoreType>
      <TotalScore></TotalScore>
      <DetailJSON></DetailJSON>
    </Score>
  </SecurityScore>
</NTOP>

```

```

    </Score>
  </SecurityScore>
</NTOP>

```

## Table description

Item	Description

    Ntop/PersistDiskCfg .....2

    Ntop /PlatformLogAction.....2

# Comware 7 NTOP NETCONF XML API

## Error Message Reference

### Ntop/PersistDiskCfg

Message	Explanation
Failed to set the usage limit because the system could not bring the storage usage below the limit. 操作失败，上限值低于当前已用值。	The specified usage limit value is less than the storage usage. 当配置的存储空间小于当前已用空间提示

### Ntop /PlatformLogAction

Message	Explanation
Failed to export logs due to insufficient storage space. 设备空间不足，导出失败。	The size of the log file exported is larger than the storage space. 导出的日志文件大小大于设备空间大小。
Failed to export logs. Please check whether the service is enabled. 文件导出失败，请检查业务功能是否已启用。	The service may not start (cannot get the register information). 相关业务没有启动（无法获取注册信息）。
Failed to decompress file. 解压缩失败。	Decompressing file failed. 文件解压失败。
Failed to verify the file. 文件校验失败。	The log file exported is modified. 导出的日志文件被修改。
Failed to import logs. Please check whether the service is enabled. 文件导入失败，请检查业务功能是否已启用。	The service may not start (cannot get the register information). 相关业务没有启动（无法获取注册信息）。

# NTP

## NTP/Clients

This table contains NTP client information.

### XML structure

```
<NTP>
  <Clients>
    <Client>
      <Service></Service>
      <VRF></VRF>
      <AddressType></AddressType>
      <IpAddress></IpAddress>
      <HostName></HostName>
      <HostMode></HostMode>
      <IfIndex></IfIndex>
      <KeyID></KeyID>
      <Version></Version>
      <Priority></Priority>
      <MaxPollInterval></MaxPollInterval>
      <MinPollInterval></MinPollInterval>
    </Client>
  </Clients>
</NTP>
```

### Table description

Item	Description
Feature name	NTP
Table name	Clients
Table type	Multi-instance table
Row name	Client
Restrictions	None
Support for row creation and deletion	Yes

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Service	Service type	Index	Enumeration: <ul style="list-style-type: none"> <li>1—NTP.</li> <li>2—SNTP.</li> </ul>	N/A
VRF	VRF	Index	String. Length: 0 to 31 characters.	It can be empty when it represents a public VRF instance.
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"> <li>1—IPv4</li> <li>2—IPv6</li> </ul>	IPv6 is not supported.
IpAddress	Remote IPv4 or IPv6 address.	Index	IPv4: String, dotted decimal notation. IPv6: Hexadecimal string, colon-separated.	IPv4 example: 1.1.1.1. IPv6 example: 1::1. HostName and IP address cannot be specified at the same time.
HostName	Host name	Index	String. Length: 1 to 253 characters.	HostName and IP address cannot be specified at the same time .
HostMode	Client mode	Index	Enumeration: <ul style="list-style-type: none"> <li>1—Symmetric active.</li> <li>3—Client.</li> </ul>	The symmetric active mode is available only for NTP.
IfIndex	Source interface index.	N/A	Unsigned integer.	This column supports only Layer 3 interfaces. Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
KeyID	Key ID	N/A	Unsigned integer. Value range: 1 to 4294967295.	This column specifies the key used for calculating the packet digest when the local end sends NTP messages to the peer.
Version	NTP version	N/A	Unsigned integer. Value range: 1 to 4 Default value: 4	This column is available only for IPv4 address entries, and not available for IPv6 address entries.
Priority	Whether the specified peer is the first choice under the same condition.	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false (default).</li> </ul>	Priority true is available only for NTP.
MaxPollInterval	Maximum polling interval	N/A	Unsigned integer. Value range: 4 to 17, in seconds.	Available only for NTP (not available for SNTP).

Column name	Column description	Column type	Data type and restrictions	Remarks
			Default value: 10.	
MinPollInterval	Minimum polling interval	N/A	Unsigned integer. Value range: 4 to 17, in seconds. Default value: 6	Available only for NTP (not available for Sntp).

## NTP/AuthenticationKey

This table contains information about NTP authentication.

### XML structure

```

<NTP>
  <AuthenticationKey>
    <Authentication>
      <Service></Service>
      <KeyID></KeyID>
      <AuthMode></AuthMode>
      <AuthKey></AuthKey>
      <Reliable></Reliable>
    </Authentication>
  </AuthenticationKey>
</NTP>

```

### Table description

Item	Description
Feature name	NTP
Table name	AuthenticationKey
Table type	Multi-instance table
Row name	Authentication
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Service	Service type	Index	Enumeration: • 1—NTP. • 2—Sntp.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
KeyID	Key ID	Index	Unsigned integer. Value range: 1 to 4294967295.	This column is used to identify an authentication key.
AuthMode	Authentication mode	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—MD5.</li> <li>2—HMAC-SHA-1.</li> <li>3—HMAC-SHA-256.</li> <li>4—HMAC-SHA-384.</li> <li>5—HMAC-SHA-512.</li> </ul>	For the create, merge and replace operations, if the AuthMode is not configured and the AuthKey is configured, the AuthMode value is equivalently set to 1.
AuthKey	Key content	N/A	String. Length: 1 to 32 characters.	Plain text key calculated by using the MD5 algorithm for authentication.
Reliable	Whether the key is a trusted key.	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false (default).</li> </ul>	For the delete and remove operations, if both the AuthMode and AuthKey are configured, the Reliable value will be deleted.

## NTP/Service

This table contains NTP service information.

## XML structure

```

<NTP>
  <Service>
    <NTPEnable></NTPEnable>
    <SNTPEnable></SNTPEnable>
    <NTPAuthEnable></NTPAuthEnable>
    <SNTPAuthEnable></SNTPAuthEnable>
    <NTPSource></NTPSource>
  </Service>
</NTP>

```

## Table description

Item	Description
Feature name	NTP
Table name	Service
Table type	Single-instance table
Row name	N/A
Restrictions	None

Item	Description
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NTPEnable	Whether to enable the NTP service.	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false (default).</li> </ul>	N/A
SNTPEnable	Whether to enable the SNTP service.	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false (default).</li> </ul>	N/A
NTPAuthEnable	Whether to enable the NTP authentication function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false (default).</li> </ul>	N/A
SNTPAuthEnable	Whether to enable the SNTP authentication function.	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false (default).</li> </ul>	N/A
NTPSource	NTP source interface index	N/A	Unsigned integer	Available only for Layer 3 interfaces.

## NTP/RefClocks

This table contains NTP reference clock information.

## XML structure

```

<NTP>
  <RefClocks>
    <RefClock>
      <RefID></RefID>
      <Stratum></Stratum>
    </RefClock>
  </RefClocks>
</NTP>

```

## Table description

Item	Description
Feature name	NTP
Table name	RefClocks

Item	Description
Table type	Multi-instance table
Row name	RefClock
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RefID	Reference Clock ID.	Index	String, dotted decimal notation 127.127.1.u, where u is in the range of 0 to 3.	N/A
Stratum	Stratum level of the local clock.	N/A	Unsigned integer. Value range: 1 to 15.	A lower stratum level represents a higher clock accuracy.

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>2—HMAC-SHA-1.</li> <li>3—HMAC-SHA-256.</li> <li>4—HMAC-SHA-384.</li> <li>5—HMAC-SHA-512.</li> </ul>	AuthMode is not configured and the AuthKey is configured, the AuthMode value is equivalently set to 1.
AuthKey	Key content	N/A	String. Length: 1 to 32 characters.	Plain text key calculated by using the MD5 algorithm for authentication.
Reliable	Whether the key is a trusted key.	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	For the delete and remove operations, if both the AuthMode and AuthKey are configured, the Reliable value will be deleted.

## NTP/Service

This table contains NTP service information.

## XML structure

```

<NTP>
  <Service>
    <NTPEnable></NTPEnable>
    <SNTPEnable></SNTPEnable>
    <NTPAuthEnable></NTPAuthEnable>
    <SNTPAuthEnable></SNTPAuthEnable>
    <NTPSource></NTPSource>
  </Service>
</NTP>

```

## Table description

Item	Description
Feature name	NTP
Table name	Service
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NTPEnable	Whether to enable the NTP service.	N/A	Boolean: <ul style="list-style-type: none"><li>true.</li><li>false.</li></ul>	N/A
SNTPEnable	Whether to enable the SNTP service.	N/A	Boolean: <ul style="list-style-type: none"><li>true.</li><li>false.</li></ul>	N/A
NTPAuthEnable	Whether to enable the NTP authentication function.	N/A	Boolean: <ul style="list-style-type: none"><li>true.</li><li>false.</li></ul>	N/A
SNTPAuthEnable	Whether to enable the SNTP authentication function.	N/A	Boolean: <ul style="list-style-type: none"><li>true.</li><li>false.</li></ul>	N/A
NTPSource	NTP source interface index.	N/A	Unsigned integer	Available only for Layer 3 interfaces.

## NTP/RefClocks

This table contains NTP reference clock information.

### XML structure

```
<NTP>
  <RefClocks>
    <RefClock>
      <RefID></RefID>
      <Stratum></Stratum>
    </RefClock>
  </RefClocks>
</NTP>
```

### Table description

Item	Description
Feature name	NTP
Table name	RefClocks
Table type	Multi-instance table
Row name	RefClock

Item	Description
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
RefID	Reference Clock ID.	Index	String, dotted decimal notation 127.127.1.u, where u is in the range of 0 to 3.	N/A
Stratum	Stratum level of the local clock.	N/A	Unsigned integer. Value range: 1 to 15.	A lower stratum level represents a higher clock accuracy.

## NTP/Status

This table contains NTP status information.

## XML structure

```

<NTP>
  <Status>
    <NTPSynchronized></NTPSynchronized>
    <SNTPSynchronized></SNTPSynchronized>
  </Status>
</NTP>

```

## Table description

Item	Description
Feature name	NTP
Table name	Status
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NTPSynchronized	Whether the NTP clock has been synchronized.	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
SNTPSynchronized	Whether the SNTP clock has been synchronized	N/A	Boolean: <ul style="list-style-type: none"> <li>• true.</li> <li>• false</li> </ul>	N/A

# NTP

## NTP/Clients

Message	Explanation
NTP is not configured. NTP未配置。	NTP service has not been started.
SNTP is not configured. SNTP未配置。	SNTP service has not been started.
IPv6 addresses are not supported. 不支持IPv6地址。	NTP IPv6 addresses are not supported with NETCONF.
Failed to create an NTP association, because the maximum number is reached. 创建失败，NTP会话超过最大数量。	The maximum number of NTP sessions is 128.
Failed to create an SNTP association, because the maximum number is reached. 创建失败，SNTP会话超过最大数量。	The maximum number of SNTP sessions is 128.
Failed to create an NTP association, because the maximum polling interval is smaller than the minimum polling interval. 创建失败，最大轮询时间间隔小于最小轮询时间间隔	Maximum polling interval must be greater than minimum polling interval.

## NTP/AuthenticationKey

Message	Explanation
NTP is not configured. NTP未配置。	NTP service has not been started.
SNTP is not configured. SNTP未配置。	SNTP service has not been started.
Input a valid authentication key string. 请输入有效的认证字符串。	Please input a valid authentication key string when set new configuration.
Failed to create an NTP authentication key, because the maximum number is reached. 创建失败，NTP认证密钥超过最大数量。	The maximum number of NTP authentication key is 128.
You cannot delete only the authentication mode or key string. 不能只删除认证模式或者认证字符串。	You have to delete authentication mode and authentication key string at the same time.
Failed to create an SNTP authentication key, because the maximum number is reached. 创建失败，SNTP认证密钥超过最大数量。	The maximum number of SNTP authentication key is 128.

## NTP/Service

Message	Explanation
Do not enable SNTP and NTP at the same time. SNTP和NTP不能同时使能。	Do not enable SNTP and NTP at the same time.
NTP is not configured. NTP未配置。	NTP service has not been started.
SNTP is not configured. SNTP未配置。	SNTP service has not been started.

## NTP/RefClocks

Message	Explanation
NTP is not configured. NTP未配置。	NTP service has not been started.
IP address of the local clock must be 127.127.1.x, where x is in the range of 0 to 3. 本地时钟的IP地址127.127.1.x, x的取值范围为0~3。	The range of valid IP address of the local clock is 127.127.1.0 to 127.127.1.3

## NVGRE/NVGREs

This table contains information about NVGRE configurations.

### XML structure

```
<NVGRE>
  <NVGREs>
    <Nvgre>
      <NvgreID></NvgreID>
      <VsiName></VsiName>
    </Nvgre>
  </NVGREs>
</NVGRE>
```

### Table description

Item	Description
Feature name	NVGRE
Table name	NVGREs
Table type	Multi-instance table
Row name	Nvgre
Restrictions	You must enabled global L2VPN feature at first.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NvgreID	NVGRE ID	Index	Unsigned integer, Value range: 4096-16777214.	N/A
VsiName	VSI name	N/A	String, Length: 1 to 31 characters.	You must create a VSI first before you merge, replace or create NVGREs. You must specify this column when the operation is merge, create or replace. You can't specify this column when the operation is delete or remove.

				Can not be modified after creation
--	--	--	--	------------------------------------

## NVGRE/Tunnels

This table contains information about tunnels associated with NVGREs.

### XML structure

```
<NVGRE>
  <Tunnels>
    <Tunnel>
      <NvgreID></NvgreID>
      <TunnelID></TunnelID>
    </Tunnel>
  </Tunnels>
</NVGRE>
```

### Table description

Item	Description
Feature name	NVGRE
Table name	Tunnels
Table type	Multi-instance table
Row name	Tunnel
Restrictions	You must enabled global L2VPN feature at first.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NvgreID	NVGRE ID	Index	Unsigned integer, Value range:4096-16777214.	You must create an NVGRE first before you merge, replace or create tunnels.
TunnelID	Tunnel ID	Index	Unsigned integer.	You must create a tunnel first before you merge, replace or create tunnels

## NVGRE/RmtMACs

This table contains information about remote MAC addresses of each NVGRE.

## XML structure

```
<NVGRE>
  <RmtMACs>
    <MAC>
      <VsiName></VsiName>
      <MacAddr></MacAddr>
      <TunnelID></TunnelID>
    </MAC>
  </RmtMACs>
</NVGRE>
```

## Table description

Item	Description
Feature name	NVGRE
Table name	RmtMACs
Table type	Multi-instance table
Row name	MAC
Restrictions	You must enabled global L2VPN feature at first.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
VsiName	VSI name	Index	String, Length: 1 to 31 characters.	You must create a VSI first before you merge, replace or create MACs.
MacAddr	Remote MAC address	Index	Six groups of two hexadecimal digits, hyphen-separated. The value must be unicast address.	Example: 00-0c-af-e3-5d-c0.
TunnelID	Tunnel ID	N/A	Unsigned integer	You must create a tunnel first before you merge, replace or create MACs. You must specify this column when the operation is merge, create or replace. You can't specify this column when the operation is delete

Column name	Column description	Column type	Data type and restrictions	Remarks
				or remove.

# NVGRE

## NVGRE/Base

This table contains information about global NVGRE functions.

### XML structure

```
<NVGRE>
  <Base>
    <NextNvgreID></NextNvgreID>
    <TotalNvgreNum></TotalNvgreNum>
  </Base>
</NVGRE>
```

### Table description

Item	Description
Feature name	NVGRE
Table name	Base
Table type	Single-instance table
Row name	N/A
Restrictions	This table supports only global functions.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NextNvgreID	Next useful NVGRE ID	N/A	Unsigned integer, Value range: 4096-16777214.	You must enabled global L2VPN feature at first. The invalid value 4294967295 indicates that no ID can be set.
TotalNvgreNum	Total number of existing NVGRES	N/A	Unsigned integer	You must enabled global L2VPN feature at first.

## NVGRE/NVGREs

This table contains information about NVGRE configurations.

### XML structure

```
<NVGRE>
```

```

<NVGRES>
  <Nvgre>
    <NvgreID></NvgreID>
    <VsiName></VsiName>
    <RmtMacCnt></RmtMacCnt>
  </Nvgre>
</NVGRES>
</NVGRE>

```

## Table description

Item	Description
Feature name	NVGRE
Table name	NVGRES
Table type	Multi-instance table
Row name	Nvgre
Restrictions	You must enabled global L2VPN feature at first.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
NvgreID	NVGRE ID	Index	Unsigned integer, Value range: 4096-16777214.	N/A
VsiName	VSI name	N/A	String, Length: 1 to 31 characters.	N/A
RmtMacCnt	The count of remote MAC addresses	N/A	Unsigned integer	N/A

## NVGRE/Tunnels

This table contains information about tunnels associated with NVGRES.

## XML structure

```

<NVGRE>
  <Tunnels>
    <Tunnel>
      <NvgreID></NvgreID>
      <TunnelID></TunnelID>
      <Type></Type>
    </Tunnel>
  </Tunnels>

```

</NVGRE>

## Table description

Item	Description
Feature name	NVGRE
Table name	Tunnels

## OBJP/ClearZoneStatistic

This table contains the operation information for an security zone pair object policy.

### XML structure

```
<OBJP>
  <ClearZoneStatistic>
    <Zonepair>
      <SrcZone></SrcZone>
      <DestZone></DestZone>
      <ClearType></ClearType>
      <Clear></Clear>
    </Zonepair>
  </ClearZoneStatistic>
</OBJP>
```

### Table description

Item	Description
Feature name	OBJP
Table name	ClearZoneStatistic
Table type	Multi-instance table
Row name	Zonepair
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcZone	Name of the source zone.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
DestZone	Name of the destination zone.	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A
ClearType	Type of statistics to be cleared.	N/A	Enumeration: <ul style="list-style-type: none"><li>1—IPv4 statistics.</li><li>2—IPv6 statistics.</li></ul>	Optional. If you do not specify this column, both IPv4 and IPv6 statistics are cleared.
Clear	Clears security zone pair object policy statistics.	N/A	This column must be empty.	Required.

# OBJP/ClearAllStatistic

This table contains the operation information for all security zone pair object policies.

## XML structure

```
<OBJP>
  <ClearAllStatistic>
    <ClearType></ClearType>
    <Clear></Clear>
  </ClearAllStatistic>
</OBJP>
```

## Table description

Item	Description
Feature name	OBJP
Table name	ClearAllStatistic
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ClearType	Type of statistics to be cleared.	N/A	Enumeration: <ul style="list-style-type: none"><li>1—IPv4 statistics.</li><li>2—IPv6 statistics.</li></ul>	Optional. If you do not specify this column, both IPv4 and IPv6 statistics are cleared.
Clear	Clears security zone pair object policy statistics.	N/A	This column must be empty.	Required.

# OBJP/ClearRuleStatistic

This table contains the operation information for all security zone pair object policies.

## XML structure

```
<OBJP>
  <ClearRuleStatistic>
```

```

<Rule>
  <SrcZone></SrcZone>
  <DestZone></DestZone>
  <ClearType></ClearType>
  <RuleID></RuleID>
  <Clear></Clear>
</Rule>
</ClearRuleStatistic>
</OBJP>

```

# OBJP

## OBJP/IPv4Policies

This table contains IPv4 security zone pair object policy information.

### XML structure

```
<OBJP>
  <IPv4Policies>
    <Policy>
      <SrcZone></SrcZone>
      <DestZone></DestZone>
    </Policy>
  </IPv4Policies>
</OBJP>
```

### Table description

Item	Description
Feature name	OBJP
Table name	IPv4Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions
SrcZone	Name of the source zone	Index	String, case insensitive. Length: 1 to 31 characters.
DestZone	Name of the destination zone	Index	String, case insensitive. Length: 1 to 31 characters.

## OBJP/IPv4Rules

This table contains IPv4 security zone pair object policy rule information.

# XML structure

```
<OBJP>
  <IPv4Rules>
    <Rule>
      <SrcZone></SrcZone>
      <DestZone></DestZone>
      <ID></ID>
      <InsID></InsID>
      <Action></Action>
      <SrcIPv4Group></SrcIPv4Group>
      <DestIPv4Group></DestIPv4Group>
      <ServGroup></ServGroup>
      <VRF></VRF>
      <TimeRange></TimeRange>

    </Rule>
  </IPv4Rules>
</OBJP>
```

## Table description

Item	Description
Feature name	OBJP
Table name	IPv4Rules
Table type	Multi-instance table
Row name	Rule
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
SrcZone	Name of the source zone	Index	String, case insensitive. Length: 1 to 31 characters.	N/A
DestZone	Name of the destination zone	Index	String, case insensitive. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	Rule ID	Index	Unassigned integer. Value range: 0 to 65535.	If you set this column to 65535, the device automatically assigns the rule an ID.  When you create or modify a rule, this column determines the place for the rule.  If you do not specify this column or set this column to 65535, the rule is put behind all rules.
InsID	Inserts this rule before the rule identified by this ID	N/A	Unassigned integer. Value range: 0 to 65535.	If you set this column to the ID of an existing rule, the rule is inserted before the specified rule.  If you set this column to the ID of a nonexistent rule, the operation fails.
Action	Action for the rule	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Deny.</li> <li>2—Permit.</li> </ul>	Required when you create a rule or modify a rule through the <b>replace</b> operation.
SrcIPv4Group	Name of the source IPv4 address object group	N/A	String, case insensitive. Length: 1 to 31 characters.	Optional.
DestIPv4Group	Name of the destination IPv4 address object group	N/A	String, case insensitive. Length: 1 to 31 characters.	Optional.
ServGroup	Name of the service object group	N/A	String, case insensitive. Length: 1 to 31 characters.	Optional.
VRF	VRF name	N/A	String, case sensitive. Length: 1 to 31 characters.	Optional.
TimeRange	Name of the time range	N/A	String, case insensitive. Length: 1 to 32 characters. The string must start with an English letter.	It cannot be the word <b>all</b> .
Enable	Whether to enable the rule	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable (default).</li> <li><b>false</b>—Disable.</li> </ul>	Optional.
Log	Whether to enable logging	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable (default).</li> </ul>	Optional.
Counting	Whether to enable Counting	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enable.</li> <li><b>false</b>—Disable (default).</li> </ul>	Optional.

Column name	Column description	Column type	Data type and restrictions	Remarks
Comment	Description	N/A	String. Length: 1 to 127 characters.	Optional.
AppGrp	Name of the application group	N/A	String, case insensitive. Length: 1 to 63 characters.	Optional.
App	Name of the application	N/A	String, case insensitive. Length: 1 to 63 characters.	Optional.
Profile	Profile	N/A	String. Length: 1 to 100 characters.	N/A.

## OBJP/IPv6Policies

This table contains IPv6 security zone pair object policy information.

### XML structure

```

<OBJP>
  <IPv6Policies>
    <Policy>
      <SrcZone></SrcZone>
      <DestZone></DestZone>
    </Policy>
  </IPv6Policies>
</OBJP>

```

### Table description

Item	Description
Feature name	OBJP
Table name	IPv6Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions
SrcZone	Name of the source zone	Index	String, case insensitive. Length: 1 to 31 characters.

Column name	Column description	Column type	Data type and restrictions
DestZone	Name of the destination zone	Index	String, case insensitive. Length: 1 to 31 characters.

## OBJP/IPv6Rules

This table contains IPv6 security zone pair object policy rule information.

### XML structure

```

<OBJP>
  <IPv6Rules>
    <Rule>
      <SrcZone></SrcZone>
      <DestZone></DestZone>

Counting	Whether counting is enabled.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Enabled.</li> <li>• <b>false</b>—Not enabled.</li> </ul>
Comment	Description	N/A	String. Length: 1 to 127 characters.
Count	Count of matches	N/A	Unassigned integer. Value range: 0 to $2^{64}-1$ .
AppGrp	Name of the application group	N/A	String. Length: 1 to 63 characters.
App	Name of the application	N/A	String. Length: 1 to 63 characters.
Byte	Byte	N/A	Unsigned integer.
Profile	Profile	N/A	String. Length: 1 to 100 characters.

# OBJP/IPv6Policies

This table contains IPv6 security zone pair object policy information.

## XML structure

```
<OBJP>
  <IPv6Policies>
    <Policy>
      <SrcZone></SrcZone>
      <DestZone></DestZone>
      <RuleNum></RuleNum>
    </Policy>
  </IPv6Policies>
</OBJP>
```

## Table description

Item	Description
Feature name	OBJP
Table name	IPv6Policies
Table type	Multi-instance table
Row name	Policy
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
SrcZone	Name of the source zone	Index	String. Length: 1 to 31 characters.
DestZone	Name of the destination zone	Index	String. Length: 1 to 31 characters.
RuleNum	Number of rules	N/A	Unassigned integer.

# OBJP/IPv6Rules

This table contains IPv6 security zone pair object policy rule information.

## XML structure

```
<OBJP>
  <IPv6Rules>
```

```

<Rule>
  <SrcZone></SrcZone>
  <DestZone></DestZone>
  <ID></ID>
  <Action></Action>
  <SrcIPv6Group></SrcIPv6Group>
  <DestIPv6Group></DestIPv6Group>

## OBJP

Message	Explanation
Failed to create the rule because the rule number exceeds the upper limit. 由于已经达到规则数上限，创建规则失败。	The number of rules configured by the object policy reaches the upper limit. 对象策略配置的规则数达到上限。
Source IP address object group does not exist. 指定的源IP地址对象组不存在。	The object-group referenced by the IPv4 source address of the rule does not exist. 规则中IPv4源地址引用的对象组不存在。
Illegal source IP address object group type. 指定的源IP地址对象组类型不正确。	The object-group type referenced by the IPv4 source address is not the IPv4 type. 规则中IPv4源地址引用的对象组类型不是IPv4。
Destination IP address object group does not exist. 指定的目的IP地址对象组不存在。	The object-group referenced by the IPv4 destination address of the rule does not exist. 规则中IPv4目的地址引用的对象组不存在。
Illegal destination IP address object group type. 指定的目的IP地址对象组类型不正确。	The object-group type referenced by the IPv4 destination address is not the IPv4 type. 规则中IPv4目的地址引用的对象组类型不是IPv4。
Source IPv6 address object group does not exist. 指定的源IPv6地址对象组不存在。	The object-group referenced by the IPv6 source address of the rule does not exist. 规则中IPv6源地址引用的对象组不存在。
Illegal source IPv6 address object group type. 指定的源IPv6地址对象组类型不正确。	The object-group type referenced by the IPv6 destination address is not the IPv6 type. 规则中IPv6源地址引用的对象组类型不是IPv6。
Destination IPv6 address object group does not exist. 指定的目的IPv6地址对象组不存在。	The object-group referenced by the IPv6 destination address of the rule does not exist. 规则中IPv6目的地址引用的对象组不存在。
Illegal destination IPv6 address object group type. 指定的目的IPv6地址对象组类型不正确。	The object-group type referenced by the IPv6 destination address is not the IPv6 type. 规则中IPv6目的地址引用的对象组类型不是IPv6。
Service object group does not exist. 指定的服务对象组不存在。	The object-group referenced by the service of the rule does not exist. 规则中服务引用的对象组不存在。
Illegal service object group type. 指定的服务对象组类型不正确。	The object-group type referenced by the service is not the service type. 规则中服务引用的对象组类型不是服务类型。
The time range does not exist and the rule will be set to inactive. 由于指定的时间段不存在，该规则不会生效。	The time range name referenced by the rule does not exist. 规则中引用的时间段名称不存在。
Failed to move the rule because the ID of the rule to be moved is equal to the target one. 由于指定规则和目标规则的编号相同，移动规则失	The source rule number specified when moving the rule is the same as the destination number. 移动规则时指定的源规则编号与目的编号一样。

败。	
Failed to move the rule because the specified rule does not exist. 由于指定规则或目标规则不存在，移动规则失败。	The source rule number specified when the rule was moved does not exist. 移动规则时指定的源规则编号不存在。
The rule does not exist. Please create the rule before adding a comment. 由于指定的规则不存在，添加规则描述信息失败。	The rule number specified when adding rule comment information does not exist. 添加规则评审信息时指定的规则编号不存在。
Failed to insert the rule because the specified rule does not exist. 由于指定的规则不存在，规则插入失败。	Specifies that the rule number to be inserted is not created. 指定要插入的规则编号没有被创建。
Failed to create the rule because the action of the rule is not specified. 由于未指定规则动作，创建规则失败。	Failure to specify a rule action cause the create operation to fail to create a rule. 没有指定规则动作导致create操作创建规则失败。
Failed to merge the rule because the action of the rule is not specified. 由于未指定规则动作，创建规则失败。	Failure to specify a rule action cause the merge operation to fail to create a rule. 没有指定规则动作导致merge操作创建规则失败。
Failed to replace the rule because the action of the rule is not specified. 由于未指定规则动作，创建规则失败。	Failure to specify a rule action cause the replace operation to fail to create a rule. 没有指定规则动作导致replace操作创建规则失败。
Failed to create the rule because the ID of the rule to be moved is equal to the target one. 由于指定规则编号和目标规则编号相同，移动规则失败	The source rule number specified when the rule is moved is the same as the destination number, causing the create operation to fail. 移动规则时指定的源规则编号与目的编号一样导致create操作失败。
Failed to merge the rule because the ID of the rule to be moved is equal to the target one. 由于指定规则编号和目标规则编号相同，移动规则失败	The source rule number specified when the rule is moved is the same as the destination number, causing the merge operation to fail. 移动规则时指定的源规则编号与目的编号一样导致merge操作失败。
Failed to replace the rule because the ID of the rule to be moved is equal to the target one. 由于指定规则编号和目标规则编号相同，移动规则失败	The source rule number specified when the rule is moved is the same as the destination number, causing the replace operation to fail. 移动规则时指定的源规则编号与目的编号一样导致replace操作失败。
Failed to create the rule because the rule to insert before does not exist. 由于目标规则不存在，移动规则失败。	The source rule number specified when the rule was moved does not exist, causing the create operation to fail. 移动规则时指定的源规则编号不存在导致create操作失败。
Failed to merge the rule because the rule to insert before does not exist. 由于目标规则不存在，移动规则失败。	The source rule number specified when the rule was moved does not exist, causing the merge operation to fail. 移动规则时指定的源规则编号不存在导致merge操作失败。
Failed to replace the rule because the rule to insert before does not exist. 由于目标规则不存在，移动规则失败。	The source rule number specified when the rule was moved does not exist, causing the replace operation to fail. 移动规则时指定的源规则编号不存在导致replace操作失败。
Can not use 'all' as time range name. 时间段名称不能为“all”。	The time range name referenced by the rule cannot be “all”. 规则引用的时间段名称不能为“all”。
The maximum number of rules has been reached. 由于已经达到规则数上限，创建规则失败。	Object policy configuration rules reach the upper limit. 对象策略配置的规则达到上限。

<p>If the action is set to "inspect", you must specify an inspect profile.</p> <p>指定动作为Inspect时，必须指定Profile。</p>	<p>The profile name is not specified when the specified rule action is inspect.</p> <p>指定规则动作为Inspect时没有指定Profile名称。</p>
<p>If the profile is specified, the action should be set to "inspect".</p> <p>指定Profile时，必须指定动作为Inspect。</p>	<p>Rule action is not inspect when specifying profile name.</p> <p>指定Profile名称时规则动作不是Inspect。</p>

## Table description

Item	Description
Feature name	OMS
Table name	IPv4Objs
Table type	Multi-instance table
Row name	Obj
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Group	Name of the IPv4 address object group	Index	String, case-insensitive. Length: 1 to 31 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
ID	ID of the IPv4 address object	Index	Unsigned integer. Value range: 0 to 4294967295.	When you create an object with the ID 4294967295, the system automatically assigns the object an ID.
Type	Type of the IPv4 address object	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Nested group.</li> <li>1—Subnet.</li> <li>2—Range.</li> <li>3—Host address.</li> <li>4—Host name.</li> </ul>	Required.
SubnetIPv4Address	IPv4 subnet address	N/A	String, dotted decimal notation.	Required when the <b>Type</b> column is <b>1</b> . It must be configured together with the <b>IPv4Mask</b> column.
IPv4Mask	IPv4 subnet mask	N/A	String, dotted decimal notation.	Required when the <b>Type</b> column is <b>1</b> . It must be configured together with the <b>SubnetIPv4Address</b> column.
IPv4WildcardAddress	IPv4 wildcard address	N/A	String, dotted decimal notation.	N/A
IPv4WildcardMask	IPv4 wildcard mask	N/A	String, dotted decimal notation.	N/A
StartIPv4Address	Start IPv4 address	N/A	String, dotted decimal notation.	Required when the <b>Type</b> column is <b>2</b> . It must be configured together with the <b>EndIPv4Address</b> column.
EndIPv4Address	End IPv4 address	N/A	String, dotted decimal notation.	Required when the <b>Type</b> column is <b>2</b> . It must be configured together with the <b>StartIPv4Address</b> column.
HostIPv4Address	IPv4 address of the host	N/A	String, dotted decimal notation.	Required when the <b>Type</b> column is <b>3</b> .
HostName	Host name	N/A	String, case-insensitive. Length: 1 to 60 characters.	Required when the <b>Type</b> column is <b>4</b> .
NestedGroup	Name of the nested IPv4 address object group	N/A	String, case-insensitive. Length: 1 to 31 characters.	Required when the <b>Type</b> column is <b>0</b> .
VRFName	VPN instance name	N/A	String, case-sensitive. Length: 1 to 31 characters.	Valid only when the <b>Type</b> column is <b>4</b> and the <b>HostName</b> column is specified.
User	User	N/A	String.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 55 characters.	
UserDomain	User domain	N/A	String. Length: 1 to 255 characters.	N/A
UserGroup	User group	N/A	String. Length: 1 to 32 characters.	N/A
UserGroupDomain	User group domain	N/A	String. Length: 1 to 255 characters.	N/A

## OMS/IPv6Groups

This table contains IPv6 address object group information.

### XML structure

```

<OMS>
  <IPv6Groups>
    <Group>
      <Name></Name>
      <Description></Description>
      <SecurityZone></SecurityZone>
    </Group>
  </IPv6Groups>
</OMS>

```

### Table description

Item	Description
Feature name	OMS
Table name	IPv6Groups
Table type	Multi-instance table
Row name	Group
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
Name	Name of the IPv4 address object group	Index	String, case-insensitive. Length: 1 to 31 characters.
Description	Description for the IPv4 address object group	N/A	String. Length: 1 to 127 characters.
SecurityZone	Security zone name	N/A	String, Case-insensitive and contains no midline( - ). Length: 1 to 31 characters.

## OMS/IPv6Objs

This table contains IPv6 address object information.

## XML structure

```
<OMS>
  <IPv6Objs>
    <Obj>
      <Group></Group>
      <ID></ID>
      <Type></Type>
      <SubnetIPv6Address></SubnetIPv6Address>
      <IPv6PrefixLen></IPv6PrefixLen>
      <StartIPv6Address></StartIPv6Address>
      <EndIPv6Address></EndIPv6Address>
      <HostIPv6Address></HostIPv6Address>
      <HostName></HostName>
      <NestedGroup></NestedGroup>
      <User></User>
      <UserDomain></UserDomain>
      <UserGroup></UserGroup>
      <UserGroupDomain></UserGroupDomain>
    </Obj>
  </IPv6Objs>
</OMS>
```

## Table description

Item	Description
Feature name	OMS
Table name	IPv6Objs
Table type	Multi-instance table

Item	Description
Row name	Obj
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Group	Name of the IPv6 address object group	Index	String, case insensitive. Length: 1 to 31 characters.	N/A
ID	ID of the IPv6 address object	Index	Unsigned integer. Value range: 1 to 4294967295.	When you create an object with the ID 4294967295, the system automatically assigns the object an ID.
Type	Type of the IPv6 address object	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Nested group.</li> <li>• <b>1</b>—Subnet.</li> <li>• <b>2</b>—Range.</li> <li>• <b>3</b>—Host address.</li> <li>• <b>4</b>—Host name.</li> </ul>	Required.
SubnetIPv6Address	IPv6 subnet address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. Required when the <b>Type</b> column is <b>1</b> . It must be configured together with the <b>IPv6PrefixLen</b> column.
IPv6PrefixLen	Length of the IPv6 prefix	N/A	Unsigned integer. Value range: 1 to 128.	Required when <b>Subnet</b> the <b>Type</b> column is <b>1</b> . It must be configured together with the <b>SubnetIPv6Address</b> column.
StartIPv6Address	Start IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. Required when the <b>Type</b> column is <b>2</b> . It must be configured together with the <b>EndIPv6Address</b> column.
EndIPv6Address	End IPv6 address	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. Required when the <b>Type</b> column is <b>2</b> . It must be configured together with the <b>StartIPv6Address</b> column.

Column name	Column description	Column type	Data type and restrictions	Remarks
HostIPv6Address	IPv6 address of the host	N/A	Hexadecimal string, colon-separated.	Example: 1:1::1:1. Required when the <b>Type</b> column is <b>3</b> .
HostName	Host name	N/A	String. Length: 1 to 60 characters.	Required when the <b>Type</b> column is <b>4</b> .
NestedGroup	Name of the nested IPv6 address object group	N/A	String, case insensitive. Length: 1 to 31 characters.	Required when the <b>Type</b> column is <b>0</b> .
User	User	N/A	String. Length: 1 to 55 characters.	N/A
UserDomain	User domain	N/A	String. Length: 1 to 255 characters.	N/A
UserGroup	User group	N/A	String. Length: 1 to 32 characters.	N/A
UserGroupDomain	User group domain	N/A	String. Length: 1 to 255 characters.	N/A

## OMS/ServGroups

This table contains service object group information.

### XML structure

```

<OMS>
  <ServGroups>
    <Group>
      <Name></Name>
      <Description></Description>
    </Group>
  </ServGroups>
</OMS>

```

### Table description

Item	Description

Row name	Group
Restrictions	None

Item	Description
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
Name	Name of the service object group	Index	String, case insensitive. Length: 1 to 31 characters.
Description	Description for the service object group	N/A	String. Length: 1 to 127 characters.

## OMS/ServObjs

This table contains service object information.

## XML structure

```

<OMS>
  <ServObjs>
    <Obj>
      <Group></Group>
      <ID></ID>
      <Type></Type>
      <Protocol></Protocol>
      <StartSrcPort></StartSrcPort>
      <EndSrcPort></EndSrcPort>
      <StartDestPort></StartDestPort>
      <EndDestPort></EndDestPort>
      <ICMPType></ICMPType>
      <ICMPCode></ICMPCode>
      <NestedGroup></NestedGroup>
    </Obj>
  </ServObjs>
</OMS>

```

## Table description

Item	Description
Feature name	OMS
Table name	ServObjs
Table type	Multi-instance table
Row name	Obj

Item	Description
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Group	Name of the service object group	Index	String, case insensitive. Length: 1 to 31 characters.	N/A
ID	ID of the service object	Index	Unsigned integer. Value range: 0 to 4294967295.	When you create an object with the ID 4294967295, the system automatically assigns the object an ID.
Type	Type of the service object	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Nested group.</li> <li>1—Protocol. This type specifies protocols other than the listed ones.</li> <li>2—ICMP (protocol number 1).</li> <li>3—TCP (protocol number 6).</li> <li>4—UDP (protocol number 17).</li> <li>5—ICMPv6 (protocol number 58).</li> </ul>	Required.
Protocol	Protocol number	N/A	Unsigned integer. Value range: 0 to 255.	Required when the <b>Type</b> column is <b>1</b> .
StartSrcPort	Start source port number	N/A	Unsigned integer. Value range: 0 to 65535.	Required when the <b>Type</b> column is <b>3</b> or <b>4</b> . It must be configured together with the <b>EndSrcPort</b> column.
EndSrcPort	End source port number	N/A	Unsigned integer. Value range: 0 to 65535.	Required when the <b>Type</b> column is <b>3</b> or <b>4</b> . It must be configured together with the <b>StartSrcPort</b> column.
StartDestPort	Start destination port number	N/A	Unsigned integer. Value range: 0 to 65535.	Required when the <b>Type</b> column is <b>3</b> or <b>4</b> . It must be configured together with the <b>EndDestPort</b> column.
EndDestPort	End destination port number	N/A	Unsigned integer. Value range: 0 to 65535.	Required when the <b>Type</b> column is <b>3</b> or <b>4</b> . It must be configured together with the <b>StartDestPort</b> column.

Column name	Column description	Column type	Data type and restrictions	Remarks
ICMPType	Type of the ICMP message	N/A	Unsigned integer. Value range: 0 to 255.	Required when the <b>Type</b> column is <b>2</b> or <b>5</b> . It must be configured together with the <b>ICMPCode</b> column.
ICMPCode	Code of the ICMP message	N/A	Unsigned integer. Value range: 0 to 255.	Required when the <b>Type</b> column is <b>2</b> or <b>5</b> . It must be configured together with the <b>ICMPType</b> column.
NestedGroup	Name of the nested service object group	N/A	String, case insensitive. Length: 1 to 31 characters.	Required when the <b>Type</b> column is <b>0</b> .

## OMS/PortGroups

This table contains port object group information.

### XML structure

## Table description

Item	Description
Feature name	OMS
Table name	IPv6Paging
Table type	Multi-instance table
Row name	Group
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Name of the IPv6 address object group	Index	String. Length: 1 to 31 characters.	N/A
Description	Description for the IPv6 address object group	N/A	String. Length: 1 to 127 characters.	N/A
ObjNum	Number of IPv6 address objects	N/A	Unsigned integer.	N/A
InUse	Whether the IPv6 address object group is in use	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—The IPv6 address object group is in use.</li> <li><b>false</b>—The IPv6 address object group is not in use.</li> </ul>	N/A
SecurityZone	Security zone of the IPv6 address object group	N/A	String. Length: 1 to 31 characters.	N/A
ObjList	List of IPv6 address objects	Data structure	Members include: <ul style="list-style-type: none"> <li>ID.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>Type.</li> <li>SubnetIPv6Address.</li> <li>IPv6PrefixLen..</li> <li>StartIPv6Address.</li> <li>EndIPv6Address.</li> <li>HostIPv6Address.</li> <li>HostName.</li> <li>NestedGroup.</li> <li>User.</li> <li>UserDomain.</li> <li>UserGroup.</li> <li>UserGroupDomain.</li> <li>ExcludeIPv6Address.</li> </ul>	
ID	ID of the IPv6 address object	N/A	Unsigned integer. Value range: 0 to 4294967294.	N/A
Type	Type of the IPv6 address object	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—Nested group.</li> <li>1—Subnet.</li> <li>2—Range.</li> <li>3—Host address.</li> <li>4—Host name.</li> <li>5—User.</li> <li>6—User Group.</li> </ul>	N/A
SubnetIPv6Address	IPv6 subnet address	N/A	String, dotted decimal notation.	The value of this column is valid if Type is <b>1</b> .
IPv6PrefixLen	IPv6 prefix length	N/A	Unsigned integer. Value range: 1 to 128.	The value of this column is valid if Type is <b>1</b> .
StartIPv6Address	Start IPv6 address	N/A	String, dotted decimal notation.	The value of this column is valid if Type is <b>2</b> .
EndIPv6Address	End IPv6 address	N/A	String, dotted decimal notation.	The value of this column is valid if Type is <b>2</b> .
HostIPv6Address	IPv6 address of the host	N/A	String, dotted decimal notation.	The value of this column is valid if Type is <b>3</b> .
HostName	Host name	N/A	String.	The value of this column is

Column name	Column description	Column type	Data type and restrictions	Remarks
			Length: 1 to 60 characters.	valid if Type is <b>4</b> .
NestedGroup	Name of the nested IPv4 address object group	N/A	String. Length: 1 to 31 characters.	The value of this column is valid if Type is <b>0</b> .
User	Name of the user	N/A	String. Length: 1 to 55 characters.	N/A
UserDomain	Name of the user domain	N/A	String. Length: 1 to 255 characters.	N/A
UserGroup	Name of the user group	N/A	String. Length: 1 to 32 characters.	N/A
UserGroupDomain	Name of the user group domain	N/A	String. Length: 1 to 255 characters.	N/A
ExcludeIPv6Address	Excluded IPv6 address	N/A	String, dotted decimal notation.	N/A
AllGroupsCount	Number of IPv6 address groups	N/A	Unsigned integer.	N/A
InSecpUse	Whether the IPv6 address object group is used by Security policy	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—The IPv6 address object group is used by Security policy.</li> <li><b>false</b>—The IPv6 address object group is not used by Security policy.</li> </ul>	N/A
InNATUse	Whether the IPv6 address object group is used by NAT	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—The IPv6 address object group is used by NAT.</li> <li><b>false</b>—The IPv6 address object group is not used by NAT.</li> </ul>	N/A

## OMS/ServicePaging

This table contains information about service object groups and service objects.

## OMS

Message	Explanation
The object group name is used by an object group of different type. 存在同名不同类型的对象组。	Object group name is occupied by other types of object groups. 对象组名称被其他类型的对象组占用。
The default object group can't be modified. 系统定义对象组不能修改。	Modify system predefined object groups. 修改系统预定义的对象组。
The default object group can't be deleted. 系统定义对象组不能删除。	Delete system predefined object groups. 删除系统预定义的对象组。
Deleting the group failed: Wrong group type. 对象组类型不匹配。	The specified type is incorrect when deleting an object group. 删除对象组时指定类型错误。
This object group is already referenced. 对象组正在被使用。	Deleted object groups are referenced by other modules. 删除的对象组被其他模块引用。
The ID can't be automatically assigned. Please specify a valid ID. 自动分配的对象编号超出了范围，请指定一个有效的对象编号。	Create a rule without specifying a number, the number of internal assignments exceeds the maximum value. 不指定编号创建规则，内部分配的编号超过最大值。
An object group can't reference an object group of different type. 被嵌套对象组类型不一致。	Nested object group types are inconsistent with parent object group types. 嵌套的对象组类型与父对象组类型不一致。
Maximum number of reference hierarchy layers (5) already reached. 嵌套层数最大支持5层。	The object group to be nested is already the sixth layer. 将要嵌套的对象组已经是第六层。
Two object groups can't reference each other. 不能形成循环引用。	A nested sub-object group cannot nest its parent object group. 被嵌套的子对象组不能嵌套其父对象组。
Invalid mask. 无效的掩码。	The address mask entered is incorrect. 输入的地址掩码错误。
Maximum number of objects already reached. 对象组中对象的个数超过了限制。	Object group configuration rules reach the upper limit. 对象组配置的规则达到上限。
The object already exists. 此对象已经存在。	The newly created rule content is the same as the other rule content that already exists. 新创建的规则内容与已存在的其他规则内容相同。
This object group can't be referenced. 此对象组不可以被引用。	System predefined object group "any" cannot be nested. 系统预定义的对象组any不能被嵌套。

## openconfig-bgp/bgp/neighbors

This table contains bgp neighbors information.

## XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

## Table description

Item	Description
Feature name	openconfig-bgp
Table name	neighbors
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
neighbor	neighbor information	Sublist	N/A	For more information, see the bgp/neighbors/neighbor table.

## openconfig-bgp/bgp/neighbors/neighbor

This table contains bgp neighbors neighbor information.

# XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

## Table description

Item	Description
Feature name	openconfig-bgp
Table name	neighbor
Table type	Multi-instance table
Row name	neighbor
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
neighbor-address	Neighbor address	Index	String, IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
config	Config information	Subtable	N/A	For more information, see the bgp/neighbors/neighbor/config table.
timers	Timers information	Subtable	N/A	For more information, see the bgp/neighbors/neighbor/timers table.
apply-policy	Apply-policy information	Subtable	N/A	For more information, see the bgp/neighbors/neighbor/apply-policy table.
afi-safis	Afi-safis information	Subtable	N/A	For more information, see the bgp/neighbors/neighbor/afi-afis table.

# openconfig-bgp/bgp/neighbors/neighbor/config

This table contains bgp neighbors neighbor config information.

## XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

## Table description

Item	Description
Feature name	openconfig-bgp
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
neighbor-address	Neighbor address	Index	String, IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
enabled	Whether the BGP peer is enabled	N/A	Boolean: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>	N/A
peer-as	AS number of the peer	N/A	Unsigned integer. Value range: 1 to 4294967295	N/A
peer-group	The peer-group with which this neighbor is associated	N/A	String. Length: 1 to 16 characters.	N/A
auth-password	MD5 authentication password	N/A	String. Length: 1 to 80 characters.	N/A
send-community	Specify which types of community should be sent to the neighbor or group. The default is to not send the community attribute	N/A	Enumeration: <ul style="list-style-type: none"><li>1—STANDARD.</li><li>2—EXTENDED.</li><li>3—BOTH.</li><li>4—NONE.</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
description	textual description	N/A	String. Length: 1 to 79 characters.	N/A

## openconfig-bgp/bgp/neighbors/neighbor/state

This table contains bgp neighbors neighbor state information.

### XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

### Table description

Item	Description
Feature name	openconfig-bgp
Table name	state
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
neighbor-address	Neighbor address	Index	String,IPv4 address string or IPv6 address string.	Example: 1.1.1.1 or 1::1.
enabled	Whether the BGP peer is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	N/A
peer-as	AS number of the peer	N/A	Unsigned integer. Value range: 1 to 4294967295	N/A
session-state	Operational state of the BGP peer	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—IDLE</li> <li>2—CONNECT</li> <li>3—ACTIVE</li> <li>4—OPENSENT</li> <li>5—OPENCONFIRM</li> <li>6—ESTABLISHED</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
peer-group	The peer-group with which this neighbor is associated	N/A	String. Length: 1 to 16 characters.	N/A
auth-password	MD5 authentication password	N/A	String. Length: 1 to 80 characters.	N/A
send-community	Specify which types of community should be sent to the neighbor or group. The default is to not send the community attribute	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—STANDARD.</li> <li>• 2—EXTENDED.</li> <li>• 3—BOTH.</li> <li>• 4—NONE.</li> </ul>	N/A
description	textual description	N/A	String. Length: 1 to 79 characters.	N/A

## openconfig-bgp/bgp/neighbors/neighbor/timers

This table contains bgp neighbors neighbor timers information.

### XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

### Table description

Item	Description
Feature name	openconfig-bgp
Table name	timers
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
config	config information	Subtable	N/A	For more information, see the

Column name	Column description	Column type	Data type and restrictions	Remarks
				bgp/neighbors/neighbor/timers/config table.

## openconfig-bgp/bgp/neighbors/neighbor/timers/config

This table contains bgp neighbors neighbor timers config information.

### XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

### Table description

Item	Description
Feature name	openconfig-bgp
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
minimum-advertisement-interval	Minimum time which must elapse between subsequent UPDATE messages relating to a common set of NLRI being transmitted to a peer	N/A	Unsigned integer. Value range: 0 to 600	N/A

# openconfig-bgp/bgp/neighbors/neighbor/apply-policy

This table contains bgp neighbors neighbor apply-policy information.

## XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

## Table description

Item	Description
Feature name	openconfig-bgp
Table name	apply-policy
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
config	config information	Subtable	N/A	For more information, see the bgp/neighbors/neighbor/apply-policy/config table.

# openconfig-bgp/bgp/neighbors/neighbor/apply-policy/config

This table contains bgp neighbors neighbor apply-policy config information.

## XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

## Table description

Item	Description
Feature name	openconfig-bgp
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
import-policy	Import Route-Policy for Neighbor	N/A	String. Length: 1 to 63 characters.	N/A
export-policy	Export Route-Policy for Neighbor	N/A	String. Length: 1 to 63 characters.	N/A

## openconfig-bgp/bgp/neighbors/neighbor/afi-safis

This table contains bgp neighbors neighbor afi-safis information.

## XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

## Table description

Item	Description
Feature name	openconfig-bgp
Table name	afi-safis
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
afi-safi	afi-safi information	Sublist	N/A	For more information, see the bgp/neighbors/neighbor/afi-safis/afi-safi table.

## openconfig-bgp/bgp/neighbors/neighbor/afi-safis/afi-safi

This table contains bgp neighbors neighbor afi-safis afi-safi information.

## XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

## Table description

Item	Description
Feature name	openconfig-bgp
Table name	afi-safi
Table type	Multi-instance table
Row name	afi-safi
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
afi-safi-name	AFI,SAFI	Index	Enumeration: <ul style="list-style-type: none"><li>1—IPV4_UNICAST.</li><li>2—IPV6_UNICAST.</li><li>3—L3VPN_IPV4_UNICAST</li><li>4—L3VPN_IPV6_UNICAST</li><li>5—L2VPN_VPLS</li></ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>6—L2VPN_EVPN.</li> <li>7—IPV4_LABELED_UNICAST</li> <li>8—IPV6_LABELED_UNICAST</li> <li>9—L3VPN_IPV4_MULTICAST</li> <li>10—L3VPN_IPV6_MULTICAST</li> </ul>	
config	config information	Subtable	N/A	For more information, see the bgp/neighbors/neighbor/afi-safis/afi-safi/config table.
apply-policy	apply-policy information	Subtable	N/A	For more information, see the bgp/neighbors/neighbor/afi-safis/afi-safi/ apply-policy table.

## openconfig-bgp/bgp/neighbors/neighbor/afi-safis/afi-safi/config

This table contains bgp neighbors neighbor afi-safis afi-safi config information.

## XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

## Table description

Item	Description
Feature name	openconfig-bgp
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
afi-safi-name	AFI,SAFI	Index	Enumeration: <ul style="list-style-type: none"> <li>• 1—IPV4_UNICAST.</li> <li>• 2—IPV6_UNICAST.</li> <li>• 3—L3VPN_IPV4_UNICAST</li> <li>• 4—L3VPN_IPV6_UNICAST</li> <li>• 5—L2VPN_VPLS</li> <li>• 6—L2VPN_EVPN.</li> <li>• 7—IPV4_LABELED_UNICAST</li> <li>• 8—IPV6_LABELED_UNICAST</li> <li>• 9—L3VPN_IPV4_MULTICAST</li> <li>• 10—L3VPN_IPV6_MULTICAST</li> </ul>	N/A
enabled	indicates whether the AFI,SAFI is enabled	N/A	Boolean: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	N/A

## openconfig-bgp/bgp/neighbors/neighbor/afi-safis/afi-safi/apply-policy

This table contains bgp neighbors neighbor afi-safis afi-safi apply-policy information.

## XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

## Table description

Item	Description
Feature name	openconfig-bgp
Table name	apply-policy

Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
config	config information	Subtable	N/A	For more information, see the bgp/neighbors/neighbor/afi-safis/afi-safi/apply-policy/config table.

## openconfig-bgp/bgp/neighbors/neighbor/afi-safis/afi-safi/apply-policy/config

This table contains bgp neighbors neighbor afi-safis afi-safi apply-policy config information.

## XML structure

Please refer to the XML structure of openconfig-bgp/bgp.

## Table description

Item	Description
Feature name	openconfig-bgp
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
import-policy	Import Route-Policy for Neighbor	N/A	String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
export-policy	Export Route-Policy for Neighbor	N/A	String. Length: 1 to 63 characters.	N/A

# openconfig-if-ip

## openconfig-if-ip/ipv4

This table contains IPv4 address family configuration for interfaces.

### XML structure

```
<openconfig-if-ip>
  <ipv4>
    <addresses>
      <address>
        <ip></ip>
        <config>
          <ip></ip>
          <prefix-length></prefix-length>
        </config>
      </address>
    </addresses>
  </ipv4>
</openconfig-if-ip>
```

### Table description

Item	Description
Feature name	openconfig-if-ip
Table name	Ipv4
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
addresses	Enclose container for address list	Subtable	N/A	For more information, see the ipv4/addresses table.

# openconfig-if-ip/ipv4/addresses

This table contains information about enclosing container for address list.

## XML structure

Please refer to the XML structure of openconfig-if-ip/ipv4.

## Table description

Item	Description
Feature name	openconfig-if-ip
Table name	addresses
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
address	List of configured IPv4 addresses on the interface	sublist	N/A.	For more information, see the ipv4/addresses/address table.

# openconfig-if-ip/ipv4/addresses/address

This table contains IPv4 addresses config information.

## XML structure

Please refer to the XML structure of openconfig-if-ip/ipv4/addresses.

## Table description

Item	Description
Feature name	openconfig-if-ip
Table name	address
Table type	Multi-instance table
Row name	N/A

Item	Description
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ip	IPv4 address	index	String, dotted decimal	N/A
config	IPv4 address configuration information	Subtable	N/A	For more information, see the <a href="#">ipv4/addresses/address/config</a> table.

## openconfig-if-ipv4/addresses/address/config

This table contains IPv4 address configuration information.

## XML structure

Please refer to the XML structure of [openconfig-if-ipv4/addresses/address](#).

## Table description

Item	Description
Feature name	openconfig-if-ipv4
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ip	IPv4 address of the interface	index	String, dotted decimal.	N/A
prefix-length	Length of the subnet prefix	No	Unsigned integer. Value range: 1 to 32	N/A

# openconfig-if-ip/ipv6

This table contains IPv6 address family configuration for interfaces.

## XML structure

```
<openconfig-if-ip>
  <ipv6>
    <addresses>
      <address>
        <ip></ip>

Column name	Column description	Column type	Data type and restrictions	Remarks
interface	Interface table	Sublist	N/A	For more information, see the interfaces/intreface table.

## interfaces/interface

This table contains interfaces/interface information.

## XML structure

Please refer to the XML structure of interfaces.

## Table description

Item	Description
Feature name	openconfig-interfaces
Table name	interface
Table type	Multi-instance table
Row name	interface

Item	Description
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Full name of an interface	Index	String. Length: 2 to 47 characters.	Read-write.
config	Configuration item of interface	Subtable	N/A	For more information, see the interfaces/intreface/config table.
subinterfaces	Subinterfaces information of an interface	Sublist	N/A	For more information, see the interfaces/intreface/subinterfaces table.
ethernet	Ethernet of interface, ref-table to openconfig-vlan	Subtable	N/A	For more information, see the interfaces/intreface/ethernet table.

## interfaces/interface/config

This table contains interfaces/interface/config information.

## XML structure

Please refer to the XML structure of interfaces.

## Table description

Item	Description
Feature name	Openconfig-interfaces
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	NO

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Full name of an interface	Index	String. Length: 2 to 47 characters.	Reference to: interfaces/interface/name.  For logic interface, only Vlan-interface, Bridge-Aggregation, Route-Aggregation and Loopback interface are supported.
type	Interface type	N/A	Unsigned integer.	Read-write. Additional values for ifType are assigned by the Internet Assigned Numbers Authority (IANA), through updating the syntax of the IANA ifType textual convention.
mtu	Configured MTU of an interface	N/A	Unsigned integer.	Read-write. Applicable to only Layer 3 interfaces.
description	Interface description	N/A	String. Length: 1 to 255 characters. Default: <i>interface-name Interface</i> .	Read-write.
enabled	Enabling status of an interface	N/A	Boolean <ul style="list-style-type: none"> <li>0—Disabled</li> <li>1—Enabled</li> </ul>	Read-write.

				e/protocols/protocol/local-aggregates/aggregate table.

## openconfig-network-instance/network-instances/network-instance/protocols/protocol/local-aggregates/aggregate

This table contains aggregate information.

### XML structure

Please refer to the XML structure of openconfig-network-instance/network-instances.

### Table description

Item	Description
Feature name	openconfig-network-instance
Table name	aggregate
Table type	Single-instance table
Row name	aggregate
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
prefix	Prefix name	Index	IPv4 prefix: String, dotted decimal notation. Prefix length. Length: 1-18	IPv4 example: 1.1.1.1/24.
config	Configuration information	Subtable	N/A	For more information, see the network-instances/network-instance/protocols/protocol/local-aggregates/aggregate/config table.

# openconfig-network-instance/network-instances/network-instance/protocols/protocol/local-aggregates/aggregate/config

This table contains aggregate configuration information.

## XML structure

Please refer to the XML structure of openconfig-network-instance/network-instances.

## Table description

Item	Description
Feature name	openconfig-network-instance

Table type	Multi-instance table
Row name	config
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
identifier	An identifier for the OSPFv2 area, represented as either a 32-bit unsigned integer or a dotted-quad.	Index	String: Length: 1 to 42 characters	N/A

## openconfig-ospfv2/ospfv2/areas/area/interfaces/interface

This table contains OSPFv2 area interface information.

## XML structure

Please refer to the XML structure of openconfig-ospfv2/ospfv2.

## Table description

Item	Description
Feature name	OSPFv2
Table name	interface
Table type	Multi-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
id	A pointer to the identifier for the interface name	Index	String. Length: 1 to 42characters.	N/A
config	Configuration information	Subtable	N/A	For more information, see the ospfv2/areas/area/interfaces/interface/config.
timers	Timer information	Subtable	N/A	For more information, see the ospfv2/areas/area/interfaces/interface/timers.

## openconfig-ospfv2/ospfv2/areas/area/interfaces/interface/config

This table contains OSPFv2 area interface configuration information.

## XML structure

Please refer to the XML structure of openconfig-ospfv2/ospfv2.

## Table description

Item	Description
Feature name	OSPFv2
Table name	config
Table type	Multi-instance table
Row name	config
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
id	An operator-specified string used to uniquely identify this interface	Index	String: Length: 1 to 42 characters	N/A
network-type	The type of network that OSPFv2 must use for the specified interface.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—broadcast</li> <li>2—NBMA.</li> <li>3—P2P.</li> <li>4—P2MP.</li> <li>5—P2MP unicast</li> </ul>	N/A
priority	The local system's priority to become the designated router	N/A	Unsigned integer: Value range: 1 to 255	N/A
metric	The metric for the interface	N/A	Unsigned integer: Value range: 0 to 65535 for loopback interfaces; 1 to 65535 for other types of interfaces.	N/A
passive	When this leaf is set to true, the interface must be	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—The interface must be advertised within the</li> </ul>	N/A

	advertised within the OSPFv2 area but OSPFv2 adjacencies must not be established over the interface.		OSPFv2 area. <ul style="list-style-type: none"> <li><b>false</b>—The interface must not be advertised within the OSPFv2 area.</li> </ul>	
--	--	--	--	--

## openconfig-ospfv2/ospfv2/areas/area/interfaces/interface/timers/config

This table contains OSPFv2 area interface timer configuration information.

### XML structure

Please refer to the XML structure of openconfig-ospfv2/ospfv2.

### Table description

Item	Description
Feature name	OSPFv2
Table name	config
Table type	Multi-instance table
Row name	config
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
dead-interval	The number of seconds that the local system must let elapse before declaring a silent router down	N/A	Unsigned integer: Value range: 1 to 2147483647	N/A

hello-interval	The number of seconds that the local system waits between the transmissions of subsequent Hello packets.	N/A	Unsigned integer: Value range: 1 to 65535	N/A

Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
interface	Interface table	Sublist	N/A	For more information, see the openconfig-spanning-tree/stp/interfaces/interface table.

## openconfig-spanning-tree/stp/interfaces/interface

This table contains openconfig-spanning-tree/stp/interfaces/interface information.

## XML structure

See the XML structure of openconfig-spanning-tree/stp.

## Table description

Item	Description
Feature name	openconfig-spanning-tree
Table name	interface
Table type	Multi-instance table
Row name	interface
Restrictions	This table supports only Layer 2 Ethernet interfaces and Layer 2 aggregate interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Full name of an interface	Index	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	Read-write.
config	Configuration items of an interface	Sublist	N/A	For more information, see the openconfig-spanning-tree/stp/interfaces/interface/config table

## openconfig-spanning-tree/stp/interfaces/interface/config

This table contains openconfig-spanning-tree/stp/interfaces/interface/config information.

## XML structure

See the XML structure of openconfig-spanning-tree/stp.

## Table description

Item	Description
Feature name	openconfig-spanning-tree

Item	Description
Table name	config
Table type	Multi-instance table
Row name	interface
Restrictions	This table supports only Layer 2 Ethernet interfaces and Layer 2 aggregate interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Full name of an interface	Index	String. Length: 2 to 47 characters. Example: GigabitEthernet2/0/2	Read-write.
edge-port	Edge aggregate interface configuration	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Configures the interface as an edge aggregate interface. It should not be configured when loop protection is enabled.</li> <li><b>false</b>—Configures the interface as a non-edge aggregate interface (default).</li> </ul>	N/A

## openconfig-local-routing/local-routes/static-routes/static

This table contains static route information.

### XML structure

```
<static-routes xmlns="http://openconfig.net/yang/local-routing">
  <static>
    <prefix></prefix>
    <next-hops>
      <next-hop>
        <index></index>
        <config>
          <index></index>
          <next-hop></next-hop>
        </config>
        <interface-ref>
          <config>
            <interface></interface>
          </config>
        </interface-ref>
      </next-hop>
    </next-hops>
  </static>
</static-routes>
```

### Table description

Item	Description
Feature name	static-route

Item	Description
Table name	static
Table type	Multi-instance table
Row name	static
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
prefix	Destination prefix for the static route.	Index	String: Length: 1 to 46 characters	For example: 1.1.1.1/24
next-hops	Next hop information	Subtable	N/A	N/A

## openconfig-local-routing/local-routes/static-routes/static/next-hops/next-hop

This table contains next hop information.

## XML structure

Please refer to the XML structure of openconfig-local-routing/local-routes/static-routes/static.

## Table description

Item	Description
Feature name	static-route
Table name	next-hop
Table type	Multi-instance table
Row name	next-hop
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
index	An user-specified identifier used to uniquely identify the next-hop entry in the next-hop list. The value of this index has no semantic meaning other than for identifying the entry.	Index	String: Length: 1 to 93 characters.	N/A
config	Configuration information	Subtable	N/A	N/A
interface-ref	Interface information	Subtable	N/A	N/A

## openconfig-local-routing/local-routes/static-routes/static/next-hops/next-hop/config

This table contains next hop configuration information.

## XML structure

Please refer to the XML structure of openconfig-local-routing/local-routes/static-routes/static.

## Table description

Item	Description
Feature name	static-route
Table name	config
Table type	Multi-instance table

Item	Description
Row name	config
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
index	Destination prefix for the static route.	Index	String: Length: 1 to 93 characters.	N/A
next-hop	Next hop address	N/A	String: Length: 1 to 46 characters.	N/A

## openconfig-local-routing/local-routes/static-routes/static/next-hops/next-hop/interface-ref/config

This table contains next hop interface configuration information.

## XML structure

Please refer to the XML structure of openconfig-local-routing/local-routes/static-routes/static.

# openconfig-vlan

## vlan

This table contains basic VLAN information.

## XML structure

```
<vlans>
  <vlan>
    <vlan-id></vlan-id>
    <config>
      <vlan-id></vlan-id>
      <name></name>
      <tpid></tpid>
    </config>
  </vlan>
</vlans>
```

## Table description

Item	Description
Feature name	openconfig-vlan
Table name	vlan
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
vlan	Vlan information	Sublist	N/A	For more information, see the vlans/vlan table.

## vlans/vlan

This table contains basic VLAN configuration information.

## XML structure

Please refer to the XML structure of vlans.

## Table description

Item	Description
Feature name	openconfig-vlan
Table name	vlan
Table type	Multi-instance table
Row name	vlan
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
vlan-id	Vlan id	Index	Unsigned integer. Value range: 1 to 4094.	Read-write
config	Vlan config information	Subtable	N/A	For more information, see the vlans/config table.

## vlans/vlan/config

This table contains basic VLAN configuration information.

## XML structure

Please refer to the XML structure of vlans.

## Table description

Item	Description
Feature name	openconfig-vlan
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	None
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
vlan-id	Vlan id	Index	Unsigned integer. Value range: 1 to 4094.	Refer to vlans vlan-id.
name	Vlan name	N/A	String. Length: 1 to 32 characters. Default: <b>vlan</b> <i>vlan-id</i> . The <i>vlan id</i> argument uses the four-digit form. If the VLAN ID has less than four digits, leading zeros are added.	Read-write. Example: VLAN 0001.
tpid	Tag protocol identifier field	N/A	Unsigned integer. Value range: 1 to 65535.	Read-write. Default TPID_0x8100

批注 [Is1]: Need confirmed by product.

## switched-vlan

This table contains basic switched-vlan information.

## XML structure

```
<openconfig-vlan>
  <switched-vlan>
    <config>
      <interface-mode></interface-mode>
      <native-vlan></native-vlan>
      <access-vlan></access-vlan>
      <trunk-vlans></trunk-vlans>
    </config>
  </switched-vlan>
</openconfig-vlan>
```

## Table description

Item	Description
Feature name	openconfig-vlan
Table name	switched-vlan
Table type	Single-instance table
Row name	N/A
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
config	Switched-vlan configuration information	Subtable	N/A	For more information, see the switched-vlan/config table.

## switched-vlan/config

This table contains basic switched-vlan configuration information.

## XML structure

Please refer to the XML structure of switched-vlan.

## Table description

Item	Description
Feature name	openconfig-vlan
Table name	config
Table type	Single-instance table
Row name	N/A
Restrictions	This table supports only Layer 2 interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
interface-mode	Set the interface mode to access or trunk for VLANs.	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>TRUNK.</b></li><li>• <b>ACCESS.</b></li></ul>	Read-write.
native-vlan	Set the port VLAN ID (PVID) for untagged frames arriving on a trunk interface.	N/A	Value range: 1 to 4094.	Read-write. You can configure this column when the interface-mode is set to TRUNK.

Column name	Column description	Column type	Data type and restrictions	Remarks
access-vlan	Port VLAN ID	N/A	Value range: 1 to 4094.	Read-write. You can config this columns when interface-mode is set to "ACCESS"
trunk-vlans	List of permitted VLANs on the port	N/A	Number string. It is a comma-separated list of VLAN items. An item can be an individual VLAN ID or a VLAN ID range. Use a hyphen (-) to separate the start and end VLANs of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Read-write. You can config this columns when interface-mode is set to "TRUNK". Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit. You can sign the flag like "<PermitVlanList base:incremental=true">". If the value is true, the vlan list will be added or removed. Otherwise, it is the final result.

## OFP/RefreshIpFlow

This table is used to refresh ip flow table of an OFP instance.

### XML structure

```
<OFP>
  <RefreshIpFlow>
    <Application>
      <InstanceID></InstanceID>
      <Refresh></Refresh>
    </Application>
  </RefreshIpFlow>
</OFP>
```

### Table description

Item	Description
Feature name	OFP
Table name	RefreshIpFlow
Table type	Multi-instance table
Row name	Application
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
InstanceID	Instance ID	Index	Unsigned integer. Value range: 1 to 4094.	You must specify this column.
Refresh	Refresh IP flow table	N/A	This column must be empty	Required.

## OFP/Packet

This table is used to send packet-out messages.

### XML structure

```
<OFP>
  <Packet>
```

```

<Application>
  <InstanceID></InstanceID>
  <Value></Value>
  <OffsetType></OffsetType>
  <OffsetLen></OffsetLen>
  <OffsetValue></OffsetValue>
  <EnableLocalFlow></EnableLocalFlow>
  <Packetout></Packetout>
</Application>
</Packet>
</OFP>

```

## Table description

Item	Description
Feature name	OFP
Table name	Packet
Table type	Multi-instance table
Row name	Application
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
InstanceID	Instance ID	Index	Unsigned integer. Value range: 1 to 4094.	You must specify this column.
Value	Values that need to be matched	N/A	Unsigned integer. Value range: 1 to 8388606.	Required. Only supports OffsetType 1,OffsetLen 29,match value 3 bytes.
OffsetType	The type of offset match	N/A	Unsigned integer. Value range: 0 to 2. <ul style="list-style-type: none"> <li><b>0</b>—The offset match is calculated from the Ethernet header.</li> <li><b>1</b>—The offset match is calculated from the IP header.</li> <li><b>2</b>—The offset match is calculated from the TCP/UDP header.</li> </ul>	Required. Only support type 2.
OffsetLen	Offset length	N/A	Unsigned integer.	Required. Only support 25 and 75.
OffsetValue	Offset value	N/A	Base64 binary. Value range: 1 to 32.	Required. Only support 4 bytes.

Column name	Column description	Column type	Data type and restrictions	Remarks
EnableLocalFlow	Enable local table entry	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Yes.</li> <li>• <b>false</b>—No (default).</li> </ul>	Required.
Packetout	Packet-out message	N/A	Base64 binary. Value range: 1 to 255.	Requires an existing instance and existing local table entries.

## Table description

Item	Description
Feature name	OFP
Table name	LogicalSwitches
Table type	Multi-instance table
Row name	LogicalSwitch
Restrictions	No
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
InstanceID	Instance ID	Index	Unsigned integer. <ul style="list-style-type: none"><li>• <b>Value range: 1-4094.</b></li></ul>
Description	Description of instance	N/A	String. <ul style="list-style-type: none"><li>• Length: 1 to 255 characters.</li></ul> Default is empty.
DatapathID	DatapathID of instance	N/A	Unsigned integer64. <ul style="list-style-type: none"><li>• Value range: 1 to <math>2^{64}-1</math>.</li></ul> Default: Instance ID for high 16 bits, Bridge MAC for low 48 bits.
Enable	Enable status of instance	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Yes.</li><li>• <b>false</b>—No(Default).</li></ul>
Capabilities	Capabilities of instance	Data structure	Members include: <ul style="list-style-type: none"><li>• MaxEntries.</li><li>• DynamicMacAware.</li><li>• MacLearning.</li><li>• TableMissDefaultPermit.</li><li>• ForbiddenPort.</li><li>• PermitPort.</li><li>• DynamicArpPre.</li><li>• TcpNsr.</li></ul>
MaxEntries	Maximum number of flow entry in instance	N/A	Unsigned integer. <ul style="list-style-type: none"><li>• <b>Value range: Depends on device type.</b></li></ul> Default value depends on device type.
DynamicMacAware	Enable to query state of dynamic mac addresses	N/A	Boolean: <ul style="list-style-type: none"><li>• <b>true</b>—Yes.</li><li>• <b>false</b>—No(Default).</li></ul>
MacLearning	Enable mac learning in	N/A	Boolean:

Column name	Column description	Column type	Data type and restrictions
	instance		<ul style="list-style-type: none"> <li><b>true</b>—Yes(Default).</li> <li><b>false</b>—No.</li> </ul>
TableMissDefaultPermit	Assign “Permit” as the default table miss action of instance	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes.</li> <li><b>false</b>—No(Default).</li> </ul>
ForbiddenPort	Port type to be forbidden reporting port status to controller	N/A	Unsigned integer. 1st bit for VLAN interface. 2nd bit for VSI interface. 3rd bit for ROUTE interface. Default is 0.
PermitPort	Permit reporting ports of specific type	N/A	Unsigned integer. 1st bit for LAGG interface. Default is 0.
DynamicArpPre	Dynamic ARP will replace the conflicting openflow ARP	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes.</li> <li><b>false</b>—No(Default).</li> </ul>
TcpNsr	Enable controller tcp nsr in instance	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Yes(Default).</li> <li><b>false</b>—No.</li> </ul>
Resources	Resources of instance	Data structure	Members include: <ul style="list-style-type: none"> <li>ClassificationType.</li> <li>ClassificationVLAN.</li> <li>ClassificationVLANMask.</li> <li>ClassificationVLANLoosen.</li> <li>InbandManagementVLANList.</li> <li>MACIPTableIDList.</li> <li>MPLSTableIDList.</li> <li>ExtensibilityFlowTableIDList.</li> </ul>
ClassificationType	Classification type of instance	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—VLANMask.</li> <li><b>2</b>—Global.</li> </ul> Default is not configured.
ClassificationVLAN	VLAN value when the type of classification is VLANMask	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>Value <b>range: 1-4094</b>.</li> </ul> Default is not configured. Classification VLAN can be configured only when the value of classification type is VLANMASK.
ClassificationVLANMask	VLAN mask value when the type of classification is VLANMask	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>Value <b>range: 0-4095</b>.</li> </ul> Default is not configured. Classification VLAN mask can be configured only when the value of classification type is VLANMASK.
ClassificationVLANLoosen	Loosen mode	N/A	Boolean:

Column name	Column description	Column type	Data type and restrictions
	when the type of classification is VLANMask		<ul style="list-style-type: none"> <li><b>true</b>—Yes.</li> <li><b>false</b>—No(Default).</li> </ul>
InbandManagementVLANList	In band management VLAN list of the instance	N/A	Number string. It is a comma-separated list of VLAN items. <ul style="list-style-type: none"> <li>The string must not end with a comma or hyphen, or include any whitespace characters.</li> </ul> Default is not configured.
MACIPTableIDList	MAC-IP table ID configuration of the instance	N/A	Number string. It is a comma-separated list of table ID items. <ul style="list-style-type: none"> <li>The string must not end with a comma or hyphen, or include any whitespace characters.</li> </ul> Default is not configured.
MPLSTableIDList	MPLS table ID configuration of the instance	N/A	Number string. It is a comma-separated list of table ID items. The string must not end with a comma or hyphen, or include any whitespace characters. Default is not configured.
ExtensibilityFlowTableIDList	Extensibility table ID configuration of the instance	N/A	Number string. It is a comma-separated list of table ID items. <ul style="list-style-type: none"> <li>The string must not end with a comma or hyphen, or include any whitespace characters.</li> </ul> Default is 0.
ConnectionCfg	Configuration of connection in instance	Data structure	Members include: <ul style="list-style-type: none"> <li>ConnectionMode.</li> <li>ConnectionInterval.</li> <li>EchoInterval.</li> <li>LostConnectionBehavior.</li> <li>TcpDscp.</li> <li>ForbiddenPktInArpCtrl.</li> </ul>
ConnectionMode	Connection mode for controller in instance	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Parallel(Default).</li> <li><b>1</b>—Serially.</li> </ul>
ConnectionInterval	Connection retry interval for connection with controller in instance	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>Value <b>range: 1-120</b>.</li> </ul> Default is 60.
EchoInterval	Interval time value of echo packet sending to controller in	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>Value <b>range: 1-10</b>.</li> </ul> Default is 5.

Column name	Column description	Column type	Data type and restrictions
	instance		
LostConnectionBehavior	Behavior for connection failure with all controllers in instance	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Standalone.</li> <li>2—Secure.</li> <li>4—<b>Smart</b></li> </ul> <b>Default is secure mode.</b>
TcpDscp	Set the DSCP value for OpenFlow messages in an OpenFlow instance	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>Value range: 0-63.</li> </ul> Default is 10.
ForbiddenPktInArpCtrl	Specify controllers to which ARP packets are forbidden to be sent	N/A	Unsigned integer64. 1st bit for controller 0. 2nd bit for controller 1. 3rd bit for controller 2. ..... 63rd bit for controller 62. 64th bit for controller 63. Default is 0.
DataPlane	Enable the data forwarding plane feature in an instance	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enabled.</li> <li><b>false</b>—Disabled.</li> </ul>

## OFP/Controller

This table contains information about OpenFlow controllers.

### XML structure

```

<OFP>
  <Controllers>
    <Controller>
      <InstanceID></InstanceID>
      <ControllerID></ControllerID>
      <IPv4Address></IPv4Address>
      <IPv6Address></IPv6Address>
      <Port></Port>
      <LocalIPv4Address></LocalIPv4Address>
      <LocalIPv6Address></LocalIPv6Address>
      <LocalPort></LocalPort>
      <Protocol></Protocol>
      <VRF></VRF>
      <SSLPolicy></SSLPolicy>
    </Controller>
  </Controllers>

```

</OFP>

## Table description

Item	Description
Feature name	OFP
Table name	Controllers
Table type	Multi-instance table
Row name	Controller
Restrictions	Row creation is allowed only when the instance exists.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions
InstanceID	Instance ID	Index	Unsigned integer. • <b>Value range: 1-4094.</b>
ControllerID	Controller ID	Index	Unsigned integer. <b>Value range: 0-63.</b>
IPv4Address	Controller's IPv4 address	N/A	String, dotted decimal notation. Default is not configured.
IPv6Address	Controller's IPv6 address	N/A	String, semicolon hex notation. Default is not configured.
Port	Controller's port	N/A	Unsigned integer. • <b>Value range: 1-65535.</b> Default is 6633.
LocalIPv4Address	Local IPv4 address for connection with controller	N/A	String, dotted decimal notation. Default is not configured.
LocalIPv6Address	Local IPv6 address for connection with controller	N/A	String, semicolon hex notation. Default is not configured.
LocalPort	Local port for connection with controller	N/A	Unsigned integer. • <b>Value range: 1-65535.</b> Default is not configured.
Protocol	Protocol used for connection with controller	N/A	Enumeration: • <b>1</b> —TCP(Default). • <b>2</b> —SSL
VRF	VRF name for VPN connection with controller	N/A	String. Length: 1 to 31 characters. Default is not configured.
SSLPolicy	SSL policy name for SSL connection with controller	N/A	String, case insensitive. Length: 1 to 31 characters. Default is not configured.

Column name	Column description	Column type	Data type and restrictions
			SSL policy can be configured only when the value of protocol is SSL.

## OFP/GlobalConfigurations

This table contains information about OpenFlow global configurations.

### XML structure

```
<OFP>
  <GlobalConfigurations>
    <NormalForwardVLANList></NormalForwardVLANList>
  </GlobalConfigurations>
</OFP>
```

### Table description

Item	Description
Feature name	OFP
Table name	GlobalConfigurations
Table type	Single-instance table
Row name	N/A
Restrictions	This table supports only global configurations.
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions
NormalForwardVLANList	Normal forwarding VLAN list	N/A	Number string. It is a comma-separated list of VLAN items. The string cannot end with a comma or hyphen, or include any whitespace characters. Default is not configured.

Configuration of multiple MAC-IP flow table ID is not supported. 暂不支持配置多个MAC-IP流表ID	Only one MAC-IP flow table ID can be supported. 只能配置一个MAC-IP流表ID。
Configuration of multiple multiple Extensibility flow table ID is not supported. 暂不支持配置多个Extensibility流表ID。	Only one extensibility flow table ID can be supported. 只能配置一个Extensibility流表ID。
The MAC-IP TableID is not legal. MAC-IP流表ID的值不合法。	The value of MAC-IP Tabled ID is only number and the MAC-IP table ID should be in the range of 0-254. MAC-IP流表ID的值只能是数字且范围是0-254。 .
Extensibility table ID and MAC-IP table ID should be in the range of 0-254. 扩展流表和MAC-IP流表的ID必须在0-254范围内。	The MAC-IP table ID and Extensibility table ID should be in the range of 0-254. 扩展流表和MAC-IP流表的ID应该在0-254范围内。
Can not delete the configuration of Vlan ID when the type is VLAN Mask. 类型为VLAN掩码时不允许删除VLAN ID。	If instance type is VLAN Mask ,the VLAN ID is not allowed to be deleted when an instance table is deleted、removed、replaced. 在对实例表进行delete、remove、replace时，如果实例类型是VLAN掩码则不允许删除VLAN ID
MAC-IP table ID and extensibility table ID should be deleted together. MAC-IP流表和扩展流表必须一起删除。	If the table type is MAC-IP table,,the MAC-IP table should be deleted with the extensibility table when an instance table is deleted、removed、replaced. 在对实例表进行delete、remove、replace时，如果流表类型是MAC-IP表，则MAC-IP表应该和扩展表一起删除。
Extensibility Flow table ID should be larger than MAC-IP table ID. 扩展流表ID必须大于MAC-IP流表ID。	MAC-IP table ID should be less than extensibility flow table ID. MAC-IP流表的ID不能大于扩展流表的ID。
The instance is already active, please deactivate instance first. 实例已经激活，请首先去激活。	Modify the activated instance configuration is not allowed when the instance has been activated. 实例已经被激活，不允许去修改已经激活的配置。
Queue wait timeout. 队列等待超时。	Read queue failure 读取队列失败
The operation of instance activation/deactivation is running, please try later. 实例激活和去激活的操作正在运行中，请稍后尝试。	The operation of instance activation/deactivation is running. 实例激活或者去激活的操作正在进行。
Failed to activate instance, please configure classification first. 激活实例请先配置实例类型。	Please configure classification first before activate instance. 激活实例之前请先配置实例类型。
No openflow instance exists. 没有OpenFlow实例存在。	No openflow instance exists. 没有OpenFlow实例存在。

## OFP/Controller

Message	Explanation
Please configure IPV4 or IPV6 unicast address.	IPV4 or IPV6 unicast address should be configured when the

请配置IPv4或IPv6的单播地址。	controller is created. 当创建控制器配置的时候，IPV4或者IPV6的单播地址应该被设置。
The instance does not exist. 指定的实例不存在。	The instance ID does not exist. 指定的实例不存在。
The specified controller can not be modified. 不支持修改控制器配置。	The specified controller is already exist when the current controller is create;the current controller has the same configure with others when the current controller is merged;the current controller is not line deletion when controller is deleted、removed. 控制器进行merge操作时，存在重复配置；进行creat操作时，指定的控制器已经存在；delete和remove操作时不是行删除。
SSL policy should not be specified when the value of protocol is TCP. 当使用TCP连接控制器时，不能配置SSL策略。	When the value of protocol is TCP ,ssl policy should not be specified. 当使用TCP连接控制器时，不能配置SSL策略。
SSL policy should be specified when the value of protocol is SSL. 当使用SSI连接控制器时，必须配置SSL策略。	When the value of protocol is SSL ,ssl policy should be specified. 当使用SSI连接控制器时，必须配置SSL策略。
Local IPv4 and IPv6 address can not be configured at the same time. 本地IPv4和IPv6地址不能同时配置。	Local IPv4 and IPv6 address can not be configured at the same time. 本地IPv4和IPv6地址不能同时配置。
IPv4 or IPv6 address must be configured. 配置控制器时必须指定IPv4或IPv6地址。	IPv4 or IPv6 address must be configured. 配置控制器时必须指定IPv4或IPv6地址。
The value of local IPv4 or IPv6 address should be configured when Local port is specified. 配置本地端口时必须指定本地IPV4或IPV6地址。	When Local port is specified, the value of local IPv4 or IPv6 address should be configured. 配置本地端口时必须指定本地IPV4或IPV6地址。
The specified controller ID exists. 指定的控制器号已经存在。	Cannot conflict with existing controller ID when creating controller configuration. 创建控制器配置时不能与已有的控制器ID冲突。
OpenFlow controller configuration conflicts with other one. 指定控制器的配置和其他控制器冲突。	The current controller configuration cannot config with other controllers when the current controller is created. 当控制器进行creat操作时，当前控制器的配置不能与其他控制相冲突。

## OFP/GlobalConfigurations

Message	Explanation
The global instance and VLAN instance can't take effect simultaneously. 全局实例和VLAN实例不可同时生效。	The global instance and VLAN instance can't be activated simultaneously. 全局实例和VLAN实例不可同时被激活生效。
This global classification already exists. 全局配置已经存在。	The current global classification conflict with others. 当前的全局配置与其他实例配置冲突。

# OSPF

## OSPF/Instances

This table contains OSPF instance information.

### XML structure

```
<OSPF>
  <Instances>
    <Instance>
      <Name></Name>
      <VRF></VRF>
      <RouterId></RouterId>
    </Instance>
  </Instances>
</OSPF>
```

### Table description

Item	Description
Feature name	OSPF
Table name	Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	It must be an unsigned integer in the range of 1 to 65535.
VRF	VRF name.	N/A	String. Length: 1 to 31 characters.	After an instance is created, its VRF cannot be modified.
RouterId	Router identifier.	N/A	String, dotted decimal notation.	After this column is created or merged, it cannot be deleted or removed.

# OSPF/Redistributes

This table contains OSPF redistribute list information.

## XML structure

```
<OSPF>
  <Redistributes>
    <Redist>
      <Name></Name>
      <TopoId></TopoId>
      <Protocol></Protocol>
      <RedistName></RedistName>
    </Redist>
  </Redistributes>
</OSPF>
```

## Table description

Item	Description
Feature name	OSPF
Table name	Redistributes
Table type	Multi-instance table
Row name	Redist
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create redistribute lists for it.  It must be an unsigned integer in the range of 1 to 65535.
Topold	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127. Default: 0.	Only 0 is supported now.
Protocol	Redistribute protocol.	Index	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>1—Direct.</li> <li>2—Static.</li> <li>3—RIP.</li> <li>4—OSPF.</li> <li>5—ISIS.</li> <li>6—BGP.</li> </ul>	
RedistName	Redistribute instance name.	Index	String. Length: 1 to 31 characters.	It must be empty when the <b>Protocol</b> column is Direct, Static, or BGP.

## OSPF/Areas

This table contains OSPF area information.

### XML structure

```

<OSPF>
  <Areas>
    <Area>
      <Name></Name>
      <AreaId></AreaId>
      <AreaType></AreaType>
    </Area>
  </Areas>
</OSPF>

```

### Table description

Item	Description
Feature name	OSPF
Table name	Areas
Table type	Multi-instance table
Row name	Area
Restrictions	None
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before

Column name	Column description	Column type	Data type and restrictions	Remarks
				you merge or create areas for it. It must be an unsigned integer in the range of 1 to 65535.
AreaId	Area ID.	Index	String, dotted decimal notation.	N/A
AreaType	Area type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Stub.</li> <li>2—NSSA.</li> </ul>	You cannot specify AreaType when AreaId is 0.

## OSPF/Networks

This table contains OSPF network list information.

### XML structure

```

<OSPF>
  <Networks>
    <Network>
      <Name></Name>
      <AreaId></AreaId>
      <NetworkAddr></NetworkAddr>
      <WildcardMask></WildcardMask>
    </Network>
  </Networks>
</OSPF>

```

### Table description

Item	Description
Feature name	OSPF
Table name	Networks
Table type	Multi-instance table
Row name	Network
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance and an area before you merge or create networks for it.  It must be an unsigned integer in the range of 1 to 65535.
Areald	Area ID.	Index	String, dotted decimal notation.	N/A
NetworkAddr	Network address.	Index	String, dotted decimal notation.	N/A
WildcardMask	Wildcard mask.	N/A	String, dotted decimal notation.	N/A

## OSPF/Interfaces

This table contains OSPF interface information.

## XML structure

```

<OSPF>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <IfEnable>
        <Name></Name>
        <AreaId></AreaId>
        <ExcludedSubIp></ExcludedSubIp>
      </IfEnable>
      <Cost></Cost>
      <NetworkType></NetworkType>
      <HelloTimer></HelloTimer>
      <DeadTimer></DeadTimer>
      <DrPriority></DrPriority>
      <SimpleAuth>
        <SimplePwdType></SimplePwdType>
        <SimplePwd></SimplePwd>
      </SimpleAuth>
      <NullAuth></NullAuth>
      <BfdEnable></BfdEnable>
      <PrefixSid>
        <SidName></SidName>
        <SidType></SidType>
      </PrefixSid>
    </Interface>
  </Interfaces>
</OSPF>

```

```

<Sid></Sid>

<ExplicitNull></ExplicitNull>

<NFlagClear></NFlagClear>

</PrefixSid>

</Interface>
</Interfaces>
</OSPF>

```

## Table description

Item	Description
Feature name	OSPF
Table name	Interfaces
Table type	Multi-instance table
Row name	Interface
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
IfEnable	Interface enable messages.	Data structure	Members include: <ul style="list-style-type: none"> <li>Name.</li> <li>Areald.</li> <li>ExcludedSubIp.</li> </ul>	The members of Name and Areald must be specified.
Name	Instance name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	It must be an unsigned integer in the range of 1 to 65535.
Areald	Area ID.	N/A	String, dotted decimal notation.	N/A
ExcludedSubIp	Whether to exclude secondary IP addresses.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Excludes secondary IP addresses.</li> <li><b>false—Does not</b> exclude secondary IP addresses (default).</li> </ul>	N/A
Cost	Interface cost.	N/A	Unsigned integer.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: <ul style="list-style-type: none"> <li>• Loopback interfaces: 0 to 65535.</li> <li>• Other interfaces: 1 to 65535.</li> </ul> Default: <ul style="list-style-type: none"> <li>• Loopback interfaces: 0.</li> <li>• Other interfaces: The cost values are calculated by using the formula: <i>Cost = Reference bandwidth value / Expected interface bandwidth.</i></li> </ul>	
NetworkType	Interface network type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—Broadcast.</li> <li>• 2—NBMA.</li> <li>• 3—P2P.</li> <li>• 4—P2MP.</li> <li>• 5—P2MP unicast.</li> </ul>	N/A
HelloTimer	Hello interval.	N/A	Unsigned integer. Value range: 1 to 65535.	N/A
DeadTimer	Dead interval.	N/A	Unsigned integer. Value range: 1 to 2147483647.	N/A
DrPriority	Router priority.	N/A	Unsigned integer. Value range: 0 to 255. Default: 1.	N/A
SimpleAuth	Simple authentication messages.	Data structure	Members include: <ul style="list-style-type: none"> <li>• SimplePwdType.</li> <li>• SimplePwd.</li> </ul>	The members must both be specified when SimplePwdType is not None.
SimplePwdType	Simple password type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—Cipher.</li> <li>• 2—Plain.</li> <li>• 3—None.</li> </ul>	OSPF will use empty string to authenticate packets when SimplePwdType is None.
SimplePwd	Simple password.	N/A	String. Length: <ul style="list-style-type: none"> <li>• 1 to 8 characters for plain password.</li> <li>• 33 to 41 characters for cipher password.</li> </ul>	It will not take effect when SimplePwdType is None.
NullAuth	Whether to use no authentication.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Use no authentication.</li> <li>• <b>false</b>—Do not use no authentication.</li> </ul>	SimpleAuth cannot be specified and the simple or cryptographic authentication configuration will be deleted when NullAuth is true.
BfdEnable	BFD is enabled for	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—Enable control</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	OSPF.		packet mode. <ul style="list-style-type: none"> <li><b>2</b>—Enable echo packet mode.</li> </ul>	
PrefixSid	Prefix Segment ID messages.	Data structure	Members include: <ul style="list-style-type: none"> <li>SidName.</li> <li>SidType.</li> <li>Sid.</li> <li>ExplicitNull.</li> <li>NFlagClear.</li> </ul>	The members of SidName, SidType and Sid must be specified.
SidName	Instance name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	It must be an unsigned integer in the range of 1 to 65535.
SidType	The type of Prefix-SID	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Absolute value of Prefix-SID.</li> <li><b>2</b>—Index value of Prefix-SID.</li> </ul>	N/A
Sid	Prefix Segment ID	N/A	Unsigned integer. Value range: 0 to 1048575.	N/A
ExplicitNull	Explicit null label	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—The upstream neighbor replaces the prefix SID with an explicit null label.</li> <li><b>false</b>—The upstream neighbor does not replace the prefix SID with an explicit null label (default).</li> </ul>	N/A
NFlagClear	Clear the N-flag	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Clears the N-flag for the prefix SID.</li> <li><b>false</b>—Does not clear the N-flag for the prefix SID (default).</li> </ul>	N/A

## OSPF/IfMd5s

This table contains OSPF interface cryptographic authentication information.

### XML structure

```

<OSPF>
  <IfMd5s>
    <Md5>
      <IfIndex></IfIndex>
      <KeyId></KeyId>
      <Md5Type></Md5Type>
    </Md5>
  </IfMd5s>
</OSPF>

```

```

    <PasswordType></PasswordType>
    <Password></Password>
  </Md5>
</IfMd5s>
</OSPF>

```

## Table description

Item	Description
Feature name	OSPF
Table name	IfMd5s
Table type	Multi-instance table
Row name	Md5
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
KeyId	Key ID.	Index	Unsigned integer. Value range: 1 to 255.	OSPF will use empty string to authenticate packets when KeyId is empty. Other Md5 configuration will be deleted when you create, merge or replace a Md5 that KeyId is empty. Empty string authentication configuration will be deleted when you create, merge or replace a Md5 that KeyId is not empty.

Column name	Column description	Column type	Data type and restrictions	Remarks
Md5Type	Cryptographic authentication type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—MD5.</li> <li>2—HMAC-MD5.</li> <li>3—HMAC-SHA-256.</li> </ul>	After a Md5 is created, its Md5Type cannot be modified when KeyId is not empty.
PasswordType	Password type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—Cipher.</li> <li>2—Plain.</li> </ul>	After a Md5 is created, its PasswordType cannot be modified. It will not take effect when KeyId is empty.
Password	Password.	N/A	String. Length: <ul style="list-style-type: none"> <li>1 to 16 characters for MD5/HMAC-MD5 plain password, and 1 to 255 characters for HMAC-SHA-256 plain password.</li> <li>33 to 53 characters for MD5/HMAC-MD5 cipher password, and 33 to 373 characters for HMAC-SHA-256 cipher password.</li> </ul>	After a Md5 is created, its Password cannot be modified. It will not take effect when KeyId is empty.

## OSPF/Preferences

This table contains OSPF preference information.

### XML structure

```

<OSPF>
  <Preferences>
    <Preference>
      <Name></Name>
      <TopoId></TopoId>
      <Type></Type>
      <Value></Value>
      <PolicyName></PolicyName>
    </Preference>
  </Preferences>
</OSPF>

```

## Table description

Item	Description
Feature name	OSPF
Table name	Preferences
Table type	Multi-instance table
Row name	Preference
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create areas for it. It must be an unsigned integer in the range of 1 to 65535.
Topold	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127. Default: 0.	Only 0 is supported now.
Type	Route type.	Index	Enumeration: <ul style="list-style-type: none"><li>1—AS internal route.</li><li>2—AS external route.</li></ul>	N/A
Value	Preference value.	N/A	Unsigned integer. Value range: 1 to 255. Default: <ul style="list-style-type: none"><li>AS internal route is 10.</li><li>AS external route is 150.</li></ul>	N/A
PolicyName	Name of the routing policy.	N/A	String. Length: 1 to 63 characters.	N/A

## OSPF/AsbrSummarys

This table contains OSPF ASBR summary route information.

## XML structure

```
<OSPF>
  <AsbrSummarys>
    <AsbrSummary>
```

```

<Name></Name>
<TopoId></TopoId>
<Ipv4Address></Ipv4Address>
<Ipv4Mask></Ipv4Mask>
<Cost></Cost>
<NotAdvertise></NotAdvertise>
<NssaOnly></NssaOnly>
<Tag></Tag>
</AsbrSummary>
</AsbrSummarys>
</OSPF>

```

## Table description

Item	Description
Feature name	OSPF
Table name	AsbrSummarys
Table type	Multi-instance table
Row name	AsbrSummary
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create areas for it. It must be an unsigned integer in the range of 1 to 65535.
Topold	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127. Default: 0.	Only 0 is supported now.
Ipv4Address	IPv4 address.	Index	IPv4: String, dotted decimal notation.	N/A
Ipv4Mask	Mask of IP address.	Index	IPv4: String, dotted decimal notation.	N/A
Cost	Summary route cost.	N/A	Unsigned integer. Value range: 1 to 16777214.	N/A
NotAdvertise	Does not advertise summary route.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—<b>Does not</b> advertise summary route.</li> <li><b>false</b>—Advertises</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			summary route (default).	
NssaOnly	Limits summary routes to NSSA areas.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Limits summary routes to NSSA areas.</li> <li><b>false</b>—Does not limit summary routes to NSSA areas(default).</li> </ul>	N/A
Tag	Summary route tag.	N/A	Unsigned integer. Value range: 0 to 4294967295. Default: 1.	N/A

## OSPF/StubRouters

This table contains OSPF stub router information.

### XML structure

```

<OSPF>
  <StubRouters>
    <StubRouter>
      <Name></Name>
      <TopoId></TopoId>
      <ExternalLsa></ExternalLsa>
      <ExtMetric></ExtMetric>
      <IncludeStub></IncludeStub>
      <OnStartup>
        <WaitForBgp></WaitForBgp>
        <Seconds></Seconds>
      </OnStartup>
      <SummaryLsa></SummaryLsa>
      <SumMetric></SumMetric>
    </StubRouter>
  </StubRouters>
</OSPF>

```

### Table description

Item	Description
Feature name	OSPF
Table name	StubRouters
Table type	Multi-instance table
Row name	StubRouter
Restrictions	None

Item	Description
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge, create, replace, delete, or remove StubRouter lists for it.  It must be an unsigned integer in the range of 1 to 65535.
Topold	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127. Default: 0.	Only 0 is supported now.
ExternalLsa	Configures the cost of external LSAs.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true—Specifies a cost for the external LSAs.</b></li> <li><b>false—Does not specify a cost for the external LSAs (default).</b></li> </ul>	For the create and merge operations, if you both configure the ExternalLsa and ExtMetric, you must specify the ExternalLsa as true.  For the replace operation, if you configure the ExtMetric, you must configure the ExternalLsa too, and specify the ExternalLsa as true.  For the delete and remove operations, if you configure the ExternalLsa, the ExtMetric value will be deleted.
ExtMetric	Cost of the external LSAs.	N/A	Unsigned integer. Value range: 1 to 16777215. Default: 16711680.	N/A
IncludeStub	Sets the cost of the stub links.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true—Sets the cost of the stub links (link type 3) in Router LSAs to the maximum value</b></li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<b>65535.</b> <ul style="list-style-type: none"> <li><b>false—Does not set the cost of the stub links (link type 3) in Router LSAs (default).</b></li> </ul>	
OnStartup	Specifies the router as a stub router during reboot.	Data structure	Members include: <ul style="list-style-type: none"> <li>WaitForBgp.</li> <li>Seconds.</li> </ul>	At least one member must be specified.
WaitForBgp	Waits for BGP on-startup.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true—Specifies the router as a stub router during BGP route convergence after reboot.</b></li> <li><b>false—Does not specify the router as a stub router during BGP route convergence after reboot (default).</b></li> </ul>	N/A
Seconds	On-startup timeout time.	N/A	Unsigned integer. Value range: 5 to 86400. Default: 600 (when WaitForBgp is specified as <b>true</b> ).	The unit is seconds. When WaitForBgp is specified as <b>true</b> , the default value for Seconds is 600.
SummaryLsa	Configures the cost of the summary LSAs.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true—Specifies a cost for the Type-3 LSAs.</b></li> <li><b>false—Does not specify a cost for the Type-3 LSAs (default).</b></li> </ul>	For the create and merge operations, if you both configure the SummaryLsa and SumMetric, you must specify the SummaryLsa as true. For the replace operation, if you configure the SumMetric, you must configure the SummaryLsa too, and specify the SummaryLsa as true. For the delete and remove operations, if you configure the SummaryLsa, the SumMetric value will be deleted.
SumMetric	Cost of the summary LSAs.	N/A	Unsigned integer. Value range: 1 to 16777215.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Default: 16711680.	

## OSPF/Nssas

This table contains OSPF NSSA area information.

### XML structure

```

<OSPF>
  <Nssas>
    <Nssa>
      <Name></Name>
      <TopoId></TopoId>
      <AreaId></AreaId>
      <DefaultRouteAdvertiseCfg>

      <Translate></Translate>
      <TranslatorStabilityInterval></TranslatorStabilityInterval>
    </Nssa>
  </Nssas>
</OSPF>

```

### Table description

Item	Description
Feature name	OSPF
Table name	Nssas
Table type	Multi-instance table
Row name	Nssa
Restrictions	The row can be operated only when the AreaType of the corresponding area in the Areas table is configured as Nssa.
Support for row creation and deletion	No

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create areas for it. It must be an unsigned integer in the range of 1 to 65535.
Topold	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127. Default: 0.	Only 0 is supported now.
Areald	Area ID.	Index	String, dotted decimal notation.	
DefaultRoute AdvertiseCfg	Default route advertisement messages.	Data structure	Members include: <ul style="list-style-type: none"> <li>DefaultRouteAdvertise.</li> <li>Cost.</li> <li>NssaOnly.</li> <li>PolicyName.</li> <li>Type.</li> </ul>	N/A
DefaultRoute Advertise	Whether to generate a Type-7 default into the NSSA area.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Generates a Type-7 default into the NSSA area.</li> <li><b>false</b>—<b>Does not</b> generate a Type-7 default into the NSSA area. <b>(default)</b>.</li> </ul>	For the create and merge operations, if you both configure the DefaultRouteAdvertise and the other members, you must specify the DefaultRouteAdvertise as true.  For the replace operation, if you configure the other members, you must configure the DefaultRouteAdvertise too, and specify it as true.  For the delete and remove operations, if you configure the DefaultRouteAdvertise, the values of the rest members will be deleted.
Cost	Metric for default route.	N/A	Unsigned integer. Value range: 0 to 16777214.	N/A
NssaOnly	Whether to limit the default route advertisement to the NSSA area.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Limits the default route advertisement to the NSSA area.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li><b>false—Does not</b> limit the default route advertisement to the NSSA area <b>(default)</b>.</li> </ul>	
PolicyName	Specifies the routing policy to filter default route.	N/A	String. Length: 1 to 63 characters.	N/A
Type	Specifies a cost type for the Type-7 LSA.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Type 1.</li> <li><b>2</b>—Type 2.</li> </ul>	N/A
NoImportRoute	Whether to redistribute routes into the NSSA area.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Does not redistribute routes into the NSSA area.</li> <li><b>false</b>—Redistributes routes into the NSSA area (default).</li> </ul>	N/A
NoSummary	Whether to send summary LSA into the NSSA area.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Does not send summary LSA into the NSSA area.</li> <li><b>false</b>—Sends summary LSA into the NSSA area <b>(default)</b>.</li> </ul>	N/A
SuppressFa	Whether to suppress the forwarding address in the Type-7 LSAs from being placed in the Type-5 LSAs.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Suppresses the forwarding address in the Type-7 LSAs from being placed in the Type-5 LSAs.</li> <li><b>false—Does not</b> suppress the forwarding address in the Type-7 LSAs from being placed in the Type-5 LSAs <b>(default)</b>.</li> </ul>	N/A
Translate	Whether to translate Type-7 LSAs to Type-5 LSAs.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>1</b>—Always translates Type-7 LSAs to Type-5 LSAs.</li> <li><b>2</b>—Never translates Type-7 LSAs to Type-5 LSAs.</li> <li><b>3</b>—Ignores checking the backbone area.</li> <li><b>4</b>—Always translates Type-7 LSAs to Type-5 LSAs and ignores checking the backbone area.</li> </ul>	N/A
TranslatorStabilityInterval	Specifies the stability interval of the translator.	N/A	Unsigned integer. Value range: 0 to 900.	The unit is seconds and the default value is 0.

# OSPF/SilentAllInterfaces

This table contains all OSPF silent interface information.

## XML structure

```
<OSPF>
  <SilentAllInterfaces>
    <SilentAllInterface>
      <Name></Name>
      <SilentAll></SilentAll>
    </SilentAllInterface>
  </SilentAllInterfaces>
</OSPF>
```

## Table description

Item	Description
Feature name	OSPF
Table name	SilentAllInterfaces
Table type	Multi-instance table
Row name	SilentAllInterface
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create SilentAllInterfaces for it.  It must be an unsigned integer in the range of 1 to 65535.
SilentAll	Whether to specify all interfaces	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Specifies all interfaces.</li><li><b>false</b>—Does not specify all interfaces(default).</li></ul>	N/A

# OSPF/SilentInterfaces

This table contains OSPF silent interface information.

## XML structure

```
<OSPF>
  <SilentInterfaces>
    <SilentInterface>
      <Name></Name>
      <IfName></IfName>
      <Silent></Silent>
    </SilentInterface>
  </SilentInterfaces>
</OSPF>
```

## Table description

Item	Description
Feature name	OSPF
Table name	SilentAllInterfaces
Table type	Multi-instance table
Row name	SilentAllInterface
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create SilentInterfaces for it.  It must be an unsigned integer in the range of 1 to 65535.
IfName	Interface name	Index	String. Length: 1 to 47 characters.	N/A
Silent	Whether to specify the interface	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Specifies the interface.</li><li><b>false</b>—Does not specify the interface.</li></ul>	If SilentAll is true in the SilentAllInterfaces table, the default Silent value is true.

Column name	Column description	Column type	Data type and restrictions	Remarks
				If SilentAll is false in the SilentAllInterfaces table, the default Silent value is false.

## OSPF/SegmentRoutings

This table contains OSPF segment routing information.

### XML structure

```

<OSPF>
  <SegmentRoutings>
    <SegmentRouting>
      <Name></Name>
      <MplsEnable></MplsEnable>
      <AdjacencyEnable></AdjacencyEnable>
      <SRGB>
        <Lowerbound></Lowerbound>
        <Upperbound></Upperbound>
      </SRGB>
      <SrPreferEnable></SrPreferEnable>
      <PrefixListName></PrefixListName>
    </SegmentRouting>
  </SegmentRoutings>
</OSPF>

```

### Table description

Item	Description
Feature name	OSPF
Table name	SegmentRoutings
Table type	Multi-instance table
Row name	SegmentRouting
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create segment routings for it. It must be an unsigned integer in the range of 1 to 65535.
MplsEnable	Whether to enable MPLS SR.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables MPLS SR.</li> <li><b>false</b>—Does not enable MPLS SR(default).</li> </ul>	N/A
AdjacencyEnable	Whether to enable adjacency label allocation.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables adjacency label allocation.</li> <li><b>false</b>—Does not enable adjacency label allocation(default).</li> </ul>	N/A
SRGB	Specifies range of SRGB.	Data structure	Members include: <ul style="list-style-type: none"> <li>Lowerbound.</li> <li>Upperbound.</li> </ul>	N/A
Lowerbound	Min value of SRGB.	N/A	Unsigned integer. Value range: 16000 to 23999. Default: 16000.	N/A
Upperbound	Max value of SRGB.	N/A	Unsigned integer. Value range: 16001 to 24000. Default: 24000.	N/A
SrPreferEnable	Whether to enable SR label preference.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables SR label preference.</li> <li><b>false</b>—Does not enable SR label preference (default).</li> </ul>	N/A
PrefixListName	Name of the prefix list	N/A	String. Length: 1 to 63 characters.	N/A

## OSPF/DistributeBgppls

This table contains information about OSPF link state advertisement to BGP.

### XML structure

```
<OSPF>
```

```

<DistributeBgpls>
  <DistributeBgpls>
    <Name></Name>
    <TopoId></TopoId>
    <InstanceId></InstanceId>
    <StrictLinkCheck></StrictLinkCheck>
  </DistributeBgpls>
</DistributeBgpls>
</OSPF>

```

## Table description

Item	Description
Feature name	OSPF
Table name	DistributeBgpls
Table type	Multi-instance table
Row name	DistributeBgpls
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	You must create an instance before you merge or create distributebgpls for it.  It must be an unsigned integer in the range of 1 to 65535.
Topold	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127 Default: 0.	Only 0 is supported now.
InstanceId	Instance ID.	N/A	Unsigned integer. Value range: 0 to 65535 Default: 0.	N/A
StrictLinkCheck	Whether to enable strict link checking.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables strict link checking.</li> <li><b>false</b>—Does not enable strict link checking (default).</li> </ul>	N/A

# OSPF

## OSPF/Instances

This table contains OSPF instance information.

### XML structure

```
<OSPF>
  <Instances>
    <Instance>
      <Name></Name>
      <VRF></VRF>
      <RouterId></RouterId>
    </Instance>
  </Instances>
</OSPF>
```

### Table description

Item	Description
Feature name	OSPF
Table name	Instances
Table type	Multi-instance table
Row name	Instance
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
Name	Instance name.	Index	String. Length: 1 to 31 characters.
VRF	VRF name.	N/A	String. Length: 1 to 31 characters.
RouterId	Router identifier.	N/A	String, dotted decimal notation.

## OSPF/Redistributes

This table contains OSPF redistribute list information.

## XML structure

```
<OSPF>
  <Redistributes>
    <Redist>
      <Name></Name>
      <TopoId></TopoId>
      <Protocol></Protocol>
      <RedistName></RedistName>
    </Redist>
  </Redistributes>
</OSPF>
```

## Table description

Item	Description
Feature name	OSPF
Table name	Redistributes
Table type	Multi-instance table
Row name	Redist
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Name	Instance name.	Index	String. Length: 1 to 31 characters.
Topold	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127. Default: 0.
Protocol	Redistribute protocol.	Index	Enumeration: <ul style="list-style-type: none"><li>• 1—Direct.</li><li>• 2—Static.</li><li>• 3—RIP.</li><li>• 4—OSPF.</li><li>• 5—ISIS.</li><li>• 6—BGP.</li></ul>
RedistName	Redistribute instance name.	Index	String. Length: 1 to 31 characters.

## OSPF/Areas

This table contains OSPF area information.

## XML structure

```
<OSPF>
  <Areas>
    <Area>
      <Name></Name>
      <AreaId></AreaId>
      <AreaType></AreaType>
    </Area>
  </Areas>
</OSPF>
```

## Table description

Item	Description
Feature name	OSPF
Table name	Areas
Table type	Multi-instance table
Row name	Area
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Name	Instance name.	Index	String. Length: 1 to 31 characters.
Areald	Area ID.	Index	String, dotted decimal notation.
AreaType	Area type.	N/A	Enumeration: <ul style="list-style-type: none"><li>1—Stub.</li><li>2—NSSA.</li></ul>

## OSPF/Networks

This table contains OSPF network list information.

## XML structure

```
<OSPF>
  <Networks>
    <Network>
      <Name></Name>
      <AreaId></AreaId>
      <NetworkAddr></NetworkAddr>
      <WildcardMask></WildcardMask>
```

```

    </Network>
  </Networks>
</OSPF>

```

## Table description

Item	Description
Feature name	OSPF
Table name	Networks
Table type	Multi-instance table
Row name	Network
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Name	Instance name.	Index	String. Length: 1 to 31 characters.
Areald	Area ID.	Index	String, dotted decimal notation.
NetworkAddr	Network address.	Index	String, dotted decimal notation.
WildcardMask	Wildcard mask.	N/A	String, dotted decimal notation.

## OSPF/Interfaces

This table contains OSPF interface information.

## XML structure

```

<OSPF>
  <Interfaces>
    <Interface>
      <IfIndex></IfIndex>
      <IfEnable>
        <Name></Name>
        <AreaId></AreaId>
        <ExcludedSubIp></ExcludedSubIp>
      </IfEnable>

Row name	Nbr
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in <i>Ifmgr NETCONF XML API Configuration Reference</i> .
NbrAddress	Neighbour IPv4 address.	Index	String, dotted decimal notation.	N/A
NbrRouterId	Neighbour router identifier.	N/A	String, dotted decimal notation.	N/A
Name	Instance name.	N/A	String, case-sensitive. Length: 1 to 31 characters.	N/A
AreaId	Area ID.	N/A	String, dotted decimal notation.	N/A
DrPriority	Router priority.	N/A	Unsigned integer. Value range: 0 to 255.	N/A
State	Neighbour state.	N/A	Enumeration: <ul style="list-style-type: none"><li>• 0—Down.</li><li>• 1—Init.</li><li>• 2—Attempt.</li><li>• 3—2-way.</li><li>• 4—Exstart.</li><li>• 5—Exchange.</li><li>• 6—Loading.</li><li>• 7—Full.</li></ul>	N/A

## OSPF/Preferences

This table contains OSPF preference information.

## XML structure

```
<OSPF>
  <Preferences>
    <Preference>
      <Name></Name>
      <TopoId></TopoId>
      <Type></Type>
      <Value></Value>
      <PolicyName></PolicyName>
    </Preference>
  </Preferences>
</OSPF>
```

## Table description

Item	Description
Feature name	OSPF
Table name	Preferences
Table type	Multi-instance table
Row name	Preference
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
Name	Instance name.	Index	String. Length: 1 to 31 characters.
Topold	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127.
Type	Route type.	Index	Enumeration: <ul style="list-style-type: none"><li>• 1—AS internal route.</li><li>• 2—AS external route.</li></ul>
Value	Preference value.	N/A	Unsigned integer. Value range: 1 to 255.
PolicyName	Name of the routing policy.	N/A	String. Length: 1 to 63 characters.

## OSPF/AsbrSummarys

This table contains OSPF ASBR summary route information.

# XML structure

```
<OSPF>
  <AsbrSummaries>
    <AsbrSummary>
      <Name></Name>
      <TopoId></TopoId>
      <Ipv4Address></Ipv4Address>
      <Ipv4Mask></Ipv4Mask>
      <Cost></Cost>
      <NotAdvertise></NotAdvertise>
      <NssaOnly></NssaOnly>
      <Tag></Tag>
    </AsbrSummary>
  </AsbrSummaries>
</OSPF>
```

## Table description

Item	Description
Feature name	OSPF
Table name	AsbrSummaries
Table type	Multi-instance table
Row name	AsbrSummary
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	N/A
Topold	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127	N/A
Ipv4Address	IPv4 address.	Index	IPv4: String, dotted decimal notation.	N/A
Ipv4Mask	Mask of IP address	Index	Unsigned integer. Value range: 0 to 32.	N/A
Cost	Summary route cost.	N/A	Unsigned integer. Value range: 0 to 16777214.	If it is not configured, the largest cost among the summarized routes applies. If the routes in Type-5 LSAs translated from Type-7 LSAs are Type-2 external

Column name	Column description	Column type	Data type and restrictions	Remarks
				routes, the largest cost among the summarized routes plus 1 applies.
NotAdvertise	Does not advertise summary route.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true—Does not</b> advertise summary route.</li> <li><b>false—</b>Advertises summary route.</li> </ul>	N/A
NssaOnly	Limits summary routes to NSSA areas.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true—</b>Limits summary routes to NSSA areas.</li> <li><b>false—Does not</b> limit summary routes to NSSA areas.</li> </ul>	N/A
Tag	Summary route tag.	N/A	Unsigned integer. Value range: 0 to 4294967295.	If it is not configured, the tag specified by the <b>default tag</b> command is used.

## OSPF/StubRouters

This table contains OSPF stub router information.

### XML structure

```

<OSPF>
  <StubRouters>
    <StubRouter>
      <Name></Name>
      <TopoId></TopoId>
      <ExternalLsa></ExternalLsa>
      <ExtMetric></ExtMetric>
      <IncludeStub></IncludeStub>
      <OnStartup>
        <WaitForBgp></WaitForBgp>
        <Seconds></Seconds>
      </OnStartup>
      <SummaryLsa></SummaryLsa>
      <SumMetric></SumMetric>
    </StubRouter>
  </StubRouters>
</OSPF>

```

## Table description

Item	Description
Feature name	OSPF
Table name	StubRouters
Table type	Multi-instance table
Row name	StubRouter
Restrictions	For the get or get-bulk operations, the data of the StubRouters table can be get only when the router is in stub state.

## Columns

Column name	Column description	Column type	Data type and restrictions
Name	Instance name.	Index	String. Length: 1 to 31 characters.
Topold	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127.
ExternalLsa	Configures the cost of external LSAs.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true—Specifies a cost for the external LSAs.</b></li> <li><b>false—Does not specify a cost for the external LSAs.</b></li> </ul>
ExtMetric	Cost of the external LSAs.	N/A	Unsigned integer. Value range: 1 to 16777215.
IncludeStub	Sets the cost of the stub links.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true—Sets the cost of the stub links (link type 3) in Router LSAs to the maximum value 65535.</b></li> <li><b>false—Does not set the cost of the stub links (link type 3) in Router LSAs.</b></li> </ul>
OnStartup	Specifies the router as a stub router during reboot.	Data structure	Members include: <ul style="list-style-type: none"> <li>WaitForBgp.</li> <li>Seconds.</li> </ul>
WaitForBgp	Waits for BGP on startup.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true—Specifies the router as a stub router during BGP route convergence after reboot.</b></li> <li><b>false—Does not specify the router as a stub router during BGP route convergence after reboot.</b></li> </ul>
Seconds	On-startup timeout	N/A	Unsigned integer.

Column name	Column description	Column type	Data type and restrictions
	time.		Value range: 5 to 86400. Default: 600 (when WaitForBgp is specified as <b>true</b> ).
SummaryLsa	Configures the cost of the summary LSAs.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Specifies a cost for the <b>Type-3 LSAs</b>.</li> <li><b>false</b>—Does not specify a cost for the <b>Type-3 LSAs</b>.</li> </ul>
SumMetric	Cost of the summary LSAs.	N/A	Unsigned integer. Value range: 1 to 16777215.

## OSPF/Nssas

This table contains OSPF NSSA area information.

### XML structure

```

<OSPF>
  <Nssas>
    <Nssa>
      <Name></Name>
      <TopoId></TopoId>
      <AreaId></AreaId>
      <DefaultRouteAdvertiseCfg>
        <DefaultRouteAdvertise></DefaultRouteAdvertise>
        <Cost></Cost>
        <NssaOnly></NssaOnly>
        <PolicyName></PolicyName>
        <Type></Type>
      </DefaultRouteAdvertiseCfg>
      <NoImportRoute></NoImportRoute>
      <NoSummary></NoSummary>
      <SuppressFa></SuppressFa>
      <Translate></Translate>
      <TranslatorStabilityInterval></TranslatorStabilityInterval>
    </Nssa>
  </Nssas>
</OSPF>

```

### Table description

Item	Description
Feature name	OSPF
Table name	Nssas

Item	Description
Table type	Multi-instance table
Row name	Nssa
Restrictions	The row can be operated only when the AreaType of the corresponding area in the Areas table is configured as Nssa.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	N/A
Topold	Topology ID.	Index	Unsigned integer. Value range: 0, 32 to 127.	N/A
Areald	Area ID.	Index	String, dotted decimal notation.	N/A
DefaultRouteAdvertiseCfg	Default route advertisement messages.	Data structure	Members include: <ul style="list-style-type: none"> <li>DefaultRouteAdvertise.</li> <li>Cost.</li> <li>NssaOnly.</li> <li>PolicyName.</li> <li>Type.</li> </ul>	N/A
DefaultRouteAdvertise	Whether to generate a Type-7 default into the NSSA area.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Generates a Type-7 default into the NSSA area.</li> <li><b>false</b>—<b>Does not</b> generate a Type-7 default into the NSSA area.</li> </ul>	N/A
Cost	Metric for default route.	N/A	Unsigned integer. Value range: 0 to 16777214.	Depends on the value specified by using the <b>default-cost</b> command and the default value of the <b>default-cost</b> command is 1.
NssaOnly	Whether to limit the default route advertisement to the NSSA area.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Limits the default route advertisement to the NSSA area.</li> <li><b>false</b>—<b>Does not</b> limit the default route advertisement to the NSSA area.</li> </ul>	N/A
PolicyName	Specifies the routing policy to filter default route.	N/A	String. Length: 1 to 63 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
Type	Specifies a cost type for the Type-7 LSA.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—Type 1.</li> <li>• <b>2</b>—Type 2.</li> </ul>	Depends on the value specified by using the <b>default type</b> command and the default value of the <b>default type</b> command is 2.
NoImportRoute	Whether to redistribute routes into the NSSA area.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Does not redistribute routes into the NSSA area.</li> <li>• <b>false</b>—Redistribute routes into the NSSA area.</li> </ul>	N/A
NoSummary	Whether to send summary LSA into the NSSA area.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Does not send summary LSA into the NSSA area.</li> <li>• <b>false</b>—Sends summary LSA into the NSSA area.</li> </ul>	N/A
SuppressFa	Whether to suppress the forwarding address in the Type-7 LSAs from being placed in the Type-5 LSAs.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Suppresses the forwarding address in the Type-7 LSAs from being placed in the Type-5 LSAs.</li> <li>• <b>false</b>—Does not suppress the forwarding address in the Type-7 LSAs from being placed in the Type-5 LSAs.</li> </ul>	N/A
Translate	Whether to translate Type-7 LSAs to Type-5 LSAs.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>1</b>—Always translates Type-7 LSAs to Type-5 LSAs.</li> <li>• <b>2</b>—Never translates Type-7 LSAs to Type-5 LSAs.</li> <li>• <b>3</b>—Ignores checking the backbone area.</li> <li>• <b>4</b>—Always translates Type-7 LSAs to Type-5 LSAs and ignores checking the backbone area.</li> </ul>	N/A
TranslatorStabilityInterval	Specifies the stability interval of the translator.	N/A	Unsigned integer. Value range: 0 to 900.	N/A

## OSPF/SilentAllInterfaces

This table contains all OSPF silent interface information.

## XML structure

```
<OSPF>
  <SilentAllInterfaces>
    <SilentAllInterface>
      <Name></Name>
      <SilentAll></SilentAll>
    </SilentAllInterface>
  </SilentAllInterfaces>
</OSPF>
```

## Table description

Item	Description
Feature name	OSPF
Table name	SilentAllInterfaces
Table type	Multi-instance table
Row name	SilentAllInterface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	N/A
SilentAll	Whether to specify all interfaces	N/A	Boolean: <ul style="list-style-type: none"><li><b>true</b>—Specifies all interfaces.</li><li><b>false</b>—Does not specify all interfaces.</li></ul>	N/A

## OSPF/SilentInterfaces

This table contains OSPF silent interface information.

## XML structure

```
<OSPF>
  <SilentInterfaces>
    <SilentInterface>
      <Name></Name>
      <IfName></IfName>
      <Silent></Silent>
    </SilentInterface>
  </SilentInterfaces>
</OSPF>
```

```

    </SilentInterfaces>
</OSPF>

```

## Table description

Item	Description
Feature name	OSPF
Table name	SilentInterfaces
Table type	Multi-instance table
Row name	SilentInterface
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	N/A
IfName	Interface name	Index	String. Length: 1 to 47 characters.	N/A
Silent	Whether to specify the interface	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Specifies the interface.</li> <li><b>false</b>—Does not specify the interface.</li> </ul>	If SilentAll is true in the SilentAllInterfaces table, the SilentInterfaces table gets data or configuration about interfaces that are not silent. If SilentAll is false in the SilentAllInterfaces table, the SilentInterfaces table gets data or configuration about silent interfaces.

## OSPF/SegmentRoutings

This table contains OSPF segment routing information.

## XML structure

```

<OSPF>
  <SegmentRoutings>
    <SegmentRouting>

```

```

<Name></Name>
<MplsEnable></MplsEnable>
<AdjacencyEnable></AdjacencyEnable>
<SRGB>
  <Lowerbound></Lowerbound>
  <Upperbound></Upperbound>
</SRGB>
<SrPreferEnable></SrPreferEnable>
<PrefixListName></PrefixListName>
</SegmentRouting>
</SegmentRoutings>
</OSPF>

```

## Table description

Item	Description
Feature name	OSPF
Table name	SegmentRoutings
Table type	Multi-instance table
Row name	SegmentRouting
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Name	Instance name.	Index	String. Length: 1 to 31 characters.	N/A
MplsEnable	Whether to enable MPLS SR.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables MPLS SR.</li> <li><b>false</b>—Does not enable MPLS SR.</li> </ul>	N/A
AdjacencyEnable	Whether to enable adjacency label allocation.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables adjacency label allocation.</li> <li><b>false</b>—Does not enable adjacency label allocation.</li> </ul>	N/A
SRGB	Specifies range of SRGB.	Data structure	Members include: <ul style="list-style-type: none"> <li>Lowerbound.</li> <li>Upperbound.</li> </ul>	N/A
Lowerbound	Min value of SRGB.	N/A	Unsigned integer. Value range: 16000 to 23999. Default: 16000.	N/A
Upperbound	Max value of SRGB.	N/A	Unsigned integer. Value range: 16001 to 24000.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			Default: 24000.	
SrPreferEnable	Whether to enable SR label preference.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Enables SR label preference.</li> <li><b>false</b>—Does not enable SR label preference.</li> </ul>	N/A
PrefixListName	Name of the prefix list.	N/A	String. Length: 1 to 63 characters.	N/A

## OSPF/DistributeBgppls

This table contains information about OSPF link state advertisement to BGP.

### XML structure

```

<OSPF>
  <DistributeBgppls>
    <DistributeBgpls>
      <Name></Name>
      <TopoId></TopoId>
      <InstanceId></InstanceId>
      <StrictLinkCheck></StrictLinkCheck>

# OSPF

## OSPF/Instances

Message	Explanation
OSPF isn't configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
The specified VRF doesn't exist. 指定的VRF不存在。	The specified VRF doesn't exist, when set configuration. 配置时，指定的VRF不存在
The instance is already associated with another VRF. OSPF实例ID已经存在于另一个VRF实例。	The OSPF process has been configured with another VRF. OSPF进程已经配置在另一个VRF实例中。
The specified VRF is deleting. 指定VRF正在被删除。	The specified VRF is deleting, when set configuration. 配置时，指定VRF正在被删除。
The instance is being deleted. OSPF实例正在删除中。	The OSPF process is deleting, when set configuration. 配置时，OSPF进程正在删除中。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can't configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can't configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。
Invalid router ID. 无效的Router ID。	The router ID is invalid. Router ID配置不正确。

## OSPF/Redistributes

Message	Explanation
OSPF isn't configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
RedistName attribute column must be empty when the value of Protocol attribute column is 1,2,or 6 当Protocol属性值为1、2或6时，RedistName属性列必须为空。	RedistName attribute column must be empty when the value of Protocol attribute column is 1,2,or 6, when set configuration. Set操作时，direct/static/bgp协议不能带RedistName参数。
RedistName attribute column is required when the value of Protocol attribute column is 3,4,5 or 7. 当Protocol属性值为3、4、5或7时，RedistName属	RedistName attribute column must be empty when the value of Protocol attribute column is 1,2,or 6, when set configuration. Set操作时，rip/ospf/isis协议必须带RedistName参数。

性列不能为空。	
Import isn't allowed within the same instance. 不允许引入OSPF的当前实例	Can't import the same process. 不能引入自己的进程ID。
The instance doesn't exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can't configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can't configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。

## OSPF/Areas

Message	Explanation
OSPF isn't configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
The instance doesn't exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can't configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can't configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。
The specified area is being deleted. 指定区域正在被删除。	Specified area is being. 区域正在删除。
Can't remove the backbone area when virtual links exist in the backbone area. OSPF骨干区存在虚连接配置。	Virtual link exists in the backbone, backbone cannot be removed. 如果进程下区域存在vlink配置则不允许删除骨干区。
The area doesn't exist. 区域不存在。	No such area. 没有此区域。
The instance is being deleted. OSPF实例正在删除中。	The OSPF process is deleting, when set configuration. 配置时，OSPF进程正在删除中。

The area must be a stub area. 当前区域不是Stub区域。	The area must be a stub area. 区域不是stub，则不许配置。
The stub option is invalid for the backbone area. 骨干区不允许配置stub区域。	Stub option invalid for backbone. 骨干区不允许配置stub。
The area is already configured with a virtual link. Remove the virtual link first. 当前区域配置了虚连接，请先删除虚连接。	The area which is already configured with a virtual link cannot configured stub. 配置vlink区域不允许配置stub。
The area is already configured as an NSSA area. 当前为NSSA区域，不支持配置stub区域。	The area which is already configured with nssa cannot configured stub. Nssa区域不能配置stub。
The nssa option is invalid for the backbone area. 骨干区不允许配置nssa区域。	Nssa option invalid for backbone. 骨干区不允许配置nssa。
The area must be an nssa area. 当前区域不是nssa区域。	The area must be an nssa area. 区域不是nssa，则不许配置。
The area is already configured as a stub area. 当前为stub区域，不支持配置nssa区域。	The area which is already configured with stub cannot configured nssa. stub区域不能配置nssa。

## OSPF/Interfaces

Message	Explanation
OSPF isn't configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
Name attribute column is required. 需要补齐Name属性列。	Process name is required. 缺少进程名称参数。
Areald attribute column is required. 需要补齐Areald属性列。	Area ID is required. 缺少区域ID参数。
Name and Areald attribute columns are required. 需要补齐Name和Areald属性列。	The interface doesn't enable ospf. 接口没有使能ospf。
Not support Segment Routing configurations. 不支持SR相关配置。	Segment Routing doesn't support. 不支持SR相关配置。
SidName and SidType attribute columns are required. 需要补齐SidName和SidType属性列。	Wrong configuration. 配置错误。
SidType and Sid attribute columns are required. 需要补齐SidType和Sid属性列。	Wrong configuration. 配置错误。
SidName and Sid attribute columns are required. 需要补齐SidName和Sid属性列。	Wrong configuration. 配置错误。
SidType attribute column is required. 需要补齐SidType属性列。	Wrong configuration. 配置错误。
SidName attribute column is required.	Wrong configuration.

需要补齐SidName属性列。	配置错误。
Sid attribute column is required. 需要补齐Sid属性列。	Wrong configuration. 配置错误。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can't configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can't configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。
The instance doesn't exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。
Another process is enabled in the current interface. 该接口已经使能其他进程，不能进行配置。	Another process is enabled in the current interface. 该接口已经使能其他进程。
The Sid is out of the SRGB range. Sid配置不合法.它的值应该在SRGB范围内。	The Sid is out of the SRGB range. Sid配置的值在SRGB范围外。
The Sid already exists. Sid配置冲突, 该Sid已存在。	The Sid already exists. 该Sid已存在。
Can't set the OSPF cost of a non-loopback interface to 0. 非LoopBack接口不允许配置OSPF的开销值为0。	Can't set the OSPF cost of a non-loopback interface to 0. 非LoopBack接口不允许配置OSPF的开销值为0。
Not support BFD. 不支持BFD。	BFD is not supported. 不支持BFD。
SimpleAuth can't be specified when NullAuth is true. 不进行验证配置与认证配置不能共存。	SimpleAuth can't be specified when NullAuth is true. 不进行验证配置与认证配置不能共存。

## OSPF/Networks

Message	Explanation
OSPF isn't configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
WildcardMask attribute column is required. 需要补齐WildcardMask属性列。	WildcardMask attribute column is required. 获取子网掩码，必须制定掩码。
The network mask isn't contiguous. 网络掩码不连续。	The network mask is wrong. 网络掩码不对。
Network mask doesn't match network address. 网络掩码和当前网络地址不匹配。	The network mask is wrong. 网络掩码不对。

The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can't configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can't configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。
The specified area is being deleted. 指定区域正在被删除。	Specified area is being. 区域正在删除。
The instance doesn't exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。
The area doesn't exist. 区域不存在。	No such area. 没有此区域。
The instance is being deleted. OSPF实例正在删除中。	The OSPF process is deleting, when set configuration. 配置时，OSPF进程正在删除中。
Network addresses of Class D and Class E in the format of 127.*.* are not allowed. 127.*.*形式的D类、E类地址不允许配置。	The network address is invalid. 网段不合法。
The network is already set in this instance. 指定网段已在当前实例使能。	The network is already set. 已在本进程使能。
The network is already set in another instance. 指定网段已在其他实例使能。	The network is already set in another process. 已在其他进程使能。
The network overlaps with the previously configured network. 网段配置重叠。	Network is duplicated or is the subset of the previous entry. 不允许配置的网段出现重叠。
Operation not supported. 不支持该操作。	WildcardMask doesn't support delete and remove. 子网掩码不支持delete、remove操作。

## OSPF/IfMd5s

Message	Explanation
OSPF isn't configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
Operation not supported. 不支持该操作。	Not support operate object without attribute. 不支持操作不带属性的对象。
The interface doesn't exist. 接口不存在。	The interface doesn't exist. 接口不存在。
Md5Type attribute column is required.	Wrong configuration.

需要补齐Md5Type属性列。	配置错误。
PasswordType attribute column is required. 需要补齐PasswordType属性列。	Wrong configuration. 配置错误。
Password attribute column is required. 需要补齐Password属性列	Wrong configuration. 配置错误。
Invalid OSPF authentication password. OSPF认证密码不合法。	Wrong configuration. 配置错误。

## OSPF/Neighbours

Message	Explanation
OSPF isn't configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。

## OSPF/Preferences

Message	Explanation
OSPF isn't configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can't configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can't configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。
The instance doesn't exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。

## OSPF/AsbrSummarys

Message	Explanation
OSPF isn't configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
The router is in smooth state.	The router is smoothing, when set configuration.

路由器在平滑启动状态。	配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can't configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can't configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。
The instance doesn't exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。
Can't configure a summary route as a default route on an ASBR. 聚合路由不能配置为缺省路由。	Wrong configuration. 配置错误。
无效的聚合地址。 Invalid summary address.	Wrong configuration. 配置错误。
Invalid network mask. 无效的网络掩码。	Wrong configuration. 配置错误。
The network mask isn't contiguous. 网络掩码不连续。	Wrong configuration. 配置错误。

## OSPF/StubRouters

Message	Explanation
OSPF isn't configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
ExternalLsa attribute column is required and must be set to true. ExternalLsa属性列需要赋值为true。	Wrong configuration. 配置错误。
SummaryLsa attribute column is required and must be set to true. SummaryLsa属性列需要赋值为true。	Wrong configuration. 配置错误。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can't configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can't configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。

The instance doesn't exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。
---	--

## OSPF/Nssas

Message	Explanation
OSPF isn't configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
DefaultRouteAdvertise attribute column is required and must be set to true. DefaultRouteAdvertise属性列需要赋值为true。	Wrong configuration. 配置错误。
The instance doesn't exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can't configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can't configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。
The specified area is being deleted. 指定区域正在被删除。	Specified area is being. 区域正在删除。
The area doesn't exist. 区域不存在。	No such area. 没有此区域。
The instance is being deleted. OSPF实例正在删除中。	The OSPF process is deleting, when set configuration. 配置时，OSPF进程正在删除中。
The area is already configured as an NSSA area. 当前为NSSA区域，不支持配置stub区域。	The area which is already configured with nssa cannot configured stub. Nssa区域不能配置stub。
The nssa option is invalid for the backbone area. 骨干区不允许配置nssa区域。	Nssa option invalid for backbone. 骨干区不允许配置nssa。
The area must be an nssa area. 当前区域不是nssa区域。	The area must be an nssa area. 区域不是nssa，则不许配置。
The area is already configured as a stub area. 当前为stub区域，不支持配置nssa区域。	The area which is already configured with stub cannot configured nssa. stub区域不能配置nssa。

# OSPF/SilentAllInterfaces

Message	Explanation
OSPF isn't configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
The instance doesn't exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can't configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can't configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。
The instance is being deleted. OSPF实例正在删除中。	The OSPF process is deleting, when set configuration. 配置时，OSPF进程正在删除中。

# OSPF/SilentInterfaces

Message	Explanation
OSPF isn't configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
The instance doesn't exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can't configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can't configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。
The instance is being deleted. OSPF实例正在删除中。	The OSPF process is deleting, when set configuration. 配置时，OSPF进程正在删除中。

# OSPF/SegmentRoutings

Message	Explanation
OSPF isn't configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
Not support Segment Routing configurations. 不支持SR相关配置。	Segment Routing doesn't support. 不支持SR相关配置。
The instance doesn't exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can't configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can't configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。
Opaque-Capability is not enabled. Opaque-Capability 未使能。	Opaque-Capability is not enabled. Opaque-Capability 未使能。
The maximum value must be greater than the minimum value. 最大值一定要大于最小值。	Wrong configuration. 配置错误。
The SRGB is invalid. It must contain the configured prefix SIDs. SRGB配置不合法.它的配置范围应该包含已配置的前缀标签值。	Wrong configuration. 配置错误。
Lowerbound attribute column is required. 需要补齐Lowerbound属性列。	Wrong configuration. 配置错误。
Upperbound attribute column is required. 需要补齐Lowerbound属性列。	Wrong configuration. 配置错误。
The value of Lowerbound is invalid.The value must be in %u to %u. Lowerbound的值非法，该值有效范围是%u - %u。	Wrong configuration. 配置错误。
The value of Upperbound is invalid.The value must be in %u to %u. Upperbound的值非法，该值有效范围是%u - %u。	Wrong configuration. 配置错误。
SrPreferEnable属性列需要赋值为true。 SrPreferEnable attribute column is required and must be set to true.	Wrong configuration. 配置错误。

# OSPF/DistributeBgpIses

Message	Explanation
OSPF isn't configuration. 没有配置OSPF。	OSPF process has not been started. OSPF进程没有启动。
The instance doesn't exist. 配置实例不存在。	No such process exists. 配置的ospf进程不存在。
The router is in smooth state. 路由器在平滑启动状态。	The router is smoothing, when set configuration. 配置时，路由器正在平滑启动阶段。
The router is performing nonstop routing. 路由器正在NSR重启。	The router is performing nonstop routing, when set configuration. 配置时，路由器正在进行NSR重启。
The router is performing Graceful Restart or normal restart. 路由器正在平滑或正在重启。	The router is performing Graceful Restart or normal restart, when set configuration. 配置时，路由器正在平滑或正在重启。
Can't configure the router while it is performing an active/standby switchover. 路由器正在主备进程倒换不能进行配置。	Can't configure the router while it is upgrading. 路由器正处于升级平滑阶段，不允许配置。

# OSPFv3

The namespace of flexbng-device-info is "urn:ietf:params:xml:ns:yang:ietf-ospfv3".

The Example on the end of the module sets an instance that the module can't be under top node.

## ietf\_ospfv3

This table contains OSPFv3 configuration information.

### XML structure

```
<ospfv3>
  <instance>
    <af></af>
    <explicit-router-id></explicit-router-id>
    <areas>
      <area>
        <area-id></area-id>
        <area-type></area-type>
        <interfaces>
          <interface>
            <name></name>
            <instance-id></instance-id>
          </interface>
        </interfaces>
      </area>
    </areas>
  </instance>
</ospfv3>
```

### Table description

Item	Description
Feature name	ietf_ospfv3
Table name	ospfv3
Table type	Multi-instance table
Row name	instance
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
af	Address type	Index	String: case-sensitiv: <ul style="list-style-type: none"><li>• ipv4.</li><li>• ipv6.</li></ul>	N/A
explicit-router-id	Router identifier	N/A	String, dotted decimal notation.	You cannot modify this column after this column is created or merged. If you need to do this, you must delete the column and then create it again.
areas	Information of the areas	Sublist	The details of the sublist refer to areas table.	N/A

## ietf\_ospfv3/areas

This table contains area configuration information of ietf-ospfv3.

## XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

## Table description

Item	Description
Feature name	ietf_ospfv3
Table name	areas
Table type	Multi-instance table
Row name	area
Restrictions	None
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
area-id	Area ID	Index	String, dotted decimal notation.	N/A
area-type	Area type	N/A	Enumeration: <ul style="list-style-type: none"><li>1—Stub.</li><li>2—NSSA.</li></ul>	You cannot specify AreaType when Areaid is 0.
interfaces	Information of the interfaces	Sublist	The details of the sublist refer to interfaces table.	N/A

## ietf\_ospfv3/areas/interfaces

This table contains interface information of ietf-ospfv3.

## XML structure

Please refer to the XML Structure of ietf-ospfv3/ospfv3.

## Table description

Item	Description
Feature name	ietf_ospfv3
Table name	interfaces
Table type	Multi-instance table
Row name	interface
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
name	Interface index	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about

Column name	Column description	Column type	Data type and restrictions	Remarks
				IfIndex, see IfMgr in <i>IfMgr NETCONF XML API Configuration Reference</i> .
instance-id	Interface instance ID	N/A	Unsigned integer.	It must be an unsigned char in the range of 0 to 255.

## Example

配置一个 ospfv3 实例，并在接口上使能

```
<v:routing xc:operation="replace" xmlns:v="urn:ietf:params:xml:ns:yang:ietf-routing"
xmlns:xc="xc">
  <v:control-plane-protocols>
    <v:control-plane-protocol>
      <v:type>ospfv3</v:type>
      <v:name>21</v:name>
      <b:ospfv3 xmlns:b="urn:ietf:params:xml:ns:yang:ietf-ospfv3">

# Package

## Package/SetBootImage

This table contains information to specify startup software image files for special node.

### XML structure

```
<Package>
  <SetBootImage>
    <DeviceNode>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
    </DeviceNode>
    <ImageFiles>
      <Boot></Boot>
      <System></System>
      <Feature></Feature>
    </ImageFiles>
    <IPEFileName></IPEFileName>
    <Type></Type>
    <OverwriteLocalFile></OverwriteLocalFile>
    <DeleteIPEFile></DeleteIPEFile>
    <Undecompressed/>
  </SetBootImage>
</Package>
```

### Table description

Item	Description
Feature name	Package
Table name	SetBootImage
Table type	Single-instance
Row name	None
Restrictions	Image files must already exist in the root directory of storage medium, must on the same device. Mostly an image file path is in the format of storage-medium:/base-filename.bin, you can also include the IRF member ID or slot number information in front of the storage medium segment to specify the node where this image file on.

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DeviceNode	Specify a target node of the system.	Data structure	Members include: <ul style="list-style-type: none"> <li>Chassis.</li> <li>Slot.</li> <li>CPUID.</li> </ul>	Optional column, specify a target node which to set all this image files as the startup software image files, if not specify, all suitable nodes will be set.
Chassis	Chassis of a node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot of a node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	Cpu id of a node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
ImageFiles	.bin image file list to set as the startup image files.	Data structure	Members include: <ul style="list-style-type: none"> <li>Boot.</li> <li>System.</li> <li>Feature.</li> </ul>	Column of Feature is optional, but both Boot and System must be included.
Boot	Specifies the file path of a .bin boot image file.	N/A	String. Length: 1 to 127 characters.	N/A
System	Specifies the file path of a .bin system image file.	N/A	String. Length: 1 to 127 characters.	N/A
Feature	Specifies the file path of a .bin feature image file.	N/A	String. Length: 1 to 127 characters.	This column can repeat to specifie several feature image files of up to 30.
IPEFileName	Specifies the file path of an .ipe image package file.	N/A	String. Length: 1 to 127 characters.	You could choose either IPEFileName or ImageFiles to specify the startup software image files.
Type	Startup type to set.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—main.</li> <li>2—backup.</li> </ul>	Backup images are used only when main images are not available.
OverwriteLocalFile	Whether overwrite image files when copying.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Optional column, if not specify default is false.
DeleteIPEFile	Whether delete the .ipe image package file after setting it as the next startup image.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Optional column, if not specify default is false.

Column name	Column description	Column type	Data type and restrictions	Remarks
Uncompressed	Decompress the IPE file when the device starts up instead of when the IPE file is specified as the startup file.	N/A	N/A	This column should be ignored when bin files are specified as startup files or the device does not support this function.

## Package/SetExtendImage

This table contains information to specify startup software image files stored on the device for security engines or PEXs.

### XML structure

```

<Package>
  <SetExtendImage>
    <ExtendImage>
      <Model></Model>
      <ImageFiles>
        <Boot></Boot>
        <System></System>
        <Feature></Feature>
      </ImageFiles>
      <IPEFileName></IPEFileName>
      <Type></Type>
      <OverwriteLocalFile></OverwriteLocalFile>
      <DeleteIPEFile></DeleteIPEFile>
    </ExtendImage>
  </SetExtendImage>
</Package>

```

### Table description

Item	Description
Feature name	Package
Table name	SetExtendImage
Table type	Multi-instance
Row name	ExtendImage
Restrictions	Image files must already exist in the root directory of storage medium, must on the same device. Mostly an image file path is in the format of storage-medium:/base-filename.bin, you can also include the IRF member ID or slot number information in front of the storage medium segment to specify the node where this image file on.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Model	Specifies the PEX model or the security engine model.	Index	String. Length: 1 to 63 characters.	N/A
ImageFiles	.bin image files list to set as the model startup image files.	Data structure	Members include: <ul style="list-style-type: none"> <li>• Boot.</li> <li>• System.</li> <li>• Feature.</li> </ul>	Column of Feature is optional, but both Boot and System must be included.
Boot	Specifies the file path of a .bin boot image file.	N/A	String. Length: 1 to 127 characters.	N/A
System	Specifies the file path of a .bin system image file.	N/A	String. Length: 1 to 127 characters.	N/A
Feature	Specifies the file path of a .bin feature image file.	N/A	String. Length: 1 to 127 characters.	This column can repeat to specifies several feature image files of up to 30.
IPEFileName	Specifies the file path of an .ipe image package file.	N/A	String. Length: 1 to 127 characters.	You could choose either IPEFileName or ImageFiles to specify the startup software image files.
Type	Model startup type.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—main.</li> <li>• 2—backup.</li> </ul>	Backup images are used only when main images are not available.
OverwriteLocalFile	Whether overwrite image file when copying.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	Optional column, if not specify default is false.
DeleteIPEFile	Whether delete the .ipe image package file after setting it as the model startup image file.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	Optional column, if not specify default is false.

## Package/InstallImage

This table contains information to activate or deactivate feature image files or patch file on special node.

## XML structure

<Package>

```

<InstallImage>
  <Action></Action>
  <ImageFiles>
    <Feature></Feature>
  </ImageFiles>
  <PatchFile></PatchFile>
  <OverwriteLocalFile></OverwriteLocalFile>
  <DeviceNode>
    <Chassis></Chassis>
    <Slot></Slot>
    <CPUID></CPUID>
  </DeviceNode>
</InstallImage>
</Package>

```

## Table description

Item	Description
Feature name	Package
Table name	InstallImage
Table type	Single-instance
Row name	None
Restrictions	This table only support patch image file and feature image file, only support fileupgrade and service upgrade for feature image file. Image files must already exist in the root directory of storage medium, must on the same device. Mostly an image file path is in the format of storage-medium:/base-filename.bin, you can also include the IRF member ID or slot number information in front of the storage medium segment to specify the node where this image file on.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Specify which action to handle all this image files.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—activate.</li> <li>2—deactivate.</li> </ul>	N/A
ImageFiles	Feature image files list to handle.	Data structure	Members include: <ul style="list-style-type: none"> <li>Feature.</li> </ul>	N/A
Feature	Specifies the file path of a .bin feature image file.	N/A	String. Length: 1 to 127 characters.	This column can repeat to specify several feature image files of up to 30.

Column name	Column description	Column type	Data type and restrictions	Remarks
PatchFile	Specifies the file path of a .bin patch image file.	N/A	String. Length: 1 to 127 characters.	You could choose either ImageFiles or PatchFile to do the specify action.
OverwriteLocalFile	Whether overwrite image file when copying.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Optional column, if not specify default is false.
DeviceNode	Specify a target node of the system.	Data structure	Members include: <ul style="list-style-type: none"> <li>Chassis.</li> <li>Slot.</li> <li>CPUID.</li> </ul>	Optional column, specify a target node which to activate or deactivate all images files, if not specify, all suitable nodes will do the action.
Chassis	Chassis of a node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot of a node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	Cpu id of a node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A

## Package/SetIssuMPUFile

This table contains information to set issu image files for MPUs to update the system.

### XML structure

```

<Package>
  <SetIssuMPUFile>
    <ImageFiles>
      <Boot></Boot>
      <System></System>
      <Feature></Feature>
      <Patch></Patch>
    </ImageFiles>
    <IPEFileName></IPEFileName>
    <OverwriteLocalFile></OverwriteLocalFile>
    <DeleteIPEFile></DeleteIPEFile>
  </SetIssuMPUFile>
</Package>

```

## Table description

Item	Description
Feature name	Package
Table name	SetIssuMPUFile
Table type	Single-instance
Row name	None
Restrictions	Image files must already exist in the root directory of storage medium, must on the same device. An image file path must in the format of storage-medium:/base-filename.bin or storage-medium:/base-filename.ipe, should not include the IRF member ID or slot number information in front of the storage medium segment.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ImageFiles	.bin image file list to set as the MPUs issu image files.	Data structure	Members include: <ul style="list-style-type: none"> <li>• Boot.</li> <li>• System.</li> <li>• Feature.</li> </ul>	N/A
Boot	Specifies the file path of a .bin boot image file	N/A	String. Length: 1 to 63 characters.	N/A
System	Specifies the file path of a .bin system image file.	N/A	String. Length: 1 to 63 characters.	N/A
Feature	Specifies the file path of a .bin feature image file.	N/A	String. Length: 1 to 63 characters.	This column can repeat to specify several feature image files of up to 30.
Patch	Specifies the file path of a .bin patch image file.	N/A	String. Length: 1 to 63 characters.	This column can repeat to specify several patch image files of up to 30.
IPEFileName	Specifies the file path of an .ipe image package file.	N/A	String. Length: 1 to 63 characters.	You could choose either ImageFiles or IPEFileName to specify issu image files for MPUs .
OverwriteLocalFile	Whether overwrite images files when copying.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	Optional column, if not specify default is false.
DeleteIPEFile	Whether delete the .ipe image package file after decompressing	N/A	Boolean: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	Optional column, if not specify default is false.

Column name	Column description	Column type	Data type and restrictions	Remarks
	it.			

## Package/SetIssuExtendFile

This table contains information to set issu image files for security engines or PEXs to update the system.

### XML structure

```

<Package>
  <SetIssuExtendFile>
    <IssuExtendFile>
      <Model></Model>
      <ImageFiles>
        <Boot></Boot>
        <System></System>
        <Feature></Feature>
      </ImageFiles>
      <IPEFileName></IPEFileName>
      <OverwriteLocalFile></OverwriteLocalFile>
      <AutoDeleteFile></AutoDeleteFile>
    </IssuExtendFile>
  </SetIssuExtendFile>
</Package>

```

### Table description

Item	Description
Feature name	Package
Table name	SetIssuExtendFile
Table type	Multi-instance
Row name	IssuExtendFile
Restrictions	Image files must already exist in the root directory of storage medium, must on the same device. Mostly an image file path is in the format of storage-medium:/base-filename.bin, you can also include the IRF member ID or slot number information in front of the storage medium segment to specify the node where this image file on.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Model	Specifies the PEX model or the security engine model	Index	String. Length: 1 to 63 characters.	N/A
ImageFiles	.bin image file list to set as the issu image files for security engines or PEXs.	Data structure	Members include: <ul style="list-style-type: none"> <li>• Boot.</li> <li>• System.</li> <li>• Feature.</li> </ul>	N/A
Boot	Specifies the file path of a .bin boot image file.	N/A	String. Length: 1 to 127 characters.	N/A
System	Specifies the file path of a .bin system image file.	N/A	String. Length: 1 to 127 characters.	N/A
Feature	Specifies the file path of a .bin feature image file.	N/A	String. Length: 1 to 127 characters.	This column can repeat to specify several feature image files of up to 30.
IPEFileName	Specifies the file path of an .ipe image package file.	N/A	String. Length: 1 to 127 characters.	You could choose either ImageFiles or IPEFileName to specify issu image files for security engines or PEXs.
OverwriteLocalFile	Whether overwrite images files when copying.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	Optional column, if not specify default is false.
DeleteIPEFile	Whether delete the .ipe image package file after decompressing it.	N/A	Boolean: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	Optional column, if not specify default is false.

## Package/IssuUpgrade

This table contains information to update system step by step. To update the system you can following steps below: firstly make sure the "Status" and the "Action" is all "none" in the table IssuUpgrade(See Comware V7 Package NETCONF XML API Data Reference.docx); secondly specify the ISSU image files for MPUs(see table SetIssuMPUFile), additionally you can also specify ISSU image files for security engines and PEXs if you want to update these devices(see table SetIssuExtendFile); thirdly test all the image files you set, then install after test successfully, after that you can wait until the updating all done or you can roll back to cancel all the updating.

## XML structure

```
<Package>
  <IssuUpgrade>
    <Action></Action>
    <Timeout></Timeout>
    <Delay></Delay>
  </IssuUpgrade>
</Package>
```

## Table description

Item	Description
Feature name	Package
Table name	IssuUpgrade
Table type	Single-instance
Row name	None
Restrictions	Mostly Action should following step test->install->done, "done" can only set after the previous action have finished successfully or failure.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Specify step to update the system, action of test must be done before install begin.	N/A	Enumeration: <ul style="list-style-type: none"><li>1—none</li><li>2—test</li><li>3—install</li><li>4—rollback</li><li>5—done</li></ul>	Action of "none" will be simply be ignored, "test" can collect all information about which way the system will be updated, "install" will start to update the system, "rollback" will cancel all the updating and roll back to the original software versions, "done" will clear all update information and set "Action" and "Status" to "none".
Timeout	Specify the timeout time for an ISSU operation.		Unsigned integer. Value range: 0 to 120. Unit: minute.	Setting this field to 0 disables automatic rollback.  The value for this field takes effect only on one ISSU operation.  If this field is not set for an ISSU operation, the automatic rollback timer set by using the

Column name	Column description	Column type	Data type and restrictions	Remarks
				<b>issu rollback-timer</b> command (45 minutes by default) is used.
Delay	Time that the system waits before starting the ISSU.		Unsigned integer. Value range: 0 to 1440. Unit: minute.	N/A

## Package/AddIPE

This table contains information to decompress a .ipe image file to several .bin image files.

### XML structure

```

<Package>
  <AddIPE>
    <IPEFileName></IPEFileName>
    <StorageCard></StorageCard>
    <OverwriteLocalFile></OverwriteLocalFile>
    <DeleteIPEFile></DeleteIPEFile>
  </AddIPE>
</Package>

```

### Table description

Item	Description
Feature name	Package
Table name	AddIPE
Table type	Single-instance
Row name	None
Restrictions	An .ipe image file must already exist in the root directory of storage medium. Mostly an image file path is in the format of storage-medium:/base-filename.ipe, you can also include the IRF member ID or slot number information in front of the storage medium segment to specify the node where the .ipe image file on.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
IPEFileName	Specifies the file path of an .ipe image package file.	N/A	String. Length: 1 to 127 characters.	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
StorageCard	Target storage medium to store the .bin image files.	N/A	String. Length: 1 to 63 characters.	You can include the IRF member ID or slot number information in front of the storage medium segment.
OverwriteLocalFile	Whether overwrite image file if Target storage medium already exist the .bin image file.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Optional column, if not specify default is false.
DeleteIPEFile	Whether delete the .ipe image package file after decompress it.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Optional column, if not specify default is false.

## Package/ClearBootIPEResult

This table contains information to clear the upgrade result for an IPE file upgrade.

### XML structure

```

<Package>
  <ClearBootIPEResult>
    <DeviceNode>
      <Chassis></Chassis>
      <Slot></Slot>
      <CPUID></CPUID>
    </DeviceNode>
  <ClearResult/>
</ClearBootIPEResult>
</Package>

```

### Table description

Item	Description
Feature name	Package
Table name	ClearBootIPEResult
Table type	Single-instance
Row name	None
Restrictions	If the device does not support IPE file decompression upon device startup, this table should be ignored.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
DeviceNode	Specify a target node of the system.	Data structure	Members include: <ul style="list-style-type: none"> <li>Chassis.</li> <li>Slot.</li> <li>CPUID.</li> </ul>	Optional column, specify a target node which to set all this image files as the startup software image files, if not specify, all suitable nodes will be set.
Chassis	Chassis of a node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
Slot	Slot of a node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
CPUID	Cpu id of a node.	N/A	Unsigned integer. Value range: 0 to 65535.	N/A
ClearResult	Clear the upgrade result	N/A	N/A	This column must be empty.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
ImageFiles	List of issu image files for MPUs.	Data structure	Members include: <ul style="list-style-type: none"> <li>FileName.</li> </ul>	N/A
FileName	Name of a .bin or .ipe image file.	N/A	String. Length: 1 to 63 characters.	This column may not occur which mean no image files have set yet, or can repeat of up to 32.
OverwriteLocalFile	Whether overwrite image files when copying.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Optional column, if not specify default is false.
DeleteIPEFile	Whether delete the .ipe image package file after decompress it.	N/A	Boolean: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	Optional column, if not specify default is false.

## Package/IssuExtendFileList

This table contains information of issu image files for security engines or PEXs.

## XML structure

```

<Package>
  <IssuExtendFileList>
    <IssuExtendFile>
      <Model></Model>
      <ImageFiles>
        <FileName></FileName>
      </ImageFiles>
    </IssuExtendFile>
  </IssuExtendFileList>
</Package>

```

## Table description

Item	Description
Feature name	Package

Item	Description
Table name	IssuExtendFileList
Table type	Muti-instance
Row name	IssuExtendFile
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Model	PEX model or the security engine model.	Index	String. Length: 1 to 63 characters.	N/A
ImageFiles	List of issu image files for security engines or PEXs.	Data structure	Members include: <ul style="list-style-type: none"> <li>FileName.</li> </ul>	N/A
FileName	Name of a .bin image file.	N/A	String. Length: 1 to 63 characters.	This column may not occur which mean no image files have set yet, or can repeat of up to 32.

## Package/IssuUpgrade

This table contains information of the ISSU operating status. After starting to update the system, you can obtain ISSU operating status from this table, you can also get detain information of the upgrading status of each node from the table IssuOpResult.

## XML structure

```

<Package>
  <IssuUpgrade>
    <Action></Action>
    <Timeout></Timeout>
    <Status></Status>
    <FailedReason></FailedReason>
    <Delay></Delay>
  </IssuUpgrade>
</Package>

```

## Table description

Item	Description
Feature name	Package

Item	Description
Table name	IssuUpgrade
Table type	Single-instance
Row name	None
Restrictions	N/A

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Action	Specify step to update the system, action of test must be done before install begin.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—none</li> <li>2—test</li> <li>3—install</li> <li>4—rollback</li> </ul>	The Action “none” indicate the system has no did any ISSU operation, “test” means the system is testing all ISSU image files, “install” indicate the system is updating, “rollback” means the system is trying to roll back to the original software versions.
Timeout	Remaining time of the rollback timer for an ISSU operation.	N/A	Unsigned integer. Value range: 0 to 120.	If no ISSU operation is in progress, this field displays the value set by using the <b>issu rollback-timer</b> command.
Status	Upgrading status of the system.	N/A	Enumeration: <ul style="list-style-type: none"> <li>1—none, system have not started to update.</li> <li>2—failed, Action is failure.</li> <li>3—inProgress, Action is in progress.</li> <li>4—success, Action have successfully done.</li> <li>5—rollbacking, roll back is in process.</li> <li>6—rollbacked, successfully roll back to the original software versions.</li> </ul>	N/A
FailedReason	Failed reason of the ISSU operation.	N/A	String. Length: 1 to 6144 characters.	Usefully only in failure.For relevant information, see the XSD document of your product
Delay	Time that the system waits before starting the ISSU.	N/A	Unsigned integer. Value range: 0 to 1440. Unit: minute.	N/A

# Package/IPEInfo

This table contains information of all .ipe image package files in the system.

## XML structure

```
<Package>
  <IPEInfo>
    <InfoList>
      <IPEFileName></IPEFileName>
      <FileName></FileName>
      <Model></Model>
      <Type></Type>
      <Service></Service>
      <FilePlatVersion></FilePlatVersion>
      <FileProductVersion></FileProductVersion>
    </InfoList>
  </IPEInfo>
</Package>
```

Feature name	PasswordControl
Table name	Users
Table type	Multi-instance table
Row name	User
Restrictions	The UserName column must be from the table UserAccounts/Management/Accounts.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
UserName	User name.	Index	String, case-sensitive. Length: 1 to 80 characters.	Only support device management users.
CheckSameChar	Whether to refuse a password that contains any character appearing consecutively three or more times.	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	Default: false.
CheckUserName	Whether to refuse the username or the reverse of the username to appear in the user's password.	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	Default: false.
MinLength	Minimum password length.	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>In non-FIPS mode, the value range is 4 to 32 characters.</li> <li>In FIPS mode, the value range is 15 to 32 characters.</li> </ul>	N/A
AgingTime	Password expiration time.	N/A	Unsigned integer. Value range: 1 to 365, in days.	N/A
Composition	Password composition restriction policy.	Data structure	Members include: <ul style="list-style-type: none"> <li>TypeNumber.</li> <li>PerTypeLen.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
TypeNumber	Minimum number of character types that a password must contain.	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>In non-FIPS mode, the value range is 1 to 4.</li> <li>In FIPS mode, the value must be 4.</li> </ul>	N/A
PerTypeLen	Minimum number of characters from each character type in a password.	N/A	Unsigned integer. <ul style="list-style-type: none"> <li>In non-FIPS mode, the value range is 1 to 63.</li> <li>In FIPS mode, the value range is 1 to 15.</li> </ul>	Default: 1. This column takes effect only when the TypeNumber column is set.
Attempt	Login attempt limit information.	Data structure	Members include: <ul style="list-style-type: none"> <li>FailTimes.</li> <li>Action.</li> <li>LockTime.</li> </ul>	N/A
FailTimes	Maximum number of consecutive login failures.	N/A	Unsigned integer. Value range: 2 to 10.	N/A
Action	An action to be taken for the user who fails to log in after making the maximum number of attempts.	N/A	Enumeration: <ul style="list-style-type: none"> <li>0—lock.</li> <li>1—lock-time.</li> <li>2—unlock.</li> </ul> This column must be set together with the FailTimes column. If the value is 1, the LockTime column must also be set.	Default: 1.
LockTime	Time period for disabling a user account.	N/A	Unsigned integer. Value range: 1 to 360, in minutes. This column takes effect only when the value of the Action column is 1 and the FailTimes column is set.	Default: 1 minute.

      <ApplyContinue></ApplyContinue>
    </PolicyNode>
  </PBRPolicyNode>
</PBR>
```

### Table description

Item	Description
Feature name	PBR
Table name	PBRPolicyNode
Table type	Multi-instance table
Row name	PolicyNode
Restrictions	None
Support for row creation and deletion	Yes

# Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"> <li>• 0—IPv4.</li> <li>• 1—IPv6.</li> </ul>	N/A
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	N/A
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	A smaller number has a higher priority. The value range for the node-number argument depends on the device model.
Mode	Match mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—Permit (default).</li> <li>• 2—Deny.</li> </ul>	N/A
Description	Description of the policy node	N/A	String, case sensitive. Length: 1 to 127 characters.	N/A
ACLNumber	ACL match criterion by number.	N/A	Unsigned integer. Value range: 2000 to 3999.	To delete an ACL match criterion, you must configure the ACLNumber together with the ACLName column.
ACLName	ACL match criterion by name.	N/A	String, case insensitive. Length: 1 to 63 characters.	The ACL name must start with letter a to z or A to Z. The ACL name cannot be <b>all</b> in any combination of upper- and lower-case letters. To delete an ACL match criterion, you must configure the ACLName together with the ACLNumber column.
MatchVxlanID	VXLAN ID	N/A	Unsigned integer, Value range: 0-16777215.	N/A
MatchPacketLen Min	Minimum IP packet length for a packet length match criterion.	N/A	Unsigned integer. Value range: 1 to 65535 bytes.	It must be configured together with the MatchPacketLenMax column. The packet length range includes boundary values. Support for this function depends on

Column name	Column description	Column type	Data type and restrictions	Remarks
				the device model.
MatchPacketLenMax	Maximum IP packet length for a packet length match criterion.	N/A	Unsigned integer. Value range: 1 to 65535 bytes.	It must be configured together with the MatchPacketLenMin column.  The value of MatchPacketLenMax must be no less than the value of MatchPacketLenMin.  Support for this function depends on the device model.
ApplyPrecedence	Sets an IP precedence for matching packets.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Routine.</li> <li>• <b>1</b>—Priority.</li> <li>• <b>2</b>—Immediate.</li> <li>• <b>3</b>—Flash.</li> <li>• <b>4</b>—Flash-override.</li> <li>• <b>5</b>—Critical.</li> <li>• <b>6</b>—Internet.</li> <li>• <b>7</b>—Network.</li> </ul>	Support for this function depends on the device model.
ApplyIPDF	Sets the Don't Fragment (DF) bit in the IP header of matching packets.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Allows packet fragmentation.</li> <li>• <b>1</b>—Prohibits packet fragmentation.</li> </ul>	Support for this function depends on the device model.
ApplyRemarkVPN	Remarks the VPN instance for packets	N/A	Boolean: <b>true</b> <b>false</b> (default).	This function takes effects only when apply access-vpn is configured.  Support for this function depends on the device model.
ApplyContinue	Compares packets with the next node upon failure on the current node.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b> (default).</li> </ul>	This function takes effect only when the match mode of the node is permit.  Support for this function depends on the device model.

## PBR/PBRIfPolicy

This table contains interface PBR information.

## XML structure

```
<PBR>
  <PBRIfPolicy>
    <IfPolicy>
      <AddressType></AddressType>
      <IfIndex></IfIndex>
      <PolicyName></PolicyName>
    </IfPolicy>
  </PBRIfPolicy>
</PBR>
```

## Table description

Item	Description
Feature name	PBR
Table name	PBRIfPolicy
Table type	Multi-instance table
Row name	IfPolicy
Restrictions	This table supports only Layer 3 interfaces.
Support for row creation and deletion	No

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"><li>0—IPv4.</li><li>1—IPv6.</li></ul>	N/A
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
PolicyName	Policy name.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist. The delete and remove operations do not support this column.

# PBR/PBRApplyNexthop

This table contains PBR next hop information.

## XML structure

```
<PBR>
  <PBRApplyNexthop>
    <ApplyNexthop>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <Mode></Mode>
      <VrfIndex></VrfIndex>
      <IpAddress></IpAddress>
      <TrackID></TrackID>
      <NexthopDirect></NexthopDirect>
    </ApplyNexthop>
  </PBRApplyNexthop>
</PBR>
```

## Table description

Item	Description
Feature name	PBR
Table name	PBRApplyNexthop
Table type	Multi-instance table
Row name	ApplyNexthop
Restrictions	Support for this table depends on the device model.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"><li>• 0—IPv4.</li><li>• 1—IPv6.</li></ul>	N/A
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.

Column name	Column description	Column type	Data type and restrictions	Remarks
Mode	Next hop mode.	Index	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Next hop.</li> <li>• <b>1</b>—Default next hop.</li> <li>• <b>2</b>—Mirroring next hop.</li> </ul>	Mirroring next hop not support NexthopDirect column.
VrfIndex	Index of the VPN instance.	Index	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product. The value of 0 specifies the public network. The value of 65535 specifies the VPN instance where the inbound interface belongs. Support for setting 65535 depends on the device model.
IpAddress	IP address of the next hop.	Index	String, case insensitive. Length: 1 to 45 characters.	Specify an IPv4 address or IPv6 address depending on AddressType.
TrackID	Track entry number	N/A	Unsigned integer. Value range: 1 to 1024.	No default track entry number exists.
NexthopDirect	Specifies whether the next hop must be directly connected.	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b></li> <li>• <b>false</b> (default).</li> </ul>	N/A

## PBR/PBRApplyOutInterface

This table contains PBR output interface information.

### XML structure

```

<PBR>
  <PBRApplyOutInterface>
    <ApplyOutInterface>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <Mode></Mode>
      <IfIndex></IfIndex>
      <TrackID></TrackID>
    </ApplyOutInterface>
  </PBRApplyOutInterface>

```

</PBR>

## Table description

Item	Description
Feature name	PBR
Table name	PBRApplyOutInterface
Table type	Multi-instance table
Row name	ApplyOutInterface
Restrictions	Support for this table depends on the device model.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—IPv4.</li><li>• <b>1</b>—IPv6.</li></ul>	N/A
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
Mode	Output interface mode.	Index	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Output interface.</li><li>• <b>1</b>—Default output interface.</li></ul>	N/A
IfIndex	Interface index.	Index	Unsigned integer.	The output interface must be P2P type. Using a non-P2P output interface can result in forwarding failures when the interface has multiple next hops. Non-P2P interfaces include broadcast and NBMA interfaces such as Ethernet and virtual-template interfaces.  Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in

Column name	Column description	Column type	Data type and restrictions	Remarks
				Ifmgr NETCONF XML API Configuration Reference.
TrackID	Track entry number.	N/A	Unsigned integer. Value range: 1 to 1024.	No track entry number as default.

## PBR/PBRApplyAccessVPN

This table contains PBR access VPN instance information.

### XML structure

```

<PBR>
  <PBRApplyAccessVPN>
    <ApplyAccessVPN>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <VrfIndex></VrfIndex>
    </ApplyAccessVPN>
  </PBRApplyAccessVPN>
</PBR>

```

### Table description

Item	Description
Feature name	PBR
Table name	PBRApplyAccessVPN
Table type	Multi-instance table
Row name	ApplyAccessVPN
Restrictions	Support for this table depends on the device model.
Support for row creation and deletion	Yes

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> </ul>	N/A
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19	The specified policy must already exist.

Column name	Column description	Column type	Data type and restrictions	Remarks
			characters.	
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
VrfIndex	Index of the VPN instance.	Index	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product.

## PBR/PBRLocalPolicy

This table contains local PBR information.

### XML structure

```

<PBR>
  <PBRLocalPolicy>
    <Ipv4PolicyName></Ipv4PolicyName>
    <Ipv6PolicyName></Ipv6PolicyName>
  </PBRLocalPolicy>
</PBR>

```

### Table description

Item	Description
Feature name	PBR
Table name	PBRLocalPolicy
Table type	Single-instance table
Row name	None
Restrictions	None
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4PolicyName	Name of the policy used by IPv4 local PBR.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
Ipv6PolicyName	Name of the policy used by IPv6 local PBR.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.

# PBR/PBRApplicationGroup

This table contains PBR application group information.

## XML structure

```
<PBR>
  <PBRApplicationGroup>
    <ApplicationGroup>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <AppGroupName></AppGroupName>
    </ApplicationGroup>
  </PBRApplicationGroup>
</PBR>
```

## Table description

Item	Description
Feature name	PBR
Table name	PBRApplicationGroup
Table type	Multi-instance table
Row name	ApplicationGroup
Restrictions	Support for this table depends on the device model.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"><li>• 0—IPv4.</li><li>• 1—IPv6.</li></ul>	IPv6 is not supported.
PolicyName	Policy name.	Index	String. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
AppGroupName	Application group name.	Index	String, case insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The name cannot be <b>invalid</b> or <b>other</b> in any

Column name	Column description	Column type	Data type and restrictions	Remarks
				combination of upper- and lower-case letters.

## PBR/PBRObjectGroup

This table contains PBR object group information.

### XML structure

```

<PBR>
  <PBRObjectGroup>
    <ObjectGroup>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <ObjectGroupName></ObjectGroupName>
    </ObjectGroup>
  </PBRObjectGroup>
</PBR>

```

### Table description

Item	Description
Feature name	PBR
Table name	PBRObjectGroup
Table type	Multi-instance table
Row name	ObjectGroup
Restrictions	Support for this table depends on the device model.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> </ul>	IPv6 is not supported.
PolicyName	Policy name.	Index	String. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.

Column name	Column description	Column type	Data type and restrictions	Remarks
ObjectGroupName	Object group name.	Index	String, case insensitive. Length: 1 to 31 characters.	The specified object group must be a service object group type.

## PBR/PBREgressIfPolicy

This table contains egress interface PBR information.

### XML structure

```

<PBR>
  <PBREgressIfPolicy>
    <EgressIfPolicy>
      <AddressType></AddressType>
      <IfIndex></IfIndex>
      <PolicyName></PolicyName>
    </EgressIfPolicy>
  </PBREgressIfPolicy>
</PBR>

```

### Table description

Item	Description
Feature name	PBR
Table name	PBREgressIfPolicy
Table type	Multi-instance table
Row name	EgressIfPolicy
Restrictions	This table supports only VXLAN mode tunnel interfaces.
Support for row creation and deletion	No

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> </ul>	IPv6 is not supported.

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
PolicyName	Policy name.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist. The delete and remove operations do not support this column.

## PBR/PBRMatchServiceChain

This table contains PBR object match service chain information.

### XML structure

```

<PBR>
  <PBRMatchServiceChain>
    <MatchServiceChain>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <PathID></PathID>
      <PathIndex></PathIndex>
    </MatchServiceChain>
  </PBRMatchServiceChain>
</PBR>

```

### Table description

Item	Description
Feature name	PBR
Table name	PBRMatchServiceChain
Table type	Multi-instance table
Row name	MatchServiceChain
Restrictions	Support for this table depends on the device model.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"><li>• 0—IPv4.</li><li>• 1—IPv6.</li></ul>	N/A
PolicyName	Policy name.	Index	String. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
PathID	Service-Chain Path-ID	Index	Unsigned integer. Value range: 1 to 16777215.	N/A
PathIndex	Service-Chain Path-Index	N/A	Unsigned integer. Value range: 1 to 255.	N/A

## PBR/PBRApplyServiceChain

This table contains PBR object apply service chain information.

## XML structure

```
<PBR>
  <PBRApplyServiceChain>
    <ApplyServiceChain>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <PathID></PathID>
      <PathIndex></PathIndex>
    </ApplyServiceChain>
  </PBRApplyServiceChain>
</PBR>
```

## Table description

Item	Description
Feature name	PBR
Table name	PBRApplyServiceChain
Table type	Multi-instance table
Row name	ApplyServiceChain
Restrictions	Support for this table depends on the device model.

Support for row creation and deletion	Yes
---------------------------------------	-----

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> </ul>	N/A
PolicyName	Policy name.	Index	String. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
PathID	Service-Chain Path-ID	Index	Unsigned integer. Value range: 1 to 16777215.	N/A
PathIndex	Service-Chain Path-Index	N/A	Unsigned integer. Value range: 1 to 255.	N/A

## PBR/PBRApplyFailActionDrop

This table contains PBR failure action drop information.

## XML structure

```

<PBR>
  <PBRApplyFailActionDrop>
    <ApplyFailActionDrop>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <Mode></Mode>
      <Drop></Drop>
    </ApplyFailActionDrop>
  </PBRApplyFailActionDrop>
</PBR>

```

## Table description

Item	Description
Feature name	PBR
Table name	PBRApplyFailActionDrop
Table type	Multi-instance table

Row name	ApplyFailActionDrop
Restrictions	Support for this table depends on the device model
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> </ul>	N/A
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
Mode	Next hop mode.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Next hop.</li> </ul>	N/A
Drop	Whether to drop matching packets when all next hops specified by column Mode become unreachable.	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false(default).</li> </ul>	N/A

## PBR/PBRVlanInterfacesPolicy

This table contains VLAN interface PBR information.

## XML structure

```

<PBR>
  <PBRVlanInterfacesPolicy>
    <VlanInterfacesPolicy>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <VlanInterfaceNumberList></VlanInterfaceNumberList>
    </VlanInterfacesPolicy>
  </PBRVlanInterfacesPolicy>
</PBR>

```

## Table description

Item	Description
Feature name	PBR

Table name	PBRVlanInterfacesPolicy
Table type	Multi-instance table
Row name	VlanInterfacesPolicy
Restrictions	Support for this table depends on the device model.
Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> </ul>	N/A
PolicyName	Policy name.	Index	String. Length: 1 to 19 characters.	The specified policy must already exist.
VlanInterfaceNumberList	List of VLAN interface numbers.	N/A	Number string. It is a comma-separated list of VLAN interface number items. An item can be an individual VLAN interface number or a VLAN interface number range. Use a hyphen (-) to separate the start and end VLAN interface numbers of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit. You can sign the flag like "<VlanInterfaceNumberList h3c:incremental=true">". If the value is true, the VLAN interface number list will be added or removed. Otherwise, it is the final result.

## PBR/PBRGlobalPolicy

This table contains global PBR information.

## XML structure

```

<PBR>
  <PBRGlobalPolicy>
    <Ipv4PolicyName></Ipv4PolicyName>
    <Ipv6PolicyName></Ipv6PolicyName>
  </PBRGlobalPolicy>
</PBR>

```

## Table description

Item	Description
Feature name	PBR
Table name	PBRGlobalPolicy

### Table description

Item	Description
Feature name	PBR
Table name	PBRPolicyNode
Table type	Multi-instance table
Row name	PolicyNode
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration:	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li>• 0—IPv4.</li> <li>• 1—IPv6.</li> </ul>	
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	N/A
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	A smaller number has a higher priority.  The value range for the node-number argument depends on the device model.
Mode	Match mode.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 1—Permit.</li> <li>• 2—Deny.</li> </ul>	N/A
Description	Description of the policy node	N/A	String, case sensitive. Length: 1 to 127 characters.	N/A
ACLNumber	ACL match criterion by number.	N/A	Unsigned integer. Value range: 2000 to 3999.	N/A
ACLName	ACL match criterion by name.	N/A	String, case insensitive. Length: 1 to 63 characters.	The ACL name must start with letter a to z or A to Z. The ACL name cannot be <b>all</b> in any combination of upper- and lower-case letters.
MatchVxlanID	VXLAN ID	N/A	Unsigned integer, Value range: 0-16777215.	N/A
MatchPacketLen Min	Minimum IP packet length for a packet length match criterion.	N/A	Unsigned integer. Value range: 1 to 65535 bytes.	The packet length range includes boundary values.  Support for this function depends on the device model.
MatchPacketLen Max	Maximum IP packet length for a packet length match criterion.	N/A	Unsigned integer. Value range: 1 to 65535 bytes.	The value of MatchPacketLenMax must be no less than the value of MatchPacketLenMin.  Support for this function depends on the device model.
ApplyPrecedence	Sets an IP precedence for matching packets.	N/A	Enumeration: <ul style="list-style-type: none"> <li>• 0—Routine.</li> <li>• 1—Priority.</li> <li>• 2—Immediate.</li> <li>• 3—Flash.</li> <li>• 4—Flash-override.</li> <li>• 5—Critical.</li> </ul>	Support for this function depends on the device model.

Column name	Column description	Column type	Data type and restrictions	Remarks
			<ul style="list-style-type: none"> <li><b>6</b>—Internet.</li> <li><b>7</b>—Network.</li> </ul>	
ApplyIPDF	Sets the Don't Fragment (DF) bit in the IP header of matching packets.	N/A	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—Allows packet fragmentation.</li> <li><b>1</b>—Prohibits packet fragmentation.</li> <li><b>2</b>—DF bit is not set.</li> </ul>	Support for this function depends on the device model.
ApplyRemarkVPN	Remarks the VPN instance for packets	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Apply.</li> <li><b>false</b>—Not apply.</li> </ul>	This function takes effects only when apply access-vpn is configured. Support for this function depends on the device model.
ApplyContinue	Compares packets with the next node upon failure on the current node.	N/A	Boolean: <ul style="list-style-type: none"> <li><b>true</b>—Apply.</li> <li><b>false</b>—Not apply.</li> </ul>	This function takes effect only when the match mode of the node is permit. Support for this function depends on the device model.

## PBR/PBRIfPolicy

This table contains interface PBR information.

### XML structure

```

<PBR>
  <PBRIfPolicy>
    <IfPolicy>
      <AddressType></AddressType>
      <IfIndex></IfIndex>
      <PolicyName></PolicyName>
    </IfPolicy>
  </PBRIfPolicy>
</PBR>

```

### Table description

Item	Description
Feature name	PBR
Table name	PBRIfPolicy
Table type	Multi-instance table

Item	Description
Row name	IfPolicy
Restrictions	This table supports only Layer 3 interfaces.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> </ul>	N/A
IfIndex	Interface index.	Index	Unsigned integer.	N/A
PolicyName	Policy name.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.

## PBR/PBRApplyNexthop

This table contains PBR next hop information.

## XML structure

```

<PBR>
  <PBRApplyNexthop>
    <ApplyNexthop>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <Mode></Mode>
      <VrfIndex></VrfIndex>
      <IpAddress></IpAddress>
      <Priority></Priority>
      <TrackID></TrackID>
      <NexthopDirect></NexthopDirect>
    </ApplyNexthop>
  </PBRApplyNexthop>
</PBR>

```

## Table description

Item	Description
Feature name	PBR
Table name	PBRApplyNexthop
Table type	Multi-instance table

Item	Description
Row name	ApplyNexthop
Restrictions	Support for this table depends on the device model.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—IPv4.</li> <li>• <b>1</b>—IPv6.</li> </ul>	N/A
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
Mode	Next hop mode.	Index	Enumeration: <ul style="list-style-type: none"> <li>• <b>0</b>—Next hop.</li> <li>• <b>1</b>—Default next hop.</li> <li>• <b>2</b>—Mirroring next hop.</li> </ul>	Mirroring next hop not support NexthopDirect column.
VrfIndex	Index of the VPN instance.	Index	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product. The value of 0 specifies the public network. The value of 65535 specifies the VPN instance where the inbound interface belongs. Support for setting 65535 depends on the device model.
IpAddress	IP address of the next hop.	Index	String, case insensitive. Length: 1 to 45 characters.	Specify an IPv4 address or IPv6 address depending on AddressType.
Priority	Priority of the next hop.	N/A	Unsigned integer. Value range: 0 to 65535.	The smaller the value, the higher the priority.
TrackID	Track entry number.	N/A	Unsigned integer. Value range: 1 to 1024.	No default track entry number exists.
NexthopDirect	Specifies whether the next hop must be directly	N/A	Boolean: <ul style="list-style-type: none"> <li>• <b>true</b>—Apply.</li> </ul>	N/A

Column name	Column description	Column type	Data type and restrictions	Remarks
	connected.		<ul style="list-style-type: none"> <li><b>false</b>—Not apply.</li> </ul>	

## PBR/PBRApplyOutInterface

This table contains PBR output interface information.

### XML structure

```

<PBR>
  <PBRApplyOutInterface>
    <ApplyOutInterface>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <Mode></Mode>
      <IfIndex></IfIndex>
      <Priority></Priority>
      <TrackID></TrackID>
    </ApplyOutInterface>
  </PBRApplyOutInterface>
</PBR>

```

### Table description

Item	Description
Feature name	PBR
Table name	PBRApplyOutInterface
Table type	Multi-instance table
Row name	ApplyOutInterface
Restrictions	Support for this table depends on the device model.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—IPv4.</li> <li><b>1</b>—IPv6.</li> </ul>	N/A
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer.	The specified node must already exist.

Column name	Column description	Column type	Data type and restrictions	Remarks
			Value range: 0 to 65535.	
Mode	Output interface mode.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Output interface.</li> <li>1—Default output interface.</li> </ul>	N/A
IfIndex	Interface index.	Index	Unsigned integer.	The output interface must be P2P type. Using a non-P2P output interface can result in forwarding failures when the interface has multiple next hops. Non-P2P interfaces include broadcast and NBMA interfaces such as Ethernet and virtual-template interfaces.
Priority	Priority of the output interface.	N/A	Unsigned integer. Value range: 0 to 65535.	The smaller the value, the higher the priority.
TrackID	Track entry number.	N/A	Unsigned integer. Value range: 1 to 1024.	No default track entry number exists.

## PBR/PBRApplyAccessVPN

This table contains PBR access VPN instance information.

### XML structure

```

<PBR>
  <PBRApplyAccessVPN>
    <ApplyAccessVPN>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <VrfIndex></VrfIndex>
      <Priority></Priority>
    </ApplyAccessVPN>
  </PBRApplyAccessVPN>
</PBR>

```

### Table description

Item	Description
Feature name	PBR

Item	Description
Table name	PBRApplyAccessVPN
Table type	Multi-instance table
Row name	ApplyAccessVPN
Restrictions	Support for this table depends on the device model.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> </ul>	N/A
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
VrfIndex	Index of the VPN instance.	Index	Unsigned integer.	Some versions support VRF name. For relevant information, see the XSD document of your product.
Priority	Priority of the VPN instance.	N/A	Unsigned integer. Value range: 0 to 65535.	The smaller the value, the higher the priority.

## PBR/PBRLocalPolicy

This table contains local PBR information.

## XML structure

```

<PBR>
  <PBRLocalPolicy>
    <Ipv4PolicyName></Ipv4PolicyName>
    <Ipv6PolicyName></Ipv6PolicyName>
  </PBRLocalPolicy>
</PBR>

```

## Table description

Item	Description
Feature name	PBR

Item	Description
Table name	PBRLocalPolicy
Table type	Single-instance table
Row name	None
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Ipv4PolicyName	Name of the policy used by IPv4 local PBR.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
Ipv6PolicyName	Name of the policy used by IPv6 local PBR.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.

## PBR/PBRApplicationGroup

This table contains PBR application group information.

## XML structure

```

<PBR>
  <PBRApplicationGroup>
    <ApplicationGroup>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <AppGroupName></AppGroupName>
      <Priority></Priority>
    </ApplicationGroup>
  </PBRApplicationGroup>
</PBR>

```

## Table description

Item	Description
Feature name	PBR
Table name	PBRApplicationGroup
Table type	Multi-instance table
Row name	ApplicationGroup
Restrictions	Support for this table depends on the device model.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"><li>• 0—IPv4.</li><li>• 1—IPv6.</li></ul>	N/A
PolicyName	Policy name.	Index	String. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
AppGroupName	Application group name.	Index	String, case insensitive. Length: 1 to 63 characters.	Valid characters include digits, letters, hyphens (-), and underlines (_). The name cannot be <b>invalid</b> or <b>other</b> in any combination of upper- and lower-case letters.
Priority	Priority of the application group.	N/A	Unsigned integer. Value range: 0 to 65535.	The smaller the value, the higher the priority.

## PBR/PBRObjectGroup

This table contains PBR object group information.

## XML structure

```
<PBR>
  <PBRObjectGroup>
    <ObjectGroup>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>

MaxAppGroupIpv4	Maximum number of IPv4 application group.	N/A	Unsigned integer.	N/A
MaxObjectGroupIpv4	Maximum number of IPv4 object group.	N/A	Unsigned integer.	N/A

## PBR/PBREgressIfPolicy

This table contains egress interface PBR information.

### XML structure

```

<PBR>
  <PBREgressIfPolicy>
    <EgressIfPolicy>
      <AddressType></AddressType>
      <IfIndex></IfIndex>
      <PolicyName></PolicyName>
    </EgressIfPolicy>
  </PBREgressIfPolicy>
</PBR>

```

### Table description

Item	Description
Feature name	PBR
Table name	PBREgressIfPolicy
Table type	Multi-instance table
Row name	EgressIfPolicy
Restrictions	This table supports only VXLAN mode tunnel interfaces.

### Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"> <li><b>0</b>—IPv4.</li> <li><b>1</b>—IPv6.</li> </ul>	IPv6 is not supported.

Column name	Column description	Column type	Data type and restrictions	Remarks
IfIndex	Interface index.	Index	Unsigned integer.	Some versions support interface name. For relevant information, see the XSD document of your product. For information about IfIndex, see IfMgr in Ifmgr NETCONF XML API Configuration Reference.
PolicyName	Policy name.	N/A	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.

## PBR/PBRMatchServiceChain

This table contains PBR object match service chain information.

### XML structure

```

<PBR>
  <PBRMatchServiceChain>
    <MatchServiceChain>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <PathID></PathID>
      <PathIndex></PathIndex>
      <Priority></Priority>
    </MatchServiceChain>
  </PBRMatchServiceChain>
</PBR>

```

### Table description

Item	Description
Feature name	PBR
Table name	PBRMatchServiceChain

Support for row creation and deletion	Yes

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> </ul>	N/A
PolicyName	Policy name.	Index	String. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
PathID	Service-Chain Path-ID	Index	Unsigned integer. Value range: 1 to 16777215.	N/A
PathIndex	Service-Chain Path-Index	N/A	Unsigned integer. Value range: 1 to 255.	N/A

## PBR/PBRApplyFailActionDrop

This table contains PBR failure action drop information.

## XML structure

```

<PBR>
  <PBRApplyFailActionDrop>
    <ApplyFailActionDrop>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <NodeID></NodeID>
      <Mode></Mode>
      <Drop></Drop>
    </ApplyFailActionDrop>
  </PBRApplyFailActionDrop>
</PBR>

```

## Table description

Item	Description
Feature name	PBR
Table name	PBRApplyFailActionDrop

Item	Description
Table type	Multi-instance table
Row name	ApplyFailActionDrop
Restrictions	Support for this table depends on the device model

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—IPv4.</li> <li>1—IPv6.</li> </ul>	N/A
PolicyName	Policy name.	Index	String, case sensitive. Length: 1 to 19 characters.	The specified policy must already exist.
NodeID	Policy node number.	Index	Unsigned integer. Value range: 0 to 65535.	The specified node must already exist.
Mode	Next hop mode.	Index	Enumeration: <ul style="list-style-type: none"> <li>0—Next hop.</li> </ul>	N/A
Drop	Whether to drop matching packets when all next hops specified by column Mode become unreachable.	N/A	Boolean: <ul style="list-style-type: none"> <li>true.</li> <li>false.</li> </ul>	N/A

## PBR/PBRVlanInterfacesPolicy

This table contains VLAN interface PBR information.

## XML structure

```

<PBR>
  <PBRVlanInterfacesPolicy>
    <VlanInterfacesPolicy>
      <AddressType></AddressType>
      <PolicyName></PolicyName>
      <VlanInterfaceNumberList></VlanInterfaceNumberList>
    </VlanInterfacesPolicy>
  </PBRVlanInterfacesPolicy>
</PBR>

```

## Table description

Item	Description
Feature name	PBR
Table name	PBRVlanInterfacesPolicy
Table type	Multi-instance table
Row name	VlanInterfacesPolicy
Restrictions	Support for this table depends on the device model.

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
AddressType	Address type.	Index	Enumeration: <ul style="list-style-type: none"><li>• 0—IPv4.</li><li>• 1—IPv6.</li></ul>	N/A
PolicyName	Policy name.	Index	String. Length: 1 to 19 characters.	The specified policy must already exist.
VlanInterfaceNumberList	List of VLAN interface numbers.	N/A	Number string. It is a comma-separated list of VLAN interface number items. An item can be an individual VLAN interface number or a VLAN interface number range. Use a hyphen (-) to separate the start and end VLAN interface numbers of a range. The string cannot end with a comma or hyphen, or include any whitespace characters.	Example: 1,2,3,5-8,10-20. The item is permitted to incremental edit. You can sign the flag like "<VlanInterfaceNumberList h3c:incremental='true'>". If the value is true, the VLAN interface number list will be added or removed. Otherwise, it is the final result.

## PBR/PBRGlobalPolicy

This table contains global PBR information.

# PCAPWARE

## PCAPWARE/StartCapture

This table contains information about starting the packet capture.

### XML structure

```
<PCAPWARE>
  <StartCapture>
    <ACL>
      <ACLType></ACLType>
      <ACLNumber></ACLNumber>
    </ACL>
    <Interface></Interface>
  </StartCapture>
</PCAPWARE>
```

### Table description

Item	Description
Feature name	PCAPWARE
Table name	StartCapture
Table type	Single-instance table
Row name	N/A
Restrictions	None

### Columns

Column name	Column description	Column type	Data type and restrictions
ACL	Capture packets that match the specified ACL.	Data structure	Members include: <ul style="list-style-type: none"><li>ACLType.</li><li>ACLNumber.</li></ul>
ACLType	ACL type.	N/A	Enumeration: <ul style="list-style-type: none"><li>1—IPv4.</li><li>2—IPv6.</li></ul>
ACLNumber	ACL number.	N/A	Unsigned integer.
Interface	Capture packets on the specified interface.	N/A	String. Length: 2 to 47 characters.

# PCAPWARE/StopCapture

This table contains information about stopping the packet capture.

## XML structure

```
<PCAPWARE>
  <StopCapture>
    <Stop><Stop/>
  </StopCapture>
</PCAPWARE>
```

## Table description

Item	Description
Feature name	PCAPWARE
Table name	StopCapture
Table type	Single-instance table
Row name	N/A
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions	Remarks
Stop	Stop the capture	N/A	Enumeration: <ul style="list-style-type: none"><li>• <b>0</b>—Stops the packet capture normally.</li><li>• <b>1</b>—Stops the packet capture immediately.</li></ul>	If this column is empty, packet capture is stopped normally.

# PCAPWARE/DelCapFiles

This table contains information about deleting specific .cap files.

## XML structure

```
<PCAPWARE>
  <DelCapFiles>
    <DelCapFile>
      <FileName></FileName>
    </DelCapFile>
  </DelCapFiles>
</PCAPWARE>
```

## Table description

Item	Description
Feature name	PCAPWARE
Table name	DelCapFiles
Table type	Multi-instance table
Row name	DelCapFile
Restrictions	None

## Columns

Column name	Column description	Column type	Data type and restrictions
FileName	Name of the .cap file to be deleted.	Index	String. Length: 1 to 253 characters.

## PCAPWARE/DelAllCapFile

This table contains information about deleting all .cap files.

## XML structure

```
<PCAPWARE>
  <DelAllCapFile>
    <Delete/>
  </DelAllCapFile>
</PCAPWARE>
```

## Table description

Item	Description
Feature name	PCAPWARE
Table name	DelAllCapFile
